

FY 16-17 Network Access Control (NAC) Solution RFP For Harrison School District Two

Addendum 5-11-17

To clarify, we will need a virtual server to handle the 802.1X authentication for up to 25,000 concurrent sessions. Right now we are most concerned with having 100 guest access licenses (where someone at a building can “sponsor” a guest and they will receive an e-mail with credentials to get on the guest network) and the cost for professional services and installation. By “port security” we are referring to the 802.1x part of the solution. We only need 100 guest licenses so we can see if we will need more as time progresses.

Thank you.
