

BULLOCH COUNTY
REQUEST FOR QUALIFICATIONS AND PROPOSALS
PRELIMINARY ENGINEERING REPORT, DESIGN SERVICES AND
CONSTRUCTION ADMINISTRATION

Statements of qualifications and proposals are being requested from Engineering Firms with a strong record in successfully assisting local governments with the preliminary report, final design, and construction administration of Federally Assisted Projects. Responding firms should be qualified to provide a Preliminary Engineering Report (PER), design and construction administration services for projects utilizing federal funds.

Plans are to contract, within a year from the date of this notice, a reputable Engineering Firm for Preliminary Report, Design and Construction Administration services for Federally Funded Projects related to community and economic development.

Addendum #1

The following is an addition to the RFQ/RFP:

- Any future question for this project must be received in writing (email is preferable to pfuller@bullochcounty.net) no later than December 11, 2023, at 2:00 PM. Responses will be emailed and posted no later than December 12, 2023, at 4:00 PM.

Question & Answer

Question: Can you provide any other details on this RFP? It only mentions a rail spur without a location, length, ect. Trying to understand what the scope of work will be.

Answer: Please note the following information that may be a helpful response to the question:

- Revalyu, a German plastics recycling company, recently broke ground on their first advanced PET (polyethylene terephthalate) recycling facility in America located at Gateway Regional Park in Statesboro, GA. revalyu is investing over \$200 million to build a plant capable of recycling 200 million pounds (90,000 metric tons) of post-consumer PET plastic per year.
- revalyu has already recycled over 6 billion bottles in India. Due to its unique recycling process based on glycolysis, the quality of revalyu's rPET (recycled PET) products enables its customers to replace conventional oil-based PET with revalyu's more sustainable rPET. Compared to conventional PET, revalyu's rPET is produced using 75% less water, 91% less energy, and saves around 0.7 barrels of oil and 0.2 cubic meters of landfill space per 2000 pounds of PET recycled.
- The future growth of revalyu will be greatly enhanced by the location of a rail spur at the company's site in Bulloch County, Georgia, to bring feedstock to the facility and to export finished products.
