I. Introduction/Survey Results/Recommendations

I. INTRODUCTION/SURVEY RESULTS

Gaudet Associates, Inc., a licensed Florida Asbestos Business (ZA#0000011), was retained to perform an asbestos material identification survey for the Residential structure located at 2690 49th Street in Vero Beach, FL.

The survey consisted of the Main House and Garage. The remains of old shed were not located.

The House is constructed of wood frames walls, wood floor with rolled roofing. The interior consists of linoleum, floor tile carpet and drywalls. The structure is slated to be demolished.

The Garage is constructed of wood and metal.

Gaudet Associates, Inc. scheduled an EPA Certified Building Inspector, Mr. Michael McGovern to perform the survey on December 28, 2021. The purpose of the survey was to identify, bulk sample and quantify suspect asbestos containing building materials in those areas accessible to the inspector. The inspector collected a total of fourteen (14) samples. These samples were analyzed by a National Voluntary Laboratory Accreditation Program (NVLAP) accredited laboratory using Polarized Light Microscopy (PLM).

The Environmental Protection Agency's (EPA) definition of an asbestos-containing material is one that is greater than one (1%) percent asbestos. Four (4) of the samples proved positive for asbestos content.

The materials that are asbestos containing are as follows:

<u>Material</u>	<u>Location</u>	<u>Approximately Quantity</u>
9" x 9" Floor Tile (beige) w/Black Mastic	Bathroom	40 s.f.
9"x 9" Floor Tile (beige) w/Black Mastic	Throughout House	800 s.f.

9" x 9" Floor Tile (beige) w/Black Mastic

The 9" x 9" Floor Tile (beige) w/Black Mastic contains two to five (2 - 5%) percent Chrysotile asbestos and is non-friable. The material is in fair condition and is located throughout the house on wood.

RECOMMENDATIONS

Gaudet Associates, Inc. recommends that the 9" x 9" Floor Tile (beige) w/Black Mastic should be removed prior to demolition by a Florida Licensed Asbestos Abatement contractor. All work shall be performed in accordance with all Local, State and Federal regulations.

Once the 9" x 9" Floor Tile (beige) w/Black Mastic has been removed, the house can be demolished, and all of its components can be recycled and/or placed in a Class III landfill. All works shall be performed in accordance with all Local, State and Federal regulations.

The Garage structure can be demolished. No suspected asbestos containing materials were observed.

II. Building Overview

II. BUILDING OVERVIEW

In conducting this building inspection in compliance with all local, state and federal regulations, all suspected asbestos-containing building materials (ACBM) which were accessible to the inspector, were either sampled to confirm the actual presence of asbestos or assumed to contain asbestos. Where suspected ACBM could be examined or by review of an existing plan, if available, could be determined to exist, such materials were also tested or assumed, as appropriate.

Building areas between walls, under floors, under concrete slabs and above permanent ceilings, all of which could not be accessed, were not visually inspected nor were materials therein sampled as a part of this building inspection.

Due in fact that over 3,600 different building products are recognized as asbestos-containing building materials, it cannot be said that all such products, which may be included in the subject building, have or could be identified. Due in fact that asbestos is an ingredient within a product and can be unevenly distributed, Gaudet Associates, Inc. cannot accept responsibility for the sample results and only reports said results as received by the accredited laboratory.

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method") but augmented with procedures outlined in the 1993 ("final") version of the method. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. Non-friable organically bound materials present a problem matrix and therefore EMSL recommends gravimetric reduction prior to analysis. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample. Estimation of uncertainty is available on request.
