**SECTION 3
REQUIREMENTS
Scope and Statement of Services**

STATEMENT:

City of Hanahan Fire/EMS is seeking the services of a records management software system vendor to provide software compliant with the National Emergency Medical Services Information System (NEMESIS).

The City is issuing this Request for Proposal (RFP) for the purpose of obtaining information and bids related to its patient care reporting software. Additionally, other modules will be considered such as mobile applications, hospital interface portal services, data analysis systems, ambulance billing, and others that may be offered. Third party applications for some of the modules will also be considered but must be fully disclosed in the RFP response.

The City is seeking a response from Vendors who can demonstrate that they possess the organizational, functional, and technical capabilities to perform the services requested. The City and the Vendor will negotiate a final contract incorporating pertinent portions of the Vendor's response to the RFP, a comprehensive list of all deliverables and services to be performed by the Vendor, applicable Vendor documentation, product literature, and pricing information.

The contractual relationship will be premised on the Vendor as the expert. The City will rely upon the Vendor's expertise to develop, deliver, implement and maintain solutions that fulfill the defined business requirements. The City expects all Vendors to exercise the highest degree of integrity in all dealings with their vendors, employees, and the City.

SCOPE OF WORK:

The City believes that completely integrated packaged solutions exist that can meet its core business requirements for this system. Given this premise, the City expects to make minimal modifications to the selected package.

The City will choose a system that most closely meets the City's needs and eliminate as many stand-alone sub-systems and applications as possible.

The City intends to purchase an integrated system that includes as much of the following:

Incident Reporting

1. Meets or exceeds the State's performance standards required data set.
2. Populates patient data for repeat clients.

3. Customized data elements to meet Agency and State-specific EMS needs.
4. Easy data input and intuitive workflow, including auto-save functionality, multiple data input options, Quick Picks and quick navigation through drop-down lists.
5. Validation tools to help ensure that calls are complete and meet required data elements.
6. Electronic capture of patient signatures in the field on both mobile and web applications.
7. Interface capabilities — data streaming to and from CAD and cardiac monitors, fire records, hospital medical records, and billing applications.
8. Include customizable Quick Treat lists for cardiac arrest, medications, and other functions, plus immediate time-stamping of vital signs and treatment events within the documentation flow.
9. Ability to automatically calculate loaded mileage using geocoding on both mobile and web applications.
10. Assessment tools to document initial and ongoing assessments, including pertinent positives and negatives.
11. Anatomical figures with 360-degree rotation and zoom-in capabilities.
12. Advanced vital signs documentation to include BP, HR, Resp., MAP, SpO2, Capnometry and auto- calculation of Glasgow Coma Scale, Revised Trauma Score, and Pediatric Trauma Score.
13. Easy to enter forms for complete, rapid documentation of advanced airway, burns, stroke, STEMI, patient refusals, MVC, and cardiac arrest patients and more.
14. Ability to transfer data wirelessly from one mobile computer to another.
15. Customizable user roles, password management policies, validation routine, treatments.
16. Providing an easy way for administrators to send positive feedback, document errors, or request that information be added to an appended narrative.
17. Receiving hospitals have electronic access to patient care charts electronically. Authorized hospital users of the system can log in and download trips after permission has been granted by the EMS organization. The hospital only sees ePCR's on which they are identified as the receiving facility. The EMS organization maintains access control to the hospitals.
18. Customize data searches for required quality improvements reports that are required by government agencies.
19. Must not require an internet connection to function.
20. Application must have an automatic update feature that allows software to be updated via internet without need to reinstall software.

21. Must not require Administrative rights on the local machine to operate and/or update.
22. A translation tool that enables EMS providers in the field to communicate with non-English speaking patients. Able to launch without leaving the ePCR application (preferred)
23. Data is hosted at secure, Tier 4 - Managed Services Data Center that is SSAE 16 SOC 2 II compliant.
24. Production equipment housed at a facility with 24-hour physical security, palm print and picture identification systems, redundant electrical generators, redundant data center air conditioners, and other backup equipment designed to keep servers continuously up-and-running.
25. The strongest encryption products to protect customer data and communications, including 128-bit SSL Certification and 1024-bit RSA public keys — the lock icon in the browser indicates that data is fully shielded from access while in transit.
26. Software access only with a valid username and password combination, which is encrypted via SSL while in transmission.
27. A robust application security model that prevents customers from accessing another's data — reapplied with every request and enforced for the entire duration of a user session.
28. Tight operating system-level security with a minimal number of access points to all production servers. Strong passwords for operating system accounts, with no master password database for production servers. Operating system maintenance at each vendor's recommended patch levels for security and hardened by disabling and/or removing any unnecessary users, protocols and processes.
29. Controls on database access at the operating system and database connection level for additional security. Restricted production database access to a limited number of points, with no master password database for production servers.
30. Vendor employees have no direct physical access to the production equipment.
31. Off-site, automatic client data backups are performed simultaneously or concurrently.
32. Servers housing in a Tier-IV Internet Data Center (IDC) equipped with redundant power, multi-layered security, effective environmental controls and cooling systems, and 24×7 monitoring. Built-in redundancy for each component of our hardware infrastructure, with multiple database servers with a Raid-5 configuration.
33. Provides a bi-directional NEMESIS/HL7 transformation engine that is ePCR and EMR vendor agnostic which enables EMS agencies and Hospitals to share vital patient information including EMS ePCR data and Hospital outcomes and billing data in near-real time. The

system has the capability to Populate EMR and other HIM system with digital pre-hospital care records and discreet data and also includes data analysis tools that EMS can utilize for QI initiatives pertaining to patient outcomes. This platform must already be in use for reference somewhere in the state of South Carolina.

34. EMS providers utilizing a mobile ePCR device and an available wireless network have the ability to transmit an alert while en route to the hospital providing the receiving facility with near real-time information for patients with suspected STEMI, stroke, cardiac, or trauma.
