Question 1:

The bidding documents for East Tuscarawas Streetscape, Phase 1, GP 1250 call for steel pipe encasement directional drilled. It cannot be directional drilled because it is a steel liner, so it should be a bore and jack. The issue is the bore pit called out in the plans is too small. The boring pit needs to be at least 30-35' long. Please advise.

Answer 1:

If the bidder(s) determines a larger or smaller boring pit, other than as shown on the plans, is necessary for the installation of the conduit crossing under the W&LE Railway, they should bid accordingly under the Lump Sum bid items for the Conduit Crossing.

Note, the pits may not be enlarged in a direction which would place them closer to the railroad tracks.
