

## **RFP WCS-FA-2018-008**

### Question and Answer #1

There was a question regarding flat rate pricing of replacement cost and repair costs of the backflow devices listed by manufacturer and size due to multiple versions of these devices.

We have determined that our back flow devices are of three (3) separate types. Double Check (DC), Double Check Detector Assembly (DCDA) and Reduced Pressure Zone (RPZ). I have posted a new file in PDF and in Excel called Back Flow Devices by Mfr. Price Quote, which includes 3 separate columns for pricing divided by type of device.

If you feel comfortable using the originally included pricing chart from Appendix A in the RFP, that is fine. If you choose to use the 3 column per device manufacturer and size, that is acceptable as well. We will try to do our best in piecing the quotes back together for an apples to apples evaluation.

Thank you,

Jim Fugate

Procurement Officer
