ADDENDUM ONE

Solicitation: 2017-132
Addendum Release Date: July 21, 2017

The following question was received and is answered below in red:

Page 6 of the RFP states that a concept level plan was completed during the preliminary traffic study. It also states "once the database is completed and design concept is finalized". Will there be an additional concept design phase with alternates prior to preliminary engineering design separate from the initial concept level plan already completed?

The intent of "once the database is completed and design concept is finalized" means that once the field survey is completed and the design engineer lays out the concept level plan on the preliminary plan and shows impacts to properties, specific lane lengths, etc. that then the consultant will facilitate a public information open house to gather input from the public before finalizing the design plan.
