

Master Plant Schedule

Table with columns: Key, Qty, Botanical Name, Common Name, Size, Notes. Lists various tree species like Amelanchier, Acer, Asimina, Betula, etc.

Southern Short Grass Meadow Mix 111 (Roundstone Seed)
WM 2.0000 Southern Short Grass Meadow Mix Lbs. 8 PLS/acre, Roundstone Seed: Meadow Mix 111, quantity to be verified

Table with columns: Key, Qty, Botanical Name, Common Name, Size, Notes. Lists Mulch and Arborist Wood Mulch.

Note: All trees to be installed by others

90% Coordination Set, Plant Schedule in progress

Abbreviations:

MT: Multi-trunk CAL: Caliper
CT: Clear Trunk HGT: Height
MIN: Minimum O.C.: On Center
GAL: Gallon QTS: Quart
CL: Central Leader CY: Cubic Yards
SF: Squar Feet LBS: Pounds
DP-50: Deep Plug 50 Count
PLS: Pure Live Seed

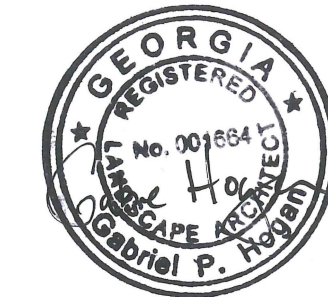

Table with columns: Key, Qty, Botanical Name, Common Name, Size, Notes. Lists shrubs and groundcover plants like Amsonia, Aesculus, Aster, etc.

Table with columns: Key, Qty, Botanical Name, Common Name, Size, Notes. Lists ornamental grasses like Andropogon, Bouteloua, Chasmanthium, etc.

Table with columns: Key, Qty, Botanical Name, Common Name, Size, Notes. Lists plants for Wetland Meadow Mix like Asclepias, Helonium, Iris, etc.

Plants with * will require multiple cultivars of same size and form.

Alternate option for Cherokee Sedge

06/11/2021

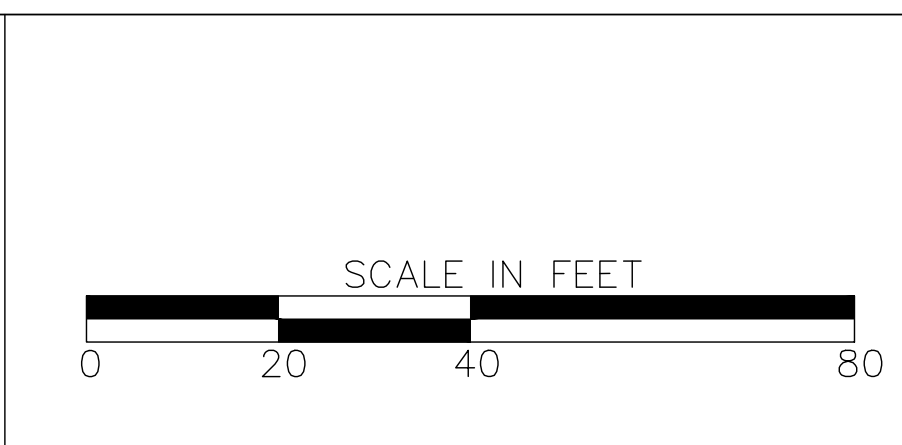

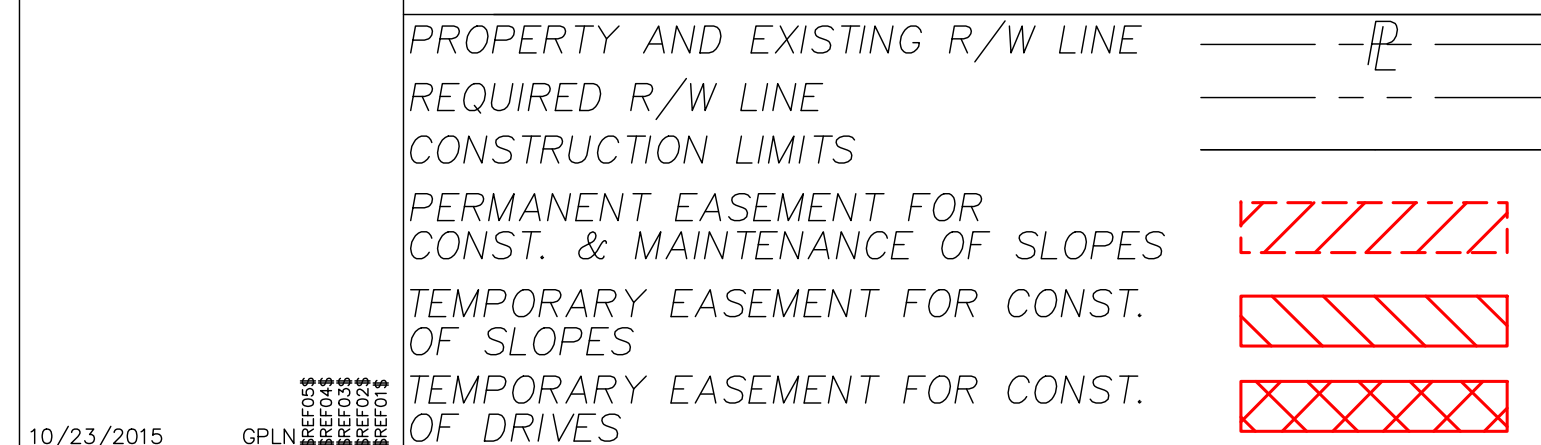

Table with columns: REVISION DATES, CHECKED, BACKCHECKED, CORRECTED, VERIFIED, DATE.

PLANTING PLANS ATLANTA BELTLINE SOUTHSIDE TRAIL (SEGMENT 4-5) DRAWING No. 29-100

Planting Notes

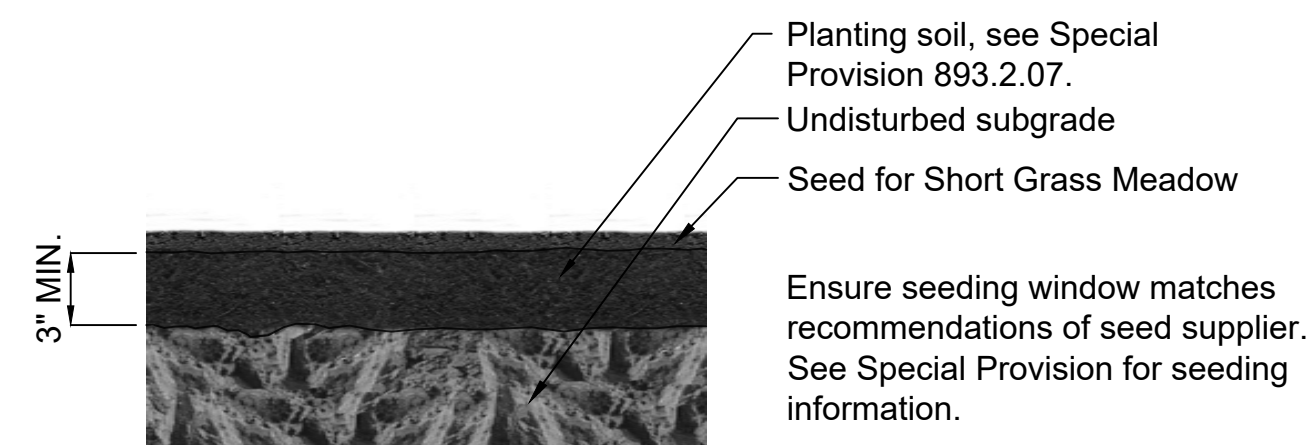

1. Refer to the Department of Transportation State of Georgia Special Provision Atlanta Beltline, Inc., section 702, Vine, Shrub, and Tree planting, and section 893, Miscellaneous plant materials. Notes are in addition to Special Provision notes, any conflicts that arise between the Special Provision document and the notes herein, the Special Provision shall govern.
2. Contractor shall verify all existing conditions in the field and report any discrepancies to the Landscape Architect or Owner's Representative prior to starting work.
3. No planting shall occur until soil samples have been received and all planting areas modified appropriately as per Special Provision section 893.
4. Plant selections reflect the nature of the planned environment and may need to be shifted due to as-built conditions. If built conditions do not match the plans stop work immediately and alert the Landscape Architect or Owner's Representative to confirm direction.
5. Stake location of all proposed trees and planting areas for approval by the Landscape Architect or Owner's Representative prior to the commencement of planting.
6. All new plant material shall conform to the guidelines established for nursery stock published by the American Association of Nurserymen, Inc. In addition, all new plant material for the project shall be of the highest specimen quality. Plant material delivered to the site that does not meet the requirements stated herein may be rejected by the Owner's Representative.
7. Do not assume trunk flare will be exposed at the nursery. Contractor to expose trunk flares to check for root girdling. Pull mulch away from the trunk flare of trees and from the base of all shrubs.
8. No plant material shall be planted before acceptance of rough grading. The finished grade shall not cover any part of the tree trunk flare. See tree planting detail.
9. All new plants shall be balled and burlapped or container grown unless otherwise noted on the plant schedule.
10. The Contractor shall locate and verify all existing utility lines prior to planting and report any conflicts to the Landscape Architect or Owner's Representative.
11. Apply mulch only in those areas identified on the plan to receive mulch and at the thickness specified on the plans. Mulch to be Arborist Wood Mulch. Depth varies per plant type. Confirm size of mulch prior to purchase and installation.
12. Thoroughly water trees and shrubs during the first 24 hours after planting. Wet the soil to a depth of 18-24". When runoff starts, stop watering, let the water soak in and repeat until the proper depth is wet.
13. Any proposed substitutions of plant species shall be made with plants of equivalent overall form, height, branching habit, flower, leaf, color, fruit, and culture only as approved by the Landscape Architect or Owner's Representative.
14. All areas to be seeded shall receive soil preparation as specified in Special Provision 702.3.03 prior to seeding, unless otherwise noted on plan.
15. Contractor's base bid to include all materials, labor, permits, equipment, tools, insurance, etc. to perform the work as described in the contract documents.
16. Contractor to complete work within schedule established by Owner.
17. Contractor to provide one year warranty for all material from date of substantial completion. Contractor to provide interim maintenance (watering, pruning, fertilizing, guying, mowing, trimming, adequate drainage of ponding areas, edging, weeding, mulching, and general landscape clean-up) until substantial completion notice is provided by the Owner's Representative. Application of insecticides/herbicides must be approved by Landscape Architect prior to use on site.
18. Shade trees to be planted a minimum of 5' from sidewalks, water line, sewer line or manholes. Evergreen and ornamental trees to be planted a minimum of 3' from sidewalks, water line, sewer line or manholes.

Instructions For Existing Soil Sampling:

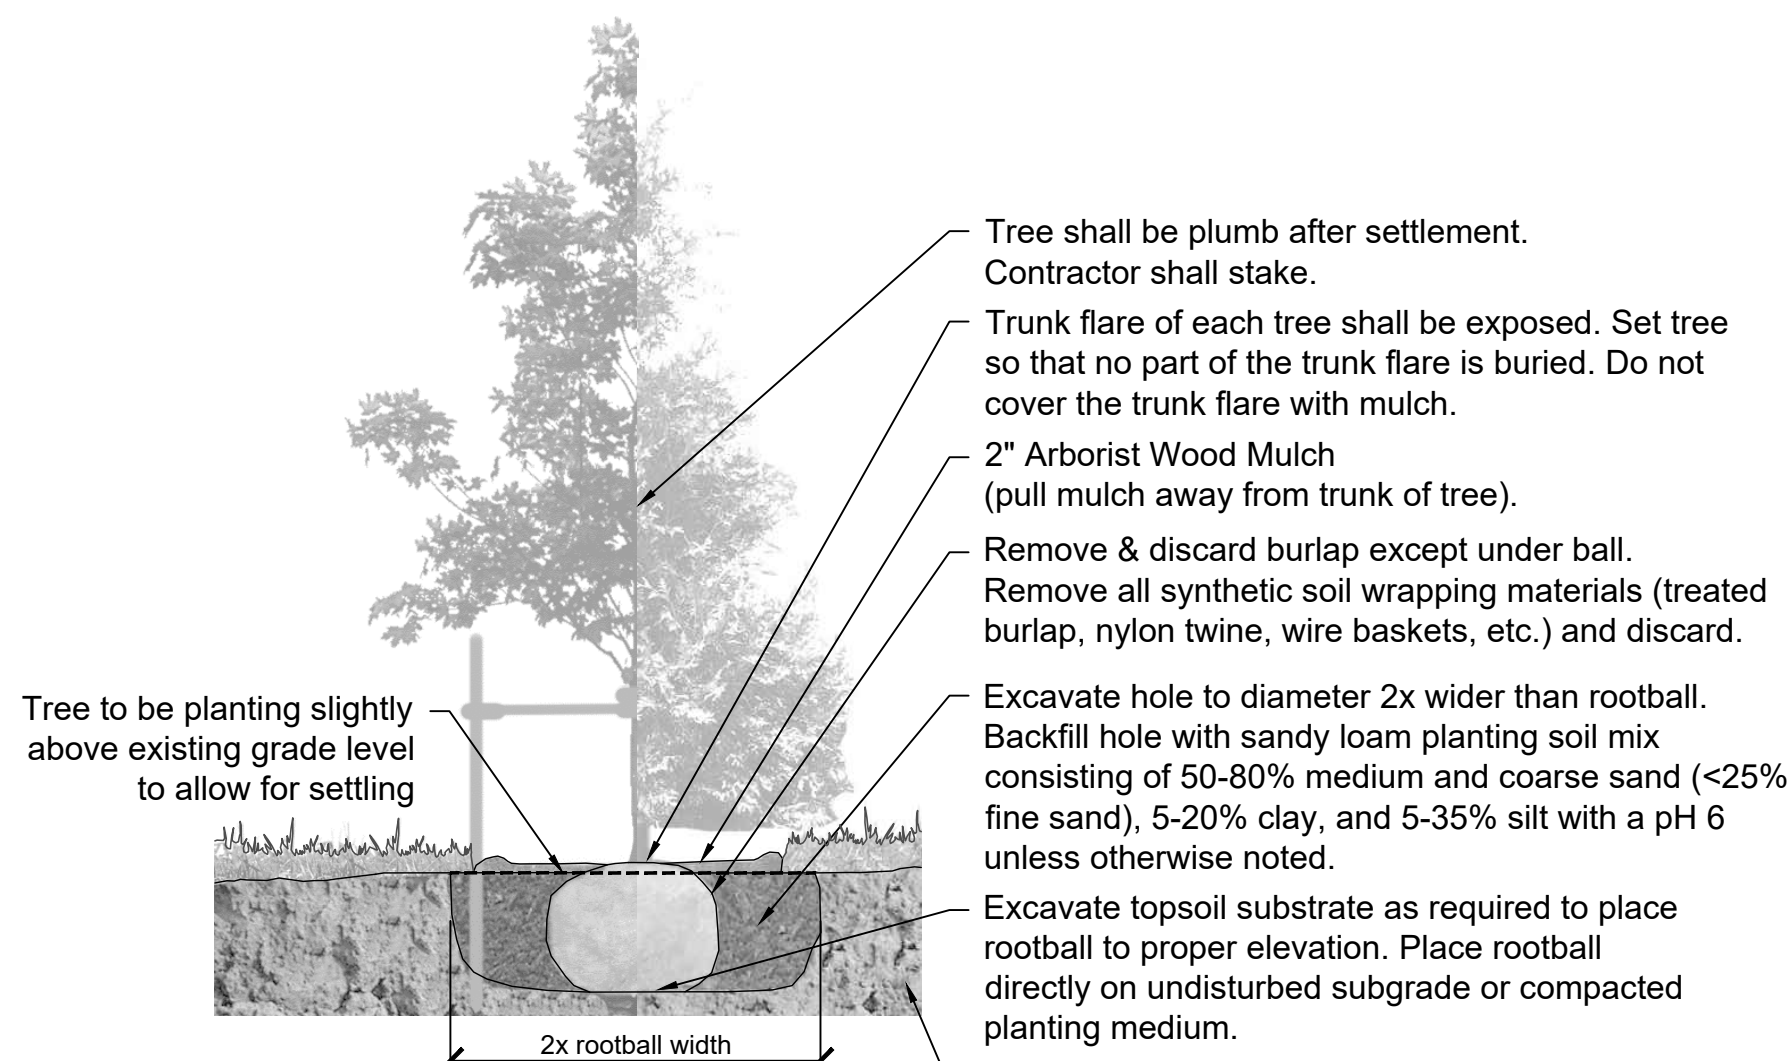

1. Using a spade, dig a v-shape hole to a 6" depth; then cut a thin slice of soil from one side of the hole. Place the slice in a plastic bucket, do not use a metal bucket. Mix slices together and fill a plastic sample bag with three (3) cups of dirt. The sample bags can be ziploc bags that are labeled with the project name and sample number.
2. A well mixed composite from 10 to 20 random locations should be subsampled to make the three (3) cup sample.
3. Mark the plan to show soil sample locations.
4. Send samples to Waypoint Analytical Labs, Inc., 2790 Whitten Road, Memphis, Tennessee 38133, 800-264-4522, www.al-labs.com.
5. Results to be copied to the Owner.

Percolation Test Notes

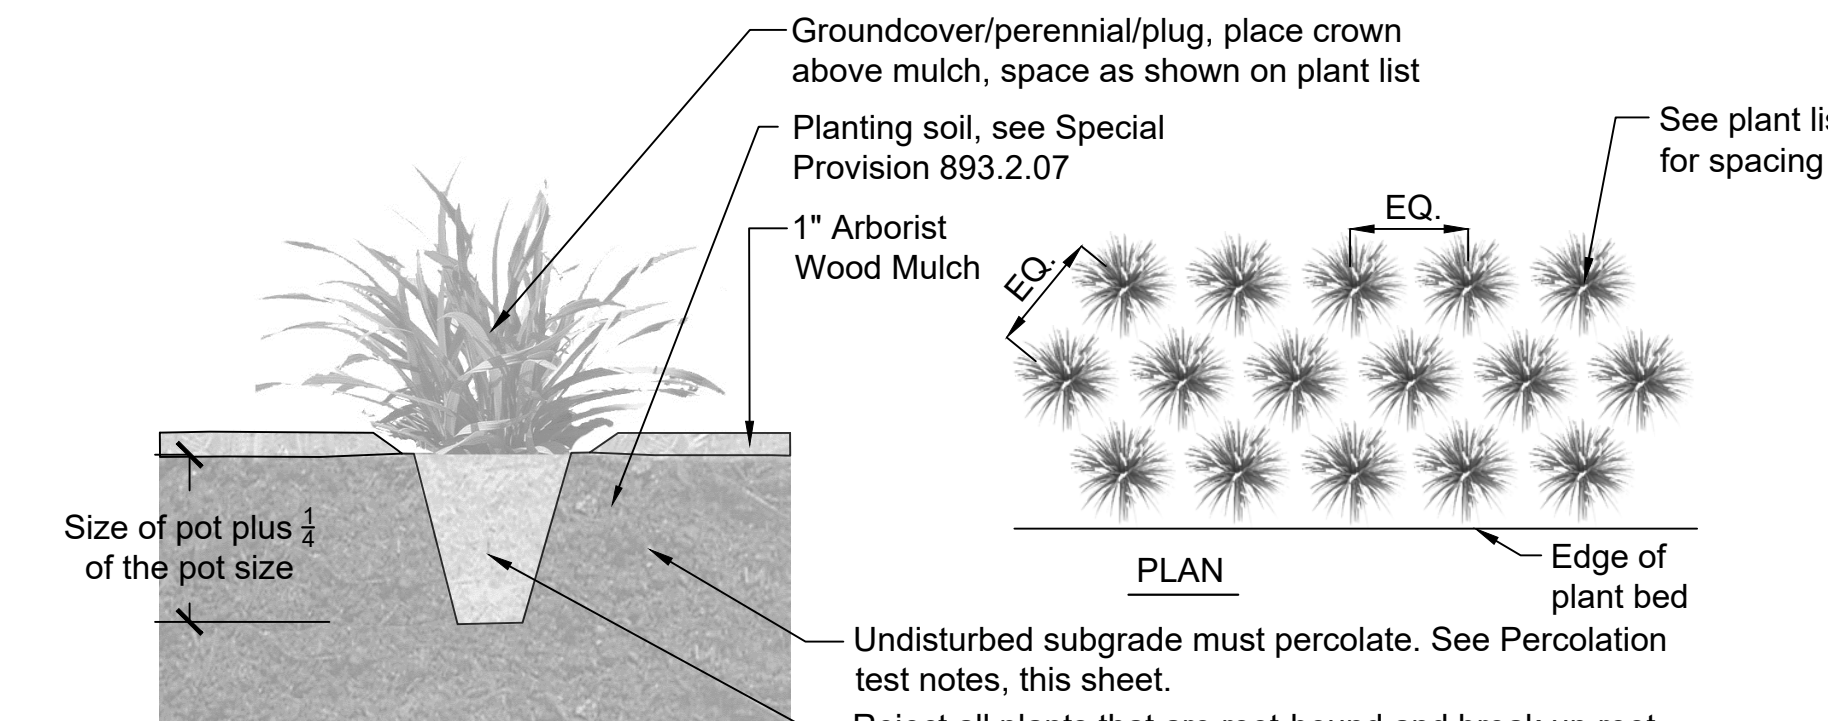

1. Dig a hole 18- 24" deep & a minimum of 6" wide.
2. Fill hole with water to the top and let drain for several hours. Ideally let the hole pre-wet over night and test the following day.
3. Refill hole to within a couple inches of the top.
4. To aid in measurement, place a stick across the top of the hole and use a second stick to mark periodic drops in water level; mark side of hole; or mark soil on side of hole with nail or stick.
5. Measure drop in water level after 30 minutes and one hour. If possible measure drop in water level the next day.
6. Determine drop in water level per hour. If water level in hole drops more than one inch per hour, it is well drained and suitable for all plant species.

KH Question:
 1. There is grading over the property line and an easement beyond the PL. Where is our actual limits and where should we plant to?

- General Notes:**
- New plant beds to encompass areas disturbed by construction. Prior to purchase of plant material contractor to verify that the plans match the as-built conditions. If conditions differ, stop work and communicate this to the Owner's Representative or the Landscape Architect.
 - Temporary and Permanent Easements to be staked on site. No trees or shrubs shall be planted within the easement.
