I. Introduction/Survey Results/Recommendations

I. INTRODUCTION/SURVEY RESULTS

Gaudet Associates, Inc., a licensed Florida Asbestos Business (ZA#0000011), was retained to perform a pre-demolition asbestos material identification survey for a Fire Station #7 at 1215 82nd Avenue in Vero Beach, FL.

Fire Station #7 is vacant and constructed of concrete block on a concrete slab with an asphalt shingle roof on a wood deck. The interior consists of ceiling tile, floor tile, carpet, plaster, duct mastic and fiberglass insulation in the attic. The structure is approximately 3,200 s.f. and is slated to be demolished.

Gaudet Associates, Inc. scheduled an EPA Certified Building Inspector, Mr. Michael McGovern to perform the survey on November 30, 2018. The purpose of the survey was to identify, bulk sample and quantify suspect asbestos containing building materials in those areas accessible to the inspector. The inspector collected a total of twenty-five (25) samples. These samples were analyzed by a National Voluntary Laboratory Accreditation Program (NVLAP) accredited laboratory using Polarized Light Microscopy (PLM).

The Environmental Protection Agency's (EPA) definition of an asbestos-containing material is one that is greater than one (1%) percent asbestos. **One (1) of the samples collected proved positive to asbestos content.**

The asbestos containing materials is:

<u>Material</u>	<u>Location</u>	<u>Approximately Quantity</u>
Sink Undercoat (white)	Kitchen	1 Double Sink

Sink Undercoat (white)

The sink undercoat (white) contains two (2%) percent chrysotile asbestos and non-friable and in fair to good condition. This material is located in the kitchen.

RECOMMENDATIONS

Gaudet Associates, Inc. recommends that the sink undercoat (white) in the kitchen must be removed prior to demolition by a Florida Licensed Asbestos Abatement Contractor. All work shall be performed accordance with all Local, State and Federal regulations.

Once the sink undercoat (white) has been removed, Fire Station #7 can be demolished, and all of its components can be recycled and/or placed in a Class III landfill. All work shall be performed in accordance with all Local, State Federal regulations.

II. Building Overview

II. BUILDING OVERVIEW

In conducting this building inspection in compliance with all local, state and federal regulations, all suspected asbestos-containing building materials (ACBM) which were accessible to the inspector, were either sampled to confirm the actual presence of asbestos or assumed to contain asbestos. Where suspected ACBM could be examined or by review of an existing plan, if available, could be determined to exist, such materials were also tested or assumed, as appropriate.

Building areas between walls, under floors, under concrete slabs and above permanent ceilings, all of which could not be accessed, were not visually inspected nor were materials therein sampled as a part of this building inspection.

Due in fact that over 3,600 different building products are recognized as asbestos-containing building materials, it cannot be said that all such products, which may be included in the subject building, have or could be identified. Due in fact that asbestos is an ingredient within a product and can be unevenly distributed, Gaudet Associates, Inc. cannot accept responsibility for the sample results and only reports said results as received by the accredited laboratory.

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.
