

ADDENDUM NO. 3

DATE: December 22, 2022

TO: All Potential Bidders

FROM: Penny Owens, Purchasing Agent, City of Knoxville

SUBJECT: Addendum No. 3 – CIPP IV Stormwater Infrastructure Rehabilitation Project

BIDS TO BE OPENED: January 3, 2023, at 11:00:00 a.m. (Eastern Time)

This addendum is being published to respond to questions that the City has received from potential bidders.

Questions Received:

Question #1: Do we have any video of the existing stormwater pipe? I see on the drawings that there are screen shots of the pipe.

Response #1: Most of the pipes were evaluated with a pole camera for which the footage is not available. The invert conditions of these pipes and/or debris prevented the use of a pipe crawler camera. There are videos for two of the pipe segments at the following link: <https://ws.onehub.com/folders/urcb8rpm>

Question #2: The Drawing notes indicate that some of the pipe needs to be grind or cut or open cut replacement to prepare the existing pipe for lining. There is not a pay item for this. Can a pay item be added for point repairs so that the existing pipe can be repaired before the lining process?

Response #2: No. The unit bid price for the liner should include any preparation work needed to install the liner. The existing conditions and suggested preparation work is outlined in the plans.

Question #3: If the existing pipe is deflected to a point that it is egged or crushed, and it cannot be lined. How would this section of pipe be repaired?

Response #3: The pipe segments in this project are anticipated to be round enough to be lined based on field observations. If an issue arises where a segment has been damaged or deteriorated to a point where it can't be lined, City Engineering will address the defective section with internal resources, a third party, a contract amendment, or remove that particular segment from the work.
