

City of Havelock
Police In-Car Camera System
Addendum 2
November 8, 2016

The City received the following questions:

- The Bid is requesting two (2) "Wireless Video Transport Hotspot Locations". Is this equipment referring to Access Points that will be installed at the location where the vehicles will be located, or is it referring to the wireless mobile radio that connects to each in-car video system in order to utilized wireless downloading of video? Please clarify. **This is referring to access points that will be installed at the location where the vehicles will be located. The in-car video systems will need the ability to wireless download the videos to these access points.**
- If the above equipment is referring to the wireless mobile radio, then all 5 of the systems will require its own wireless radio. This would require the number of units requested on the bid sheet to changed from two (2) to five (5). **Not applicable.**
