- PIPELINE TELEVISION INSPECTION SYSTEM, WITH TRAILER- [RFP #2017-03-006]

ADDENDA #1 – Q&A through April 6, 2017

Question #1 In the first paragraph on the first page prior to the actual specifications there is mention of a “mainline-launch lateral inspection system” however there is no mention of it anywhere within the specification itself. Specifically, the portion of the paragraph in question is *“...Components usable with the base unit shall include a small diameter camera for push or pull applications, various tractor drive systems, and a mainline-launched lateral inspection system.”*

Is the City simply stating that in the future the base unit should offer compatibility to use such items a later date if the City were to elect to purchase? I simply want to clarify there is not an expectation for vendors to bid a lateral launch system or other “usable components” beyond the base system mentioned in the specifications?

Answer #1: There is no expectations in the bid for it to include a lateral launch system.

Question #2 In Section 7, Item 7.2, the specification states “The laptop shall include a Windows 7 Professional operating system.” It is worth noting that Microsoft has already ended mainstream support of Windows 7 effective January 13, 2015 and Windows 7 was retired from sale as of October 31st, 2014 and is no longer available. We would like to confirm the City will accept a Windows 10 Professional operating system? The specification again states a Windows 7 requirement under 8.2.1 for Data System Software, for the same reasons stated above, please clarify the City’s stance on operating systems.

Answer #2: A Windows 10 operating system will meet the requirements and is acceptable.
