

## Questions Addendum 2

1. On Skidaway Road, it appears that the town has figured the existing road to be reconstructed starting at the intersection of Wickford Court all the way to its intersection at Gibbon Court according to the strip maps provided. However, the existing concrete pavement ends at its intersection of Black Oak Blvd. The bid quantities for this road may be inflated twice as much as what is needed for the planned concrete reconstruction. **This is a unit cost contract. Quantities can be adjusted as needed during construction and reflected in invoices.**
2. Based on the strip map provided for Weber Rd, the town is looking to resurface the roadway from North Palmetto St to the intersection of Lilac Drive. If the existing road is approx. 20ft in width, this would equate to 2,655 SY. The bid quantity is only 1,007 SY. Please confirm. **This is a unit cost contract. Quantities can be adjusted as needed during construction and reflected in invoices.**
