

RFP2012 Zoning and Mapping Software

Addendum #2

March 26, 2020

This addendum is to address the following questions:

- 1) Does access to the web application need to be freely/openly available to the public? **On a limited basis for parents to access the school in their attendance area.**
- 2) How will Spartanburg County provide access to their GIS data? Web services or Shapefiles/Geodatabases? If they will be providing shapefiles/geodatabases, how often will the County provide updates to their data? **Shapefile, but we are unsure how often the data is updated.**
- 3) PowerSchool integration: is there a current in place integration with PowerSchool and GIS? **No**
- 4) What data from PowerSchool would be integrated into the web application? **All data that is needed - student data, socioeconomic data, etc.**
- 5) Will PowerSchool or Spartanburg County GIS provide student data like address/age/school? **PowerSchool**
- 6) Will PowerSchool or Spartanburg County GIS provide socioeconomic data for each student? **PowerSchool**
- 7) What is your current GIS version/platform that the District is using? **None**
- 8) Do you have a preference about if the respondent offers a hosted solution or if you prefer to house the web-based data on your server? **No preference**
- 9) Due to social distancing and addendum 1 allowing email submittals, should we provide pricing as an appendix to our proposal in our email submittal per page 10? **Yes, only one copy of the proposal needs to be emailed, but pricing should be a separate document. The evaluation team will see the proposal and evaluate technical aspects first and then they will evaluate cost.**
- 10) What integration with PowerSchool and GIS are you looking for? **We need to integrate GIS in order to pull current mapping data. We need to integrate Powerschool to analyze student demographics in order to make zoning decisions.**
- 11) Can we get clarification about how the School District wants to integrate with PowerSchool? A direct link to the application? Support for data exports geocoded via address? **See #4**
- 12) What format does Spartanburg County GIS use for the current web GIS data? Web services? What platform do they use? ESRI? **We are unsure as GIS is supported by the County, not the School District.**
- 13) Would the district consider a solution that does not allow users to load their GIS map or create their own streets, but rather relies on Mapbox technology to provide maps that are updated daily? **No, we are looking to integrate Spartanburg County GIS data into this software in order to have accurate maps that we can use to draw boundary lines.**
