

**RFP 22-004 ADDENDUM NUMBER 1:**

Service Provider must provide BGP failover between the District's Central Data Center and the Disaster Recovery site with the District utilizing a Private AS#. The District currently owns a /24 and a /20 network that will be divided between the two sites and advertised via BGP to the Service Provider. In addition, the two Class C subnets provided by the Service Provider will also be included in the BGP advertisements.

Service provider will be responsible for injecting only a default route via BGP to the District. No other BGP routes should be advertised to the District

The contiguous Class C provided at each location must be separate from the transport connection between the District's Equipment and the Service Provider. Example topology shown below.
