Q&A for Content Filter RFP 2019-610-3

1. Can you provide a diagram of your current network topology?
    a. We do not have a current diagram, however the district has a hub and spoke topology with 20 sites coming back through the main data center where the firewall connects the district to the ISP.
2. What types of devices will be secured via the Web Filtering Solution (Windows, MAC, iOS, Chromebook, etc)? Could you provide the number/count of devices for each type?
    a. Windows (8,000), Mac (50), Chromebook (30), iPad (1800)
3. Do you have any near term projections of substantial growth of full time enrolled students or devices. If so, what percentage growth over what period of time?
    a. Students enrollment stays relatively consistent. There are no significant projections of the number of devices increasing at this time.
4. Can you provide concurrent connections per second count from the existing web filtering solution? This would be helpful for sizing / scaling purposes.
    a. New connection per second count: ~1000
    b. Average active sessions: 80,000
5. What is your average Web Filtering reporting log size in bytes daily?
    a. 33,637,574 bytes
6. What are the required Web Filter reporting log retention times (in months ore weeks)?
    a. We would prefer to have at least 1 month of logs. Requests for information typically come in quickly.
