    a. **Column graphics will be provided at a later date. Columns to receive a 3' painted band with parking level numbers within it.**
17. 14.21.00 - Elevator refurbishment (POB Parking Garage) - Spec section calls for one elevator to have all new finishes and one to be abandoned. This does not appear to be shown on the drawings, please clarify status for POB parking garage elevators.
    a. **Refer to revised POB Parking Garage Sheets – notes removed. Refer to Specifications and SheetA624 for POB Garage Elevator Notes.**
18. A120.3 - Notes 7 & 8 call for one elevator to be refurbished, one elevator to be replaced.
    a. **Refer to revised Sheet A120.3. Notes removed. Refer to Specifications and SheetA624 for POB Garage Elevator Notes.**
19. We are reviewing the drawings/specs and it appears the scope consists of decommissioning certain elevators and modernizing others.
    - Could you ask the owner/architect to confirm the scope of work for each elevator?
    - Additionally, are there any new elevators being installed?
    a. **Refer to elevator renovation scope notes on A600s sheets for scope and which elevators are to remain operational in the new project. Refer to Vertical Circulation Keynote 7 on Sheet A611 for new elevator scope.**
20. Please clarify the exact scope of work covered by the allowances for Backfill and Demolitions. We understand these are previously negotiated with subcontractors that will be assigned to the successful bidder. Please clarify what these allowance cover. Example; exact scope, subcontract bonds, clean up, waste removal. Also since this scope is outside of our control, please provide the agreed to duration for this work?
    a. Refer to Addendum #02.1 for demolition allowance clarification as well as Addendum #03.1 Sheet clarifications. The Backfill allowance is directly attributed to Sheet C000. I've attached the Site Work description for this scope. It assumes 30,000 cubic yards of durable construction debris be used across the site as backfill. The GC will need to include money for the bond cost based on bond rate for Blount and Renascent. Bond is not included in the allowances. Cleanup is part of the scope of work in the allowance.

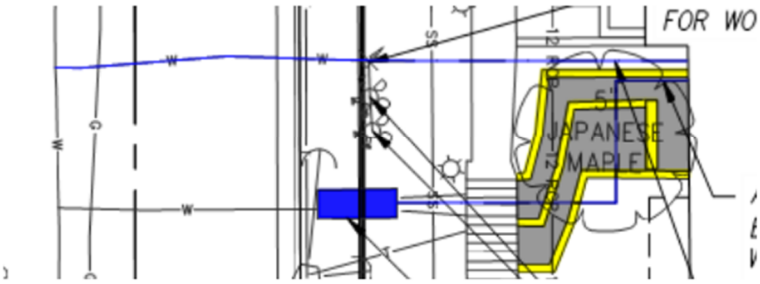
    a. **I would anticipate the interior frames to be recaulked as they abut new drywall and finishes.**
    b. In the drawing below at the women's pavilion the domestic water service is shown running below the existing stairs. The elevation drops off significantly after the stairs to match 1st floor elevation. I am assuming that the domestic water line then runs below the 1st floor level putting this water line at an impossible installation without taking out the stairs and the planter retaining walls. It appears there used to be a water service that run into the building at one time but has been cut off at the shear wall at the outer exterior of the building. This drawing is

located on C501. Please clarify how to proceed based on these conditions.



i. **Reference the revised building plans for location of proposed domestic water and fire protection lines. Existing site water lines will be reconnected to the proposed building service lines as needed based on the new proposed locations. Final location will be subject to the actual installed location of the existing lines (shown per historic drawings).**

ii. **The 5" Japanese Maple shown above is part of the "Preserved Existing Trees" on site and counts towards meeting our tree requirements per the City Code. We cannot do disturb anything within it's dripline (edge of canopy). If we did the landscape plans would be to be re-designed to increase the proposed trees.**

The specs indicate a new roof system with a 20 year warranty using a 60 mil membrane. Can you ask them to clarify which system they want: 20 year 60 mil or 30 year 80 mil?
    a. **Provide a 60 mil TPO roof with a 20 year warranty, key notes to be revised.**
91. Can you also let them know the roof system over the Women's Pavilion can't be coated because it is an existing gravel surface built up roof?
    a. **Existing gravel surface must be fully removed and prepped prior to coating being applied. Damaged membrane must be repaired or replaced be reinstalling the ballast or mechanically attached the membrane prior. Cost for this removal should be accounted for the in the alternate.**
92. The specifications have a section 10.26.16 Wall guards (Wall guard & Bumper guards), where are they located?
    a. **Refer to Finish Plan General Notes as indicated in Addendum #02.1.**
93. Bid package #4: On the electrical drawing the circuit for the gate is shown to be coming from panel "LEQWP3". Could the circuit come from the existing panel in the parking area?
    a. **No, emergency power is needed for this gate.**
94. Please clarify the scope of refurbishment/recertification required for the existing generator being relocated from the Clark Tower. This could be interpreted many ways to be included in a bid.
    a. **Refurbishment/recertification shall include replacement of all filters, oil, coolant, lubricant, hoses, belts, batteries, and any non-functioning equipment associated with the generator. System shall be load bank tested. During the running of the generator vendor shall observe that no fluid is leaking from the unit.**
95. The existing generator being relocated from Clark Tower is a 1981 model year Detroit Diesel. It is ESSE's firm opinion that a new generator will be more cost effective for the owner compared to the refurbishment and continued maintenance of a 40+ year old generator. Is it acceptable to bid a new generator as an alternate to refurbishing/recertifying and relocating the existing generator?
    a. **It is acceptable to bid a new generator as an alternate to refurbishing/recertifying/relocating the existing generator.**
96. As a follow-up to question 14.e above and the answer (#46.e) provided in Addendum 02.1,"This should be directed to civil." This response appears to be incomplete. Regarding the issue at hand, we suggest rotating the 3" water line within the building 180 degrees towards CL3 and exiting below the EIFS wall perpendicular to the adjacent existing storefront. This will require a slight modification to the existing site water line to move it south a few feet south to get it out of the planter bed but all things considered, it will be less expensive and much less invasive.
    a. We noticed this error, please refer to the response in Addendum #03.1.

97. M005 provides the schedule for the Fuel Oil System and Storage Tanks. Remark #4, states, "CONTRACTOR SHALL FURNISH A TANK FULL OF FUEL OIL FOR TANK AND REFILL TO REPLACE FUEL OIL USED FOR TESTING EQUIPMENT AT END OF PROJECT." Given the volatility of the fuel pricing, would the owner please consider establishing an allowance for the fuel oil material referenced in this remark? Either that or consider moving this scope from the contractors responsibility to the owners responsibility?
    a. **Refer to revised Allowance Specification for fuel allowance for this material.**
98. The following questions were submitted to us from a local Millwork company:
    - Is M-2 high performance industrial grade particleboard acceptable as a substrate for the general casework? Is it appropriate with the plastic laminate countertops as well?
    - Are the bottoms of wall cabinets to be white melamine or match the exterior finish of the plastic laminate casework?
    - What is required for the edge banding on the drawer and door fronts? Is this a .020 PVC or 3mm edge banding?

    a. **Refer to revised Specification 06 41 00 – Architectural Wood Casework. Match the exterior finish of the plastic laminate casework for the bottom of wall cabinets. The inside of cabinets should be white melamine. Provide 3mm edge banding on drawers and drawer fronts.**
99. Parking Garage General Note 2 refers to scope related to Hospital "Box Signs" @ Parking Garage Levels. Please provide additional clarification relative to this scope. The note references capping all electrical implying this item is an electrical component.
    a. **These items have an electrical component to them and should be disconnected.**
100. "WO-1" floor finish is identified on the floor finish plan but does not appear to be listed anywhere on the Finish Legend sheet A900. Please advise.
    a. **Refer to revised Finish Legend. WO-1 is actually CPT-9.**
101. Regarding the firing range scope, please clarify which package this scope pertains to. It is our understanding that it is to be included with the BP3.1 scope. What has confused this is understanding is the reference to BP4 in item 6.b. of the Pre-bid Meeting Agenda which states, "#02: Addition of Pre-engineered Firing Range (BP4)." Please clarify whether this was an error or if there is a relationship between the firing range scope and BP4. Note item 6.a. referencing the Alt. 1 deduct of the range from the base bid links it to (BP3).
    a. **Please keep both firing range alternates associated with BP3 pricing so that the cost differential can be more easily tracked. The intent is for the prefabricated range to be located in the BP4 parking lot should it be accepted.**
102. Regarding alternate #2, the alternate which utilizes a pre-engineered fire range in lieu of a "Stick built" or "Brick-and-mortar" site build firing range. Outside of the brief description of this alternate found in spec. section 01.23.00, which references BP3.1 sheets A108, A403 and C103, there is no information or spec provided for a "Pre-engineered" firing range. Have I missed this or is the design team asking the GC's to propose an alternate option to the stick built approach while maintaining the "programmatic and technical requirements described in this Bid Package"? Please clarify.
    a. **Refer to Sheet AS100 for Premanufactured Range Alternate #2 information.**
103. Addendum 02.1 references a reissued G003 but there was no attachment G003. Please advise.
    a. **A copy of G003 intended to be issued in Addendum #02.1 will be included in this Addendum #03.1.**
104. There appears to be damaged traffic coating at the top level of POB Parking Structure – Plans/specs don't currently address removal/replacement of traffic coating. Will this be required?
    a. **Parking garage repairs will be deferred for future maintenance by the Owner.**
105. Please see the attached spray foam insulation and Dampproofing/rigid insulation combo product substitution request submitted by Tennessee Spray Foam.
    a. **Rejected - Substitutions with this degree of coordination will not be accepted during the bidding cycle. We are open to reviewing changes such as this with the awarded GC should it produce additional project cost savings.**
106. Please see the attached operable partition product substitution request submitted by South Eastern Acoustics.
    a. **Refer to revised Specification and attached approved Substitution Request.**
107. Addendum 02.1 makes several references to the parking "barrier arms" being provided and installed by the owner with the rough-in being the responsibility of the GC. Though this remark was made multiple times, spec. section 11 12 00 - Parking Control Equipment was not deleted from the project specs. Please clarify what remaining scope within spec 11 12 00 is the responsibility of the GC.
    a. **Specification will be removed in a forthcoming Addendum. GC will be responsible for conduit rough in, power, and any curbs required by Civil.**
108. If all the GC bids come in over budget, does the city intend to award to the lowest GC bidder and work with the awarded GC to get the project into budget?
    a. **The City of Knoxville intends to work with the lowest bidder to get the project in budget and award the project once an acceptable price is achieved.**

109. The following questions (regarding sheet L100) were submitted to us from a Landscaping sub:
- A note on L100 states, "Prepare all plant beds with planting soil to a minimum depth matching the depth of the rootballs." There are some trees within the beds. Is the depth of soil based on the larger rootball depth of the trees or the shrubs?
- A note on L100 states, "All disturbed areas inside or outside the limit of work line shall receive 4" of topsoil and lawn sod as directed by Landscape Architect." Please clarify that the "disturbed areas" are defined by those areas disturbed by the GC awarded this scope of work and won't include areas disturbed in previous bid packages? For example, if we disturb areas outside the limit of work defined on these documents, we'll be responsible for placing topsoil/sod per this directive. But we will not be responsible for placing topsoil and sod at areas outside of limit of work that have been disturbed by other forces unrelated to this contract, correct?

a. **For plant beds the depth of soil should be consistent with the plant material, so in a bed with shrubs and trees the soil immediately surrounding the tree should be to the depth indicated in the tree detail (2/L200) the remaining soil depth should be consistent with the shrub detail (6/L200). The same is true regarding shrubs and groundcover.**

b. **Only areas disturbed by work done under this contract need to be dressed with soil and lawn sod. This includes areas disturbed by the general contractor or other sub-contractors working under this contract.**

110. The following questions were submitted to us from a local Fire Protection company:
- The FP drawings show a note talking about existing system(s) and changing heads to quick response etc. After a site visit earlier this week, all the sprinkler system(s) have been removed. Please clarify.
- **All sprinkler heads will be new. Notes will be updated.**
- Sheet FP101 show using the existing run-ins for the Women's Pavilion. During our site visit we noticed the run-in is in a different location and it has been cut off even with the wall leaving nothing to connect with. This also appears to be the same for the remote F.D.C. Please advise on how to connect?
- **A new 6" building supply line is already shown. A new FDC and fire pump test header will be shown in the next addendum.**
- The drawings show using the existing underground for the new pump in the POB building. After our site visit it appears the demo contractor has cut out a portion of the feed main, heat trace and insulation. I am not sure the heat trace can be spliced back together can you advise how this will be taken care of.
- **New fire protection lines will be shown.**
- The site utility C501 shows a new 6" fire line coming into the existing Central Annex building. It shows an F.D.C. on the hot box. Per NFPA you cannot put an F.D.C. on a supply side of a fire pump.
- **A new FDC and fire pump test header will be shown in the next addendum.**
- Will installation of duct detectors be part of the Ansul Inergen scope of work for room 318, 319 and 327?
- **No additional DSD are required other than what is currently specified**
- An Ansul lithium Ion battery risk prevention system is cited in the spec. For that I need to know quantity of batteries and what racking system will be used for storage.
- **Will be provided with future addendum prior to bid**
- The lithium ion packages rely of different sensors for detection based upon type of Li-Ion battery. SDS sheets are needed to identify and correctly outfit the system. Can you provide the SDS sheets now?
- **Sheets providing a full description of the system will be provided prior to final bid**
- Where will the battery storage be located, will it be partitioned off to create separate space? Can you provide rough dimensions of container?
- **Sheets providing a full description of the system will be provided prior to final bid**
- i. Will a VESDA detection system be required for the Ansul Intergen System?

a. **Yes.**

111. The following questions (regarding BP3.1) were submitted to us from a local Electrical company:
- On drawing E201 & E220.2 it shows the underground fuel tank for the gensets in areas that could be a problem to install relative to existing subgrade utilities. Has the location of the underground fuel tank locations been coordinated with subgrade conditions?
- **Location has been coordinated among the design team and are the preferred location.**
- Are there any conduits that the electrical will need to install for controls or electrical for the underground fuel tanks? Who installs the control panels?
- **Yes the electrical contractor is responsible for controls and control panel installation.**
- On the riser drawing for the POB the fire pump and the main distribution feeders are shown to be concrete encased in the garage area. Could the panel & pump be relocated for cost savings?

- **Main breaker in 'MSBCA' will be moved to allow the feed from the secondary of the transformer to route directly to the breaker and not route through the building to avoid the concrete encasement required for the length to the electric room. Reference Addendum #03.1 drawings. However, there is no way to avoid concrete encasement for the fire pump.**
- In lieu of concrete encasement of the dist. feeders references in item c. above, is a CMU enclosure acceptable?
- **Per NEC 230.6 (2) the conduit would need to be encased in concrete or brick not less than 2 inches thick.**
- Regarding the horizontal dist. feed run at the elevated parking deck condition, how do you propose we route this through the concrete parking deck?
- **Route would need to be coordinated with structural engineer and installed per NEC requirements**
- On drawing E220.2 note #2 calls out that the existing genset in the Clarke building should be sent to "CAT" for recertification. Which genset are they talking about? What should the recertification process include? Is "CAT" the only dealer we can use? Will the cost of recertification be paid by the GC or owner?

a. **These are the existing generators in the Clarke Building parking garage. Any certified generator distributor that is prequalified and capable can bid this work. Cost of recertification to be paid for by contractor.**

112. The following question (regarding BP4.1) was submitted to us from a local Electrical Company:
    - On the electrical drawing the circuit for the gate is shown to be coming from panel "LEQWP3". Could the circuit come from the existing panel in the parking area?

    a. **Emergency power is required so circuit should be from LEQWP3 as designed.**

113. The following questions (regarding the Central Annex) were submitted to us from a local Mechanical/Plumbing company:
    - The sanitary sewer (P210.1) shows the invert elevation to leave the building at -16.0' Below LL3. Please clarify whether this is coming from the upper elevation of LL3 or the lower mechanical room elevation.
    - **Updated invert elevations will be shown.**
    - We came up with the elevation needed to get the below ground plumbing installed inside the building being -3'+. Would the sanitary drop to the -16' beyond the 5' the plumbing contractor stubs out at?
    - **Updated invert elevations will be shown.**
    - There are several roof drains that are on the overhang off LL2 that are not shown on plumbing drawings. Will these roof drains need to be re-connected to the existing storm drain system?
    - **Yes.**
    - There are several roof drains that are existing. Should all roof drains within this building be replaced from 2' above ground level to existing roof drains? Or do we need to only price what is shown on the drawings? *Note not all existing roof drains are shown on drawings.

    a. **The existing roof drainage piping that has not already been demoed is in poor condition for CA and POB and WP. Plan on installing new piping, coordinated with the new architectural layout. Our drawings are based on existing drawings and may not include all drains. Field verify.**

114. Alternate 6 on the plumbing drawings P1.11.1 & P211.2 outlines the shell space only however the architectural drawing A111.1 outline a much different layout for alternate 6. Could you please clarify this alternate on the electrical, plumbing & mechanical pages?

    a. **For electrical provide 5 type 'M' lights in the shell space. Two of these type 'M' lights are to be connected to the emergency circuit and three of the lights are to be connected to the normal circuit. Provide exit signs at the egress doors connected to the emergency circuit. Provide electrical connection to the fan powered VAV boxes to panel HMLL2. Provide two speaker/strobe fire alarm devices in the space.**

    b. Provide (2) 2000 cfm vav boxes connected to 20x14 duct. Cap duct medium pressure at end of run. No low pressure duct to be connected to VAV boxes. T'stats to be connected to end of VAV box for shell tempering. Medium pressure ductwork shown on documents to be maintained.

    c. For plumbing a 3" cw will be stubbed into the shell space for future connection. A 4" sanitary vent will be stubbed in the ceiling space for future connection. Sanitary sewer lines will be stubbed in the ceiling below the restrooms and breakroom for future connection. Storm lines will be installed through the space as shown.

    d. **For Fire Protection Brass upright sprinkler heads will be provided to fully protect the shell space.**

115. Can you please clarify to what extent the deduction is for on alternate 6? Are we to leave this floor completely free of all electrical, plumbing and mechanical rough-ins if not please clarify to what extent you would like the space to be built out as?

    a. **For electrical provide 5 type 'M' lights in the shell space. Two of these type 'M' lights are to be connected to the emergency circuit and three of the lights are to be connected to the normal circuit. Provide exit signs at**

the egress doors connected to the emergency circuit. Provide electrical connection to the fan powered VAV boxes to panel HMLL2. Provide two speaker/strobe fire alarm devices in the space.

c. **For plumbing a 3" cw will be stubbed into the shell space for future connection. A 4" sanitary vent will be stubbed in the ceiling space for future connection. Sanitary sewer lines will be stubbed in the ceiling below the restrooms and breakroom for future connection. Storm lines will be installed through the space as shown.**

d. **For Fire Protection Brass upright sprinkler heads will be provided to fully protect the shell space.**

116. We have the same issues and questions concerning alternate 5. Please advise on how to proceed with pricing this as well?

a. **ICT Response (I need a narrative at what happens when we shell out spaces)! –**

b. **Provide 5 'M' lights in the shell space. Two of these type 'M' lights will be tied to the emergency lighting circuit and the other three lights will be connected to the normal lighting circuit in the shell space. Exit signs shall be provided over the egress doors tied to the emergency lighting circuit. Provide electrical connection to 8 fan powered VAV boxes connected to panel 'HMP6'. Provide 2 additional fire alarm speaker/strobe devices in the expanded shell space.**

c. **Provide (8) 2000 cfm parallel fan powered VAV boxes. Boxes to be connected to medium pressure duct work extended down the middle of the shell space. Cap medium pressure ductwork at 30"x14" medium pressure duct. No low pressure duct to be connected to VAV boxes. T'stats to be connected to end of VAV box for shell tempering. Medium pressure ductwork shown on documents to be maintained.**

d. **For plumbing A 3" cw will be stubbed into the shell space for future connection. 2 - 4" sanitary vents will be stubbed in the ceiling space for future connection; one above break room 638 and one above women's tlt 614. 117. A901-A924 - Corner Guards - Section 10.26.13- refers to locations used for vinyl and stainless steel corner guards. They are not shown on the plans anywhere, please advise.

a. **As previously answered, please refer to Finish Plan General Notes for corner guard locations and materiality.**

118. 10.51.00 – lockers - 2.04A.4 Personnel locker height is listed as 76". Does this overall height include the lockable drawer base?

a. **Yes.**

119. 10.51.00 – lockers - 2.04B.5 Please confirm that overall height of multi-tier lockers is 76" regardless of number of tiers.

a. **Correct.**

120. The 09.51.00 acoustical ceilings specifications I have a question about ACT-3 And the Suspension System for that Area.

- My other question is does the parking Garage Acoustical Ceiling get Insulation. If so which type R-11, R-19, R-30 ?

a. **Refer to revised 09 51 00 - Acoustical Ceilings Specification**

121. Please advise which elevators are operational for construction use, and what elevators are not in operation.

a. **There is one elevator in the POB and one elevator in the Central Annex that have been placed into temporary service. GCs can activate one of the elevators in the Woman's Pavilion if needed for phase 3 construction but it is not currently operating.**

122. Please advise what the allowable load per square foot is allowed on the Parking level of the POB P4 for construction logistics/scaffold posts, etc. 43. Regarding the note provided on sheet S124 near Stair 3 (level 5) in the POB, Helical brick ties are specified to attach masonry units to a 6" 18 ga. stud wall. Per the Simpson Helical product spec, these brick ties are designed to attach to a masonry backer, not a framing backer. Please advise what the masonry backer will be where brick needs to be supported to new work.

a. **The allowable load per square foot based on the building code for parking structures is 40 psf or a concentrated load of 3,000 pounds acting on an area of 4.5" x 4.5". The simpson product spec also allows these anchors to attach to metal stud.**

*Foam application temperatures and pressures can vary widely depending on temperature, humidity, elevation, substrate, equipment and other factors. While processing, the applicator must continuously observe the characteristics of the sprayed foam and adjust processing temperatures and pressures to maintain proper cell structure, adhesion, cohesion and general foam quality. It is the sole responsibility of the applicator to process and apply Heatlok XT within specification.

General Requirements: Equipment must be capable of delivering the proper ratio (1:1 by volume) of polymeric isocyanate (PMDI) and polyol blend at adequate temperatures and spray pressures. Substrate must be at least 5 degrees above dew point, with best processing results when ambient humidity is below 80%. Substrate must also be free of moisture (dew or frost), grease, oil, solvents and other materials that would adversely affect adhesion of the polyurethane foam. Applicators should limit the application of this product to no more than a thickness of 2" (50mm) per pass (after expansion) to avoid fire hazards (including spontaneous combustion) resulting from excessive heat generation. A second 2" (50mm) layer may be applied immediately after the first one has fully risen. If subsequent passes are needed, applicators should wait until the core temperature of the foam has dropped below 100°F to allow any reaction heat to dissipate from the prior applications before attempting to reapply the product.

Heatlok XT must be separated from the interior of the building by an approved thermal barrier or an approved finish material equivalent to a thermal barrier in accordance with applicable codes. Heatlok XT must be sprayed at a minimum thickness of 1" per pass. This product must not be used when the continuous service temperature of the substrate or foam is below -60°F (-51°C) or above 180°F (82°C). Heatlok XT should not be used to cover flexible ductwork.

2.0 USES

Demilec Heatlok® XT-s closed cell spray foam product is used as a nonstructural thermal insulating material in Type VB construction (IBC) and dwellings under the IRC. The insulation is for use in wall cavities, floor assemblies, ceiling assemblies or attics and crawl spaces when installed in accordance with Section 4.4.

Under the IRC and the 2018 and 2015 IBC, the insulation may be used as air-impermeable insulation when installed in accordance with Section 3.5.

The insulation also may be used in exterior walls of Type I, II, III or IV construction that do not exceed 40 feet (12 192 mm) in height above grade plane when used as described in Section 4.5.

3.0 DESCRIPTION

3.1 General:

Demilec Heatlok® XT-s product is a rigid, medium-density, spray-applied cellular polyurethane foam plastic insulation installed as a component of wall assemblies, ceilings, floors, crawlspaces and cavities of roofs. The foam plastic insulation is a two-component, closed-cell, one-to-one by volume spray foam system with a nominal density of 2.0 pcf (32 kg/m^3). The insulation is produced in the field by combining a polymeric isocyanate (A component) with a polymeric resin blend (B component). The insulation components have a shelf life of six months when stored in factory-sealed containers at temperatures between 50°F (10°C) and 80°F (26°C).

The attributes of the insulation have been verified as conforming to the provisions of ICC 700-2008 Section 703.2.1.1.1(c) as an air impermeable insulation. Note that decisions on compliance for those areas rest with the user of this report. The user is advised of the project-specific provisions that may be contingent upon meeting specific conditions, and the verification of those conditions is outside the scope of this report. These codes or standards often provide supplemental information as guidance.

3.2 Surface-burning Characteristics:

Demilec Heatlok® XT-s product, at a maximum thickness of 4 inches (102 mm) and a nominal density of 2.0 pcf (32 kg/m^3), has a flame spread index of 25 or less and a smoke-developed index of 450 or less when tested in accordance with ASTM E84 (UL 723). There are not any thickness limitations when insulation is covered by a code-prescribed thermal barrier.

3.3 Thermal Resistance (*R*-values):

Demilec Heatlok® XT-s product has thermal resistance (*R*-value) at a mean temperature of 75°F (24°C), as shown in Table 1.

3.4 Vapor Permeance:

HEATLOK® XT-s has a vapor permeance of less than 1.0 perms (5.7x10^{-12} kg/Pa-s-m^2) when applied at a

minimum of 1 inch (25.4 mm) thickness and may be used where a Class II vapor retarder is required by the applicable code.

3.5 Air Permeability:

HEATLOK® XT-s foam plastic insulation, at a minimum 1-inch (25 mm) thickness, is considered air-impermeable insulation in accordance with 2018, 2015 and 2012 IRC Section R806.5 (2009 IRC Section R806.4) and 2018 IBC Section 1202.2 (2015 IBC Section 1203.3) based on testing in accordance with ASTM E283.

3.6 DC 315 Coating:

DC 315 Coating (ESR-3702), manufactured by International Fireproof Technology, Inc. / Paint to Protect Inc., is a one-component water-based coating. The coating is supplied in 5-gallon (19 L) pails and 55-gallon (208 L) drums and has a shelf life of 12 months when stored in factory-sealed containers at temperatures between 50°F (10°C) and 80°F (27°C).

3.7 Blazelok TBX Intumescent Coating:

Blazelok™ TBX intumescent coating (ESR-3997), manufactured by TPR^2 Corporation, is a one-component water-based liquid-applied coating. The coating is supplied in 5-gallon (19 L) pails and 55-gallon (208 L) drums and has a shelf life of 12 months when stored in factory-sealed containers at temperatures between 45°F (7°C) and 95°F (35°C).

4.0 INSTALLATION

4.1 General:

Demilec Heatlok® XT-s product must be installed in accordance with the manufacturer's published installation instructions and this report. A copy of the manufacturer's published installation instructions must be available at all times on the jobsite during installation.

4.2 Application:

The insulation is spray-applied on the jobsite using equipment identified in the manufacturer's published installation instructions. The Demilec Heatlok® XT-s product must be applied when the ambient and substrate temperature is between 50ºF (10ºC) and 120ºF (49ºC). The insulation must not be used in areas that have a maximum service temperature greater than 180ºF (82ºC). The foam plastic insulation must not be used in electrical outlet or junction boxes or in continuous contact with rain or water. The substrate must be free of moisture, frost or ice, loose scales, rust, oil and grease, or contaminates that will interfere with adhesion of the spray foam insulation. The Demilec Heatlok® XT-s product is applied in passes having a maximum thickness of 2 inches (51 mm) per pass. When multiple passes are required, subsequent passes can be sprayed once the core temperature drops below 100ºF.

4.3 Thermal Barrier:

4.3.1 Application with a Prescriptive Thermal Barrier: Demilec Heatlok® XT-s insulation must be separated from the interior of the building by an approved thermal barrier of $^1/_2$-inch-thick (12.7 mm) gypsum wallboard or an equivalent 15-minute thermal barrier complying with and installed in accordance with the applicable code except where the installation complies with the requirements set forth in Section 4.3.2. When installation is within an attic or crawl space as described in Section 4.4, a thermal barrier is not required between the foam plastic and the attic or crawl space, but is required between the insulation and the interior of the building.

There is no thickness limit when installed behind a code-prescribed thermal barrier except as noted in Section 4.4.2.1.

4.3.2 Application without a Prescriptive Thermal Barrier: The prescriptive 15-minute thermal barrier may be omitted when installation is in accordance with this section. The insulation and coating may be spray-applied to the interior facing of walls and the underside of roof sheathing or roof rafters, and in crawl spaces, and may be left exposed as an interior finish without a prescribed 15-minute thermal barrier or ignition barrier. The thickness of the foam plastic applied to the underside of the roof sheathing must not exceed 11$^1/_2$ inches (292 mm). The thickness of the foam plastic applied to the vertical wall surfaces must not exceed 7$^1/_2$ inches (191mm). The foam plastic must be covered on all surfaces with DC 315 coating at a minimum wet film thickness of 18 wet mils (0.46 mm) (12 dry mils [0.31 mm]), at a rate of 1.12 gal/100 ft^2 (0.457 L/m^2) or with Blazelok™ TBX at a minimum wet film thickness of 18 wet mils (0.46 mm) (12 dry mils [0.31 mm]), at a rate of 1.12 gal/100 ft^2 (0.457 L/m^2). The coating must be applied over the Demilec Heatlok® XT-s insulation in accordance with the coating manufacturer's instructions and this report. The DC 315 coating must be applied in accordance with the manufacturer's instructions and ESR-3702. The Blazelok TBX coating must be applied in accordance with the manufacturer's instructions and ESR-3997. Surfaces to be coated must be dry, clean and free of dirt, loose debris and other substances that could interfere with the adhesion of the coating. The coating is applied in one coat by airless spray equipment at ambient temperatures above 50°F (10°C) and relative humidity of less than 70 percent.

4.4 Ignition Barrier – Attics and Crawl Spaces:

4.4.1 Application with a Prescriptive Ignition Barrier: When Demilec Heatlok® XT-s insulation is installed within attics or crawl spaces where entry is made only for service of utilities, an ignition barrier must be installed in accordance with IBC Section 2603.4.1.6 and IRC Sections R316.5.3 and R316.5.4, as applicable. The ignition barrier must be consistent with the requirements for the type of construction required by the applicable code, and must be installed in a manner so that the foam plastic insulation is not exposed. The attic or crawl space area must be separated from the interior of the building by an approved 15-minute thermal barrier as described in Section 4.3.1.

Demilec Heatlok® XT-s insulation, as described in this section, may be installed in unvented attics in accordance with 2018, 2015 and 2012 IRC Section R806.5 (2009 IRC Section R806.4) or 2018 IBC Section 1202.3 (2015 IBC Section 1203.3).

4.4.2 Application without a Prescriptive Ignition Barrier: Where the spray-applied insulation is installed in accordance with Section 4.4.2.1, the following conditions apply:

a) Entry to the attic or crawl space is to only service utilities, and no storage is permitted.

b) There are no interconnected attic or crawl space areas.

c) Air in the attic or crawl space is not circulated to other parts of the building.

d) Attic ventilation is provided when required by 2018 IBC Section 1202.2 (2015, 2012 and 2009 IBC Section 1203.2) or IRC Section R806, except when air-impermeable insulation is permitted in unvented attics in accordance with the 2018 IBC Section 1202.3 (2015 IBC Section 1203.3) or 2018, 2015 and 2012 IRC

Section R806.5 (2009 IRC Section R806.4). Underfloor (crawl space) ventilation is provided when required by 2018 IBC Section 1202.4 (2015 IBC Section 1203.4, 2012 and 2009 IBC Section 1203.3) or IRC Section R408.1, as applicable.

e) Combustion air is provided in accordance with *International Mechanical Code*® Section 701.

4.4.2.1 Application without a Prescriptive Ignition Barrier: In attics and crawl spaces, Demilec Heatlok® XT-s insulation may be spray-applied to the underside of roof sheathing and/or rafters, and to vertical surfaces and the underside of floors as described in this section. The thickness of the foam plastic applied to the underside of the overhead surfaces (roof sheathing, rafters and the underside of floors) must not exceed $11^1/_2$ inches (292 mm). The thickness of the foam plastic applied to vertical surfaces must not exceed $7^1/_2$ inches (191 mm). The insulation may be left exposed without a prescriptive ignition barrier or fire-protective coating. The attic or crawl space must be separated from the interior of the building by an approved 15-minute thermal barrier as described in Section 4.3.1.

4.4.2.2 Use on Attic Floors: Demilec Heatlok® XT-s insulation may be installed at a maximum thickness of $11^1/_2$ inches (292 mm) between and over joists in attic floors. The Demilec Heatlok® XT-s insulation must be separated from the interior of the building by an approved thermal barrier. The coating specified in Section 4.3.2 and the ignition barrier in accordance with IBC Section 2603.4.1.6 and IRC Section R316.5.3 may be omitted.

4.5 Exterior Walls of Type I, II, III and IV Construction:

4.5.1 General: When used on exterior walls of Type I, II, III, and IV construction that are 40 feet (12 192 mm) or less above grade plane, the Heatlok® XT-s insulation must comply with Section 2603.5 of the IBC and this section (Section 4.5). The insulation must not exceed a maximum thickness of 3.2 inches (81 mm). The potential heat of Demilec Heatlok® XT-s insulation is 1953 Btu/ft^2 (22.0 Mj/m^2) per inch of thickness when tested in accordance with NFPA 259.

4.5.2 Specific Wall Assemblies: One layer of $^5/_8$-inch-thick (15.9 mm), Type X gypsum wallboard complying with ASTM C36 or ASTM C1396 is installed with the long dimension perpendicular to $3^5/_8$-inch-deep (92 mm), No. 20 gage steel studs spaced a maximum of 24 inches (610 mm) on center. The wallboard is attached with No. 6, $1^1/_4$-inch-long (32 mm), self-tapping screws located 8 inches (203 mm) on center along the perimeter and in the field of the wallboard. Wallboard joints must be taped and treated with joint compound in accordance with ASTM C840 or GA-216. Fastener heads must also be treated with joint compound in accordance with ASTM C840 or GA-216.

4.5.3 Exterior Face: One layer of $^5/_8$-inch-thick (15.9 mm) sheathing complying with ASTM C1177 is attached to steel studs using $1^1/_4$-inch-long (32 mm), self-tapping screws spaced 8 inches (203 mm) on center along the perimeter and in the field of the sheathing. Heatlok® XT-s spray-applied polyurethane foam insulation, at a maximum thickness of 3.2 inches (81 mm), is spray-applied onto the exterior of sheathing. Brick ties, $3^1/_2$ inches long (89 mm), must be installed at a nominal 24 inches on center to each vertical steel stud, using two No. 14 by 5-inch-long (127 mm) hex head screws. Exterior veneer must be 4-inch-thick (102 mm) standard brick with a nominally 2-inch air gap between brick and the foam plastic insulation.

Sound Transmission Loss Test
RAL™-TL08-190

ON: 8000 Series – Operable

CONDUCTED: 8 July 2008

REVISION: 19 October 2011

TEST METHOD

Unless otherwise designated, the measurements reported below were made with all facilities and procedures in explicit conformity with the ASTM Designations E90-04 and E413-04, as well as other pertinent standards. Riverbank Acoustical Laboratories has been accredited by the U.S. Department of Commerce, National Institute of Standards and Technology (NIST) under the National Voluntary Laboratory Accreditation Program (NVLAP) for this test procedure (NVLAP Lab Code: 100227-0). A description of the measuring technique is available separately.

DESCRIPTION OF THE SPECIMEN

The test specimen was designated by the manufacturer as an 8000 Series – operable. The overall dimensions of the specimen as measured were nominally 4.27 m (168 in.) wide by 2.67 m (105 in.) high and 108 mm (4.25 in.) thick. The full height closure panel at one end measured nominally 152 mm (6 in.) thick (included in specimen area). The full width header panel attached to the top of the laboratory test frame measured nominally 133 mm (5.25 in.) thick (not included in specimen area). The specimen was installed by the manufacturer directly into the laboratory's 2.74 m (9 ft) by 4.27 m (14 ft) wood-lined steel frame which was sealed on its periphery (both sides) with dense mastic.

The manufacturer's details of the specimen were as follows: Gypsum board – 24 gauge steel – acoustical isolation – 24 gauge steel – gypsum board. The operable partition wall had retractable seals on the bottom and the top.

A description of the specimen was as follows: The test specimen was a top supported, manually operated folding operable partition. The overhead track was covered on both sides by a gypsum board construction bulkhead covered with dense mastic and was not included in the overall area of the sample. The assembly consisted of a single No. 45 track system with a No. 45 trolley per panel. Each trolley was made of four (4) steel ball bearings with nylon tires. The specimen consisted of a header, end closure and three panels. Three movable panels measured 1.37 m (54 in.) wide by 2.67 m (105 in.) high and 108 mm (4.25 in.) thick and weighed a total of 411 kg (907 lbs.). The end closure panel measured 197 m (7.75 in.) wide by 2.65 m (104.5 in.) high by 152 mm (6 in.) thick and weighed 31.5 kg (69.5 lbs.). The latching device was a positive acoustically designed seal. A visual inspection verified the manufacturer's details of the

specimen. The specimen was opened and closed at least five times, and the test was conducted with no further adjustments.

The weight of the specimen as measured was 442.9 kg (976.5 lbs.), an average of 38.9 kg/m^2 (8 lbs/ft^2). The transmission area used in the calculations was 11.4 m^2 (122.5 ft^2). The source and receiving room temperatures at the time of the test were 26±1ºC (78±1ºF) and 50±1% relative humidity. The source and receive reverberation room volumes were 178 m^3 (6,298 ft^3) and 177 m^3 (6,255 ft^3), respectively.

CA - LL2 C FINISH PLANS

USE OF DRAWINGS

TYPICAL DETAILS: ALL TYPICAL DETAILS AND NOTES SHOWN IN THE DRAWINGS SHALL APPLY UNLESS NOTED OTHERWISE. TYPICAL DETAILS MAY NOT NECESSARILY BE INDICATED ON THE PLANS BUT SHALL STILL APPLY AS SHOWN OR DESCRIBED IN THE DETAILS. WHERE TYPICAL DETAILS ARE NOTED ON THE DRAWINGS, THE SPECIFIED TYPICAL DETAIL SHALL BE USED. WHERE NO DETAIL IS NOTED, IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO CHOOSE THE APPROPRIATE TYPICAL DETAIL FROM THOSE PROVIDED. THE CONTRACTOR SHALL SUBMIT ALL PROPOSED ALTERNATE TYPICAL DETAILS TO THOSE PROVIDED WITH RELATED CALCULATIONS TO THE ENGINEER FOR APPROVAL PRIOR TO SHOP DRAWING PRODUCTION AND FIELD USE.

STRUCTURAL GENERAL NOTES: NOTES ON THE STRUCTURAL GENERAL NOTES SHEET ARE APPLICABLE UNLESS SPECIFICALLY NOTED OTHERWISE ON THE DRAWINGS.

USE OF DRAWINGS AND COORDINATION: USE STRUCTURAL DRAWINGS IN CONJUNCTION WITH ARCHITECTURAL, CIVIL, MECHANICAL AND OTHER DRAWINGS FOR BIDDING AND CONSTRUCTION. SEE ARCHITECTURAL, MECHANICAL, ELECTRICAL, AND PLUMBING DRAWINGS FOR EMBEDS, OPENINGS, SLEEVES, ETC NOT SHOWN ON THE STRUCTURAL DRAWINGS. COORDINATE WORK AND VERIFY DIMENSIONS AND CONDITIONS FOR COMPATIBILITY BETWEEN TRADES AND EQUIPMENT PURCHASED. NOTIFY OWNER'S REPRESENTATIVE OF DISCREPANCIES PRIOR TO CONSTRUCTION.

DRAWING SCALE: NOTED DIMENSIONS TAKE PRECEDENCE OVER SCALED DIMENSIONS - DO NOT SCALE DRAWINGS.

DIMENSION VERIFICATION: DIMENSIONS NOTED PLUS OR MINUS (+/-) OR AS 'FIELD VERIFY' INDICATE UN-VERIFIED DIMENSIONS THAT REQUIRE CONFIRMATION OR DETERMINATION BY THE CONTRACTOR PRIOR TO FABRICATION AND CONSTRUCTION. NOTIFY OWNER'S REPRESENTATIVE IMMEDIATELY OF CONFLICTS OR VARIATIONS FROM INDICATED DIMENSIONS.

NOTE CONFLICTS: IF ANY STRUCTURAL NOTES ARE IN CONFLICT WITH EACH OTHER ARCHITECTURAL, OTHER DRAWINGS, OR THE SPECIFICATIONS, USE THE MOST STRINGENT REQUIREMENT FOR BIDDING AND CONSTRUCTING THE WORK.

EXISTING CONDITIONS: INFORMATION SHOWN ON THE DRAWINGS RELATED TO EXISTING CONDITIONS REPRESENTS THE PRESENT KNOWLEDGE, BUT WITHOUT GUARANTEE OF ACCURACY. VERIFY ALL EXISTING DIMENSIONS, MEMBER SIZES, AND CONDITIONS IN THE FIELD PRIOR TO COMMENCING ANY WORK. IMMEDIATELY REPORT CONDITIONS THAT CONFLICT WITH THE CONTRACT DOCUMENTS TO THE ENGINEER OF RECORD. DO NOT DEVIATE FROM THE CONTRACT DOCUMENTS WITHOUT WRITTEN DIRECTION FROM THE ENGINEER OF RECORD.

DESIGN BY OTHERS: ANY ENGINEERING DESIGN PROVIDED BY OTHERS AND SUBMITTED FOR REVIEW SHALL BEAR THE SEAL OF AN ENGINEER REGISTERED IN THE STATE OF THE PROJECT AND BE ACCOMPANIED BY SUBSTANTIATING CALCULATIONS.

MEANS AND METHODS

MEANS AND METHODS: CSA ENGINEERING, INC. OR ANY OF ITS EMPLOYEES SHALL NOT HAVE CONTROL OR BE RESPONSIBLE FOR CONSTRUCTION MEANS AND METHODS, TECHNIQUES, PROCEDURES, SEQUENCES, ACTS OR OMISSIONS OF THE CONTRACTOR OR ANY OTHER PERSONS PERFORMING THE WORK, OR FOR THE FAILURE OF ANY OF INDIVIDUAL OR COMPANY TO SAFELY CARRY OUT THE WORK IN ACCORDANCE WITH THE CONTRACT DOCUMENTS.

STABILITY: THE CONTRACTOR SHALL PROVIDE NECESSARY BRACING AND SHORING AS REQUIRED UNTIL THE BUILDING'S STRUCTURAL SYSTEMS HAVE BEEN COMPLETED. THE STRUCTURE SHALL NOT BE CONSIDERED STABLE UNTIL ALL STRUCTURAL ELEMENTS HAVE BEEN CONSTRUCTED IN ACCORDANCE WITH THE CONTRACT DOCUMENTS. THE CONTRACTOR SHALL RETAIN A QUALIFIED LICENSED STRUCTURAL ENGINEER WHO SHALL DETERMINE WHERE TEMPORARY SHORING/BRACING IS REQUIRED AND PROVIDE ITS DESIGN. PROVIDE THE TEMPORARY BRACING AS REQUIRED TO STABILIZE THE STRUCTURE AND ITS COMPONENTS UNTIL ALL FINAL CONNECTIONS HAVE BEEN COMPLETED ACCORDING TO THE CONTRACT DOCUMENTS.

JOBSITE SAFETY: THE CONTRACTOR IS SOLELY RESPONSIBLE FOR PROVIDING A SAFE PLACE TO WORK AND FOR MEETING THE REQUIREMENTS OF ALL APPLICABLE JURISDICTIONS. EXECUTE WORK IN A MANNER THAT PROVIDES FOR THE SAFETY OF PERSONS AND ADJACENT PROPERTY AGAINST INJURY AND DAMAGE DUE TO FALLING DEBRIS AND OTHER HAZARDS IN CONNECTION WITH CONSTRUCTING THE WORK.

CONSTRUCTION LOADING: THE CONTRACTOR IS RESPONSIBLE FOR PROTECTING THE STRUCTURE DURING CONSTRUCTION. WHERE CONSTRUCTION SEQUENCING AND STAGING ARE LIKELY TO CREATE OVERLOADING, THE CONTRACTOR SHALL RETAIN A QUALIFIED STRUCTURAL ENGINEER TO DETERMINE HOW TO TEMPORARILY SHORE AND SUPPORT THE OVERLOADED ELEMENTS IN A MANNER THAT DOES NOT EXCEED THE STRESS LIMITS OF THE ELEMENTS AND THE SUPPORTING FOUNDATION AS DEFINED BY THE APPLICABLE BUILDING CODES.

GEOTECHNICAL

REPORT INFO: THE FOUNDATIONS WERE DESIGNED TO THE REQUIREMENTS PROVIDED IN THE PROJECT GEOTECHNICAL REPORT NUMBER **1205007-01** PREPARED BY **SHIELD ENGINEERING, INC.**, DATED **NOVEMBER 20, 2020**. THE CONTRACTOR SHALL UTILIZE THE RECOMMENDATIONS IN THE GEOTECHNICAL REPORT TO ACHIEVE THE DESIGN PARAMETERS LISTED IN THESE DRAWINGS.

ALLOWABLE BEARING PRESSURES:	
COURTS ADDITION ON NEW FILL:	3000 PSF
RETAINING WALL FOOTINGS AT LL3:	2000 PSF
FROST DEPTH:	18 INCHES
BUILDING PAD:	
SUBGRADE MODULUS:	150 PCI
COEFFICIENT OF FRICTION:	0.35
FOUNDATION/RETAINING WALL:	
WEIGHT OF BACKFILL MATERIAL:	110 PCF
AT REST PRESSURE:	55 PSF/FT
ACTIVE PRESSURE:	35 PSF/FT
PASSIVE PRESSURE:	330 PSF/FT
COEFFICIENT OF FRICTION:	0.30

GEOTECH APPROVAL: THE GEOTECHNICAL ENGINEER SHALL OBSERVE AND APPROVE PREPARED SOIL BEARING SURFACES PRIOR TO PLACEMENT OF REINFORCING STEEL AND CASTING OF FOOTING. THE GEOTECHNICAL ENGINEER OR AN APPROVED TESTING LAB SHALL OBSERVE SOIL COMPACTION WORK.

SUBGRADE PREP: SUBGRADE PREPARATION INCLUDING DRAINAGE, EXCAVATION, COMPACTION, AND FILLING REQUIREMENTS SHALL CONFORM STRICTLY TO THE CONTRACT DOCUMENTS. THE RECOMMENDATIONS GIVEN IN THE GEOTECHNICAL REPORT, AND AS DIRECTED BY THE GEOTECHNICAL ENGINEER.

UTILITIES: DETERMINE THE LOCATION OF ALL NEW/EXISTING UNDERGROUND UTILITIES IN AND ADJACENT TO THE AREA OF WORK PRIOR TO COMMENCING EXCAVATION. COORDINATE UTILITY LOCATIONS WITH FOUNDATIONS AS REQUIRED.

EXISTING STRUCTURES: CONTRACTOR SHALL CONFIRM THE ASBUILT LOCATION OF ANY POTENTIAL NEW OR EXISTING STRUCTURES OR OBJECTS WITHIN THE ZONE OF EXCAVATION INCLUDING WORK PERFORMED AS A PORTION OF THIS PROJECT BEFORE EXCAVATING OR INSTALLING FOUNDATION ELEMENTS. NOTIFY THE STRUCTURAL ENGINEER BEFORE PROCEEDING WITH ANY EXCAVATIONS OR OTHER SITE WORK, IF THE EXCAVATION WILL CUT BELOW AN ADJACENT STRUCTURE'S BOTTOM OF FOOTING ELEVATION OR IF AN ADJACENT STRUCTURE IS UPSLOPE FROM THE PLANNED SITE WORK.

BACKFILL: BACKFILL FOOTINGS AND RETAINING WALLS WITH FREE DRAINING GRANULAR FILL. PROVIDE A SUBSURFACE DRAINAGE SYSTEM FOR FOUNDATION AND RETAINING WALLS BASED ON THE GEOTECHNICAL REPORT RECOMMENDATIONS. DO NOT BACKFILL BEHIND WALLS BEFORE ADJACENT SUPPORTING ELEMENTS ARE COMPLETE AND CURED. ALTERNATIVELY, PROVIDE DESIGN AND CONSTRUCTION OF TEMPORARY BRACING THAT PROTECTS THE WALL AGAINST OVERSTRESS OR MOVEMENT.

WEEP HOLES: PROVIDE 2" DIAMETER WEEP HOLES AT 6'-0" OC MAXIMUM IN EXTERIOR RETAINING WALLS. PROVIDE FILTER FABRIC OR STAINLESS STEEL WIRE MESH OVER THE WEEP HOLE TO RETAIN THE BACKFILL MATERIAL.

SLAB-ON-GRADE BASE: AGGREGATE BASE (GRANULAR FILL) BELOW CONCRETE SLAB-ON-GRADE SHALL CONSIST OF MATERIAL AS RECOMMENDED BY THE GEOTECHNICAL ENGINEER AND BASED ON LOCAL AVAILABILITY.

FOOTINGS: FOOTINGS SHALL BEAR ON SOLID UNDISTURBED EARTH (CONTROLLED, COMPACTED STRUCTURAL FILL OR BOTH) AT LEAST FROST DEPTH BELOW LOWEST ADJACENT FINISHED GRADE. FOOTING DEPTHS/ELEVATIONS SHOWN ON PLANS AND DETAILS ARE MINIMUM. ESTABLISH THE ACTUAL BOTTOM-OF-FOOTING ELEVATIONS IN THE FIELD, BASED UPON THE GEOTECHNICAL ENGINEER'S ON-SITE OBSERVATIONS AND ADDITIONAL TESTING, IF REQUIRED, THAT WILL ACHIEVE THE ALLOWABLE DESIGN BEARING PRESSURE. NOTIFY ENGINEER OF ANY NECESSARY DEVIATIONS FROM THE FOOTING ELEVATIONS SHOWN ON THE DRAWINGS PRIOR TO CONSTRUCTING THE FOOTINGS.

CONCRETE PLACEMENT: FOUNDATION CONCRETE SHALL BE PLACED THE SAME DAY THE EXCAVATION IS MADE WHEN FEASIBLE. WHERE FOUNDATION EXCAVATIONS MUST REMAIN OPEN OR EXPOSED, SPECIAL CARE SHOULD BE TAKEN TO PROTECT THE EXPOSED SOILS FROM BEING DISTURBED, SATURATED, OR DRIED OUT PRIOR TO THE PLACEMENT OF SELECT FILL OR CONCRETE WITH A MUD MAT OF LEAN (250 PSI) CONCRETE OR AS APPROVED BY THE GEOTECHNICAL ENGINEER.

FORMS: THE EXTERIOR VERTICAL FACE OF ALL EXPOSED SLAB TURNDOWNS SHALL BE FORMED. THE SIDES OF FOOTINGS MAY BE EARTH FORMED AS LONG AS THE SOIL WILL MAINTAIN A VERTICAL FACE. ALL FOUNDATION STEM WALLS AND RETAINING WALLS SHALL BE FORMED ON BOTH SIDES OF THE WALL.

FILL BENEATH SLAB-ON-GRADE:	95% MAXIMUM DRY DENSITY
FILL BENEATH FOOTINGS:	98% MAXIMUM DRY DENSITY

DESIGN AND CONSTRUCTION CRITERIA

EXISTING BUILDINGS: EXISTING BUILDINGS WILL BE MODIFIED AS PART OF THE PROJECT. THE PROJECT IS NOT INTENDED TO BE A FULL SEISMIC RENOVATION OF THE BUILDINGS. THE BUILDINGS WILL BE MODIFIED ACCORDING TO THE WORK AREA COMPLIANCE METHOD AS SPECIFIED IN THE INTERNATIONAL EXISTING BUILDING CODE (IEBC).

WORK AREA: THE WORK PERFORMED INCLUDES AN ALTERATION 3 AT ALL BUILDINGS, A CHANGE OF OCCUPANCY IN TWO BUILDINGS, AND AN ADDITION PER THE IEBC DEFINITIONS PROVIDED IN CHAPTER 6. THE WORK AREA IS REPRESENTED ON THE DRAWINGS BY DARK LINES. THE EXISTING BUILDING NOT TO BE ALTERED IS REPRESENTED ON THE DRAWINGS BY HALF-TONE LINES. 1. THE ALTERATION DOES NOT INCREASE THE DESIGN GRAVITY LOAD IN ANY EXISTING STRUCTURAL ELEMENT BY MORE THAN 5 PERCENT.
2. THE ALTERATION DOES NOT INCREASE THE DESIGN LATERAL FORCE IN ANY EXISTING STRUCTURAL ELEMENT BY MORE THAN 10 PERCENT.
3. THE ALTERATION DOES NOT DECREASE THE DESIGN STRENGTH OF ANY EXISTING STRUCTURAL ELEMENT TO RESIST LATERAL FORCES BY MORE THAN 10 PERCENT.

SUMMARY OF EXISTING BUILDING WORK:
WOMEN'S PAVILION (WP):
THE WORK PERFORMED INCLUDES A LEVEL 3 ALTERATION AND A CHANGE OF PRIMARY OCCUPANCY FROM INSTITUTIONAL (HOSPITAL) TO BUSINESS. THE CHANGE OF OCCUPANCY DOES NOT RESULT IN AN INCREASED RISK CATEGORY.

ROOF DRAINAGE: THE ROOF FRAMING SYSTEM HAS BEEN DESIGNED WITH THE ASSUMPTION THAT A DRAINAGE SYSTEM ADEQUATE TO PREVENT PONDING WILL BE PROVIDED.

SLAB-ON-GRADE: SLABS-ON-GRADE ARE NOT DESIGNED FOR CONCENTRATED LOADS SUCH AS THOSE FROM FORKLIFTS OR STORAGE RACKS UNLESS NOTED SPECIFICALLY ON PLAN.

HANDRAILS: DESIGN LOADS FOR HANDRAILS SHALL BE AS FOLLOWS:
A. 200 LB CONCENTRATED LOAD APPLIED AT ANY POINT AND IN ANY DIRECTION.
B. 50 PLF APPLIED IN ANY DIRECTION.
THESE LOADS ARE NOT TO BE APPLIED SIMULTANEOUSLY, BUT EACH SHALL BE APPLIED TO PRODUCE MAXIMUM STRESSES IN EACH OF THE RESPECTIVE HANDRAIL COMPONENTS.

GUARDRAILS: DESIGN LOADS FOR GUARDRAILS SHALL BE AS FOLLOWS:
A. 200 LB CONCENTRATED LOAD APPLIED AT ANY POINT AND IN ANY DIRECTION AT THE TOP OF THE GUARDRAIL.
B. 50 PLF APPLIED HORIZONTALLY AND A SIMULTANEOUS LOAD OF 100 PLF APPLIED VERTICALLY DOWNWARD AT THE TOP OF THE GUARDRAIL.
C. 200 LB CONCENTRATED HORIZONTAL LOAD APPLIED ON A 1 FT SQUARE AREA AT ANY POINT IN THE SYSTEM.
THESE LOADS ARE NOT TO BE APPLIED SIMULTANEOUSLY, BUT EACH SHALL BE APPLIED TO PRODUCE MAXIMUM STRESSES IN EACH OF THE RESPECTIVE HANDRAIL COMPONENTS.

MECHANICAL: COORDINATE THE LOCATIONS OF ROOF, FLOOR AND WALL OPENINGS WITH THE TRADES REQUIRING THEM. OPENINGS LARGER THAN 24" X 24" SHALL BE COORDINATED WITH THE STRUCTURAL ENGINEER TO DETERMINE POTENTIAL IMPACTS ON THE FRAMING. ANY EQUIPMENT WEIGHING MORE THAN 200 LBS SHALL BE COORDINATED WITH THE STRUCTURAL ENGINEER TO DETERMINE POTENTIAL IMPACTS ON THE FRAMING.

SUBMITTALS

SHOP DRAWINGS: SUBMIT SHOP DRAWINGS FOR REVIEW AND ACCEPTANCE BY THE OWNER'S REPRESENTATIVE AND ENGINEER-OF-RECORD PRIOR TO ANY FABRICATION OR CONSTRUCTION. DIMENSION AND QUANTITY VERIFICATION ARE THE CONTRACTOR'S RESPONSIBILITIES AND ARE NOT REVIEWED BY THE ENGINEER OF RECORD. THE CONTRACTOR SHALL REVIEW AND STAMP DRAWINGS PRIOR TO REVIEW BY THE ENGINEER OF RECORD. IF DEVIATIONS, DISCREPANCIES, OR CONFLICTS BETWEEN SHOP DRAWING SUBMITTALS AND THE CONTRACT DOCUMENTS ARE DISCOVERED, EITHER PRIOR TO OR AFTER THE ENGINEER PROCESSES THE SHOP DRAWING SUBMITTALS, THE DESIGN DRAWINGS AND SPECIFICATIONS SHALL CONTROL AND SHALL BE FOLLOWED.

DEVIATION FROM CONTRACT DOCUMENTS: CHANGES TO THE CONTRACT DOCUMENTS SHALL BE CLOUDED ON SHOP DRAWINGS OR REQUESTED IN WRITING. THE CONTRACTOR IS LIABLE FOR ANY DEVIATIONS UNLESS REVIEWED AND ACKNOWLEDGED BY THE ENGINEER OF RECORD IN WRITING.

DRAWING PREPARATION: COPIES OF STRUCTURAL DRAWINGS (PLANS AND/OR DETAILS) WILL NOT BE ACCEPTED BY CSA AS SHOP DRAWINGS. ALL SHOP DRAWINGS MUST BE REPRODUCED BY THE RESPECTIVE SUPPLIERS AND DETAILED AS NECESSARY.

SUBMITTAL REVIEW TIME: THE CONTRACTOR SHALL PROVIDE 10 WORKING DAYS IN HIS SCHEDULE FOR THE ENGINEER'S REVIEW OF EACH SUBMITTAL. THE 10 WORKING DAYS COMMENCE UPON THE ENGINEER'S RECEIPT OF A PROPERLY COMPLETED SUBMITTAL IN HIS OFFICE.

REQUIRED SUBMITTALS:
REQUIRED SUBMITTALS INCLUDE, BUT ARE NOT LIMITED TO, THE FOLLOWING:

- BIDDER-DESIGNED SUBMITTALS

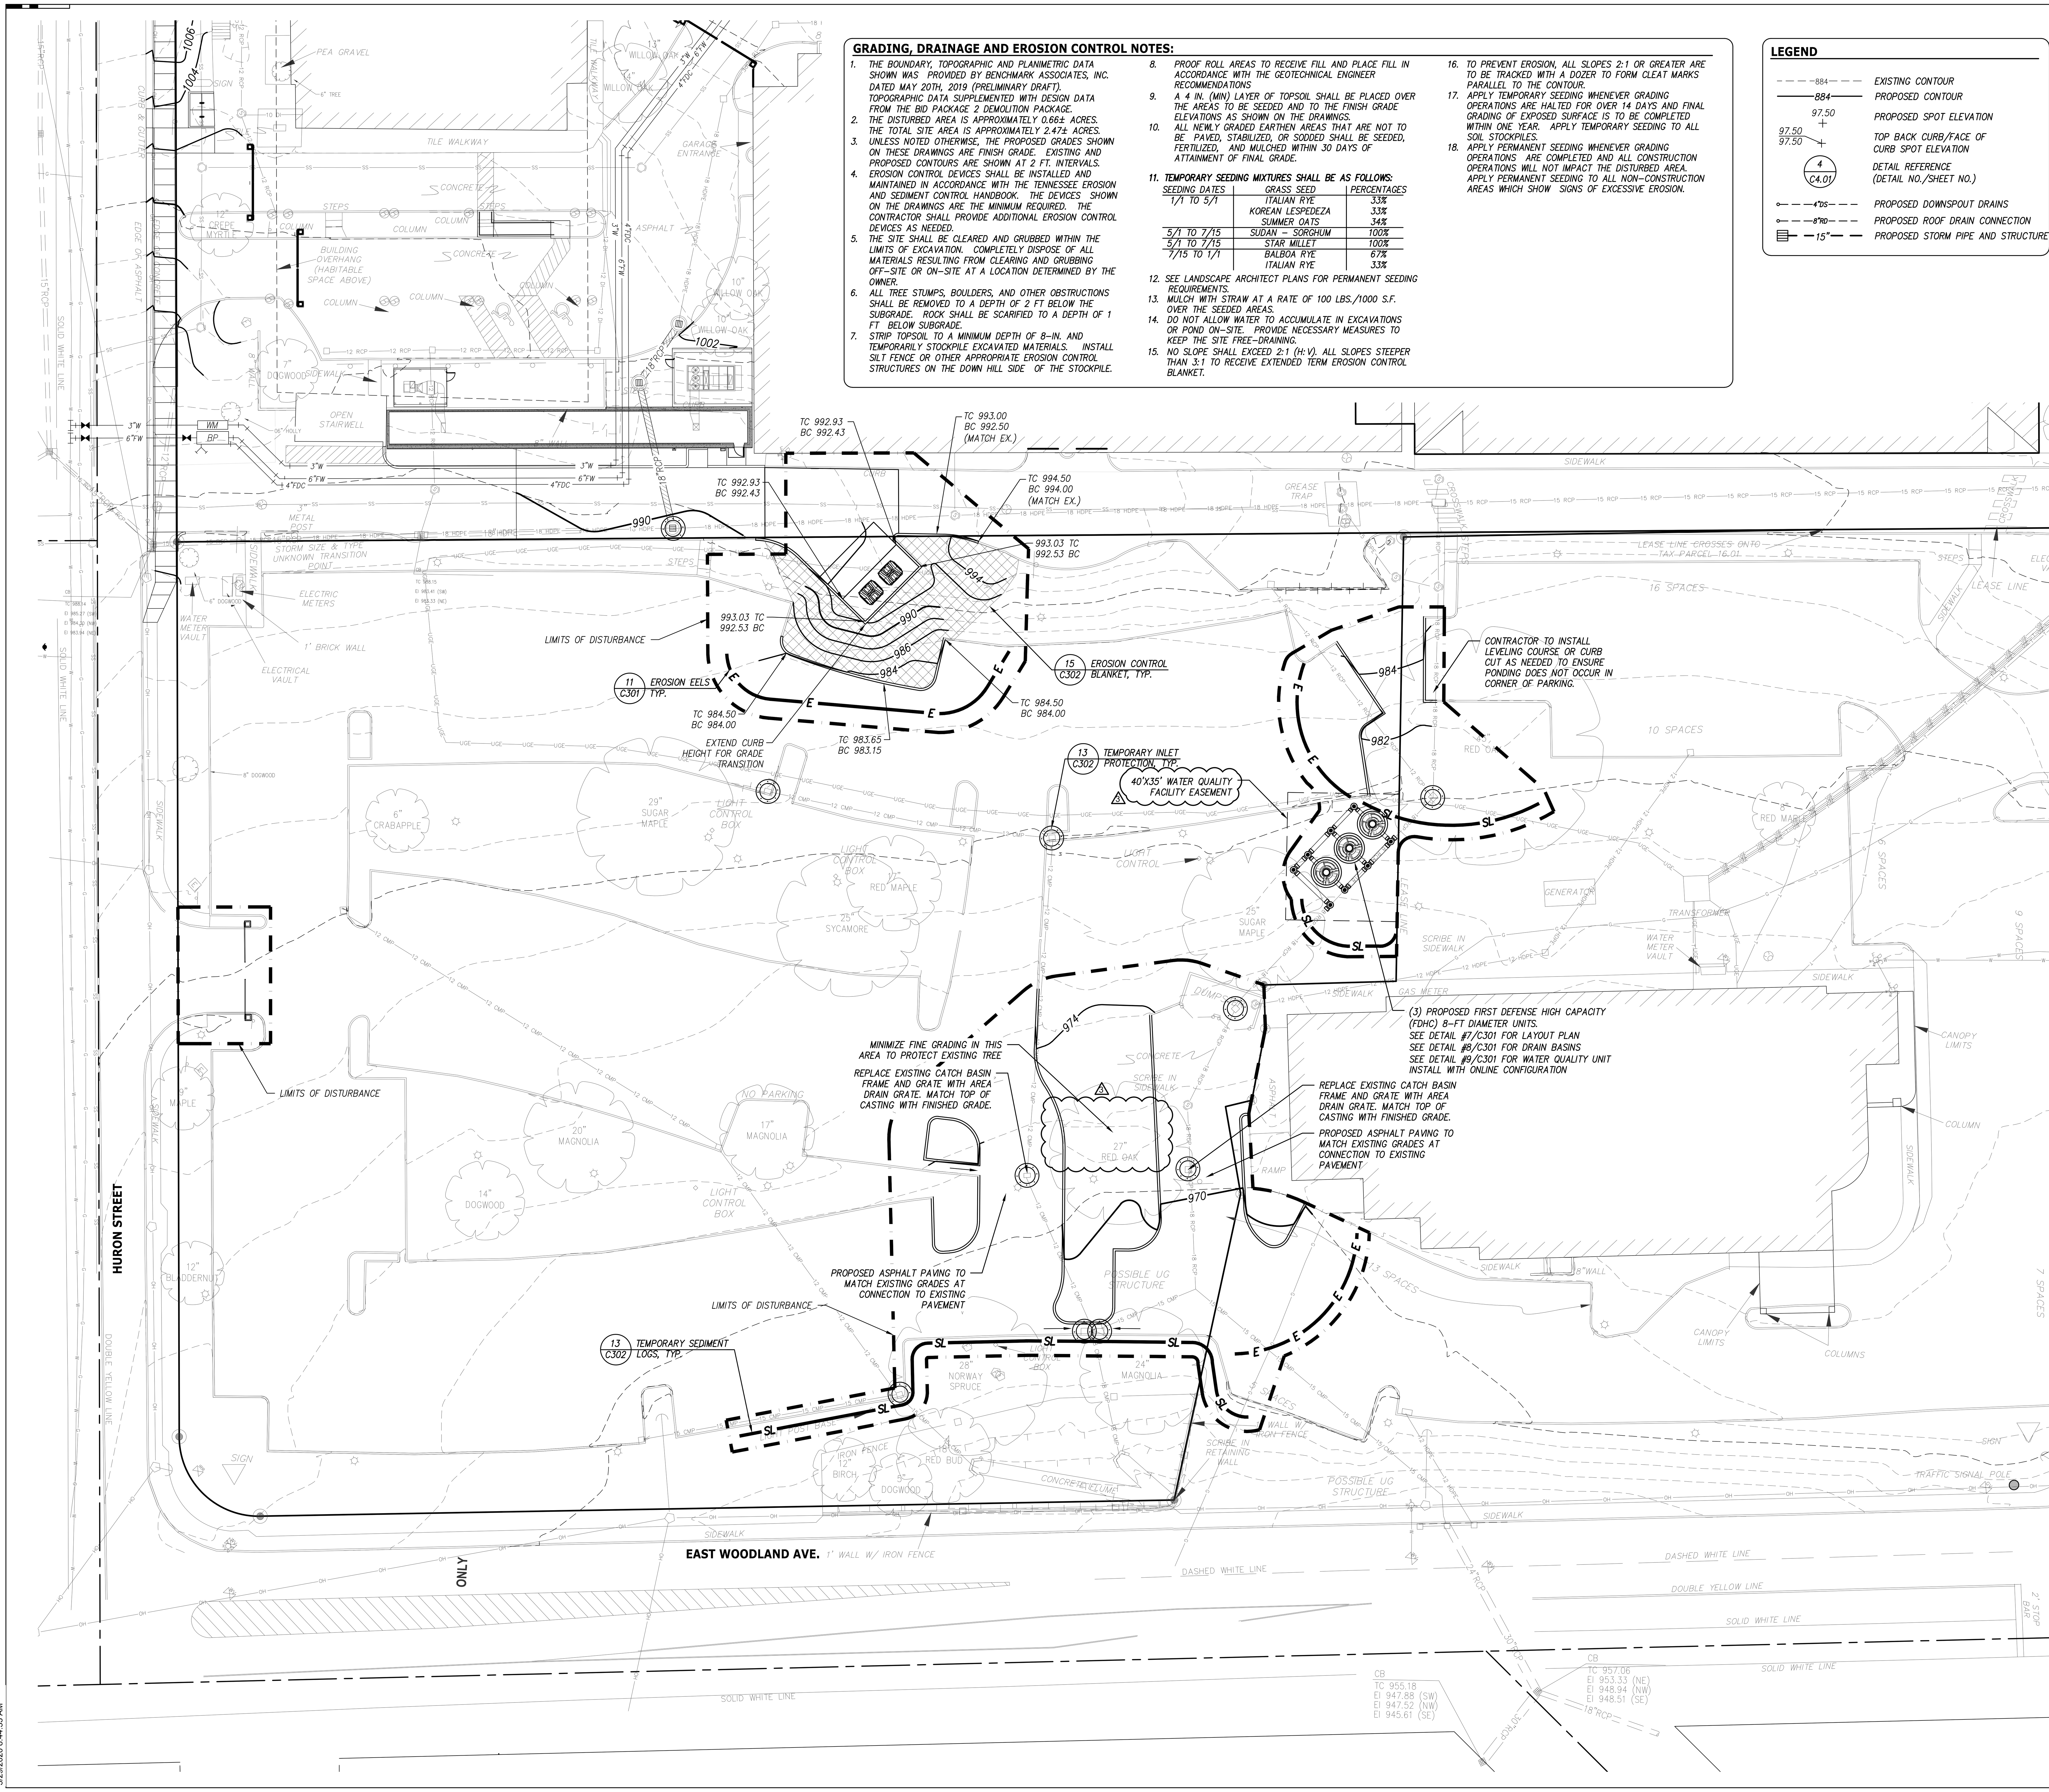
SITE LAYOUT AND STRIPING PLAN



GRADING, DRAINAGE AND EROSION CONTROL NOTES:

1. THE BOUNDARY, TOPOGRAPHIC AND PLANIMETRIC DATA SHOWN WAS PROVIDED BY BENCHMARK ASSOCIATES, INC. DATED MAY 20TH, 2019 (PRELIMINARY DRAFT). TOPOGRAPHIC DATA SUPPLEMENTED WITH DESIGN DATA FROM THE BID PACKAGE 2 DEMOLITION PACKAGE.
2. THE DISTURBED AREA IS APPROXIMATELY 0.66± ACRES. THE TOTAL SITE AREA IS APPROXIMATELY 2.47± ACRES.
3. UNLESS NOTED OTHERWISE, THE PROPOSED GRADES SHOWN ON THESE DRAWINGS ARE FINISH GRADE. EXISTING AND PROPOSED CONTOURS ARE SHOWN AT 2 FT. INTERVALS.
4. EROSION CONTROL DEVICES SHALL BE INSTALLED AND MAINTAINED IN ACCORDANCE WITH THE TENNESSEE EROSION AND SEDIMENT CONTROL HANDBOOK. THE DEVICES SHOWN ON THE DRAWINGS ARE THE MINIMUM REQUIRED. THE CONTRACTOR SHALL PROVIDE ADDITIONAL EROSION CONTROL DEVICES AS NEEDED.
5. THE SITE SHALL BE CLEARED AND GRUBBED WITHIN THE LIMITS OF EXCAVATION. COMPLETELY DISPOSE OF ALL MATERIALS RESULTING FROM CLEARING AND GRUBBING OFF-SITE OR ON-SITE AT A LOCATION DETERMINED BY THE OWNER.
6. ALL TREE STUMPS, BOULDERS, AND OTHER OBSTRUCTIONS SHALL BE REMOVED TO A DEPTH OF 2 FT BELOW THE SUBGRADE. ROCK SHALL BE SCARIFIED TO A DEPTH OF 1 FT BELOW SUBGRADE.
7. STRIP TOPSOIL TO A MINIMUM DEPTH OF 8-IN. AND TEMPORARILY STOCKPILE EXCAVATED MATERIALS. INSTALL SILT FENCE OR OTHER APPROPRIATE EROSION CONTROL STRUCTURES ON THE DOWN HILL SIDE OF THE STOCKPILE.
8. PROOF ROLL AREAS TO RECEIVE FILL AND PLACE FILL IN ACCORDANCE WITH THE GEOTECHNICAL ENGINEER RECOMMENDATIONS
9. A 4 IN. (MIN) LAYER OF TOPSOIL SHALL BE PLACED OVER THE AREAS TO BE SEEDED AND TO THE FINISH GRADE ELEVATIONS AS SHOWN ON THE DRAWINGS.
10. ALL NEWLY GRADED EARTHEN AREAS THAT ARE NOT TO BE PAVED, STABILIZED, OR SODDED SHALL BE SEEDED, FERTILIZED, AND MULCHED WITHIN 30 DAYS OF ATTAINMENT OF FINAL GRADE.
11. **TEMPORARY SEEDING MIXTURES SHALL BE AS FOLLOWS:**

SEEDING DATES	GRASS SEED	PERCENTAGES
1/1 TO 5/1	ITALIAN RYE	33%
	KOREAN LESPEDEZA	33%
	SUMMER OATS	34%
5/1 TO 7/15	SUDAN - SORGHUM	100%
5/1 TO 7/15	STAR MILLET	100%
7/15 TO 1/1	BALBOA RYE	67%
	ITALIAN RYE	33%

12. SEE LANDSCAPE ARCHITECT PLANS FOR PERMANENT SEEDING REQUIREMENTS.
13. MULCH WITH STRAW AT A RATE OF 100 LBS./1000 S.F. OVER THE SEEDED AREAS.
14. DO NOT ALLOW WATER TO ACCUMULATE IN EXCAVATIONS OR POND ON-SITE. PROVIDE NECESSARY MEASURES TO KEEP THE SITE FREE-DRAINING.
15. NO SLOPE SHALL EXCEED 2:1 (H:V). ALL SLOPES STEEPER THAN 3:1 TO RECEIVE EXTENDED TERM EROSION CONTROL BLANKET.
16. TO PREVENT EROSION, ALL SLOPES 2:1 OR GREATER ARE TO BE TRACKED WITH A DOZER TO FORM CLEAT MARKS PARALLEL TO THE CONTOUR.
17. APPLY TEMPORARY SEEDING WHENEVER GRADING OPERATIONS ARE HALTED FOR OVER 14 DAYS AND FINAL GRADING OF EXPOSED SURFACE IS TO BE COMPLETED WITHIN ONE YEAR. APPLY TEMPORARY SEEDING TO ALL SOIL STOCKPILES.
18. APPLY PERMANENT SEEDING WHENEVER GRADING OPERATIONS ARE COMPLETED AND ALL CONSTRUCTION OPERATIONS WILL NOT IMPACT THE DISTURBED AREA. APPLY PERMANENT SEEDING TO ALL NON-CONSTRUCTION AREAS WHICH SHOW SIGNS OF EXCESSIVE EROSION.

SLOPE INSTALLATION NOTES

1. PREPARE SOIL BEFORE INSTALLING ROLLED EROSION CONTROL PRODUCTS (RECP's), INCLUDING ANY NECESSARY APPLICATION OF LIME, FERTILIZER, AND SEED. NOTE: WHEN USING CELL-O-SEED DO NOT SEED PREPARED AREA. CELL-O-SEED MUST BE INSTALLED WITH PAPER SIDE DOWN.
2. BEGIN AT THE TOP OF THE SLOPE BY ANCHORING THE RECP's IN A 6" (15 CM) DEEP X 6" (15 CM) WIDE TRENCH WITH APPROXIMATELY 12" (30cm) OF RECP's EXTENDED BEYOND THE UP-SLOPE PORTION OF THE TRENCH. ANCHOR THE RECP's WITH A ROW OF STAPLES/STAKES APPROXIMATELY 12" (30 CM) APART IN THE BOTTOM OF THE TRENCH. BACKFILL AND COMPACT THE TRENCH AFTER STAPLING. APPLY SEED TO COMPACTED SOIL AND FOLD REMAINING 12" (30 CM) PORTION OF RECP's BACK OVER SEED AND COMPACTED SOIL. SECURE RECP's OVER COMPACTED SOIL WITH A ROW OF STAPLES/STAKES SPACED APPROXIMATELY 12" (30 CM) APART ACROSS THE WIDTH OF THE RECP's.
3. ROLL THE RECP's (A.) DOWN OR (B.) HORIZONTALLY ACROSS THE SLOPE. RECP's WILL UNROLL WITH APPROPRIATE SIDE AGAINST THE SOIL SURFACE. ALL RECP's MUST BE SECURELY FASTENED TO SOIL SURFACE BY PLACING STAPLES/STAKES TM IN APPROPRIATE LOCATIONS AS SHOWN IN THE STAPLE PATTERN GUIDE. WHEN USING THE DOT SYSTEM , STAPLES/STAKES SHOULD BE PLACED THROUGH EACH OF THE COLORED DOTS CORRESPONDING TO THE APPROPRIATE STAPLE PATTERN.
4. THE EDGES OF PARALLEL RECP's MUST BE STAPLED WITH APPROXIMATELY 2" - 5" (5 CM - 12.5 CM) OVERLAP DEPENDING ON RECP's TYPE.
5. CONSECUTIVE RECP's SPLICED DOWN THE SLOPE MUST BE PLACED END OVER END (SHINGLE STYLE) WITH AN APPROXIMATE 3" (7.5 CM) OVERLAP. STAPLE THROUGH OVERLAPPED AREA, APPROXIMATELY 12" (30 CM) APART ACROSS ENTIRE RECP's WIDTH. NOTE: *IN LOOSE SOIL CONDITIONS, THE USE OF STAPLE OR STAKE LENGTHS GREATER THAN 6" (15 CM) MAY BE NECESSARY TO PROPERLY SECURE THE RECP's.
