

## WILLIAMSON COUNTY GOVERNMENT

**October 7, 2019**

**Addendum # 2**  
**Sheriff Lead Maintenance Shooting Range**  
**Bid Date October 17, 2019, 2:00 p.m.**

Williamson County has received the following questions.

- Is the berm to be excavated to a 2 foot depth?  
*To the depth necessary to remove all lead. This range has never been mined before. It was put in place approximately 30 years ago. The soil/berm has been added more and more over the years. We are not sure how much and what the exact depth is.*
- Is the required lead recovery percentage from berm soils the industry standard of 85% to 90%?  
*Yes*
- Where onsite will oversized material be placed?  
*The grassy area at the rear of the range. Facing the front of the range house, the area to the left.*
- How much additional soil will be provided by the County for installation to the berm by Contractor?  
*Do not know exact amount, but estimate is minimum of 4 dump truck loads of dirt and sand.*
- Following completion of lead reclamation activities, will the County complete re-vegetation of the berm (seeding and mulching)?  
*Yes*
