

- 1) Does the bidder furnish and install the safety surface? Yes
- 2) Does the bidder furnish and install a layer of filter cloth under the safety surface? Yes
- 3) If the bidder is to furnish and install the safety surface, then what type of safety surface and how thick? Meeting standards of ASTM for the equipment that is proposed.
- 4) On the swing set do you want belt seats or tot seats or a combination of both. Also would you like any inclusive swing seats or other type of swing seats? That has not been determined, please propose your best option.
- 5) The RFP mentions the contractor will provide and install borders and safety surfacing. I didn't see a specific surfacing request, but I'm assuming Engineered Wood Fiber? That is preferred, but other surfacing options may be proposed.
- 6) I believe I read that the City will take care of access from the road to the play area. Do you plan to pour a sidewalk or pathway up to the borders? Would you prefer for us to fully enclose the surfaced area all the way around with plastic borders, leave one 4' section out for access, or have a full or 1/2 border ramp? A sidewalk will be poured up to the border. Please include a ½ border ramp.
