Local Comprehensive Beach Management Plan & Engineered Beach Services

Scope of Work:

Georgetown County is requesting the preparation of a Local Comprehensive Beach Management Plan (LCBMP), with the goal of establishing FEMA-eligible engineered beaches along the County's developed beach communities. Thus, the County seeks an experienced Team which can provide the range of expertise related to the services detailed herein including resources from their firm or use of sub-consulting firms. At a minimum the LCBMP is required to include the following ten elements under the South Carolina Beachfront Management Act (SCBMA):

- 1) An inventory of beach profile and historic erosion rate data for each standard and inlet erosion zone under the local jurisdiction
- 2) A list of public beach accesses, along with a plan for enhancing public access and parking
- 3) An inventory of all structures located in the area seaward of the setback line
- 4) An inventory of turtle nesting and important habitats of the beach/dune system and if necessary, a protection and restoration plan.
- 5) A conventional zoning and land use plan consistent with the purposes of the SCBMA for the area seaward of the setback line
- 6) An analysis of beach erosion control alternatives, including renourishment of the beach under the local government's jurisdiction
- 7) A drainage plan for the area seaward of the setback line
- 8) A post-disaster plan that includes strategies for cleanup, maintaining essential services, protecting public health, emergency building ordinances, and the establishment of priorities, all of which must be consistent with the SCBMA
- 9) A detailed strategy that highlights both short and long-term planning objectives to protect, preserve, restore, and enhance the beach/dune system
- 10) A detailed plan for achieving the goals of preserving existing public access and enhancing public access to assure full enjoyment of the beach by all state residents

Develop a Local Comprehensive Beach Management Plan

The County is requesting the development of a LCBMP that accounts for each of the 10 tasks outlined above. This plan will follow the requirements outlined in OCRM's guidance for developing LCBMPs (available on OCRM's website). Specific task requirements will be:

- 1) Assemble an overview of beach management history along Georgetown County, including past projects, areas of particular concern, storm history, existing policies, and local community efforts for beach management. Prepare an outline of local policies, management issues, conflicts, or other significant matters regarding the beach.
- 2) Assemble existing beach profile data collected by the state, academic, and/or local beach monitoring efforts and provide an analysis of volumetric erosion rates for each County beach for date ranges spanning available data. Conduct linear shoreline erosion assessments along each County beach using available orthoimagery spanning a minimum of 40 years. Provide maps showing erosion rates and OCRM-defined beach and inlet erosion zones for each County beach.
- 3) Prepare an inventory of existing public beach accesses with parking information, structures seaward of the setback lines (including habitable structures, pools, coastal erosion structures, and other infrastructure), maps of beach areas with state-defined full and complete public access, and maps showing past beach improvement efforts (sand transfers, nourishment).
- 4) Prepare a summary of sea turtle nesting data for each County beach over the past 10 years. Provide maps and summaries of current and proposed critical habitat areas for sea turtles, piping plovers, red knots, and other endangered species that utilize County beaches. Provide maps and/or charts describing overall dune habitat conditions along County beaches.
- 5) The awarded engineering firm will prepare a land use and drainage plan for areas seaward of the OCRM setback line in coordination with local towns and HOAs. The plan will consider existing state policies regarding development in the beach/dune system and beach area. The engineering firm will produce maps, GIS layers, metadata, or other geospatial information for inclusion in the land use plan.
- 6) Provide an analysis of beach restoration alternatives, including beach nourishment (offshore and inland), coastal structures, structure relocation, or other acceptable methods under state and federal regulations. The analysis will include a summary of existing geotechnical information regarding previous borrow areas and offshore sediment characteristics.
- 7) The awarded engineering firm will prepare a disaster recovery plan for the beach areas, including debris removal, emergency beach restoration, and coordination with state and federal agencies (OCRM, FEMA, USACE).
- 8) On behalf of the County, the awarded engineering firm will prepare short and long-term planning for beach preservation, protecting and enhancing the public use of the beach, and preserving the natural environment and habitats of the beach/dune system.

Develop a long-range engineered Beach feasibility assessment and designs

The County is requesting the preparation of a feasibility study and long-range beach management plan, focusing on establishing FEMA-eligible engineered beaches along the County's developed beach communities. This plan will include an assessment of the present status of beaches potentially qualifying as FEMA-engineered beaches (eligible for Category G disaster funds), as well as requirements for non-approved beaches to become FEMA-eligible.

The study will address permit requirements, localized design considerations, borrow area information, and a preliminary cost opinion for initial and future projects spanning a 20-30 year time frame. The study will include a detailed outline of tasks required to implement components of the plan, including (but not limited to) engineering analysis, environmental assessments, geotechnical or other field data collection, permitting, bidding, and monitoring as detailed below.
