DATE: January 6, 2023  
TO: Prospective Respondents  
FROM: Amy Lucey, Contracts Administrator  
SUBJECT: Addendum #2 to Request for Qualifications # 38275, Characterization of Urban Runoff Water Quality in Upper St. Johns River-Lake Watersheds

The following clarifications/changes are provided for your information. Please make all appropriate changes to your bid documents. Note: changes are reflected with original language shown with strike-through and new language is underlined.

Q1: The method detection limits for NO<sub>x</sub> and TKN requested in the RFQ, Table 1, are 0.01 mg/L and 0.05 mg/L, respectively. These are below the levels at several labs we have contacted. We would like to respond with the MDLs we believe accurately reflect the lab's capability which may be higher than the requested MDL. Will that disqualify our response? Is the District lab achieving these low levels, or is there a lab the District has used in the past to meet these levels?

Similarly, the holding time listed for NO<sub>x</sub> is 48 hr, but the method provided allows for up to 28 days. Is <48 hr critical to this project or should that be 28 days?

A1: Proposed use of labs who cannot meet the listed MDL and/or holding time targets would not disqualify the response. However, lab capabilities are part of the evaluation criteria (see "Evaluation Criteria" 2b).

**NOTE:** The Proposal Opening **remains** 2:00 p.m., **Friday, January 13, 2023**

Please acknowledge receipt of this Addendum on the **SUBMITTAL FORM** provided in the proposal package.
