DESIGN PROFESSIONALS OF RECORD

Discipline: Architectural
Consultant: AE3 Partners
Name: Doug Davis
License No.: C28047

Responsible for Divisions 02-33 Sections except where indicated as prepared by other design professionals of record.

Discipline: Civil Engineer
Consultant: KPFF
Name: Ryan Beaton
License No.: 82786
Responsible for Sections 31 1000, 31 2000, 32
1216, 33 1116, 33 3100, 33 4100

Discipline: Landscape Architect:

Consultant: Keller Mitchel & Co.

Name: Amy Cupples

License No.: CA 4488

Responsible for Sections 01 5639, 02 4216, 06 2013, 11 6813, 31 1413, 32 1313, 32 1500, 32 1816, 32 1817, 32 3119, 32 3300, 32 8400, 32 9110, 32 9113, 32 9219, 32 9223, 32 9300, 33 4300

Discipline: Structural Engineer
Consultant: KPW Structural Engineers, Inc
Name: John Westphal
License No.: 4S575
Responsible for Sections 03 1000, 03 2000, 03 3000, 05 1200, 05 3100, 05 4000

Discipline: Plumbing Engineer
Consultant: Integral Group
Name: Ehsan Daryaram
License No.: M-38661
Responsible for Division 22

Discipline: Mechanical Engineer
Consultant: Integral Group
Name: Ehsan Daryaram
License No.: M-38661
Responsible for Division 23

Discipline: Electrical Engineer
Consultant: Integral Group
Name: Cirilo P. Marquez
License No.: E-14506
Responsible for Division 26

Discipline: Communications Engineers
Consultant: Integral Group
Name: Cirilo P. Marquez
License No.: E-14506
Responsible for Division 27
Responsible for Sections

Discipline: Electronic Safety and Security
Engineer:

Consultant: Integral Group

Name: Cirilo P. Marquez

License No.: E-14506

Responsible for Division 28

Responsible for Sections

Discipline: Fire-Protection Engineer
Consultant: Interface Engineering
Name: Kenton Aikens
License No.: 1689
Responsible for Division 21

Discipline: Roofing

Consultant:

K2M Design

Name:

Scott Maloney

License No.:

C-34775

Responsible for Sections: 07 1413, 07 2620,
07 5420

Discipline: Commissioning
Consultant: Red Car Analytics
Name: Hillary Price
License No.: M35907
Responsible for Sections: 019100

Discipline: Food Service
Consultant: Restaurant Design Concepts
Name: Peter Braun
License No.: C-13221
Responsible for Sections 11400

TABLE OF CONTENTS

Division	Section Title	Date Issued
----------	---------------	-------------

DIVISION 00 - PROCUREMENT AND CONTRACTING REQUIREMENTS

00 0010	Cover
00 0107	Seals Page
00 0110	Table of Contents
00 0115	List of Drawings and Tables
00 1116	Notice to Bidders
00 0120	List of Schedules
00 2113	Instructions to Bidders
00 3100	Available Project Information
00 3119	Existing Conditions
00 3132	Geotechnical Data
00 4113	Bid Form and Proposal
00 4313	Bid Bond
00 4336	Designated Subcontractors List
00 4501	Site Visit Certification
00 4519	Non-Collusion Declaration
00 4519.01	Iran Contracting Act Certification
00 4526	Workers' Compensation Certification
00 4546.01	Prevailing Wage and Related Labor Requirements Certification
00 4546.02	Disabled Veteran Business Enterprise Participation Certification
00 4546.03	Drug-Free Workplace Certification
00 4546.04	Tobacco-Free Environment Certification
00 4546.05	Hazardous Materials Certification
00 4546.06	Lead-Based Materials Certification
00 4546.07	Imported Materials Certification
00 4546.08	Sex Offender Registration Act Certification
00 4546.09	Buy American Certification

00 4549	Registered Subcontractors List
00 4590	Post Bid Interview
00 5100	Notice of Award
00 5213	Agreement
00 5500	Notice to Proceed
00 5600	Escrow Bid Documentation
00 5700	Escrow Agreement in Lieu of Retention
00 6313.13	Performance Bond
00 6313.16	Payment Bond
00 6340	Allowance Expenditure Directive Form
00 6357	Proposed Change Order Form
00 6519.26	Agreement and Release of Any and All Claims
00 6536	Guarantee Form
00 7213	General Conditions
00 7313	Special Conditions
00 7356	Hazardous Materials Procedures & Requirements
00 7357	Appendix A

DIVISION 01 - GENERAL REQUIREMENTS

01 1100	Summary of Work
01 2100	Allowance
01 2200	Alternates and Unit Pricing
01 2513	Product Options and Substitutions
01 2600	Changes in The Work
01 2900	Application for Payment and Conditional and Unconditional Waiver and Release Forms
01 3119	Project Meetings
01 3213	Scheduling of Work
01 3300	Submittals
01 3513.23	Site Standards
01 4100	Regulatory Requirements
01 4213	Abbreviations and Acronyms
01 4216	Definitions
01 4219	Reference Standards
01 4300	Materials and Equipment
01 4500	Quality Control
01 5000	Temporary Facilities and Controls
01 5013	Construction Waste Management and Disposal
01 5213	Field Offices
06 5639	Temporary Tree and Plant Protection
01 6211	Delegated Design
01 6400	Owner-Furnished Products
01 6600	Product Delivery, Storage and Handling
01 7123	Field Engineering
01 7329	Cutting and Patching
01 7600	Alteration Project Procedures
01 7700	Contract Closeout and Final Cleaning
01 7823	Operation and Maintenance Data
01 7836	Warranties
01 7839	Record Documents
01 8114	Sustainable Design Requirements - Cal-Green
01 9100	Commissioning

DIVISION 02 - EXISTING CONDITIONS

02 4116	Demolition
---------	------------

02 4216 Tree Removal and Salvage

DIVISION 03 - CONCRETE

03 1000 Concrete Forming and Accessories
 03 1513 Waterstops
 03 2000 Concrete Reinforcing
 03 3000 Cast-In-Place Concrete
 03 3500 Concrete Finishing
 03 3541 Concrete Sealing
 03 3543 Polished Concrete Floor Finishing

DIVISION 04 - MASONRY

04 0511 Masonry Mortaring and Grouting
 04 2600 Single-Wythe Unit Masonry

DIVISION 05 - METALS

05 1200 Structural Steel Framing
 05 1213 Architecturally-Exposed Structural Steel Framing
 05 3100 Steel Decking
 05 4000 Cold-Formed Metal Framing
 05 4300 Slotted Channel Framing
 05 5000 Metal Fabrications
 05 5100 Metal Stairs
 05 5133 Metal Ladders
 05 5213 Pipe and Tube Railings
 05 7011 Decorative Metal Stairs
 05 7013 Decorative Metal
 05 7300 Decorative Metal Railings
 05 7313 Glazed Decorative Metal Railings
 05 7511 Ornamental Metal Mesh Panels

DIVISION 06 - WOOD, PLASTICS, AND COMPOSITES

06 1053 Miscellaneous Rough Carpentry
 06 1643 Gypsum Sheathing
 02 4216 Tree Removal and Salvage
 06 2013 Exterior Finish Carpentry
 06 4116 Plastic-Laminate-Faced Architectural Cabinets
 06 8316 Fiber Glass Reinforced Plastic (FRP) Panels

DIVISION 07 - THERMAL AND MOISTURE PROTECTION

07 1413 Hot Fluid-Applied Rubberized Asphalt Waterproofing
 07 2100 Thermal Insulation
 07 2616 Below-Grade Vapor Retarders
 07 2620 Fluid Applied Air, Water, and Vapor Barrier
 07 4213 Metal Wall Panels
 07 5420 Single Ply Membrane Roofing
 07 6200 Sheet Metal Flashing and Trim
 07 7100 Roof Specialties
 07 7200 Roof Accessories
 07 8400 Firestopping

07 9200	Joint Sealants
07 9219	Acoustical Joint Sealants
07 9513	Expansion Joint Cover Assemblies

DIVISION 08 - OPENINGS

08 1113	Hollow Metal Doors and Frames
08 1416	Flush Wood Doors
08 1433	Stile and Rail Wood Doors
08 3100	Access Doors and Panels
08 3223	Sliding and Folding Glazed Walls and Doors
08 4313	Aluminum-Framed Storefronts
08 4413	Glazed Aluminum Curtain Walls
08 4500	Translucent Wall and Roof Assemblies
08 7100	Door Hardware
08 8000	Glazing
08 9100	Louvers

DIVISION 09 - FINISHES

09 0561	Common Work Results for Flooring Preparation
09 2116	Gypsum Board Assemblies
09 2236.23	Metal Lath
09 2400	Cement Plastering
09 3000	Tiling
09 5100	Acoustical Ceilings
09 5426.11	Linear Wood Ceilings
09 6513	Resilient Base and Accessories
09 6521	Resilient Plank Flooring
09 6623	Resinous Matrix Terrazzo Flooring
09 6700	Fluid-Applied Flooring
09 8100	Acoustic Insulation
09 8414	Acoustic Stretched-Fabric Wall and Ceiling Systems
09 9113	Exterior Painting
09 9123	Interior Painting
09 9600	High-Performance Coatings
09 9623	Graffiti-Resistant Coatings

DIVISION 10 - SPECIALTIES

10 1100	Visual Display Units
10 1414	Signage
10 1435	Dimensional Sign Characters
10 2113.17	Phenolic Toilet Compartments
10 2239	Folding Panel Partitions
10 2600	Wall and Door Protection
10 2800	Toilet, Bath, and Laundry Accessories
10 4116	Emergency Access Key Boxes
10 4400	Fire Protection Specialties

DIVISION 11 - EQUIPMENT

11 4000	Foodservice Equipment
11 6813	Playground Equipment

DIVISION 12 - FURNISHINGS

12 2400 Window Shades
 12 3600 Countertops
 12 4813 Entrance Floor Mats and Frames

DIVISION 13 - SPECIAL CONSTRUCTION

NOT APPLICABLE

DIVISION 14 - CONVEYING EQUIPMENT

14 2400 Hydraulic Elevators

DIVISION 21 - FIRE SUPPRESSION

21 0500 Common Work Results for Fire Suppression
 21 1300 Fire Suppression Sprinkler Systems

DIVISION 22 - PLUMBING

22 0000 Plumbing General Requirements
 22 0513 Common Motor Requirements for Plumbing Equipment
 22 0517 Sleeves and Sleeve Seals for Plumbing Piping
 22 0518 Escutcheons for Plumbing Piping
 22 0519 Meters and Gages for Plumbing Piping
 22 0523 General Duty Valves for Plumbing Piping
 22 0529 Hangers and Supports for Plumbing Piping and Equipment
 22 0548 Vibration and Seismic Controls for Plumbing Piping and Equipment
 22 0553 Identification for Plumbing Piping and Equipment
 22 0719 Plumbing Piping Insulation
 22 1116 Domestic Water Piping
 22 1119 Domestic Water Piping Specialties
 22 1123 Domestic Water Pumps
 22 1316 Sanitary Waste and Vent Piping
 22 1319 Sanitary Waste Piping Specialties
 22 1319.13 Sanitary Drains
 22 1323 Sanitary Waste Interceptors
 22 1413 Storm Drainage Piping
 22 1423 Storm Drainage Piping Specialties
 22 3300 Electric Domestic Water Heaters
 22 4200 Plumbing Fixtures

DIVISION 23 - HEATING, VENTILATING, AND AIR-CONDITIONING (HVAC)

23 0000 HVAC General Requirements
 23 0513 Common Motor Requirements for HVAC Equipment
 23 0517 Sleeves and Sleeve Seals for HVAC Piping
 23 0523 Valves for HVAC Piping
 23 0529 Hangers and Supports for HVAC Piping and Equipment
 23 0548 Vibration and Seismic Controls for HVAC
 23 0553 Identification for HVAC Piping and Equipment
 23 0593 Testing, Adjusting, and Balancing for HVAC
 23 0713 HVAC Duct Insulation
 23 0716 HVAC Equipment Insulation
 23 0719 HVAC Piping Insulation

23 0800	Commissioning of HVAC and Plumbing
23 2113	Hydronic Piping
23 2116	Hydronic Piping Specialties
23 2123	Hydronic Pumps
23 2300	Refrigerant Piping
23 2500	HVAC Water Treatment
23 3100	HVAC Metal Ducts
23 3300	HVAC Duct Accessories
23 3400	HVAC Fans
23 3470	Commercial Ceiling Fans
23 3600	Air Terminal Units
23 3713.13	Air Diffusers
23 3713.23	Registers and Grilles
23 5216	Heat Pump Heating Hot Water
23 74 13	Packaged Rooftop Air-Handling Units
23 8129	Variable Refrigerant Flow (VRF) System

DIVISION 25 – INTEGRATED AUTOMATION

25 3000	Building Automation Sensors and Control Devices
25 5000	Building Automation Hardware and Networking
25 9000	Sequence of Operations

DIVISION 26 - ELECTRICAL

26 0513	Medium-Voltage Cables
26 0519	Low-Voltage Electrical Power Conductors and Cables
26 0526	Grounding and Bonding for Electrical Systems
26 0529	Hangers and Supports for Electrical Systems
26 0533	Raceways and Boxes for Electrical Systems
26 0543	Underground Ducts and Raceways for Electrical Systems
26 0544	Sleeves and Sleeve Seals for Electrical Raceways and Cabling
26 0548	Seismic Controls for Electrical Systems
26 0553	Identification for Electrical Systems
26 0572	Overcurrent Protective Device Short-Circuit Study
26 0573	Overcurrent Protective Device Coordination Study
26 0574	Overcurrent Protective Device Arc-Flash Study
26 0800	Commissioning of Electrical Systems
26 0923	Lighting Control Devices
26 0926	Lighting Control Panelboards
26 0943	Relay-Based Lighting Controls
26 2413	Switchboards
26 2416	Panelboards
26 2713	Electricity Metering
26 2726	Wiring Devices
26 2813	Fuses
26 2816	Enclosed Switches and Circuit Breakers
26 2913	Manual and Magnetic Motor Controllers
26 2923	Variable-Frequency Motor Controllers
26 3323	Central Battery Equipment for Emergency Lighting
26 4313	Surge Protection for Low-Voltage Electrical Power Circuits
26 5119	LED Interior Lighting
26 5619	LED Exterior Lighting

DIVISION 27 - COMMUNICATIONS

27 0000	Basic Communications Requirements
27 0500	Common Works for Communication
27 0526	Grounding and Bonding for Communications Systems
27 0529	Hangers and Supports
27 0533	Conduit Boxes Communications
27 1100	Communications Equipment Room Fittings
27 1300	Communications Backbone Cabling
27 1500	Communications Horizontal Cabling
27 5116	Public Address Systems
27 5126	Assistive Listening Systems
27 5313	Clock Systems
27 5319	Distributed Antenna System (DAS) Emergency Responder Radio Communications Systems (ERRCS)

DIVISION 28 - ELECTRONIC SAFETY AND SECURITY

28 0513	Conductors and Cables for Electronic Safety and Security
28 0526	Grounding and Bonding for Electronic Safety and Security
28 0528	Pathways for Electronic Safety and Security
28 0544	Sleeves and Sleeve Seals for Electronic Safety and Security Pathways and Cabling
28 3111	Digital, Addressable, Fire Alarm System

DIVISION 31 - EARTHWORK

31 1000	Site Clearing
31 1413	Topsoil Stripping and Stockpiling
31 2000	Earth Moving

DIVISION 32 - EXTERIOR IMPROVEMENTS

32 1216	Asphalt Paving
32 1313	Site Concrete
32 1500	Aggregate Surfacing
32 1713	Parking Bumpers
32 1723.13	Painted Pavement Markings
32 1726	Tactile Warning Surfacing
32 1816	Synthetic Resilient Paving
32 1817	Fibrous Resilient Paving
32 3118	Metal Fences and Gates
32 3119	Decorative Metal Fences and Gates
32 3300	Site Furnishings
32 8400	Irrigation System
32 9110	Topsoil
32 9113	Import Topsoil
32 9219	Hydroseeding
32 9223	Sodding
32 9300	Planting
33 4300	Bio Treatment Soil Mix

DIVISION 33 - UTILITIES

33 1116	Facility Water Distribution Piping
33 3100	Sanitary Utility Sewerage Piping
33 4100	Storm Utility Drainage Piping

END OF TABLE OF CONTENTS

NOTICE TO BIDDERS

1. Notice is hereby given that the governing board ("Board") of the Peralta Community College District ("District") will receive, by electronic submission, bids for the following project, Bid No. _____, Bid Package _____ ("Project" or "Contract"):

2. The Project consists of:

Construction of a new two-story classroom building with preschool and adult classrooms, administrative offices, food service facility, teacher preparation rooms, resource room and restrooms. The work includes associated civil, landscape, architectural, structural, plumbing, mechanical, electrical, fire alarm, fire protection, low voltage and food service work as indicated in the Drawings and Specifications. The project involves all new work and finishes. The Project involves two increments – Increment 1 includes all site work, including site clearing, grading, utilities, and landscape, classrooms, offices, elevator, stairs, food service, restrooms and major MEP systems; Increment 2 includes the addition of preschool and adult classrooms and the continuation of MEP systems.

3. To bid on this Project, the Bidder is required to possess one or more of the following State of California contractor license(s):

B – General Contracting

The Bidder's license(s) must remain active and in good standing throughout the term of the Contract.

4. To bid on this Project, the Bidder is required to be registered as a public works contractor with the Department of Industrial Relations pursuant to the Labor Code.

5. Contract Documents will be available on or after _____, 20____, for review at the District Vendor Registry website, and may be downloaded from the District's website, <https://vrapp.vendorregistry.com/Bids/View/BidsList?BuyerId=4d041f6c-7568-4c8a-8878-c82684292a3c>, using the **["Facilities Project and Information"]** link. In addition, Contract Documents are available for bidders' review at the following builders' exchanges:

- A. Builder's Exchange of _____ County (____) _____ - _____
- B. A list of these builders' exchanges is available at the District's Facilities Office.

6. ***The District will only receive bids submitted electronically.*** Bids will be received until ___a.m./p.m., ____, 20____, only at the following email address [INSERT], after which time the bids will be opened and publicly read aloud via video conference. A link to the video conference will be provided by Addendum. Any bid that is submitted after this time shall be nonresponsive and returned to the bidder. **Each bidder is solely responsible for timely submission of its bid; the District is not responsible for any technological issues in a bidder's ability to timely**

submit its bid or portion thereof. Any claim by a bidder of error in its bid must be made in compliance with section 5100 et seq. of the Public Contract Code. Prior to publicly reading aloud bids at the video conference, the District reserves the right to verify the genuineness of any bid security.

7. Pursuant to Public Contract Code section 20111.5, only prequalified bidders will be eligible to submit a bid for this Project. Any bid submitted by a bidder who is not prequalified shall be non-responsive and returned by email to the bidder.
8. All bids shall be on the form provided by the District. Each bid must conform and be responsive to all pertinent Contract Documents, including, but not limited to, the Instructions to Bidders.
9. A bid bond by an admitted surety insurer on the form provided by the District, or a cashier's check or a certified check, drawn to the order of the Peralta Community College District, in the amount of ten percent (10%) of the total bid price, shall accompany the Bid Form and Proposal, as a guarantee that the Bidder will, within seven (7) calendar days after the date of the Notice of Award, enter into a contract with the District for the performance of the services as stipulated in the bid.
10. A mandatory pre-bid conference and site visit will be held on 20____, at ____m. at _____, California. All participants are required to sign in front of the _____ Building, _____, California. The site visit is expected to take approximately _____. Failure to attend or tardiness will render bid ineligible.
11. The successful Bidder shall be required to furnish a 100% Performance Bond and a 100% Payment Bond if it is awarded the contract for the Work.
12. The successful Bidder may substitute securities for any monies withheld by the District to ensure performance under the Contract, in accordance with the provisions of section 22300 of the Public Contract Code.
13. The Contractor and all Subcontractors under the Contractor shall pay all workers on all work performed pursuant to this Contract not less than the general prevailing rate of per diem wages and the general prevailing rate for holiday and overtime work as determined by the Director of the Department of Industrial Relations, State of California, for the type of work performed and the locality in which the work is to be performed within the boundaries of the District, pursuant to section 1770 et seq. of the California Labor Code. Prevailing wage rates are also available from the District or on the Internet at: <<http://www.dir.ca.gov>>.
14. This Project is subject to labor compliance monitoring and enforcement by the Department of Industrial Relations pursuant to Labor Code section 1771.4 and subject to the requirements of Title 8 of the California Code of Regulations. The successful Bidder shall comply with all requirements of Division 2, Part 7, Chapter 1, Articles 1-5 of the Labor Code.
15. The District has entered into a Project Labor Agreement that is applicable to this Project. A copy of the Project Labor Agreement is available for review at the District Facilities Office and may be downloaded from the District's website, <https://build.peralta.edu/construction-project-labor-agreement>. The successful

bidder and all subcontractors will be required to agree to be bound by the Project Labor Agreement.

16. The District shall award the Contract, if it awards it at all, to the lowest responsive responsible bidder based on:
 - A. Base Bid for Increment #1 only.
 - B. The Base Bid for Increment #2 cannot exceed 25% of the Total Base Bid.
Total Base Bid = Base Bid for Increment #1 + Base Bid for Increment #2
17. The Board reserves the right to reject any and all bids and/or waive any irregularity in any bid received. If the District awards the Contract, the security of unsuccessful bidder(s) shall be returned within sixty (60) days from the time the award is made. Unless otherwise required by law, no bidder may withdraw its bid for ninety (90) days after the date of the bid opening.

END OF DOCUMENT

DOCUMENT 00 21 13

INSTRUCTIONS TO BIDDERS

Bidders shall follow the instructions in this document, and shall submit all documents, forms, and information required for consideration of a Bid.

Peralta Community College District ("District") will evaluate information submitted by the apparent low Bidder and, if incomplete or unsatisfactory to District, Bidder's bid may be rejected at the sole discretion of District.

1. Bids are requested for a general construction contract, or work described in general, for the following project ("Project" or "Contract"):

Merritt College New Child Development Center

2. Bidder and its subcontractors must possess the appropriate State of California contractors' license and must maintain the license throughout the duration of the project. Bidders must also be registered as a public works contractor with the Department of Industrial Relations pursuant to the Labor Code. Bids submitted by a contractor who is not properly licensed or registered shall be deemed nonresponsive and will not be considered.
3. The District has prequalified bidders pursuant to Public Contract Code section 20651.5. Only prequalified bidders will be eligible to submit a bid for this Project. Any bid submitted by a bidder who is not prequalified shall be deemed nonresponsive and will not be considered.
4. District will receive bids submitted electronically from bidders as stipulated in the Notice to Bidders.
 - a. Email subject line must include the name of the Bidder, name of the Project, the Project Number and/or bid number, and time of bid opening.
 - b. Bids must be electronically submitted to the following email address [INSERT], by date and time shown in the Notice to Bidders.
 - c. Each bidder is solely responsible for timely submission of its bid; the District is not responsible for any technological issues affecting a bidder's ability to timely submit its bid or portion thereof.
5. Bidders are advised that on the date that bids are opened, the District Offices will **not** be open to bidders or their representatives.
6. Bids will be opened and publicly read aloud via video conference. A link to the video conference will be provided by Addendum. Prior to publicly reading aloud bids at the video conference, the District reserves the right to verify the genuineness of any bid security.
7. Bidders must submit Bids on the documents titled Bid Form and Proposal, and must submit all other required District forms. Bids not submitted on the District's required

forms shall be deemed nonresponsive and shall not be considered. Additional sheets required to fully respond to requested information are permissible.

8. Bidders shall not modify the Bid Form and Proposal or qualify their bids. Bidders shall not submit to the District a re-formatted, re-typed, altered, modified, or otherwise recreated version of the Bid Form and Proposal or other District-provided document.
9. Bids shall be clearly written and without erasure or deletions. District reserves the right to reject any bid containing erasures, deletions, or illegible contents.
10. Bidders must supply all information required by each Bid Document. Bids must be full and complete. District reserves the right in its sole discretion to reject any Bid as non-responsive as a result of any error or omission in the Bid. Bidders must complete and submit all of the following documents with the Bid Form and Proposal:
 - a. Photocopy of Bid Bond on the District's form, or other security.
 - b. Designated Subcontractors List.
 - c. Site Visit Certification, if a site visit was required.
 - d. Non-Collusion Declaration.
 - e. Iran Contracting Act Certification, if contract value is \$1,000,000 or more.
 - f. SLBE/SELBE Self Certification Affidavit.
11. Bidders must submit with their bids a legible photocopy of (i) a cashier's check or (ii) a certified check payable to District, or (iii) a bid bond by an admitted surety insurer of not less than ten percent (10%) of amount of Base Bid, plus all additive alternates ("Bid Bond"). If Bidder chooses to provide a Bid Bond as security, Bidder must use the required form of corporate surety provided by District. The Surety on Bidder's Bid Bond must be an insurer admitted in the State of California and authorized to issue surety bonds in the State of California. Bidder must deposit the original of the bid bond, cashier's check, or certified check in the mail on the same day as the bid opening. Bids submitted without necessary bid security will be deemed non-responsive and will not be considered.
12. If Bidder to whom the Contract is awarded fails or neglects to enter into the Contract and submit required bonds, insurance certificates, and all other required documents, within **SEVEN (7)** calendar days after the date of the Notice of Award, District may deposit Bid Bond, cashier's check, or certified check for collection, and proceeds thereof may be retained by District as liquidated damages for failure of Bidder to enter into Contract, in the sole discretion of District. It is agreed that calculation of damages District may suffer as a result of Bidder's failure to enter into the Contract would be extremely difficult and impractical to determine and that the amount of the Bidder's required bid security shall be the agreed and conclusively presumed amount of damages.
13. Bidders must submit with the Bid the Designated Subcontractors List for those subcontractors who will perform any portion of Work, including labor, rendering of

service, or specially fabricating and installing a portion of the Work or improvement according to detailed drawings contained in the plans and specifications, in excess of one half of one percent (0.5%) of total Bid. Failure to submit this list when required by law shall result in bid being deemed nonresponsive and the bid will not be considered.

14. All of the listed subcontractors are required to be registered as a public works contractor with the Department of Industrial Relations pursuant to the Labor Code.
 - a. An inadvertent error in listing the California contractor license number on the Designated Subcontractors List shall not be grounds for filing a bid protest or grounds for considering the bid nonresponsive if the correct contractor's license number is submitted to the District within 24 hours after the bid opening and the corrected number corresponds with the submitted name and location for that subcontractor.
 - b. An inadvertent error listing an unregistered subcontractor shall not be grounds for filing a bid protest or grounds for considering the bid nonresponsive provided that any of the following apply:
 - (1) The subcontractor is registered prior to the bid opening.
 - (2) The subcontractor is registered and has paid the penalty registration fee within 24 hours after the bid opening.
 - (3) The subcontractor is replaced by another registered subcontractor pursuant to Public Contract Code section 4107.

15. If a mandatory pre-bid conference and site visit ("Site Visit") is required as referenced in the Notice to Bidders, then Bidders must submit the Site-Visit Certification with their Bid. District will transmit to all prospective Bidders of record such Addenda as District in its discretion considers necessary in response to questions arising at the Site Visit. Oral statements shall not be relied upon and will not be binding or legally effective. Addenda issued by the District as a result of the Site Visit, if any, shall constitute the sole and exclusive record and statement of the results of the Site Visit.

16. Bidders shall submit the Non-Collusion Declaration with their Bids. Bids submitted without the Non-Collusion Declaration shall be deemed non-responsive and will not be considered.

17. The Contractor and all Subcontractors under the Contractor shall pay all workers on all work performed pursuant to the Contract not less than the general prevailing rate of per diem wages and the general prevailing rate for holiday and overtime work as determined by the Director of the Department of Industrial Relations, State of California, for the type of work performed and the locality in which the work is to be performed within the boundaries of the District, pursuant to sections 1770 et seq. of the California Labor Code. Copies of the general prevailing rates of per diem wages for each craft, classification, or type of worker needed to execute the Contract, as determined by Director of the Department of Industrial Relations, are available upon request at the District's principal office. Prevailing wage rates are also available on the internet at <http://www.dir.ca.gov>.

18. The District has entered into a Project Labor Agreement that is applicable to this Project. A copy of the Project Labor Agreement is available for review at the District Facilities Office and may be downloaded from the District's website, <https://build.peralta.edu/construction-project-labor-agreement>. The successful bidder and all subcontractors will be required to agree to be bound by the Project Labor Agreement.
19. Submission of Bid signifies careful examination of Contract Documents and complete understanding of the nature, extent, and location of Work to be performed. Bidders must complete the tasks listed below as a condition to bidding, and submission of a Bid shall constitute the Bidder's express representation to District that Bidder has fully completed the following:
 - a. Bidder has visited the Site, if required, and has examined thoroughly and understood the nature and extent of the Contract Documents, Work, Site, locality, actual conditions, as-built conditions, and all local conditions and federal, state and local laws, and regulations that in any manner may affect cost, progress, performance, or furnishing of Work or that relate to any aspect of the means, methods, techniques, sequences, or procedures of construction to be employed by Bidder and safety precautions and programs incident thereto;
 - b. Bidder has conducted or obtained and has understood all examinations, investigations, explorations, tests, reports, and studies that pertain to the subsurface conditions, as-built conditions, underground facilities, and all other physical conditions at or contiguous to the Site or otherwise that may affect the cost, progress, performance, or furnishing of Work, as Bidder considers necessary for the performance or furnishing of Work at the Contract Sum, within the Contract Time, and in accordance with the other terms and conditions of Contract Documents, including specifically the provisions of the General Conditions; and no additional examinations, investigations, explorations, tests, reports, studies, or similar information or data are or will be required by Bidder for such purposes;
 - c. Bidder has correlated its knowledge and the results of all such observations, examinations, investigations, explorations, tests, reports, and studies with the terms and conditions of the Contract Documents;
 - d. Bidder has given the District prompt written notice of all conflicts, errors, ambiguities, or discrepancies that it has discovered in or among the Contract Documents and the actual conditions, and the written resolution(s) thereof by the District, is/are acceptable to Bidder;
 - e. Bidder has made a complete disclosure in writing to the District of all facts bearing upon any possible interest, direct or indirect, that Bidder believes any representative of the District or other officer or employee of the District presently has or will have in this Contract or in the performance thereof or in any portion of the profits thereof;
 - f. Bidder must, prior to bidding, perform the work, investigations, research, and analysis required by this document and that Bidder represented in its Bid Form and Proposal and the Agreement that it performed prior to bidding.

Contractor under this Contract is charged with all information and knowledge that a reasonable bidder would ascertain from having performed this required work, investigation, research, and analysis. Bid prices must include entire cost of all work "incidental" to completion of the Work.

- g. Conditions Shown on the Contract Documents: Information as to underground conditions, as-built conditions, or other conditions or obstructions, indicated in the Contract Documents, e.g., on Drawings or in Specifications, has been obtained with reasonable care, and has been recorded in good faith. However, District only warrants, and Bidder may only rely, on the accuracy of limited types of information.
- (1) As to above-ground conditions or as-built conditions shown or indicated in the Contract Documents, there is no warranty, express or implied, or any representation express or implied, that such information is correctly shown or indicated. This information is verifiable by independent investigation and Bidder is required to make such verification as a condition to bidding. In submitting its Bid, Bidder shall rely on the results of its own independent investigation. In submitting its Bid, Bidder shall not rely on District-supplied information regarding above-ground conditions or as-built conditions.
 - (2) As to any subsurface condition shown or indicated in the Contract Documents, Bidder may rely only upon the general accuracy of actual reported depths, actual reported character of materials, actual reported soil types, actual reported water conditions, or actual obstructions shown or indicated. District is not responsible for the completeness of such information for bidding or construction; nor is District responsible in any way for any conclusions or opinions that the Bidder has drawn from such information; nor is the District responsible for subsurface conditions that are not specifically shown (for example, District is not responsible for soil conditions in areas contiguous to areas where a subsurface condition is shown).
- h. Conditions Shown in Reports and Drawings Supplied for Informational Purposes: Reference is made to the document entitled Geotechnical Data, and the document entitled Existing Conditions, for identification of:
- (1) Subsurface Conditions: Those reports of explorations and tests of subsurface conditions at or contiguous to the Site that have been utilized by Architect in preparing the Contract Documents; and
 - (2) Physical Conditions: Those drawings of physical conditions in or relating to existing surface or subsurface structures at or contiguous to the Site that has been utilized by Architect in preparing the Contract Documents.
 - (3) These reports and drawings are **not** Contract Documents and, except for any "technical" data regarding subsurface conditions specifically identified in Geotechnical Data and Existing Conditions, and underground facilities data, Bidder may not in any manner rely on the information in these reports and drawings. Subject to the foregoing,

Bidder must make its own independent investigation of all conditions affecting the Work and must not rely on information provided by District.

20. Bids shall be based on products and systems specified in Contract Documents or listed by name in Addenda. Whenever in the Specifications any materials, process, or article is indicated or specified by grade, patent, or proprietary name, or by name of manufacturer, that Specification shall be deemed to be followed by the words "or equal." Bidder may, unless otherwise stated, offer any material, process, or article that shall be substantially equal or better in every respect to that so indicated or specified. The District is not responsible and/or liable in any way for a Contractor's damages and/or claims related, in any way, to that Contractor's basing its bid on any requested substitution that the District has not approved in advance and in writing. Contractors and materials suppliers who submit requests for substitutions prior to the award of the Contract must do so in writing and in compliance with Public Contract Code section 3400. All requests must comply with the following:
- a. District must receive any notice of request for substitution of a specified item a minimum of **TEN (10)** calendar days prior to bid opening. The Successful Bidder will not be allowed to substitute specified items unless properly noticed.
 - b. Within 35 days after the date of the Notice of Award, the Successful Bidder shall submit data substantiating the request(s) for all substitution(s) containing sufficient information to assess acceptability of product or system and impact on Project, including, without limitation, the requirements specified in the Special Conditions and the Specifications. Insufficient information shall be grounds for rejection of substitution.
 - c. Approved substitutions, if any, shall be listed in Addenda. District reserves the right not to act upon submittals of substitutions until after bid opening.
 - d. Substitutions may be requested after Contract has been awarded only if indicated in and in accordance with requirements specified in the Special Conditions and the Specifications.
21. Bidders may examine any available "as-built" drawings of previous work by giving District reasonable advance notice. District will not be responsible for accuracy of "as-built" drawings. The document entitled Existing Conditions applies to all supplied "as-built" drawings.
22. All questions about the meaning or intent of the Contract Documents are to be directed via email to the District to _____. Interpretations or clarifications considered necessary by the District in response to such questions will be issued in writing by Addenda and delivered electronically to all parties recorded by the District as having received the Contract Documents or posted on the District's website at _____. Questions received less than **SEVEN (7)** calendar days prior to the date for opening Bids may not be answered. Only questions answered by formal written Addenda will be binding. Oral and other interpretations or clarifications will be without legal effect.

23. Addenda may also be issued to modify other parts of the Contract Documents as deemed advisable by the District.
24. All Addenda must be signed by the Project Architect and approved by the Division of the State Architect (CAC, Section 4-338 (b)).
25. Each Bidder must acknowledge each Addendum in its Bid Form and Proposal by number or its Bid shall be considered non-responsive. Each Addendum shall be part of the Contract Documents. A complete listing of Addenda may be secured from the District.
26. This Contract may include alternates. Alternates are defined as alternate products, materials, equipment, systems, methods, or major elements of the construction that may, at the District's option and under terms established in the Contract and pursuant to section 20103.8 of the Public Contract Code, be selected for the Work.
27. The District shall award the Contract, if it awards it at all, to the lowest responsive responsible bidder based on the criteria as indicated in the Notice to Bidders. In the event two or more responsible bidders submit identical bids, the District shall select the Bidder to whom to award the Contract by lot.
28. Discrepancies between written words and figures, or words and numeral, will be resolved in favor of figures or numerals.
29. Bidders in contention for contract awards shall be required to attend a Post Bid interview, which will be set within three (3) calendar days following bid opening. A duly authorized representative of the apparent low bidder is required to attend the Post Bid Interview, in person. The apparent low bidder's authorized representative(s) must have (1) knowledge of how the bid submitted was prepared, (2) the person responsible for supervising performance of the Work, and (3) the authority to bind the apparent low bidder. Failure to attend the Post Bid Interview as scheduled will be considered just cause for the District to reject the Bid as nonresponsive. .
30. Any bid protest by any Bidder regarding any other bid must be submitted in writing to the District, before 5:00 p.m. of the **THIRD (3rd)** business day following bid opening.
 - a. Only a Bidder who has actually submitted a bid, and who could be awarded the Contract if the bid protest is upheld, is eligible to submit a bid protest. Subcontractors are not eligible to submit bid protests. A Bidder may not rely on the bid protest submitted by another Bidder.
 - b. A bid protest must contain a complete statement of any and all bases for the protest and all supporting documentation. Materials submitted after the bid protest deadline will not be considered.
 - c. The protest must refer to the specific portions of all documents that form the basis for the protest.
 - (1) Without limitation to any other basis for protest, an inadvertent error in listing the California contractor's license number on the Designated

Subcontractors List shall not be grounds for filing a bid protest or grounds for considering the bid nonresponsive if the correct contractor's license number is submitted to the District within 24 hours after the bid opening and the corrected number corresponds with the submitted name and location for that subcontractor.

- (2) Without limitation to any other basis for protest, an inadvertent error listing an unregistered subcontractor shall not be grounds for filing a bid protest or grounds for considering the bid nonresponsive provided that any of the following apply:
 - (i) The subcontractor is registered prior to the bid opening.
 - (ii) The subcontractor is registered and has paid the penalty registration fee within 24 hours after the bid opening.
 - (iii) The subcontractor is replaced by another registered subcontractor pursuant to Public Contract Code section 4107.
 - d. The protest must include the name, address and telephone number of the person representing the protesting party.
 - e. The party filing the protest must concurrently transmit a copy of the protest and any attached documentation to all other parties with a direct financial interest that may be adversely affected by the outcome of the protest. Such parties shall include all other bidders or proposers who appear to have a reasonable prospect of receiving an award depending upon the outcome of the protest.
 - f. The procedure and time limits set forth in this paragraph are mandatory and are each bidder's sole and exclusive remedy in the event of bid protest. Failure to comply with these procedures shall constitute a waiver of any right to further pursue the bid protest, including filing a Government Code Claim or legal proceedings.
31. The Bidder to whom Contract is awarded shall execute and submit the following documents by 5:00 p.m. of the **SEVENTH (7th)** calendar day following the date of the Notice of Award. Failure to properly and timely submit these documents entitles District to reject the bid as nonresponsive.
- a. Agreement: To be executed by successful Bidder. Submit four (4) copies, each bearing an original signature.
 - b. Escrow of Bid Documentation: This must include all required documentation. See the document titled Escrow Bid Documentation for more information.
 - c. Performance Bond (100%): On the form provided in the Contract Documents and fully executed as indicated on the form.
 - d. Payment Bond (Contractor's Labor and Material Bond) (100%): On the form provided in the Contract Documents and fully executed as indicated on the form.

- e. Insurance Certificates and Endorsements as required.
 - f. Workers' Compensation Certification.
 - g. Prevailing Wage and Related Labor Requirements Certification.
 - h. Drug-Free Workplace Certification.
 - i. Tobacco-Free Environment Certification.
 - j. Hazardous Materials Certification.
 - k. Lead-Based Materials Certification.
 - l. Imported Materials Certification.
 - m. Sex Offender Registration Act_Certification.
 - n. Buy American Certification.
 - o. Small Local Business Enterprise and Small Emerging Local Business Enterprise Program.
 - p. Registered Subcontractors List: Must include Department of Industrial Relations (DIR) registration number of each subcontractor for all tiers. Per Article 10 of the General Conditions, the complete submittal of Registered Subcontractors List is required within 10 days after the Notice to Proceed is issued.
32. Time for Completion: District may issue a Notice to Proceed within **NINETY (90)** days from the date of the Notice of Award. Once Contractor has received the Notice to Proceed, Contractor shall complete the Work within the period of time indicated in the Contract Documents.
- a. In the event that the District desires to postpone issuing the Notice to Proceed beyond this 90-day period, it is expressly understood that with reasonable notice to the Contractor, the District may postpone issuing the Notice to Proceed.
 - b. It is further expressly understood by Contractor that Contractor shall not be entitled to any claim of additional compensation as a result of the postponement of the issuance of the Notice to Proceed beyond a 90-day period. If the Contractor believes that a postponement of issuance of the Notice to Proceed will cause a hardship to the Contractor, the Contractor may terminate the Contract. Contractor's termination due to a postponement beyond this 90-day period shall be by written notice to District within **TEN (10)** calendar days after receipt by Contractor of District's notice of postponement.
 - c. It is further understood by the Contractor that in the event that Contractor terminates the Contract as a result of postponement by the District, the District shall only be obligated to pay Contractor for the Work that Contractor

had performed at the time of notification of postponement and which the District had in writing authorized Contractor to perform prior to issuing a Notice to Proceed.

- d. Should the Contractor terminate the Contract as a result of a notice of postponement, District shall have the authority to award the Contract to the next lowest responsive responsible bidder.
33. District reserves the right to reject any or all bids, including without limitation the right to reject any or all nonconforming, non-responsive, unbalanced, or conditional bids, to re-bid, and to reject the bid of any bidder if District believes that it would not be in the best interest of the District to make an award to that bidder, whether because the bid is not responsive or the bidder is unqualified or of doubtful financial ability or fails to meet any other pertinent standard or criteria established by District. District also reserves the right to waive any inconsequential deviations or irregularities in any bid. For purposes of this paragraph, an "unbalanced bid" is one having nominal prices for some work items and/or enhanced prices for other work items.
34. It is the policy of the District that no qualified person shall be excluded from participating in, be denied the benefits of, or otherwise be subjected to discrimination in any consideration leading to the award of contract, based on race, color, gender, sexual orientation, political affiliation, age, ancestry, religion, marital status, national origin, medical condition or disability. The Successful Bidder and its subcontractors shall comply with applicable federal and state laws, including, but not limited to the California Fair Employment and Housing Act, beginning with Government Code section 12900, and Labor Code section 1735.
35. Prior to the award of Contract, District reserves the right to consider the responsibility of the Bidder. District may conduct investigations as District deems necessary to assist in the evaluation of any bid and to establish the responsibility, including, without limitation, qualifications and financial ability of Bidders, proposed subcontractors, suppliers, and other persons and organizations to perform and furnish the Work in accordance with the Contract Documents to District's satisfaction within the prescribed time.

END OF DOCUMENT

**SECTION 00 3100
AVAILABLE PROJECT INFORMATION**

PART 1 GENERAL

1.01 EXISTING CONDITIONS

- A. Certain information relating to existing surface and subsurface conditions and structures is available to bidders, but will not be part of the Contract Documents, as follows:
 - 1. Geotechnical Report: Entitled Geotechnical Design and Geological Hazards Evaluation Report, Child Development Center, Merritt College, 12500 Campus Drive, Oakland, California, dated December 22, 2019.
 - a. Report prepared by Terraphase Engineering Inc., Project No. 0034.005.0003.
 - b. Original copy is available for inspection at Owner's offices during normal business hours, or available with the Bidding Documents.
 - c. Original copy is available for inspection at the Architect's office during normal business hours.
 - d. Contractor is required to examine data provided.
 - e. Contractor is required to visit the site and become acquainted with existing conditions.
 - f. This report identifies properties of below grade conditions only at the locations of the borings and offers recommendations for the design of foundations, prepared primarily for the use of Architect.
 - g. The recommendations described shall not be construed as a requirement of this Contract, unless specifically referenced in Contract Documents.
 - h. This report, by its nature, cannot reveal all conditions that exist on the site. Should subsurface conditions be found to vary substantially from this report, changes in the design and construction of foundations will be made, with resulting credits or expenditures to the Contract Sum accruing to Owner.
 - i. Interpretation: This report is provided only for information and convenience. Owner and Architect disclaim responsibility for accuracy, true location and extent of soil conditions that have been evaluated by others. Owner and Architect further disclaim responsibility for interpretation of the report data by the Contractor; including but not limited to projecting soil bearing values, rock profiles, soil stability, and presence, level, and extent of underground water.
 - j. Applicable Requirements: Specific and variable recommendations contained in this document are subject to acceptance by Owner for incorporation in the Contract Documents prepared by Architect. Comply with requirements specified in the Contract Documents for earthwork, paving systems, and other applicable work scope items.
 - 2. California Geological Survey: Entitled Second Engineering Geology and Seismology Review for Merritt College - New Child Development Center Building 12500 Campus Drive, Oakland, California CGS Application No. 01-CGS4294, dated May 6, 2020.
 - a. Report prepared by California Department of Conservation.
 - b. Original copy is available for inspection at Owner's offices during normal business hours, or available with the Bidding Documents.
 - c. Original copy is available for inspection at the Architect's office during normal business hours.
 - d. Contractor is required to examine data provided.
 - e. Contractor is required to visit the site and become acquainted with existing conditions.
 - f. This report identifies properties of below grade conditions only at the locations of the borings and offers recommendations for the design of foundations, prepared primarily for the use of Architect.
 - g. The recommendations described shall not be construed as a requirement of this Contract, unless specifically referenced in Contract Documents.
 - h. This report, by its nature, cannot reveal all conditions that exist on the site. Should subsurface conditions be found to vary substantially from this report, changes in the

design and construction of foundations will be made, with resulting credits or expenditures to the Contract Sum accruing to Owner.

- i. Interpretation: This report is provided only for information and convenience. Owner and Architect disclaim responsibility for accuracy, true location and extent of soil conditions that have been evaluated by others. Owner and Architect further disclaim responsibility for interpretation of the report data by the Contractor; including but not limited to projecting soil bearing values, rock profiles, soil stability, and presence, level, and extent of underground water.
- j. Applicable Requirements: Specific and variable recommendations contained in this document are subject to acceptance by Owner for incorporation in the Contract Documents prepared by Architect. Comply with requirements specified in the Contract Documents for earthwork, paving systems, and other applicable work scope items.

1.02 OTHER INFORMATION

- A. Bulk Asbestos Analysis Entitled Bulk Asbestos Analysis - PLM ARB 435.
 - 1. Report prepared by Micro Analytical Laboratories, Inc., Project No. 0034.005.0002
 - 2. Original copy is available for inspection at Owner's offices during normal business hours.
 - 3. Contractor is required to examine report data.
 - 4. Contractor should visit the site and become acquainted with existing conditions.
- B. ASCE 7 Hazards Report: Entitled ASCE 7 Hazards Report.
 - 1. Original copy is available for inspection at Owner's offices during normal business hours.
 - 2. Contractor is required to examine report data.
 - 3. Contractor should visit the site and become acquainted with existing conditions.
- C. Arborist Report: Entitled Second Merritt College Childcare Center Arborist Report, dated August 8, 2019.
 - 1. Report prepared by Bay Area Plant Consultants.
 - 2. Original copy is available for inspection at Owner's offices during normal business hours.
 - 3. Contractor is required to examine report data.
 - 4. Contractor should visit the site and become acquainted with existing conditions.

PART 3 EXECUTION - NOT USED

END OF SECTION

DOCUMENT 00 31 19

EXISTING CONDITIONS**1. Summary**

This document describes existing conditions at or near the Project, and use of information available regarding existing conditions. This document is **not** part of the Contract Documents. See General Conditions for definition(s) of terms used herein.

2. Reports and Information on Existing Conditions

- a. Documents providing a general description of the Site and conditions of the Work may have been collected by Peralta Community College District ("District"), its consultants, contractors, and tenants. These documents may, but are not required to, include previous contracts, contract specifications, tenant improvement contracts, as-built drawings, utility drawings, and information regarding underground facilities.
- b. Information regarding existing conditions may be inspected at the District offices or the Construction Manager's offices, if any, and copies may be obtained at cost of reproduction and handling upon Bidder's agreement to pay for such copies. These reports, documents, and other information are **not** part of the Contract Documents. These reports, documents, and other information do **not** excuse Contractor from fulfilling Contractor's obligation to independently investigate any or all existing conditions or from using reasonable prudent measures to avoid damaging existing improvements.
- c. Information regarding existing conditions may also be included in the Project Manual, but shall **not** be considered part of the Contract Documents.
- d. Prior to commencing this Work, Contractor and the District's representative shall survey the Site to document the condition of the Site. Contractor will record the survey in digital videotape format and provide an electronic copy to the District within fourteen (14) days of the survey.
- e. Contractor may also document any pre-existing conditions in writing, provided that both the Contractor and the District's representative agree on said conditions and sign a memorandum documenting the same.

3. Use of Information

- a. Information regarding existing conditions was obtained only for use of District and its consultants, contractors, and tenants for planning and design and is **not** part of the Contract Documents.
- b. District does not warrant, and makes no representation regarding, the accuracy or thoroughness of any information regarding existing conditions. Bidder represents and agrees that in submitting a bid it is not relying on any information regarding existing conditions supplied by District.

- c. Under no circumstances shall District be deemed to warrant or represent existing above-ground conditions, as-built conditions, or other actual conditions, verifiable by independent investigation. These conditions are verifiable by Bidder by the performance of its own independent investigation that Bidder must perform as a condition to bidding and Bidder should not and shall not rely on this information or any other information supplied by District regarding existing conditions.
- d. Any information shown or indicated in the reports and other data supplied herein with respect to existing underground facilities at or contiguous to the Project may be based upon information and data furnished to District by the District's employees and/or consultants or builders of such underground facilities or others. District does not assume responsibility for the completeness of this information, and Bidder is solely responsible for any interpretation or conclusion drawn from this information.
- e. District shall be responsible only for the general accuracy of information regarding underground facilities, and only for those underground facilities that are owned by District, and only where Bidder has conducted the independent investigation required of it pursuant to the Instructions to Bidders, and discrepancies are not apparent.

4. Investigations/Site Examinations

- a. Before submitting a Bid, each Bidder is responsible for conducting or obtaining any additional or supplementary examinations, investigations, explorations, tests, studies, and data concerning conditions (surface, subsurface, and underground facilities) at or contiguous to the Site or otherwise, that may affect cost, progress, performance, or furnishing of Work or that relate to any aspect of the means, methods, techniques, sequences, or procedures of construction to be employed by Bidder and safety precautions and programs incident thereto or that Bidder deems necessary to determine its Bid for performing and furnishing the Work in accordance with the time, price, and other terms and conditions of Contract Documents.
- b. On request, District will provide each Bidder access to the Site to conduct such examinations, investigations, explorations, tests, and studies, as each Bidder deems necessary for submission of a Bid. Bidders must fill all holes and clean up and restore the Site to its former condition upon completion of its explorations, investigations, tests, and studies. Such investigations and Site examinations may be performed during any and all Site visits indicated in the Notice to Bidders and only under the provisions of the Contract Documents, including, but not limited to, proof of insurance and obligation to indemnify against claims arising from such work, and District's prior approval.

END OF DOCUMENT

DOCUMENT 00 31 32

GEOTECHNICAL DATA**1. Summary**

This document describes geotechnical data at or near the Project that is in the District's possession available for Contractor's review, and use of data resulting from various investigations. This document is **not** part of the Contract Documents. See General Conditions for definition(s) of terms used herein.

2. Geotechnical Reports

- a. Geotechnical reports may have been prepared for and around the Site and/or in connection with the Work by soil investigation engineers hired by Peralta Community College District ("District"), and its consultants, contractors, and tenants.
- b. Geotechnical reports may be inspected at the District offices or the Construction Manager's offices, if any, and copies may be obtained at cost of reproduction and handling upon Bidder's agreement to pay for such copies. These reports are **not** part of the Contract Documents.
- c. The following reports and drawings of physical conditions that may relate to the Project are for reference only and can be made available to the bidders:

- (1) Geotechnical Design Report-0034 Peralta-22Dec19
- (2) 201908 PCCD 2nd Childcare Center Report
- (3) ASCEDesignHazardsReport 2016 Site Class C
- (4) Merritt College 01-CGS4294_Second Review

3. Use of Data

- a. Geotechnical data were obtained only for use of District and its consultants, contractors, and tenants for planning and design and are **not** a part of Contract Documents.
- b. Except as expressly set forth below, District does not warrant, and makes no representation regarding, the accuracy or thoroughness of any geotechnical data. Bidder represents and agrees that in submitting a Bid it is not relying on any geotechnical data supplied by District, except as specifically allowed below.
- c. Under no circumstances shall District be deemed to make a warranty or representation of existing above ground conditions, as-built conditions, geotechnical conditions, or other actual conditions verifiable by independent investigation. These conditions are verifiable by Bidder by the performance of its own independent investigation that Bidder should perform as a condition to bidding and Bidder must not and shall not rely on information supplied by District.

4. Limited Reliance Permitted on Certain Information

- a. Reference is made herein for identification of:

Reports of explorations and tests of subsurface conditions at or contiguous to the Site that have been utilized by District in preparation of the Contract Documents.

Drawings of physical conditions in or relating to existing subsurface structures (except underground facilities) that are at or contiguous to the Site and have been utilized by District in preparation of the Contract Documents.

- b. Bidder may rely upon the general accuracy of the "technical data" contained in the reports and drawings identified above, but only insofar as it relates to subsurface conditions, provided Bidder has conducted the independent investigation required pursuant to Instructions to Bidders, and discrepancies are not apparent. The term "technical data" in the referenced reports and drawings shall be limited as follows:
- (1) The term "technical data" shall include actual reported depths, reported quantities, reported soil types, reported soil conditions, and reported material, equipment or structures that were encountered during subsurface exploration. The term "technical data" does not include, and Bidder may not rely upon, any other data, interpretations, opinions or information shown or indicated in such drawings or reports that otherwise relate to subsurface conditions or described structures.
 - (2) The term "technical data" shall not include the location of underground facilities.
 - (3) Bidder may not rely on the completeness of reports and drawings for the purposes of bidding or construction. Bidder may rely upon the general accuracy of the "technical data" contained in such reports or drawings.
 - (4) Bidder is solely responsible for any interpretation or conclusion drawn from any "technical data" or any other data, interpretations, opinions, or information provided in the identified reports and drawings.

5. Investigations/Site Examinations

- a. Before submitting a Bid, each Bidder is responsible for conducting or obtaining any additional or supplementary examinations, investigations, explorations, tests, studies, and data concerning conditions (surface, subsurface, and underground facilities) at or contiguous to the Site or otherwise, that may affect cost, progress, performance, or furnishing of Work or that relate to any aspect of the means, methods, techniques, sequences, or procedures of construction to be employed by Bidder and safety precautions and programs incident thereto or that Bidder deems necessary to determine its Bid for performing and furnishing the Work in accordance with the time, price, and other terms and conditions of Contract Documents.

- b. On request, District will provide each Bidder access to the Site to conduct such examinations, investigations, explorations, tests, and studies, as each Bidder deems necessary for submission of a Bid. Bidders must fill all holes and clean up and restore the Site to its former condition upon completion of its explorations, investigations, tests, and studies. Such investigations and Site examinations may be performed during any and all Site visits indicated in the Notice to Bidders and only under the provisions of the Contract Documents, including, but not limited to, proof of insurance and obligation to indemnify against claims arising from such work, and District's prior approval.

DOCUMENT 00 41 13
BID FORM AND PROPOSAL

To: Peralta Community College District ("District" or "Owner")

From: _____
(Proper Name of Bidder)

The undersigned declares that Bidder has read and understands the Contract Documents, including, without limitation, the Notice to Bidders and the Instructions to Bidders, and agrees and proposes to furnish all necessary labor, materials, and equipment to perform and furnish all work in accordance with the terms and conditions of the Contract Documents, including, without limitation, the Drawings and Specifications of Bid No. _ _____, for the following project known as:

Merritt College New Child Development Center (Increments #1 & #2)

("Project" or "Contract") and will accept in full payment for that Work the following total lump sum amount, all taxes included:

_____ dollars	\$ _____
Base Bid for Increment #1	
_____ dollars	\$ _____
Base Bid for Increment #2*	
_____ dollars	\$ _____
<i>TOTAL BASE BID = (Inc. #1 + Inc. #2)</i>	
* The Base Bid for Increment #2 cannot exceed 25% of the Total Base Bid.	
<i>Bidder acknowledges and agrees that the lowest responsive, responsible bidder will be determined based on the Base Bid for Increment #1 only.</i>	

Alternate Pricing

	dollars	\$ _____
Deductive Alternate #1 (Increment #1)		
Landscape:		
1. Item L-1: Delete fence along line 13, between lines BB and EE. (Drawings S/L-402, L/LD-101)		
	dollars	\$ _____
Deductive Alternate #2 (Increment #1)		
Structural:		
1. Item S-1: Delete exterior wall elevation. (Drawing 2-S/S-402)		
2. Item S-2: Delete details 14, 17. (Drawing L/S-510)		
	dollars	\$ _____
Deductive Alternate #3 (Increment #1)		
Architectural:		
1. Item A-1: Delete temporary walls along Lines EE, DD.5, 12.5. (Drawings S/A-201, S/A-202)		
2. Item A-2: Delete roofing, gutter, RWL above Room 107. (Drawing S/A-201)		
3. Item a-3: Delete Door 121A, frame, hardware. (Drawing S/A-102)		
4. Item A-4: Delete concrete sidewalk outside Door 121A. (Drawing S/A-041)		
5. Item A-5: Eliminate intermediate roofing slopes where temporary wall occurs. (Drawing S/A -103)		
	dollars	\$ _____
Deductive Alternate #4 (Increment #1)		
Mechanical / Electrical:		
1. Item M-1: Remove all duct and pipe caps at Line EE, Levels 1 and 2. (Drawings S/M-101, S/M-102, S/M-121, S/M-122)		
2. Item M-2: Lower grade on cable from Category 6A to Category 6. (Drawing S/T-001, L/T-001)		
3. Item M-3: Reduce wireless access points in classrooms from 2 to 1. (Drawings S/T-111, S/T-112, L/T-111, L/T-112)		
4. Item M-4: Delete card reader at Door 121A. (Drawing S/E-101)		

Descriptions of deductive alternates are primarily scope definitions and do not necessarily detail the full range of materials and processes needed to complete the construction.

[REMAINDER OF PAGE INTENTIONALLY LEFT BLANK]

Additional Detail Regarding Calculation of Base Bid

1. The undersigned has reviewed the Work outlined in the Contract Documents and fully understands the scope of Work required in this Proposal, understands the construction and project management function(s) is described in the Contract Documents, and that each Bidder who is awarded a contract shall be in fact a prime contractor, not a subcontractor, to the District, and agrees that its Proposal, if accepted by the District, will be the basis for the Bidder to enter into a contract with the District in accordance with the intent of the Contract Documents.
2. The undersigned has notified the District in writing of any discrepancies or omissions or of any doubt, questions, or ambiguities about the meaning of any of the Contract Documents, and has contacted the Construction Manager before bid date to verify the issuance of any clarifying Addenda.
3. The undersigned agrees to commence work under this Contract on the date established in the Contract Documents and to complete all work within the time specified in the Contract Documents.
4. The liquidated damages clause of the General Conditions and Agreement is hereby acknowledged.
5. It is understood that the District reserves the right to reject this bid and that the bid shall remain open to acceptance and is irrevocable for a period of ninety (90) days.
6. The following documents are attached hereto:
 - Bid Bond on the District's form or other security
 - Designated Subcontractors List
 - Site Visit Certification
 - Non-Collusion Declaration
 - Iran Contracting Act Certification
 - SLBE/SELBE Self Certification Affidavit

7. Receipt and acceptance of the following Addenda is hereby acknowledged:

No. _____, Dated _____	No. _____, Dated _____
No. _____, Dated _____	No. _____, Dated _____
No. _____, Dated _____	No. _____, Dated _____

8. Bidder acknowledges that the license required for performance of the Work is a _____ license.
9. Bidder hereby certifies that Bidder is able to furnish labor that can work in harmony with all other elements of labor employed or to be employed on the Work.

10. Bidder specifically acknowledges and understands that if it is awarded the Contract, that it shall perform the Work of the Project while complying with all requirements of the Department of Industrial Relations.
11. Bidder hereby certifies that its bid includes sufficient funds to permit Bidder to comply with all local, state or federal labor laws or regulations during the Project, including payment of prevailing wage, and that Bidder will comply with the provisions of Labor Code section 2810(d) if awarded the Contract.
12. Bidder agrees to comply with all requirements of the Project Labor Agreement.
13. The Bidder represents that it is competent, knowledgeable, and has special skills with respect to the nature, extent, and inherent conditions of the Work to be performed. Bidder further acknowledges that there are certain peculiar and inherent conditions existent in the construction of the Work that may create, during the Work, unusual or peculiar unsafe conditions hazardous to persons and property.
14. Bidder expressly acknowledges that it is aware of such peculiar risks and that it has the skill and experience to foresee and to adopt protective measures to adequately and safely perform the Work with respect to such hazards.
15. Bidder expressly acknowledges that it is familiar with and capable of complying with applicable federal, State, and local requirements relating to COVID-19 or other public health emergency/epidemic/pandemic including, if required, preparing, posting, and implementing a Social Distancing Protocol.
16. Bidder expressly acknowledges that it is aware that if a false claim is knowingly submitted (as the terms "claim" and "knowingly" are defined in the California False Claims Act, Gov. Code, § 12650 et seq.), the District will be entitled to civil remedies set forth in the California False Claim Act. It may also be considered fraud and the Contractor may be subject to criminal prosecution.
17. The undersigned Bidder certifies that it is, at the time of bidding, and shall be throughout the period of the Contract, licensed by the State of California to do the type of work required under the terms of the Contract Documents and registered as a public works contractor with the Department of Industrial Relations. Bidder further certifies that it is regularly engaged in the general class and type of work called for in the Contract Documents.

Furthermore, Bidder hereby certifies to the District that all representations, certifications, and statements made by Bidder, as set forth in this bid form, are true and correct and are made under penalty of perjury.

BID BOND

(Note: If Bidder is providing a bid bond as its bid security, Bidder must use this form, NOT a surety company form.)

KNOW ALL PERSONS BY THESE PRESENTS:

That the undersigned, _____, as Principal ("Principal"),
and, _____, as Surety ("Surety"), a corporation organized and existing under and by virtue of the laws of the State of ____ and authorized to do business as a surety in the State of California, are held and firmly bound unto the Peralta Community College District ("District") of Alameda County, State of California, as Obligee, in an amount equal to ten percent (10%) of the Base Bid plus alternates, in the sum of

_____ Dollars (\$ _____)

lawful money of the United States of America, for the payment of which sum well and truly to be made, we, and each of us, bind ourselves, our heirs, executors, administrators, successors, and assigns, jointly and severally, firmly by these presents.

THE CONDITION OF THIS OBLIGATION IS SUCH that whereas the Principal has submitted a bid to the District for all Work specifically described in the accompanying bid for the following project: _____ ("Project" or "Contract").

NOW, THEREFORE, if the Principal is awarded the Contract and, within the time and manner required under the Contract Documents, after the prescribed forms are presented to Principal for signature, enters into a written contract, in the prescribed form in accordance with the bid, and files two bonds, one guaranteeing faithful performance and the other guaranteeing payment for labor and materials as required by law, and meets all other conditions to the Contract between the Principal and the District becoming effective, or if the Principal shall fully reimburse and save harmless the District from any damage sustained by the District through failure of the Principal to enter into the written contract and to file the required performance and labor and material bonds, and to meet all other conditions to the Contract between the Principal and the District becoming effective, then this obligation shall be null and void; otherwise, it shall be and remain in full force and effect. The full payment of the sum stated above shall be due immediately if Principal fails to execute the Contract within seven (7) days of the date of the District's Notice of Award to Principal.

Surety, for value received, hereby stipulates and agrees that no change, extension of time, alteration or addition to the terms of the Contract or the call for bids, or to the work to be performed thereunder, or the specifications accompanying the same, shall in any way affect its obligation under this bond, and it does hereby waive notice of any such change, extension of time, alteration or addition to the terms of the Contract or the call for bids, or to the work, or to the specifications.

In the event suit is brought upon this bond by the District and judgment is recovered, the Surety shall pay all costs incurred by the District in such suit, including a reasonable attorneys' fee to be fixed by the Court.

If the District awards the bid, the security of unsuccessful bidder(s) shall be returned within sixty (60) days from the time the award is made. Unless otherwise required by law, no bidder may withdraw its bid for ninety (90) days after the date of the bid opening.

IN WITNESS WHEREOF, this instrument has been duly executed by the Principal and Surety above named, on the _____ day of _____, 20__.

DESIGNATED SUBCONTRACTORS LIST
(Public Contract Code Sections 4100-4114)

PROJECT: Merritt College New Child Development Center (CDC)_____

Bidder acknowledges and agrees that it must clearly set forth below the name, location and California contractor license number of each subcontractor who will perform work or labor or render service to the Bidder in or about the construction of the Work or who will specially fabricate and install a portion of the Work according to detailed drawings contained in the plans and specifications in an amount in excess of one-half of one percent (0.5%) of Bidder's total Base Bid and the kind of Work that each will perform. Vendors or suppliers of materials only do not need to be listed.

Bidder acknowledges and agrees that, if Bidder fails to list as to any portion of Work, or if Bidder lists more than one subcontractor to perform the same portion of Work, Bidder must perform that portion itself or be subjected to penalty under applicable law. In case more than one subcontractor is named for the same kind of Work, state the portion of the kind of Work that each subcontractor will perform.

If alternate bid(s) is/are called for and Bidder intends to use subcontractors different from or in addition to those subcontractors listed for work under the Base Bid, Bidder must list subcontractors that will perform Work in an amount in excess of one half of one percent (0.5%) of Bidder's total Base Bid, plus alternate(s).

If further space is required for the list of proposed subcontractors, attach additional copies of page 2 showing the required information, as indicated below.

NON-COLLUSION DECLARATION
(Public Contract Code Section 7106)

The undersigned declares:

I am the _____ of _____, the party making the foregoing bid.
[Title] [Name of Firm]

The bid is not made in the interest of, or on behalf of, any undisclosed person, partnership, company, association, organization, or corporation. The bid is genuine and not collusive or sham. The bidder has not directly or indirectly induced or solicited any other bidder to put in a false or sham bid. The bidder has not directly or indirectly colluded, conspired, connived, or agreed with any bidder or anyone else to put in a sham bid, or to refrain from bidding. The bidder has not in any manner, directly or indirectly, sought by agreement, communication, or conference with anyone to fix the bid price of the bidder or any other bidder, or to fix any overhead, profit, or cost element of the bid price, or of that of any other bidder. All statements contained in the bid are true. The bidder has not, directly or indirectly, submitted his or her bid price or any breakdown thereof, or the contents thereof, or divulged information or data relative thereto, to any corporation, partnership, company, association, organization, bid depository, or to any member or agent thereof, to effectuate a collusive or sham bid, and has not paid, and will not pay, any person or entity for such purpose.

Any person executing this declaration on behalf of a bidder that is a corporation, partnership, joint venture, limited liability company, limited liability partnership, or any other entity, hereby represents that he or she has full power to execute, and does execute, this declaration on behalf of the bidder.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct and that this declaration is executed on _____,

IRAN CONTRACTING ACT CERTIFICATION
(Public Contract Code Sections 2202-2208)

MERRITT COLLEGE NEW CHILD DEVELOPMENT CENTER (CDC)/PROJECT NO. 2425:
 between the Peralta Community College District ("District") and
 ("Contractor" or "Bidder")
 ("Contract" or "Project").

Prior to bidding on or submitting a proposal for a contract for goods or services of \$1,000,000 or more, the bidder/proposer must submit this certification pursuant to Public Contract Code section 2204.

The bidder/proposer must complete **ONLY ONE** of the following two options. To complete OPTION 1, check the corresponding box **and** complete the certification below. To complete OPTION 2, check the corresponding box, complete the certification below, and attach documentation demonstrating the exemption approval.

- OPTION 1.** Bidder/Proposer is not on the current list of persons engaged in investment activities in Iran created by the California Department of General Services ("DGS") pursuant to Public Contract Code section 2203(b), and we are not a financial institution extending twenty million dollars (\$20,000,000) or more in credit to another person, for 45 days or more, if that other person will use the credit to provide goods or services in the energy sector in Iran and is identified on the current list of persons engaged in investment activities in Iran created by DGS.
- OPTION 2.** Bidder/Proposer has received a written exemption from the certification requirement pursuant to Public Contract Code sections 2203(c) and (d). *A copy of the written documentation demonstrating the exemption approval is included with our bid/proposal.*

CERTIFICATION:

I, the official named below, CERTIFY UNDER PENALTY OF PERJURY, that I am duly authorized to legally bind the bidder/proposer to the OPTION selected above. This certification is made under the laws of the State of California.

WORKERS' COMPENSATION CERTIFICATION

MERRITT COLLEGE NEW CHILD DEVELOPMENT CENTER (CDC)/PROJECT NO. 2425:
between the Peralta Community College District
("District") and ("Contractor" or "Bidder")
("Contract" or "Project").

Labor Code section 3700, in relevant part, provides:

Every employer except the State shall secure the payment of compensation in one or more of the following ways:

- a. By being insured against liability to pay compensation by one or more insurers duly authorized to write compensation insurance in this state; and/or
- b. By securing from the Director of Industrial Relations a certificate of consent to self-insure, which may be given upon furnishing proof satisfactory to the Director of Industrial Relations of ability to self-insure and to pay any compensation that may become due to his employees.

I am aware of the provisions of section 3700 of the Labor Code which require every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that code, and I will comply with such provisions before commencing the performance of the Work of this Contract.

DOCUMENT 00 45 46.03

DRUG-FREE WORKPLACE CERTIFICATION

MERRITT COLLEGE NEW CHILD DEVELOPMENT CENTER (CDC)/PROJECT NO. 2425:
 between the Peralta Community College District
 (“District”) and (“Contractor”
 or “Bidder”) (“Contract” or “Project”).

This Drug-Free Workplace Certification form is required from the successful Bidder pursuant to Government Code section 8350 et seq., the Drug-Free Workplace Act of 1990. The Drug-Free Workplace Act of 1990 requires that every person or organization awarded a contract or grant for the procurement of any property or service from any state agency must certify that it will provide a drug-free workplace by doing certain specified acts. In addition, the Act provides that each contract or grant awarded by a state agency may be subject to suspension of payments or termination of the contract or grant, and the contractor or grantee may be subject to debarment from future contracting, if the contracting agency determines that specified acts have occurred.

The District is not a “state agency” as defined in the applicable section(s) of the Government Code, but the District is a local agency and community college district under California law and requires all contractors on District projects to comply with the provisions and requirements of the Drug-Free Workplace Act of 1990.

Contractor must also comply with the provisions of Health & Safety Code section 11362.3 which prohibits the consumption or possession of cannabis or cannabis products in any public place, including on campus.

Contractor shall certify that it will provide a drug-free workplace by doing all of the following:

- a. Publishing a statement notifying employees that the unlawful manufacture, distribution, dispensation, possession, or use of a controlled substance is prohibited in the person’s or organization’s workplace and specifying actions which will be taken against employees for violations of the prohibition.
- b. Establishing a drug-free awareness program to inform employees about all of the following:
 - (1) The dangers of drug abuse in the workplace.
 - (2) The person’s or organization’s policy of maintaining a drug-free workplace.
 - (3) The availability of drug counseling, rehabilitation, and employee-assistance programs.
 - (4) The penalties that may be imposed upon employees for drug abuse violations.

- c. Requiring that each employee engaged in the performance of the contract or grant be given a copy of the statement required above, and that, as a condition of employment on the contract or grant, the employee agrees to abide by the terms of the statement.

I, the undersigned, agree to fulfill the terms and requirements of Government Code section 8355 listed above and will publish a statement notifying employees concerning (a) the prohibition of controlled substance at the workplace, (b) establishing a drug-free awareness program, and (c) requiring that each employee engaged in the performance of the Contract be given a copy of the statement required by section 8355(a), and requiring that the employee agree to abide by the terms of that statement.

I also understand that if the District determines that I have either (a) made a false certification herein, or (b) violated this certification by failing to carry out the requirements of section 8355, that the Contract awarded herein is subject to termination, suspension of payments, or both. I further understand that, should I violate the terms of the Drug-Free Workplace Act of 1990, I may be subject to debarment in accordance with the requirements of the aforementioned Act.

I acknowledge that I am aware of the provisions of and hereby certify that I will adhere to the requirements of the Drug-Free Workplace Act of 1990 and Health and Safety Code section 11362.3.

TOBACCO-FREE ENVIRONMENT CERTIFICATION

MERRITT COLLEGE NEW CHILD DEVELOPMENT CENTER (CDC)/PROJECT NO. 2425:
between the Peralta Community College District
("District") and ("Contractor")
or "Bidder") ("Contract" or "Project").

This Tobacco-Free Environment Certification form is required from the successful Bidder.

Pursuant to, without limitation, 20 U.S.C. section 6083, Labor Code section 6400 et seq., Health & Safety Code section 104350 et seq., Business and Professions Code section 22950 et seq., and District Board policies, all District sites, including the Project site, are tobacco-free environments. Smoking and the use of tobacco products by all persons is prohibited on or in District property. District property includes school buildings, school grounds, school-owned vehicles and vehicles owned by others while on District property. The prohibition on smoking includes the use of any electronic smoking device that creates an aerosol or vapor, in any manner or in any form, and the use of any oral smoking device for the purpose of circumventing the prohibition of tobacco smoking. Further, Health & Safety Code section 11362.3 prohibits the smoking or use of cannabis or cannabis products in any place where smoking tobacco is prohibited.

I acknowledge that I am aware of the District's policy regarding tobacco-free environments at District sites, including the Project site and hereby certify that I will adhere to the requirements of that policy and not permit any of my firm's employees, agents, subcontractors, or my firm's subcontractors' employees or agents, to use tobacco and/or smoke on the Project site.

HAZARDOUS MATERIALS CERTIFICATION

MERRITT COLLEGE NEW CHILD DEVELOPMENT CENTER (CDC)/PROJECT NO. 2425:
between the Peralta Community College District ("District")
and ("Contractor" or "Bidder")
("Contract" or "Project").

1. Contractor hereby certifies that no asbestos, or asbestos-containing materials, polychlorinated biphenyl (PCB), or any material listed by the federal or state Environmental Protection Agency or federal or state health agencies as a hazardous material, or any other material defined as being hazardous under federal or state laws, rules, or regulations, ("New Hazardous Material"), shall be furnished, installed, or incorporated in any way into the Project or in any tools, devices, clothing, or equipment used to affect any portion of Contractor's work on the Project for District.
2. Contractor further certifies that it has instructed its employees with respect to the above-mentioned standards, hazards, risks, and liabilities.
3. Asbestos and/or asbestos-containing material shall be defined as all items containing but not limited to chrysotile, crocidolite, amosite, anthophyllite, tremolite, and actinolite. Any or all material containing greater than one-tenth of one percent (0.1%) asbestos shall be defined as asbestos-containing material.
4. Any disputes involving the question of whether or not material is New Hazardous Material shall be settled by electron microscopy or other appropriate and recognized testing procedure, at the District's determination. The costs of any such tests shall be paid by Contractor if the material is found to be New Hazardous Material.
5. All Work or materials found to be "New Hazardous Material" or Work or material installed with equipment containing "New Hazardous Material" will be immediately rejected and this Work will be removed at Contractor's expense at no additional cost to the District.
6. Contractor has read and understood the document titled Hazardous Materials Procedures & Requirements, and shall comply with all the provisions outlined therein. Contractor certifies that it is knowledgeable of, and shall comply with, all laws applicable to the Work, including, but not limited to, all federal, state, and local laws, statutes, standards, rules, regulations, and ordinances applicable to the Work.

DOCUMENT 00 45 46.06

LEAD-BASED MATERIALS CERTIFICATION

MERRITT COLLEGE NEW CHILD DEVELOPMENT CENTER (CDC)/PROJECT NO. 2425:
 between the Peralta Community College District ("District")
 and ("Contract" or "Project"). ("Contractor" or "Bidder")

This certification provides notice to the Contractor that:

- (1) Contractor's work may disturb lead-containing building materials.
- (2) Contractor shall notify the District if any work may result in the disturbance of lead-containing building materials.
- (3) Contractor shall comply with the Renovation, Repair and Painting Rule, if lead-based paint is disturbed in a six-square-foot or greater area indoors or a 20-square-foot or greater area outdoors.

1. Lead as a Health Hazard

Lead poisoning is recognized as a serious environmental health hazard facing children today. Even at low levels of exposure, much lower than previously believed, lead can impair the development of a child's central nervous system, causing learning disabilities, and leading to serious behavioral problems. Lead enters the environment as tiny lead particles and lead dust disburse when paint chips, chalks, peels, wears away over time, or is otherwise disturbed. Ingestion of lead dust is the most common pathway of childhood poisoning; lead dust gets on a child's hands and toys and then into a child's mouth through common hand-to-mouth activity. Exposures may result from construction or remodeling activities that disturb lead paint, from ordinary wear and tear of windows and doors, or from friction on other surfaces.

Ordinary construction and renovation or repainting activities carried out without lead-safe work practices can disturb lead-based paint and create significant hazards. Improper removal practices, such as dry scraping, sanding, or water blasting painted surfaces, are likely to generate high volumes of lead dust.

Because the Contractor and its employees will be providing services for the District, and because the Contractor's work may disturb lead-containing building materials, CONTRACTOR IS HEREBY NOTIFIED of the potential presence of lead-containing materials located within certain buildings utilized by the District. All school buildings built prior to 1978 are presumed to contain some lead-based paint until sampling proves otherwise.

2. Overview of Law

Both the Federal Occupational Safety and Health Administration ("Fed/OSHA") and the California Division of Occupational Safety and Health ("Cal/OSHA") have

implemented safety orders applicable to all construction work where a contractor's employee may be occupationally exposed to lead.

The OSHA Regulations apply to all construction work where a contractor's employee may be occupationally exposed to lead. The OSHA Regulations contain specific and detailed requirements imposed on contractors subject to those regulations. The OSHA Regulations define construction work as work for construction, alteration, and/or repair, including painting and decorating. Regulated construction work includes, but is not limited to, the following:

- a. Demolition or salvage of structures where lead or materials containing lead are present;
- b. Removal or encapsulation of materials containing lead;
- c. New construction, alteration, repair, or renovation of structures, substrates, or portions thereof, that contain lead, or materials containing lead;
- d. Installation of products containing lead;
- e. Lead contamination/emergency cleanup;
- f. Transportation, disposal, storage, or containment of lead or materials containing lead on the site or location at which construction activities are performed; and
- g. Maintenance operations associated with the construction activities described in the subsection.

Because it is assumed by the District that all painted surfaces (interior as well as exterior) within the District contain some level of lead, it is imperative that the Contractor, its workers and subcontractors fully and adequately comply with all applicable laws, rules and regulations governing lead-based materials (including title 8, California Code of Regulations, section 1532.1).

Contractor shall notify the District if any Work may result in the disturbance of lead-containing building materials. Any and all Work that may result in the disturbance of lead-containing building materials shall be coordinated through the District. A signed copy of this Certification shall be on file prior to beginning Work on the Project, along with all current insurance certificates.

3. Renovation, Repair and Painting Rule, Section 402(c)(3) of the Toxic Substances Control Act

The EPA requires lead safe work practices to reduce exposure to lead hazards created by renovation, repair and painting activities that disturb lead-based paint. Pursuant to the Renovation, Repair and Painting Rule (RRP), renovations in homes, childcare facilities, and schools built prior to 1978 must be conducted by certified renovations firms, using renovators with training by a EPA-accredited training provider, and fully and adequately complying with all applicable laws, rules and regulations governing lead-based materials, including those rules and regulations

appearing within title 40 of the Code of Federal Regulations as part 745 (40 CFR 745).

The RRP requirements apply to all contractors who disturb lead-based paint in a six-square-foot or greater area indoors or a 20-square-foot or greater area outdoors. If a DPH-certified inspector or risk assessor determines that a home constructed before 1978 is lead-free, the federal certification is not required for anyone working on that particular building.

4. Contractor's Liability

If the Contractor fails to comply with any applicable laws, rules, or regulations, and that failure results in a site or worker contamination, the Contractor will be held solely responsible for all costs involved in any required corrective actions, and shall defend, indemnify, and hold harmless the District, pursuant to the indemnification provisions of the Contract, for all damages and other claims arising therefrom.

If lead disturbance is anticipated in the Work, only persons with appropriate accreditation, registrations, licenses, and training shall conduct this Work.

It shall be the responsibility of the Contractor to properly dispose of any and all waste products, including, but not limited to, paint chips, any collected residue, or any other visual material that may occur from the prepping of any painted surface. It will be the responsibility of the Contractor to provide the proper disposal of any hazardous waste by a certified hazardous waste hauler. This company shall be registered with the Department of Transportation (DOT) and shall be able to issue a current manifest number upon transporting any hazardous material from any school site within the District.

The Contractor shall provide the District with any sample results prior to beginning Work, during the Work, and after the completion of the Work. The District may request to examine, prior to the commencement of the Work, the lead training records of each employee of the Contractor.

THE CONTRACTOR HEREBY ACKNOWLEDGES, UNDER PENALTY OF PERJURY, THAT IT:

1. HAS RECEIVED NOTIFICATION OF POTENTIAL LEAD-BASED MATERIALS ON THE OWNER'S PROPERTY;
2. IS KNOWLEDGEABLE REGARDING AND WILL COMPLY WITH ALL APPLICABLE LAWS, RULES, AND REGULATIONS GOVERNING WORK WITH, AND DISPOSAL, OF LEAD.

THE UNDERSIGNED WARRANTS THAT HE/SHE HAS THE AUTHORITY TO SIGN ON BEHALF OF AND BIND THE CONTRACTOR. THE DISTRICT MAY REQUIRE PROOF OF SUCH AUTHORITY.

SEX OFFENDER REGISTRATION ACT CERTIFICATION

MERRITT COLLEGE NEW CHILD DEVELOPMENT CENTER (CDC)/PROJECT NO. 2425:
and between the Peralta Community College District ("District")
("Contract" or "Project"). ("Contractor" or "Bidder")

This certification provides notice to the Contractor that:

- Penal Code section 290.001 requires every person required to register pursuant to sections 290 to 290.009, inclusive, of the Sex Offender Registration Act who is carrying on a vocation at the community college for more than fourteen (14) days, or for an aggregate period exceeding thirty (30) days in a calendar year, shall, in addition to the registration required by the Sex Offender Registration Act, register with the campus police department within five (5) working days of commencing employment at that community college on a form as may be required by the Department of Justice. The terms "employed or carries on a vocation" include employment whether or not financially compensated, volunteered, or performed for government or educational benefit.
- If the community college has no campus police department, the registrant shall instead register with the police of the city in which the campus is located or the sheriff of the county in which the campus is located if the campus is located in an unincorporated area or in a city that has no police department, on a form as may be required by the Department of Justice.
- The registrant shall also notify the campus police department within five (5) working days of ceasing to be employed, or ceasing to carry on a vocation, at the community college.

Contractor hereby acknowledges, under penalty of perjury, that it is aware of the provisions of section 290.001 of the Penal Code, and it will provide notice of the above provisions to all of its employees, subcontractors, and employees of subcontractors regardless of whether they are designated as employees or acting as independent contractors of the Contractor at least five (5) working days before commencing the performance of the Work of this Contract.

BUY AMERICAN CERTIFICATION

MERRITT COLLEGE NEW CHILD DEVELOPMENT CENTER (CDC)/PROJECT NO. 2425:
between the Peralta Community College District
("District") and ("Contractor"
or "Bidder") ("Contract" or "Project").

Federal regulations require that all of the iron, steel, and manufactured goods used in projects for the construction, installation, repairs, renovation, modernization, or maintenance of a public building or public work funded in part or in whole by federal stimulus funds, with the exception of projects funded by Qualified School Construction Bonds, be produced in the United States of America, unless a federal department waives this requirement because (1) it is inconsistent with the public interest, (2) the goods are not produced in sufficient quantities or of satisfactory quality in the United States, or (3) the requirement would increase the cost of the Project overall by more than twenty-five percent (25%) ("Buy American").

Contractor shall submit this Certification with its executed agreement, identifying the steps Contractor will take to use goods produced in the United States of America in carrying out this Contract. Bidder should not submit this form with its bid.

Contractor shall retain a copy of this form and may be subject to a future audit.

CERTIFICATION

On behalf of Contractor, I represent and covenant that Contractor will use on the Project only iron, steel and manufactured goods produced in the United States of America except goods for which a federal department has waived this requirement.

I, _____, certify that I am the Contractor's _____ and that the representations and covenants made herein are true and correct. In making this certification, I am aware of section 12650 et seq. of the Government Code providing for the imposition of treble damages for making false claims.

Peralta Community College District

SMALL LOCAL BUSINESS ENTERPRISE AND SMALL EMERGING LOCAL BUSINESS ENTERPRISE PROGRAM

The District is committed to ensure equal opportunity and equitable treatment in awarding and managing its public contracts and has established an annual overall program goal of twenty-five percent participation for small local businesses. To facilitate opportunities for small local business, the District will use a maximum 5% bidding preference for SLBE and SELBE firms. The preference is only used for computation purposes to determine the winning bidder, the contract is awarded at the actual bid amount. Please review the following guidelines to see if your firm qualifies for the preference.

The 5% bidding preference for an SLBE and SELBE firms are for construction, personal and professional services, goods and services, maintenance, repairs, and operations where responsibility and quality are equal. The preference will be 5% of the bid amount of the lowest responsive responsible bidder, and may not exceed \$50,000.00 for any bid.

A Non-SLBE/SELBE Prime Contractor who utilizes 25% of total bid amount, with SLBE or SELBE subcontractors (who meet the District's Definition of an SLBE and SELBE), can also receive a maximum of 4% bidding preference, not to exceed \$50,000.00 for any bid. (See below Subcontractor section.)

Definitions:

SLBE: A Small Local Business Enterprise is a business that has not exceeded gross annual revenue of 8.5 million dollars for a construction firm, or 6 million dollars for goods and non-professional services firm, or 3 million dollars for architecture, engineering and professional services firm, for the past three consecutive years and meets the below geographic location requirements.

SELBE: A Small Local Emerging Business Enterprise is a business that has not exceeded gross annual revenue of 1.5 million dollars for the past three consecutive years and meets the below geographic location requirements.

Commercially Useful Function: Shall mean a business is directly responsible for providing the materials, equipment, supplies or services to the District as required by the contract solicitation. The business performs work that is normal for its business services and carries out its obligation by actually performing, managing, or supervising the work involved. The business is not Commercially Useful if its role is limited to that of an extra participant in a transaction, contract, or project through which funds are passed in order to obtain the appearance of SLBE or SELBE participation.

Geographic Location Requirements:

- The business must be located at a fixed, established commercial address located in the District's market area of Albany, Alameda, Berkeley, Emeryville, Oakland, or Piedmont, and not a temporary or movable office, a post office box, or a telephone answering service.
- If the business has an office outside of the District's market area as well as an office within

the market area, the office within the District's market area must be staffed on a full time permanent basis with someone employed by the business.

- If requested, the business that has an office outside of the District's market area must provide proof of one or more past contracts citing the business address (such as contracts to perform work, to rent space or equipment, or for other business services) was within the District's market area at least one (1) year prior to the date of contract award. The one-year requirement does not apply to businesses whose sole establishment is located within the District's market area.

Subcontractors:

Non-SLBE/SELBE Prime Contractors who use subcontractors, who meet the district definitions of SLBE and SELBE, may receive a maximum of 4% bidding preference if the following conditions are met:

1. 25% of total bid amount is with Subcontractors who meet the District's definition of an SLBE and SELBE. The Prime Contractor must list each Subcontractor on the Subcontractor List form, clearly identifying the SLBE and SELBE status and the Dollar Amount of work each subcontractor will perform.
2. The Subcontractors must provide a Commercially Useful Function.
3. The Prime Contractor must maintain the Subcontractor percentages (based on the quoted dollar amounts) indicated in the Subcontractor List form at the time the Contract is awarded and throughout the term of the Contract.
4. The Prime Contractor must fill out sign the SLBE/SELBE Self Certification Affidavit and return it with the bid documents, and 48 hours after the bid opening the Prime Contractor must submit signed SLBE/SELBE Self Certification Affidavit from each of the SLBE and SELBE subcontractors listed in the Subcontractor form. The Subcontractor must agree to provide the requested documentation to verify the SLBE/SEBLE status.
5. No Substitutions can be made to the SLBE and SELBE subcontractor without the prior written approval of the District. The District will approve a subcontractor substitution on the following conditions:
 - a. A written statement from the subcontractor agreeing to the substitution.
 - b. When the subcontractor has been given a reasonable opportunity to execute the subcontract, yet fails to, or refuses to execute the subcontract, or refuses to satisfy contractual obligations.
 - c. When the subcontractor becomes insolvent.
 - d. When the District determines the work performed by the subcontractor is not in accordance with the contact agreement, or the subcontractor is substantially and unduly delaying or disrupting the progress of work.

Firms that meet the District criteria for an SLBE and SELBE can complete the below self-certification affidavit signed under penalty of perjury. Firms claiming SLBE and SELBE status in the self-certification affidavit will be required to submit proof of residency and revenue 48 hours after bid opening. Such proof shall consist of a copy of a contract to perform work, to rent space or equipment, or for other business services, executed from their local address, and the firm's tax returns for the past three consecutive years.

Peralta Community College District

SLBE/SELBE SELF CERTIFICATION AFFIDAVIT

I certify under penalty of perjury that my firm meets the District’s definition of a Small Local Business Enterprise or a Small Emerging Local Business Enterprise and resides in the geographic location of the District’s market area and qualifies for the below preference. The maximum preference will be five percent of the bid amount of the lowest responsible bidder, and may not exceed \$50,000.00 for any bid. The preference is only used for computation purposes to determine the winning bidder; the contract is awarded at the actual bid amount. The District’s Contract Compliance Office will determine whether this requirement has been fulfilled. Bidders may only claim one of the below preferences.

Certification Status	Preference	Preference Claimed (check only one)
SLBE	5% of lowest bid	
SELBE	5% of lowest bid	
25% of Subcontractors are SLBE/SELBE	4% of lowest bid	
Not a SLBE/SELBE	None	

1. I acknowledge and am hereby advised that upon a finding of perjury with the claims made in this self certification affidavit the District is authorized to impose penalties which may include any of the following:
 - a) Refusal to certify the award of a contract
 - b) Suspension of a contract
 - c) Withholding of funds
 - d) Revision of a contract for material breach of contract
 - e) Disqualification of my firm from eligibility for providing goods and services to the Peralta Community College District for a period not to exceed five (5) years

2. I acknowledge and have been advised and hereby agree that my firm will be required to provide proof (and if applicable, my SLBE and SELBE Subcontractors will provide proof) of the status claimed on this self-certification affidavit 48 hours after bid opening. Proof of status claimed includes tax returns from the previous three years and past contracts to determine the size and geographical location of my firm.

3. I declare that the above provisions are attested to under penalty of perjury under the laws of the State of California.

POST BID INTERVIEW

PART 1 – GENERAL**1.01 SUMMARY**

If requested by the District, this Section requires the apparent low bidder to attend and participate in a Post Bid Interview with the Construction Manager, prior to award of any contract by the District. The Post Bid Interview will be scheduled by the Construction Manager within three (3) calendar days after the date of bid.

1.02 REQUIRED ATTENDANCE

- A. A duly authorized representative of the apparent low bidder is required to attend the Post Bid Interview, in person.
- B. The apparent low bidder's authorized representative(s) must have (1) knowledge of how the bid submitted was prepared, (2) the person responsible for supervising performance of the Work, and (3) the authority to bind the apparent low bidder.
- C. Failure to attend the Post Bid Interview as scheduled will be considered just cause for the District to reject the Bid as nonresponsive.

1.03 POST BID INTERVIEW PROCEDURE

- A. The Construction Manager will review the Bid with the attendees.
- B. The Construction Manager will review the Contract Documents with the attendees, including but not limited to:
 - (1) Insurance
 - (2) Bonding
 - (3) Addenda
 - (4) Pre-Bid Clarifications
 - (5) Scope of Work
 - (6) Bid Packages Descriptions
 - (7) Bid Alternates
 - (8) Contract Plans
 - (9) Contract Specifications
 - (10) Project Schedule and Schedule Requirements

- (11) Critical Dates Requirement for Other Bid Packages
- (12) Prevailing Wage Requirements
- (13) Liquidated Damages
- (14) Required Documentation for Contract Administration
- (15) Contract Coordination Requirements

1.04 POST BID INTERVIEW DOCUMENTATION

The Construction Manager will document the Post Bid Interview on the form attached to this Section. Both the apparent low bidder and the Construction Manager are required to sign the Post Bid Interview Documentation.

CONTRACTOR

[CM]

CONTRACTOR

[CM]

II. PROPOSED CONTRACT:

III. PURPOSE OF INTERVIEW IS TO ASSURE A MUTUAL UNDERSTANDING OF THE FOLLOWING:

- A. Do you acknowledge submission of a complete and accurate bid? Yes No
- B. Do you acknowledge the Bid Document submittal timelines after NOA and NTP and can you meet those timelines? Yes No
- C. Do you acknowledge the requirements for the escrow of bid documents? Yes No
- D. Are you comfortable with your listed subcontractors? Yes No

IV. CONTRACTUAL REQUIREMENTS:

- A. Do you understand you are a prime contractor? Yes No
- B. Can you meet specified insurance requirements? Yes No
 - 1. Do any of your policies that require Additional Insured endorsements exceed the minimum coverage requirements? Yes No
 - 2. Are you requesting that the District accept an Umbrella or Excess Liability Insurance Policy to meet the policy limit? Yes No

- 3. Will there be a gap between the per occurrence amount of any underlying policy and the start of the coverage under the Umbrella or Excess Liability Insurance Policy? Yes No

- C. Will you provide the Performance Bond and Labor and Material Bond for 100% of the Contract Price as stipulated? Yes No
 - 1. Cost for bond: _____% Yes No
 - 2. Is the cost of your bond in your base bid? Yes No
 - 3. Is your surety licensed to issue bonds in California? Yes No

- D. Do you understand the sex offender registration requirements? Yes No

- E. Is it understood that all workers must be paid prevailing wage? Yes No

- F. Is it understood that all subcontractors of every tier must be registered as a public works contractor with the Department of Industrial Relations? Yes No

- V. SCOPE OF WORK:

- A. Acknowledged Receipt of Addenda #1-___ Yes No

- B. Are the costs for addenda items included in your bid? (if applicable) Yes No

- C. Do you have a complete understanding of your Scope of Work under the proposed Agreement? Yes No

- D. You have re-reviewed the documents and understand the Scope of the Work. Are there any items that require clarification? Yes No

If yes, please identify them.

- 1. _____

- 2. _____

- 3. _____

Is (are) there additional cost(s) for the above item(s)? Yes No

- E. Have you reviewed bid alternative(s) #1-___? (If applicable) Yes No
- F. Are the costs for bid alternatives included in your bid? Yes No
- G. Are the plans and specifications clear and understandable to your satisfaction? Yes No
- H. Do you acknowledge that the time to submit notice of requests for substitution of specified materials has expired? Yes No

VI. SCHEDULE:

- A. Do you acknowledge and agree to the stipulated completion dates and milestones in the contract? Yes No
 - 1. Will you provide a detailed construction schedule to _____ within the required ten (10) days of the Notice to Proceed, per the contract? Yes No
 - 2. Can you meet the submittal deadline? Yes No
 - 3. It is understood that the Project schedule is critical and that that weekend and overtime work may be required to meet the milestones. Yes No
 - 4. It is understood that if rain does occur, then all dewatering and protection of work is required, per the contract. Yes No
If not, what do you believe must change and why? _____

- B. Identify critical materials, deliveries, long lead items and other dependencies, including Owner Furnished items that could affect the completion of your work. Yes No

- 1. _____
- 2. _____
- 3. _____
- 4. _____
- 5. _____

C. Do you understand that there is going to be maintenance and other construction taking place on site during the course of the project? Yes No

VII. EXECUTION OF WORK

A. Do you understand the access to the site? Yes No

B. Do you understand the staging area restrictions? Yes No

C. Have you included protection of [asphalt, floors, and roofs]? Yes No

D. Do you understand that the site is occupied by students, teachers, administrators, parents, etc.? Yes No

VIII. CONTRACTOR COMMENTS/SUGGESTIONS:

- 1. _____
2. _____
3. _____
4. _____
5. _____

IX. CONTRACTOR

You agree the information contained herein is part of your contractual obligations. Your signature acknowledges your agreement to perform all Work in the Contract Documents, and that costs for all Work are included in your bid.

The foregoing information is true and accurate, and I am authorized to sign as an officer of the company I am representing.

AGREEMENT

THIS AGREEMENT IS MADE AND ENTERED INTO THIS _____ DAY OF _____
 _____, 20____, by and between the Peralta Community College District ("District") and _____
 _____ ("Contractor")
 ("Agreement").

WITNESSETH: That the parties hereto have mutually covenanted and agreed, and by these presents do covenant and agree with each other, as follows:

- 1. The Work:** Contractor agrees to furnish all tools, equipment, apparatus, facilities, labor, and material necessary to perform and complete in a good and workmanlike manner, the work of the following project:

MERRITT COLLEGE NEW CHILD DEVELOPMENT CENTER (CDC) ("Project" or "Contract" or "Work")

It is understood and agreed that the Work shall be performed and completed as required in the Contract Documents including, without limitation, the Drawings and Specifications and submission of all documents required to secure funding or by the Division of the State Architect for close-out of the Project, under the direction and supervision of, and subject to the approval of, the District or its authorized representative.

- 2. The Contract Documents:** The complete Contract consists of all Contract Documents as defined in the General Conditions and incorporated herein by this reference. Any and all obligations of the District and Contractor are fully set forth and described in the Contract Documents. All Contract Documents are intended to cooperate so that any Work called for in one and not mentioned in the other or vice versa is to be executed the same as if mentioned in all Contract Documents.
- 3. Interpretation of Contract Documents:** Should any question arise concerning the intent or meaning of Contract Documents, including the Drawings or Specifications, the question shall be submitted to the District for interpretation. If a conflict exists in the Contract Documents, valid, written modifications, beginning with the most recent, shall control over this Agreement (if any), which shall control over the Special Conditions, which shall control over any Supplemental Conditions, which shall control over the General Conditions, which shall control over the remaining Division 0 documents, which shall control over Division 1 Documents which shall control over Division 2 through Division 49 documents, which shall control over figured dimensions, which shall control over large-scale drawings, which shall control over small-scale drawings. In the case of a discrepancy or ambiguity solely between and among the Drawings and Specifications, the discrepancy or ambiguity shall be resolved in favor of the interpretation that will provide District with the functionally complete and operable Project described in the Drawings and Specifications. In no case shall a document calling for lower quality and/or quantity material or workmanship control. The decision of the District in the matter shall be final.

4. **Time for Completion:** It is hereby understood and agreed that the Work under this Contract shall be completed within **540 consecutive calendar days** ("Contract Time") from the date specified in the District's Notice to Proceed.
5. **Completion - Extension of Time:** Should the Contractor fail to complete this Contract, and the Work provided herein, within the time fixed for completion, due allowance being made for the contingencies provided for herein, the Contractor shall become liable to the District for all loss and damage that the District may suffer on account thereof. The Contractor shall coordinate its Work with the Work of all other contractors. The District shall not be liable for delays resulting from Contractor's failure to coordinate its Work with other contractors in a manner that will allow timely completion of Contractor's Work. Contractor shall be liable for delays to other contractors caused by Contractor's failure to coordinate its Work with the Work of other contractors.
6. **Liquidated Damages:** Time is of the essence for all work under this Agreement. It is hereby understood and agreed that it is and will be difficult and/or impossible to ascertain and determine the actual damage that the District will sustain in the event of and by reason of Contractor's delay; therefore, Contractor agrees that it shall pay to the District the sum of **two thousand five hundred dollars (\$2,500.00) per day as liquidated damages for each and every day's delay beyond the time herein prescribed in the finishing of each Milestone as identified in Specification Section 01 32 12 Scheduling of Work.**

It is hereby understood and agreed that this amount is not a penalty.

In the event that any portion of the liquidated damages is not paid to the District, the District may deduct that amount from any money due or that may become due the Contractor under this Agreement, and such deduction does not constitute a withholding or penalty. The District's right to assess liquidated damages is as indicated herein and in the General Conditions.

The time during which the Contract is delayed for cause, as hereinafter specified, may extend the time of completion for a reasonable time as the District may grant, provided that Contractor has complied with the claims procedure of the Contract Documents. This provision does not exclude the recovery of damages by either party under other provisions in the Contract Documents.

7. **Loss Or Damage:** The District and its agents and authorized representatives shall not in any way or manner be answerable or suffer loss, damage, expense, or liability for any loss or damage that may happen to the Work, or any part thereof, or in or about the same during its construction and before acceptance, and the Contractor shall assume all liabilities of every kind or nature arising from the Work, either by accident, negligence, theft, vandalism, or any cause whatsoever; and shall hold the District and its agents and authorized representatives harmless from all liability of every kind and nature arising from accident, negligence, or any cause whatsoever.
8. **Limitation Of District Liability:** District's financial obligations under this Contract shall be limited to the payment of the compensation provided in this Contract. Notwithstanding any other provision of this Contract, in no event shall District be liable, regardless of whether any claim is based on contract or tort, for any special, consequential, indirect or incidental damages, including, but not limited to, lost

profits or revenue, lost bonding capacity, arising out of or in connection with this Contract for the services performed in connection with this Contract.

9. **Insurance and Bonds:** Prior to issuance of the Notice to Proceed by the District, Contractor shall provide all required certificates of insurance, insurance endorsements, and payment and performance bonds as evidence thereof.
10. **Prosecution of Work:** If the Contractor should neglect to prosecute the Work properly or fail to perform any provisions of this Contract, the District, may, pursuant to the General Conditions and without prejudice to any other remedy it may have, make good such deficiencies and may deduct the cost thereof from the payment then or thereafter due the Contractor.
11. **Authority of Architect, Project Inspector, and DSA:** Contractor hereby acknowledges that the Architect(s), the Project Inspector(s), and the Division of the State Architect ("DSA") have authority to approve and/or suspend Work if the Contractor's Work does not comply with the requirements of the Contract Documents, Title 24 of the California Code of Regulations, and all applicable laws and regulations. The Contractor shall be liable for any delay caused by its non-compliant Work.
12. **Assignment of Contract:** Neither the Contract, nor any part thereof, nor any moneys due or to become due thereunder, may be assigned by the Contractor without the prior written approval of the District, nor without the written consent of the Surety on the Contractor's Performance Bond (the "Surety"), unless the Surety has waived in writing its right to notice of assignment.
13. **Classification of Contractor's License:** Contractor hereby acknowledges that it currently holds valid Type B – General Contractor's license(s) issued by the State of California, Contractors' State License Board, in accordance with division 3, chapter 9, of the Business and Professions Code and in the classification called for in the Contract Documents.
14. **Registration as Public Works Contractor:** The Contractor and all Subcontractors currently are registered as public works contractors with the Department of Industrial Relations, State of California, in accordance with Labor Code section 1771.1.
15. **Payment of Prevailing Wages:** The Contractor and all Subcontractors shall pay all workers on all Work performed pursuant to this Contract not less than the general prevailing rate of per diem wages and the general prevailing rate for holiday and overtime work as determined by the Director of the Department of Industrial Relations, State of California, for the type of work performed and the locality in which the work is to be performed within the boundaries of the District, pursuant to sections 1770 et seq. of the California Labor Code.
16. This Project is subject to labor compliance monitoring and enforcement by the Department of Industrial Relations pursuant to Labor Code section 1771.4 and Title 8 of the California Code of Regulations. Contractor specifically acknowledges and understands that it shall perform the Work of this Agreement while complying with all the applicable provisions of Division 2, Part 7, Chapter 1, of the Labor Code, including, without limitation, the requirement that the Contractor and all of its

Subcontractors shall timely submit complete and accurate electronic certified payroll records as required by the Contract Documents, or the District may not issue payment.

- 17. Contract Price:** In consideration of the foregoing covenants, promises, and agreements on the part of the Contractor, and the strict and literal fulfillment of each and every covenant, promise, and agreement, and as compensation agreed upon for the Work and construction, erection, and completion as aforesaid, the District covenants, promises, and agrees that it will well and truly pay and cause to be paid to the Contractor in full, and as the full Contract Price and compensation for construction, erection, and completion of the Work hereinabove agreed to be performed by the Contractor, the following price:

_____ Dollars

(\$ _____),

in lawful money of the United States, which sum is to be paid according to the schedule provided by the Contractor and accepted by the District and subject to additions and deductions as provided in the Contract. This amount supersedes any previously stated and/or agreed to amount(s).

- 18. No Representations:** No representations have been made other than as set forth in writing in the Contract Documents, including this Agreement. Each of the Parties to this Agreement warrants that it has carefully read and understood the terms and conditions of this Agreement and all Contract Documents, and that it has not relied upon the representations or advice of any other Party or any attorney not its own.
- 19. Entire Agreement:** The Contract Documents, including this Agreement, set forth the entire agreement between the parties hereto and fully supersede any and all prior agreements, understandings, written or oral, between the parties hereto pertaining to the subject matter thereof.
- 20. Severability:** If any term, covenant, condition, or provision in any of the Contract Documents is held by a court of competent jurisdiction to be invalid, void or unenforceable, the remainder of the provisions in the Contract Documents shall remain in full force and effect and shall in no way be affected, impaired, or invalidated thereby.

IN WITNESS WHEREOF, accepted and agreed on the date indicated above:

DOCUMENT 00 56 00

ESCROW BID DOCUMENTATION**1. Requirement to Escrow Bid Documentation**

- a. Contractor shall submit, within **SEVEN (7)** calendar days after the date of the Notice of Award, one copy of all documentary information received or generated by Contractor in preparation of bid prices for this Contract, as specified herein. This material is referred to herein as "Escrow Bid Documentation." The Escrow Bid Documentation of the Contractor will be held in escrow for the duration of the Contract.
- b. Contractor agrees, as a condition of award of the Contract, that the Escrow Bid Documentation constitutes all written information used in the preparation of its bid, and that no other written bid preparation information shall be considered in resolving disputes or claims. Contractor also agrees that nothing in the Escrow Bid Documentation shall change or modify the terms or conditions of the Contract Documents.
- c. The Escrow Bid Documentation will not be opened by District except as indicated herein. The Escrow Bid Documentation will be used only for the resolution of change orders and claims disputes.
- d. Contractor's submission of the Escrow Bid Documentation, as with the bonds and insurance documents required, is considered an essential part of the Contract award. Should the Contractor fail to make the submission within the allowed time specified above, District may deem the Contractor to have failed to enter into the Contract, and the Contractor shall forfeit the amount of its bid security, accompanying the Contractor's bid, and District may award the Contract to the next lowest responsive responsible bidder.
- e. NO PAYMENTS WILL BE MADE, NOR WILL DISTRICT ACCEPT PROPOSED CHANGE ORDERS UNTIL THE ABOVE REQUIRED INFORMATION IS SUBMITTED AND APPROVED.
- f. The Escrow Bid Documentation shall be submitted in person by an authorized representative of the Contractor to the District.

2. Ownership of Escrow Bid Documentation

- a. The Escrow Bid Documentation is, and shall always remain, the property of Contractor, subject to review by District, as provided herein.
- b. Escrow Bid Documentation constitute trade secrets, not known outside Contractor's business, known only to a limited extent and only by a limited number of employees of Contractor, safeguarded while in Contractor's possession, extremely valuable to Contractor, and could be extremely valuable to Contractor's competitors by virtue of it reflecting Contractor's contemplated techniques of construction. Subject to the provisions herein, District agrees to safeguard the Escrow Bid Documentation, and all

information contained therein, against disclosure to the fullest extent permitted by law.

3. **Format and Contents of Escrow Bid Documentation**

- a. Contractor may submit Escrow Bid Documentation in its usual cost-estimating format; a standard format is not required. The Escrow Bid Documentation shall be submitted in the language (e.g., English) of the specification.
- b. Escrow Bid Documentation must clearly itemize the estimated costs of performing the work of each bid item contained in the bid schedule, separating bid items into sub-items as required to present a detailed cost estimate and allow a detailed cost review. The Escrow Bid Documentation shall include all subcontractor bids or quotes, supplier bids or quotes, quantity takeoffs, crews, equipment, calculations of rates of production and progress, copies of quotes from subcontractors and suppliers, and memoranda, narratives, add/deduct sheets, and all other information used by the Contractor to arrive at the prices contained in the bid proposal. Estimated costs should be broken down into Contractor's usual estimate categories such as direct labor, repair labor, equipment ownership and operation, expendable materials, permanent materials, and subcontract costs as appropriate. Plant and equipment and indirect costs should be detailed in the Contractor's usual format. The Contractor's allocation of indirect costs, contingencies, markup, and other items to each bid item shall be identified.
- c. All costs shall be identified. For bid items amounting to less than \$10,000, estimated unit costs are acceptable without a detailed cost estimate, provided that labor, equipment, materials, and subcontracts, as applicable, are included and provided that indirect costs, contingencies, and markup, as applicable, are allocated.
- d. Bid Documentation provided by District should not be included in the Escrow Bid Documentation unless needed to comply with the following requirements.

4. **Submittal of Escrow Bid Documentation**

- a. The Escrow Bid Documentation shall be submitted by the Contractor in a sealed container within **SEVEN (7)** calendar days after the date of the Notice of Award. The container shall be clearly marked on the outside with the Contractor's name, date of submittal, project name and the words "Escrow Bid Documentation – Intended to be opened in the presence of Authorized Representatives of Both District and Contractor".
- b. By submitting Escrow Bid Documentation, Contractor represents that the material in the Escrow Bid Documentation constitutes all the documentary information used in preparation of the bid and that the Contractor has personally examined the contents of the Escrow Bid Documentation container and has found that the documents in the container are complete.
- c. If Contractor's proposal is based upon subcontracting any part of the work, each subcontractor whose total subcontract price exceeds 5 percent of the total contract price proposed by Contractor, shall provide separate Escrow

Documents to be included with those of Contractor. Those documents shall be opened and examined in the same manner and at the same time as the examination described above for Contractor.

- d. If Contractor wishes to subcontract any portion of the Work after award, District retains the right to require Contractor to submit Escrow Documents for the Subcontractor before the subcontract is approved.

5. Storage, Examination and Final Disposition of Escrow Bid Documentation

- a. The Escrow Bid Documentation will be placed in escrow, for the life of the Contract, in a mutually agreeable institution. The cost of storage will be paid by Contractor for the duration of the project until final Contract payment. The storage facilities shall be the appropriate size for all the Escrow Bid Documentation and located conveniently to both District's and Contractor's offices.
- b. The Escrow Bid Documentation shall be examined by both District and Contractor, at any time deemed necessary by either District or Contractor, to assist in the negotiation of price adjustments and change orders or the settlement of disputes and claims. In the case of legal proceedings, Escrow Bid Documentation shall be used subject to the terms of an appropriate protective order if requested by Contractor and ordered by a court of competent jurisdiction. Examination of the Escrow Bid Documentation is subject to the following conditions:
- (1) As trade secrets, the Escrow Bid Documentation is proprietary and confidential to the extent allowed by law.
 - (2) District and Contractor shall each designate, in writing to the other party **SEVEN (7)** calendar days prior to any examination, the names of representatives who are authorized to examine the Escrow Bid Documentation. No other person shall have access to the Escrow Bid Documentation.
 - (3) Access to the documents may take place only in the presence of duly designated representatives of the District and Contractor. If Contractor fails to designate a representative or appear for joint examination on **SEVEN (7)** calendar days' notice, then the District representative may examine the Escrow Bid Documents alone upon an additional **THREE (3)** calendar days' notice if a representative of the Contractor does not appear at the time set.
 - (4) If a subcontractor has submitted sealed information to be included in the Escrow Bid Documents, access to those documents may take place only in the presence of a duly designated representative of the District, Contractor and that subcontractor. If that subcontractor fails to designate a representative or appear for joint examination on **SEVEN (7)** calendar days' notice, then the District representative and/or the Contractor may examine the Escrow Bid Documentation without that subcontractor present upon an additional **THREE (3)** calendar days'

notice if a representative of that subcontractor does not appear at the time set.

- c. The Escrow Bid Documentation will be returned to Contractor at such time as the Contract has been completed and final settlement has been achieved.

END OF DOCUMENT

DOCUMENT 00 57 00

ESCROW AGREEMENT IN LIEU OF RETENTION
(Public Contract Code Section 22300)

(Note: Contractor must use this form.)

This Escrow Agreement in Lieu of Retention ("Escrow Agreement") is made and entered into this _____ day of _____, 20____, by and between the Peralta Community College District ("District"), whose address is 333 East 8th Street, Oakland, California 94606, and _____ ("Contractor"), whose address is _____, and _____ ("Escrow Agent"), a state or federally chartered bank in the state of California, whose address is _____.

For the consideration hereinafter set forth, District, Contractor, and Escrow Agent agree as follows:

1. Pursuant to section 22300 of Public Contract Code of the State of California, which is hereby incorporated by reference, Contractor has the following two (2) options:
 - Deposit securities with Escrow Agent as a substitute for retention earnings required to be withheld by District pursuant to the Construction Contract No. _____ entered into between District and Contractor for the _____ Project, in the amount of _____ Dollars (\$ _____) dated, _____, 20____, (the "Contract"); **or**
 - On written request of Contractor, District shall make payments of the retention earnings for the above referenced Contract directly to Escrow Agent.

When Contractor deposits the securities as a substitute for Contract earnings (first option), Escrow Agent shall notify District within ten (10) calendar days of the deposit. The market value of the securities at the time of substitution and at all times from substitution until the termination of the Escrow Agreement shall be at least equal to the cash amount then required to be withheld as retention under the terms of the Contract between District and Contractor.

Securities shall be held in name of Peralta Community College School District, and shall designate Contractor as beneficial owner.

2. District shall make progress payments to Contractor for those funds which otherwise would be withheld from progress payments pursuant to Contract provisions, provided that Escrow Agent holds securities in form and amount specified above.
3. When District makes payment of retention earned directly to Escrow Agent, Escrow Agent shall hold them for the benefit of Contractor until the time that the escrow created under this Escrow Agreement is terminated. Contractor may direct the investment of the payments into securities. All terms and conditions of this Escrow

Agreement and the rights and responsibilities of the Parties shall be equally applicable and binding when District pays Escrow Agent directly.

4. Contractor shall be responsible for paying all fees for the expenses incurred by Escrow Agent in administering the Escrow Account, and all expenses of District. The District will charge Contractor \$_____ for each of District's deposits to the escrow account. These expenses and payment terms shall be determined by District, Contractor, and Escrow Agent.
5. Interest earned on securities or money market accounts held in escrow and all interest earned on that interest shall be for sole account of Contractor and shall be subject to withdrawal by Contractor at any time and from time to time without notice to District.
6. Contractor shall have the right to withdraw all or any part of the principal in the Escrow Account only by written notice to Escrow Agent accompanied by written authorization from District to Escrow Agent that District consents to withdrawal of amount sought to be withdrawn by Contractor.
7. District shall have the right to draw upon the securities and/or withdraw amounts from the Escrow Account in the event of default by Contractor. Upon seven (7) days' written notice to Escrow Agent from District of the default, if applicable, Escrow Agent shall immediately convert the securities to cash and shall distribute the cash as instructed by District. Escrow Agent shall not be authorized to determine the validity of any notice of default given by District pursuant to this paragraph, and shall promptly comply with District's instructions to pay over said escrowed assets. Escrow Agent further agrees to not interplead the escrowed assets in response to a conflicting demand.
8. Upon receipt of written notification from District certifying that the Contract is final and complete, and that Contractor has complied with all requirements and procedures applicable to the Contract, Escrow Agent shall release to Contractor all securities and interest on deposit less escrow fees and charges of the Escrow Account. The escrow shall be closed immediately upon disbursement of all monies and securities on deposit and payments of fees and charges.
9. Escrow Agent shall rely on written notifications from District and Contractor pursuant to Paragraphs 5 through 8, inclusive, of this Escrow Agreement and District and Contractor shall hold Escrow Agent harmless from Escrow Agent's release and disbursement of securities and interest as set forth above.

[REMAINDER OF PAGE INTENTIONALLY LEFT BLANK]

PERFORMANCE BOND
(100% of Contract Price)

(Note: Contractor must use this form, NOT a surety company form.)

KNOW ALL PERSONS BY THESE PRESENTS:

WHEREAS, the governing board ("Board") of the Peralta Community College District ("District") and _____ ("Principal") have entered into a contract for the furnishing of all materials and labor, services and transportation, necessary, convenient, and proper to perform the following project: MERRITT COLLEGE NEW CHILD DEVELOPMENT CENTER (CDC) _____ ("Project" or "Contract") which Contract dated , 20____, and all of the Contract Documents attached to or forming a part of the Contract, are hereby referred to and made a part hereof; and

WHEREAS, said Principal is required under the terms of the Contract to furnish a bond for the faithful performance of the Contract.

NOW, THEREFORE, the Principal and _____ ("Surety") are held and firmly bound unto the Board of the District in the penal sum of _____ Dollars (\$_____), lawful money of the United States, for the payment of which sum well and truly to be made we bind ourselves, our heirs, executors, administrators, successors, and assigns jointly and severally, firmly by these presents, to:

- Promptly perform all the work required to complete the Project; and
- Pay to the District all damages the District incurs as a result of the Principal's failure to perform all the Work required to complete the Project.

Or, at the District's sole discretion and election, the Surety shall obtain a bid or bids for completing the Contract in accordance with its terms and conditions, and upon determination by the District of the lowest responsible bidder, arrange for a contract between such bidder and the District and make available as Work progresses sufficient funds to pay the cost of completion less the "balance of the Contract Price," and to pay and perform all obligations of Principals under the Contract, including, without limitation, all obligations with respect to warranties, guarantees and the payment of liquidated damages. The term "balance of the Contract Price," as used in this paragraph, shall mean the total amount payable to Principal by the District under the Contract and any modifications thereto, less the amount previously paid by the District to the Principal, less any withholdings by the District allowed under the Contract. District shall not be required or obligated to accept a tender of a completion contractor from the Surety for any or no reason.

The condition of the obligation is such that, if the above bound Principal, its heirs, executors, administrators, successors, or assigns, shall in all things stand to and abide by, and well and truly keep and perform the covenants, conditions, and agreements in the Contract and any alteration thereof made as therein provided, on its part to be kept and performed at the time and in the intent and meaning, including all contractual guarantees and warranties of materials and workmanship, and shall indemnify and save harmless the

District, its trustees, officers and agents, as therein stipulated, then this obligation shall become null and void, otherwise it shall be and remain in full force and virtue.

Surety expressly agrees that the District may reject any contractor or subcontractor proposed by Surety to fulfill its obligations in the event of default by the Principal. Surety shall not utilize Principal in completing the Work nor shall Surety accept a Bid from Principal for completion of the Work if the District declares the Principal to be in default and notifies Surety of the District's objection to Principal's further participation in the completion of the Work.

As a condition precedent to the satisfactory completion of the Contract, the above obligation shall hold good for a period equal to the warranty and/or guarantee period of the Contract, during which time Surety's obligation shall continue if Contractor shall fail to make full, complete, and satisfactory repair and replacements and totally protect the District from loss or damage resulting from or caused by defective materials or faulty workmanship. The obligations of Surety hereunder shall continue so long as any obligation of Contractor remains. Nothing herein shall limit the District's rights or the Contractor or Surety's obligations under the Contract, law or equity, including, but not limited to, California Code of Civil Procedure section 337.15.

The Surety, for value received, hereby stipulates and agrees that no change, extension of time, alteration, or addition to the terms of the contract or to the work to be performed thereunder or the specifications accompanying the same shall in any way affect its obligation on this bond. The Surety also stipulates and agrees that it shall not be exonerated or released from the obligation of this bond by any overpayment or underpayment by the District that is based upon estimates approved by the Architect. The Surety does hereby waive notice of any such change, extension of time, alteration, or addition to the terms of the Contract or to the work or to the specifications.

IN WITNESS WHEREOF, two (2) identical counterparts of this instrument, each of which shall for all purposes be deemed an original thereof, have been duly executed by the Principal and Surety above named, on the _____ day of _____, 20____.

Principal	Surety
By	By
	Name of California Agent of Surety
	Address of California Agent of Surety
	Telephone No. of California Agent of Surety

Contractor must attach a Notarial Acknowledgment for all Surety's signatures and a Power of Attorney and Certificate of Authority for Surety. The California Department of Insurance must authorize the Surety to be an admitted surety insurer.

END OF DOCUMENT

DOCUMENT 00 61 13.16

PAYMENT BOND
Contractor's Labor & Material Bond
(100% Of Contract Price)

(Note: Contractor must use this form, NOT a surety company form.)

KNOW ALL PERSONS BY THESE PRESENTS:

WHEREAS, the governing board ("Board") of the Peralta Community College District, ("District") and _____, ("Principal") have entered into a contract for the furnishing of all materials and labor, services and transportation, necessary, convenient, and proper to perform the following project:

MERRITT COLLEGE NEW CHILD DEVELOPMENT CENTER (CDC) which Contract dated _____, 20____, and all of the Contract Documents attached to or forming a part of the Contract, are hereby referred to and made a part hereof; and

WHEREAS, pursuant to law and the Contract, the Principal is required, before entering upon the performance of the work, to file a good and sufficient bond with the body by which the Contract is awarded in an amount equal to one hundred percent (100%) of the Contract price, to secure the claims to which reference is made in sections 9000 through 9510 and 9550 through 9566 of the Civil Code, and division 2, part 7, of the Labor Code.

NOW, THEREFORE, the Principal and _____ ("Surety") are held and firmly bound unto all laborers, material men, and other persons referred to in said statutes in the sum of _____ Dollars (\$_____), lawful money of the United States, being a sum not less than the total amount payable by the terms of Contract, for the payment of which sum well and truly to be made, we bind ourselves, our heirs, executors, administrators, successors, or assigns, jointly and severally, by these presents.

The condition of this obligation is that if the Principal or any of its subcontractors, or the heirs, executors, administrators, successors, or assigns of any, all, or either of them shall fail to pay for any labor, materials, provisions, or other supplies, used in, upon, for or about the performance of the work contracted to be done, or for any work or labor thereon of any kind, or for amounts required to be deducted, withheld, and paid over to the Employment Development Department from the wages of employees of the Principal or any of its subcontractors of any tier under Section 13020 of the Unemployment Insurance Code with respect to such work or labor, that the Surety will pay the same in an amount not exceeding the amount herein above set forth, and also in case suit is brought upon this bond, will pay a reasonable attorney's fee to be awarded and fixed by the court, and to be taxed as costs and to be included in the judgment therein rendered.

It is hereby expressly stipulated and agreed that this bond shall inure to the benefit of any and all persons, companies, and corporations entitled to file claims under section 9100 of the Civil Code, so as to give a right of action to them or their assigns in any suit brought upon this bond.

Should the condition of this bond be fully performed, then this obligation shall become null and void; otherwise it shall be and remain in full force and affect.

And the Surety, for value received, hereby stipulates and agrees that no change, extension of time, alteration, or addition to the terms of Contract or the specifications accompanying the same shall in any manner affect its obligations on this bond, and it does hereby waive notice of any such change, extension, alteration, or addition.

IN WITNESS WHEREOF, two (2) identical counterparts of this instrument, each of which shall for all purposes be deemed an original thereof, have been duly executed by the Principal and Surety above named, on the _____ day of _____, 20__.

Principal	Surety
By	By
	Name of California Agent of Surety
	Address of California Agent of Surety
	Telephone No. of California Agent of Surety

Contractor must attach a Notarial Acknowledgment for all Surety's signatures and a Power of Attorney and Certificate of Authority for Surety. The California Department of Insurance must authorize the Surety to be an admitted surety insurer.

AGREEMENT AND RELEASE OF ANY AND ALL CLAIMS

THIS AGREEMENT AND RELEASE OF CLAIMS ("Agreement and Release") IS MADE AND ENTERED INTO THIS _____ DAY OF _____, 20__ by and between the PERALTA COMMUNITY COLLEGE DISTRICT ("District") and _____ ("Contractor"), whose place of business is _____.

RECITALS

WHEREAS, District and Contractor entered into PROJECT/CONTRACT NO.: _____ ("Contract" or "Project") in the County of Alameda, California; and

WHEREAS, the Work under the Contract was completed on _____, and a Notice of Completion was recorded with the County Recorder on _____.

NOW, THEREFORE, it is mutually agreed between District and Contractor as follows:

AGREEMENT AND RELEASE

1. Contractor will only be assessed liquidated damages as detailed below:

Original Contract Sum	\$ _____
Modified Contract Sum	\$ _____
Payment to Date	\$ _____
Liquidated Damages	\$ _____
Payment Due Contractor	\$ _____

2. Subject to the provisions hereof, District shall forthwith pay to Contractor the undisputed sum of _____ Dollars (\$_____) under the Contract, less any amounts represented by any notice to withhold funds on file with District as of the date of such payment.

3. Contractor acknowledges and hereby agrees that there are no unresolved or outstanding claims in dispute against District arising from the performance of work under the Contract, except for the claims described in Paragraph 6 and continuing obligations described in Paragraph 8. It is the intention of the parties in executing this Agreement and Release that this Agreement and Release shall be effective as a full, final and general release of all claims, demands, actions, causes of action, obligations, costs, expenses, damages, losses and liabilities of Contractor against District and all of its respective agents, employees, trustees, inspectors, assignees, consultants and transferees, except for any Disputed Claim that may be set forth in Paragraph 4 and the continuing obligations described in Paragraph 6 hereof.

4. The following claims are disputed (hereinafter, the "Disputed Claims") and are specifically excluded from the operation of this Agreement and Release:

<u>Claim No.</u>	<u>Description of Claim</u>	<u>Amount of Claim</u>	<u>Date Claim Submitted</u>
_____	_____	\$ _____	_____
_____	_____	\$ _____	_____
_____	_____	\$ _____	_____
_____	_____	\$ _____	_____

[If further space is required, attach additional sheets showing the required information.]

5. Consistent with California Public Contract Code section 7100, Contractor hereby agrees that, in consideration of the payment set forth in Paragraph 4 hereof, Contractor hereby releases and forever discharges District, all its agents, employees, inspectors, assignees, and transferees from any and all liability, claims, demands, actions, or causes of action of whatever kind or nature arising out of or in any way concerned with the Work under the Contract.
6. Guarantees and warranties for the Work, and any other continuing obligation of Contractor, including without limitation the duty to defend, indemnify and hold harmless the District, shall remain in full force and effect as specified in the Contract Documents.
7. Contractor hereby waives the provisions of California Civil Code section 1542 which provides as follows:
- A GENERAL RELEASE DOES NOT EXTEND TO CLAIMS THAT THE CREDITOR OR RELEASING PARTY DOES NOT KNOW OR SUSPECT TO EXIST IN HIS OR HER FAVOR AT THE TIME OF EXECUTING THE RELEASE, AND THAT, IF KNOWN BY HIM OR HER WOULD HAVE MATERIALLY AFFECTED HIS OR HER SETTLEMENT WITH THE DEBTOR OR RELEASED PARTY.
8. The provisions of this Agreement and Release are contractual in nature and not mere recitals and shall be considered independent and severable. If any such provision or any part thereof shall be at any time held invalid in whole or in part under any federal, state, county, municipal, or other law, ruling, or regulations, then such provision, or part thereof, shall remain in force and effect to the extent permitted by law, and the remaining provisions of this Agreement and Release shall also remain in full force and effect, and shall be enforceable.

9. All rights of District shall survive completion of the Work or termination of Contract, and execution of this Release.

GUARANTEE FORM

_____ ("Contractor") hereby agrees that the (_____
_____ "Work" of Contractor) which Contractor has installed for the Peralta
Community College District ("District") for the following project:

PROJECT: MERRITT COLLEGE NEW CHILD DEVELOPMENT CENTER (CDC)_____

("Project" or "Contract") has been performed in accordance with the requirements of the
Contract Documents and that the Work as installed will fulfill the requirements of the
Contract Documents.

The undersigned agrees to repair or replace any or all of such Work that may prove to be
defective in workmanship or material together with any other adjacent Work that may be
displaced in connection with such replacement within a period of two year(s) from the date
of completion as defined in Public Contract Code section 7107, subdivision (c), ordinary
wear and tear and unusual abuse or neglect excepted. The date of completion is
_____, 20____.

In the event of the undersigned's failure to comply with the above-mentioned conditions
within a reasonable period of time, as determined by the District, but not later than seven
(7) days after being notified in writing by the District, the undersigned authorizes the
District to proceed to have said defects repaired and made good at the expense of the
undersigned. The undersigned shall pay the costs and charges therefor upon demand.

DOCUMENT 00 72 13

GENERAL CONDITIONS**1. CONTRACT TERMS AND DEFINITIONS****1.1 Definitions**

Wherever used in the Contract Documents, the following terms shall have the meanings indicated, which shall be applicable to both the singular and plural thereof:

1.1.1 Adverse Weather: Shall be only weather that satisfies all of the following conditions: (1) unusually severe precipitation, sleet, snow, hail, or extreme temperature conditions in excess of the norm for the location and time of year it occurred based on the closest weather station data averaged over the past five years, (2) that is unanticipated and would cause unsafe work conditions and/or is unsuitable for scheduled work that should not be performed during inclement weather (i.e., exterior finishes), and (3) at the Project.

1.1.2 Allowance Expenditure Directive: Written authorization for expenditure of allowance, if any.

1.1.3 Approval, Approved, and/or Accepted: Written authorization, unless stated otherwise.

1.1.4 Architect (or "Design Professional in General Responsible Charge"): The individual, partnership, corporation, joint venture, or any combination thereof, named as Architect, who will have the rights and authority assigned to the Architect in the Contract Documents. The term Architect means the Design Professional in General Responsible Charge as defined in DSA PR 13-02 on this Project or the Architect's authorized representative.

1.1.5 As-Builts: Electronic files (CADD and PDF) of drawings to be prepared on a monthly basis pursuant to the Contract Documents, that reflect changes made during the performance of the Work, recording differences between the original design of the Work and the Work as constructed since the preceding monthly submittal. See **Record Drawings**.

1.1.6 Bidder: A contractor who intends to provide a proposal to the District to perform the Work of this Contract.

1.1.7 Change Order: A written order to the Contractor authorizing an addition to, deletion from, or revision in the Work, and/or authorizing an adjustment in the Contract Price or Contract Time.

1.1.8 Claim: A Dispute that remains unresolved at the conclusion of the all the applicable Dispute Resolution requirements provided herein.

1.1.9 Construction Change Directive: A written order prepared and issued by the District, the Construction Manager, and/or the Architect and signed by the District and the Architect, directing a change in the Work.

1.1.10 Construction Manager: The individual, partnership, corporation, joint venture, or any combination thereof, or its authorized representative, named as such by the District. If no Construction Manager is used on the Project that is the subject of this Contract, then all references to Construction Manager herein shall be read to refer to District.

1.1.11 Construction Schedule: The progress schedule of construction of the Project as provided by Contractor and approved by District.

1.1.12 Contract, Contract Documents: The Contract consists exclusively of the documents evidencing the agreement of the District and Contractor, identified as the Contract Documents. The Contract Documents consist of the following documents:

- 1.1.12.1** Notice to Bidders
- 1.1.12.2** Instructions to Bidders
- 1.1.12.3** Bid Form and Proposal
- 1.1.12.4** Bid Bond
- 1.1.12.5** Designated Subcontractors List
- 1.1.12.6** Site Visit Certification (if a site visit was required)
- 1.1.12.7** Non-Collusion Declaration
- 1.1.12.8** Notice of Award
- 1.1.12.9** Notice to Proceed
- 1.1.12.10** Agreement
- 1.1.12.11** Escrow of Bid Documentation
- 1.1.12.12** Escrow Agreement for Security Deposits in Lieu of Retention (if applicable)
- 1.1.12.13** Performance Bond
- 1.1.12.14** Payment Bond (Contractor's Labor & Material Bond)
- 1.1.12.15** General Conditions
- 1.1.12.16** Special Conditions (if applicable)
- 1.1.12.17** Project Labor Agreement (if applicable)
- 1.1.12.18** Hazardous Materials Procedures and Requirements
- 1.1.12.19** Workers' Compensation Certification
- 1.1.12.20** Prevailing Wage Certification
- 1.1.12.21** Drug-Free Workplace Certification (if applicable)
- 1.1.12.22** Tobacco-Free Environment Certification
- 1.1.12.23** Hazardous Materials Certification (if applicable)
- 1.1.12.24** Lead-Based Materials Certification (if applicable)
- 1.1.12.25** Imported Materials Certification (if applicable)
- 1.1.12.26** Sex Offender Registration Act Certification (if applicable)
- 1.1.12.27** Buy American Certification (if applicable)
- 1.1.12.28** Roofing Project Certification (if applicable)
- 1.1.12.29** Registered Subcontractors List
- 1.1.12.30** Iran Contracting Act Certification (if applicable)
- 1.1.12.31** SLBE/SELBE Self Certification Affidavit (if applicable)
- 1.1.12.32** Post Bid Interview
- 1.1.12.33** All Plans, Technical Specifications, and Drawings

- 1.1.12.34** Any and all addenda to any of the above documents
- 1.1.12.35** Any and all change orders or written modifications to the above documents if approved in writing by the District

1.1.13 Contract Price: The total monies payable to the Contractor under the terms and conditions of the Contract Documents.

1.1.14 Contract Time: The time period stated in the Agreement for the completion of the Work.

1.1.15 Contractor: The person or persons identified in the Agreement as contracting to perform the Work to be done under this Contract, or the legal representative of such a person or persons.

1.1.16 Daily Job Report(s): Daily Project reports prepared by the Contractor's employee(s) who are present on Site, which shall include the information required herein.

1.1.17 Day(s): Unless otherwise designated, day(s) means calendar day(s).

1.1.18 Department of Industrial Relations (or "DIR"): is responsible, among other things, for labor compliance monitoring and enforcement of California prevailing wage laws and regulations for public works contracts.

1.1.19 Design Professional in General Responsible Charge: See definition of **Architect** above.

1.1.20 Dispute: A separate demand by Contractor for a time extension, or payment of money or damages arising from Work done by or on behalf of the Contractor pursuant to the Contract and payment of which is not otherwise expressly provided for or Contractor is not otherwise entitled to; or an amount of payment disputed by the District.

1.1.21 District: The public agency or the district for which the Work is performed. The governing board of the District or its designees will act for the District in all matters pertaining to the Contract. The District may, at any time,

1.1.21.1 Direct the Contractor to communicate with or provide notice to the Construction Manager or the Architect on matters for which the Contract Documents indicate the Contractor will communicate with or provide notice to the District; and/or

1.1.21.2 Direct the Construction Manager or the Architect to communicate with or direct the Contractor on matters for which the Contract Documents indicate the District will communicate with or direct the Contractor.

1.1.22 Drawings (or "Plans"): The graphic and pictorial portions of the Contract Documents showing the design, location, scope and dimensions of the work, generally including plans, elevations, sections, details, schedules, sequence of operation, and diagrams.

1.1.23 DSA: Division of the State Architect.

1.1.24 Force Account Directive: A process that may be used when the District and the Contractor cannot agree on a price for a specific portion of work or before the Contractor prepares a price for a specific portion of work and whereby the Contractor performs the work as indicated herein on a time and materials basis.

1.1.25 Job Cost Reports: Any and all reports or records detailing the costs associated with work performed on or related to the Project that Contractor shall maintain for the Project. Specifically, Job Cost Reports shall contain, but are not limited by or to, the following information: a description of the work performed or to be performed on the Project; quantity, if applicable, of work performed (hours, square feet, cubic yards, pounds, etc.) for the Project; Project budget; costs for the Project to date; estimated costs to complete the Project; and expected costs at completion. The Job Cost Reports shall also reflect all Contract cost codes, change orders, elements of non-conforming work, back charges, and additional services.

1.1.26 Labor Commissioner’s Office (or “Labor Commissioner”, also known as the Division of Labor Standards Enforcement (“DLSE”)): Division of the DIR responsible for adjudicating wage claims, investigating discrimination and public works complaints, and enforcing Labor Code statutes and Industrial Welfare Commission orders.

1.1.27 Municipal Separate Storm Sewer System (or “MS4”): A system of conveyances used to collect and/or convey storm water, including, without limitation, catch basins, curbs, gutters, ditches, man-made channels, and storm drains.

1.1.28 Plans: See **Drawings**.

1.1.29 Premises: The real property owned by the District on which the Site is located.

1.1.30 Product(s): New material, machinery, components, equipment, fixtures and systems forming the Work, including existing materials or components required and approved by the District for reuse.

1.1.31 Product Data: Illustrations, standard schedules, performance charts, instructions, brochures, diagrams, and other information furnished by the Contractor to illustrate a material, product, or system for some portion of the Work.

1.1.32 Program Manager: The individual, partnership, corporation, joint venture, or any combination thereof, or its authorized representative, named as such by the District. If no Program Manager is designated for Project that is the subject of this Contract, then all references to Project Manager herein shall be read to refer to District.

1.1.33 Project: The planned undertaking as provided for in the Contract Documents.

1.1.34 Project Inspector (or “Inspector”): The individual(s) retained by the District in accordance with title 24 of the California Code of Regulations to monitor and inspect the Project.

1.1.35 Project Labor Agreement (or "PLA"): a prehire collective bargaining agreement in accordance with Public Contract Code section 2500 *et seq.* that establishes terms and conditions of employment for a specific construction project or projects and/or is an agreement described in Section 158(f) of Title 29 of the United States Code.

1.1.36 Proposed Change Order (or "PCO"): a written request prepared by the Contractor requesting that the District and the Architect issue a Change Order based upon a proposed change to the Work.

1.1.37 Provide: Shall include "provide complete in place," that is, "furnish and install," and "provide complete and functioning as intended in place" unless specifically stated otherwise.

1.1.38 Qualified SWPPP Practitioners (or "QSP"): certified personnel that attended a State Water Resources Control Board sponsored or approved training class and passed the qualifying exam.

1.1.39 Record Drawings: Reproducible (Electronic files) drawings (or Plans) prepared pursuant to the requirements of the Contract Documents that reflect all changes made during the performance of the Work, recording differences between the original design of the Work and the Work as constructed upon completion of the Project. See also **As-Builts**.

1.1.40 Request for Information (or "RFI"): A written request prepared by the Contractor requesting that the Architect provide additional information necessary to clarify or amplify an item in the Contract Documents that the Contractor believes is not clearly shown or called for in the Drawings or Specifications or other portions of the Contract Documents, or to address problems that have arisen under field conditions.

1.1.41 Request for Substitution for Specified Item: A request by Contractor to substitute an equal or superior material, product, thing, or service for a specific material, product, thing, or service that has been designated in the Contract Documents by a specific brand or trade name.

1.1.42 Safety Orders: Written and/or verbal orders for construction issued by the California Division of Occupational Safety and Health ("CalOSHA") or by the United States Occupational Safety and Health Administration ("OSHA").

1.1.43 Safety Plan: Contractor's safety plan specifically adapted for the Project. Contractor's Safety Plan shall comply with all provisions regarding Project safety, including all applicable provisions in these General Conditions.

1.1.44 Samples: Physical examples that illustrate materials, products, equipment, finishes, colors, or workmanship and that, when approved in accordance with the Contract Documents, establish standards by which portions of the Work will be judged.

1.1.45 Shop Drawings: All drawings, prints, diagrams, illustrations, brochures, schedules, and other data that are prepared by the Contractor, a subcontractor, manufacturer, supplier, or distributor, that illustrate how specific portions of the Work shall be fabricated or installed.

1.1.46 Site: The Project site as shown on the Drawings.

1.1.47 Specifications: That portion of the Contract Documents, Division 1 through Division 49, and all technical sections, and addenda to all of these, if any, consisting of written descriptions and requirements of a technical nature of materials, equipment, construction methods and systems, standards, and workmanship.

1.1.48 State: The State of California.

1.1.49 Storm Water Pollution Prevention Plan (or "SWPPP"): A document which identifies sources and activities at a particular facility that may contribute pollutants to storm water and contains specific control measures and time frames to prevent or treat such pollutants.

1.1.50 Subcontractor: A contractor and/or supplier who is under contract with the Contractor or with any other subcontractor, regardless of tier, to perform a portion of the Work of the Project.

1.1.51 Submittal Schedule: The schedule of submittals as provided by Contractor and approved by District.

1.1.52 Surety: The person, firm, or corporation that executes as surety the Contractor's Performance Bond and Payment Bond, and must be a California admitted surety insurer as defined in the Code of Civil Procedure section 995.120.

1.1.53 Work: All labor, materials, equipment, components, appliances, supervision, coordination, and services required by, or reasonably inferred from, the Contract Documents, that are necessary for the construction and completion of the Project.

1.2 Laws Concerning the Contract

Contract is subject to all provisions of the Constitution and laws of California and the United States governing, controlling, or affecting District, or the property, funds, operations, or powers of District, and such provisions are by this reference made a part hereof. Any provision required by law to be included in this Contract shall be deemed to be inserted.

1.3 No Oral Agreements

No oral agreement or conversation with any officer, agent, or employee of District, either before or after execution of Contract, shall affect or modify any of the terms or obligations contained in any of the documents comprising the Contract.

1.4 No Assignment

Contractor shall not assign this Contract or any part thereof including, without limitation, any Work or money to become due hereunder without the prior written consent of the District. Assignment without District's prior written consent shall be null and void. Any assignment of money due or to become due under this Contract shall be subject to a prior lien for services rendered or material supplied for performance of work called for under this Contract in favor of all persons, firms, or corporations rendering services or supplying material to the extent that claims are filed pursuant to the Civil Code, Code of Civil Procedure, Government Code, Labor Code, and/or Public Contract Code, and shall also be subject to deductions for liquidated damages or withholding of payments as determined by District in accordance with this Contract. Contractor shall not assign or transfer in any manner to a Subcontractor or supplier the right to prosecute or maintain an action against the District.

1.5 Notice and Service Thereof

1.5.1 Any notice from one party to the other or otherwise under Contract shall be in writing and shall be dated and signed by the party giving notice or by a duly authorized representative of that party. Any notice shall not be effective for any purpose whatsoever unless served in one of the following manners:

1.5.1.1 If notice is given by personal delivery thereof, it shall be considered delivered on the day of delivery.

1.5.1.2 If notice is given by overnight delivery service, it shall be considered delivered one (1) day after date deposited, as indicated by the delivery service.

1.5.1.3 If notice is given by depositing same in United States mail, enclosed in a sealed envelope, it shall be considered delivered three (3) days after date deposited, as indicated by the postmarked date.

1.5.1.4 If notice is given by registered or certified mail with postage prepaid, return receipt requested, it shall be considered delivered on the day the notice is signed for.

1.5.1.5 Electronic mail may be used for convenience but is not a substitute for the notice and service requirements herein.

1.6 No Waiver

The failure of District in any one or more instances to insist upon strict performance of any of the terms of this Contract or to exercise any option herein conferred shall not be construed as a waiver or relinquishment to any extent of the right to assert or rely upon any such terms or option on any future occasion. No action or failure to act by the District, Architect, or Construction Manager shall constitute a waiver of any right or duty afforded the District under the Contract, nor shall any action or failure to act constitute an approval of or acquiescence in any breach thereunder, except as may be specifically agreed in writing.

1.7 Substitutions for Specified Items

1.7.1 Whenever in the Specifications any materials, process, or article is indicated or specified by grade, patent, or proprietary name, or by name of manufacturer, that Specification shall be deemed to be followed by the words "or equal." Contractor may, unless otherwise stated, offer any material, process, or article that shall be substantially equal or better in every respect to that so indicated or specified.

1.7.1.1 If the material, process, or article offered by Contractor is not, in the opinion of the District, substantially equal or better in every respect to that specified, then Contractor shall furnish the material, process, or article specified in the Specifications without any additional compensation or change order.

1.7.1.2 This provision shall not be applicable with respect to any material, product, thing or service for which District made findings and gave notice in accordance with Public Contract Code section 3400(c); therefore, Contractor shall not be entitled to request a substitution with respect to those materials, products or services.

1.7.2 A request for a substitution shall be submitted as follows:

1.7.2.1 Contractor shall notify the District in writing of any request for a substitution at least ten (10) days prior to bid opening as indicated in the Instructions to Bidders.

1.7.2.2 Requests for Substitutions after award of the Contract shall be submitted within thirty-five (35) days of the date of the Notice of Award.

1.7.3 Within 35 days after the date of the Notice of Award, Contractor shall provide data substantiating a request for substitution of "an equal" item, including but not limited to the following:

1.7.3.1 All variations of the proposed substitute from the material specified including, but not limited to, principles of operation, materials, or construction finish, thickness or gauge of materials, dimensions, weight, and tolerances;

1.7.3.2 Available maintenance, repair or replacement services;

1.7.3.3 Increases or decreases in operating, maintenance, repair, replacement, and spare parts costs;

1.7.3.4 Whether or not acceptance of the substitute will require other changes in the Work (or in work performed by the District or others under Contract with the District); and

1.7.3.5 The time impact on any part of the Work resulting directly or indirectly from acceptance of the proposed substitute.

1.7.4 No substitutions shall be made until approved, in writing, by the District. The burden of proof as to equality of any material, process, or article shall rest with Contractor. The Contractor warrants that if substitutes are approved:

1.7.4.1 The proposed substitute is equal or superior in all respects to that specified, and that such proposed substitute is suitable and fit for the intended purpose and will perform adequately the function and achieve the results called for by the general design and the Contract Documents;

1.7.4.2 The Contractor provides the same warranties and guarantees for the substitute that would be provided for that specified;

1.7.4.3 The Contractor shall be fully responsible for the installation of the substitute and any changes in the Work required, either directly or indirectly, because of the acceptance of such substitute, with no increase in Contract Price or Contract Time. Incidental changes or extra component parts required to accommodate the substitute will be made by the Contractor without a change in the Contract Price or Contract Time;

1.7.4.4 The Contractor shall be responsible for any re-design costs occasioned by District's acceptance and/or approval of any substitute; and

1.7.4.5 The Contractor shall, in the event that a substitute is less costly than that specified, credit the District with one hundred percent (100%) of the net difference between the substitute and the originally specified material. In this event, the Contractor agrees to execute a deductive Change Order to reflect that credit.

1.7.5 In the event Contractor furnishes a material, process, or article more expensive than that specified, the difference in the cost of that material, process, or article so furnished shall be borne by Contractor.

1.7.6 In no event shall the District be liable for any increase in Contract Price or Contract Time due to any claimed delay in the evaluation of any proposed substitute or in the acceptance or rejection of any proposed substitute.

1.7.7 Contractor shall be responsible for any costs the District incurs for professional services, DSA fees, or delay to the Project Schedule, if applicable, while DSA reviews changes for the convenience of Contractor and/or to accommodate Contractor's means and methods. District may deduct those costs from any amounts owing to the Contractor for the review of the request for substitution, even if the request for substitution is not approved. District, at its sole discretion, shall deduct from the payments due to and/or invoice Contractor for all the professional services and/or DSA fees or delay to the Project Schedule, if applicable, while DSA reviews changes for the convenience of Contractor and/or to accommodate Contractor's means and methods arising herein.

1.8 Materials and Work

1.8.1 Except as otherwise specifically stated in this Contract, Contractor shall provide and pay for all materials, labor, tools, equipment, transportation,

supervision, temporary constructions of every nature, and all other services, management, and facilities of every nature whatsoever necessary to execute and complete this Contract, in a good and workmanlike manner, within the Contract Time.

1.8.2 Unless otherwise specified, all materials shall be new and of the best quality of their respective kinds and grades as noted or specified, workmanship shall be of good quality, and Contractor shall use all diligence to inform itself fully as to the required manufacturer's instructions and to comply therewith.

1.8.3 Materials shall be furnished in ample quantities and at such times as to ensure uninterrupted progress of Work and shall be stored properly and protected from the elements, theft, vandalism, or other loss or damage as required.

1.8.4 For all materials and equipment specified or indicated in the Drawings, the Contractor shall provide all labor, materials, equipment, and services necessary for complete assemblies and complete working systems, functioning as intended. Incidental items not indicated on Drawings, nor mentioned in the Specifications, that can legitimately and reasonably be inferred to belong to the Work described, or be necessary in good practice to provide a complete assembly or system, shall be furnished as though itemized here in every detail. In all instances, material and equipment shall be installed in strict accordance with each manufacturer's most recent published recommendations and specifications.

1.8.5 Contractor shall, after award of Contract by District and after relevant submittals have been approved, place orders for materials and/or equipment as specified so that delivery of same may be made without delays to the Work. Contractor shall, upon five (5) days' demand from District, present documentary evidence showing that orders have been placed.

1.8.6 District reserves the right but has no obligation, in response to Contractor's neglect or failure in complying with the above instructions, to place orders for such materials and/or equipment as the District may deem advisable in order that the Work may be completed at the date specified in the Contract, and all expenses incidental to the procuring of said materials and/or equipment shall be paid for by Contractor or deducted from payment(s) to Contractor.

1.8.7 Contractor warrants good title to all material, supplies, and equipment installed or incorporated in Work and agrees upon completion of all Work to deliver the Site to District, together with all improvements and appurtenances constructed or placed thereon by it, and free from any claims, liens, or charges. Contractor further agrees that neither it nor any person, firm, or corporation furnishing any materials or labor for any work covered by the Contract shall have any right to lien any portion of the Premises or any improvement or appurtenance thereon, except that Contractor may install metering devices or other equipment of utility companies or of political subdivision, title to which is commonly retained by utility company or political subdivision. In the event of installation of any such metering device or equipment, Contractor shall advise District as to owner thereof.

1.8.7.1 If a lien or a claim based on a stop payment notice of any nature should at any time be filed against the Work or any District property, by any entity that has supplied material or services at the request of the Contractor,

Contractor and Contractor's Surety shall promptly, on demand by District and at Contractor's and Surety's own expense, take any and all action necessary to cause any such lien or a claim based on a stop payment notice to be released or discharged immediately therefrom.

1.8.7.2 If the Contractor fails to furnish to the District within ten (10) calendar days after demand by the District, satisfactory evidence that a lien or a claim based on a stop payment notice has been so released, discharged, or secured, the District may discharge such indebtedness and deduct the amount required therefor, together with any and all losses, costs, damages, and attorney's fees and expense incurred or suffered by District from any sum payable to Contractor under the Contract.

1.8.8 Nothing contained in this Article, however, shall defeat or impair the rights of persons furnishing materials or labor under any bond given by Contractor for their protection or any rights under any law permitting such protection or any rights under any law permitting such persons to look to funds due Contractor in hands of District (e.g., stop payment notices), and this provision shall be inserted in all subcontracts and material contracts and notice of its provisions shall be given to all persons furnishing material for work when no formal contract is entered into for such material.

1.8.9 Title to new materials and/or equipment for the Work of this Contract and attendant liability for its protection and safety shall remain with Contractor until incorporated in the Work of this Contract and accepted by District. No part of any materials and/or equipment shall be removed from its place of storage except for immediate installation in the Work of this Contract. Should the District, in its discretion, allow the Contractor to store materials and/or equipment for the Work off-site, Contractor will store said materials and/or equipment at a bonded warehouse and with appropriate insurance coverage at no cost to District. Contractor shall keep an accurate inventory of all materials and/or equipment in a manner satisfactory to District or its authorized representative and shall, at the District's request, forward it to the District.

2. [RESERVED]

3. ARCHITECT

3.1 The Architect shall represent the District during the Project and will observe the progress and quality of the Work on behalf of the District. Architect shall have the authority to act on behalf of District to the extent expressly provided in the Contract Documents and to the extent determined by District. Architect shall have authority to reject materials, workmanship, and/or the Work whenever rejection may be necessary, in Architect's reasonable opinion, to ensure the proper execution of the Contract.

3.2 Architect shall, with the District and on behalf of the District, determine the amount, quality, acceptability, and fitness of all parts of the Work, and interpret the Specifications, Drawings, and shall, with the District, interpret all other Contract Documents.

3.3 Architect shall have all authority and responsibility established by law, including title 24 of the California Code of Regulations.

3.4 Contractor shall provide District and the Construction Manager with a copy of all written communication between Contractor and Architect at the same time as that communication is made to Architect, including, without limitation, all RFIs, correspondence, submittals, claims, and proposed change orders.

4. CONSTRUCTION MANAGER

4.1 If a Construction Manager is used on this Project ("Construction Manager" or "CM"), the Construction Manager will provide administration of the Contract on the District's behalf. After execution of the Contract and Notice to Proceed, all correspondence and/or instructions from Contractor and/or District shall be forwarded through the Construction Manager. The Construction Manager will not be responsible for and will not have control or charge of construction means, methods, techniques, sequences, or procedures or for safety precautions in connection with the Work, which shall all remain the Contractor's responsibility.

4.2 The Construction Manager, however, will have authority to reject materials and/or workmanship not conforming to the Contract Documents, as determined by the District, the Architect, and/or the Project Inspector. The Construction Manager shall also have the authority to require special inspection or testing of any portion of the Work, whether it has been fabricated, installed, or fully completed. Any decision made by the Construction Manager, in good faith, shall not give rise to any duty or responsibility of the Construction Manager to: the Contractor; any Subcontractor; the Contractor or Subcontractor's respective agents, employees; or other persons performing any of the Work. The Construction Manager shall have free access to any or all parts of Work at any time.

4.3 If the District does not use a Construction Manager on this Project, all references within the Contract Documents to Construction Manager or CM shall be read as District.

5. INSPECTOR, INSPECTIONS, AND TESTS

5.1 Project Inspector

5.1.1 One or more Project Inspector(s), including special Project Inspector(s), as required, will be assigned to the Work by District, in accordance with requirements of title 24, part 1, of the California Code of Regulations, to enforce the building code and monitor compliance with Plans and Specifications for the Project previously approved by the DSA. Duties of Project Inspector(s) are specifically defined in section 4-342 of said part 1 of title 24.

5.1.2 No Work shall be carried on except with the knowledge and under the inspection of the Project Inspector(s). The Project Inspector(s) shall have free access to any or all parts of Work at any time. Contractor shall furnish Project Inspector(s) reasonable opportunities for obtaining such information as may be necessary to keep Project Inspector(s) fully informed respecting progress and manner of work and character of materials, including, but not limited to, submission of form DSA 156 (or the most current version applicable at the time the Work is performed) to the Project Inspector at least 48 hours in advance of the commencement and completion of construction of each and every aspect of the Work. Forms are available on the DSA's website at:

<http://www.dgs.ca.gov/dsa/Forms.aspx>. Inspection of Work shall not relieve Contractor from an obligation to fulfill this Contract. Project Inspector(s) and the DSA are authorized to suspend work whenever the Contractor and/or its Subcontractor(s) are not complying with the Contract Documents. Any work stoppage by the Project Inspector(s) and/or DSA shall be without liability to the District. Contractor shall instruct its Subcontractors and employees accordingly.

5.1.3 If Contractor and/or any Subcontractor requests that the Project Inspector(s) perform any inspection off-site, this shall only be done if it is allowable pursuant to applicable regulations and DSA approval, if the Project Inspector(s) agree to do so, and at the expense of the Contractor.

5.2 Tests and Inspections

5.2.1 Tests and Inspections shall comply with title 24, part 1, California Code of Regulations, group 1, article 5, section 4-335, and with the provisions of the Specifications.

5.2.2 The District will select an independent testing laboratory to conduct the tests. Selection of the materials required to be tested shall be by the laboratory or the District's representative and not by the Contractor. The Contractor shall notify the District's representative a sufficient time in advance of its readiness for required observation or inspection.

5.2.3 The Contractor shall notify the District's representative a sufficient time in advance of the manufacture of material to be supplied under the Contract Documents, which must by terms of the Contract Documents be tested, in order that the District may arrange for the testing of same at the source of supply. This notice shall be provided, at a minimum, seventy-two (72) hours prior to the manufacture of the material that needs to be tested.

5.2.4 Any material shipped by the Contractor from the source of supply prior to having satisfactorily passed such testing and inspection or prior to the receipt of notice from said representative that such testing and inspection will not be required, shall not be incorporated into and/or onto the Project.

5.2.5 The District will select the testing laboratory and pay for the costs of all tests and inspections, excepting those inspections performed at Contractor's request and expense. Contractor shall reimburse the District for any and all laboratory costs or other testing costs for any materials found to be not in compliance with the Contract Documents. At the District's discretion, District may elect to deduct laboratory or other testing costs for noncompliant materials from the Contract Price, and such deduction shall not constitute a withholding.

5.3 Costs for After Hours and/or Off Site Inspections

If the Contractor performs Work outside the Inspector's regular working hours or requests the Inspector to perform inspections off Site, costs of any inspections required outside regular working hours or off Site shall be borne by the Contractor and may be invoiced to the Contractor by the District or the District may deduct those expenses from the next Progress Payment.

6. CONTRACTOR

Contractor shall construct and complete, in a good and workmanlike manner, the Work for the Contract Price including any adjustment(s) to the Contract Price pursuant to provisions herein regarding changes to the Contract Price. Except as otherwise noted, Contractor shall provide and pay for all labor, materials, equipment, permits (excluding DSA), fees, licenses, facilities, transportation, taxes, bonds and insurance, and services necessary for the proper execution and completion of the Work, except as indicated herein.

6.1 Status of Contractor

6.1.1 Contractor is and shall at all times be deemed to be an independent contractor and shall be wholly responsible for the manner in which it and its Subcontractors perform the services required of it by the Contract Documents. Nothing herein contained shall be construed as creating the relationship of employer and employee, or principal and agent, between the District, or any of the District's employees or agents, and Contractor or any of Contractor's Subcontractors, agents or employees. Contractor assumes exclusively the responsibility for the acts of its agents, and employees as they relate to the services to be provided during the course and scope of their employment. Contractor, its Subcontractors, agents, and its employees shall not be entitled to any rights or privileges of District employees. District shall be permitted to monitor the Contractor's activities to determine compliance with the terms of this Contract.

6.1.2 As required by law, Contractor and all Subcontractors shall be properly licensed and regulated by the Contractors State License Board, 9821 Business Park Drive, Sacramento, California 95827, <http://www.cslb.ca.gov>.

6.1.3 As required by law, Contractor and all Subcontractors shall be properly registered as public works contractors by the Department of Industrial Relations at: <https://efiling.dir.ca.gov/PWCR/ActionServlet?action=displayPWCRRegistrationForm> or current URL.

6.1.4 Contractor represents that it has no existing interest and will not acquire any interest, direct or indirect, which could conflict in any manner or degree with the performance of the Work required under this Contract and that no person having any such interest shall be employed by Contractor.

6.2 Project Inspection Card(s)

Contractor shall verify that forms DSA 152 (or the current version applicable at the time the Work is performed) are issued for the Project prior to the commencement of construction.

6.3 Contractor's Supervision

6.3.1 During progress of the Work, Contractor shall keep on the Premises, and at all other locations where any Work related to the Contract is being performed, an experienced and competent project manager and construction superintendent who are employees of the Contractor, to whom the District does not object and at least one of whom shall be fluent in English, written and verbal.

6.3.2 The project manager and construction superintendent shall both speak fluently the predominant language of the Contractor's employees.

6.3.3 Before commencing the Work herein, Contractor shall give written notice to District of the name of its project manager and construction superintendent. Neither the Contractor's project manager nor construction superintendent shall be changed except with prior written notice to District. If the Contractor's project manager and/or construction superintendent proves to be unsatisfactory to Contractor, or to District, any of the District's employees, agents, the Construction Manager, or the Architect, the unsatisfactory project manager and/or construction superintendent shall be replaced. However, Contractor shall notify District in writing before any change occurs, but no less than two (2) business days prior. Any replacement of the project manager and/or construction superintendent shall be made promptly and must be satisfactory to the District. The Contractor's project manager and construction superintendent shall each represent Contractor, and all directions given to Contractor's project manager and/or construction superintendent shall be as binding as if given to Contractor.

6.3.4 Contractor shall give efficient supervision to Work, using its best skill and attention. Contractor shall carefully study and compare all Contract Documents, Drawings, Specifications, and other instructions and shall at once report to District, Construction Manager, and Architect any error, inconsistency, or omission that Contractor or its employees and Subcontractors may discover, in writing, with a copy to District's Project Inspector(s). The Contractor shall have responsibility for discovery of errors, inconsistencies, or omissions.

6.4 Duty to Provide Fit Workers

6.4.1 Contractor and Subcontractor(s) shall at all times enforce strict discipline and good order among their employees and shall not employ or work any unfit person or anyone not skilled in work assigned to that person. It shall be the responsibility of Contractor to ensure compliance with this requirement. District may require Contractor to permanently remove unfit persons from Project Site.

6.4.2 Any person in the employ of Contractor or Subcontractor(s) whom District may deem incompetent or unfit shall be excluded from working on the Project and shall not again be employed on the Project except with the prior written consent of District.

6.4.3 The Contractor shall furnish labor that can work in harmony with all other elements of labor employed or to be employed in the Work.

6.4.4 If Contractor intends to make any change in the name or legal nature of the Contractor's entity, Contractor must first notify the District in writing prior to making any contemplated change. The District shall determine in writing if Contractor's intended change is permissible while performing this Contract.

6.5 Field Office

6.5.1 Contractor shall provide a temporary office on the Site for the District's use exclusively, during the term of the Contract.

6.6 Purchase of Materials and Equipment

The Contractor is required to order, obtain, and store materials and equipment sufficiently in advance of its Work at no additional cost or advance payment from District to assure that there will be no delays.

6.7 Documents on Work

6.7.1 Contractor shall at all times keep on the Site, or at another location as the District may authorize in writing, one (1) legible copy of all Contract Documents, including Addenda and Change Orders, and Titles 19 and 24 of the California Code of Regulations, the specified edition(s) of the Uniform Building Code, all approved Drawings, Plans, Schedules, and Specifications, and all codes and documents referred to in the Specifications, and made part thereof. These documents shall be kept in good order and available to District, Construction Manager, Architect, Architect’s representatives, the Project Inspector(s), and all authorities having jurisdiction. Contractor shall be acquainted with and comply with the provisions of these titles as they relate to this Project. (See particularly the duties of Contractor, Title 24, Part 1, California Code of Regulations, section 4-343.) Contractor shall also be acquainted with and comply with all California Code of Regulations provisions relating to conditions on this Project, particularly Titles 8 and 17. Contractor shall coordinate with Architect and Construction Manager and shall submit its verified report(s) according to the requirements of Title 24.

6.7.2 Daily Job Reports.

6.7.2.1 Contractor shall maintain, at a minimum, at least one (1) set of Daily Job Reports on the Project. These must be prepared by the Contractor’s employee(s) who are present on Site, and must include, at a minimum, the following information:

- 6.7.2.1.1** A brief description of all Work performed on that day.
- 6.7.2.1.2** A summary of all other pertinent events and/or occurrences on that day.
- 6.7.2.1.3** The weather conditions on that day.
- 6.7.2.1.4** A list of all Subcontractor(s) working on that day, including DIR registration numbers.
- 6.7.2.1.5** A list of each Contractor employee working on that day and the total hours worked for each employee.
- 6.7.2.1.6** A complete list of all equipment on Site that day, whether in use or not.
- 6.7.2.1.7** A complete list of all materials, supplies, and equipment delivered on that day.
- 6.7.2.1.8** A complete list of all inspections and tests performed on that day.

6.7.2.2 Each day Contractor shall provide a copy of the previous day’s Daily Job Report to the District or the Construction Manager.

6.8 Preservation of Records

Contractor shall maintain, and District shall have the right to inspect, Contractor's financial records for the Project, including, without limitation, Job Cost Reports for the Project in compliance with the criteria set forth herein. The District shall have the right to examine and audit all Daily Job Reports or other Project records of Contractor's project manager(s), project superintendent(s), and/or project foreperson(s), all certified payroll records and/or related documents including, without limitation, Job Cost Reports, payroll, payment, timekeeping and tracking documents; all books, estimates, records, contracts, documents, bid documents, bid cost data, subcontract job cost reports, and other data of the Contractor, any Subcontractor, and/or supplier, including computations and projections related to bidding, negotiating, pricing, or performing the Work or Contract modification, in order to evaluate the accuracy, completeness, and currency of the cost, manpower, coordination, supervision, or pricing data at no additional cost to the District. These documents may be duplicative and/or be in addition to any Bid Documents held in escrow by the District. The Contractor shall make available at its office at all reasonable times the materials described in this paragraph for the examination, audit, or reproduction until three (3) years after final payment under this Contract. Notwithstanding the provisions above, Contractor shall provide any records requested by any governmental agency, if available, after the time set forth above.

6.9 Integration of Work

6.9.1 Contractor shall do all cutting, fitting, patching, and preparation of Work as required to make its several parts come together properly, to fit it to receive or be received by work of other contractors, and to coordinate tolerances to various pieces of work, showing upon, or reasonably implied by, the Drawings and Specifications for the completed structure, and shall conform them as District and/or Architect may direct.

6.9.2 Contractor shall make its own layout of lines and elevations and shall be responsible for the accuracy of both Contractor's and Subcontractors' work resulting therefrom.

6.9.3 Contractor and all Subcontractors shall take all field dimensions required in performance of the Work, and shall verify all dimensions and conditions on the Site. All dimensions affecting proper fabrication and installation of all Work must be verified prior to fabrication by taking field measurements of the true conditions. If there are any discrepancies between dimensions in drawings and existing conditions which will affect the Work, Contractor shall bring such discrepancies to the attention of the District and Architect for adjustment before proceeding with the Work. In doing so, it is recognized that Contractor is not acting in the capacity of a licensed design professional, and that Contractor's examination is made in good faith to facilitate construction and does not create an affirmative responsibility of a design professional to detect errors, omissions or inconsistencies in the Contract Documents or to ascertain compliance with applicable laws, building codes or regulations. However, nothing in this provision shall abrogate Contractor's responsibilities for discovering and reporting any error, inconsistency, or omission pursuant to the Contract within the Contractor's standard of care including, without limitation, any applicable laws, ordinance, rules, or regulations. Following receipt of written notice from Contractor, the District and/or Architect shall inform Contractor what action, if any, Contractor shall take with regard to such discrepancies.

6.9.4 All costs caused by noncompliant, defective, or delayed Work shall be borne by Contractor, inclusive of repair work.

6.9.5 Contractor shall not endanger any work performed by it or anyone else by cutting, excavating, or otherwise altering work and shall not cut or alter work of any other contractor except with consent of District.

6.10 Notifications

6.10.1 Contractor shall notify the Architect and Project Inspector, in writing, of the commencement of construction of each and every aspect of the Work at least 48 hours in advance by submitting form DSA 156 (or the most current version applicable at the time the Work is performed) to the Project Inspector. Forms are available on the DSA's website at: <http://www.dgs.ca.gov/dsa/Forms.aspx>.

6.10.2 Contractor shall notify the Architect and Project Inspector, in writing, of the completion of construction of each and every aspect of the Work at least 48 hours in advance by submitting form DSA 156 (or current version) to the Project Inspector.

6.11 Obtaining of Permits, Licenses and Registrations

Contractor shall secure and pay for all permits (except DSA), licenses, registrations, approvals and certificates necessary for prosecution of Work, including but not limited to those listed in the Special Conditions, if any, before the date of the commencement of the Work or before the permits, licenses, registrations, approvals and certificates are legally required to continue the Work without interruption. The Contractor shall obtain and pay, only when legally required, for all licenses, registrations, approvals, permits, inspections, and inspection certificates required to be obtained from or issued by any authority having jurisdiction over any part of the Work included in the Contract. All final permits, licenses, registrations, approvals and certificates shall be delivered to District before demand is made for final payment.

6.12 Royalties and Patents

6.12.1 Contractor shall obtain and pay, only when legally required, all royalties and license fees necessary for prosecution of Work before the earlier of the date of the commencement of the Work or the date that the license is legally required to continue the Work without interruption. Contractor shall defend suits or claims of infringement of patent, copyright, or other rights and shall hold the District, the Architect, and the Construction Manager harmless and indemnify them from loss on account thereof except when a particular design, process, or make or model of product is required by the Contract Documents. However, if the Contractor has reason to believe that the required design, process, or product is an infringement of a patent or copyright, the Contractor shall indemnify and defend the District, Architect and Construction Manager against any loss or damage unless the Contractor promptly informs the District of its information.

6.12.2 The review by the District or Architect of any method of construction, invention, appliance, process, article, device, or material of any kind shall be only its adequacy for the Work and shall not approve use by the Contractor in violation of any patent or other rights of any person or entity.

6.13 Work to Comply With Applicable Laws and Regulations

6.13.1 Contractor shall give all notices and comply with the following specific laws, ordinances, rules, and regulations and all other applicable laws, ordinances, rules, and regulations bearing on conduct of Work as indicated and specified, including but not limited to the appropriate statutes and administrative code sections. If Contractor observes that Drawings and Specifications are at variance therewith, or should Contractor become aware of the development of conditions not covered by Contract Documents that may result in finished Work being at variance therewith, Contractor shall promptly notify District in writing and any changes deemed necessary by District shall be made as provided in Contract for changes in Work.

6.13.1.1 National Electrical Safety Code, U. S. Department of Commerce

6.13.1.2 National Board of Fire Underwriters’ Regulations

6.13.1.3 International Building Code, latest addition, and the California Code of Regulations, title 24, and other amendments

6.13.1.4 Manual of Accident Prevention in Construction, latest edition, published by A.G.C. of America

6.13.1.5 Industrial Accident Commission’s Safety Orders, State of California

6.13.1.6 Regulations of the State Fire Marshall (title 19, California Code of Regulations) and Pertinent Local Fire Safety Codes

6.13.1.7 Americans with Disabilities Act

6.13.1.8 Education Code of the State of California

6.13.1.9 Government Code of the State of California

6.13.1.10 Labor Code of the State of California, division 2, part 7, Public Works and Public Agencies

6.13.1.11 Public Contract Code of the State of California

6.13.1.12 California Art Preservation Act

6.13.1.13 U. S. Copyright Act

6.13.1.14 U. S. Visual Artists Rights Act

6.13.2 Contractor shall comply with all applicable mitigation measures, if any, adopted by any public agency with respect to this Project pursuant to the California Environmental Quality Act (Public Resources Code section 21000 et seq.).

6.13.3 If Contractor performs any Work that it knew, or through exercise of reasonable care should have known, to be contrary to any applicable laws,

ordinance, rules, or regulations, Contractor shall bear all costs arising therefrom and arising from the correction of said Work.

6.13.4 Where Specifications or Drawings state that materials, processes, or procedures must be approved by the DSA, State Fire Marshall, or other body or agency, Contractor shall be responsible for satisfying requirements of such bodies or agencies applicable at the time the Work is performed, and as determined by those bodies or agencies.

6.14 Safety/Protection of Persons and Property

6.14.1 The Contractor will be solely and completely responsible for conditions of the Site, including safety of all persons and property during performance of the Work. This requirement will apply continuously and not be limited to normal working hours.

6.14.2 The wearing of hard hats will be mandatory at all times for all personnel on Site. Contractor shall supply sufficient hard hats to properly equip all employees and visitors.

6.14.3 Any construction review of the Contractor's performance is not intended to include review of the adequacy of the Contractor's safety measures in, on, or near the Site.

6.14.4 Implementation and maintenance of safety programs shall be the sole responsibility of the Contractor.

6.14.5 The Contractor shall furnish to the District a copy of the Contractor's safety plan within the time frame indicated in the Contract Documents and specifically adapted for the Project.

6.14.6 Contractor shall be responsible for all damages to persons or property that occur as a result of its fault or negligence in connection with the prosecution of this Contract and shall take all necessary measures and be responsible for the proper care and completion and final acceptance by District. All Work shall be solely at Contractor's risk with the exception of damage to the Work caused by "acts of God" as defined in Public Contract Code section 7105.

6.14.7 Contractor shall take, and require Subcontractors to take, all necessary precautions for safety of workers on the Project and shall comply with all applicable federal, state, local, and other safety laws, standards, orders, rules, regulations, and building codes to prevent accidents or injury to persons on, about, or adjacent to premises where Work is being performed and to provide a safe and healthful place of employment. Contractor shall furnish, erect, and properly maintain at all times, all necessary safety devices, safeguards, construction canopies, signs, nets, barriers, lights, and watchmen for protection of workers and the public and shall post danger signs warning against hazards created by such features in the course of construction.

6.14.8 Hazards Control – Contractor shall store volatile wastes in covered metal containers and remove them from the Site daily. Contractor shall prevent accumulation of wastes that create hazardous conditions. Contractor shall provide adequate ventilation during use of volatile or noxious substances.

6.14.9 Contractor shall designate a responsible member of its organization on the Project, whose duty shall be to post information regarding protection and obligations of workers and other notices required under occupational safety and health laws, to comply with reporting and other occupational safety requirements, and to protect the life, safety, and health of workers. Name and position of person so designated shall be reported to District by Contractor.

6.14.10 Contractor shall correct any violations of safety laws, rules, orders, standards, or regulations. Upon the issuance of a citation or notice of violation by the Division of Occupational Safety and Health, Contractor shall correct such violation promptly.

6.14.11 Contractor shall comply with any District storm water requirements that are approved by the District and applicable to the Project, at no additional cost to the District.

6.14.12 In an emergency affecting safety of life or of work or of adjoining property, Contractor, without special instruction or authorization, shall act, at its discretion, to prevent such threatened loss or injury. Any compensation claimed by Contractor on account of emergency work shall be determined by agreement.

6.14.13 All salvage materials will become the property of the Contractor and shall be removed from the Site unless otherwise called for in the Contract Documents. However, the District reserves the right to designate certain items of value that shall be turned over to the District unless otherwise directed by District.

6.14.14 All connections to public utilities and/or existing on-site services shall be made and maintained in such a manner as to not interfere with the continuing use of same by the District during the entire progress of the Work.

6.14.15 Contractor shall provide such heat, covering, and enclosures as are necessary to protect all Work, materials, equipment, appliances, and tools against damage by weather conditions, such as extreme heat, cold, rain, snow, dry winds, flooding, or dampness.

6.14.16 The Contractor shall protect and preserve the Work from all damage or accident, providing any temporary roofs, window and door coverings, boxings, or other construction as required by the Architect. The Contractor shall be responsible for existing structures, walks, roads, trees, landscaping, and/or improvements in working areas; and shall provide adequate protection therefore. If temporary removal is necessary of any of the above items, or damage occurs due to the Work, the Contractor shall replace same at its expense with same kind, quality, and size of Work or item damaged. This shall include any adjoining property of the District and others.

6.14.17 Contractor shall take adequate precautions to protect existing roads, sidewalks, curbs, pavements, utilities, adjoining property, and structures (including, without limitation, protection from settlement or loss of lateral support), and to avoid damage thereto, and repair any damage thereto caused by construction operations.

6.14.18 Contractor shall confine apparatus, the storage of materials, and the operations of workers to limits indicated by law, ordinances, permits, or directions of

Architect, and shall not interfere with the Work or unreasonably encumber Premises or overload any structure with materials. Contractor shall enforce all instructions of District and Architect regarding signs, advertising, fires, and smoking, and require that all workers comply with all regulations while on Project Site.

6.14.19 Contractor, Contractor’s employees, Subcontractors, Subcontractors’ employees, or any person associated with the Work shall conduct themselves in a manner appropriate for a school site. No verbal or physical contact with neighbors, students, and faculty, profanity, or inappropriate attire or behavior will be permitted. District may require Contractor to permanently remove non-complying persons from Project Site.

6.14.20 Contractor shall take care to prevent disturbing or covering any survey markers, monuments, or other devices marking property boundaries or corners. If such markers are disturbed, Contractor shall have a civil engineer, registered as a professional engineer in California, replace them at no cost to District.

6.14.21 In the event that the Contractor enters into any agreement with owners of any adjacent property to enter upon the adjacent property for the purpose of performing the Work, Contractor shall fully indemnify, defend, and hold harmless each person, entity, firm, or agency that owns or has any interest in adjacent property. The form and content of the agreement of indemnification shall be approved by the District prior to the commencement of any Work on or about the adjacent property. The Contractor shall also indemnify the District as provided in the indemnification provision herein. These provisions shall be in addition to any other requirements of the owners of the adjacent property.

6.15 Working Evenings and Weekends

Contractor may be required to work increased hours, evenings, and/or weekends at no additional cost to the District. Contractor shall give the District seventy-two (72) hours’ notice prior to performing any evening and/or weekend work. Contractor shall perform all evening and/or weekend work only upon District’s approval and in compliance with all applicable rules, regulations, laws, and local ordinances including, without limitation, all noise and light limitations. Contractor shall reimburse the District for any increased or additional Inspector charges as a result of Contractor’s increased hours, or evening and/or weekend work.

6.16 Cleaning Up

6.16.1 The Contractor shall provide all services, labor, materials, and equipment necessary for protecting and securing the Work, all school occupants, furnishings, equipment, and building structure from damage until its completion and final acceptance by District. Dust barriers shall be provided to isolate dust and dirt from construction operations. At completion of the Work and portions thereof, Contractor shall clean to the original state any areas beyond the Work area that become dust laden as a result of the Work. The Contractor must erect the necessary warning signs and barricades to ensure the safety of all school occupants. The Contractor at all times must maintain good housekeeping practices to reduce the risk of fire damage and must make a fire extinguisher, fire blanket, and/or fire watch, as applicable, available at each location where cutting, braising, soldering, and/or welding is being performed or where there is an increased risk of fire.

6.16.2 Contractor at all times shall keep Premises, including property immediately adjacent thereto, free from debris such as waste, rubbish (including personal rubbish of workers, e.g., food wrappers, etc.), and excess materials and equipment caused by the Work. Contractor shall not leave debris under, in, or about the Premises (or surrounding property or neighborhood), but shall promptly remove same from the Premises on a daily basis. If Contractor fails to clean up, District may do so and the cost thereof shall be charged to Contractor. If Contract is for work on an existing facility, Contractor shall also perform specific clean-up on or about the Premises upon request by the District as it deems necessary for continued operations. Contractor shall comply with all related provisions of the Specifications.

6.16.3 If the Construction Manager, Architect, or District observes the accumulation of trash and debris, the District will give the Contractor a 24-hour written notice to mitigate the condition.

6.16.4 Should the Contractor fail to perform the required clean-up, or should the clean-up be deemed unsatisfactory by the District, the District may, at its sole discretion, then perform the clean-up. All cost associated with the clean-up work (including all travel, payroll burden, and costs for supervision) will be deducted from the Contract Price.

7. SUBCONTRACTORS

7.1 Contractor shall provide the District with information for all Subcontracts as indicated in the Contractor's Submittals and Schedules Section herein.

7.2 No contractual relationship exists between the District and any Subcontractor, supplier, or sub-subcontractor by reason of this Contract.

7.3 Contractor agrees to bind every Subcontractor by terms of this Contract as far as those terms that are applicable to Subcontractor's work including, without limitation, all labor, wage & hour, apprentice and related provisions and requirements. If Contractor shall subcontract any part of this Contract, Contractor shall be as fully responsible to District for acts and omissions of any Subcontractor and of persons either directly or indirectly employed by any Subcontractor, including Subcontractor caused Project delays, as it is for acts and omissions of persons directly employed by Contractor. The divisions or sections of the Specifications and/or the arrangement of the drawings are not intended to control the Contractor in dividing the Work among Subcontractors or limit the work performed by any trade.

7.4 District's consent to, or approval of, or failure to object to, any Subcontractor under this Contract shall not in any way relieve Contractor of any obligations under this Contract and no such consent shall be deemed to waive any provisions of this Contract.

7.5 Contractor is directed to familiarize itself with sections 4100 through 4114 of the Public Contract Code of the State of California, as regards subletting and subcontracting, and to comply with all applicable requirements therein. In addition, Contractor is directed to familiarize itself with sections 1720 through 1861 of the Labor Code of the State of California, as regards the payment of prevailing wages and related issues, and to comply with all applicable requirements therein including, without

limitation, section 1775 and the Contractor's and Subcontractors' obligations and liability for violations of prevailing wage law and other applicable laws.

7.6 No Contractor whose Bid is accepted shall, without consent of the awarding authority and in full compliance with section 4100 et seq. of the Public Contract Code, including, without limitation, sections 4107, 4107.5, and 4109 of the Public Contract Code, and section 1771.1 of the Labor Code, either:

7.6.1 Substitute any person as a Subcontractor in place of the Subcontractor designated in the original Bid; or

7.6.2 Permit any Subcontract to be assigned or transferred, or allow any portion of the Work to be performed by anyone other than the original Subcontractor listed in the Bid; or

7.6.3 Sublet or subcontract any portion of the Work in excess of one-half of one percent (0.5%) of the Contractor's total bid as to which its original bid did not designate a Subcontractor.

7.7 The Contractor shall be responsible for the coordination of the trades, Subcontractors, sub-subcontractors, and material or equipment suppliers working on the Project.

7.7.1 Contractor is responsible for ensuring that all Subcontractors are properly registered as public works contractors by the Department of Industrial Relations.

7.8 Contractor is solely responsible for settling any differences between the Contractor and its Subcontractor(s) or between Subcontractors.

7.9 Contractor must include in all of its subcontracts the assignment provisions as indicated in the Termination section of these General Conditions.

8. OTHER CONTRACTS/CONTRACTORS

8.1 District reserves the right to let other contracts, and/or to perform work with its own forces, in connection with the Project. Contractor shall afford other contractors reasonable opportunity for introduction and storage of their materials and execution of their work and shall properly coordinate and connect Contractor's Work with the work of other contractors.

8.2 In addition to Contractor's obligation to protect its own Work, Contractor shall protect the work of any other contractor that Contractor encounters while working on the Project.

8.3 If any part of Contractor's Work depends for proper execution or results upon work of District or any other contractor, the Contractor shall inspect and, before proceeding with its Work, promptly report to the District in writing any defects in District's or any other contractor's work that render Contractor's Work unsuitable for proper execution and results. Contractor shall be held accountable for damages to District for District's or any other contractor's work that Contractor failed to inspect or should have inspected. Contractor's failure to inspect and report shall constitute Contractor's acceptance of all District's or any other contractor's work as fit and proper for reception of Contractor's Work, except as to defects that may develop in District's or any other contractor's work after execution of Contractor's Work and not caused by execution of Contractor's Work.

8.4 To ensure proper execution of its subsequent work, Contractor shall measure and inspect work already in place and shall at once report to the District in writing any discrepancy between that executed work and the Contract Documents.

8.5 Contractor shall ascertain to its own satisfaction the scope of the Project and nature of District's or any other contracts that have been or may be awarded by District in prosecution of the Project to the end that Contractor may perform this Contract in light of the other contracts, if any.

8.6 Nothing herein contained shall be interpreted as granting to Contractor exclusive occupancy of the Site, the Premises, or of the Project. Contractor shall not cause any unnecessary hindrance or delay to the use and/or operation(s) of the Premises and/or to District or any other contractor working on the Project. If simultaneous execution of any contract or Premises operation is likely to cause interference with performance of Contractor's Contract, Contractor shall coordinate with

those contractor(s), person(s), and/or entity(s) and shall notify the District of the resolution.

9. DRAWINGS AND SPECIFICATIONS

9.1 A complete list of all Drawings that form a part of the Contract is to be found as an index on the Drawings themselves, and/or may be provided to the Contractor and/or in the Table of Contents.

9.2 Materials or Work described in words that so applied have a well-known technical or trade meaning shall be deemed to refer to recognized standards, unless noted otherwise.

9.3 Trade Name or Trade Term. It is not the intention of this Contract to go into detailed descriptions of any materials and/or methods commonly known to the trade under "trade name" or "trade term." The mere mention or notation of "trade name" or "trade term" shall be considered a sufficient notice to Contractor that it will be required to complete the work so named, complete, finished, and operable, with all its appurtenances, according to the best practices of the trade.

9.4 The naming of any material and/or equipment shall mean furnishing and installing of same, including all incidental and accessory items thereto and/or labor therefor, as per best practices of the trade(s) involved, unless specifically noted otherwise.

9.5 Contract Documents are complementary, and what is called for by one shall be binding as if called for by all. As such, Drawings and Specifications are intended to be fully cooperative and to agree. However, if Contractor observes that Drawings and Specifications are in conflict with the Contract Documents, Contractor shall promptly notify District and Architect in writing, and any necessary changes shall be made as provided in the Contract Documents.

9.6 In the case of discrepancy or ambiguity in the Contract Documents, the order of precedence in the Agreement shall prevail. However, in the case of discrepancy or ambiguity solely between and among the Drawings and Specifications, the discrepancy or ambiguity shall be resolved in favor of the interpretation that will provide District with the functionally complete and operable Project described in the Drawings and Specifications. In case of ambiguity, conflict, or lack of information, District will furnish clarifications with reasonable promptness.

9.7 Drawings and Specifications are intended to comply with all laws, ordinances, rules, and regulations of constituted authorities having jurisdiction, and where referred to in the Contract Documents, the laws, ordinances, rules, and regulations shall be considered as a part of the Contract within the limits specified. Contractor shall bear all expense of correcting work done contrary to said laws, ordinances, rules, and regulations.

9.9 As required by Section 4-317(c), Part 1, Title 24, CCR: "Should any existing conditions such as deterioration or non-complying construction be discovered which is not covered by the DSA-approved documents wherein the finished work will not comply with Title 24, California Code of Regulations, a construction change document, or a

separate set of plans and specifications, detailing and specifying the required repair work shall be submitted to and approved by DSA before proceeding with the repair work.”

9.9 Ownership of Drawings

All copies of Plans, Drawings, Designs, Specifications, and copies of other incidental architectural and engineering work, or copies of other Contract Documents furnished by District, are the property of District. They are not to be used by Contractor in other work and, with the exception of signed sets of Contract Documents, are to be returned to District on request at completion of Work, or may be used by District as it may require without any additional costs to District. Neither the Contractor nor any Subcontractor, or material or equipment supplier shall own or claim a copyright in the Drawings, Specifications, and other documents prepared by the Architect. District hereby grants the Contractor, Subcontractors, sub-subcontractors, and material or equipment suppliers a limited license to use applicable portions of the Drawings prepared for the Project in the execution of their Work under the Contract Documents.

10. CONTRACTOR’S SUBMITTALS AND SCHEDULES

Contractor’s submittals shall comply with the provisions and requirements of the Specifications including, without limitation Submittals.

10.1 Schedule of Work, Schedule of Submittals, and Schedule of Values

10.1.1 Within **TEN (10)** calendar days after the date of the Notice to Proceed (unless otherwise specified in the Specifications), the Contractor shall prepare and submit to the District for review, in a form supported by sufficient data to substantiate its accuracy as the District may require:

10.1.1.1 Preliminary Schedule. A preliminary schedule of construction indicating the starting and completion dates of the various stages of the Work, including any information and following any form as may be specified in the Specifications. Once approved by District, this shall become the Construction Schedule. This schedule shall include and identify all tasks that are on the Project’s critical path with a specific determination of the start and completion of each critical path task as well as all Contract milestones and each milestone’s completion date(s) as may be required by the District.

10.1.1.1.1 The District is not required to approve a preliminary schedule of construction with early completion, i.e., one that shows early completion dates for the Work and/or milestones. Contractor shall not be entitled to extra compensation if the District approves a Construction Schedule with an early completion date and Contractor completes the Project beyond the date shown in the schedule but within the Contract Time. A Construction Schedule showing the Work completed in less than the Contract Time, the time between the early completion date and the end of the Contract Time shall be Float

10.1.1.2 Preliminary Schedule of Values. **Contractor is responsible for providing a Schedule of Values for each Increment (2 Total).** A preliminary schedule of values for all of the Work, which must include quantities and prices of items aggregating the Contract Price and must subdivide the Work

into component parts in sufficient detail to serve as the basis for progress payments during construction. The Preliminary Schedule of Values will include all disciplines and the component parts. Unless the Special Conditions contain different limits, this preliminary schedule of values shall include, at a minimum, the following information and the following structure:

10.1.1.2.1 Divided into at least the following categories:

- 10.1.1.2.1.1** Overhead and profit;
- 10.1.1.2.1.2** Supervision;
- 10.1.1.2.1.3** General conditions;
- 10.1.1.2.1.4** Layout;
- 10.1.1.2.1.5** Mobilization;
- 10.1.1.2.1.6** Submittals;
- 10.1.1.2.1.7** Bonds and insurance;
- 10.1.1.2.1.8** Close-out/Certification documentation;
- 10.1.1.2.1.9** Demolition;
- 10.1.1.2.1.10** Installation;
- 10.1.1.2.1.11** Rough-in;
- 10.1.1.2.1.12** Finishes;
- 10.1.1.2.1.13** Testing;
- 10.1.1.2.1.14** Specification Section;
- 10.1.1.2.1.15** Punchlist and District acceptance.

10.1.1.2.2 And also divided by each of the following areas:

- 10.1.1.2.2.1** Increment;
- 10.1.1.2.2.2** Site work;
- 10.1.1.2.2.3** By each building;
- 10.1.1.2.2.4** By each floor and/or use area;
- 10.1.1.2.2.5** By each roof.

10.1.1.2.3 The preliminary schedule of values shall not provide for values any greater than the following percentages of the Contract value:

- 10.1.1.2.3.1** Mobilization and layout combined to equal not more than 1%;
- 10.1.1.2.3.2** Submittals, samples and shop drawings combined to equal not more than 3%;
- 10.1.1.2.3.3** Bonds and insurance combined to equal not more than 2%.
- 10.1.1.2.3.4** Closeout documentation shall have a value in the preliminary schedule of not less than 5%.

10.1.1.2.4 Notwithstanding any provision of the Contract Documents to the contrary, payment of the Contractor's overhead, supervision, general conditions costs, and profit, as reflected in the Cost Breakdown, shall be paid based on percentage complete, with the disbursement of Progress Payments and the Final Payment.

10.1.1.2.5 Contractor shall certify that the preliminary schedule of values as submitted to the District is accurate and reflects the costs as developed in

preparing Contractor's bid. For example, without limiting the foregoing, Contractor shall not "front-load" the preliminary schedule of values with dollar amounts greater than the value of activities performed early in the Project.

10.1.1.2.6 The preliminary schedule of values shall be subject to the District's review and approval of the form and content thereof. In the event that the District objects to any portion of the preliminary schedule of values, the District shall notify the Contractor, in writing, of the District's objection(s) to the preliminary schedule of values. Within five (5) calendar days of the date of the District's written objection(s), Contractor shall submit a revised preliminary schedule of values to the District for review and approval. The foregoing procedure for the preparation, review and approval of the preliminary schedule of values shall continue until the District has approved the entirety of the preliminary schedule of values.

10.1.1.2.7 Once the preliminary schedule of values is approved by the District, this shall become the Schedule of Values. The Schedule of Values shall not be thereafter modified or amended by the Contractor without the prior consent and approval of the District, which may be granted or withheld in the sole discretion of the District.

10.1.1.3 Preliminary Schedule of Submittals. A preliminary schedule of submittals, including Shop Drawings, Product Data, and Samples submittals. Once approved by District, this shall become the Submittal Schedule. All submittals shall be forwarded to the District by the date indicated on the approved Submittal Schedule, unless an earlier date is necessary to maintain the Construction Schedule, in which case those submittals shall be forwarded to the District so as not to delay the Construction Schedule. Upon request by the District, Contractor shall provide an electronic copy of all submittals to the District. All submittals shall be submitted no later than 90 days after the Notice to Proceed.

10.1.1.4 Safety Plan. Contractor's Safety Plan specifically adapted for the Project. Contractor's Safety Plan shall comply with the following requirements:

10.1.1.4.1 All applicable requirements of California Division of Occupational Safety and Health ("CalOSHA") and/or of the United States Occupational Safety and Health Administration ("OSHA").

10.1.1.4.2 All provisions regarding Project safety, including all applicable provisions in these General Conditions.

10.1.1.4.3 Contractor's Safety Plan shall be in English and in the language(s) of the Contractor's and its Subcontractors' employees.

10.1.1.5 Complete Registered Subcontractors List. The name, address, telephone number, facsimile number, California State Contractors License number, classification, DIR registration number and monetary value of all Subcontracts of any tier for parties furnishing labor, material, or equipment for completion of the Project.

10.1.2 Contractor must provide all schedules both in hard copy and electronically, in a format (e.g., Microsoft Project or Primavera) approved in advance by the District.

10.1.3 The District will review the schedules submitted and the Contractor shall make changes and corrections in the schedules as requested by the District and resubmit the schedules until approved by the District.

10.1.4 The District shall have the right at any time to revise the schedule of values if, in the District's sole opinion, the schedule of values does not accurately reflect the value of the Work performed.

10.1.5 All submittals and schedules must be approved by the District before Contractor can rely on them as a basis for payment.

10.2 Monthly Progress Schedule(s)

10.2.1 Contractor shall provide Monthly Progress Schedule(s) to the District. A Monthly Progress Schedule shall update the approved Construction Schedule or the last Monthly Progress Schedule, showing all work completed and to be completed as well as updating the Registered Subcontractors List. The monthly Progress Schedule shall be sent within the timeframe requested by the District and shall be in a format acceptable to the District and contain a written narrative of the progress of work that month and any changes, delays, or events that may affect the work. The process for District approval of the Monthly Progress Schedule shall be the same as the process for approval of the Construction Schedule.

10.2.2 Contractor shall submit Monthly Progress Schedule(s) with all payment applications.

10.2.3 Contractor must provide all schedules both in hard copy and electronically, in a format (e.g., Microsoft Project or Primavera) approved in advance by the District.

10.2.4 The District will review the schedules submitted and the Contractor shall make changes and corrections in the schedules as requested by the District and resubmit the schedules until approved by the District.

10.2.5 The District shall have the right at any time to revise the schedule of values if, in the District's sole opinion, the schedule of values does not accurately reflect the value of the Work performed.

10.2.6 All submittals and schedules must be approved by the District before Contractor can rely on them as a basis for payment.

10.3 Material Safety Data Sheets (MSDS)

Contractor is required to ensure Material Safety Data Sheets are available in a readily accessible place at the Site for any material requiring a Material Safety Data Sheet per the federal "Hazard Communication" standard, or employees' "right to know" law. The Contractor is also required to ensure proper labeling on substances brought onto the job site and that any person working with the material or within the general area of the

material is informed of the hazards of the substance and follows proper handling and protection procedures. Two additional copies of the Material Safety Data Sheets shall also be submitted directly to the District.

11. SITE ACCESS, CONDITIONS, AND REQUIREMENTS

11.1 Site Investigation

Before bidding on this Work, Contractor shall make a careful investigation of the Site and thoroughly familiarize itself with the requirements of the Contract. By the act of submitting a bid for the Work included in this Contract, Contractor shall be deemed to have made a complete study and investigation, and to be familiar with and accepted the existing conditions of the Site.

Prior to commencing the Work, Contractor and the District's representative shall survey the Site to document the condition of the Site. Contractor will record the survey in digital videotape format and provide an electronic copy to the District within fourteen (14) days of the survey. This electronic record shall serve as a basis for determining any damages caused by the Contractor during the Project. The Contractor may also document any pre-existing conditions in writing, provided that both the Contractor and the District's representative agree on said conditions and sign a memorandum documenting the same.

11.2 Soils Investigation Report

11.2.1 When a soils investigation report obtained from test holes at Site or for the Project is available, that report may be available to the Contractor but shall not be a part of this Contract and shall not alleviate or excuse the Contractor's obligation to perform its own investigation. Any information obtained from that report or any information given on Drawings as to subsurface soil condition or to elevations of existing grades or elevations of underlying rock is approximate only, is not guaranteed, does not form a part of this Contract, and Contractor may not rely thereon. By submitting its bid, Contractor acknowledges that it has made visual examination of Site and has made whatever tests Contractor deems appropriate to determine underground condition of soil. Although any such report is not a part of this Contract, recommendations from the report may be included in the Drawings, Specifications, or other Contract Documents. It is Contractor's sole responsibility to thoroughly review all Contract Documents, Drawings, and Specifications.

11.2.2 Contractor agrees that no claim against District will be made by Contractor for damages and hereby waives any rights to damages if, during progress of Work, Contractor encounters subsurface or latent conditions at Site materially differing from those shown on Drawings or indicated in Specifications, or for unknown conditions of an unusual nature that differ materially from those ordinarily encountered in the work of the character provided for in Plans and Specifications, except as indicated in the provisions of these General Conditions regarding trenches, trenching, and/or existing utility lines.

11.3 Access to Work

District and its representatives shall at all times have access to Work wherever it is in preparation or progress, including storage and fabrication. Contractor shall provide safe

and proper facilities for such access so that District's representatives may perform their functions.

11.4 Layout and Field Engineering

11.4.1 All field engineering required for layout of this Work and establishing grades for earthwork operations shall be furnished by Contractor at its expense. This Work shall be done by a qualified, California-registered civil engineer approved in writing by District and Architect. Any required Record and/or As-Builts of Site development shall be prepared by the approved civil engineer.

11.4.2 The Contractor shall be responsible for having ascertained pertinent local conditions such as location, accessibility, and general character of the Site and for having satisfied itself as to the conditions under which the Work is to be performed. Contractor shall follow best practices, including but not limited to potholing to avoid utilities. District shall not be liable for any claim for allowances because of Contractor's error, failure to follow best practices, or negligence in acquainting itself with the conditions at the Site.

11.4.3 Contractor shall protect and preserve established benchmarks and monuments and shall make no changes in locations without the prior written approval of District. Contractor shall replace any benchmarks or monuments that are lost or destroyed subsequent to proper notification of District and with District's approval.

11.5 Utilities

Utilities shall be provided as indicated in the Specifications.

11.6 Sanitary Facilities

Sanitary facilities shall be provided as indicated in the Specifications.

11.7 Surveys

Contractor shall provide surveys done by a California-licensed civil engineer surveyor to determine locations of construction, grading, and site work as required to perform the Work.

11.8 Regional Notification Center

The Contractor, except in an emergency, shall contact the appropriate regional notification center at least two (2) days prior to commencing any excavation if the excavation will be conducted in an area or in a private easement that is known, or reasonably should be known, to contain subsurface installations other than the underground facilities owned or operated by the District, and obtain an inquiry identification number from that notification center. No excavation shall be commenced and/or carried out by the Contractor unless an inquiry identification number has been assigned to the Contractor or any Subcontractor and the Contractor has given the District the identification number. Any damages arising from Contractor's failure to make appropriate notification shall be at the sole risk and expense of the Contractor.

Any delays caused by failure to make appropriate notification shall be at the sole risk of the Contractor and shall not be considered for an extension of the Contract Time.

11.9 Existing Utility Lines

11.9.1 Pursuant to Government Code section 4215, District assumes the responsibility for removal, relocation, and protection of main or trunk utility lines and facilities located on the construction Site at the time of commencement of construction under this Contract with respect to any such utility facilities that are not identified in the Plans and Specifications. Contractor shall not be assessed for liquidated damages for delay in completion of the Project caused by failure of District or the owner of a utility to provide for removal or relocation of such utility facilities.

11.9.2 Locations of existing utilities provided by District shall not be considered exact, but approximate within a reasonable margin and shall not relieve Contractor of responsibilities to exercise reasonable care or costs of repair due to Contractor's failure to do so. District shall compensate Contractor for the costs of locating and repairing damage not due to the failure of Contractor to exercise reasonable care, and removing or relocating such utility facilities not indicated in the Plans and Specifications with reasonable accuracy, and for equipment necessarily idle during such work.

11.9.3 No provision herein shall be construed to preclude assessment against Contractor for any other delays in completion of the Work. Nothing in this Article shall be deemed to require District to indicate the presence of existing service laterals, appurtenances, or other utility lines, within the exception of main or trunk utility lines or whenever the presence of these utilities on the Site of the construction Project can be inferred from the presence of other visible facilities, such as buildings, meter junction boxes, on or adjacent to the Site of the construction.

11.9.4 If Contractor, while performing Work under this Contract, discovers utility facilities not identified by District in Contract Plans and Specifications, Contractor shall immediately notify the District and the utility in writing. The cost of repair for damage to above-mentioned visible facilities without prior written notification to the District shall be borne by the Contractor.

11.10 Notification

Contractor understands, acknowledges and agrees that the purpose of prompt notification to the District pursuant to these provisions is to allow the District to investigate the condition(s) so that the District shall have the opportunity to decide how the District desires to proceed as a result of the condition(s). Accordingly, failure of Contractor to promptly notify the District in writing, pursuant to these provisions, shall constitute Contractor's waiver of any claim for damages or delay incurred as a result of the condition(s).

11.11 Hazardous Materials

Contractor shall comply with all provisions and requirements of the Contract Documents related to hazardous materials including, without limitation, Hazardous Materials Procedures and Requirements.

11.12 No Signs

Neither the Contractor nor any other person or entity shall display any signs not required by law or the Contract Documents at the Site, fences trailers, offices, or elsewhere on the Site without specific prior written approval of the District.

12. TRENCHES

12.1 Trenches Greater Than Five Feet

Pursuant to Labor Code section 6705, if the Contract Price exceeds \$25,000 and involves the excavation of any trench or trenches five (5) feet or more in depth, the Contractor shall, in advance of excavation, promptly submit to the District and/or a registered civil or structural engineer employed by the District or Architect, a detailed plan, stamped by a licensed engineer retained by the Contractor, showing the design of shoring for protection from the hazard of caving ground during the excavation of such trench or trenches.

12.2 Excavation Safety

If such plan varies from the Shoring System Standards established by the Construction Safety Orders, the plan shall be prepared by a registered civil or structural engineer, but in no case shall such plan be less effective than that required by the Construction Safety Orders. No excavation of such trench or trenches shall be commenced until said plan has been accepted by the District or by the person to whom authority to accept has been delegated by the District.

12.3 No Tort Liability of District

Pursuant to Labor Code section 6705, nothing in this Article shall impose tort liability upon the District or any of its employees.

12.4 No Excavation without Permits

The Contractor shall not commence any excavation Work until it has secured all necessary permits including the required CalOSHA excavation/shoring permit. Any permits shall be prominently displayed on the Site prior to the commencement of any excavation.

12.5 Discovery of Hazardous Waste and/or Unusual Conditions

12.5.1 Pursuant to Public Contract Code section 7104, if the Work involves digging trenches or other excavations that extend deeper than four feet below the Surface, the Contractor shall promptly, and before the following conditions are disturbed, notify the District, in writing, of any:

12.5.1.1 Material that the Contractor believes may be material that is hazardous waste, as defined in section 25117 of the Health and Safety Code, is required to be removed to a Class I, Class II, or Class III disposal site in accordance with provisions of existing law.

12.5.1.2 Subsurface or latent physical conditions at the Site differing from those indicated.

12.5.1.3 Unknown physical conditions at the Site of any unusual nature, different materially from those ordinarily encountered and generally recognized as inherent in work of the character provided for in the Contract.

12.5.2 The District shall promptly investigate the conditions, and if it finds that the conditions do materially so differ, or do involve hazardous waste, and cause a decrease or increase in the Contractor's cost of, or the time required for, performance of any part of the Work, shall issue a Change Order under the procedures described herein.

12.5.3 In the event that a dispute arises between District and the Contractor whether the conditions materially differ, or involve hazardous waste, or cause a decrease or increase in the Contractor's cost of, or time required for, performance of any part of the Work, the Contractor shall not be excused from any scheduled completion date provided for by the Contract, but shall proceed with all work to be performed under the Contract. The Contractor shall retain any and all rights provided either by Contract or by law that pertain to the resolution of disputes and protests.

13. INSURANCE AND BONDS

13.1 Insurance

Unless different provisions and/or limits are indicated in the Special Conditions, all insurance required of Contractor and/or its Subcontractor(s) shall be at least as broad as the amounts and include the provisions set forth herein.

13.1.1 Commercial General Liability and Automobile Liability Insurance

13.1.1.1 Contractor shall procure and maintain, during the life of this Contract, Commercial General Liability Insurance and Automobile Liability Insurance that shall protect Contractor, District, State, Construction Manager(s), Project Inspector(s), and Architect(s) from all claims for bodily injury, property damage, personal injury, death, advertising injury, and medical payments arising from, or in connection with, operations under this Contract. This coverage shall be provided in a form at least as broad as Insurance Services (ISO) Form CG 0001 11188. Contractor shall ensure that Products Liability and Completed Operations coverage, Fire Damage Liability coverage, and Automobile Liability Insurance coverage including owned, non-owned, and hired automobiles, are included within the above policies and at the required limits, or Contractor shall procure and maintain these coverages separately.

13.1.1.2 Contractor's deductible or self-insured retention for its Commercial General Liability Insurance policy shall not exceed \$25,000 unless approved in writing by District.

13.1.1.3 All such policies shall be written on an occurrence form.

13.1.2 Excess Liability Insurance

13.1.2.1 If Contractor's underlying policy limits are less than required, subject to the District's sole discretion, Contractor may procure and maintain, during the life of this Contract, an Excess Liability Insurance Policy to meet the policy limit requirements of the required policies in order to satisfy, in the aggregate with its underlying policy, the insurance requirements herein.

13.1.2.2 There shall be no gap between the per occurrence amount of any underlying policy and the start of the coverage under the Excess Liability Insurance Policy. Any Excess Liability Insurance Policy shall be written on a following form and shall protect Contractor, District, State, Construction Manager(s), Project Manager(s), and Architect(s) in amounts and including the provisions as set forth in the Supplementary Conditions (if any) and/or Special Conditions, and that complies with all requirements for Commercial General Liability and Automobile Liability and Employers' Liability Insurance.

13.1.2.3 The District, in its sole discretion, may accept an Excess Liability Insurance Policy that brings Contractor's primary limits to the minimum requirements herein.

13.1.3 Subcontractor(s): Contractor shall require its Subcontractor(s), if any, to procure and maintain Commercial General Liability Insurance, Automobile Liability Insurance, and Excess Liability Insurance (if Subcontractor elects to satisfy, in part the insurance required herein by procuring and maintaining an Excess Liability Insurance Policy) with forms of coverage and limits equal to the amounts required of the Contractor.

13.1.4 Workers' Compensation and Employers' Liability Insurance

13.1.4.1 In accordance with provisions of section 3700 of the California Labor Code, the Contractor and every Subcontractor shall be required to secure the payment of compensation to its employees.

13.1.4.2 Contractor shall procure and maintain, during the life of this Contract, Workers' Compensation Insurance and Employers' Liability Insurance for all of its employees engaged in work under this Contract, on/or at the Site of the Project. This coverage shall cover, at a minimum, medical and surgical treatment, disability benefits, rehabilitation therapy, and survivors' death benefits. Contractor shall require its Subcontractor(s), if any, to procure and maintain Workers' Compensation Insurance and Employers' Liability Insurance for all employees of Subcontractor(s). Any class of employee or employees not covered by a Subcontractor's insurance shall be covered by Contractor's insurance. If any class of employee or employee engaged in Work under this Contract, on or at the Site of the Project, is not protected under the Workers' Compensation Insurance, Contractor shall provide, or shall cause a Subcontractor to provide, adequate insurance coverage for the protection of any employee(s) not otherwise protected before any of those employee(s) commence work.

13.1.5 Builder's Risk Insurance: Builder's Risk "All Risk" Insurance

Contractor shall procure and maintain, during the life of this Contract, Builder's Risk (Course of Construction), or similar first party property coverage acceptable to the District, issued on a replacement cost value basis. The cost shall be consistent with

the total replacement cost of all insurable Work of the Project included within the Contract Documents. Coverage is to insure against all risks of accidental physical loss and shall include without limitation the perils of vandalism and/or malicious mischief (both without any limitation regarding vacancy or occupancy), sprinkler leakage, civil authority, theft, sonic disturbance, earthquake, flood, collapse, wind, rain, dust, fire, war, terrorism, lightning, smoke, and rioting. Coverage shall include debris removal, demolition, increased costs due to enforcement of all applicable ordinances and/or laws in the repair and replacement of damaged and undamaged portions of the property, and reasonable costs for the Architect's and engineering services and expenses required as a result of any insured loss upon the Work and Project, including completed Work and Work in progress, to the full insurable value thereof.

13.1.6 Pollution Liability Insurance

13.1.6.1 Contractor shall procure and maintain Pollution Liability Insurance that shall protect Contractor, District, State, Construction Manager(s), Project Inspector(s), and Architect(s) from all claims for bodily injury, property damage, including natural resource damage, cleanup costs, removal, storage, disposal, and/or use of the pollutant arising from operations under this Contract, and defense, including costs and expenses incurred in the investigation, defense, or settlement of claims. Coverage shall apply to sudden and/or gradual pollution conditions resulting from the escape or release of smoke, vapors, fumes, acids, alkalis, toxic chemicals, liquids, or gases, natural gas, waste materials, or other irritants, contaminants, or pollutants, including asbestos. This coverage shall be provided in a form at least as broad as Insurance Services Offices, Inc. (ISO) Form CG 2415, or Contractor shall procure and maintain these coverages separately.

13.1.6.2 Contractor warrants that any retroactive date applicable to coverage under the policy shall predate the effective date of the Contract and that continuous coverage will be maintained or an extended reporting or discovery period will be exercised for a period of three (3) years, beginning from the time that the Work under the Contract is completed.

13.1.6.3 If Contractor is responsible for removing any pollutants from a site, then Contractor shall ensure that Any Auto, including owned, non-owned, and hired, is included within the above policies and at the required limits, to cover its automobile exposure from transporting the pollutants from the site to an approved disposal site. This coverage shall include the Motor Carrier Act Endorsement, MCS 90.

13.1.7 Proof of Insurance and Other Requirements: Endorsements and Certificates

13.1.7.1 Contractor shall not commence Work nor shall it allow any Subcontractor to commence Work under this Contract, until Contractor and its Subcontractor(s) have procured all required insurance and Contractor has delivered in duplicate to the District complete endorsements (or entire insurance policies) and certificates indicating the required coverages have been obtained, and the District has approved these documents.

13.1.7.2 Endorsements, certificates, and insurance policies shall include the following:

13.1.7.2.1 A clause stating the following, or other language acceptable to the District:

"This policy shall not be canceled until written notice to District, Architect, and Construction Manager stating date of the cancellation by the insurance carrier. Date of cancellation may not be less than thirty (30) days after date of mailing notice."

13.1.7.2.2 Language stating in particular those insured, extent of insurance, location and operation to which insurance applies, expiration date, to whom cancellation and reduction notice will be sent, and length of notice period.

13.1.7.2.3 All endorsements, certificates and insurance policies shall state that District, its trustees, employees and agents, the State of California, Construction Manager(s), Project Manager(s), Inspector(s) and Architect(s) are named additional insureds under all policies except Workers' Compensation Insurance and Employers' Liability Insurance.

13.1.7.2.4 All endorsements shall waive any right to subrogation against any of the named additional insureds.

13.1.7.2.5 Contractor's and Subcontractors' insurance policy(s) shall be primary and non-contributory to any insurance or self-insurance maintained by District, its trustees, employees and/or agents, the State of California, Construction Manager(s), Project Manager(s), Inspector(s), and/or Architect(s).

13.1.7.2.6 Contractor's insurance limit shall apply separately to each insured against whom a claim is made or suit is brought.

13.1.7.3 No policy shall be amended, canceled or modified, and the coverage amounts shall not be reduced, until Contractor or Contractor's broker has provided written notice to District, Architect(s), and Construction Manager(s) stating date of the amendment, modification, cancellation or reduction, and a description of the change. Date of amendment, modification, cancellation or reduction may not be less than thirty (30) days after date of mailing notice.

13.1.7.4 Insurance written on a "claims made" basis shall be retroactive to a date that coincides with or precedes Contractor's commencement of Work, including subsequent policies purchased as renewals or replacements. Said policy is to be renewed by the Contractor and all Subcontractors for a period of five (5) years following completion of the Work or termination of this Agreement. Such insurance must have the same coverage and limits as the policy that was in effect during the term of this Agreement, and will cover the Contractor and all Subcontractors for all claims made.

13.1.7.5 Unless otherwise stated in the Special Conditions, all of Contractor’s insurance shall be with insurance companies with an A.M. Best rating of no less than **A: VII**.

13.1.7.6 The insurance requirements set forth herein shall in no way limit the Contractor’s liability arising out of or relating to the performance of the Work or related activities.

13.1.7.7 Failure of Contractor and/or its Subcontractor(s) to comply with the insurance requirements herein shall be deemed a material breach of the Contract.

13.1.8 Insurance Policy Limits

13.1.8.1 Unless different limits are indicated in the Special Conditions, the limits of insurance shall not be less than the following amounts:

Commercial General Liability	Product Liability and Completed Operations, Fire Damage Liability – Split Limit	\$2,000,000 per occurrence; \$4,000,000 aggregate
Automobile Liability – Any Auto	Combined Single Limit	\$1,000,000
Workers’ Compensation		Statutory limits pursuant to State law
Employers’ Liability		\$1,000,000
Builder’s Risk (Course of Construction)		Issued for the value and scope of Work indicated herein.
Pollution Liability		\$1,000,000 per claim; \$2,000,000 aggregate

13.1.8.2 If Contractor normally carries insurance in an amount greater than the minimum amounts required by District, that greater amount shall become the minimum required amount of insurance for purposes of the Contract. Therefore, Contractor hereby acknowledges and agrees that all insurance carried by it shall be deemed liability coverage for all actions it performs in connection with the Contract.

13.2 Contract Security - Bonds

13.2.1 Contractor shall furnish two surety bonds issued by a California admitted surety insurer as follows:

13.2.1.1 Performance Bond: A bond in an amount at least equal to one hundred percent (100%) of Contract Price as security for faithful performance of this Contract.

13.2.1.2 Payment Bond: A bond in an amount at least equal to one hundred percent (100%) of the Contract Price as security for payment of persons performing labor and/or furnishing materials in connection with this Contract.

13.2.2 Cost of bonds shall be included in the Bid and Contract Price.

13.2.3 All bonds related to this Project shall be in the forms set forth in these Contract Documents and shall comply with all requirements of the Contract Documents, including, without limitation, the bond forms.

14. WARRANTY/GUARANTEE/INDEMNITY

14.1 Warranty/Guarantee

14.1.1 The Contractor shall obtain and preserve for the benefit of the District, manufacturer's warranties on materials, fixtures, and equipment incorporated into the Work.

14.1.2 In addition to guarantees required elsewhere, Contractor shall, and hereby does guarantee and warrant all Work furnished on the job against all defects for a period of **TWO (2)** years after the later of the following dates, unless a longer period is provided for in the Contract Documents:

14.1.2.1 The acceptance by the District's governing board of the Work, subject to these General Conditions, or

14.1.2.2 The date that commissioning for the Project, if any, was completed.

At the District's sole option, Contractor shall repair or replace any and all of that Work, together with any other Work that may be displaced in so doing, that may prove defective in workmanship and/or materials within a **TWO (2)** year period from date of completion as defined above, unless a longer period is provided for in the Contract Documents, without expense whatsoever to District. In the event of failure of Contractor and/or Surety to commence and pursue with diligence said replacements or repairs within ten (10) days after being notified in writing, Contractor and Surety hereby acknowledge and agree that District is authorized to proceed to have defects repaired and made good at expense of Contractor and/or Surety who hereby agree to pay costs and charges therefore immediately on demand.

14.1.3 If, in the opinion of District, defective work creates a dangerous condition or requires immediate correction or attention to prevent further loss to District or to prevent interruption of District operations, District will attempt to give the notice required above. If Contractor or Surety cannot be contacted or neither complies with District's request for correction within a reasonable time as determined by District, District may, notwithstanding the above provision, proceed to make any and all corrections and/or provide attentions the District believes are necessary. The costs

of correction or attention shall be charged against Contractor and Surety of the guarantees provided in this Article or elsewhere in this Contract.

14.1.4 The above provisions do not in any way limit the guarantees on any items for which a longer guarantee is specified or on any items for which a manufacturer gives a guarantee for a longer period. Contractor shall furnish to District all appropriate guarantee or warranty certificates as indicated in the Specifications or upon request by District.

14.1.5 Nothing herein shall limit any other rights or remedies available to District.

14.2 Indemnity and Defense

14.2.1 To the furthest extent permitted by California law, the Contractor shall indemnify, keep and hold harmless the District, the Architect(s), and the Construction Manager(s), their respective consultants, separate contractors, board members, officers, representatives, agents, and employees, in both individual and official capacities ("Indemnitees"), against all suits, claims, injury, damages, losses, and expenses ("Claims"), including but not limited to attorney's fees, caused by, arising out of, resulting from, or incidental to, in whole or in part, the performance of the Work under this Contract by the Contractor, its Subcontractors, vendors, or suppliers. However, the Contractor's indemnification and hold harmless obligation shall be reduced by the proportion of the Indemnitees' and/or Architect's liability to the extent the Claim(s) is/are caused by the sole negligence, active negligence, or willful misconduct of the Indemnitees, and/or defects in design furnished by the Architect, as found by a court or arbitrator of competent jurisdiction. This indemnification and hold harmless obligation of the Contractor shall not be construed to negate, abridge, or otherwise reduce any right or obligation of indemnity that would otherwise exist or arise as to Indemnitee or other person described herein. This indemnification and hold harmless obligation includes, but is not limited to, any failure or alleged failure by Contractor to comply with any provision of law, any failure or alleged failure to timely and properly fulfill all of its obligations under the Contract Documents in strict accordance with their terms, and without limitation, any failure or alleged failure of Contractor's obligations regarding any stop payment notice actions or liens, including Civil Wage and Penalty Assessments and/or Orders by the DIR.

14.2.2 To the furthest extent permitted by California law, Contractor shall also defend Indemnitees, at its own expense, including but not limited to attorneys' fees and costs, against all Claims caused by, arising out of, resulting from, or incidental to, in whole or in part, the performance of the Work under this Contract by the Contractor, its Subcontractors, vendors, or suppliers. However, without impacting Contractor's obligation to provide an immediate and ongoing defense of Indemnitees, the Contractor's defense obligation shall be retroactively reduced by the proportion of the Indemnitees' and/or Architect's liability to the extent caused by the sole negligence, active negligence, or willful misconduct of the Indemnitees, and/or defects in design furnished by the Architect, as found by a court or arbitrator of competent jurisdiction. The District shall have the right to accept or reject any legal representation that Contractor proposes to defend the Indemnitees. If any Indemnitee provides its own defense due to failure to timely respond to tender of defense, rejection of tender of defense, or conflict of interest of proposed counsel, Contractor shall reimburse such Indemnitee for any expenditures. Contractor's

defense obligation shall not be construed to negate, abridge, or otherwise reduce any right or obligation of defense that would otherwise exist as to any Indemnitee or other person described herein. Contractor's defense obligation includes, but is not limited to, any failure or alleged failure by Contractor to comply with any provision of law, any failure or alleged failure to timely and properly fulfill all of its obligations under the Contract Documents in strict accordance with their terms, and without limitation, any failure or alleged failure of Contractor's obligations regarding any stop payment notice actions or liens, including Civil Wage and Penalty Assessments and/or Orders by the DIR. The Contractor shall give prompt notice to the District in the event of any Claim(s).

14.2.3 Without limitation of the provisions herein, if the Contractor's obligation to indemnify and hold harmless the Indemnitees or its obligation to defend Indemnitees as provided herein shall be determined to be void or unenforceable, in whole or in part, it is the intention of the parties that these circumstances shall not otherwise affect the validity or enforceability of the Contractor's agreement to indemnify, defend, and hold harmless the rest of the Indemnitees, as provided herein. Further, the Contractor shall be and remain fully liable on its agreements and obligations herein to the fullest extent permitted by law.

14.2.4 Pursuant to Public Contract Code section 9201, the District shall provide timely notification to Contractor of the receipt of any third-party claim relating to this Contract. The District shall be entitled to recover its reasonable costs incurred in providing said notification.

14.2.5 In any and all claims against any of the Indemnitees by any employee of the Contractor, any Subcontractor, anyone directly or indirectly employed by any of them or anyone for whose acts any of them may be liable, the Contractor's indemnification obligation herein shall not be limited in any way by any limitation on the amount or type of damages, compensation, or benefits payable by or for the Contractor or any Subcontractor under workers' compensation acts, disability benefit acts, or other employee benefit acts.

14.2.6 The District may retain so much of the moneys due the Contractor as shall be considered necessary, until disposition of any such Claims or until the District, Architect(s) and Construction Manager(s) have received written agreement from the Contractor that they will unconditionally defend the District, Architect(s) and Construction Manager(s), their respective officers, agents and employees, and pay any damages due by reason of settlement or judgment.

14.2.7 The Contractor's defense and indemnification obligations hereunder shall survive the completion of Work, the warranty/guarantee period, and the termination of the Contract.

15. TIME

15.1 Notice to Proceed

15.1.1 District may issue a Notice to Proceed within ninety (90) days from the date of the Notice of Award. Once Contractor has received the Notice to Proceed, Contractor shall complete the Work within the period of time indicated in the Contract Documents.

15.1.2 In the event that the District desires to postpone issuing the Notice to Proceed beyond ninety (90) days from the date of the Notice of Award, it is expressly understood that with reasonable notice to the Contractor, the District may postpone issuing the Notice to Proceed. It is further expressly understood by Contractor that Contractor shall not be entitled to any claim of additional compensation as a result of the postponement of the issuance of the Notice to Proceed.

15.1.3 If the Contractor believes that a postponement of issuance of the Notice to Proceed will cause a hardship to Contractor, Contractor may terminate the Contract. Contractor's termination due to a postponement shall be by written notice to District within ten (10) days after receipt by Contractor of District's notice of postponement. It is further understood by Contractor that in the event that Contractor terminates the Contract as a result of postponement by the District, the District shall only be obligated to pay Contractor for the Work that Contractor had performed at the time of notification of postponement. Should Contractor terminate the Contract as a result of a notice of postponement, District shall have the authority to award the Contract to the next lowest responsive responsible bidder.

15.2 Computation of Time / Adverse Weather

15.2.1 The Contractor will only be allowed a time extension for Adverse Weather conditions if requested by Contractor in compliance with the time extension request procedures and only if all of the following conditions are met:

15.2.1.1 The weather conditions constitute Adverse Weather, as defined herein and further specified in the Special Conditions;

15.2.1.2 Contractor can verify that the Adverse Weather caused delays in excess of five (5) hours of the indicated labor required to complete the scheduled tasks of Work on the day affected by the Adverse Weather;

15.2.1.3 The Contractor's crew is dismissed as a result of the Adverse Weather;

15.2.1.4 Said delay adversely affects the critical path in the Construction Schedule; and

15.2.1.5 Exceeds sixty-three (63) days of delay per year.

15.2.2 If the aforementioned conditions are met, a non-compensable day-for-day extension will only be allowed for those days in excess of those indicated in the Special Conditions.

15.2.3 The Contractor shall work seven (7) days per week, if necessary, irrespective of inclement weather, to maintain access and the Construction Schedule, and to protect the Work under construction from the effects of Adverse Weather, all at no further cost to the District.

15.2.4 The Contract Time has been determined with consideration given to the average climate weather conditions prevailing in the County in which the Project is located.

15.3 Hours of Work

15.3.1 Sufficient Forces

Contractor and Subcontractors shall continuously furnish sufficient and competent work forces with the required levels of familiarity with the Project and skill, training and experience to ensure the prosecution of the Work in accordance with the Construction Schedule.

15.3.2 Performance During Working Hours

Work shall be performed during regular working hours as permitted by the appropriate governmental agency except that in the event of an emergency, or when required to complete the Work in accordance with job progress, Work may be performed outside of regular working hours with the advance written consent of the District and approval of any required governmental agencies.

15.3.3 No Work during Testing

Contractor shall, at no additional cost to the District and at the District's request, coordinate its Work to not disturb District students including, without limitation, not performing any Work when students at the Site are taking tests. The District or District's Representative will provide Contractor with a schedule of test dates concurrent with the District's issuance of the Notice to Proceed, or as soon as test dates are made available to the District.

15.4 Progress and Completion

15.4.1 Time of the Essence

Time limits stated in the Contract Documents are of the essence to the Contract. By executing the Agreement, the Contractor confirms that the Contract Time is a reasonable period for performing the Work.

15.4.2 No Commencement Without Insurance or Bonds

The Contractor shall not commence operations on the Project or elsewhere prior to the effective date of insurance and bonds. The date of commencement of the Work shall not be changed by the effective date of such insurance or bonds. If Contractor commences Work without insurance and bonds, all Work is performed at Contractor's peril and shall not be compensable until and unless Contractor secures bonds and insurance pursuant to the terms of the Contract Documents and subject to District claim for damages.

15.5 Schedule

Contractor shall provide to District, Construction Manager, and Architect a schedule in conformance with the Contract Documents and as required in the Notice to Proceed and the Contractor's Submittals and Schedules section of these General Conditions.

15.6 Expeditious Completion

The Contractor shall proceed expeditiously with adequate forces and shall achieve Completion within the Contract Time.

16. EXTENSIONS OF TIME – LIQUIDATED DAMAGES

16.1 Liquidated Damages

Contractor and District hereby agree that the exact amount of damages for failure to complete the Work within the time specified is extremely difficult or impossible to determine. If the Work is not completed within the time specified in the Contract Documents, it is understood that the District will suffer damage. It being impractical and unfeasible to determine the amount of actual damage, it is agreed the Contractor shall pay to District as fixed and liquidated damages, and not as a penalty, the amount set forth in the Agreement for each calendar day of delay in completion. Contractor and its Surety shall be liable for the amount thereof pursuant to Government Code section 53069.85.

16.2 Excusable Delay

16.2.1 Contractor shall not be charged for liquidated damages because of any delays in completion of Work which are not the fault of Contractor or its Subcontractors, including acts of God as defined in Public Contract Code section 7105, acts of enemy, epidemics, and quarantine restrictions. Contractor shall, within five (5) calendar days of beginning of any delay, notify District in writing of causes of delay including documentation and facts explaining the delay and the direct correlation between the cause and effect. District shall review the facts and extent of any delay and shall grant extension(s) of time for completing Work when, in its judgment, the findings of fact justify an extension. Extension(s) of time shall apply only to that portion of Work affected by delay, and shall not apply to other portions of Work not so affected. An extension of time may only be granted if Contractor has timely submitted the Construction Schedule as required herein.

16.2.2 Contractor shall notify the District pursuant to the claims provisions in these General Conditions of any anticipated delay and its cause. Following submission of a claim, the District may determine whether the delay is to be considered avoidable or unavoidable, how long it continues, and to what extent the prosecution and completion of the Work might be delayed thereby.

16.2.3 In the event the Contractor requests an extension of Contract Time for unavoidable delay, such request shall be submitted in accordance with the provisions in the Contract Documents governing changes in Work. When requesting time, requests must be submitted with full justification and documentation. If the Contractor fails to submit justification, it waives its right to a time extension at a later date. Such justification must be based on the official Construction Schedule as updated at the time of occurrence of the delay or execution of Work related to any changes to the Scope of Work. Any claim for delay must include the following information as support, without limitation:

16.2.3.1 The duration of the activity relating to the changes in the Work and the resources (manpower, equipment, material, etc.) required to perform the activities within the stated duration.

16.2.3.2 Specific logical ties to the Contract Schedule for the proposed changes and/or delay showing the activity/activities in the Construction Schedule that are affected by the change and/or delay. In particular, Contractor must show an actual impact to the schedule, after making a good faith effort to mitigate the delay by rescheduling the work, by providing an analysis of the schedule ("Time Impact Analysis"). Such Time Impact Analysis shall describe in detail the cause and effect of the delay and the impact on the critical dates in the Project schedule. (A portion of any delay of seven (7) days or more must be provided.)

16.2.3.3 A recovery schedule must be submitted within twenty (20) calendar days of written notification to the District of causes of delay.

16.3 No Additional Compensation for Delays Within Contractor's Control

16.3.1 Contractor is aware that governmental agencies, including, without limitation, the Division of the State Architect, the Department of General Services, gas companies, electrical utility companies, water districts, and other agencies may have to approve Contractor-prepared drawings or approve a proposed installation. Accordingly, Contractor shall include in its bid, time for possible review of its drawings and for reasonable delays and damages that may be caused by such agencies. Thus, Contractor is not entitled to make a claim for damages or delays arising from the review of Contractor's drawings.

16.3.2 Contractor shall only be entitled to compensation for delay when all of the following conditions are met:

16.3.2.1 The District is responsible for the delay;

16.3.2.2 The delay is unreasonable under the circumstances involved;

16.3.2.3 The delay was not within the contemplation of the District and Contractor;

16.3.2.4 The delay could not have been avoided or mitigated by Contractor's reasonable diligence; and

16.3.2.5 Contractor timely complies with the claims procedure of the Contract Documents.

16.4 Float or Slack in the Schedule

Float or slack is the amount of time between the early start date and the late start date, or the early finish date and the late finish date, of any of the activities in the schedule. Float or slack is not for the exclusive use of or benefit of either the District or the Contractor, but its use shall be determined solely by the District.

17. CHANGES IN THE WORK**17.1 No Changes Without Authorization**

17.1.1 There shall be no change whatsoever in the Drawings, Specifications, or in the Work without an executed Change Order or a written Construction Change Directive authorized by the District as herein provided. District shall not be liable for the cost of any extra work or any substitutions, changes, additions, omissions, or deviations from the Drawings and Specifications unless the District's governing board has authorized the same and the cost thereof has been approved in writing by Change Order or Construction Change Directive in advance of the changed Work being performed. No extension of time for performance of the Work shall be allowed hereunder unless claim for such extension is made at the time changes in the Work are ordered, and such time duly adjusted and approved in writing in the Change Order or Construction Change Directive. Contractor shall be responsible for any costs incurred by the District for professional services and DSA fees and/or delay to the Project Schedule, if any, for DSA to review any request for changes to the DSA approved plans and specifications for the convenience of the Contractor and/or to accommodate the Contractor's means and methods. The provisions of the Contract Documents shall apply to all such changes, additions, and omissions with the same effect as if originally embodied in the Drawings and Specifications.

17.1.2 Contractor shall perform immediately all work that has been authorized by a fully executed Change Order or Construction Change Directive. Contractor shall be fully responsible for any and all delays and/or expenses caused by Contractor's failure to expeditiously perform this Work.

17.1.3 Should any Change Order result in an increase in the Contract Price or extend the Contract Time, the cost of or length of extension in that Change Order shall be agreed to, in writing, by the District in advance of the Work by Contractor, and shall be subject to the monetary limitations set forth in Public Contract Code section 20118.4. In the event that Contractor proceeds with any change in Work without a Change Order executed by the District or Construction Change Directive, Contractor waives any claim of additional compensation or time for that additional work. Under no circumstances shall Contractor be entitled to any claim of additional compensation or time not expressly requested by Contractor in a Proposed Change Order or approved by District in an executed Change Order.

17.1.4 A Change Order or Construction Change Directive will become effective when approved by the Board, notwithstanding that Contractor has not signed it. A Change Order or Construction Change Directive will become effective without Contractor's signature provided District indicates it as a "Unilateral Change Order". Any dispute as to the adjustment in the Contract Price or Contract Time, if any, of the Unilateral Change Order shall be resolved pursuant to the Payment and Claims and Disputes provisions herein.

17.1.5 Contractor understands, acknowledges, and agrees that the reason for District authorization is so that District may have an opportunity to analyze the Work and decide whether the District shall proceed with the Change Order or alter the Project so that a change in Work becomes unnecessary.

17.2 Architect Authority

The Architect will have authority to order minor changes in the Work not involving any adjustment in the Contract Price, or an extension of the Contract Time, or a change that is inconsistent with the intent of the Contract Documents. These changes shall be effected by written Change Order, Construction Change Directive, by Architect's response(s) to RFI(s), or by Architect's Supplemental Instructions ("ASI").

17.3 Change Orders

17.3.1 A Change Order is a written instrument prepared and issued by the District and/or the Architect and signed by the District (as authorized by the District's Governing Board), the Contractor, the Architect, and approved by the Project Inspector (if necessary) and DSA (if necessary), stating their agreement regarding all of the following:

17.3.1.1 A description of a change in the Work;

17.3.1.2 The amount of the adjustment in the Contract Price, if any; and

17.3.1.3 The extent of the adjustment in the Contract Time, if any.

17.4 Construction Change Directives

17.4.1 A Construction Change Directive is a written order prepared and issued by the District, the Construction Manager, and/or the Architect and signed by the District and the Architect, directing a change in the Work. The District may, as provided by law, by Construction Change Directive and without invalidating the Contract, order changes in the Work consisting of additions, deletions, or other revisions. The adjustment to the Contract Price or Time, if any, is subject to the provisions of this section regarding Changes in the Work. If all or a portion of the Project is being funded by funds requiring approval by the State Allocation Board ("SAB"), these revisions may be subject to compensation once approval of same is received and funded by the SAB, and funds are released by the Office of Public School Construction ("OPSC"). Any dispute as to the adjustment in the Contract Price, if any, of the Construction Change Directive or timing of payment shall be resolved pursuant to the Payment and Claims and Disputes provisions herein.

17.4.2 The District may issue a Construction Change Directive in the absence of agreement on the terms of a Change Order.

17.5 Force Account Directives

17.5.1 When work, for which a definite price has not been agreed upon in advance, is to be paid for on a force account basis, all direct costs necessarily incurred and paid by the Contractor for labor, material, and equipment used in the performance of that Work, shall be subject to the approval of the District and compensation will be determined as set forth herein.

17.5.2 The District will issue a Force Account Directive to proceed with the Work on a force account basis, and a not-to-exceed budget will be established by the District.

17.5.3 All requirements regarding direct cost for labor, labor burden, material, equipment, and markups on direct costs for overhead and profit described in this section shall apply to Force Account Directives. However, the District will only pay for actual costs verified in the field by the District or its authorized representative(s) on a daily basis.

17.5.4 The Contractor shall be responsible for all cost related to the administration of Force Account Directive. The markup for overhead and profit for Contractor modifications shall be full compensation to the Contractor to administer Force Account Directive, and Contractor shall not be entitled to separately recover additional amounts for overhead and/or profit.

17.5.5 The Contractor shall notify the District or its authorized representative(s) at least twenty-four (24) hours prior to proceeding with any of the force account work. Furthermore, the Contractor shall notify the District when it has consumed eighty percent (80%) of the budget, and shall not exceed the budget unless specifically authorized in writing by the District. The Contractor will not be compensated for force account work in the event that the Contractor fails to timely notify the District regarding the commencement of force account work, or exceeding the force account budget.

17.5.6 The Contractor shall diligently proceed with the work, and on a daily basis, submit a daily force account report on a form supplied by the District no later than 5:00 p.m. each day. The report shall contain a detailed itemization of the daily labor, material, and equipment used on the force account work only. The names of the individuals performing the force account work shall be included on the daily force account reports. The type and model of equipment shall be identified and listed. The District will review the information contained in the reports, and sign the reports no later than the next work day, and return a copy of the report to the Contractor for their records. The District will not sign, nor will the Contractor receive compensation for work the District cannot verify. The Contractor will provide a weekly force account summary indicating the status of each Force Account Directive in terms of percent complete of the not-to-exceed budget and the estimated percent complete of the work.

17.5.7 In the event the Contractor and the District reach a written agreement on a set cost for the work while the work is proceeding based on a Force Account Directive, the Contractor's signed daily force account reports shall be discontinued and all previously signed reports shall be invalid.

17.6 Price Request

17.6.1 Definition of Price Request

A Price Request ("PR") is a written request prepared by the Architect requesting the Contractor to submit to the District and the Architect an estimate of the effect of a proposed change in the Work on the Contract Price and the Contract Time.

17.6.2 Scope of Price Request

A Price Request shall contain adequate information, including any necessary Drawings and Specifications, to enable Contractor to provide the cost breakdowns

required herein. The Contractor shall not be entitled to any additional compensation for preparing a response to a Price Request, whether ultimately accepted or not.

17.7 Proposed Change Order

17.7.1 Definition of Proposed Change Order

A Proposed Change Order ("PCO") is a written request prepared by the Contractor requesting that the District and the Architect issue a Change Order based upon a proposed change to the Work.

17.7.2 Changes in Contract Price

A PCO shall include breakdowns and backup documentation pursuant to the revisions herein and sufficient, in the District's judgment, to validate any change in Contract Price. In no case shall Contractor or any of its Subcontractors be permitted to reserve rights for additional compensation for Change Order Work.

17.7.3 Changes in Time

A PCO shall also include any changes in time required to complete the Project. Any additional time requested shall not be the number of days to make the proposed change, but must be based upon the impact to the Construction Schedule as defined in the Contract Documents. The Contractor shall justify the proposed change in time by submittal of a schedule analysis that accurately shows the impact of the change on the critical path of the Construction Schedule ("Time Impact Analysis"). If Contractor fails to request a time extension in a PCO, including the Time Impact Analysis then the Contractor is thereafter precluded from requesting, and waives any right to request, additional time and/or claim a delay. In no case shall Contractor or any of its Subcontractors be permitted to reserve rights for additional time for Change Order Work. A PCO that leaves the amount of time requested blank, or states that such time requested is "to be determined", is not permitted and shall also constitute a waiver of any right to request additional time and/or claim a delay.

17.7.4 Unknown and/or Unforeseen Conditions

If there is an Allowance, then Contractor must submit a Request for Allowance Expenditure Directive, including supporting documentation as described below, to receive authorization for the release of funds from the Allowance. Allowance Expenditure Directives shall be based on Contractor's costs, without overhead and profit, for products, delivery, installation, labor, insurance, payroll, taxes, bonding and equipment rental will be included in Allowance Expenditure Directive authorizing expenditure of funds from this Allowance. No overhead and profit shall be added to the Allowance Expenditure Directive. If cost of the unforeseen condition(s) exceed the Allowance, Contractor must submit a PCO for amounts in excess of the Allowance requesting an increase in Contract Price and/or Contract Time that is based at least partially on Contractor's assertion that Contractor has encountered unknown and/or unforeseen condition(s) on the Project, then Contractor shall base the PCO on provable information that, beyond a reasonable doubt and to the District's satisfaction, demonstrates that the unknown and/or unforeseen condition(s) were actually unknown and/or unforeseen and that the condition(s) were reasonably unknown and/or unforeseen. If not, the District shall deny the PCO as

unsubstantiated, and the Contractor shall complete the Project without any increase in Contract Price and/or Contract Time based on that PCO.

17.7.5 Time to Submit Proposed Change Order

Contractor shall submit its PCO within five (5) working days of the date Contractor discovers, or reasonably should have discovered, the circumstances giving rise to the PCO, unless additional time to submit a PCO is granted in writing by the District. Time is of the essence in Contractor's submission of PCOs so that the District can promptly investigate the basis for the PCO. Accordingly, if Contractor fails to submit its PCO within this timeframe, Contractor waives, releases, and discharges any right to assert or claim any entitlement to an adjustment of the Contract Price and/or Time based on circumstances giving rise to the PCO

17.7.6 Proposed Change Order Certification

In submitting a PCO, Contractor certifies and affirms that the cost and/or time request is submitted in good faith, that the cost and/or time request is accurate and in accordance with the provisions of the Contract Documents, and the Contractor submits the cost and/or request for extension of time recognizing the significant civil penalties and treble damages which follow from making a false claim or presenting a false claim under Government Code section 12650 et seq.

It is expressly understood that the value of the extra Work or changes expressly includes any and all of the Contractor's costs and expenses, direct and indirect, resulting from additional time required on the Project or resulting from delay to the Project including, without limitation, cumulative impacts. Contractor is not entitled to separately recover amounts for overhead or other indirect costs. Any costs, expenses, damages, or time extensions not included are deemed waived.

[THE REMAINDER OF THIS PAGE LEFT BLANK INTENTIONALLY]

17.8 Format for Proposed Change Order

17.8.1 The following format shall be used as applicable by the District and the Contractor (e.g. Change Orders, PCO’s) to communicate proposed additions and deductions to the Contract, supported by attached documentation. Any spaces left blank will be deemed no change to cost or time.

	<u>WORK PERFORMED OTHER THAN BY CONTRACTOR</u>	<u>ADD</u>	<u>DEDUCT</u>
(a)	<u>Material</u> (attach suppliers’ invoice or itemized quantity and unit cost plus sales tax)		
(b)	<u>Add Labor</u> (attach itemized hours and rates, fully encumbered)		
(c)	<u>Add Equipment</u> (attach suppliers’ invoice)		
(d)	<u>Subtotal</u>		
(e)	<u>Add overhead and profit for any and all tiers of Subcontractor</u> , the total not to exceed ten percent (10%) of Item (d)		
(f)	<u>Subtotal</u>		
(g)	<u>Add Overhead and Profit for Contractor</u> , not to exceed five percent (5%) of Item (f)		
(h)	<u>Subtotal</u>		
(i)	<u>Add Bond and Insurance</u> , not to exceed one and a half percent (1.5%) of Item (h)		
(j)	<u>TOTAL</u>		
(k)	<u>Time</u> (zero unless indicated; “TBD” not permitted)	_____	Calendar Days

	<u>WORK PERFORMED BY CONTRACTOR</u>	<u>ADD</u>	<u>DEDUCT</u>
(l)	<u>Material</u> (attach itemized quantity and unit cost plus sales tax)		
(m)	<u>Add Labor</u> (attach itemized hours and rates, fully encumbered)		
(n)	<u>Add Equipment</u> (attach suppliers’ invoice)		
(o)	<u>Subtotal</u>		
(p)	<u>Add Overhead and Profit for Contractor</u> , not to exceed fifteen percent (15%) of Item (d)		
(q)	<u>Subtotal</u>		
(r)	<u>Add Bond and Insurance</u> , not to exceed one and a half percent (1.5%) of Item (f)		
(s)	<u>TOTAL</u>		
(t)	<u>Time</u> (zero unless indicated; “TBD” not permitted)	_____	Calendar Days

17.8.2 Labor. Contractor shall be compensated for the costs of labor actually and directly utilized in the performance of the Work. Such labor costs shall be the actual cost, not to exceed prevailing wage rates in the locality of the Site and shall be in the labor classification(s) necessary for the performance of the Work, plus employer payments of payroll taxes and insurance, health and welfare, pension,

vacation, apprenticeship funds, and other direct costs resulting from Federal, State, or local laws. Labor costs shall exclude costs incurred by the Contractor in preparing estimate(s) of the costs of the change in the Work, in the maintenance of records relating to the costs of the change in the Work, coordination and assembly of materials and information relating to the change in the Work or performance thereof, or the supervision and other overhead and general conditions costs associated with the change in the Work or performance thereof, including but not limited to the cost for the job superintendent.

17.8.3 Materials. Contractor shall be compensated for the costs of materials necessarily and actually used or consumed in connection with the performance of the change in the Work. Costs of materials may include reasonable costs of transportation from a source closest to the Site of the Work and delivery to the Site. If discounts by material suppliers are available for materials necessarily used in the performance of the change in the Work, they shall be credited to the District. If materials necessarily used in the performance of the change in the Work are obtained from a supplier or source owned in whole or in part by the Contractor, compensation therefor shall not exceed the current wholesale price for such materials. If, in the reasonable opinion of the District, the costs asserted by the Contractor for materials in connection with any change in the Work are excessive, or if the Contractor fails to provide satisfactory evidence of the actual costs of such materials from its supplier or vendor of the same, the costs of such materials and the District's obligation to pay for the same shall be limited to the then lowest wholesale price at which similar materials are available in the quantities required to perform the change in the Work. The District may elect to furnish materials for the change in the Work, in which event the Contractor shall not be compensated for the costs of furnishing such materials or any mark-up thereon.

17.8.4 Equipment. As a precondition for the District's duty to pay for Equipment rental or loading and transportation, Contractor shall provide satisfactory evidence of the actual costs of Equipment from the supplier, vendor or rental agency of same. Contractor shall be compensated for the actual cost of the necessary and direct use of Equipment in the performance of the change in the Work. Use of such Equipment in the performance of the change in the Work shall be compensated in increments of fifteen (15) minutes. Rental time for Equipment moved by its own power shall include time required to move such Equipment to the site of the Work from the nearest available rental source of the same. If Equipment is not moved to the Site by its own power, Contractor will be compensated for the loading and transportation costs in lieu of rental time. The foregoing notwithstanding, neither moving time or loading and transportation time shall be allowed if the Equipment is used for performance of any portion of the Work other than the change in the Work. Unless prior approval in writing is obtained by the Contractor from the Architect, the Project Inspector and the District, no costs or compensation shall be allowed for time while Construction Equipment is inoperative, idle or on standby, for any reason. Contractor shall not be entitled to an allowance or any other compensation for Equipment or tools used in the performance of change in the Work where such Equipment or tools have a replacement value of \$500.00 or less. Equipment costs claimed by the Contractor in connection with the performance of any Work shall not exceed rental rates established by distributors or construction equipment rental agencies in the locality of the Site; any costs asserted which exceed such rental rates shall not be allowed or paid. Unless otherwise specifically approved in writing by the Architect, the Project Inspector and the District, the allowable rate for the use of

Equipment in connection with the Work shall constitute full compensation to the Contractor for the cost of rental, fuel, power, oil, lubrication, supplies, necessary attachments, repairs or maintenance of any kind, depreciation, storage, insurance, labor (exclusive of labor costs of the Equipment operator), and any and all other costs incurred by the Contractor incidental to the use of such Equipment.

17.8.5 Overhead and Profit. The phrase "Overhead and Profit" shall include field and office supervisors and assistants, watchperson, use of small tools, consumable, insurance other than construction bonds and insurance required herein, general conditions costs and home office expenses.

17.9 Change Order Certification

17.9.1 All Change Orders and PCOs include the following certification by the Contractor, either in the form specifically or incorporated by this reference:

17.9.1.1 The undersigned Contractor approves the foregoing as to the changes, if any, to the Contract Price specified for each item, and as to the extension of time allowed, if any, for completion of the entire Work as stated herein, and agrees to furnish all labor, materials, and service, and perform all work necessary to complete any additional work specified for the consideration stated herein. Submission of sums which have no basis in fact or which Contractor knows are false are at the sole risk of Contractor and may be a violation of the False Claims Act set forth under Government Code section 12650 et seq. It is understood that the changes herein to the Contract shall only be effective when approved by the governing board of the District.

17.9.1.2 It is expressly understood that the value of the extra Work or changes expressly includes any and all of the Contractor's costs and expenses, direct and indirect, resulting from additional time required on the Project or resulting from delay to the Project including, without limitation, cumulative impacts. Contractor is not entitled to separately recover amounts for overhead or other indirect costs. Any costs, expenses, damages, or time extensions not included are deemed waived.

17.9.2 Accord and Satisfaction: Contractor's execution of any Change Order shall constitute a full accord and satisfaction, and release, of all Contractor (and if applicable, Subcontractor) claims for additional time, money or other relief arising from or relating to the subject matter of the change including, without limitation, impacts of all types, cumulative impacts, inefficiency, overtime, delay and any other type of claim.

17.10 Determination of Change Order Cost

17.10.1 The amount of the increase or decrease in the Contract Price from a Change Order, if any, shall be determined in one or more of the following ways as applicable to a specific situation and at the District's discretion:

17.10.1.1 District acceptance of a PCO;

17.10.1.2 By unit prices contained in Contractor's original bid;

17.10.1.3 By agreement between District and Contractor.

17.11 Deductive Change Orders

All deductive Change Order(s) must be prepared pursuant to the provisions herein. Where a portion of the Work is deleted from the Contract, the reasonable value of the deducted work less the value of work performed shall be considered the appropriate deduction. The value submitted on the Schedule of Values shall be used to calculate the credit amount unless the bid documentation is being held in escrow as part of the Contract Documents. Unit Prices, if any, may be used in District's discretion in calculating reasonable value. If Contractor offers a proposed amount for a deductive Change Order(s), Contractor shall include a minimum of five percent (5%) total profit and overhead to be deducted with the amount of the work of the Change Order(s). If Subcontractor work is involved, Subcontractors shall also include a minimum of five percent (5%) profit and overhead to be deducted with the amount of its deducted work. Any deviation from this provision shall not be allowed.

17.12 Addition or Deletion of Alternate Bid Item(s)

If the Bid Form and Proposal includes proposal(s) for Alternate Bid Item(s), during Contractor's performance of the Work, the District may elect to add or delete any such Alternate Bid Item(s) if not included in the Contract at the time of award. If the District elects to add or delete Alternate Bid Item(s) after Contract award, the cost or credit for such Alternate Bid Item(s) shall be as set forth in the Bid Form and Proposal unless the parties agree to a different price and the Contract Time shall be adjusted by the number of days allocated in the Contract Documents. If days are not allocated in the Contract Documents, the Contract Time shall be equitably adjusted.

17.13 Discounts, Rebates, and Refunds

For purposes of determining the cost, if any, of any change, addition, or omission to the Work hereunder, all trade discounts, rebates, refunds, and all returns from the sale of surplus materials and equipment shall accrue and be credited to the Contractor, and the Contractor shall make provisions so that such discounts, rebates, refunds, and returns may be secured, and the amount thereof shall be allowed as a reduction of the Contractor's cost in determining the actual cost of construction for purposes of any change, addition, or omission in the Work as provided herein.

17.14 Accounting Records

With respect to portions of the Work performed by Change Orders and Construction Change Directives, the Contractor shall keep and maintain cost-accounting records satisfactory to the District, including, without limitation, Job Cost Reports as provided in these General Conditions, which shall be available to the District on the same terms as any other books and records the Contractor is required to maintain under the Contract Documents. Such records shall include without limitation hourly records for Labor and Equipment and itemized records of materials and Equipment used that day in connection with the performance of any Work. All records maintained hereunder shall be subject to inspection, review and/or reproduction by the District, the Architect or the Project Inspector upon request. In the event that the Contractor fails or refuses, for any reason, to maintain or make available for inspection, review and/or reproduction such

records, the District's reasonable good faith determination of the extent of adjustment to the Contract Price shall be final, conclusive, dispositive and binding upon Contractor.

17.15 Notice Required

If the Contractor desires to make a claim for an increase in the Contract Price, or any extension in the Contract Time for completion, it shall notify the District pursuant to the provisions herein, including the Article on Claims and Disputes. No claim shall be considered unless made in accordance with this subparagraph. Contractor shall proceed to execute the Work even though the adjustment may not have been agreed upon. Any change in the Contract Price or extension of the Contract Time resulting from such claim shall be authorized by a Change Order.

17.16 Applicability to Subcontractors

Any requirements under this Article shall be equally applicable to Change Orders or Construction Change Directives issued to Subcontractors by the Contractor to the extent as required by the Contract Documents.

17.17 Alteration to Change Order Language

Contractor shall not alter Change Orders or reserve time in Change Orders. Change Orders altered in violation of this provision, if in conflict with the terms set forth herein, shall be construed in accordance with the terms set forth herein. Contractor shall execute finalized Change Orders and proceed under the provisions herein with proper notice.

17.18 Failure of Contractor to Execute Change Order

Contractor shall be in default of the Contract if Contractor fails to execute a Change Order when the Contractor agrees with the addition and/or deletion of the Work in that Change Order.

[THE REMAINDER OF THIS PAGE LEFT BLANK INTENTIONALLY]

18. REQUEST FOR INFORMATION

18.1 Any Request for Information shall reference all applicable Contract Document(s), including Specification section(s), detail(s), page number(s), drawing number(s), and sheet number(s), etc. The Contractor shall make suggestions and interpretations of the issue raised by each Request for Information. A Request for Information cannot modify the Contract Price, Contract Time, or the Contract Documents. Upon request by the District, Contractor shall provide an electronic copy of the Request for Information in addition to the hard copy.

18.2 The Contractor shall be responsible for any costs incurred for professional services that District may deduct from any amounts owing to the Contractor, if a Request for Information requests an interpretation or decision of a matter where the information sought is equally available to the party making the request. District, at its sole discretion, shall deduct from and/or invoice Contractor for all the professional services arising herein.

19. PAYMENTS

19.1 Contract Price

The Contract Price is stated in the Agreement and, including authorized adjustments, is the total amount payable by the District to the Contractor for performance of the Work under the Contract Documents.

19.2 Applications for Progress Payments

19.2.1 Procedure for Applications for Progress Payments

19.2.1.1 Application for Progress Payment

19.2.1.1.1 Not before the fifth (5th) day of each calendar month during the progress of the Work, Contractor shall submit to the District and the Architect an itemized Application for Payment for operations completed in accordance with the Schedule of Values. Such application shall be notarized, if required, and supported by the following or each portion thereof unless waived by the District in writing:

19.2.1.1.1.1 Contractor shall submit a separate Application for Payment for each Increment (Increment 1 and Increment 2).

19.2.1.1.1.2 Contractor is required to upload Applications for Payment into a designated Project Management Information System (PMIS) as required by the District.

19.2.1.1.1.3 The amount paid to the date of the Application to the Contractor, to all its Subcontractors, and all others furnishing labor, material, or equipment for its Contract;

19.2.1.1.1.4 The amount being requested under the Application for Payment by the Contractor on its own behalf and separately stating the

amount requested on behalf of each of the Subcontractors and all others furnishing labor, material, and equipment under the Contract;

19.2.1.1.1.5 The balance that will be due to each of such entities after said payment is made;

19.2.1.1.1.6 A certification that the As-Builts and annotated Specifications are current;

19.2.1.1.1.7 Itemized breakdown of work done for the purpose of requesting partial payment;

19.2.1.1.1.8 An updated and acceptable construction schedule in conformance with the provisions herein;

19.2.1.1.1.9 The additions to and subtractions from the Contract Price and Contract Time;

19.2.1.1.1.10 A total of the retentions held;

19.2.1.1.1.11 Material invoices, evidence of equipment purchases, rentals, and other support and details of cost as the District may require from time to time;

19.2.1.1.1.12 The percentage of completion of the Contractor's Work by line item;

19.2.1.1.1.13 Schedule of Values updated from the preceding Application for Payment;

19.2.1.1.1.14 A duly completed and executed conditional waiver and release upon progress payment compliant with Civil Code section 8132 from the Contractor and each subcontractor of any tier and supplier to be paid from the current progress payment;

19.2.1.1.1.15 A duly completed and executed unconditional waiver and release upon progress payment compliant with Civil Code section 8134 from the Contractor and each subcontractor of any tier and supplier that was paid from the previous progress payment(s); and

19.2.1.1.1.16 A certification by the Contractor of the following:

The Contractor warrants title to all Work performed as of the date of this payment application has been completed in accordance with the Contract Documents for the Project. The Contractor further warrants that all amounts have been paid for work which previous Certificates for Payment were issued and payments received and all Work performed as of the date of this payment application is free and clear of liens, claims, security interests, or encumbrances in favor of the Contractor, Subcontractors, material and equipment suppliers, workers, or other persons or entities making a claim by reason of having provided labor, materials, and equipment relating to the Work, except those of which the District has been informed. Submission of sums which have no basis in fact or which Contractor knows are false are at the sole risk of Contractor and may be a violation of the False Claims Act set forth under Government Code section 12650 et seq.

19.2.1.1.1.17 The Contractor shall be subject to the False Claims Act set forth in Government Code section 12650 et seq. for information provided with any Application for Progress Payment.

19.2.1.1.1.18 All remaining certified payroll records ("CPR(s)") for each journeyman, apprentice, worker, or other employee employed by the Contractor and/or each Subcontractor in connection with the Work for the period of the Application for Payment. As indicated herein, the District shall not make any payment to Contractor until:

19.2.1.1.1.18.1 Contractor and/or its Subcontractor(s) provide electronic CPRs weekly for all weeks any journeyman, apprentice, worker or other employee was employed in connection with the Work directly to the DIR, or within ten (10) days of any request by the District or the DIR, and

19.2.1.1.1.18.2 Any delay in Contractor and/or its Subcontractor(s) providing CPRs in a timely manner may directly delay the Contractor's payment.

19.2.1.1.2 Applications received after June 20th will not be paid until the second week of July and applications received after December 12th will not be paid until the first week of January.

19.2.2 Prerequisites for Progress Payments

19.2.2.1 First Payment Request: The following items, if applicable, must be completed before the District will accept and/or process the Contractor's first payment request:

19.2.2.1.1 Installation of the Project sign;

19.2.2.1.2 Installation of field office;

19.2.2.1.3 Installation of temporary facilities and fencing;

- 19.2.2.1.4** Schedule of Values;
- 19.2.2.1.5** Contractor's Construction Schedule;
- 19.2.2.1.6** Schedule of unit prices, if applicable;
- 19.2.2.1.7** Submittal Schedule;
- 19.2.2.1.8** Receipt by Architect of all submittals due as of the date of the payment application;
- 19.2.2.1.9** Copies of necessary permits;
- 19.2.2.1.10** Copies of authorizations and licenses from governing authorities;
- 19.2.2.1.11** Initial progress report;
- 19.2.2.1.12** Surveyor qualifications;
- 19.2.2.1.13** Written acceptance of District's survey of rough grading, if applicable;
- 19.2.2.1.14** List of all Subcontractors, with names, license numbers, telephone numbers, and Scope of Work;
- 19.2.2.1.15** All bonds and insurance endorsements; and
- 19.2.2.1.16** Resumes of Contractor's project manager, and if applicable, job site secretary, record documents recorder, and job site superintendent.

19.2.2.2 Second Payment Request: The District will not process the second payment request until and unless all submittals and Shop Drawings have been accepted for review by the Architect.

19.2.2.3 No Waiver of Criteria: Any payments made to Contractor where criteria set forth herein have not been met shall not constitute a waiver of said criteria by District. Instead, such payment shall be construed as a good faith effort by District to resolve differences so Contractor may pay its Subcontractors and suppliers. Contractor agrees that failure to submit such items may constitute a breach of contract by Contractor and may subject Contractor to termination.

19.3 Progress Payments

19.3.1 District's Approval of Application for Payment

19.3.1.1 Upon receipt of an Application for Payment, The District shall act in accordance with both of the following:

19.3.1.1.1 Each Application for Payment shall be reviewed by the District as soon as practicable after receipt for the purpose of determining that the Application for Payment is a proper Application for Payment.

19.3.1.1.2 Any Application for Payment determined not to be a proper Application for Payment suitable for payment shall be returned to the Contractor as soon as practicable, but not later than seven (7) days, after receipt. An Application for Payment returned pursuant to this paragraph shall be accompanied by a document setting forth in writing the reasons why the Application for Payment is not proper. The number of days available to the District to make a payment without incurring interest pursuant to this section shall be reduced by the number of days by which the District exceeds this seven-day return requirement.

19.3.1.1.3 An Application for Payment shall be considered properly executed if funds are available for payment of the Application for Payment, and payment is not delayed due to an audit inquiry by the financial officer of the District.

19.3.1.2 The District's review of the Contractor's Application for Payment will be based on the District's and the Architect's observations at the Site and the data comprising the Application for Payment that the Work has progressed to the point indicated and that, to the best of the District's and the Architect's knowledge, information, and belief, the quality of the Work is in accordance with the Contract Documents. The foregoing representations are subject to:

19.3.1.2.1 Observation of the Work for general conformance with the Contract Documents,

19.3.1.2.2 Results of subsequent tests and inspections,

19.3.1.2.3 Minor deviations from the Contract Documents correctable prior to completion, and

19.3.1.2.4 Specific qualifications expressed by the Architect.

19.3.1.3 District's approval of the certified Application for Payment shall be based on Contractor complying with all requirements for a fully complete and valid certified Application for Payment.

19.3.2 Payments to Contractor

19.3.2.1 Within thirty (30) days after approval of the Application for Payment, Contractor shall be paid a sum equal to ninety-five percent (95%) of the value of the Work performed (as verified by Architect and Inspector and certified by Contractor) up to the last day of the previous month, less the aggregate of previous payments and amount to be withheld. The value of the Work completed shall be Contractor's best estimate. No inaccuracy or error in said estimate shall operate to release the Contractor, or any Surety upon any bond, from damages arising from such Work, or from the District's right to enforce each and every provision of this Contract, and the District shall have the right subsequently to correct any error made in any estimate for payment.

19.3.2.2 The Contractor shall not be entitled to have any payment requests processed, or be entitled to have any payment made for Work performed, so long

as any lawful or proper direction given by the District concerning the Work, or any portion thereof, remains incomplete.

19.3.2.3 If the District fails to make any progress payment within thirty (30) days after receipt of an undisputed and properly submitted Application for Payment from the Contractor, the District shall pay interest to the Contractor equivalent to the legal rate set forth in subdivision (a) of Section 685.010 of the Code of Civil Procedure.

19.3.3 No Waiver

No payment by District hereunder shall be interpreted so as to imply that District has inspected, approved, or accepted any part of the Work. Notwithstanding any payment, the District may enforce each and every provision of this Contract. The District may correct or require correction of any error subsequent to any payment.

19.4 Decisions to Withhold Payment

19.4.1 Reasons to Withhold Payment

The District may withhold payment in whole, or in part, to the extent reasonably necessary to protect the District if, in the District's opinion, the representations to the District required herein cannot be made. The District may withhold payment, in whole, or in part, to such extent as may be necessary to protect the District from loss because of, but not limited to any of the following:

19.4.1.1 Defective Work not remedied within **FORTY-EIGHT (48)** hours of written notice to Contractor.

19.4.1.2 Stop Payment Notices or other liens served upon the District as a result of the Contract. Contractor agrees that the District may withhold up to 125% of the amount claimed in the Stop Payment Notice to answer the claim and to provide for the District's reasonable cost of any litigation pursuant to the stop payment notice.

19.4.1.3 Liquidated damages assessed against the Contractor.

19.4.1.4 The cost of completion of the Contract if there exists a reasonable doubt that the Work can be completed for the unpaid balance of the Contract Price or by the completion date.

19.4.1.5 Damage to the District or other contractor(s).

19.4.1.6 Unsatisfactory prosecution of the Work by the Contractor.

19.4.1.7 Failure to store and properly secure materials.

19.4.1.8 Failure of the Contractor to submit, on a timely basis, proper, sufficient, and acceptable documentation required by the Contract Documents, including, without limitation, a Construction Schedule, Schedule of Submittals, Schedule of Values, Monthly Progress Schedules, Shop Drawings, Product Data

and samples, Proposed product lists, executed Change Orders, and/or verified reports.

19.4.1.9 Failure of the Contractor to maintain As-Builts.

19.4.1.10 Erroneous estimates by the Contractor of the value of the Work performed, or other false statements in an Application for Payment.

19.4.1.11 Unauthorized deviations from the Contract Documents.

19.4.1.12 Failure of the Contractor to prosecute the Work in a timely manner in compliance with the Construction Schedule, established progress schedules, and/or completion dates.

19.4.1.13 Failure to provide acceptable electronic certified payroll records, as required by the Labor Code, by these Contract Documents, or by written request; for each journeyman, apprentice, worker, or other employee employed by the Contractor and/or by each Subcontractor in connection with the Work for the period of the Application for Payment or if payroll records are delinquent or inadequate.

19.4.1.14 Failure to properly pay prevailing wages as required in Labor Code section 1720 et seq., failure to comply with any other Labor Code requirements, and/or failure to comply with labor compliance monitoring and enforcement by the DIR.

19.4.1.15 Allowing an unregistered subcontractor, as described in Labor Code section 1725.5, to engage in the performance of any work under this Contract.

19.4.1.16 Failure to comply with any applicable federal statutes and regulations regarding minimum wages, withholding, payrolls and basic records, apprentice and trainee employment requirements, equal employment opportunity requirements, Copeland Act requirements, Davis-Bacon Act and related requirements, Contract Work Hours and Safety Standards Act requirements, if applicable.

19.4.1.17 Failure to properly maintain or clean up the Site.

19.4.1.18 Failure to timely indemnify, defend, or hold harmless the District.

19.4.1.19 Any payments due to the District, including but not limited to payments for failed tests, utilities changes, or permits.

19.4.1.20 Failure to pay Subcontractor(s) or supplier(s) as required by law and by the Contract Documents.

19.4.1.21 Failure to pay any royalty, license or similar fees.

19.4.1.22 Contractor is otherwise in breach, default, or in substantial violation of any provision of this Contract.

19.4.1.23 Failure to perform any implementation and/or monitoring required by any SWPPP for the Project and/or the imposition of any penalties or fines therefore whether imposed on the District or Contractor.

19.4.2 Reallocation of Withheld Amounts

19.4.2.1 District may, in its discretion, apply any withheld amount to pay outstanding claims or obligations as defined herein. In so doing, District shall make such payments on behalf of Contractor. If any payment is so made by District, then that amount shall be considered a payment made under Contract by District to Contractor and District shall not be liable to Contractor for any payment made in good faith. These payments may be made without prior judicial determination of claim or obligation. District will render Contractor an accounting of funds disbursed on behalf of Contractor.

19.4.2.2 If Contractor defaults or neglects to carry out the Work in accordance with the Contract Documents or fails to perform any provision thereof, District may, after **FORTY-EIGHT (48)** hours' written notice to the Contractor and, without prejudice to any other remedy, make good such deficiencies. The District shall adjust the total Contract Price by reducing the amount thereof by the cost of making good such deficiencies. If District deems it inexpedient to correct Work that is damaged, defective, or not done in accordance with Contract provisions, an equitable reduction in the Contract Price (of at least one hundred fifty percent (150%) of the estimated reasonable value of the nonconforming Work) shall be made therefor.

19.4.3 Payment After Cure

When Contractor removes the grounds for declining approval, payment shall be made for amounts withheld because of them. No interest shall be paid on any retainage or amounts withheld due to the failure of the Contractor to perform in accordance with the terms and conditions of the Contract Documents.

19.5 Subcontractor Payments

19.5.1 Payments to Subcontractors

No later than seven (7) days after receipt, or pursuant to Business and Professions Code section 7108.5 and Public Contract Code section 7107, the Contractor shall pay to each Subcontractor, out of the amount paid to the Contractor on account of such Subcontractor's portion of the Work, the amount to which said Subcontractor is entitled. The Contractor shall, by appropriate agreement with each Subcontractor, require each Subcontractor to make payments to its Sub-subcontractors in a similar manner.

19.5.2 No Obligation of District for Subcontractor Payment

The District shall have no obligation to pay, or to see to the payment of, money to a Subcontractor except as may otherwise be required by law.

19.5.3 Joint Checks

District shall have the right in its sole discretion, if necessary for the protection of the District, to issue joint checks made payable to the Contractor and Subcontractors and/or material or equipment suppliers. The joint check payees shall be responsible for the allocation and disbursement of funds included as part of any such joint payment. In no event shall any joint check payment be construed to create any contract between the District and a Subcontractor of any tier, or a material or equipment supplier, any obligation from the District to such Subcontractor or a material or equipment supplier, or rights in such Subcontractor or a material or equipment supplier against the District.

20. COMPLETION OF THE WORK

20.1 Completion

20.1.1 District will accept completion of Contract and have the Notice of Completion recorded when the entire Work shall have been completed to the satisfaction of District.

20.1.2 The Work may only be accepted as complete by action of the governing board of the District.

20.1.3 District, at its sole option, may accept completion of Contract and have the Notice of Completion recorded when the entire Work shall have been completed to the satisfaction of District, except for minor corrective items, as distinguished from incomplete items. If Contractor fails to complete all minor corrective items within fifteen (15) days after the date of the District's acceptance of completion, District shall withhold from the final payment one hundred fifty percent (150%) of an estimate of the amount sufficient to complete the corrective items, as determined by District, until the item(s) are completed.

20.1.4 At the end of the 15-day period, if there are any items remaining to be corrected, District may elect to proceed as provided herein related to adjustments to Contract Price, and/or District's right to perform the Work of the Contractor.

20.2 Close-Out/Certification Procedures

20.2.1 Punch List

The Contractor shall notify the Architect when Contractor considers the Work complete. Upon notification, Architect will prepare a list of minor items to be completed or corrected ("Punch List"). The Contractor and/or its Subcontractors shall proceed promptly to complete and correct items on the Punch List. Failure to

include an item on Punch List does not alter the responsibility of the Contractor to complete all Work in accordance with the Contract Documents.

20.2.2 Close-Out/Certification Requirements

20.2.2.1 Utility Connections

Buildings shall be connected to water, gas, sewer, and electric services, complete and ready for use. Service connections shall be made and existing services reconnected.

20.2.2.2 Record Drawings and Record Specifications

20.2.2.2.1 Contractor shall provide exact Record Drawings of the Work ("As-Builts") and Record Specifications upon completion of the Project and as a condition precedent to approval of final payment.

20.2.2.2.2 Contractor shall obtain the Inspector's approval of the corrected prints and employ a competent draftsman to transfer the Record Drawings information to the most current version of AutoCAD that is, at that time, currently utilized for plan check submission by either the District, the Architect, OPSC, and/or DSA, and print a complete set of transparent sepias. When completed, Contractor shall deliver corrected sepias and diskette/CD/other

20.2.2.2.3 Contractor is liable and responsible for any and all inaccuracies in the Record Drawings and Record Specifications, even if inaccuracies become evident at a future date.

20.2.2.3 Maintenance Manuals: Contractor shall prepare all operation and maintenance manuals and date as indicated in the Specifications.

20.2.2.4 Source Programming: Contractor shall provide all source programming for all items in the Project.

20.2.2.5 Verified Reports: Contractor shall completely and accurately fill out and file forms DSA 6-C or DSA 152 (or current form), as appropriate. Refer to section 4-336 and section 4-343 of Part 1, Title 24 of the California Code of Regulations.

20.3 Final Inspection

20.3.1 Contractor shall comply with Punch List procedures as provided herein, and maintain the presence of a Project Superintendent and Project Manager until the Punch List is complete to ensure proper and timely completion of the Punch List. Under no circumstances shall Contractor demobilize its forces prior to completion of the Punch List without District's prior written approval. Upon receipt of Contractor's written notice that all of the Punch List items have been fully completed and the Work is ready for final inspection and District acceptance, Architect and Project Inspector will inspect the Work and shall submit to Contractor and District a final inspection report noting the Work, if any, required in order to complete in

accordance with the Contract Documents. Absent unusual circumstances, this report shall consist of the Punch List items not yet satisfactorily completed.

20.3.2 Upon Contractor's completion of all items on the Punch List and any other uncompleted portions of the Work, the Contractor shall notify the District and Architect, who shall again inspect such Work. If the Architect finds the Work complete and acceptable under the Contract Documents, the Architect will notify Contractor, who shall then jointly submit to the Architect and the District its final Application for Payment.

20.3.3 Final Inspection Requirements

20.3.3.1 Before calling for final inspection, Contractor shall determine that the following have been performed:

- 20.3.3.1.1** The Work has been completed.
- 20.3.3.1.2** All life safety items are completed and in working order.
- 20.3.3.1.3** Mechanical and electrical Work are complete and tested, fixtures are in place, connected, and ready for tryout.
- 20.3.3.1.4** Electrical circuits scheduled in panels and disconnect switches labeled.
- 20.3.3.1.5** Painting and special finishes complete.
- 20.3.3.1.6** Doors complete with hardware, cleaned of protective film, relieved of sticking or binding, and in working order.
- 20.3.3.1.7** Tops and bottoms of doors sealed.
- 20.3.3.1.8** Floors waxed and polished as specified.
- 20.3.3.1.9** Broken glass replaced and glass cleaned.
- 20.3.3.1.10** Grounds cleared of Contractor's equipment, raked clean of debris, and trash removed from Site.
- 20.3.3.1.11** Work cleaned, free of stains, scratches, and other foreign matter, and damaged and broken material replaced.
- 20.3.3.1.12** Finished and decorative work shall have marks, dirt, and superfluous labels removed.
- 20.3.3.1.13** Final cleanup, as provided herein.

20.4 Costs of Multiple Inspections

More than two (2) requests of the District to make a final inspection shall be considered an additional service of District, Architect, Construction Manager, and/or Project

Inspector, and all subsequent costs will be invoiced to Contractor and if funds are available, withheld from remaining payments.

20.5 Partial Occupancy or Use Prior to Completion

20.5.1 District's Rights to Occupancy

The District may occupy or use any completed or partially completed portion of the Work at any stage, and such occupancy shall not constitute the District's Final Acceptance of any part of the Work. Neither the District's Final Acceptance, the making of Final Payment, any provision in Contract Documents, nor the use or occupancy of the Work, in whole or in part, by District shall constitute acceptance of Work not in accordance with the Contract Documents nor relieve the Contractor or the Contractor's Performance Bond Surety from liability with respect to any warranties or responsibility for faulty or defective Work or materials, equipment and workmanship incorporated therein. In the event that the District occupies or uses any completed or partially completed portion of the Work, the Contractor shall remain responsible for payments, security, maintenance, heat, utilities, damage to the Work, insurance, the period for correction of the Work, and the commencement of warranties required by the Contract Documents unless the Contractor requests in writing, and the District agrees, to otherwise divide those responsibilities. Any dispute as to responsibilities shall be resolved pursuant to the Claims and Disputes provisions herein, with the added provision that during the dispute process, the District shall have the right to occupy or use any portion of the Work that it needs or desires to use.

20.5.2 Inspection Prior to Occupancy or Use

Immediately prior to partial occupancy or use, the District, the Contractor, and the Architect shall jointly inspect the area to be occupied or portion of the Work to be used in order to determine and record the condition of the Work.

20.5.3 No Waiver

Unless otherwise agreed upon, partial or entire occupancy or use of a portion or portions of the Work shall not constitute beneficial occupancy or District's acceptance of the Work not complying with the requirements of the Contract Documents.

21. FINAL PAYMENT AND RETENTION

21.1 Final Payment

Upon receipt and approval of a valid and final Application for Payment, the Architect will issue a final Certificate of Payment. The District shall thereupon jointly inspect the Work and either accept the Work as complete or notify the Architect and the Contractor in writing of reasons why the Work is not complete. Upon District's acceptance of the Work of the Contractor as fully complete by the Governing Board of the District (that, absent unusual circumstances, will occur when the Punch List items have been satisfactorily completed), the District shall record a Notice of Completion with the County Recorder, and the Contractor shall, upon receipt of final payment from the District, pay the amount due Subcontractors.

21.2 Prerequisites for Final Payment

The following conditions must be fulfilled prior to Final Payment:

21.2.1 A full release of all Stop Payment Notices served in connection with the Work shall be submitted by Contractor.

21.2.2 A duly completed and executed conditional waiver and release upon final payment compliant with Civil Code section 8136, from the Contractor and each subcontractor of any tier and supplier to be paid from the final payment.

21.2.3 A duly completed and executed unconditional waiver and release upon progress payment compliant with Civil Code section 8134, from the Contractor and each subcontractor of any tier and supplier that was paid from the previous progress payments.

21.2.4 A duly completed and executed Document 00 65 19.26, "AGREEMENT AND RELEASE OF ANY AND ALL CLAIMS" from the Contractor.

21.2.5 The Contractor shall have made all corrections to the Work that are required to remedy any defects therein, to obtain compliance with the Contract Documents or any requirements of applicable codes and ordinances, or to fulfill any of the orders or directions of District required under the Contract Documents.

21.2.6 Each Subcontractor shall have delivered to the Contractor all written guarantees, warranties, applications, and bonds required by the Contract Documents for its portion of the Work.

21.2.7 Contractor must have completed all requirements set forth under "Close-Out/Certification Procedures," including, without limitation, submission of an approved set of complete Record Drawings.

21.2.8 Architect shall have issued its written approval that final payment can be made.

21.2.9 The Contractor shall have delivered to the District all manuals and materials required by the Contract Documents, which must be approved by the District.

21.2.10 The Contractor shall have completed final clean-up as provided herein.

21.3 Retention

21.3.1 The retention, less any amounts disputed by the District or that the District has the right to withhold pursuant to provisions herein, shall be paid:

21.3.1.1 After approval by the Architect of the Application and Certificate of Payment,

21.3.1.2 After the satisfaction of the conditions set forth herein, and

21.3.1.3 After forty-five (45) days after the recording of the Notice of Completion by District.

21.3.2 No interest shall be paid on any retention, or on any amounts withheld due to a failure of the Contractor to perform, in accordance with the terms and conditions of the Contract Documents, except as provided to the contrary in any Escrow Agreement between the District and the Contractor pursuant to Public Contract Code section 22300.

21.4 Substitution of Securities

The District will permit the substitution of securities in accordance with the provisions of Public Contract Code section 22300.

22. UNCOVERING OF WORK

If a portion of the Work is covered without Inspector or Architect approval or not in compliance with the Contract Documents, it must, if required in writing by the District, the Project Inspector, or the Architect, be uncovered for the Project Inspector's or the Architect's observation and be corrected, replaced, and/or recovered at the Contractor's expense without change in the Contract Price or Contract Time.

23. NONCONFORMING WORK AND CORRECTION OF WORK

23.1 Nonconforming Work

23.1.1 Contractor shall promptly remove from Premises all Work identified by District as failing to conform to the Contract Documents whether incorporated or not. Contractor shall promptly replace and re-execute its own Work to comply with the Contract Documents without additional expense to the District and shall bear the expense of making good all work of other contractors destroyed or damaged by any removal or replacement pursuant hereto and/or any delays to the District or other Contractors caused thereby.

23.1.2 If Contractor does not remove Work that District has identified as failing to conform to the Contract Documents within a reasonable time, not to exceed **FORTY-EIGHT (48)** hours, District may remove it and may store any material at Contractor's expense. If Contractor does not pay expense(s) of that removal within ten (10) days' time thereafter, District may, upon ten (10) days' written notice, sell any material at auction or at private sale and shall deduct all costs and expenses incurred by the District and/or District may withhold those amounts from payment(s) to Contractor.

23.2 Correction of Work

23.2.1 Correction of Rejected Work

Pursuant to the notice provisions herein, the Contractor shall immediately correct the Work rejected by the District, the Architect, or the Project Inspector as failing to conform to the requirements of the Contract Documents, whether observed before or after Completion and whether or not fabricated, installed, or completed. The Contractor shall bear costs of correcting the rejected Work, including additional

testing, inspections, and compensation for the Inspector's or the Architect's services and expenses made necessary thereby.

23.2.2 Two-Year Warranty Corrections

If, within two (2) years after the date of Completion of the Work or a designated portion thereof, or after the date for commencement of warranties established hereunder, or by the terms of an applicable special warranty required by the Contract Documents, any of the Work is found to be not in accordance with the requirements of the Contract Documents, the Contractor shall correct it promptly after receipt of written notice from the District to do so. This period of two (2) years shall be extended with respect to portions of the Work first performed after Completion by the period of time between Completion and the actual performance of the Work. This obligation hereunder shall survive District's acceptance of the Work under the Contract and termination of the Contract. The District shall give such notice promptly after discovery of the condition.

23.3 District's Right to Perform Work

23.3.1 If the Contractor should neglect to prosecute the Work properly or fail to perform any provisions of this contract, the District, after **FORTY-EIGHT (48)** hours written notice to the Contractor, may, without prejudice to any other remedy it may have, make good such deficiencies and may deduct the cost thereof from the payment then or thereafter due the Contractor.

23.3.2 If it is found at any time, before or after completion of the Work, that Contractor has varied from the Drawings and/or Specifications, including, but not limited to, variation in material, quality, form, or finish, or in the amount or value of the materials and labor used, District may require at its option:

23.3.2.1 That all such improper Work be removed, remade or replaced, and all work disturbed by these changes be made good by Contractor at no additional cost to the District;

23.3.2.2 That the District deduct from any amount due Contractor the sum of money equivalent to the difference in value between the work performed and that called for by the Drawings and Specifications; or

23.3.2.3 That the District exercise any other remedy it may have at law or under the Contract Documents, including but not limited to the District hiring its own forces or another contractor to replace the Contractor's nonconforming Work, in which case the District shall either issue a deductive Change Order, a Construction Change Directive, or invoice the Contractor for the cost of that work. Contractor shall pay any invoices within thirty (30) days of receipt of same or District may withhold those amounts from payment(s) to Contractor.

24. TERMINATION AND SUSPENSION

24.1 District's Request for Assurances

If District at any time reasonably believes Contractor is or may be in default under this Contract, District may in its sole discretion notify Contractor of this fact and request

written assurances from Contractor of performance of Work and a written plan from Contractor to remedy any potential default under the terms this Contract that the District may advise Contractor of in writing. Contractor shall, within ten (10) calendar days of District's request, deliver a written cure plan that meets the District's requirements in its request for assurances. Contractor's failure to provide such written assurances of performance and the required written plan, within ten (10) calendar days of request, will constitute a material breach of this Contract sufficient to justify termination for cause.

24.2 District's Right to Terminate Contractor for Cause

24.2.1 Grounds for Termination: The District, in its sole discretion, may terminate the Contract and/or terminate the Contractor's right to perform the work of the Contract based upon any of the following:

24.2.1.1 Contractor refuses or fails to execute the Work or any separable part thereof with sufficient diligence as will ensure its completion within the time specified or any extension thereof, or

24.2.1.2 Contractor fails to complete said Work within the time specified or any extension thereof, or

24.2.1.3 Contractor persistently fails or refuses to perform Work or provide material of sufficient quality as to be in compliance with Contract Documents; or

24.2.1.4 Contractor persistently refuses, or repeatedly fails, except in cases for which extension of time is provided, to supply enough properly skilled workers or proper materials to complete the Work in the time specified; or

24.2.1.5 Contractor fails to make prompt payment to Subcontractors, or for material, or for labor; or

24.2.1.6 Contractor persistently disregards laws, or ordinances, or instructions of District; or

24.2.1.7 Contractor fails to supply labor, including that of Subcontractors, that is sufficient to prosecute the Work or that can work in harmony with all other elements of labor employed or to be employed on the Work; or

24.2.1.8 Contractor or its Subcontractor(s) is/are otherwise in breach, default, or in substantial violation of any provision of this Contract, including but not limited to a lapse in licensing or registration.

24.2.2 Notification of Termination

24.2.2.1 Upon the occurrence at District's sole determination of any of the above conditions, District may, without prejudice to any other right or remedy, serve written notice upon Contractor and its Surety of District's termination of this Contract and/or the Contractor's right to perform the work of the Contract. This notice will contain the reasons for termination. Unless, within three (3) days after the service of the notice, any and all condition(s) shall cease, and any and all violation(s) shall cease, or arrangement satisfactory to District for the

correction of the condition(s) and/or violation(s) be made, this Contract and/or the Contractor's right to perform the Work of the Contract shall cease and terminate. Upon termination, Contractor shall not be entitled to receive any further payment until the entire Work is finished.

24.2.2.2 Upon Termination, District may immediately serve written notice of tender upon Surety whereby Surety shall have the right to take over and perform this Contract only if Surety:

24.2.2.2.1 Within three (3) days after service upon it of the notice of tender, gives District written notice of Surety's intention to take over and perform this Contract; and

24.2.2.2.2 Commences performance of this Contract within three (3) days from date of serving of its notice to District.

24.2.2.3 Surety shall not utilize Contractor in completing the Project if the District notifies Surety of the District's objection to Contractor's further participation in the completion of the Project. Surety expressly agrees that any contractor which Surety proposes to fulfill Surety's obligations is subject to District's approval. District's approval shall not be unreasonably withheld, conditioned or delayed.

24.2.2.4 If Surety fails to notify District or begin performance as indicated herein, District may take over the Work and execute the Work to completion by any method it may deem advisable at the expense of Contractor and/or its Surety. Contractor and/or its Surety shall be liable to District for any excess cost or other damages the District incurs thereby. Time is of the essence in this Contract. If the District takes over the Work as herein provided, District may, without liability for so doing, take possession of and utilize in completing the Work such materials, appliances, plan, and other property belonging to Contractor as may be on the Site of the Work, in bonded storage, or previously paid for.

24.3 Termination of Contractor for Convenience

24.3.1 District in its sole discretion may terminate the Contract in whole or in part upon three (3) days' written notice to the Contractor.

24.3.2 Upon notice, Contractor shall:

24.3.2.1 Cease operations as directed by the District in the notice;

24.3.2.2 Take necessary actions for the protection and preservation of the Work as soon as possible; and

24.3.2.3 Terminate all existing subcontracts and purchase orders and enter into no further subcontracts and purchase orders.

24.3.3 Within 30 days of the notice, Contractor submit to the District a payment application for the actual cost for labor, materials, and services performed, including all Contractor's and Subcontractor(s)' mobilization and/or demobilization costs, that

is unpaid. Contractor shall have no claims against the District except for the actual cost for labor, materials, and services performed that adequately documented through timesheets, invoices, receipts, or otherwise. District shall pay all undisputed invoice(s) for work performed until the notice of termination.

24.3.4 Under a termination for convenience, the District retains the right to all the options available to the District if there is a termination for cause.

24.4 Effect of Termination

24.4.1 Contractor shall, only if ordered to do so by the District, immediately remove from the Site all or any materials and personal property belonging to Contractor that have not been incorporated in the construction of the Work, or which are not in place in the Work. The District retains the right, but not the obligation, to keep and use any materials and personal property belonging to Contractor that have not been incorporated in the construction of the Work, or which are not in place in the Work. The Contractor and its Surety shall be liable upon the Performance Bond for all damages caused to the District by reason of the Contractor's failure to complete the Contract.

24.4.2 In the event that the District shall perform any portion of, or the whole of the Work, pursuant to the provisions of the General Conditions, the District shall not be liable nor account to the Contractor in any way for the time within which, or the manner in which, the Work is performed by the District or for any changes the District may make in the Work or for the money expended by the District in satisfying claims and/or suits and/or other obligations in connection with the Work.

24.4.3 In the event termination for cause is determined to have not been for cause, the termination shall be deemed to have been a termination for convenience effective as of the same date as the purported termination for cause.

24.4.4 In the event that the Contract is terminated for any reason, no allowances or compensation will be granted for the loss of any anticipated profit by the Contractor or any impact or impairment of Contractor's bonding capacity.

24.4.5 If the expense to the District to finish the Work exceeds the unpaid Contract Price, Contractor and Surety shall pay difference to District within twenty-one (21) days of District's request.

24.4.6 The District shall have the right (but shall have no obligation) to assume and/or assign to a general contractor or construction manager or other third party who is qualified and has sufficient resources to complete the Work, the rights of the Contractor under its subcontracts with any or all Subcontractors. In the event of an assumption or assignment by the District, no Subcontractor shall have any claim against the District or third party for Work performed by Subcontractor or other matters arising prior to termination of the Contract. The District or any third party, as the case may be, shall be liable only for obligations to the Subcontractor arising after assumption or assignment. Should the District so elect, the Contractor shall execute and deliver all documents and take all steps, including the legal assignment of its contractual rights, as the District may require, for the purpose of fully vesting in the District the rights and benefits of its Subcontractor under Subcontracts or other obligations or commitments. All payments due the Contractor hereunder shall

be subject to a right of offset by the District for expenses and damages suffered by the District as a result of any default, acts, or omissions of the Contractor. Contractor must include this assignment provision in all of its contracts with its Subcontractors.

24.4.7 The foregoing provisions are in addition to and not in limitation of any other rights or remedies available to District.

24.5 Emergency Termination of Public Contracts Act of 1949

24.5.1 This Contract is subject to termination as provided by sections 4410 and 4411 of the Government Code of the State of California, being a portion of the Emergency Termination of Public Contracts Act of 1949.

24.5.1.1 Section 4410 of the Government Code states:

In the event a national emergency occurs, and public work, being performed by contract, is stopped, directly or indirectly, because of the freezing or diversion of materials, equipment or labor, as the result of an order or a proclamation of the President of the United States, or of an order of any federal authority, and the circumstances or conditions are such that it is impracticable within a reasonable time to proceed with a substantial portion of the work, then the public agency and the contractor may, by written agreement, terminate said contract.

24.5.1.2 Section 4411 of the Government Code states:

Such an agreement shall include the terms and conditions of the termination of the contract and provision for the payment of compensation or money, if any, which either party shall pay to the other or any other person, under the facts and circumstances in the case.

24.5.2 Compensation to the Contractor shall be determined at the sole discretion of District on the basis of the reasonable value of the Work done, including preparatory work. As an exception to the foregoing and at the District's discretion, in the case of any fully completed separate item or portion of the Work for which there is a separate previously submitted unit price or item on the accepted schedule of values, that price shall control. The District, at its sole discretion, may adopt the Contract Price as the reasonable value of the work done or any portion thereof.

24.6 Suspension of Work

24.6.1 District in its sole discretion may suspend, delay or interrupt the Work in whole or in part for such period of time as the District may determine upon three (3) days written notice to the Contractor.

24.6.1.1 An adjustment may be made for changes in the cost of performance of the Work caused by any such suspension, delay or interruption. No adjustment shall be made to the extent:

24.6.1.1.1 That performance is, was or would have been so suspended, delayed or interrupted by another cause for which Contractor is responsible; or

24.6.1.1.2 That an equitable adjustment is made or denied under another provision of the Contract; or

24.6.1.1.3 That the suspension of Work was the direct or indirect result of Contractor's failure to perform any of its obligations hereunder.

24.6.1.2 Any adjustments in cost of performance may have a fixed or percentage fee as provided in the section on Format for Proposed Change Order herein. This amount shall be full compensation for all Contractor's and its Subcontractor(s)' changes in the cost of performance of the Contract caused by any such suspension, delay or interruption.

25. CLAIMS PROCESS

25.1 Obligation to File Claims for Disputed Work

25.1.1 Should Contractor otherwise seek extra time or compensation for any reason whatsoever ("Disputed Work"), then Contractor shall first follow procedures set forth in the Contract Documents including, without limitation, Articles 15, 16 and 17. A Notice of Potential Change or Proposed Change Order are less formal procedures that proceed the formal claim and do not constitute a Claim. A Claim also does not include correspondence, RFIs, vouchers, invoices, progress payment applications, or other routine or authorized form of requests for progress payments in compliance with the Contract. If a dispute remains, then Contractor shall give written notice to Owner that expressly invokes this Article 25 within the time limits set forth herein.

25.1.2 Contractor's sole and exclusive remedy for Disputed Work is to file a written claim setting forth Contractor's position as required herein within the time limits set forth herein.

25.2 Duty to Perform during during Claims Process

Contractor and its subcontractors shall continue to perform its Work under the Contract including the disputed work, and shall not cause a delay of the Work during any dispute, claim, negotiation, mediation, or arbitration proceeding, except by written agreement by the District.

25.3 Definition of a Claim

25.3.1 Pursuant to Public Contract Code section 9204, the term "Claim" means a separate demand by the Contractor, sent by registered mail or certified mail with return receipt requested, for one or more of the following:

25.3.1.1 A time extension, including without limitation, for relief of damages or penalties for delay assessed by the District under the Contract;

25.3.1.2 Payment by the District of money or damages arising from work done by, or on behalf of, the Contractor pursuant to the Contract and payment of which is not otherwise expressly provided for or to which Contractor is not otherwise entitled to; or

25.3.1.3 An amount of payment disputed by the District.

25.4 **Claims Presentation**

25.4.1 Form and Contents of Claim

25.4.1.1 If Contractor intends to apply for an increase in the Contract Price or Contract Time for any reason including, without limitation, the acts of District or its agents, Contractor shall, within thirty (30) days after the event giving rise to the Claim, give notice of the Claim in writing specifically identifying Contractor is invoking this Article 25 Claims Presentation.

25.4.1.2 The Claim shall include an itemized statement of the details and amounts of its Claim for any increase in the Contract Price of Contract Time as provided below, including a Time Impact Analysis and any and all other documentation substantiating Contractor's claimed damages:

25.4.1.2.1 The issues, events, conditions, circumstances and/or causes giving rise to the dispute, and shall show, in detail, the cause and effect of same;

25.4.1.2.2 Citation to provisions in the Contract Documents, statute sections, and/or case law entitling Contractor to an increase in the Contract Price or Contract Time;

25.4.1.2.3 The pertinent dates and/or durations and actual and/or anticipated effects on the Contract Price, Contract Schedule milestones and/or Contract Time adjustments;

25.4.1.2.4 The Time Impact Analysis of all time delays that shows actual time impact on the critical path; and

25.4.1.2.5 The line-item costs for labor, material, and/or equipment, if applicable, for all cost impacts priced like a change order according to Article 17 and must be updated monthly as to cost and entitlement if a continuing claim.

25.4.1.3 The Claim shall include the following certification by the Contractor:

25.4.1.3.1 The undersigned Contractor certifies under penalty of perjury that the attached dispute is made in good faith; that the supporting data is accurate and complete to the best of my knowledge and belief; that the amount requested accurately reflects the adjustment for which Contractor believes the District is liable; and that I am duly authorized to certify the dispute on behalf of the Contractor.

25.4.1.3.2 Furthermore, Contractor understands that the value of the attached dispute expressly includes any and all of the Contractor's costs and expenses, direct and indirect, resulting from the Work performed on the Project, additional time required on the Project and/or resulting from delay to the Project including, without limitation, cumulative impacts. Contractor may not separately recover for overhead or other indirect costs. Any costs, expenses, damages, or time extensions not included are deemed waived.

25.4.2 Contractor shall bear all costs incurred in the preparation and submission of a claim.

25.4.3 Failure to timely submit a claim and the requisite supporting documentation shall constitute a waiver of Contractor's claim(s) against the District and Contractor's claims for compensation or an extension of time shall be forfeited and invalidated.

[THE REMAINDER OF THIS PAGE LEFT BLANK INTENTIONALLY]

25.5 Claim Resolution pursuant to Public Contract Code section 9204

Contractor may request to waive the claims procedure under Public Contract Code section 9204 and proceed directly to the commencement of a civil action or binding arbitration. If Contractor chooses to proceed, Contractor shall comply with the following steps.

25.5.1 STEP 1:

25.5.1.1 Upon receipt of a Claim by registered or certified mail, return receipt requested, including the documents necessary to substantiate it, the District shall conduct a reasonable review of the Claim and, within a period **not to exceed 45 days**, shall provide the Contractor a written statement identifying what portion of the Claim is disputed and what portion is undisputed. Upon receipt of a Claim, the District and Contractor may, **by mutual agreement, extend the time period** to provide a written statement. If the District needs approval from its governing body to provide the Contractor a written statement identifying the disputed portion and the undisputed portion of the Claim, and the governing body does not meet within the 45 days or within the mutually agreed to extension of time following receipt of Claim sent by registered mail or certified mail, return receipt requested, the District shall have **up to three (3) days following the next duly publicly noticed meeting of the governing body after the 45-day period, or extension**, expires to provide Contractor a written statement identifying the disputed portion and the undisputed portion.

25.5.1.1.1 Any payment due on an undisputed portion of the Claim shall be processed and made within 60 days after the District issues its written statement. Amounts not paid in a timely manner as required by this section, section 25.4, shall bear interest at seven percent (7%) per annum.

25.5.1.2 Upon receipt of a Claim, the parties may mutually agree to waive, in writing, mediation and proceed directly to the commencement of a civil action or binding arbitration, as applicable. In this instance, District and Contractor must

comply with the sections below regarding Public Contract Code section 20104 et seq. and Government Code Claim Act Claims.

25.5.1.3 If the District fails to issue a written statement, or to otherwise meet the time requirements of this section, this shall result in the Claim being deemed rejected in its entirety. A claim that is denied by reason of the District’s failure to have responded to a claim, or its failure to otherwise meet the time requirements of this section, shall not constitute an adverse finding with regard to the merits of the claim or the responsibility or qualifications of Contractor.

25.5.2 STEP 2:

25.5.2.1 If Contractor disputes the District’s written response, or if the District fails to respond to a Claim within the time prescribed, Contractor may demand in writing an informal conference to meet and confer for settlement of the issues in dispute. Upon receipt of a demand in writing sent by registered mail or certified mail, return receipt requested, the District shall schedule a meet and confer conference within 30 days for settlement of the dispute. Within 10 business days following the conclusion of the meet and confer conference, if the claim or any portion of the claim remains in dispute, the District shall provide the Contractor a written statement identifying the portion of the claim that remains in dispute and the portion that is undisputed.

25.5.2.1.1.1 Any payment due on an undisputed portion of the claim shall be processed and made within 60 days after the District issues its written statement. Amounts not paid in a timely manner as required by this section, section 25.4, shall bear interest at seven percent (7%) per annum.

25.5.3 STEP 3:

25.5.3.1 Any disputed portion of the claim, as identified by Contractor in writing, shall be submitted to nonbinding mediation, with the District and Contractor sharing the associated costs equally. The District and Contractor shall mutually agree to a mediator within 10 business days after the disputed portion of the claim has been identified in writing. If the parties cannot agree upon a mediator, each party shall select a mediator and those mediators shall select a qualified neutral third party to mediate with regard to the disputed portion of the claim. Each party shall bear the fees and costs charged by its respective mediator in connection with the selection of the neutral mediator. If mediation is unsuccessful, the parts of the claim remaining in dispute shall be subject to applicable procedures outside this section.

25.5.3.1.1 For purposes of this section, mediation includes any nonbinding process, including, but not limited to, neutral evaluation or a dispute review board, in which an independent third party or board assists the parties in dispute resolution through negotiation or by issuance of an evaluation. Any mediation utilized shall conform to the timeframes in this section.

25.5.3.2 Unless otherwise agreed to by the District and Contractor in writing, the mediation conducted pursuant to this section shall excuse any further

obligation under Public Contract Code section 20104.4 to mediate after litigation has been commenced.

25.5.4 STEP 4:

25.5.4.1 If mediation under this section does not resolve the parties' dispute, the District may, but does not require arbitration of disputes under private arbitration or the Public Works Contract Arbitration Program.

25.6 Subcontractor Pass-Through Claims

25.6.1 If a subcontractor or a lower tier subcontractor lacks legal standing to assert a claim against a District because privity of contract does not exist, the contractor may present to the District a Claim on behalf of a subcontractor or lower tier subcontractor. A subcontractor may request in writing, either on his or her own behalf or on behalf of a lower tier subcontractor, that Contractor present a Claim for work which was performed by the subcontractor or by a lower tier subcontractor on behalf of the subcontractor. The subcontractor requesting that the Claim be presented to the District shall furnish reasonable documentation to support the Claim.

25.6.2 Within 45 days of receipt of this written request from a subcontractor, Contractor shall notify the subcontractor in writing as to whether the Contractor presented the Claim to the District and, if Contractor did not present the Claim, provide the subcontractor with a statement of the reasons for not having done so.

25.6.3 The Contractor shall bind all its Subcontractors to the provisions of this section and will hold the District harmless against Claims by Subcontractors.

25.7 Government Code Claim Act Claim

25.7.1 If a claim, or any portion thereof, remains in dispute upon satisfaction of all applicable Claim Resolution requirements the Contractor shall comply with all claims presentation requirements as provided in Chapter 1 (commencing with section 900) and Chapter 2 (commencing with section 910) of Part 3 of Division 3.6 of Title 1 of Government Code as a condition precedent to the Contractor's right to bring a civil action against the District.

25.7.2 Contractor shall bear all costs incurred in the preparation, submission and administration of a Claim. Any claims presented in accordance with the Government Code must affirmatively indicate Contractor's prior compliance with the claims procedure herein of the claims asserted.

25.7.3 For purposes of those provisions, the running of the time within which a claim pursuant to Public Contract Code section 20104.2 only must be presented to the District shall be tolled from the time the claimant submits his or her written claim pursuant to subdivision (a) until the time that claim is denied as a result of the meet and confer process, including any period of time utilized by the meet and confer process.

25.8 Claim Resolution pursuant to Public Contract Code section 20104 et seq.

25.8.1 In the event of a disagreement between the parties as to performance of the Work, the interpretation of this Contract, or payment or nonpayment for Work performed or not performed, the parties shall attempt to resolve all Claims of three hundred seventy-five thousand dollars (\$375,000) or less which arise between Contractor and District by those procedures set forth in Public Contract Code section 20104, et seq., to the extent applicable.

25.8.1.1 Contractor shall file with the District any written Claim, including the documents necessary to substantiate it, upon the application for final payment.

25.8.1.2 For claims of less than fifty thousand dollars (\$50,000), the District shall respond in writing within forty-five (45) days of receipt of the Claim or may request in writing within thirty (30) days of receipt of the Claim any additional documentation supporting the claim or relating to defenses or claims the District may have against the Contractor.

25.8.1.2.1 If additional information is required, it shall be requested and provided by mutual agreement of the parties.

25.8.1.2.2 District's written response to the documented Claim shall be submitted to the Contractor within fifteen (15) days after receipt of the further documentation or within a period of time no greater than that taken by the Contractor to produce the additional information, whichever is greater.

25.8.1.3 For claims of over fifty thousand dollars (\$50,000) and less than or equal to three hundred seventy-five thousand dollars (\$375,000), the District shall respond in writing to all written Claims within sixty (60) days of receipt of the claim, or may request, in writing, within thirty (30) days of receipt of the Claim any additional documentation supporting the Claim or relating to defenses or claims the District may have against the Contractor.

25.8.1.3.1 If additional information is required, it shall be requested and provided upon mutual agreement of the District and the Contractor.

25.8.1.3.2 The District's written response to the claim, as further documented, shall be submitted to the Contractor within thirty (30) days after receipt of the further documentation, or within a period of time no greater than that taken by the Contractor to produce the additional information or requested documentation, whichever is greater.

25.8.1.4 If Contractor disputes the District's written response, or the District fails to respond within the time prescribed, Contractor may so notify the District, in writing, either within fifteen (15) days of receipt of the District's response or within fifteen (15) days of the District's failure to respond within the time prescribed, respectively, and demand an informal conference to meet and confer for settlement of the issues in dispute. Upon a demand, the District shall schedule a meet and confer conference within thirty (30) days for settlement of the dispute.

25.8.1.5 Following the meet and confer conference, if the claim or any portion of it remains in dispute, the Contractor may file a claim as provided in Chapter 1 (commencing with Section 900) and Chapter 2 (commencing with Section 910) of Part 3 of Division 3.6 of Title 1 of the Government Code. For purposes of those provisions the running of the time within which a claim must be filed shall be tolled from the time the Contractor submits its written Claim until the time the Claim is denied, including any period of time utilized by the meet and confer process.

25.8.1.6 For any civil action filed to resolve claims filed pursuant to this section, within sixty (60) days, but no earlier than thirty (30) days, following the filing of responsive pleadings, the court shall submit the matter to nonbinding mediation unless waived by mutual stipulation of both parties. The mediation process shall provide for the selection within fifteen (15) days by both parties of a disinterested third person as mediator, shall be commenced within thirty (30) days of the submittal, and shall be concluded within fifteen (15) days from the commencement of the mediation unless a time requirement is extended upon a good cause showing to the court or by stipulation of both parties. If the parties fail to select a mediator within the 15-day period, any party may petition the court to appoint the mediator.

25.8.1.7 If the matter remains in dispute, the case shall be submitted to judicial arbitration pursuant to Chapter 2.5 (commencing with Section 1141.10) of the Title 3 of Part 3 of the Code of Civil Procedure, notwithstanding Section 1141.11 of that code. The Civil Discovery Act of 1986, (Article 3 (commencing with Section 2016) of Chapter 3 of Title 3 of part 4 of the Code of Civil Procedure) shall apply to any proceeding brought under this subdivision consistent with the rules pertaining to judicial arbitration.

25.8.1.8 The District shall not fail to pay money as to any portion of a Claim which is undisputed except as otherwise provided in the Contract Documents. In any suit filed pursuant to this section, the District shall pay interest due at the legal rate on any arbitration award or judgment. Interest shall begin to accrue on the date the suit is filed in a court of law.

25.8.2 Contractor shall bind its Subcontractors to the provisions of this Section and will hold the District harmless against disputes by Subcontractors.

25.9 Claim Procedure Compliance

25.9.1 Failure to submit and administer claims as required in Article 25 shall waive Contractor's right to claim on any specific issues not included in a timely submitted claim. Claim(s) not raised in a timely protest and timely claim submitted under this Article 25 may not be asserted in any subsequent litigation, Government Code Claim, or legal action.

25.9.2 District shall not be deemed to waive any provision under this Article 25, if at Owner's sole discretion, a claim is administered in a manner not in accord with this Article 25. Waivers or modifications of this Article 25 may only be made by a signed change order approved as to form by legal counsel for both District and Contractor; oral or implied modifications shall be ineffective.

25.10 Claim Resolution Non-Applicability

25.10.1 The procedures for dispute and claim resolutions set forth in this Article shall not apply to the following:

25.10.1.1 Personal injury, wrongful death or property damage claims;

25.10.1.2 Latent defect or breach of warranty or guarantee to repair;

25.10.1.3 Stop payment notices;

25.10.1.4 District's rights set forth in the Article on Suspension and Termination;

25.10.1.5 Disputes arising out of labor compliance enforcement by the Department of Industrial Relations; or

25.10.1.6 District rights and obligations as a public entity set forth in applicable statutes; provided, however, that penalties imposed against a public entity by statutes, including, but not limited to, Public Contract Code sections 20104.50 and 7107, shall be subject to the Claim Resolution requirements provided in this Article.

25.11 Attorney's Fees

25.11.1 Should litigation be necessary to enforce any terms or provisions of this Agreement, then each party shall bear its own litigation and collection expenses, witness fees, court costs, and attorney's fees.

26. STATE LABOR, WAGE & HOUR, APPRENTICE, AND RELATED PROVISIONS

26.1 Labor Compliance and Enforcement

Since this Project is subject to labor compliance and enforcement by the Department of Industrial Relations ("DIR"), Contractor specifically acknowledges and understands that it shall perform the Work of this Agreement while complying with all the applicable provisions of Division 2, Part 7, Chapter 1, of the Labor Code and Title 8 of the California Code of Regulations, including, without limitation, the requirement that the Contractor and all Subcontractors shall timely furnish complete and accurate electronic certified payroll records directly to the DIR. The District may not issue payment if this requirement is not met.

26.2 Wage Rates, Travel, and Subsistence

26.2.1 Pursuant to the provisions of Article 2 (commencing at section 1770), Chapter 1, Part 7, Division 2, of the Labor Code, the general prevailing rate of per diem wages and the general prevailing rate for holiday and overtime work in the locality in which this public work is to be performed for each craft, classification, or type of worker needed to execute this Contract are on file at the District's principal office and copies will be made available to any interested party on request. Contractor shall obtain and post a copy of these wage rates at the job site.

26.2.2 Holiday and overtime work, when permitted by law, shall be paid for at the general prevailing rate of per diem wages for holiday and overtime work on file with the Director of the Department of Industrial Relations, unless otherwise specified. The holidays upon which those rates shall be paid need not be specified by the District, but shall be all holidays recognized in the applicable collective bargaining agreement. If the prevailing rate is not based on a collectively bargained rate, the holidays upon which the prevailing rate shall be paid shall be as provided in Section 6700 of the Government Code.

26.2.3 Contractor shall pay and shall cause to be paid each worker engaged in Work on the Project the general prevailing rate of per diem wages determined by the Director of the Department of Industrial Relations, regardless of any contractual relationship which may be alleged to exist between Contractor or any Subcontractor and such workers.

26.2.4 If during the period this bid is required to remain open, the Director of the Department of Industrial Relations determines that there has been a change in any prevailing rate of per diem wages in the locality in which the Work under the Contract is to be performed, such change shall not alter the wage rates in the Notice to Bidders or the Contract subsequently awarded.

26.2.5 Pursuant to Labor Code section 1775, Contractor shall, as a penalty to District, forfeit the statutory amount (believed by the District to be currently up to two hundred dollars (\$200) for each calendar day, or portion thereof, for each worker paid less than the prevailing rates, determined by the District and/or the Director, for the work or craft in which that worker is employed for any public work done under Contract by Contractor or by any Subcontractor under it. The difference between such prevailing wage rates and the amount paid to each worker for each calendar day or portion thereof for which each worker was paid less than the prevailing wage rate shall be paid to each worker by Contractor.

26.2.6 Any worker employed to perform Work on the Project, which Work is not covered by any classification listed in the general prevailing wage rate of per diem wages determined by the Director, shall be paid not less than the minimum rate of wages specified therein for the classification which most nearly corresponds to Work to be performed by him, and such minimum wage rate shall be retroactive to time of initial employment of such person in such classification.

26.2.7 Pursuant to Labor Code section 1773.1, per diem wages are deemed to include employer payments for health and welfare, pension, vacation, travel time, subsistence pay, and apprenticeship or other training programs authorized by Labor Code section 3093, and similar purposes.

26.2.8 Contractor shall post at appropriate conspicuous points on the Site of Project, a schedule showing all determined minimum wage rates and all authorized deductions, if any, from unpaid wages actually earned. In addition, Contractor shall post a sign-in log for all workers and visitors to the Site, a list of all subcontractors of any tier on the Site, and the required Equal Employment Opportunity poster(s).

26.3 Hours of Work

26.3.1 As provided in article 3 (commencing at section 1810), chapter 1, part 7, division 2, of the Labor Code, eight (8) hours of labor shall constitute a legal day's work. The time of service of any worker employed at any time by Contractor or by any Subcontractor on any subcontract under this Contract upon the Work or upon any part of the Work contemplated by this Contract shall be limited and restricted by Contractor to eight (8) hours per day, and forty (40) hours during any one week, except as hereinafter provided. Notwithstanding the provisions hereinabove set forth, Work performed by employees of Contractor in excess of eight (8) hours per day and forty (40) hours during any one week, shall be permitted upon this public work upon compensation for all hours worked in excess of eight (8) hours per day at not less than one and one-half times the basic rate of pay.

26.3.2 Contractor shall keep and shall cause each Subcontractor to keep an accurate record showing the name of and actual hours worked each calendar day and each calendar week by each worker employed by Contractor in connection with the Work or any part of the Work contemplated by this Contract. The record shall be kept open at all reasonable hours to the inspection of District and to the Division of Labor Standards Enforcement of the DIR.

26.3.3 Pursuant to Labor Code section 1813, Contractor shall as a penalty to the District forfeit the statutory amount (believed by the District to be currently twenty-five dollars (\$25)) for each worker employed in the execution of this Contract by Contractor or by any Subcontractor for each calendar day during which such worker is required or permitted to work more than eight (8) hours in any one calendar day and forty (40) hours in any one calendar week in violation of the provisions of article 3 (commencing at section 1810), chapter 1, part 7, division 2, of the Labor Code.

26.3.4 Any Work necessary to be performed after regular working hours, or on Sundays or other holidays shall be performed without additional expense to the District.

26.4 Payroll Records

26.4.1 Contractor shall upload, and shall cause each Subcontractor performing any portion of the Work under this Contract to upload, an accurate and complete certified payroll record ("CPR") electronically using DIR's eCPR System by uploading the CPRs by electronic XML file or entering each record manually using the DIR's iform (or current form) online on a weekly basis and within ten (10) days of any request by the District or Labor Commissioner at <http://www.dir.ca.gov/Public-Works/Certified-Payroll-Reporting.html> or current application and URL, showing the name, address, social security number, work classification, straight-time, and overtime hours worked each day and week, and the actual per diem wages paid to each journeyman, apprentice, worker, or other employee employed by the Contractor and/or each Subcontractor in connection with the Work.

26.4.1.1 The CPRs enumerated hereunder shall be filed directly with the DIR on a weekly basis or to the requesting party, whether the District or DIR, within ten (10) days after receipt of each written request. The CPRs from the Contractor and each Subcontractor for each week shall be provided on or before Wednesday

of the week following the week covered by the CPRs. District may not make any payment to Contractor until:

26.4.1.1.1 Contractor and/or its Subcontractor(s) provide CPRs acceptable to the DIR; and

26.4.1.1.2 Any delay in Contractor and/or its Subcontractor(s) providing CPRs to the DIR in a timely manner may directly delay Contractor's payment.

26.4.2 All CPRs shall be available for inspection at all reasonable hours at the principal office of Contractor on the following basis:

26.4.2.1 A certified copy of an employee's CPR shall be made available for inspection or furnished to the employee or his/her authorized representative on request.

26.4.2.2 CPRs shall be made available for inspection or furnished upon request to a representative of District, Division of Labor Standards Enforcement, Division of Apprenticeship Standards, and/or the DIR.

26.4.2.3 CPRs shall be made available upon request by the public for inspection or copies thereof made; provided, however, that a request by the public shall be made through the District, Division of Apprenticeship Standards, or the Division of Labor Standards Enforcement. If the requested CPRs have not been provided pursuant to the provisions herein, the requesting party shall, prior to being provided the records, reimburse the costs of preparation by Contractor, Subcontractors, and the entity through which the request was made. The public shall not be given access to the records at the principal office of Contractor.

26.4.3 Any copy of records made available for inspection as copies and furnished upon request to the public or any public agency by District, Division of Apprenticeship Standards, or Division of Labor Standards Enforcement shall be marked or obliterated in such a manner as to prevent disclosure of an individual's name, address, and social security number. The name and address of Contractor awarded Contract or performing Contract shall not be marked or obliterated.

26.4.4 Contractor shall inform District of the location of the records enumerated hereunder, including the street address, city, and county, and shall, within five (5) working days, provide a notice of change of location and address.

26.4.5 In the event of noncompliance with the requirements of this section, Contractor shall have ten (10) days in which to comply subsequent to receipt of written notice specifying in what respects Contractor must comply with this section. Should noncompliance still be evident after the ten (10) day period, Contractor shall, as a penalty to District, forfeit up to one hundred dollars (\$100) for each calendar day, or portion thereof, for each worker, until strict compliance is effectuated. Upon the request of the Labor Commissioner, these penalties shall be withheld from progress payments then due.

26.4.6 [RESERVED]

26.5 [RESERVED]

26.6 Apprentices

26.6.1 Contractor acknowledges and agrees that, if this Contract involves a dollar amount greater than or a number of working days greater than that specified in Labor Code section 1777.5, then this Contract is governed by the provisions of Labor Code Section 1777.5. It shall be the responsibility of Contractor to ensure compliance with this Article and with Labor Code section 1777.5 for all apprenticeship occupations.

26.6.2 Apprentices of any crafts or trades may be employed and, when required by Labor Code section 1777.5, shall be employed provided they are properly registered in full compliance with the provisions of the Labor Code.

26.6.3 Every such apprentice shall be paid the standard wage paid to apprentices under the regulations of the craft or trade at which he/she is employed, and shall be employed only at the work of the craft or trade to which she/he is registered.

26.6.4 Only apprentices, as defined in section 3077 of the Labor Code, who are in training under apprenticeship standards and written apprentice agreements under chapter 4 (commencing at section 3070), division 3, of the Labor Code, are eligible to be employed. The employment and training of each apprentice shall be in accordance with the provisions of the apprenticeship standards and apprentice agreements under which he/she is training.

26.6.5 Pursuant to Labor Code section 1777.5, if that section applies to this Contract as indicated above, Contractor and any Subcontractors employing workers in any apprenticeable craft or trade in performing any Work under this Contract shall apply to the applicable joint apprenticeship committee for a certificate approving the Contractor or Subcontractor under the applicable apprenticeship standards and fixing the ratio of apprentices to journeymen employed in performing the Work.

26.6.6 Pursuant to Labor Code section 1777.5, if that section applies to this Contract as indicated above, Contractor and any Subcontractor may be required to make contributions to the apprenticeship program.

26.6.7 If Contractor or Subcontractor willfully fails to comply with Labor Code section 1777.5, then, upon a determination of noncompliance by the Administrator of Apprenticeship, it shall:

26.6.7.1 Be denied the right to bid on any subsequent project for one (1) year from the date of such determination;

26.6.7.2 Forfeit as a penalty to District the full amount as stated in Labor Code section 1777.7. Interpretation and enforcement of these provisions shall be in accordance with the rules and procedures of the California Apprenticeship Council and under the authority of the Chief of the Division of Apprenticeship Standards.

26.6.8 Contractor and all Subcontractors shall comply with Labor Code section 1777.6, which section forbids certain discriminatory practices in the employment of apprentices.

26.6.9 Contractor shall become fully acquainted with the law regarding apprentices prior to commencement of the Work. Special attention is directed to sections 1777.5, 1777.6, and 1777.7 of the Labor Code, and title 8, California Code of Regulations, section 200 et seq. Questions may be directed to the State Division of Apprenticeship Standards, 455 Golden Gate Avenue, 9th floor, San Francisco, California 94102.

26.7 Non-Discrimination

26.7.1 Contractor herein agrees to comply with the provisions of the California Fair Employment and Housing Act as set forth in part 2.8 of division 3 of the California Government Code, commencing at section 12900; the Federal Civil Rights Act of 1964, as set forth in Public Law 88-352, and all amendments thereto; Executive Order 11246; and all administrative rules and regulations found to be applicable to Contractor and Subcontractor.

26.7.2 Special requirements for Federally Assisted Construction Contracts: During the performance of this Contract, Contractor agrees to incorporate in all subcontracts the provisions set forth in Chapter 60-1.4(b) of Title 41 published in Volume 33 No. 104 of the Federal Register dated May 28, 1968.

26.8 Labor First Aid

Contractor shall maintain emergency first aid treatment for Contractor’s workers on the Project which complies with the Federal Occupational Safety and Health Act of 1970 (29 U.S.C. § 651 *et seq.*) and the California Occupational Safety and Health Act of 1973 (Lab. Code, § 6300 *et seq.*; 8 Cal. Code of Regs., § 330 *et seq.*).

27. [RESERVED]

28. MISCELLANEOUS

28.1 Assignment of Antitrust Actions

28.1.1 Section 7103.5(b) of the Public Contract Code states:

In entering into a public works contract or subcontract to supply goods, services, or materials pursuant to a public works contract, the Contractor or subcontractor offers and agrees to assign to the awarding body all rights, title, and interest in and to all causes of action it may have under Section 4 of the Clayton Act (15 U.S.C. Sec. 15) or under the Cartwright Act (Chapter 2 (commencing with Section 16700) of Part 2 of Division 7 of the Business and Professions Code), arising from purchases of goods, which assignment shall be made and become effective at the time the awarding body tenders final payment to the Contractor, without further acknowledgment by the parties.

28.1.2 Section 4552 of the Government Code states:

In submitting a bid to a public purchasing body, the bidder offers and agrees that if the bid is accepted, it will assign to the purchasing body all rights, title, and interest in and to all causes of action it may have under Section 4 of the Clayton Act (15 U.S.C. Sec. 15) or under the Cartwright Act (Chapter 2 (commencing with Section

16700) of Part 2 of Division 7 of the Business and Professions Code), arising from purchases of goods, materials, or services by the bidder for sale to the purchasing body pursuant to the bid. Such assignment shall be made and become effective at the time the purchasing body tenders final payment to the bidder.

28.1.3 Section 4553 of the Government Code states:

If an awarding body or public purchasing body receives, either through judgment or settlement, a monetary recovery for a cause of action assigned under this chapter, the assignor shall be entitled to receive reimbursement for actual legal costs incurred and may, upon demand, recover from the public body any portion of the recovery, including treble damages, attributable to overcharges that were paid by the assignor but were not paid by the public body as part of the bid price, less the expenses incurred in obtaining that portion of the recovery.

28.1.4 Section 4554 of the Government Code states:

Upon demand in writing by the assignor, the assignee shall, within one year from such demand, reassign the cause of action assigned under this part if the assignor has been or may have been injured by the violation of law for which the cause of action arose and (a) the assignee has not been injured thereby, or (b) the assignee declines to file a court action for the cause of action.

28.1.5 Under this Article, "public purchasing body" is District and "bidder" is Contractor.

28.2 **Excise Taxes**

If, under Federal Excise Tax Law, any transaction hereunder constitutes a sale on which a Federal Excise Tax is imposed and the sale is exempt from such Federal Excise Tax because it is a sale to a State or Local Government for its exclusive use, District, upon request, will execute documents necessary to show (1) that District is a political subdivision of the State for the purposes of such exemption, and (2) that the sale is for the exclusive use of District. No Federal Excise Tax for such materials shall be included in any Contract Price.

28.3 **Taxes**

Contract Price is to include any and all applicable sales taxes or other taxes that may be due in accordance with section 7051 et seq. of the Revenue and Taxation Code, Regulation 1521 of the State Board of Equalization or any other tax code that may be applicable.

28.4 **Shipments**

Contractor is responsible for any or all damage or loss to shipments until delivered and accepted on Site, as indicated in the Contract Documents. There must be no charge for containers, packing, unpacking, drayage, or insurance. The total Contract Price shall be all inclusive (including sales tax) and no additional costs of any type will be considered.

28.5 Compliance with Government Reporting Requirements

If this Contract is subject to federal or other governmental reporting requirements because of federal or other governmental financing in whole or in part for the Project of which it is part, or for any other reason, Contactor shall comply with those reporting requirements at the request of the District at no additional cost.

15. Preliminary Schedule of Values
27. Federal Labor, Wage & Labor, Apprenticeship, and Related Provisions

DOCUMENT 00 73 13

SPECIAL CONDITIONS**1. Mitigation Measures**

Contractor shall comply with all applicable mitigation measures, if any, adopted by any public agency with respect to this Project pursuant to the California Environmental Quality Act (CEQA). (Public Resources Code section 21000 *et seq.*)

See Appendix A for the Mitigation Monitoring and Reporting Program (MMRP) for the Merritt College Child Development Center Project. The General Contractor shall review and be familiar with the MMRP. The mitigation measures that are the responsibility of the contractor to implement and monitor include but are not limited to:

- (A) Air Quality: AIR-1
- (B) Hazards and Hazardous Materials: HAZARDS-1
- (C) Noise: NOISE-1a; NOISE-1c; NOISE-1d

2. Modernization Projects

2.1 Access. Access to the school buildings and entry to buildings, classrooms, restrooms, mechanical rooms, electrical rooms, or other rooms, for construction purposes, must be coordinated with District and onsite District personnel before Work is to start. Unless agreed to otherwise in writing, only a school custodian will be allowed to unlock and lock doors in existing building(s). The custodian will be available only while school is in session. If a custodian is required to arrive before 7:00 a.m. or leave after 3:30 p.m. to accommodate Contractor's Work, the overtime wages for the custodian will be paid by the Contractor, unless at the discretion of the District, other arrangements are made in advance.

2.2 Keys. Upon request, the District may, at its own discretion, provide keys to the school site for the convenience of the Contractor. The Contractor agrees to pay all expenses to re-key the entire school site and all other affected District buildings if the keys are lost or stolen, or if any unauthorized party obtains a copy of a key or access to the school.

2.3 Maintaining Services. The Contractor is advised that Work is to be performed in spaces regularly scheduled for instruction. Interruption and/or periods of shutdown of public access, electrical service, water service, lighting, or other utilities shall be only as arranged in advance with the District. Contractor shall provide temporary services to all facilities interrupted by Contractor's Work.

2.4 Maintaining Utilities. The Contractor shall maintain in operation during duration of Contract, drainage lines, storm drains, sewers, water, gas, electrical, steam, and other utility service lines within working area.

2.5 Confidentiality. Contractor shall maintain the confidentiality of all information, documents, programs, procedures and all other items that Contractor

encounters while performing the Work. This requirement shall be ongoing and shall survive the expiration or termination of this Contract and specifically includes, without limitation, all student, parent, and employee disciplinary information and health information.

2.6 Work during Instructional Time. By submitting its bid, Contractor affirms that Work may be performed during ongoing instruction in existing facilities. If so, Contractor agrees to cooperate to the best of its ability to minimize any disruption to school operations and any use of school facilities by the public up to, and including, rescheduling specific work activities, at no additional cost to District.

2.7 No Work during Student Testing. Contractor shall, at no additional cost to the District and at the District's request, coordinate its Work to not disturb District students including, without limitation, not performing any Work when students at the Site are taking State or Federally-required tests.

3. Badge Policy for Contractors

All Contractors doing work for the District will provide their workers with identification badges. These badges will be worn by all members of the Contractor's staff who are working in a District facility.

3.1 Badges must be filled out in full and contain the following information:

3.1.1 Name of Contractor

3.1.2 Name of Employee

3.1.3 Contractor's address and phone number

3.2 Badges are to be worn when the Contractor or his/her employees are on site and must be visible at all times. Contractors must inform their employees that they are required to allow District employees, the Architect, the Construction Manager, the Program Manager, or the Project Inspector to review the information on the badges upon request.

3.3 Continued failure to display identification badges as required by this policy may result in the individual being removed from the Project or assessment of fines against the Contractor.

4. Substitutions for Specified Items

Replace Section 1.7 in the General Conditions with the following provisions:

4.1 Whenever in the Specifications any materials, process, or article is indicated or specified by grade, patent, or proprietary name, or by name of manufacturer, that Specification shall be deemed to be followed by the words "or equal." Contractor may,

unless otherwise stated, offer any material, process, or article that shall be substantially equal or better in every respect to that so indicated or specified.

4.1.1 If the material, process, or article offered by Contractor is not, in the opinion of the District, substantially equal or better in every respect to that specified, then Contractor shall furnish the material, process, or article specified in the Specifications without any additional compensation or change order.

4.1.2 This provision shall not be applicable with respect to any material, product, thing or service for which District made findings and gave notice in accordance with Public Contract Code section 3400(c); therefore, Contractor shall not be entitled to request a substitution with respect to those materials, products or services.

4.2 A request for a substitution shall be submitted as follows:

4.2.1 Contractor shall notify the District in writing of any request for a substitution at least ten (10) days prior to bid opening as indicated in the Instructions to Bidders.

4.2.2 Requests for Substitutions after award of the Contract shall be submitted within thirty-five (35) days of the date of the Notice of Award.

4.3 Within 35 days after the date of the Notice of Award, Contractor shall provide data substantiating a request for substitution of "an equal" item, including but not limited to the following:

4.3.1 All variations of the proposed substitute from the material specified including, but not limited to, principles of operation, materials, or construction finish, thickness or gauge of materials, dimensions, weight, and tolerances;

4.3.2 Available maintenance, repair or replacement services;

4.3.3 Increases or decreases in operating, maintenance, repair, replacement, and spare parts costs;

4.3.4 Whether or not acceptance of the substitute will require other changes in the Work (or in work performed by the District or others under Contract with the District); and

4.3.5 The time impact on any part of the Work resulting directly or indirectly from acceptance of the proposed substitute.

4.4 No substitutions shall be made until approved, in writing, by the District. The burden of proof as to equality of any material, process, or article shall rest with Contractor. The Contractor warrants that if substitutes are approved:

4.4.1 The proposed substitute is equal or superior in all respects to that specified, and that such proposed substitute is suitable and fit for the intended

purpose and will perform adequately the function and achieve the results called for by the general design and the Contract Documents;

4.4.2 The Contractor provides the same warranties and guarantees for the substitute that would be provided for that specified;

4.4.3 The Contractor shall be fully responsible for the installation of the substitute and any changes in the Work required, either directly or indirectly, because of the acceptance of such substitute, with no increase in Contract Price or Contract Time. Incidental changes or extra component parts required to accommodate the substitute will be made by the Contractor without a change in the Contract Price or Contract Time;

4.4.4 The Contractor shall be responsible for any re-design costs occasioned by District's acceptance and/or approval of any substitute; and

4.4.5 The Contractor shall, in the event that a substitute is less costly than that specified, credit the District with one hundred percent (100%) of the net difference between the substitute and the originally specified material. In this event, the Contractor agrees to execute a deductive Change Order to reflect that credit.

4.5 In the event Contractor furnishes a material, process, or article more expensive than that specified, the difference in the cost of that material, process, or article so furnished shall be borne by Contractor.

4.6 In no event shall the District be liable for any increase in Contract Price or Contract Time due to any claimed delay in the evaluation of any proposed substitute or in the acceptance or rejection of any proposed substitute.

4.7 Contractor shall be responsible for any costs the District incurs for professional services, DSA fees, or delay to the Project Schedule, if applicable, while DSA reviews changes for the convenience of Contractor and/or to accommodate Contractor's means and methods. District may deduct those costs from any amounts owing to the Contractor for the review of the request for substitution, even if the request for substitution is not approved. District, at its sole discretion, shall deduct from the payments due to and/or invoice Contractor for all the professional services and/or DSA fees or delay to the Project Schedule, if applicable, while DSA reviews changes for the convenience of Contractor and/or to accommodate Contractor's means and methods arising herein.

5. Weather Days

Replace Section 15.2.1.5 in the General Conditions with the following:

15.2.1.5 The number of days of Adverse Weather exceeds the following parameters:

January	11	July	0
February	10	August	0
March	10	September	1

April	6	October	4
May	3	November	7
June	1	December	10

6. Insurance Policy Limits

All of Contractor’s insurance shall be with insurance companies with an A.M. Best rating of no less than **A- or A:VII**. The limits of insurance shall not be less than:

Commercial General Liability	Product Liability and Completed Operations, Fire Damage Liability – Split Limit	\$2,000,000 per occurrence; \$4,000,000 aggregate
Automobile Liability – Any Auto	Combined Single Limit	\$1,000,000
Workers’ Compensation		Statutory limits pursuant to State law
Employers’ Liability		\$1,000,000
Builder’s Risk (Course of Construction)		Issued for the value and scope of Work indicated herein.
Pollution Liability		\$1,000,000 per claim; \$2,000,000 aggregate

7. Permits, Certificates, Licenses, Fees, Approvals

7.1 Payment for Permits, Certificates, Licenses, Fees, and Approvals. As required in the General Conditions, the Contractor shall secure and pay for all permits, licenses, approvals, and certificates necessary for the prosecution of the Work with the exception of the following:

7.2 General Permit For Storm Water Discharges Associated With Construction and Land Disturbance Activities

7.2.1 Contractor acknowledges that all California school districts are obligated to develop and implement the following requirements for the discharge of storm water to surface waters from its construction and land disturbance activities (storm water requirements):

7.2.1.1 Projects that disturb less than one acre of land and are not part of a larger common plan of development or sale, in accordance with Title 24,

Chapter 5.106.1, shall prevent the pollution of stormwater runoff from the construction activities through one or more of the following measures:

7.2.1.1.1 Comply with lawfully enacted stormwater management and/or erosion control ordinance.

7.2.1.1.2 Prevent loss of soil through wind or water erosion by adhering to a Storm Water Pollution Prevention Plan ("SWPPP") implementing an effective combination of erosion and sediment control and good housekeeping best management practices ("BMPs").

7.2.1.1.2.1 Soil loss BMP's that should be considered for implementation as appropriate for each project include, but are not limited to, the following:

7.2.1.1.2.1.1 Scheduling construction activity during dry weather, when possible.

7.2.1.1.2.1.2 Preservation of natural features, vegetation, soil, and buffers around surface waters.

7.2.1.1.2.1.3 Drainage swales or lined ditches to control stormwater flow.

7.2.1.1.2.1.4 Mulching or hydroseeding to stabilize disturbed soils.

7.2.1.1.2.1.5 Erosion control to protect slopes.

7.2.1.1.2.1.6 Protection of storm drain inlets (gravel bags or catch basin inserts).

7.2.1.1.2.1.7 Perimeter sediment control (perimeter silt fence, fiber rolls).

7.2.1.1.2.1.8 Sediment trap or sediment basin to retain sediment on site.

7.2.1.1.2.1.9 Stabilized construction exits.

7.2.1.1.2.1.10 Wind erosion control.

7.2.1.1.2.1.11 Other soil loss BMP's acceptable to the enforcing agency.

7.2.1.1.2.2 Good housekeeping BMP's to manage construction equipment, materials, non-stormwater discharges, and wastes that should be considered for implementation as appropriate for each project include, but are not limited to, the following:

7.2.1.1.2.2.1 Dewatering activities.

- 7.2.1.1.2.2.2** Material handling and waste management.
- 7.2.1.1.2.2.3** Building materials stockpile management.
- 7.2.1.1.2.2.4** Management of washout areas (concrete, paints, stucco, etc.).
- 7.2.1.1.2.2.5** Control of vehicle/equipment fueling to contractor’s staging area.
- 7.2.1.1.2.2.6** Vehicle and equipment cleaning performed off site.
- 7.2.1.1.2.2.7** Spill prevention and control.
- 7.2.1.1.2.2.8** Other housekeeping BMP’s acceptable to the enforcing agency.

7.2.1.2 Projects that disturb one acre or more of land, or disturb less than one acre of land but are part of a larger common plan of development or sale shall comply with all lawfully enacted stormwater discharge regulations in accordance with Title 24, Chapter 5.106.2.

7.2.2 Contractor shall comply with any District storm water requirements that are approved by the District and applicable to the Project, at no additional cost to the District.

7.2.3 At no additional cost to the District, Contractor shall provide a Qualified Storm Water Practitioner who shall be onsite and implement and monitor any and all SWPPP requirements applicable to the Project, including but not limited to:

7.2.3.1 At least forty eight (48) hours prior to a forecasted rain event, implementing the Rain Event Action Plan (REAP) for any rain event requiring implementation of the REAP, including any erosion and sediment control measures needed to protect all exposed portions of the site; and

7.2.3.2 Monitoring any Numeric Action Levels (NALs), if applicable.

8. Project Labor Agreement/Payroll Records

The District has entered into a Project Labor Agreement (“PLA”), which covers this Project. Accordingly, the following provision is added as Section 26.4.6:

26.4.6 As Contractor and its subcontractors have agreed to be bound by the terms of the PLA entered into by the District [on or about / dated] _____, Contractor and its subcontractors may be excused from uploading CPRs electronically using DIR’s eCPR System by uploading the CPRs by electronic XML file or entering each record manually using the DIR’s iform (or current form) online at <http://www.dir.ca.gov/Public-Works/Certified-Payroll-Reporting.html> , or by using a more current application and URL. However, within ten (10) days of any request by

the District or Labor Commissioner, Contractor and its subcontractors shall provide CPRs showing the name, address, social security number, work classification, straight time, and overtime hours worked each day and week, and the actual per diem wages paid to each journeyman, apprentice, worker, or other employee employed by the Contractor and/or each subcontractor in connection with the Work.

9. As-Builts and Record Drawings

9.1 When called for by Division 1, Contractor shall submit As-Built Drawings pursuant to the Contract Documents consisting of one set of computer-aided design and drafting ("CADD") files in .DWG format, plus one set of As Built Drawings in electronic PDF format.

9.2 Contractor shall submit Record Drawings pursuant to the Contract Documents consisting of one set of computer-aided design and drafting ("CADD") files in in .DWG format, plus one set of Record Drawings on electronic PDF format.

10. Construction Manager

The District will use a Construction Manager on the Project that is the subject of this Contract. Kitchell CEM is the Construction Manager for this Project.

11. Program Manager

AECOM is the Program Manager designated for the Project that is the subject of this Contract.

12. Federal Funds

As this Project is funded in whole or in part by federal funds, Contractor and all Subcontractors are subject to civil or criminal prosecution for any violation of the federal False Claims Act set forth under section 1001 of title 18 and section 231 of title 31 of the United States Code.

13. Separation of Documentation for Each Increment (Increment #1 and Increment #2)

Funding for the project comes from different funding sources; therefore, documentation must be separated by the two project Increments (Increment # 1 and Increment #2). This includes, but is not limited to, separation of the following items:

- (A) Applications for Payments
- (B) Change Order/Potential Change Orders (PCOs) Requests
- (C) Requests for Information (RFIs)
- (D) Submittals

14. Project Management Information System (PMIS)

The Contractor will be responsible to use the Project Management Information System (PMIS) supplied by the District as required. The PMIS will be used for all project documentation including but not limited to:

- (A) Applications for Payments
- (B) Change Order/Potential Change Orders (PCOs) Requests
- (C) Requests for Information (RFIs)
- (D) Submittals
- (E) Daily Logs
- (F) Meeting Minutes
- (G) Reports

15. Preliminary Schedule of Values

The preliminary schedule of values shall include, at a minimum, the following information and the following structure:

Replace provision in the General Conditions with the following provisions:

15.1.1.2.3. The preliminary schedule of values shall not provide for values any greater than the following percentages of the Contract value:

15.1.2.3.1 Mobilization and layout combined to equal not more than [1]%;

15.1.1.2.3.2 Submittals, samples and shop drawings combined to equal not more than [3]%;

15.1.1.2.3.3 Bonds and insurance combined to equal not more than [2]%.

The following provisions are added as Section 27:

27. FEDERAL LABOR, WAGE & HOUR, APPRENTICE, AND RELATED PROVISIONS

27.1 Minimum Wages

The Davis-Bacon Act and 29 CFR parts 1 through 7 shall apply if the Project is financed in whole or in part from Federal funds or in accordance with guarantees of a Federal agency or financed from funds obtained by pledge of any contract of a Federal agency to make a loan, grant or annual contribution.

27.1.1 All laborers and mechanics employed or working upon the Site of the Work (or under the United States Housing Act of 1937 or under the Housing Act of 1949 in the construction or development of the Project), will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account, except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR part 3) , the full amount

of wages and bona fide fringe benefits, or cash equivalents thereof, due at time of payment computed at rates not less than those contained in the applicable wage determination of the Secretary of Labor regardless of any contractual relationship which may be alleged to exist between the Contractor and such laborers and mechanics.

Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of this section, including but not limited to paragraph 27.1.7; also, regular contributions made or costs incurred for more than a weekly period, but not less often than quarterly, under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of Work actually performed, without regard to skill, except as provided in 29 CFR 5.5(a)(4). Laborers or mechanics performing Work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: Provided, that the employer's payroll records accurately set forth the time spent in each classification in which Work is performed. The wage determination including any additional classification and wage rates conformed under this section, including but not limited to paragraph 27.1.6 and the Davis-Bacon poster (WH-1321) shall be posted at all times by the Contractor and its Subcontractors at the Site of the Work in a prominent and accessible place where it can be easily seen by the workers.

27.1.2 Any class of laborers or mechanics, including helpers, and which is to be employed under the Contract which is not listed in the wage determination shall be classified in conformance with the wage determination. An additional classification and wage rate and fringe benefits will not be approved unless when the following criteria have been met:

27.1.2.1 The Work to be performed by the classification requested is not performed by a classification in the wage determination; and

27.1.2.2 The classification is utilized in the area by the construction industry; and

27.1.2.3 The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

27.1.3 If the Contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the District agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the Contractor to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, DC 20210.

27.1.4 In the event the Contractor, the laborers or mechanics to be employed in the classification or their representatives, and the District do not agree on the proposed classification and wage rate (including the amount designated for fringe

benefits, where appropriate), the Contractor shall provide the questions, including the views of all interested parties and the recommendation of the District, to the District for the District's review and referral to the Administrator for determination.

27.1.5 The wage rate (including fringe benefits where appropriate) determined pursuant to this section, shall be paid to all workers performing Work in the classification under this Contract from the first day on which Work is performed in the classification.

27.1.6 Whenever the minimum wage rate prescribed in any applicable wage determination for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, Contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

27.1.7 If the Contractor does not make payments to a trustee or other third person, the Contractor may consider, as part of the wages of any laborer or mechanic, the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, provided that the Secretary of Labor has found, upon the written request of the Contractor, that the applicable standards of the Davis-Bacon Act have been met. If the Secretary of Labor so requires, the Contractor shall set aside in a separate account sufficient assets to meet obligations under the plan or program.

27.2 Withholding. District may, upon its own action or upon written request of an authorized representative of the Department of Labor, withhold or cause to be withheld from the Contractor under this Contract or any other Federal contract with the same Contractor, or any other federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same Contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the Contractor or any Subcontractor the full amount of wages required by the Contract. In the event of Contractor's or any Subcontractors' failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the Site of the Work (or under the United States Housing Act of 1937 or under the Housing Act of 1949 in the construction or development of the project), all or part of the wages required by the Contract, the District may, after written notice to the Contractor, sponsor, applicant, or owner, take such action as it deems necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

27.3 Payrolls and basic records.

27.3.1 Payrolls and basic records relating thereto shall be maintained by the Contractor during the course of the Work and preserved for a period of three years thereafter for all laborers and mechanics working at the Site of the Work (or under the United States Housing Act of 1937, or under the Housing Act of 1949, in the construction or development of the project). Such records shall contain the name, address, and social security number of each worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in section

1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in section 1(b)(2)(B) of the Davis-Bacon Act, the Contractor shall maintain records that show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs.

27.3.2 The Contractor shall submit weekly for each week in which any Contract Work is performed a copy of all payrolls to the District. The payrolls submitted shall set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i), except that full social security numbers and home addresses shall not be included on weekly transmittals. Instead the payrolls shall only need to include an individually identifying number for each employee (e.g., the last four digits of the employee's social security number). The required weekly payroll information shall be submitted on a form acceptable to the District. Optional Form WH-347 is available for this purpose from the Wage and Hour Division Web site at <https://www.dol.gov/whd/programs/dbra/wh347.htm> or its successor site. Contractor is responsible for the submission of copies of payrolls by all Subcontractors. Contractor and Subcontractors shall maintain the full social security number and current address of each covered worker, and shall provide them upon request to the District, the Contractor, or the Wage and Hour Division of the Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. Contractor may require a Subcontractor to provide addresses and social security numbers to the Contractor for its own records, without weekly submission to the District or other government agency

27.3.3 Each payroll submitted shall be accompanied by a "Statement of Compliance," signed by the Contractor or Subcontractor or his or her agent who pays or supervises the payment of the persons employed under the Contract and shall certify the following:

27.3.3.1 That the payroll for the payroll period contains the information required to be provided under 29 CFR 5.5 (a)(3)(ii) of Regulations, 29 CFR part 5,

27.3.3.2 That the appropriate information is being maintained under 29 CFR 5.5 (a)(3)(i) of Regulations, 29 CFR part 5, and

27.3.3.3 That such information is correct and complete;

27.3.3.4 That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the Contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and

27.3.3.5 That no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations, 29 CFR part 3;

27.3.3.6 That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of Work performed, as specified in the applicable wage determination incorporated into or applicable to the Contract.

27.3.3.7 The weekly submission of a properly executed certification in the form set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by paragraph 27.3.3 of this section.

27.3.3.8 The falsification of any of the above certifications may subject the Contractor or one or more Subcontractors to civil or criminal prosecution under section 1001 of title 18 and section 231 of title 31 of the United States Code.

27.3.3.9 The Contractor or Subcontractor shall make the records required under this section available for inspection, copying, or transcription by authorized representatives of the District or the federal Department of Labor, and shall permit representatives to interview employees during working hours on the job. If the Contractor or Subcontractor fails to submit the required records or to make them available, the Federal agency may, after written notice to the Contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

27.4 Apprentices and trainees

27.4.1 Apprentices. Apprentices will be permitted to work at less than the predetermined rate for the Work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship Training, Employer and Labor Services, or with a State Apprenticeship Agency recognized by the Office, or if a person is employed in his or her first ninety (90) days of probationary employment as an apprentice in an eligible apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship Training, Employer and Labor Services or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job Site in any craft classification shall not be greater than the ratio permitted to the Contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of Work actually performed. In addition, any apprentice performing Work on the job Site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the Work actually performed. Where a Contractor is

performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the Contractor's or Subcontractor's registered program shall be observed. Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination. In the event the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency recognized by the Office, withdraws approval of an apprenticeship program, the Contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the Work performed until an acceptable program is approved.

27.4.2 Trainees. Except as provided in 29 CFR 5.16, trainees will not be permitted to Work at less than the predetermined rate for the Work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job Site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of Work actually performed. In addition, any trainee performing Work on the job Site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the Work actually performed. In the event the Employment and Training Administration withdraws approval of a training program, the Contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the Work performed until an acceptable program is approved.

27.4.3 Equal employment opportunity. The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR part 30.

27.5 Compliance with Copeland Act requirements. Contractor shall comply with the requirements of 29 CFR part 3, which are incorporated by reference in this Contract.

27.6 Subcontracts. The Contractor or Subcontractor shall insert in any subcontracts the clauses contained in 29 CFR 5.5(a)(1) through (10) and such other clauses as the Federal agency may by appropriate instructions require, and also a clause requiring the Subcontractors to include these clauses in any lower tier subcontracts. The Contractor shall be responsible for the compliance by any Subcontractor or lower tier Subcontractor with all the Contract clauses in 29 CFR 5.5.

27.7 Contract termination: debarment. A breach of the Contract clauses in 29 CFR 5.5 may be grounds for termination of the Contract, and for debarment as a Contractor and a Subcontractor as provided in 29 CFR 5.12.

27.8 Compliance with Davis-Bacon and Related Act requirements. All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR parts 1, 3, and 5 are herein incorporated by reference in this Contract.

27.9 Disputes concerning labor standards. Disputes arising out of the labor standards provisions of this Contract shall not be subject to the general disputes clause of this Contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the Contractor (or any of its Subcontractors) and the contracting agency, the U.S. Department of Labor, or the employees or their representatives.

27.10 Certification of eligibility.

27.10.1 By entering into this Contract, the Contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the Contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

27.10.2 No part of this Contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

27.10.3 Contractor shall be subject to the penalty for making false statements prescribed in the U.S. Criminal Code, 18 U.S.C. 1001.

27.11 Clauses Mandated by Contract Work Hours and Safety Standards Act.

As used in the following paragraphs, the terms laborers and mechanics include watchmen and guards.

27.11.1 Overtime requirements. No Contractor or Subcontractor contracting for any part of the Contract Work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such Work to work in excess of forty

hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such workweek.

27.11.2 Violation; liability for unpaid wages; liquidated damages. In the event of any violation of the clause set forth in the foregoing paragraph the Contractor and any Subcontractor responsible therefor shall be liable for the unpaid wages. In addition, such Contractor and Subcontractor shall be liable to the United States for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the foregoing paragraph, in the sum of \$10 for each calendar day on which such individual was required or permitted to Work in excess of the standard workweek of forty hours without payment of the overtime wages required by the foregoing paragraph.

27.11.3 Withholding for unpaid wages and liquidated damages. The District may upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld, from any moneys payable on account of Work performed by the Contractor or Subcontractor under the Contract or any other Federal contract with the same Contractor, or any other federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same Contractor, such sums as may be determined to be necessary to satisfy any liabilities of such Contractor or Subcontractor for unpaid wages and liquidated damages as provided in the foregoing paragraph.

27.11.4 Subcontracts. The Contractor or Subcontractor shall insert in any subcontracts the foregoing paragraphs concerning "Overtime requirements" and "Violation; liability for unpaid wages; liquidated damages" and also a clause requiring each Subcontractor to include these clauses in any lower tier subcontracts. Contractor shall be responsible for compliance by any Subcontractor or lower tier Subcontractor with the clauses set forth in paragraphs 27.11.1 through 27.11.4 of this section.

DOCUMENT 00 73 56

HAZARDOUS MATERIALS
PROCEDURES & REQUIREMENTS

1. Summary

This document includes information applicable to hazardous materials and hazardous waste abatement.

2. Notice of Hazardous Waste or Materials

- a. Contractor shall give notice in writing to the District, the Construction Manager, and the Architect promptly, before any of the following materials are disturbed, and in no event later than twenty-four (24) hours after first observance, of any:
 - (1) Material that Contractor believes may be a material that is hazardous waste or hazardous material, as defined in section 25117 of the Health and Safety Code, that is required to be removed to a Class I, Class II, or Class III disposal site in accordance with provisions of existing law;
 - (2) Other material that may present a substantial danger to persons or property exposed thereto in connection with Work at the site.
- b. Contractor's written notice shall indicate whether the hazardous waste or material was shown or indicated in the Contract Documents to be within the scope of Work, and whether the materials were brought to the site by Contractor, its Subcontractors, suppliers, or anyone else for whom Contractor is responsible. As used in this section the term "hazardous materials" shall include, without limitation, asbestos, lead, Polychlorinated biphenyl (PCB), petroleum and related hydrocarbons, and radioactive material.
- c. In response to Contractor's written notice, the District shall investigate the identified conditions.
- d. If the District determines that conditions do not involve hazardous materials or that no change in terms of Contract is justified, the District shall so notify Contractor in writing, stating reasons. If the District and Contractor cannot agree on whether conditions justify an adjustment in Contract Price or Contract Time, or on the extent of any adjustment, Contractor shall proceed with the Work as directed by the District.
- e. If after receipt of notice from the District, Contractor does not agree to resume Work based on a reasonable belief it is unsafe, or does not agree to resume Work under special conditions, then District may order such portion of Work that is in connection with such hazardous condition or such affected area to be deleted from the Work, or performed by others, or District may invoke its rights to terminate the Contract in whole or in part. District will determine entitlement to or the amount or extent of an adjustment, if any, in

Contract Price or Contract Time as a result of deleting such portion of Work, or performing the Work by others.

- f. If Contractor stops Work in connection with any hazardous condition and in any area affected thereby, Contractor shall immediately redeploy its workers, equipment, and materials, as necessary, to other portions of the Work to minimize delay and disruption.

3. Additional Warranties and Representations

- a. Contractor represents and warrants that it, its employees, and its subcontractors and their employees, shall at all times have the required levels of familiarity with the Site and the Work, training, and ability to comply fully with all applicable laws and contractual requirements for safe and expeditious performance of the Work, including whatever training is or may be required regarding the activities to be performed (including, but not limited to, all training required to address adequately the actual or potential dangers of Contract performance).
- b. Contractor represents and warrants that it, its employees, and its subcontractors and their employees, shall at all times have and maintain in good standing any and all certifications and licenses required by applicable federal, state, and other governmental and quasi-governmental requirements applicable to the Work.
- c. Contractor represents and warrants that it has studied carefully all requirements of the Specifications regarding procedures for demolition, hazardous waste abatement, or safety practices, specified in the Contract, and prior to submitting its bid, has either (a) verified to its satisfaction that the specified procedures are adequate and sufficient to achieve the results intended by the Contract Documents, or (b) by way of approved "or equal" request or request for clarification and written Addenda, secured changes to the specified procedures sufficient to achieve the results intended by the Contract Documents. Contractor accepts the risk that any specified procedure will result in a completed Project in full compliance with the Contract Documents.

4. Monitoring and Testing

- a. District reserves the right, in its sole discretion, to conduct air monitoring, earth monitoring, Work monitoring, and any other tests (in addition to testing required under the agreement or applicable law), to monitor Contract requirements of safe and statutorily compliant work methods and (where applicable) safe re-entry level air standards under state and federal law upon completion of the job, and compliance of the work with periodic and final inspection by public and quasi-public entities having jurisdiction.
- b. Contractor acknowledges that District has the right to perform, or cause to be performed, various activities and tests including, but not limited to, pre-abatement, during abatement, and post-abatement air monitoring, that District shall have no obligation to perform said activities and tests, and that

a portion of said activities and tests may take place prior to the completion of the Work by Contractor. In the event District elects to perform these activities and tests, Contractor shall afford District ample access to the Site and all areas of the Work as may be necessary for the performance of these activities and tests. Contractor will include the potential impact of these activities or tests by District in the Contract Price and the Scheduled Completion Date.

- c. Notwithstanding District's rights granted by this paragraph, Contractor may retain its own industrial hygiene consultant at Contractor's own expense and may collect samples and may perform tests including, but not limited to, pre-abatement, during abatement, and post-abatement personal air monitoring, and District reserves the right to request documentation of all such activities and tests performed by Contractor relating to the Work and Contractor shall immediately provide that documentation upon request.

5. Compliance with Laws

- a. Contractor shall perform safe, expeditious, and orderly work in accordance with the best practices and the highest standards in the hazardous waste abatement, removal, and disposal industry, the applicable law, and the Contract Documents, including, but not limited to, all responsibilities relating to the preparation and return of waste shipment records, all requirements of the law, delivering of all requisite notices, and obtaining all necessary governmental and quasi-governmental approvals.
- b. Contractor represents that it is familiar with and shall comply with all laws applicable to the Work or completed Work including, but not limited to, all federal, state, and local laws, statutes, standards, rules, regulations, and ordinances applicable to the Work relating to:
 - (1) The protection of the public health, welfare and environment;
 - (2) Storage, handling, or use of asbestos, PCB, lead, petroleum based products, radioactive material, or other hazardous materials;
 - (3) The generation, processing, treatment, storage, transport, disposal, destruction, or other management of asbestos, PCB, lead, petroleum, radioactive material, or hazardous waste materials or other waste materials of any kind; and
 - (4) The protection of environmentally sensitive areas such as wetlands and coastal areas.

6. Disposal

- a. Contractor has the sole responsibility for determining current waste storage, handling, transportation, and disposal regulations for the job Site and for each waste disposal facility. Contractor must comply fully at its sole cost and expense with these regulations and any applicable law. District may, but is

not obligated to, require submittals with this information for it to review consistent with the Contract Documents.

- b. Contractor shall develop and implement a system acceptable to District to track hazardous waste from the Site to disposal, including appropriate "Hazardous Waste Manifests" on the EPA form, so that District may track the volume of waste it put in each landfill and receive from each landfill a certificate of receipt.
- c. Contractor shall provide District with the name and address of each waste disposal facility prior to any disposal, and District shall have the express right to reject any proposed disposal facility. Contractor shall not use any disposal facility to which District has objected. Contractor shall document actual disposal or destruction of waste at a designated facility by completing a disposal certificate or certificate of destruction forwarding the original to the District.

7. Permits

- a. Before performing any of the Work, and at such other times as may be required by applicable law, Contractor shall deliver all requisite notices and obtain the approval of all governmental and quasi-governmental authorities having jurisdiction over the Work. Contractor shall submit evidence satisfactory to District that it and any disposal facility:
 - (1) have obtained all required permits, approvals, and the like in a timely manner both prior to commencement of the Work and thereafter as and when required by applicable law; and
 - (2) are in compliance with all such permits, approvals and the regulations.

For example, before commencing any work in connection with the Work involving asbestos-containing materials, or PCBs, or other hazardous materials subject to regulation, Contractor agrees to provide the required notice of intent to renovate or demolish to the appropriate state or federal agency having jurisdiction, by certified mail, return receipt requested, or by some other method of transmittal for which a return receipt is obtained, and to send a copy of that notice to District. Contractor shall not conduct any Work involving asbestos-containing materials or PCBs unless Contractor has first confirmed that the appropriate agency having jurisdiction is in receipt of the required notification. All permits, licenses, and bonds that are required by governmental or quasi-governmental authorities, and all fees, deposits, tap fees, offsite easements, and asbestos and PCB disposal facilities expenses necessary for the prosecution of the Work, shall be procured and paid for by Contractor. Contractor shall give all notices and comply with the all applicable laws bearing on the conduct of the Work as drawn and specified. If Contractor observes or reasonably should have observed that Plans and Specifications and other Contract Documents are at variance therewith, it shall be responsible for promptly notifying District in writing of such fact. If

Contractor performs any Work contrary to applicable laws, it shall bear all costs arising therefrom.

- b. In the case of any permits or notices held in District's name or of necessity to be made in District's name, District shall cooperate with Contractor in securing the permit or giving the notice, but the Contractor shall prepare for District review and execution upon approval, all necessary applications, notices, and other materials.

8. Indemnification

To the fullest extent permitted by law, the indemnities and limitations of liability expressed throughout the Contract Documents apply with equal force and effect to any claims or liabilities imposed or existing by virtue of the removal, abatement, and disposal of hazardous waste. This includes, but is not limited to, liabilities connected to the selection and use of a waste disposal facility, a waste transporter, personal injury, property damage, loss of use of property, damage to the environment or natural resources, or "disposal" and "release" of materials associated with the Work (as defined in 42 U.S.C. § 9601 *et seq.*).

9. Termination

District shall have an absolute right to terminate for default immediately without notice and without an opportunity to cure should Contractor knowingly or recklessly commit a material breach of the terms of the Contract Documents, or any applicable law, on any matter involving the exposure of persons or property to hazardous waste. However, if the breach of contract exposing persons or property to hazardous waste is due solely to an ordinary, unintentional, and non-reckless failure to exercise reasonable care, then the procedures for termination for cause shall apply without modification.

MITIGATION MONITORING AND REPORTING PROGRAM

Mitigation Measure	Party Responsible for Ensuring Implementation	Party Responsible for Monitoring	Monitoring Timing	Compliance Verification		
				Initial	Date	Project/ Comments
Air Quality						
<p><u>AIR-1:</u> During project construction, the contractor shall implement a dust control program that includes the following measures recommended by the Bay Area Air Quality Management District (BAAQMD) and these measures shall be included in contract specifications:</p> <ul style="list-style-type: none"> ▪ All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day. ▪ If any hauling activities would occur, all haul trucks transporting soil, sand, or other loose material off-site shall be covered. ▪ All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited. ▪ All vehicle speeds on unpaved roads shall be limited to 15 miles per hour. ▪ All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used. ▪ A publicly visible sign shall be posted with the telephone number and person to contact at the lead agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The BAAQMD phone number shall also be visible to ensure compliance with applicable regulations. <p>In addition, an independent construction monitor or a Peralta Community College District (PCCD) staff member shall conduct periodic site inspections, but in no event fewer than four total inspections, during the course of construction to ensure these mitigation measures are implemented and shall issue a letter report documenting the inspection results. Reports indicating non-compliance with construction mitigation measures shall be cause to issue a stop-work order until such time as compliance is achieved.</p>	District and Contractor	District	During construction			
Biological Resources						
<p><u>BIOLOGY-1:</u> Adequate measures shall be taken to avoid inadvertent take of raptor nests and other nesting birds protected under the Migratory Bird Treaty Act when in the nests are active use. This shall be accomplished by taking the following steps:</p> <ul style="list-style-type: none"> ▪ If construction is proposed during the nesting season (February through August), a focused survey for nesting raptors and other migratory birds shall be conducted by a 	District	District	Prior to construction

				Initial	Date	Project/ Comments
<p>qualified biologist within 14 days prior to the onset of tree removal or construction, in order to identify any active nests on the project site and in the vicinity of proposed construction.</p> <ul style="list-style-type: none"> ▪ If no active nests are identified during the survey period, or if development is initiated during the non-breeding season (September through February), construction may proceed with no restrictions. ▪ If bird nests are found, an adequate setback shall be established around the nest location and construction activities restricted within this no-disturbance zone until the qualified biologist has confirmed that any young birds have fledged and are able to function outside the nest location. Required setback distances for the no-disturbance zone shall be based on input received from the California Department of Fish and Wildlife (CDFW), and may vary depending on species and sensitivity to disturbance. As necessary, the no-disturbance zone shall be fenced with temporary orange construction fencing if construction is to be initiated on the remainder of the construction area. ▪ A report of findings shall be prepared by the qualified biologist and submitted to the Peralta Community College District (PCCD) for review and approval prior to initiation of construction within the no-disturbance zone during the nesting season (February through August). The report either shall confirm absence of any active nests or shall confirm that any young within a designated no-disturbance zone have fledged and construction can proceed. <p>Implementation of Mitigation Measure BIOLOGY-1 would reduce potentially significant impacts on nesting birds to a less-than-significant level.</p>						
Cultural Resources						
<p><u>CULTURAL-1</u>: Should an archaeological deposit be encountered during project subsurface construction activities, all ground-disturbing activities within 25 feet shall be redirected and a qualified archaeologist meeting the Secretary of the Interior’s Professional Qualifications Standards for Archeology contacted to assess the situation, determine if the deposit qualifies as a historical resource, consult with agencies as appropriate, and make recommendations for the treatment of the discovery. If the deposit is found to be significant (i.e., eligible for listing in the California Register of Historical Resources), the Peralta Community College District (PCCD) shall be responsible for funding and implementing appropriate mitigation measures. Mitigation measures may include recording of the archaeological deposit, data recovery and analysis, and public outreach regarding the scientific and cultural importance of the discovery. Upon completion of the selected mitigations, a report documenting methods, findings, and recommendations shall be</p>	District	District	Prior to and during construction

MITIGATION MONITORING AND REPORTING PROGRAM

Mitigation Measure	Party Responsible for Ensuring Implementation	Party Responsible for Monitoring	Monitoring Timing	Compliance Verification		
				Initial	Date	Project/ Comments
<p>prepared and submitted to the PCCD for review, and the final report shall be submitted to the Northwest Information Center at Sonoma State University. Significant archaeological materials shall be submitted to an appropriate local curation facility and used for future research and public interpretive displays, as appropriate.</p> <p>The PCCD shall inform its contractor(s) of the sensitivity of the project area for archaeological deposits and shall verify that the following directive has been included in the appropriate contract documents:</p> <p>“The subsurface of the construction site may be sensitive for Native American archaeological deposits and associated human remains. If archaeological deposits are encountered during project subsurface construction, all ground-disturbing activities within 25 feet shall stop and a qualified archaeologist contacted to assess the situation and make recommendations for the treatment of the discovery. Project personnel shall not collect or move any archaeological materials. Archaeological deposits can include shellfish remains; bones; flakes of, and tools made from, obsidian, chert, and basalt; and mortars and pestles. Contractor acknowledges and understands that excavation or removal of archaeological material is prohibited by law and constitutes a misdemeanor under California Public Resources Code, Section 5097.5 and breach of contract.”</p> <p>With implementation of the above mitigation measure, the potential impact on historical and archaeological resources would be reduced to a less-than-significant level.</p>						
<u>CULTURAL-2</u> : Mitigation Measure CULTURAL-1 shall be implemented.	District	District	Prior to and during construction			
Hazards and Hazardous Materials						
<u>HAZARDS-1a</u> : Construction contractors shall ensure the following measures are implemented to minimize the potential for accidental ignition of construction materials and vegetation: 1) flammable/combustible materials shall be stored away from vegetated areas; 2) spark arrestors shall be fitted on all construction vehicles and equipment; 3) work that generates sparks such metal cutting, torching, and welding shall only be performed in areas where vegetation has been sufficiently cleared and the ground surface has been wetted; and 4) an adequate water source and fire extinguishers shall be available at all times for fire suppression.	District and construction contractors	District	During construction			
<u>HAZARDS-1b</u> : The Peralta Community College District (PCCD) shall develop a Vegetation Management and Fire Prevention Plan prior to the start of construction, and shall implement the plan during construction and operation of the project. The Vegetation Management and Fire Prevention Plan shall include, at a minimum, the following	District	District	Prior to construction and during construction and operation of project			

Note: District = Peralta Community College District

MERRITT COMMUNITY COLLEGE CHILD CARE DEVELOPMENT CENTER

MITIGATION MONITORING AND REPORTING PROGRAM

Mitigation Measure	Party Responsible for Ensuring Implementation	Party Responsible for Monitoring	Monitoring Timing	Compliance Verification		
				Initial	Date	Project/ Comments
measures:						
<ul style="list-style-type: none"> ▪ Using spark arrestors on all vehicles and equipment used for vegetation management; ▪ Using fire-resistant plants when planting areas for erosion control; ▪ Pruning the lower branches of tall trees; ▪ Clearing out ground-level brush and debris; and ▪ Storing combustible materials away from vegetated areas. 						
Implementation of Mitigation Measures HAZARDS-1a and HAZARDS-1b would ensure that the proposed project would result in less-than-significant impacts related to wildfires.						
Noise						
<u>NOISE-1a</u> : The Peralta Community College District (PCCD) shall require the construction contractor to develop a set of procedures for tracking and responding to complaints received pertaining to construction vibration and noise and implement the procedures during construction. At a minimum, the procedures shall include:	District and contractor	District	Prior to and during construction			
<ol style="list-style-type: none"> 1. Designation of an on-site construction complaint and enforcement manager for the project; 2. Protocols specific to on-campus and off-campus receptors for receiving, responding to, and tracking received complaints; and 3. Maintenance of a complaint log that records received complaints and how complaints were addressed. 						
<u>NOISE-1b</u> : Nearby residents, college students, and staff shall be informed of construction activity through informational notices posted on the fence line of the construction site, nearby buildings, and classrooms. The notices shall state the date of planned construction activity and include the contact information of the construction complaint and enforcement manager identified in Mitigation Measure NOISE-1a.	District	District	Prior to construction			
<u>NOISE-1c</u> : To the maximum extent practicable, the construction contractor shall coordinate construction activities so that noisier construction activities do not occur during established testing periods (e.g., finals week).	District and contractor	District	Prior to and during construction			
<u>NOISE-1d</u> : For all project construction activities, the PCCD shall require the construction contractor to implement measures to reduce noise impacts related to construction. Noise reduction measures include, but are not limited to, the following:	District and contractor	District	During construction			
<ol style="list-style-type: none"> 1. Equipment and trucks used for project construction shall use reasonable noise control techniques (e.g., improved mufflers, equipment redesign, use of intake silencers, 						

Note: District = Peralta Community College District

				Initial	Date	Project/ Comments
ducts, engine enclosures and acoustically-attenuating shields or shrouds), wherever feasible.						
2. Except as provided herein, impact tools (e.g., jack hammers, pavement breakers, and rock drills) used for project construction shall, to the extent feasible, be hydraulically or electrically powered to avoid noise associated with compressed air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used; this muffler can lower noise levels from the exhaust by up to about 10 dBA. External jackets on the tools themselves shall be used, if such jackets are commercially available; this could achieve a reduction of 5 dBA. Quieter procedures shall be used, such as drills rather than impact equipment, to the extent feasible, whenever such procedures are available and consistent with required construction procedures. These recommendations shall be included in contract specifications.						
3. To the extent feasible, stationary noise sources shall be located as far from nearby receptors as possible, and they shall be muffled and enclosed within temporary sheds, incorporate insulation barriers, or use other measures to provide reasonably equivalent noise reduction as feasible.						
The combination of the above mitigation measures would reduce the impact to a less-than-significant level.						
<u>NOISE-2:</u> Mitigation Measures NOISE-1a, NOISE-1b, NOISE-1c, and NOISE-1d shall be implemented.	District	District	Prior to and during construction			
The above mitigation measures would require the development of a noise complaint tracking and response system; notification to nearby students and staff of planned construction activities; construction to be scheduled to avoid disrupting established testing periods scheduled at Building E, as feasible; and the implementation of measures to reduce noise generated by construction to the maximum extent feasible. These measures are relevant because high noise-generating construction activities often generate high vibration levels. These measures would reduce the potential vibration impact to a less-than-significant level.

APPLICATION FOR PAYMENT AND
CONDITIONAL AND UNCONDITIONAL WAIVER
AND RELEASE FORMS

**CONDITIONAL WAIVER AND RELEASE
ON PROGRESS PAYMENT
(CIVIL CODE SECTION 8132)**

NOTICE: THIS DOCUMENT WAIVES THE CLAIMANT'S LIEN, STOP PAYMENT NOTICE, AND PAYMENT BOND RIGHTS EFFECTIVE ON RECEIPT OF PAYMENT. A PERSON SHOULD NOT RELY ON THIS DOCUMENT UNLESS SATISFIED THAT THE CLAIMANT HAS RECEIVED PAYMENT.

Name of Claimant: _____

Name of Customer: _____

Job Location: _____

Owner: _____

Through Date: _____

Conditional Waiver and Release

This document waives and releases lien, stop payment notice, and payment bond rights the claimant has for labor and service provided, and equipment and material delivered, to the customer on this job through the Through Date of this document. Rights based upon labor or service provided, or equipment or material delivered, pursuant to a written change order that has been fully executed by the parties prior to the date that this document is signed by the claimant, are waived and released by this document, unless listed as an Exception below. This document is effective only on the claimant's receipt of payment from the financial institution on which the following check is drawn:

Maker of Check: _____

Amount of Check: \$ _____

Check Payable to: _____

Exceptions

This document does not affect any of the following:

- (1) Retentions.
- (2) Extras for which the claimant has not received payment.
- (3) The following progress payments for which the claimant has previously given a conditional waiver and release but has not received payment:

Date(s) of waiver and release: _____

Amount(s) of unpaid progress payment(s): \$ _____

- (4) Contract rights, including (A) a right based on rescission, abandonment, or breach of contract, and (B) the right to recover compensation for work not compensated by the payment.

Claimant's Signature: _____

Claimant's Title: _____

Date of Signature: _____

**UNCONDITIONAL WAIVER AND RELEASE
ON PROGRESS PAYMENT
(CIVIL CODE SECTION 8134)**

NOTICE TO CLAIMANT: THIS DOCUMENT WAIVES AND RELEASES LIEN, STOP PAYMENT NOTICE, AND PAYMENT BOND RIGHTS UNCONDITIONALLY AND STATES THAT YOU HAVE BEEN PAID FOR GIVING UP THOSE RIGHTS. THIS DOCUMENT IS ENFORCEABLE AGAINST YOU IF YOU SIGN IT, EVEN IF YOU HAVE NOT BEEN PAID. IF YOU HAVE NOT BEEN PAID, USE A CONDITIONAL WAIVER AND RELEASE FORM.

Name of Claimant: _____

Name of Customer: _____

Job Location: _____

Owner: _____

Through Date: _____

Unconditional Waiver and Release

This document waives and releases lien, stop payment notice, and payment bond rights the claimant has for labor and service provided, and equipment and material delivered, to the customer on this job through the Through Date of this document. Rights based upon labor or service provided, or equipment or material delivered, pursuant to a written change order that has been fully executed by the parties prior to the date that this document is signed by the claimant, are waived and released by this document, unless listed as an Exception below. The claimant has received the following progress payment: \$_____

Exceptions

This document does not affect any of the following:

- (1) Retentions.
- (2) Extras for which the claimant has not received payment.
- (3) Contract rights, including (A) a right based on rescission, abandonment, or breach of contract, and (B) the right to recover compensation for work not compensated by the payment.

DOCUMENT 01 31 19

PROJECT MEETINGS

PART 1 – GENERAL

1.01 RELATED DOCUMENTS AND PROVISIONS:

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions; and
- B. Special Conditions.

1.02 PROGRESS MEETINGS:

- A. Contractor shall schedule and hold regular weekly progress meetings after a minimum of one week's prior written notice of the meeting date and time to all Invitees as indicated below.
- B. Location: Contractor's field office.
- C. The Contractor shall notify and invite the following entities ("Invitees"):
 - (1) District Representative.
 - (2) Contractor.
 - (3) Contractor's Project Manager.
 - (4) Contractor's Superintendent.
 - (5) Subcontractors, as appropriate to the agenda of the meeting.
 - (6) Suppliers, as appropriate to the agenda of the meeting.
 - (7) Construction Manager, if any.
 - (8) Architect
 - (9) Engineer(s), if any and as appropriate to the agenda of the meeting.
 - (10) Others, as appropriate to the agenda of the meeting.
- D. The District's, the Architect's, and/or an engineer's Consultants will attend at their discretion, in response to the agenda.
- E. The District representative, the Construction Manager, and/or another District Agent shall take and distribute meeting notes to attendees and other concerned parties. If exceptions are taken to anything in the meeting notes,

those exceptions shall be stated in writing to the District within five (5) working days following District's distribution of the meeting notes.

1.03 PRE-INSTALLATION/PERFORMANCE MEETING:

- A. Contractor shall schedule a meeting prior to the start of each of the following portions of the Work: cutting and patching of plaster and roofing, and other weather-exposed and moisture-resistant products. Contractor shall invite all Invitees to this meeting, and others whose work may affect or be affected by the quality of the cutting and patching work.
- B. Contractor shall review in detail prior to this meeting, the manufacturer's requirements and specifications, applicable portions of the Contract Documents, Shop Drawings, and other submittals, and other related work. At this meeting, invitees shall review and resolve conflicts, incompatibilities, or inadequacies discovered or anticipated.
- C. Contractor shall review in detail Project conditions, schedule, requirements for performance, application, installation, and quality of completed Work, and protection of adjacent Work and property.
- D. Contractor shall review in detail means of protecting the completed Work during the remainder of the construction period.

PART 2 - PRODUCTS Not Used.

PART 3 - EXECUTION Not Used.

END OF DOCUMENT

DOCUMENT 01 32 13

SCHEDULING OF WORK**PART 1 – GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions;
- B. Special Conditions;
- C. Summary of Work; and
- D. Submittals.

1.02 SECTION INCLUDES

- A. Scheduling of Work under this Contract shall be performed by Contractor in accordance with requirements of this Section.
 - (1) Development of schedule, cost and resource loading of the schedule, monthly payment requests, and project status reporting requirements of the Contract shall employ computerized Critical Path Method ("CPM") scheduling ("CPM Schedule").
 - (2) CPM Schedule shall be cost loaded based on Schedule of Values as approved by District.
 - (3) Submit schedules and reports as specified in the General Conditions.
- B. Upon Award of Contract, Contractor shall immediately commence development of Initial and Original CPM Schedules to ensure compliance with CPM Schedule submittal requirements.

1.03 CONSTRUCTION SCHEDULE

- A. Within ten (10) days of issuance of the Notice to Proceed, and before request for first progress payment, the Contractor shall prepare and submit to the Project Manager a construction progress schedule conforming to the Milestone Schedule below.
- B. The Construction Schedule shall be continuously updated, and an updated schedule shall be submitted with each application for progress payment. Each revised schedule shall indicate the work actually accomplished during the previous period and the schedule for completion of the remaining work.

C. Milestone Schedule:

ACTIVITY DESCRIPTION	DURATION
ALL SUBMITTALS PROVIDED	WITHIN 90 CALENDAR DAYS OF NTP
SLAB-ON-GRADE COMPLETE	WITHIN 180 CALENDAR DAYS OF NTP
BUILDING WEATHER TIGHT	WITHIN 365 CALENDAR DAYS OF NTP
SUBSTANTIAL PROJECT COMPLETION	WITHIN 510 CALENDAR DAYS OF NTP
FINAL PROJECT COMPLETION	WITHIN 540 CALENDAR DAYS OF NTP

1.04 QUALIFICATIONS

- A. Contractor shall employ experienced scheduling personnel qualified to use the latest version of [i.e., Primavera Project Planner]. Experience level required is set forth below. Contractor may employ such personnel directly or may employ a consultant for this purpose.
 - (1) The written statement shall identify the individual who will perform CPM scheduling.
 - (2) Capability and experience shall be verified by description of construction projects on which individual has successfully applied computerized CPM.
 - (3) Required level of experience shall include at least two (2) projects of similar nature and scope with value not less than three fourths (¾) of the Total Bid Price of this Project. The written statement shall provide contact persons for referenced projects with current telephone and address information.
- B. District reserves the right to approve or reject Contractor’s scheduler or consultant at any time. District reserves the right to refuse replacing of Contractor’s scheduler or consultant, if District believes replacement will negatively affect the scheduling of Work under this Contract.

1.05 GENERAL

- A. Progress Schedule shall be based on and incorporate milestone and completion dates specified in Contract Documents.
- B. Overall time of completion and time of completion for each milestone shown on Progress Schedule shall adhere to times in the Contract, unless an earlier (advanced) time of completion is requested by Contractor and agreed to by District. Any such agreement shall be formalized by a Change Order.
 - (1) District is not required to accept an early completion schedule, i.e., one that shows an earlier completion date than the Contract Time.
 - (2) Contractor shall not be entitled to extra compensation in event agreement is reached on an earlier completion schedule and Contractor completes its Work, for whatever reason, beyond

completion date shown in its early completion schedule but within the Contract Time.

- (3) A schedule showing the work completed in less than the Contract Time, and that has been accepted by District, shall be considered to have Project Float. The Project Float is the time between the scheduled completion of the work and the Completion Date. Project Float is a resource available to both District and the Contractor.
- C. Ownership Project Float: Neither the District nor Contractor owns Project Float. The Project owns the Project Float. As such, liability for delay of the Completion Date rests with the party whose actions, last in time, actually cause delay to the Completion Date.
- (1) For example, if Party A uses some, but not all of the Project Float and Party B later uses remainder of the Project Float as well as additional time beyond the Project Float, Party B shall be liable for the time that represents a delay to the Completion Date.
 - (2) Party A would not be responsible for the time since it did not consume the entire Project Float and additional Project Float remained; therefore, the Completion Date was unaffected by Party A.
- D. Progress Schedule shall be the basis for evaluating job progress, payment requests, and time extension requests. Responsibility for developing Contract CPM Schedule and monitoring actual progress as compared to Progress Schedule rests with Contractor.
- E. Failure of Progress Schedule to include any element of the Work, or any inaccuracy in Progress Schedule, will not relieve Contractor from responsibility for accomplishing the Work in accordance with the Contract. District's acceptance of schedule shall be for its use in monitoring and evaluating job progress, payment requests, and time extension requests and shall not, in any manner, impose a duty of care upon District, or act to relieve Contractor of its responsibility for means and methods of construction.
- F. Software: Use the latest version of Primavera P6 and Microsoft Project. Such software shall be compatible with Windows operating system. Contractor shall transmit contract file to District on compact disk at times requested by District.
- G. Transmit each item under the form approved by District.
- (1) Identify Project with District Contract number and name of Contractor.
 - (2) Provide space for Contractor's approval stamp and District's review stamps.
 - (3) Submittals received from sources other than Contractor will be returned to the Contractor without District's review.

1.06 INITIAL CPM SCHEDULE

- A. Initial CPM Schedule submitted for review at the pre-construction conference shall serve as Contractor’s schedule for up to ninety (90) calendar days after the Notice to Proceed.
- B. Indicate detailed plan for the Work to be completed in first ninety (90) days of the Contract; details of planned mobilization of plant and equipment; sequence of early operations; procurement of materials and equipment. Show Work beyond ninety (90) calendar days in summary form.
- C. Initial CPM Schedule shall be time scaled.
- D. Initial CPM Schedule shall be cost and resource loaded. Accepted cost and resource loaded schedule will be used as basis for monthly progress payments until acceptance of the Original CPM Schedule. Use of Initial CPM Schedule for progress payments shall not exceed ninety (90) calendar days.
- E. District and Contractor shall meet to review and discuss the Initial CPM Schedule within seven (7) calendar days after it has been submitted to District.
 - (1) District’s review and comment on the schedule shall be limited to Contract conformance (with sequencing, coordination, and milestone requirements).
 - (2) Contractor shall make corrections to schedule necessary to comply with Contract requirements and shall adjust schedule to incorporate any missing information requested by District. Contractor shall resubmit Initial CPM Schedule if requested by District.
- F. If, during the first ninety (90) days after Notice to Proceed, the Contractor is of the opinion that any of the Work included on its Initial CPM Schedule has been impacted, the Contractor shall submit to District a written Time Impact Evaluation (“TIE”) in accordance with Article 1.12 of this Section. The TIE shall be based on the most current update of the Initial CPM Schedule.

1.07 ORIGINAL CPM SCHEDULE

- A. Submit a detailed proposed Original CPM Schedule presenting an orderly and realistic plan for completion of the Work in conformance with requirements as specified herein.
- B. Progress Schedule shall include or comply with following requirements:
 - (1) Time scaled, cost and resource (labor and major equipment) loaded CPM schedule.
 - (2) No activity on schedule shall have duration longer than fifteen (15) work days, with exception of submittal, approval, fabrication and procurement activities, unless otherwise approved by District.

- (a) Activity durations shall be total number of actual work days required to perform that activity.
- (3) The start and completion dates of all items of Work, their major components, and milestone completion dates, if any.
- (4) District furnished materials and equipment, if any, identified as separate activities.
- (5) Activities for maintaining Project Record Documents.
- (6) Dependencies (or relationships) between activities.
- (7) Processing/approval of submittals and shop drawings for all material and equipment required per the Contract. Activities that are dependent on submittal acceptance or material delivery shall not be scheduled to start earlier than expected acceptance or delivery dates.
 - (a) Include time for submittals, re-submittals and reviews by District. Coordinate with accepted schedule for submission of Shop Drawings, samples, and other submittals.
 - (b) Contractor shall be responsible for all impacts resulting from re-submittal of Shop Drawings and submittals.
- (8) Procurement of major equipment, through receipt and inspection at jobsite, identified as separate activity.
 - (a) Include time for fabrication and delivery of manufactured products for the Work.
 - (b) Show dependencies between procurement and construction.
- (9) Activity description; what Work is to be accomplished and where.
- (10) The total cost of performing each activity shall be total of labor, material, and equipment, excluding overhead and profit of Contractor. Overhead and profit of the General Contractor shall be shown as a separate activity in the schedule. Sum of cost for all activities shall equal total Contract value.
- (11) Resources required (labor and major equipment) to perform each activity.
- (12) Responsibility code for each activity corresponding to Contractor or Subcontractor responsible for performing the Work.
- (13) Identify the activities which constitute the controlling operations or critical path. No more than twenty-five (25%) of the activities shall be critical or near critical. Near critical is defined as float in the range of one (1) to (10) days.

- (14) Twenty (20) workdays for developing punch list(s), completion of punch-list items, and final clean-up for the Work or any designated portion thereof. No other activities shall be scheduled during this period.
- (15) Interface with the work of other contractors, District, and agencies such as, but not limited to, utility companies.
- (16) Show detailed Subcontractor Work activities. In addition, furnish copies of Subcontractor schedules upon which CPM was built.
 - (a) Also furnish for each Subcontractor, as determined by District, submitted on Subcontractor letterhead, a statement certifying that Subcontractor concurs with Contractor's Original CPM Schedule and that Subcontractor's related schedules have been incorporated, including activity duration, cost and resource loading.
 - (b) Subcontractor schedules shall be independently derived and not a copy of Contractor's schedule.
 - (c) In addition to Contractor's schedule and resource loading, obtain from electrical, mechanical, and plumbing Subcontractors, and other Subcontractors as required by District, productivity calculations common to their trades, such as units per person day, feet of pipe per day per person, feet of wiring per day per person, and similar information.
 - (d) Furnish schedule for Contractor/Subcontractor CPM schedule meetings which shall be held prior to submission of Original CPM schedule to District. District shall be permitted to attend scheduled meetings as an observer.
- (17) Activity durations shall be in Work days.
- (18) Submit with the schedule a list of anticipated non-Work days, such as weekends and holidays. The Progress Schedule shall exclude in its Work day calendar all non-Work days on which Contractor anticipates critical Work will not be performed.

C. Original CPM Schedule Review Meeting: Contractor shall, within sixty (60) days from the Notice to Proceed date, meet with District to review the Original CPM Schedule submittal.

- (1) Contractor shall have its Project Manager, Project Superintendent, Project Scheduler, and key Subcontractor representatives, as required by District, in attendance. The meeting will take place over a continuous one (1) day period.
- (2) District's review will be limited to submittal's conformance to Contract requirements including, but not limited to, coordination requirements. However, review may also include:

- (a) Clarifications of Contract Requirements.
 - (b) Directions to include activities and information missing from submittal.
 - (c) Requests to Contractor to clarify its schedule.
- (3) Within five (5) days of the Schedule Review Meeting, Contractor shall respond in writing to all questions and comments expressed by District at the Meeting.

1.08 ADJUSTMENTS TO CPM SCHEDULE

- A. Adjustments to Original CPM Schedule: Contractor shall have adjusted the Original CPM Schedule submittal to address all review comments from original CPM Schedule review meeting and resubmit network diagrams and reports for District’s review.
- (1) District, within ten (10) days from date that Contractor submitted the revised schedule, will either:
 - (a) Accept schedule and cost and resource loaded activities as submitted, or
 - (b) Advise Contractor in writing to review any part or parts of schedule which either do not meet Contract requirements or are unsatisfactory for District to monitor Project’s progress, resources, and status or evaluate monthly payment request by Contractor.
 - (2) District may accept schedule with conditions that the first monthly CPM Schedule update be revised to correct deficiencies identified.
 - (3) When schedule is accepted, it shall be considered the “Original CPM Schedule” which will then be immediately updated to reflect the current status of the work.
 - (4) District reserves right to require Contractor to adjust, add to, or clarify any portion of schedule which may later be discovered to be insufficient for monitoring of Work or approval of partial payment requests. No additional compensation will be provided for such adjustments, additions, or clarifications.
- B. Acceptance of Contractor’s schedule by District will be based solely upon schedule’s compliance with Contract requirements.
- (1) By way of Contractor assigning activity durations and proposing sequence of Work, Contractor agrees to utilize sufficient and necessary management and other resources to perform work in accordance with the schedule.

- (2) Upon submittal of schedule update, updated schedule shall be considered "current" CPM Schedule.
- (3) Submission of Contractor's schedule to District shall not relieve Contractor of total responsibility for scheduling, sequencing, and pursuing Work to comply with requirements of Contract Documents, including adverse effects such as delays resulting from ill-timed Work.
- C. Submittal of Original CPM Schedule, and subsequent schedule updates, shall be understood to be Contractor's representation that the Schedule meets requirements of Contract Documents and that Work shall be executed in sequence indicated on the schedule.
- D. Contractor shall distribute Original CPM Schedule to Subcontractors for review and written acceptance, which shall be noted on Subcontractors' letterheads to Contractor and transmitted to District for the record.

1.09 MONTHLY CPM SCHEDULE UPDATE SUBMITTALS

- A. Following acceptance of Contractor's Original CPM Schedule, Contractor shall monitor progress of Work and adjust schedule each month to reflect actual progress and any anticipated changes to planned activities.
 - (1) Each schedule update submitted shall be complete, including all information requested for the Original CPM Schedule submittal.
 - (2) Each update shall continue to show all Work activities including those already completed. These completed activities shall accurately reflect "as built" information by indicating when activities were actually started and completed.
- B. A meeting will be held on approximately the twenty-fifth (25th) of each month to review the schedule update submittal and progress payment application.
 - (1) At this meeting, at a minimum, the following items will be reviewed: Percent (%) complete of each activity; Time Impact Evaluations for Change Orders and Time Extension Request; actual and anticipated activity sequence changes; actual and anticipated duration changes; and actual and anticipated Contractor delays.
 - (2) These meetings are considered a critical component of overall monthly schedule update submittal and Contractor shall have appropriate personnel attend. At a minimum, these meetings shall be attended by Contractor's General Superintendent and Scheduler.
 - (3) Contractor shall plan on the meeting taking no less than four (4) hours.
- C. Within five (5) working days after monthly schedule update meeting, Contractor shall submit the updated CPM Schedule update.

- D. Within five (5) work days of receipt of above noted revised submittals, District will either accept or reject monthly schedule update submittal.
 - (1) If accepted, percent (%) complete shown in monthly update will be basis for Application for Payment by the Contractor. The schedule update shall be submitted as part of the Contractor's Application for Payment.
 - (2) If rejected, update shall be corrected and resubmitted by Contractor before the Application for Payment is submitted.
- E. Neither updating, changing or revising of any report, curve, schedule, or narrative submitted to District by Contractor under this Contract, nor District's review or acceptance of any such report, curve, schedule or narrative shall have the effect of amending or modifying in any way the Completion Date or milestone dates or of modifying or limiting in any way Contractor's obligations under this Contract.

1.10 SCHEDULE REVISIONS

- A. Updating the Schedule to reflect actual progress shall not be considered revisions to the Schedule. Since scheduling is a dynamic process, revisions to activity durations and sequences are expected on a monthly basis.
- B. To reflect revisions to the Schedule, the Contractor shall provide District with a written narrative with a full description and reasons for each Work activity revised. For revisions affecting the sequence of work, the Contractor shall provide a schedule diagram which compares the original sequence to the revised sequence of work. The Contractor shall provide the written narrative and schedule diagram for revisions two (2) working days in advance of the monthly schedule update meeting.
- C. Schedule revisions shall not be incorporated into any schedule update until the revisions have been reviewed by District. District may request further information and justification for schedule revisions and Contractor shall, within three (3) days, provide District with a complete written narrative response to District's request.
- D. If the Contractor's revision is still not accepted by District, and the Contractor disagrees with District's position, the Contractor has seven (7) calendar days from receipt of District's letter rejecting the revision to provide a written narrative providing full justification and explanation for the revision. The Contractor's failure to respond in writing within seven (7) calendar days of District's written rejection of a schedule revision shall be contractually interpreted as acceptance of District's position, and the Contractor waives its rights to subsequently dispute or file a claim regarding District's position.
- E. At District's discretion, the Contractor can be required to provide Subcontractor certifications of performance regarding proposed schedule revisions affecting said Subcontractors.

1.11 RECOVERY SCHEDULE

- A. If the Schedule Update shows a completion date twenty-one (21) calendar days beyond the Contract Completion Date, or individual milestone completion dates, the Contractor shall submit to District the proposed revisions to recover the lost time within seven (7) calendar days. As part of this submittal, the Contractor shall provide a written narrative for each revision made to recapture the lost time. If the revisions include sequence changes, the Contractor shall provide a schedule diagram comparing the original sequence to the revised sequence of work.
- B. The revisions shall not be incorporated into any schedule update until the revisions have been reviewed by District.
- C. If the Contractor's revisions are not accepted by District, District and the Contractor shall follow the procedures in paragraph 1.09.C, 1.09.D and 1.09.E above.
- D. At District's discretion, the Contractor can be required to provide Subcontractor certifications for revisions affecting said Subcontractors.

1.12 TIME IMPACT EVALUATION ("TIE") FOR CHANGE ORDERS, AND OTHER DELAYS

- A. When Contractor is directed to proceed with changed Work, the Contractor shall prepare and submit within fourteen (14) calendar days from the Notice to Proceed a TIE which includes both a written narrative and a schedule diagram depicting how the changed Work affects other schedule activities. The schedule diagram shall show how the Contractor proposes to incorporate the changed Work in the schedule and how it impacts the current schedule-update critical path. The Contractor is also responsible for requesting time extensions based on the TIE's impact on the critical path. The diagram must be tied to the main sequence of schedule activities to enable District to evaluate the impact of changed Work to the scheduled critical path.
- B. Contractor shall be required to comply with the requirements of Paragraph 1.09.A for all types of delays such as, but not limited to, Contractor/Subcontractor delays, adverse weather delays, strikes, procurement delays, fabrication delays, etc.
- C. Contractor shall be responsible for all costs associated with the preparation of TIEs, and the process of incorporating them into the current schedule update. The Contractor shall provide District with four (4) copies of each TIE.
- D. Once agreement has been reached on a TIE, the Contract Time will be adjusted accordingly. If agreement is not reached on a TIE, the Contract Time may be extended in an amount District allows, and the Contractor may submit a claim for additional time claimed by contractor.

1.13 TIME EXTENSIONS

- A. The Contractor is responsible for requesting time extensions for time impacts that, in the opinion of the Contractor, impact the critical path of the current schedule update. Notice of time impacts shall be given in accord with the General Conditions.
- B. Where an event for which District is responsible impacts the projected Completion Date, the Contractor shall provide a written mitigation plan, including a schedule diagram, which explains how (e.g., increase crew size, overtime, etc.) the impact can be mitigated. The Contractor shall also include a detailed cost breakdown of the labor, equipment, and material the Contractor would expend to mitigate District-caused time impact. The Contractor shall submit its mitigation plan to District within fourteen (14) calendar days from the date of discovery of the impact. The Contractor is responsible for the cost to prepare the mitigation plan.
- C. Failure to request time, provide TIE, or provide the required mitigation plan will result in Contractor waiving its right to a time extension and cost to mitigate the delay.
- D. No time will be granted under this Contract for cumulative effect of changes.
- E. District will not be obligated to consider any time extension request unless the Contractor complies with the requirements of Contract Documents.
- F. Failure of the Contractor to perform in accordance with the current schedule update shall not be excused by submittal of time extension requests.
- G. If the Contractor does not submit a TIE within the required fourteen (14) calendar days for any issue, it is mutually agreed that the Contractor does not require a time extension for said issue.

1.14 SCHEDULE REPORTS

- A. Submit four (4) copies of the following reports with the Initial CPM Schedule, the Original CPM Schedule, and each monthly update.
- B. Required Reports:
 - (1) Two activity listing reports: one sorted by activity number and one by total Project Float. These reports shall also include each activity's early/late and actual start and finish dates, original and remaining duration, Project Float, responsibility code, and the logic relationship of activities.
 - (2) Cost report sorted by activity number including each activity's associated cost, percentage of Work accomplished, earned value- to date, previous payments, and amount earned for current update period.

- (3) Schedule plots presenting time-scaled network diagram showing activities and their relationships with the controlling operations or critical path clearly highlighted.
- (4) Cash flow report calculated by early start, late start, and indicating actual progress. Provide an exhibit depicting this information in graphic form.
- (5) Planned versus actual resource (i.e., labor) histogram calculated by early start and late start.

C. Other Reports:

In addition to above reports, District may request, from month to month, any two of the following reports. Submit four (4) copies of all reports.

- (1) Activities by early start.
- (2) Activities by late start.
- (3) Activities grouped by Subcontractors or selected trades.
- (4) Activities with scheduled early start dates in a given time frame, such as fifteen (15) or thirty (30) day outlook.

D. Furnish District with report files on compact disks containing all schedule files for each report generated.

1.15 PROJECT STATUS REPORTING

- A. In addition to submittal requirements for CPM scheduling identified in this Section, Contractor shall provide a monthly project status report (i.e., written narrative report) to be submitted in conjunction with each CPM Schedule as specified herein. Status reporting shall be in form specified below.
- B. Contractor shall prepare monthly written narrative reports of status of Project for submission to District. Written status reports shall include:
 - (1) Status of major Project components (percent (%) complete, amount of time ahead or behind schedule) and an explanation of how Project will be brought back on schedule if delays have occurred.
 - (2) Progress made on critical activities indicated on CPM Schedule.
 - (3) Explanations for any lack of work on critical path activities planned to be performed during last month.
 - (4) Explanations for any schedule changes, including changes to logic or to activity durations.
 - (5) List of critical activities scheduled to be performed next month.

- (6) Status of major material and equipment procurement.
- (7) Any delays encountered during reporting period.
- (8) Contractor shall provide printed report indicating actual versus planned resource loading for each trade and each activity. This report shall be provided on weekly and monthly basis.
 - (a) Actual resource shall be accumulated in field by Contractor, and shall be as noted on Contractor's daily reports. These reports will be basis for information provided in computer-generated monthly and weekly printed reports.
 - (b) Contractor shall explain all variances and mitigation measures.
- (9) Contractor may include any other information pertinent to status of Project. Contractor shall include additional status information requested by District at no additional cost.
- (10) Status reports, and the information contained therein, shall not be construed as claims, notice of claims, notice of delay, or requests for changes or compensation.

1.16 WEEKLY SCHEDULE REPORT

At the Weekly Progress Meeting, the Contractor shall provide and present a time-scaled three (3) week look-ahead schedule that is based and correlated by activity number to the current schedule (i.e., Initial, Original CPM, or Schedule Update).

1.17 DAILY CONSTRUCTION REPORTS

On a daily basis, Contractor shall submit a daily activity report to District for each workday, including weekends and holidays when worked. Contractor shall develop the daily construction reports on a computer-generated database capable of sorting daily Work, manpower, and man-hours by Contractor, Subcontractor, area, sub-area, and Change Order Work. Upon request of District, furnish computer disk of this data base. Obtain District's written approval of daily construction report data base format prior to implementation. Include in report:

- A. Project name and Project number.
- B. Contractor's name and address.
- C. Weather, temperature, and any unusual site conditions.
- D. Brief description and location of the day's scheduled activities and any special problems and accidents, including Work of Subcontractors. Descriptions shall be referenced to CPM scheduled activities.
- E. Worker quantities for its own Work force and for Subcontractors of any tier.
- F. Equipment, other than hand tools, utilized by Contractor and Subcontractors.

1.18 PERIODIC VERIFIED REPORTS

Contractor shall complete and verify construction reports on a form prescribed by the Division of the State Architect and file reports on the first day of February, May, August, and November during the preceding quarter year; at the completion of the Contract; at the completion of the Work; at the suspension of Work for a period of more than one (1) month; whenever the services of Contractor or any of Contractor's Subcontractors are terminated for any reason; and at any time a special verified report is required by the Division of the State Architect. Refer to section 4-336 and section 4-343 of Part 1, Title 24 of the California Code of Regulations.

DOCUMENT 01 33 00

SUBMITTALS**PART 1 - GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS:**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions, including, without limitation, Contractor's Submittals and Schedules, Drawings and Specifications;
- B. Special Conditions.

1.02 SECTION INCLUDES:

- A. Definitions:
 - (1) Shop Drawings and Product Data are as indicated in the General Conditions and include, but are not limited to, fabrication, erection, layout and setting drawings, formwork and falsework drawings, manufacturers' standard drawings, descriptive literature, catalogues, brochures, performance and test data, wiring and control diagrams. In addition, there are other drawings and descriptive data pertaining to materials, equipment, piping, duct and conduit systems, and methods of construction as may be required to show that the materials, equipment or systems and all positions conform to the requirement of the Contract Documents, including, without limitation, the Drawings.
 - (2) "Manufactured" applies to standard units usually mass-produced; "fabricated" means specifically assembled or made out of selected materials to meet design requirements. Shop Drawings shall establish the actual detail of manufactured or fabricated items, indicated proper relation to adjoining work and amplify design details of mechanical and electrical equipment in proper relation to physical spaces in the structure.
 - (3) Manufacturer's Instructions: Where any item of Work is required by the Contract Documents to be furnished, installed, or performed, at a minimum, in accordance with a specified product manufacturer's instructions, the Contractor shall procure and distribute copies of these to the District, the Architect, and all other concerned parties and shall furnish, install, or perform the work, at a minimum, in accordance with those instructions.
- B. Samples, Shop Drawings, Product Data, and other items as specified, in accordance with the following requirements:

- (1) Contractor shall submit all Shop Drawings, Product Data, and Samples to the District, the Architect, the Project Inspector, and the Construction Manager.
- (2) Contractor shall comply with all time frames herein and in the General Conditions and, in any case, shall submit required information in sufficient time to permit proper consideration and action before ordering any materials or items represented by such Shop Drawings, Product Data, and/or Samples.
- (3) Contractor shall allow sufficient time so that no delay occurs due to required lead time in ordering or delivery of any item to the Site. Contractor shall be responsible for any delay in progress of Work due to its failure to observe these requirements.
- (4) Time for completion of Work shall not be extended on account of Contractor's failure to promptly submit Shop Drawings, Product Data, and/or Samples.
- (5) Reference numbers on Shop Drawings shall have Architectural and/or Engineering Contract Drawings reference numbers for details, sections, and "cuts" shown on Shop Drawings. These reference numbers shall be in addition to any numbering system that Contractor chooses to use or has adopted as standard.
- (6) When the magnitude or complexity of submittal material prevents a complete review within the stated time frame, Contractor shall make this submittal in increments to avoid extended delays.
- (7) Contractor shall certify on submittals for review that submittals conform to Contract requirements. Also certify that Contractor-furnished equipment can be installed in allocated space. In event of any variance, Contractor shall specifically state in transmittal and on Shop Drawings, portions vary and require approval of a substitute. Submittals shall not be used as a means of requesting a substitution.
- (8) Unless specified otherwise, sampling, preparation of samples, and tests shall be in accordance with the latest standard of the American Society for Testing and Materials.
- (9) Upon demand by Architect or District, Contractor shall submit samples of materials and/or articles for tests or examinations and consideration before Contractor incorporates same in Work. Contractor shall be solely responsible for delays due to sample(s) not being submitted in time to allow for tests. Acceptance or rejection will be expressed in writing. Work shall be equal to approved samples in every respect. Samples that are of value after testing will remain the property of Contractor.

C. Submittal Schedule:

- (1) Contractor shall prepare its proposed submittal schedule that is coordinated with the its proposed construction schedule and submit both to the District within ten (10) days after the date of the Notice to Proceed. Contractor's proposed schedules shall become the Project Construction Schedule and the Project Submittal Schedule after each is approved by the District.
- (2) Contractor is responsible for all lost time should the initial submittal be rejected, marked "revise and resubmit", etc.
- (3) All Submittals shall be forwarded to the District by the date indicated on the approved Submittal Schedule, unless an earlier date is necessary to maintain the Construction Schedule, in which case those Submittals shall be forwarded to the District so as not to delay the Construction Schedule.
- (4) Contractor may be assessed \$100 a day for each day it is late in submitting a shop drawing or sample. No extensions of time will be granted to Trade Contractor or any Subcontractor because of its failure to have shop drawings and samples submitted in accordance with the Schedule.

1.03 SHOP DRAWINGS:

- A. Contractor shall submit Shop Drawings electronically, except for samples.
- B. Before commencing installation of any Work, the Contractor shall submit and receive approval of all drawings, descriptive data, and material list(s) as required to accomplish Work.
- C. Review of Shop Drawings is regarded as a service to assist Contractor and in all cases original Contract Documents shall take precedence as outlined under General Conditions.
- D. No claim for extra time or payment shall be based on work shown on Shop Drawings unless the claim is (1) noted on Contractor's transmittal letter accompanying Shop Drawings and (2) Contractor has complied with all applicable provisions of the General Conditions, including, without limitation, provisions regarding changes and payment, and all required written approvals.
- E. District shall not review Shop Drawings for quantities of materials or number of items supplied.
- F. District's and/or Architect's review of Shop Drawing will be general. District and/or Architect review does not relieve Contractor of responsibility for dimensions, accuracy, proper fitting, construction of Work, furnishing of materials, or Work required by Contract Documents and not indicated on Shop Drawings. The District's and/or Architect's review of Shop Drawings is not to be construed as approving departures from Contract Documents.

- G. Review of Shop Drawings and Schedules does not relieve Contractor from responsibility for any aspect of those Drawings or Schedules that is a violation of local, County, State, or Federal laws, rules, ordinances, or rules and regulations of commissions, boards, or other authorities or utilities having jurisdiction.
- H. Before submitting Shop Drawings for review, Contractor shall check Shop Drawings of its subcontractors for accuracy, and confirm that all Work contiguous with and having bearing on other work shown on Shop Drawings is accurately drawn and in conformance with Contract Documents.
- I. Submitted drawings and details must bear stamp of approval of Contractor:
 - (1) Stamp and signature shall clearly certify that Contractor has checked Shop Drawings for compliance with Drawings.
 - (2) If Contractor submits a Shop Drawing without an executed stamp of approval, or whenever it is evident (despite stamp) that Drawings have not been checked, the District and/or Architect will not consider them and will return them to the Contractor for revision and resubmission. In that event, it will be deemed that Contractor has not complied with this provision and Contractor shall bear risk of all delays to same extent as if it had not submitted any Shop Drawings or details.
- J. Submission of Shop Drawings (in either original submission or when resubmitted with correction) constitutes evidence that Contractor has checked all information thereon and that it accepts and is willing to perform Work as shown.
- K. Contractor shall pay for cost of any changes in construction due to improper checking and coordination. Contractor shall be responsible for all additional costs, including coordination. Contractor shall be responsible for costs incurred by itself, the District, the Architect, the Project Inspector, the Construction Manager, any other Subcontractor or contractor, etc., due to improperly checked and/or coordination of submittals.
- L. Shop Drawings must clearly delineate the following information:
 - (1) Project name and address.
 - (2) Specification number and description.
 - (3) Architect's name and project number.
 - (4) Shop Drawing title, number, date, and scale.
 - (5) Names of Contractor, Subcontractor(s) and fabricator.
 - (6) Working and erection dimensions.
 - (7) Arrangements and sectional views.

- (8) Necessary details, including complete information for making connections with other Work.
 - (9) Kinds of materials and finishes.
 - (10) Descriptive names of materials and equipment, classified item numbers, and locations at which materials or equipment are to be installed in the Work. Contractor shall use same reference identification(s) as shown on Contract Drawings.
- M. Contractor shall prepare composite drawings and installation layouts when required to solve tight field conditions.
- (1) Shop Drawings shall consist of dimensioned plans and elevations and must give complete information, particularly as to size and location of sleeves, inserts, attachments, openings, conduits, ducts, boxes, structural interferences, etc.
 - (2) Contractor shall coordinate these composite Shop Drawings and installation layouts in the field between itself and its Subcontractor(s) for proper relationship to the Work, the work of other trades, and the field conditions. The Contractor shall check and approve all submittal(s) before submitting them for final review.

1.04 PRODUCT DATA OR NON REPRODUCIBLE SUBMITTALS:

- A. Contractor shall submit manufacturer's printed literature electronically.
- B. Contractor shall submit a complete list of all major items of mechanical, plumbing, and electrical equipment and materials in accordance with the approved Submittal Schedule, except as required earlier to comply with the approved Construction Schedule. Other items specified are to be submitted prior to commencing Work. Contractor shall submit items of like kind at one time in a neat and orderly manner. Partial lists will not be acceptable.
- C. Submittals shall include manufacturer's specifications, physical dimensions, and ratings of all equipment. Contractor shall furnish performance curves for all pumps and fans. Where printed literature describes items in addition to that item being submitted, submitted item shall be clearly marked on sheet and superfluous information shall be crossed out. If highlighting is used, Contractor shall mark all copies.
- D. Equipment submittals shall be complete and include space requirements, weight, electrical and mechanical requirements, performance data, and supplemental information that may be requested.
- E. Imported Materials Certification must be submitted at least ten (10) days before material is delivered.

1.05 SAMPLES:

- A. Contractor shall submit for approval Samples as required and within the time frame in the Contract Documents. Materials such as concrete, mortar, etc., which require on-site testing will be obtained from Project Site.
- B. Contractor shall submit four (4) samples except where greater or lesser number is specifically required by Contract Documents including, without limitation, the Specifications.
 - (1) Samples must be of sufficient size and quality to clearly illustrate functional characteristics, with integrally related parts and attachment devices.
 - (2) Samples must show full range of texture, color, and pattern.
- C. Contractor shall make all Submittals, unless it has authorized Subcontractor(s) to submit and Contractor has notified the District in writing to this effect.
- D. Samples to be shipped prepaid or hand-delivered to the District.
- E. Contractor shall mark samples to show name of Project, name of Contractor submitting, Contract number and segment of Work where representative Sample will be used, all applicable Specifications Sections and documents, Contract Drawing Number and detail, and ASTM or FS reference, if applicable.
- F. Contractor shall not deliver any material to Site prior to receipt of District's and/or Architect's completed written review and approval. Contractor shall furnish materials equal in every respect to approved Samples and execute Work in conformance therewith.
- G. District's and/or Architect's review, acceptance, and/or approval of Sample(s) will not preclude rejections of any material upon discovery of defects in same prior to final acceptance of completed Work.
- H. After a material has been approved, no change in brand or make will be permitted.
- I. Contractor shall prepare its Submittal Schedule and submit Samples of materials requiring laboratory tests to specified laboratory for testing not less than ninety (90) days before such materials are required to be used in Work.
- J. Samples which are rejected must be resubmitted promptly after notification of rejection and be marked "Resubmitted Sample" in addition to other information required.
- K. Field Samples and Mock-Ups are to be removed by Contractor at District's direction:
 - (1) Size: As Specified.

- (2) Furnish catalog numbers and similar data, as requested.

1.06 REVIEW AND RESUBMISSION REQUIREMENTS:

- A. The District will arrange for review of Sample(s), Shop Drawing(s), Product Data, and other submittal(s) by appropriate reviewer and return to Contractor as provided below within twenty-one (21) days after receipt or within twenty-one (21) days after receipt of all related information necessary for such review, whichever is later.
- B. One (1) copy of product or materials data will be returned to Contractor with the review status.
- C. Samples to be incorporated into the Work will be returned to Contractor, together with a written notice designating the Sample with the appropriate review status and indicating errors discovered on review, if any. Other Samples will not be returned, but the same notice will be given with respect thereto, and that notice shall be considered a return of the Sample.
- D. Contractor shall revise and resubmit any Sample(s), Shop Drawing(s), Product Data, and other submittal(s) as required by the reviewer. Such resubmittals will be reviewed and returned in the same manner as original Sample(s), Shop Drawing(s), Product Data, and other submittal(s), within fourteen (14) days after receipt thereof or within fourteen (14) days after receipt of all related information necessary for such review. Such resubmittal shall not delay the Work.
- E. Contractor may proceed with any of the Work covered by Sample(s), Shop Drawing(s), Product Data, and other submittal(s) upon its return if designated as no exception taken, or revise as noted, provided the Contractor proceeds in accordance with the District and/or the Architect's notes and comments.
- F. Contractor shall not begin any of the work covered by a Sample(s), Shop Drawing(s), Product Data, and other submittal(s), designated as revise and resubmit or rejected, until a revision or correction thereof has been reviewed and returned to Contractor.
- G. Sample(s), Shop Drawing(s), Product Data, and other submittal(s) designated as revise and resubmit or rejected and requiring resubmittal, shall be revised or corrected and resubmitted to the District no later than fourteen (14) days or a shorter period as required to comply with the approved Construction Schedule, after its return to Contractor.
- H. Neither the review nor the lack of review of any Sample(s), Shop Drawing(s), Product Data, and other submittal(s) shall waive any of the requirements of the Contract Documents, or relieve Contractor of any obligation thereunder.
- I. District's and/or Architect's review of Shop Drawings does not relieve the Contractor of responsibility for any errors that may exist. Contractor is responsible for the dimensions and design of adequate connections and details and for satisfactory construction of all the Work.

DOCUMENT 01 35 13.23

SITE STANDARDS**PART 1 – GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS:**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions, including without limitation, Site Access, Conditions, and Regulations;
- B. Special Conditions;
- C. Drug-Free Workplace Certification;
- D. Tobacco-Free Environment Certification;
- E. Criminal Background Investigation/Fingerprinting Certification;
- F. Temporary Facilities and Controls.

1.02 REQUIREMENTS OF THE DISTRICT:

- A. Drug-Free Schools and Safety Requirements:
 - (1) All school sites and other District Facilities have been declared "Drug-Free Zones." No drugs, alcohol and/or smoking are allowed at any time in any buildings and/or grounds on District property. No students, staff, visitors, or contractors are to use drugs on these sites.
 - (2) Smoking and the use of tobacco products by all persons is prohibited on or in District property. District property includes school buildings, school grounds, school-owned vehicles and vehicles owned by others while on District property. Contractor shall post: "Non-Smoking Area" in a highly visible location in each work area, staging area, and parking area. Contractor may designate a smoking area outside of District property within the public right-of-way, provided that this area remains quiet and unobtrusive to adjacent neighbors. This smoking area is to be kept clean at all times.
 - (3) Contractor shall ensure that no alcohol, firearms, weapons, or controlled substances enter or are used at the Site. Contractor shall immediately remove from the Site and terminate the employment of any employee(s) found in violation of this provision.
- B. Language: Profanity or other unacceptable and/or loud language will not be tolerated, "Cat calls" or other derogatory language toward students, staff, volunteers, parents or public will not be allowed.

- C. Disturbing the Peace (Noise and Lighting):
- (1) Contractor shall observe the noise ordinance of the Site at all times including, without limitation, all applicable local, city, and/or state laws, ordinances, and/or regulations regarding noise and allowable noise levels.
 - (2) The use of radios, etc., shall be controlled to keep all sound at a level that cannot be heard beyond the immediate area of use. District reserves the right to prohibit the use of radios at the Site, except for mobile phones or other handheld communication radios.
 - (3) If portable lights are used after dark, all light must be located so as not to direct light into neighboring property.
- D. Traffic:
- (1) Driving on the Premises shall be limited to periods when students and public are not present. If driving or deliveries must be made during the school hours, two (2) or more ground guides shall lead the vehicle across the area of travel. In no case shall driving take place across playgrounds or other pedestrian paths during recess, lunch, and/or class period changes. The speed limit on-the Premises shall be five (5) miles per hour (maximum) or less if conditions require.
 - (2) All paths of travel for deliveries, including without limitation, material, equipment, and supply deliveries, shall be reviewed and approved by District in advance. Any damage will be repaired to the pre-damaged condition by the Contractor.
 - (3) District shall designate a construction entry to the Site. If Contractor requests, District determines it is required, and to the extent possible, District shall designate a staging area so as not to interfere with the normal functioning of school facilities. Location of gates and fencing shall be approved in advance with District and at Contractor's expense.
 - (4) Parking areas shall be reviewed and approved by District in advance. No parking is to occur under the drip line of trees or in softscape areas that could otherwise be damaged.
- E. All of the above shall be observed and complied with by the Contractor and all workers on the Site. Failure to follow these directives could result in individual(s) being suspended or removed from the work force at the discretion of the District. The same rules and regulations shall apply equally to delivery personnel, inspectors, consultants, and other visitors to the Site.

DOCUMENT 01 41 00

REGULATORY REQUIREMENTS**PART 1 - GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS:**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions, including, without limitation, Obtaining of Permits, Licenses and Registrations and Work to Comply with All Applicable Laws and Regulations;
- B. Special Conditions; and
- C. Quality Control.

1.02 DESCRIPTION:

This section covers the general requirements for regulatory requirements pertaining to the Work and is supplementary to all other regulatory requirements mentioned or referenced elsewhere in the Contract Documents.

1.03 REQUIREMENTS OF REGULATORY AGENCIES:

- A. All statutes, ordinances, laws, rules, codes, regulations, standards, and the lawful orders of all public authorities having jurisdiction over the Work, are hereby incorporated into these Contract Documents as if repeated in full herein and are intended to be included in any reference to Code or Building Code, unless otherwise specified, including, without limitation, the references in the list below. Contractor shall make available at the Site copies of all the listed documents applicable to the Work as the District and/or Architect may request, including, without limitation, applicable portions of the California Code of Regulations ("CCR").
 - (1) California Building Standards Administrative Code, Part 1, Title 24, CCR.
 - (2) California Building Code (CBC), Part 2, Title 24, CCR; (International Building Code volumes 1-2 and California Amendments).
 - (3) California Electrical Code (CEC), Part 3, Title 24, CCR; (National Electrical Code and California Amendments).
 - (4) California Mechanical Code (CMC), Part 4, Title 24, CCR; (Uniform Mechanical Code and California Amendments).
 - (5) California Plumbing Code (CPC), Part 5, Title 24, CCR; (Uniform Plumbing Code and California Amendments).

- (6) California Fire Code (CFC), Part 9, Title 24, CCR; (International Fire Code and California Amendments).
- (7) California Green Building Standards Code (CALGreen), Part 11, Title 24, CCR.
- (8) California Referenced Standards Code, Part 12, Title 24, CCR.
- (9) State Fire Marshal Regulations, Public Safety, Title 19, CCR.
- (10) Partial List of Applicable National Fire Protection Association (NFPA) Standards:
 - (a) NFPA 13 - Automatic Sprinkler System.
 - (b) NFPA 14 - Standpipes Systems.
 - (c) NFPA 17A - Wet Chemical System
 - (d) NFPA 24 - Private Fire Mains.
 - (e) (California Amended) NFPA 72 - National Fire Alarm Codes.
 - (f) NFPA 253 - Critical Radiant Flux of Floor Covering System.
 - (g) NFPA 2001 - Clean Agent Fire Extinguishing Systems.
- (11) California Division of the State Architect interpretation of Regulations ("DSA IR"), including, without limitation:
 - (a) DSA IR A-6 — Construction Change Document Submittal and Approval Processes.
 - (b) DSA IR A-7 — Project Inspector Certification and Approval.
 - (c) DSA IR A-8 — Project Inspector and Assistant Inspector Duties and Performance.
 - (d) DSA IR A-12 — Assistant Inspector Approval.
- (12) DSA Procedures ("DSA PR")
 - (a) DSA PR 13-01 – Construction Oversight Process
- (13) DSA PR 13-02 – Project Certification Process

B. This Project shall be governed by applicable regulations, including, without limitation, the State of California's Administrative Regulations for the Division of the State Architect-Structural Safety (DSA/SS), Chapter 4, Part 1, Title 24, CCR, and the most current version on the date the bids are opened and as it pertains to school construction including, without limitation:

- (1) Test and testing laboratory per Section 4-335. District shall pay for the testing laboratory.
- (2) Special inspections per Section 4-333(c).
- (3) Deferred Approvals per section 4-317(g).
- (4) Verified reports per Sections 4-336 & 4-343(c).
- (5) Duties of the Architect & Engineers shall be per Section 4-333(a) and 4-341.
- (6) Duties of the Contractor shall be per Section 4-343.
- (7) Duties of Project Inspector shall be per Section 4-334.
- (8) Addenda and Construction Change Documents per Section 4-338.

Contractor shall keep and make available all applicable parts of the most current version of Title 24 referred to in the plans and specifications at the Site during construction.

C. Items of deferred approval shall be clearly marked on the Architect's and/or Engineer's approved Drawings. All items later submitted for approval shall be per Title 24 requirements to the DSA.

- (1) Contractor shall submit the following to Architect for review and endorsement:
 - (a) Product information on proposed material/system supplier.
 - (b) Drawings, specifications, and calculations prepared, signed, and stamped by an architect or engineer licensed in the State of California for that portion of the Work.
 - (c) All other requirements as may be required by DSA.
- (2) Cost of preparing and submitting documentation per DSA Deferred Approval requirements including required modifications to Drawings and Specifications, whether or not indicated in the Contract Documents, shall be borne by Contractor.
- (3) Contractor shall not begin fabrication and installation of deferred approval items without first obtaining DSA approval of Drawings and Specifications.

DOCUMENT 01 42 16

DEFINITIONS**PART 1 - GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions including without limitation, Definitions;
- B. Special Conditions.

1.02 QUALITY ASSURANCE

- A. For products or workmanship specified by association, trade, or Federal Standards, Contractor shall comply with requirements of the standard, except when more rigid requirements are specified in the Contract Documents, or are required by applicable codes.
- B. Contractor shall conform to current reference standard publication date in effect on the date of bid opening.
- C. Contractor shall obtain copies of standards unless specifically required not to by the Contract Documents.
- D. Contractor shall maintain a copy of all standards at jobsite during submittals, planning, and progress of the specific Work, until final completion, unless specifically required not to by the Contract Documents.
- E. Should specified reference standards conflict with Contract Documents, Contractor shall request clarification from the District and./or the Architect before proceeding.
- F. The contractual relationship of the parties to the Contract shall not be altered from the contractual relationship as indicated in the Contract Documents by mention or inference otherwise in any referenced document.
- G. Governing Codes shall be as shown in the Contract Documents including, without limitation, the Specifications.

END OF DOCUMENT

**SECTION 01 4219
REFERENCE STANDARDS**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Requirements relating to referenced standards.

1.02 QUALITY ASSURANCE

- A. For products or workmanship specified by reference to a document or documents not included in the Project Manual, also referred to as reference standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable codes.
- B. Comply with the reference standard of date of issue specified in this section, except where a specific date is established by applicable code.
- C. Obtain copies of standards when required by Contract Documents.
- D. Maintain copy at project site during submittals, planning, and progress of the specific work, until Date of Substantial Completion.
- E. Should specified reference standards conflict with Contract Documents, request clarification from the Architect before proceeding.
- F. Neither the contractual relationships, duties, or responsibilities of the parties in Contract nor those of the Architect shall be altered by Contract Documents by mention or inference otherwise in any reference document.

PART 2 CONSTRUCTION INDUSTRY ORGANIZATION DOCUMENTS

2.01 3GPP -- 3RD GENERATION PARTNERSHIP PROJECT

- A. 3GPP Specification - The 3GPP Specifications (IoT or Mobile Broadband Standard): 5G, GSM (GPRS, EDGE, EDGE+), W-CDMA (HSPA, HSPA+), LTE (LTE-Advanced, LTE-Advanced Pro), and UMTS; Current Edition.

2.02 AA -- ALUMINUM ASSOCIATION, INC.

2.03 AAMA -- AMERICAN ARCHITECTURAL MANUFACTURERS ASSOCIATION

- A. AAMA 501.1 - Standard Test Method for Water Penetration of Windows, Curtain Walls and Doors Using Dynamic Pressure; 2017.
- B. AAMA 501.4 - Recommended Static Test Method for Evaluating Curtain Wall and Storefront Systems Subjected to Seismic and Wind Induced Interstory Drifts; 2018.
- C. AAMA 503 - Voluntary Specification for Field Testing of Newly Installed Storefronts, Curtain Walls and Sloped Glazing Systems; 2014.
- D. AAMA 609 & 610 - Cleaning and Maintenance Guide for Architecturally Finished Aluminum (Combined Document); 2015.
- E. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum; 2014 (2015 Errata).
- F. AAMA 612 - Voluntary Specification, Performance Requirements, and Test Procedures for Combined Coatings of Anodic Oxide and Transparent Organic Coatings on Architectural Aluminum; 2017a.
- G. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections; 2009.

- H. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix); 2017a.
- I. AAMA CW-10 - Care and Handling of Architectural Aluminum From Shop to Site; 2015.
- J. AAMA CW-DG-1 - Aluminum Curtain Wall Design Guide Manual; 1996, with Editorial Revision (2005).

2.04 ACI -- AMERICAN CONCRETE INSTITUTE INTERNATIONAL

- A. ACI 302.1R - Guide to Concrete Floor and Slab Construction; 2015.

2.05 AISC -- AMERICAN INSTITUTE OF STEEL CONSTRUCTION, INC.

- A. AISC 201 - AISC Certification Program for Structural Steel Fabricators, Standard for Steel Building Structures; 2006.
- B. AISC 303 - Code of Standard Practice for Steel Buildings and Bridges; 2016.
- C. AISC 360 - Specification for Structural Steel Buildings; 2016.

2.06 AMCA -- AIR MOVEMENT AND CONTROL ASSOCIATION INTERNATIONAL, INC.

- A. AMCA 511 - Certified Ratings Program for Air Control Devices; 2010.

2.07 ANSI -- AMERICAN NATIONAL STANDARDS INSTITUTE

- A. ANSI A14.3 - American National Standard for Ladders -- Fixed -- Safety Requirements; 2008.
- B. ANSI A108/A118/A136 - American National Standard Specifications for the Installation of Ceramic Tile (Compendium); 2017.
- C. ANSI A108.1a - American National Standard Specifications for Installation of Ceramic Tile in the Wet-Set Method, with Portland Cement Mortar; 2014.
- D. ANSI A108.2 - American National Standard General Requirements: Materials, Environmental and Workmanship; 2019.
- E. ANSI A108.10 - American National Standard Specifications for Installation of Grout in Tilework; 1999 (Reaffirmed 2010).
- F. ANSI A108.11 - American National Standard Specifications for Interior Installation of Cementitious Backer Units; 2010 (Reaffirmed 2016).
- G. ANSI A118.4 - American National Standard Specifications for Modified Dry-Set Cement Mortar; 2012 (Revised).
- H. ANSI A118.7 - American National Standard Specifications for High Performance Cement Grouts for Tile Installation; 2010 (Reaffirmed 2016).
- I. ANSI A118.9 - American National Standard Specifications for Test Methods and Specifications for Cementitious Backer Units; 1999 (Reaffirmed 2016).
- J. ANSI A118.10 - American National Standard Specifications for Load Bearing, Bonded, Waterproof Membranes For Thin-Set Ceramic Tile And Dimension Stone Installation; 2014.
- K. ANSI A118.15 - American National Standard Specifications for Improved Modified Dry-Set Cement Mortar; 2012.
- L. ANSI A137.1 - American National Standard Specifications for Ceramic Tile; 2012.
- M. ANSI A208.1 - American National Standard for Particleboard; 2009.

- N. ANSI A208.2 - American National Standard for Medium Density Fiberboard for Interior Use; 2009.
- O. ANSI A250.8 - SDI-100 Recommended Specifications for Standard Steel Doors and Frames; 2003.
- P. ANSI/SDI A250.4 - Test Procedure and Acceptance Criteria for Physical Endurance for Steel Doors, Frames and Frame Anchors; 2011.
- Q. ANSI/SDI A250.6 - Recommended Practice for Hardware Reinforcing on Standard Steel Doors and Frames; 2003 (R2009).
- R. ANSI/SDI A250.8 - Specifications for Standard Steel Doors and Frames (SDI-100); 2017.
- S. ANSI/SDI A250.10 - Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames; 2011.
- T. ANSI/SPRI/FM 4435/ES-1 - Test Standard for Edge Systems Used with Low Slope Roofing Systems; 2017.
- U. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings - Safety Performance Specifications and Methods of Test; 2015.
- V. ANSI/ASSP Z359.16 - Safety Requirements for Climbing Ladder Fall Arrest Systems; 2016.

2.08 ASCE -- AMERICAN SOCIETY OF CIVIL ENGINEERS

- A. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures; Most Recent Edition Cited by Referring Code or Reference Standard.

2.09 ASHRAE -- AMERICAN SOCIETY OF HEATING, REFRIGERATING AND AIR-CONDITIONING ENGINEERS, INC.

- A. ASHRAE Std 62.1 - Ventilation for Acceptable Indoor Air Quality; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

2.10 ASME -- THE AMERICAN SOCIETY OF MECHANICAL ENGINEERS

- A. ASME A17.1 - Safety Code for Elevators and Escalators; 2016.
- B. ASME A17.2 - Guide for Inspection of Elevators, Escalators, and Moving Walks; 2014.
- C. ASME A112.18.9 - Protectors/Insulators for Exposed Waste and Supplies on Accessible Fixtures; 2011.
- D. ASME QEI-1 - Standard for the Qualification of Elevator Inspectors; 2013.

2.11 ASTM A SERIES -- ASTM INTERNATIONAL

- A. ASTM A6/A6M - Standard Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes, and Sheet Piling; 2017.
- B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2014.
- C. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2018.
- D. ASTM A240/A240M - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications; 2018.
- E. ASTM A269/A269M - Standard Specification for Seamless and Welded Austenitic Stainless Steel Tubing for General Service; 2015a.
- F. ASTM A276/A276M - Standard Specification for Stainless Steel Bars and Shapes; 2017.

- G. ASTM A283/A283M - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates; 2013.
- H. ASTM A325 - Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength; 2014.
- I. ASTM A325M - Standard Specification for Structural Bolts, Steel, Heat Treated 830 MPa Minimum Tensile Strength (Metric); 2014.
- J. ASTM A424/A424M - Standard Specification for Steel, Sheet, for Porcelain Enameling; 2018.
- K. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes; 2013.
- L. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing; 2014.
- M. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nuts; 2015.
- N. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement; 2018.
- O. ASTM A641/A641M - Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire; 2009a (Reapproved 2014).
- P. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2015.
- Q. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2009 (Reapproved 2015).
- R. ASTM A786/A786M - Standard Specification for Hot-Rolled Carbon, Low-Alloy, High-Strength Low-Alloy, and Alloy Steel Floor Plates; 2015.
- S. ASTM A792/A792M - Standard Specification for Steel Sheet, 55% Aluminum-Zinc Alloy-Coated by the Hot-Dip Process; 2010 (Reapproved 2015).
- T. ASTM A820/A820M - Standard Specification for Steel Fibers for Fiber-Reinforced Concrete; 2016.
- U. ASTM A879/A879M - Standard Specification for Steel Sheet, Zinc Coated by the Electrolytic Process for Applications Requiring Designation of the Coating Mass on Each Surface; 2012 (Reapproved 2017).
- V. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable; 2018.
- W. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength; 2018a.

2.12 ASTM B SERIES -- ASTM INTERNATIONAL

- A. ASTM B32 - Standard Specification for Solder Metal; 2008 (Reapproved 2014).
- B. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2014.
- C. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate (Metric); 2014.
- D. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2014.

- E. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric); 2013.
- F. ASTM B308/B308M - Standard Specification for Aluminum-Alloy 6061-T6 Standard Structural Profiles; 2010.
- G. ASTM B456 - Standard Specification for Electrodeposited Coatings of Copper Plus Nickel Plus Chromium and Nickel Plus Chromium; 2017.
- H. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel; 2015.

2.13 ASTM C SERIES -- ASTM INTERNATIONAL

- A. ASTM C78/C78M - Standard Test Method for Flexural Strength of Concrete (Using Simple Beam with Third-Point Loading); 2018.
- B. ASTM C90 - Standard Specification for Loadbearing Concrete Masonry Units; 2016a.
- C. ASTM C91/C91M - Standard Specification for Masonry Cement; 2012.
- D. ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 2-in. or (50-mm) Cube Specimens); 2016a.
- E. ASTM C136/C136M - Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates; 2019.
- F. ASTM C140/C140M - Standard Test Methods of Sampling and Testing Concrete Masonry Units and Related Units; 2017a.
- G. ASTM C143/C143M - Standard Test Method for Slump of Hydraulic-Cement Concrete; 2015a.
- H. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar; 2018.
- I. ASTM C150/C150M - Standard Specification for Portland Cement; 2018.
- J. ASTM C206 - Standard Specification for Finishing Hydrated Lime; 2014.
- K. ASTM C207 - Standard Specification for Hydrated Lime for Masonry Purposes; 2018.
- L. ASTM C270 - Standard Specification for Mortar for Unit Masonry; 2019.
- M. ASTM C309 - Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete; 2019.
- N. ASTM C330/C330M - Standard Specification for Lightweight Aggregates for Structural Concrete; 2017a.
- O. ASTM C387/C387M - Standard Specification for Packaged, Dry, Combined Materials for Concrete and High Strength Mortar; 2017.
- P. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method; 2017.
- Q. ASTM C475/C475M - Standard Specification for Joint Compound and Joint Tape for Finishing Gypsum Board; 2015.
- R. ASTM C476 - Standard Specification for Grout for Masonry; 2019.
- S. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications; 2013.
- T. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation; 2014.

- U. ASTM C635/C635M - Standard Specification for the Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings; 2017.
- V. ASTM C636/C636M - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels; 2013.
- W. ASTM C645 - Standard Specification for Nonstructural Steel Framing Members; 2014, with Editorial Revision (2015).
- X. ASTM C661 - Standard Test Method for Indentation Hardness of Elastomeric-Type Sealants by Means of a Durometer; 2015.
- Y. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing; 2017.
- Z. ASTM C754 - Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products; 2017.
- AA. ASTM C780 - Standard Test Method for Preconstruction and Construction Evaluation of Mortars for Plain and Reinforced Unit Masonry; 2019.
- AB. ASTM C794 - Standard Test Method for Adhesion-In-Peel of Elastomeric Joint Sealants; 2018.
- AC. ASTM C834 - Standard Specification for Latex Sealants; 2017.
- AD. ASTM C840 - Standard Specification for Application and Finishing of Gypsum Board; 2018b.
- AE. ASTM C841 - Standard Specification for Installation of Interior Lathing and Furring; 2003 (Reapproved 2018).
- AF. ASTM C847 - Standard Specification for Metal Lath; 2018.
- AG. ASTM C864 - Standard Specification for Dense Elastomeric Compression Seal Gaskets, Setting Blocks, and Spacers; 2005 (Reapproved 2015).
- AH. ASTM C897 - Standard Specification for Aggregate for Job-Mixed Portland Cement-Based Plasters; 2015.
- AI. ASTM C920 - Standard Specification for Elastomeric Joint Sealants; 2018.
- AJ. ASTM C926 - Standard Specification for Application of Portland Cement-Based Plaster; 2018a.
- AK. ASTM C933 - Standard Specification for Welded Wire Lath; 2018.
- AL. ASTM C954 - Standard Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs From 0.033 in. (0.84 mm) to 0.112 in. (2.84 mm) in Thickness; 2015.
- AM. ASTM C979/C979M - Standard Specification for Pigments for Integrally Colored Concrete; 2016.
- AN. ASTM C1002 - Standard Specification for Steel Self-Piercing Tapping Screws for Application of Gypsum Panel Products or Metal Plaster Bases to Wood Studs or Steel Studs; 2016.
- AO. ASTM C1019 - Standard Test Method for Sampling and Testing Grout for Masonry; 2019.
- AP. ASTM C1036 - Standard Specification for Flat Glass; 2016.
- AQ. ASTM C1047 - Standard Specification for Accessories For Gypsum Wallboard and Gypsum Veneer Base; 2014a.
- AR. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass; 2018.

- AS. ASTM C1063 - Standard Specification for Installation of Lathing and Furring to Receive Interior and Exterior Portland Cement-Based Plaster; 2019.
- AT. ASTM C1072 - Standard Test Methods for Measurement of Masonry Flexural Bond Strength; 2019.
- AU. ASTM C1087 - Standard Test Method for Determining Compatibility of Liquid-Applied Sealants with Accessories Used in Structural Glazing Systems; 2016.
- AV. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink); 2014a.
- AW. ASTM C1148 - Standard Test Method for Measuring the Drying Shrinkage of Masonry Mortar; 1992a (Reapproved 2014).
- AX. ASTM C1172 - Standard Specification for Laminated Architectural Flat Glass; 2014.
- AY. ASTM C1177/C1177M - Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing; 2013.
- AZ. ASTM C1193 - Standard Guide for Use of Joint Sealants; 2016.
- BA. ASTM C1248 - Standard Test Method for Staining of Porous Substrate by Joint Sealants; 2008 (Reapproved 2012).
- BB. ASTM C1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board; 2018a.
- BC. ASTM C1311 - Standard Specification for Solvent Release Sealants; 2014.
- BD. ASTM C1314 - Standard Test Method for Compressive Strength of Masonry Prisms; 2018.
- BE. ASTM C1315 - Standard Specification for Liquid Membrane-Forming Compounds Having Special Properties for Curing and Sealing Concrete; 2019.
- BF. ASTM C1325 - Standard Specification for Non-Asbestos Fiber-Mat Reinforced Cementitious Backer Units; 2017a.
- BG. ASTM C1330 - Standard Specification for Cylindrical Sealant Backing for Use with Cold Liquid-Applied Sealants; 2018.
- BH. ASTM C1357 - Standard Test Methods for Evaluating Masonry Bond Strength ; 2009.
- BI. ASTM C1396/C1396M - Standard Specification for Gypsum Board; 2017.
- BJ. ASTM C1503 - Standard Specification for Silvered Flat Glass Mirror; 2018.
- BK. ASTM C1521 - Standard Practice for Evaluating Adhesion of Installed Weatherproofing Sealant Joints; 2013.
- BL. ASTM C1787 - Standard Specification for Installation of Non Metallic Plaster Bases (Lath) Used with Portland Cement Based Plaster in Vertical Wall Applications; 2014.
- BM. ASTM C1822 - Standard Specification for Insulating Covers on Accessible Lavatory Piping; 2015.

2.14 ASTM D SERIES -- ASTM INTERNATIONAL

- A. ASTM D16 - Standard Terminology for Paint, Related Coatings, Materials, and Applications; 2016.
- B. ASTM D226/D226M - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing; 2017.
- C. ASTM D256 - Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics; 2010 (Reapproved 2018).

- D. ASTM D905 - Standard Test Method for Strength Properties of Adhesive Bonds in Shear by Compression Loading; 2008 (Reapproved 2013).
- E. ASTM D1187/D1187M - Standard Specification for Asphalt-Base Emulsions for Use as Protective Coatings for Metal; 1997 (Reapproved 2018).
- F. ASTM D1653 - Standard Test Methods for Water Vapor Transmission of Organic Coating Films; 2013.
- G. ASTM D2583 - Standard Test Method for Indentation Hardness of Rigid Plastics by Means of Barcol Impressor; 2013a.
- H. ASTM D3273 - Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber; 2016.
- I. ASTM D4258 - Standard Practice for Surface Cleaning Concrete for Coating; 2005 (Reapproved 2017).
- J. ASTM D4259 - Standard Practice for Abrading Concrete; 1988 (Reapproved 2012).
- K. ASTM D4397 - Standard Specification for Polyethylene Sheeting for Construction, Industrial, and Agricultural Applications; 2016.
- L. ASTM D4442 - Standard Test Methods for Direct Moisture Content Measurement of Wood and Wood-Based Materials; 2016.
- M. ASTM D4479/D4479M - Standard Specification for Asphalt Roof Coatings - Asbestos-Free; 2007, with Editorial Revision (2012).
- N. ASTM D4833/D4833M - Standard Test Method for Index Puncture Resistance of Geomembranes, and Related Products; 2007, with Editorial Revision (2013).
- O. ASTM D5319 - Standard Specification for Glass-Fiber Reinforced Polyester Wall and Ceiling Panels; 2017.

2.15 ASTM E SERIES -- ASTM INTERNATIONAL

- A. ASTM E72 - Standard Test Methods of Conducting Strength Tests of Panels for Building Construction; 2015.
- B. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2018b.
- C. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements; 2009 (Reapproved 2016).
- D. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials; 2016.
- E. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials; 2018c.
- F. ASTM E136 - Standard Test Method for Behavior of Materials in a Vertical Tube Furnace At 750 Degrees C; 2016a.
- G. ASTM E283 - Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen; 2004 (Reapproved 2012).
- H. ASTM E283/E283M - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Skylights, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen; 2019.

- I. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference; 2014.
- J. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference; 2000 (Reapproved 2016).
- K. ASTM E413 - Classification for Rating Sound Insulation; 2016.
- L. ASTM E488/E488M - Standard Test Methods for Strength of Anchors in Concrete Elements; 2018.
- M. ASTM E514/E514M - Standard Test Method for Water Penetration and Leakage Through Masonry; 2014a.
- N. ASTM E518/E518M - Standard Test Methods for Flexural Bond Strength of Masonry; 2015.
- O. ASTM E547 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Cyclic Static Air Pressure Difference; 2000 (Reapproved 2016).
- P. ASTM E557 - Standard Guide for Architectural Design and Installation Practices for Sound Isolation between Spaces Separated by Operable Partitions; 2012.
- Q. ASTM E580/E580M - Standard Practice for Installation of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Subject to Earthquake Ground Motions; 2017.
- R. ASTM E783 - Standard Test Method for Field Measurement of Air Leakage Through Installed Exterior Windows and Doors; 2002 (Reapproved 2018).
- S. ASTM E795 - Standard Practices for Mounting Test Specimens During Sound Absorption Tests; 2016.
- T. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems; 2013a (Reapproved 2017).
- U. ASTM E935 - Standard Test Methods for Performance of Permanent Metal Railing Systems and Rails for Buildings; 2013, with Editorial Revision.
- V. ASTM E985 - Standard Specification for Permanent Metal Railing Systems and Rails for Buildings; 2000 (Reapproved 2006).
- W. ASTM E1105 - Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference; 2015.
- X. ASTM E1155 - Standard Test Method for Determining F(F) Floor Flatness and F(L) Floor Levelness Numbers; 2014.
- Y. ASTM E1264 - Standard Classification for Acoustical Ceiling Products; 2014.
- Z. ASTM E1300 - Standard Practice for Determining Load Resistance of Glass in Buildings; 2016.
- AA. ASTM E1643 - Standard Practice for Selection, Design, Installation and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs; 2011 (Reapproved 2017).
- AB. ASTM E1745 - Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs; 2017.
- AC. ASTM E1966 - Standard Test Method for Fire-Resistive Joint Systems; 2015.
- AD. ASTM E2112 - Standard Practice for Installation of Exterior Windows, Doors and Skylights; 2007 (Reapproved 2016).

- AE. ASTM E2174 - Standard Practice for On-Site Inspection of Installed Firestops; 2018.
- AF. ASTM E2190 - Standard Specification for Insulating Glass Unit Performance and Evaluation; 2010.
- AG. ASTM E2307 - Standard Test Method for Determining Fire Resistance of Perimeter Fire Barriers Using Intermediate-Scale, Multi-story Test Apparatus; 2015b, with Editorial Revision (2016).
- AH. ASTM E2393 - Standard Practice for On-Site Inspection of Installed Fire Resistive Joint Systems and Perimeter Fire Barriers; 2010a (Reapproved 2015).
- AI. ASTM E2573 - Standard Practice for Specimen Preparation and Mounting of Site-Fabricated Stretch Systems to Assess Surface Burning Characteristics; 2019.
- AJ. ASTM E2837 - Standard Test Method for Determining the Fire Resistance of Continuity Head-of-Wall Joint Systems Installed Between Rated Wall Assemblies and Nonrated Horizontal Assemblies; 2013 (Reapproved 2017).

2.16 ASTM F SERIES -- ASTM INTERNATIONAL

- A. ASTM F436 - Standard Specification for Hardened Steel Washers; 2011.
- B. ASTM F436/F436M - Standard Specification for Hardened Steel Washers Inch and Metric Dimensions; 2019.
- C. ASTM F593 - Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs; 2017.
- D. ASTM F594 - Standard Specification for Stainless Steel Nuts; 2009 (Reapproved 2015).
- E. ASTM F710 - Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring; 2017.
- F. ASTM F793/F793M - Standard Classification of Wall Coverings by Use Characteristics; 2015.
- G. ASTM F1554 - Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength; 2018.
- H. ASTM F1861 - Standard Specification for Resilient Wall Base; 2016.
- I. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride; 2016a.
- J. ASTM F1941 - Standard Specification for Electrodeposited Coatings on Threaded Fasteners; 2010.
- K. ASTM F1941/F1941M - Standard Specification for Electrodeposited Coatings on Mechanical Fasteners, Inch and Metric; 2016.
- L. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes; 2017.
- M. ASTM F2285 - Standard Consumer Safety Performance Specification for Diaper Changing Tables for Commercial Use; 2004, with Editorial Revision (2016).
- N. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts, Steel and Alloy Steel, Heat Treated, 120 ksi (830 MPa) and 150 ksi (1040 MPa) Minimum Tensile Strength, Inch and Metric Dimensions; 2015a.

2.17 ASTM G SERIES -- ASTM INTERNATIONAL

- A. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi; 2015.

- 2.18 AWI/AWMAC/WI -- JOINT PUBLICATION OF ARCHITECTURAL WOODWORK INSTITUTE/ARCHITECTURAL WOODWORK MANUFACTURERS ASSOCIATION OF CANADA/WOODWORK INSTITUTE**
- A. AWI/AWMAC/WI (AWS) - Architectural Woodwork Standards; 2014, with Errata (2016).
- 2.19 AWMAC/WI -- JOINT PUBLICATION OF ARCHITECTURAL WOODWORK MANUFACTURERS ASSOCIATION OF CANADA/WOODWORK INSTITUTE**
- A. AWMAC/WI (NAAWS) - North American Architectural Woodwork Standards, U.S. Version 3.1; 2016, with Errata (2017).
- 2.20 AWS -- AMERICAN WELDING SOCIETY**
- A. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination; 2012.
 - B. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2015, with Errata (2016).
- 2.21 BHMA -- BUILDERS HARDWARE MANUFACTURERS ASSOCIATION**
- A. BHMA A156.9 - American National Standard for Cabinet Hardware; 2015.
 - B. BHMA A156.115 - American National Standard for Hardware Preparation in Steel Doors and Steel Frames; 2016.
- 2.22 CARB -- CALIFORNIA AIR RESOURCES BOARD**
- A. CARB (ATCM) - Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products; California Air Resources Board; current edition.
 - B. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board; 2007.
- 2.23 CRI -- CARPET AND RUG INSTITUTE**
- A. CRI (GLP) - Green Label Plus Testing Program - Certified Products; Current Edition.
- 2.24 FM -- FACTORY MUTUAL GLOBAL**
- A. FM (AG) - FM Approval Guide; current edition.
 - B. FM 4991 - Approval Standard for Firestop Contractors; 2013.
- 2.25 GA -- GYPSUM ASSOCIATION**
- A. GA-216 - Application and Finishing of Gypsum Panel Products; 2016.
 - B. GA-600 - Fire Resistance Design Manual; 2015.
- 2.26 GANA -- GLASS ASSOCIATION OF NORTH AMERICA**
- A. GANA (GM) - GANA Glazing Manual; 2008.
 - B. GANA (SM) - GANA Sealant Manual; 2008.
- 2.27 IAS -- INTERNATIONAL ACCREDITATION SERVICE**
- A. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel; 2017.
- 2.28 ICC -- INTERNATIONAL CODE COUNCIL, INC.**
- A. ICC A117.1 - Accessible and Usable Buildings and Facilities; 2017.
 - B. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

- C. ICC (IFC) - International Fire Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

2.29 ICRI -- INTERNATIONAL CONCRETE REPAIR INSTITUTE

- A. ICRI 310.2R - Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, Polymer Overlays, and Concrete Repair; 2013.

2.30 ISFA - INTERNATIONAL SURFACE FABRICATORS ASSOCIATION

- A. ISFA 2-01 - Classification and Standards for Solid Surfacing Material; 2013.

2.31 ITS -- INTERTEK TESTING SERVICES NA, INC.

- A. ITS (DIR) - Directory of Listed Products; current edition.

2.32 MPI -- MASTER PAINTERS INSTITUTE (MASTER PAINTERS AND DECORATORS ASSOCIATION)

- A. MPI (APSM) - Master Painters Institute Architectural Painting Specification Manual; Current Edition.

2.33 NAAMM -- THE NATIONAL ASSOCIATION OF ARCHITECTURAL METAL MANUFACTURERS

- A. NAAMM HMMA 830 - Hardware Selection for Hollow Metal Doors and Frames; 2002.
- B. NAAMM HMMA 831 - Hardware Locations for Hollow Metal Doors and Frames; 2011.
- C. NAAMM HMMA 840 - Guide Specifications for Installation and Storage of Hollow Metal Doors and Frames; 2007.
- D. NAAMM AMP 500-06 - Metal Finishes Manual; 2006.
- E. NAAMM AMP 510 - Metal Stairs Manual; 1992.

2.34 NEMA -- NATIONAL ELECTRICAL MANUFACTURERS ASSOCIATION

- A. NEMA LD 3 - High-Pressure Decorative Laminates; 2005.
- B. NEMA MG 1 - Motors and Generators; 2017.

2.35 NFPA -- NATIONAL FIRE PROTECTION ASSOCIATION

- A. NFPA 10 - Standard for Portable Fire Extinguishers; 2017.
- B. NFPA 13 - Standard for the Installation of Sprinkler Systems; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- C. NFPA 80 - Standard for Fire Doors and Other Opening Protectives; 2019.
- D. NFPA 101 - Life Safety Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
- E. NFPA 105 - Standard for Smoke Door Assemblies and Other Opening Protectives; 2016.
- F. NFPA 241 - Standard for Safeguarding Construction, Alteration, and Demolition Operations; 2013.
- G. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies; 2017.
- H. NFPA 701 - Standard Methods of Fire Tests for Flame Propagation of Textiles and Films; 2015.

2.36 NFRC -- NATIONAL FENESTRATION RATING COUNCIL, INC.

- A. NFRC 100 - Procedure for Determining Fenestration Product U-factors; 2017.

- B. NFRC 200 - Procedure for Determining Fenestration Product Solar Heat Gain Coefficient and Visible Transmittance at Normal Incidence; 2014, with Errata (2017).
- C. NFRC 300 - Test Method for Determining the Solar Optical Properties of Glazing Materials and Systems; 2017.

2.37 NRCA -- NATIONAL ROOFING CONTRACTORS ASSOCIATION

- A. NRCA (RM) - The NRCA Roofing Manual; 2018.

2.38 NTMA -- NATIONAL TERRAZZO AND MOSAIC ASSOCIATION, INC., THE

- A. NTMA (GRAD) - Aggregate Gradation Standards; Current Edition.
- B. NTMA (EPOXY) - Epoxy Terrazzo Specifications; Current Edition.

2.39 RFCI -- RESILIENT FLOOR COVERING INSTITUTE

- A. RFCI (RWP) - Recommended Work Practices for Removal of Resilient Floor Coverings; 2011.

2.40 SCAQMD -- SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

- A. SCAQMD 1113 - Architectural Coatings; 1977 (Amended 2016).
- B. SCAQMD 1168 - Adhesive and Sealant Applications; 1989 (Amended 2017).

2.41 SMACNA -- SHEET METAL AND AIR CONDITIONING CONTRACTORS' NATIONAL ASSOCIATION, INC.

- A. SMACNA (ASMM) - Architectural Sheet Metal Manual; 2012.

2.42 SPRI -- SINGLE PLY ROOFING INDUSTRY

- A. SPRI ES-1 - Wind Design Standard for Edge Systems Used with Low Slope Roofing Systems; 2011.

2.43 SSPC -- SOCIETY FOR PROTECTIVE COATINGS

- A. SSPC V1 (PM1) - Good Painting Practice: Painting Manual, Volume 1; 2016.
- B. SSPC V2 (PM2) - Systems and Specifications: Steel Structures Painting Manual, Volume 2; 2015.
- C. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 1999 (Ed. 2004).
- D. SSPC-PA 1 - Shop, Field, and Maintenance Painting of Steel; 2016.
- E. SSPC-SP 1 - Solvent Cleaning; 2015, with Editorial Revision (2016).
- F. SSPC-SP 2 - Hand Tool Cleaning; 1982, with Editorial Revision (2004).
- G. SSPC-SP 3 - Power Tool Cleaning; 1982, with Editorial Revision (2004).
- H. SSPC-SP 6 - Commercial Blast Cleaning; 2007.
- I. SSPC-SP 7 - Brush-Off Blast Cleaning; 2007.
- J. SSPC-SP 11 - Power Tool Cleaning to Bare Metal; 2012 (Ed. 2013).
- K. SSPC-SP 13 - Surface Preparation of Concrete; 1997 (Reaffirmed 2003).

2.44 SWRI -- SEALANT, WATERPROOFING AND RESTORATION INSTITUTE

- A. SWRI (VAL) - SWRI Institute Validated Products Directory; Current Edition.

2.45 TCNA -- TILE COUNCIL OF NORTH AMERICA, INC.

- A. TCNA (HB) - Handbook for Ceramic, Glass, and Stone Tile Installation; 2017.

2.46 TMS -- THE MASONRY SOCIETY

- A. TMS 402/602 - Building Code Requirements and Specification for Masonry Structures; 2016.

2.47 UL -- UNDERWRITERS LABORATORIES INC.

- A. UL (GGG) - GREENGUARD Gold Certified Products; Current Edition.
- B. UL (DIR) - Online Certifications Directory; Current Edition.
- C. UL (FRD) - Fire Resistance Directory; Current Edition.
- D. UL 723 - Standard for Test for Surface Burning Characteristics of Building Materials; Current Edition, Including All Revisions.
- E. UL 1479 - Standard for Fire Tests of Penetration Firestops; Current Edition, Including All Revisions.
- F. UL 2079 - Standard for Tests for Fire Resistance of Building Joint Systems; Current Edition, Including All Revisions.

2.48 WCMA -- WINDOW COVERING MANUFACTURERS ASSOCIATION

- A. WCMA A100.1 - Safety of Window Covering Products; 2018.

2.49 WDMA -- WINDOW AND DOOR MANUFACTURERS ASSOCIATION (FORMERLY NWWDA)

- A. WDMA I.S. 1A - Interior Architectural Wood Flush Doors; 2013.

2.50 WI -- WOODWORK INSTITUTE

- A. WI (CCP) - Certified Compliance Program (CCP); Current Edition.
- B. WI (CSIP) - Certified Seismic Installation Program (CSIP); Current Edition.
- C. WI (MCP) - Monitored Compliance Program (MCP); Current Edition.

PART 3 UNITED STATES GOVERNMENT AND RELATED AGENCIES DOCUMENTS

3.01 CFR -- CODE OF FEDERAL REGULATIONS

- A. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design; 2010.
- B. 9 CFR 416.2 - Regulatory Requirements Under the Federal Meat Inspection Act and the Poultry Products Inspection Act, Part 416-Sanitation; current edition.
- C. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials; current edition.
- D. 29 CFR 1910.28 - Duty to have Fall Protection and Falling Object Protection; Current Edition.
- E. 29 CFR 1910.29 - Fall Protection Systems and Falling Object Protection - Criteria and Practices; Current Edition.
- F. 29 CFR 1926 - U.S. Occupational Safety and Health Standards; current edition.
- G. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency; current edition.
- H. 49 CFR 37 - Transportation Services for Individuals with Disabilities (ADA); current edition.

3.02 FHWA -- FEDERAL HIGHWAY ADMINISTRATION

- A. FHWA MUTCD - Manual on Uniform Traffic Control Devices for Streets and Highways; U.S. Department of Transportation, Federal Highway Administration; Current Edition.
- B. FHWA MUTCD - Manual on Uniform Traffic Control Devices for Streets and Highways; U.S. Department of Transportation, Federal Highway Administration; Current Edition.

3.03 FS -- FEDERAL SPECIFICATIONS AND STANDARDS (GENERAL SERVICES ADMINISTRATION)

- A. GSA CID A-A-1936 - Adhesive, Contact, Neoprene Rubber; 1996a (Validated 2013).
- B. FS TT-P-1952 - Paint, Traffic Black, and Airfield Marking, Waterborne; 2015f.

PART 2 - PRODUCTS Not Used.

PART 3 - EXECUTION Not Used.

END OF DOCUMENT

DOCUMENT 01 43 00

MATERIALS AND EQUIPMENT**PART 1 - GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions, including, without limitation, Purchase of Materials and Equipment;
- B. Special Conditions;
- C. Imported Materials Certification.

1.02 MATERIAL AND EQUIPMENT

- A. Only items approved by the District and/or Architect shall be used.
- B. Contractor shall submit lists of products and other product information in accordance with the Contract Documents, including, without limitation, the provisions regarding the submittals.

1.03 MATERIAL AND EQUIPMENT COLORS

- A. The District and/or Architect will provide a schedule of colors.
- B. No individual color selections will be made until after approval of all pertinent materials and equipment and after receipt of appropriate samples in accordance with the Contract Documents, including, without limitation, the provisions regarding the submittals.
- C. Contractor shall request priority in writing for any item requiring advance ordering to maintain the approved Construction Schedule.

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Contractor shall deliver manufactured materials in original packages, containers, or bundles (with seals unbroken), bearing name or identification mark of manufacturer.
- B. Contractor shall deliver fabrications in as large assemblies as practicable; where specified as shop-primed or shop-finished, package or crate as required to preserve such priming or finish intact and free from abrasion.
- C. Contractor shall store materials in such a manner as necessary to properly protect them from damage. Materials or equipment damaged by handling, weather, dirt, or from any other cause will not be accepted.

- D. Materials are not acceptable that have been warehoused for long periods of time, stored or transported in improper environment, improperly packaged, inadequately labeled, poorly protected, excessively shipped, deviated from normal distribution pattern, or reassembled.
- E. Contractor shall store material so as to cause no obstructions of sidewalks, roadways, access to the Site or buildings, and underground services. Contractor shall protect material and equipment furnished under Contract.
- F. Contractor may store materials on Site with prior written approval by the District, all material shall remain under Contractor's control and Contractor shall remain liable for any damage to the materials. Should the Project Site not have storage area available, the Contractor shall provide for off-site storage at a bonded warehouse and with appropriate insurance coverage at no cost to District.
- G. When any room in Project is used as a shop or storeroom, the Contractor shall be responsible for any repairs, patching, or cleaning necessary due to that use. Location of storage space shall be subject to prior written approval by District.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

- A. Manufacturers listed in various sections of Contract Documents are names of those manufacturers that are believed to be capable of supplying one or more of items specified therein.
- B. The listing of a manufacturer does not imply that every product of that manufacturer is acceptable as meeting the requirements of the Contract Documents.

2.02 FACILITIES AND EQUIPMENT

Contractor shall provide, install, maintain, and operate a complete and adequate facility for handling, the execution, disposal, and distribution of material and equipment as required for proper and timely performance of Work connected with Contract.

2.03 MATERIAL REFERENCE STANDARDS

Where material is specified solely by reference to "standard specifications" and if requested by District, Contractor shall submit for review data on actual material proposed to be incorporated into Work of Contract listing name and address of vendor, manufacturer, or producer, and trade or brand names of those materials, and data substantiating compliance with standard specifications.

PART 3 - EXECUTION

3.01 WORKMANSHIP

- A. Where not more specifically described in any other Contract Documents, workmanship shall conform to methods and operations of best standards and accepted practices of trade or trades involved and shall include items of fabrication, construction, or installation regularly furnished or required for completion (including finish and for successful operation, as intended).
- B. Work shall be executed by tradespersons skilled in their respective lines of Work. When completed, parts shall have been durably and substantially built and present a neat appearance.

3.02 COORDINATION

- A. Contractor shall coordinate installation of Work so as to not interfere with installation of others. Adjustment or rework because of Contractor's failure to coordinate will be at no additional cost to District.
- B. Contractor shall examine in-place work for readiness, completeness, fitness to be concealed or to receive other work, and in compliance with Contract Documents. Concealing or covering Work constitutes acceptance of additional cost which will result should in-place Work be found unsuitable for receiving other Work or otherwise deviating from the requirements of the Contract Documents.

3.03 COMPLETENESS

Contractor shall provide all portions of the Work, unless clearly stated otherwise, installed complete and operational with all elements, accessories, anchorages, utility connections, etc., in manner to assure well-balanced performance, in accordance with manufacturer's recommendations and by Contract Documents. For example, electric water coolers require water, electricity, and drain services; roof drains require drain system; sinks fit within countertop, etc. Terms such as "installed complete," "operable condition," "for use intended," "connected to all utilities," "terminate with proper cap," "adequately anchored," "patch and refinish," "to match similar," should be assumed to apply in all cases, except where completeness of functional or operable condition is specifically stated as not required.

3.04 APPROVED INSTALLER OR APPLICATOR

Installation by a manufacturer's approved installer or applicator is an understood part of Specifications and only approved installer or applicator is to provide on-site Work where specified manufacturer has on-going program of approving (i.e. certifying, bonding, re-warranting) installers or applicators. Newly established relationships between a manufacturer and an installer or applicator who does not have other approved applicator work in progress or completed is not approved for this Project.

3.05 MANUFACTURER'S RECOMMENDATIONS

All installations shall be in accordance with manufacturer's published recommendations and specific written directions of manufacturer's representative. Should Contract Documents differ from recommendations of manufacturer or directions of his representative, Contractor shall analyze differences, make recommendations to the District and the Architect in writing, and shall not proceed until interpretation or clarification has been issued by the District and/or the Architect.

END OF DOCUMENT

DOCUMENT 01 45 00

QUALITY CONTROL**PART 1 - GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS:**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions, including, without limitation, Inspector, Inspections and Tests, Uncovering of Work and Non-conforming of Work and Correction of Work;
- B. Special Conditions.

1.02 RELATED CODES:

- A. The Work is governed by requirements of Title 24, California Code of Regulations ("CCR"), and the Contractor shall keep a copy of these available at the job Site for ready reference during construction.
- B. The Division of the State Architect ("DSA") shall be notified at or before the start of construction.

1.03 OBSERVATION AND SUPERVISION:

- A. The District and Architect or their appointed representatives will review the Work and the Contractor shall provide facilities and access to the Work at all times as required to facilitate this review. Administration by the Architect and any consulting Structural Engineer will be in accordance with applicable regulations, including, without limitation, CCR, Part 1, Title 24, Section 4-341.
- B. One or more Project Inspector(s) approved by DSA and employed by or in contract with the District, referred to hereinafter as the "Project Inspector", will observe the work in accordance with CCR, Part 1, Title 24, Sections 4-333(b) and 4-342:
 - (1) The Project Inspector and Special Inspector(s) shall have access to the Work wherever it is in preparation or progress for ascertaining that the Work is in accordance with the Contract Documents and all applicable code sections. The Contractor shall provide facilities and operation of equipment as needed, and access as required and shall provide assistance for sampling or measuring materials.
 - (2) The Project Inspector will notify the District and Architect and call the attention of the Contractor to any observed failure of Work or material to conform to Contract Documents.

- (3) The Project Inspector shall observe and monitor all testing and inspection activities required.

The Contractor shall conform with all applicable laws as indicated in the Contract Documents, including, without limitation, to CCR, Part 1, Title 24, Section 4-343. The Contractor shall supervise and direct the Work and maintain a competent superintendent on the job who is authorized to act in all matters pertaining to the Work. The Contractor's superintendent shall also inspect all materials, as they arrive, for compliance with the Contract Documents. Contractor shall reject defective Work or materials immediately upon delivery or failure of the Work or material to comply with the Contract Documents. The Contractor shall submit verified reports as indicated in the Contract Documents, including, without limitation, the Specifications and as required by Part 1, Title 24, Section 4-336.

1.04 TESTING AGENCIES:

- A. Testing agencies and tests shall be in conformance with the General Documents and the requirements of Part 1, Title 24, Section 4- 335.
- B. Testing and inspection in connection with earthwork shall be under the direction of the District's consulting soils engineer, if any, referred to hereinafter as the "Soils Engineer."
- C. Testing and inspection of construction materials and workmanship shall be performed by a qualified laboratory, referred to hereinafter as the "Testing Laboratory." The Testing Laboratory shall be under direction of an engineer registered in the State of California, shall conform to requirements of ASTM E329, and shall be employed by or in contract with the District.

1.05 TESTS AND INSPECTIONS:

- A. The Contractor shall be responsible for notifying the District and Project Inspector of all required tests and inspections. Contractor shall notify the District and Project Inspector at least seventy-two hours (72) hours in advance of performing any Work requiring testing or inspection.
- B. The Contractor shall provide access to Work to be tested and furnish incidental labor, equipment, and facilities to facilitate all inspections and tests.
- C. The District will pay for first inspections and tests required by the "CCR", and other inspections or tests that the District and/or the Architect may direct to have made, including the following principal items:
 - (1) Tests and observations for earthwork and paving.
 - (2) Tests for concrete mix designs, including tests of trial batches.
 - (3) Tests and inspections for structural steel work.
 - (4) Field tests for framing lumber moisture content.

- (5) Additional tests directed by the District that establish that materials and installation comply with the Contract Documents.
- (6) Tests and observations of welding and expansion anchors.
- D. The District may at its discretion, pay and then back charge the Contractor for:
 - (1) Retests or reinspections, if required, and tests or inspections required due to Contractor error or lack of required identifications of material.
 - (2) Uncovering of work in accordance with Contract Documents.
 - (3) Testing done on weekends, holidays, and overtime will be chargeable to the Contractor for the overtime portion.
 - (4) Testing done off Site.
- E. Testing and inspection reports and certifications:
 - (1) If initially received by Contractor, Contractor shall provide to each of the following a copy of the agency or laboratory report of each test or inspection or certification.
 - (a) The District;
 - (b) The Construction Manager, if any;
 - (c) The Architect;
 - (d) The Consulting Engineer, if any;
 - (e) Other engineers on the Project, as appropriate;
 - (f) The Project Inspector; and
 - (g) The Contractor.
 - (2) When the test or inspection is one required by the CCR, a copy of the report shall also be provided to the DSA.

PART 2 - PRODUCTS

2.01 TYPE OF TESTS AND INSPECTIONS:

- A. Contractor shall refer to DSA Form 103 (or current version) for all required inspections.
- B. Contractor shall schedule a meeting prior to the commencement of any major construction activities to review DSA Form 103 with the Inspector of Record (IOR), Special Inspection Agency and Construction Manager.

PART 3 - EXECUTION Not Used.

END OF DOCUMENT

DOCUMENT 01 50 00

TEMPORARY FACILITIES AND CONTROLS**PART 1 – GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS:**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions;
- B. Special Conditions;
- C. Site Standards; and
- D. Construction Waste Management and Disposal.

1.02 TEMPORARY UTILITIES:

- A. Electric Power and Lighting:
 - (1) Contractor will pay for power during the course of the Work. To the extent power is available in the building(s) or on the Site, Contractor may use the District's existing utilities by making prearranged payments to the District for the utilities used by Contractor and all Subcontractors. Contractor shall be responsible for providing temporary facilities required to deliver that power service from its existing location in the building(s) or on the Site to point of intended use.
 - (2) Contractor shall verify characteristics of power available in building(s) or on the Site. Contractor shall take all actions required to make modifications where power of higher voltage or different phases of current are required. Contractor shall be fully responsible for providing that service and shall pay all costs required therefor.
 - (3) Contractor shall furnish, wire for, install, and maintain temporary electrical lights wherever it is necessary to provide illumination for the proper performance and/or observation of the Work: a minimum of 20 foot-candles for rough work and 50 foot-candles for finish work.
 - (4) Contractor shall be responsible for maintaining existing lighting levels in the project vicinity should temporary outages or service interruptions occur.
- B. Heat and Ventilation:
 - (1) Contractor shall provide temporary heat to maintain environmental conditions to facilitate progress of the Work, to meet specified

minimum conditions for the installation and curing of materials, and to protect materials and finishes from damage due to improper temperature and humidity conditions. Portable heaters shall be standard units complete with controls.

- (2) Contractor shall provide forced ventilation and dehumidification, as required, of enclosed areas for proper installation and curing of materials, to disperse humidity, and to prevent hazardous accumulations of dust, fumes, vapors, and gases.
- (3) Contractor shall pay the costs of installation, maintenance, operation, and removal of temporary heat and ventilation, including costs for fuel consumed, required for the performance of the Work.

C. Water:

- (1) Contractor shall pay for water used during the course of the Work. Contractor shall coordinate and pay for installation or use of water meter in compliance with local water agency requirements. To the extent water is then available in the building(s) or on the Site, Contractor may use the District's existing utilities by making prearranged payments to the District for the utilities used by Contractor and all Subcontractors. Contractor shall be responsible for providing temporary facilities required to deliver such utility service from its existing location in the building(s) on the Site, or other location approved by the local water agency, to point of intended use.
- (2) Contractor shall use backflow preventers on water lines at point of connection to District's water supply. Backflow preventers shall comply with requirements of Uniform Plumbing Code.
- (3) Contractor shall make potable water available for human consumption.

D. Sanitary Facilities:

- (1) Contractor shall provide sanitary temporary facilities in no fewer numbers than required by law and such additional facilities as may be directed by the Inspector for the use of all workers. The facilities shall be maintained in a sanitary condition at all times and shall be left at the Site until removal is directed by the Inspector or Contractor completes all other work at the Site.
- (2) Use of toilet facilities in the Work under construction shall not be permitted except by consent of the Inspector and the District.

E. Telephone Service:

- (1) Contractor shall arrange with local telephone service company for telephone service as required for the performance of the Work. Contractor shall, at a minimum, provide in its field office one line for telephone and one line for fax machine.

- (2) Contractor shall pay the costs for telephone and fax lines installation, maintenance, service, and removal.

F. Fire Protection:

- (1) Contractor shall provide and maintain fire extinguishers and other equipment for fire protection. Such equipment shall be designated for use for fire protection only and shall comply with all requirements of the California Fire, State Fire Marshall and/or its designee.
- (2) Where on-site welding and burning of steel is unavoidable, Contractor shall provide protection for adjacent surfaces.

G. Trash Removal:

- (1) Contractor shall provide trash removal on a timely basis. Under no circumstance shall Contractor use District trash service.

H. Field Office:

- (1) If Contractor chooses to provide a field office, it shall be an acceptable construction trailer that is well-lit and ventilated. The construction trailer shall be equipped with shelves, desks, filing cabinet, chairs, and such other items of equipment needed. Trailer and equipment are the property of the Contractor and must be removed from the Site upon completion of the Work.
- (2) Contractor shall provide any additional electric lighting and power required for the trailer. Contractor shall make adequate provisions for heating and cooling as required.

1.03 CONSTRUCTION AIDS:

A. Plant and Equipment:

- (1) Contractor shall furnish, operate, and maintain a complete plant for fabricating, handling, conveying, installing, and erecting materials and equipment; and for conveyances for transporting workers. Include elevators, hoists, debris chutes, and other equipment, tools, and appliances necessary for performance of the Work.
- (2) Contractor shall maintain plant and equipment in safe and efficient operating condition. Damages due to defective plant and equipment, and uses made thereof, shall be repaired by Contractor at no expense to the District.

B. None of the District's tools and equipment shall be used by Contractor for the performance of the Work.

1.04 BARRIERS AND ENCLOSURES:

- A. Contractor shall obtain the District's written permission for locations and types of temporary barriers and enclosures, including fire-rated materials proposed for use, prior to their installation.
- B. Contractor shall provide and maintain temporary enclosures to prevent public entry and to protect persons using other buildings and portions of the Site and/or Premises, the public, and workers. Contractor shall also protect the Work and existing facilities from the elements, and adjacent construction and improvements, persons, and trees and plants from damage and injury from demolition and construction operations.
- C. Contractor shall provide site access to existing facilities for persons using other buildings and portions of the Site, the public, and for deliveries and other services and activities.
- D. Tree and Plant Protection:
 - (1) Contractor shall preserve and protect existing trees and plants on the Premises that are not designated or required to be removed, and those adjacent to the Premises.
 - (2) Contractor shall provide barriers to a minimum height of 4'-0" around drip line of each tree and plant, around each group of trees and plants, as applicable, in the proximity of demolition and construction operations, or as denoted on the Plans.
 - (3) Contractor shall not park trucks, store materials, perform Work or cross over landscaped areas. Contractor shall not dispose of paint thinners, water from cleaning, plastering or concrete operations, or other deleterious materials in landscaped areas, storm drain systems, or sewers. Plant materials damaged as a result of the performance of the Work shall, at the option of the District and at Contractor's expense, either be replaced with new plant materials equal in size to those damaged or by payment of an amount representing the value of the damaged materials as determined by the District.
 - (4) Contractor shall remove soil that has been contaminated during the performance of the Work by oil, solvents, and other materials which could be harmful to trees and plants, and replace with good soil, at Contractor's expense.
 - (5) Excavation around Trees:
 - (a) Excavation within drip lines of trees shall be done only where absolutely necessary and with written permission from the District.
 - (b) Where trenching for utilities is required within drip lines, tunneling under and around roots shall be by hand digging and shall be approved by the District. Main lateral roots and

taproots shall not be cut. All roots 2 inches in diameter and larger shall be tunneled under and heavily wrapped with wet burlap so as to prevent scarring or excessive drying. Smaller roots that interfere with installation of new work may be cut with prior approval by the District. Roots must first be cut with a Vermeer, or equivalent, root cutter prior to any trenching.

- (c) Where excavation for new construction is required within drip line of trees, hand excavation shall be employed to minimize damage to root system. Roots shall be relocated in backfill areas wherever possible. If encountered immediately adjacent to location of new construction, roots shall be cut approximately 6 inches back from new construction.
- (d) Approved excavations shall be carefully backfilled with the excavated materials approved for backfilling. Backfill shall conform to adjacent grades without dips, sunken areas, humps, or other surface irregularities. Do not use mechanical equipment to compact backfill. Tamp carefully using hand tools, refilling and tamping until Final Acceptance as necessary to offset settlement.
- (e) Exposed roots shall not be allowed to dry out before permanent backfill is placed. Temporary earth cover shall be provided, or roots shall be wrapped with four layers of wet, untreated burlap and temporarily supported and protected from damage until permanently relocated and covered with backfill.
- (f) Accidentally broken roots should be sawed cleanly 3 inches behind ragged end.

1.05 SECURITY:

The Contractor shall be responsible for project security for materials, tools, equipment, supplies, and completed and partially completed Work.

1.06 TEMPORARY CONTROLS:

A. Noise Control:

- (1) Contractor acknowledges that adjacent facilities may remain in operation during all or a portion of the Work period, and it shall take all reasonable precautions to minimize noise as required by applicable laws and the Contract Documents.
- (2) Notice of proposed noisy operations, including without limitation, operation of pneumatic demolition tools, concrete saws, and other equipment, shall be submitted to the District a minimum of forty-eight (48) hours in advance of their performance.

B. Noise and Vibration:

- (1) Equipment and impact tools shall have intake and exhaust mufflers.
- (2) Contractor shall cooperate with District to minimize and/or cease the use of noisy and vibratory equipment if that equipment becomes objectionable by its longevity.

C. Dust and Dirt:

- (1) Contractor shall conduct demolition and construction operations to minimize the generation of dust and dirt, and prevent dust and dirt from interfering with the progress of the Work and from accumulating in the Work and adjacent areas including, without limitation, occupied facilities.
- (2) Contractor shall periodically water exterior demolition and construction areas to minimize the generation of dust and dirt.
- (3) Contractor shall ensure that all hauling equipment and trucks carrying loads of soil and debris shall have their loads sprayed with water or covered with tarpaulins, and as otherwise required by local and state ordinance.
- (4) Contractor shall prevent dust and dirt from accumulating on walks, roadways, parking areas, and planting, and from washing into sewer and storm drain lines.

D. Water:

Contractor shall not permit surface and subsurface water, and other liquids, to accumulate in or about the vicinity of the Premises. Should accumulation develop, Contractor shall control the water or other liquid, and suitably dispose of it by means of temporary pumps, piping, drainage lines, troughs, ditches, dams, or other methods.

E. Pollution:

- (1) No burning of refuse, debris, or other materials shall be permitted on or in the vicinity of the Premises.
- (2) Contractor shall comply with applicable regulatory requirements and anti-pollution ordinances during the conduct of the Work including, without limitation, demolition, construction, and disposal operations.

F. Lighting:

- (1) If portable lights are used after dark, all light must be located so as not to direct light into neighboring property.

1.07 JOB SIGN(S):

A. General:

- (1) Contractor shall provide and maintain a Project identification sign with the design, text, and colors designated by the District and/or the Design Professional; locate sign as approved by the District.
- (2) Signs other than the specified Project sign and or signs required by law, for safety, or for egress, shall not be permitted, unless otherwise approved in advance by the District.

B. Materials:

- (1) Structure and Framing: Structurally sound, new or used wood or metal; wood shall be nominal 3/4-inch exterior grade plywood.
- (2) Sign Surface: Minimum 3/4-inch exterior grade plywood.
- (3) Rough Hardware: Galvanized.
- (4) Paint: Exterior quality, of type and colors selected by the District and/or the Design Professional.

C. Fabrication:

- (1) Contractor shall fabricate to provide smooth, even surface for painting.
- (2) Size: 4'-0" x 8'-0", unless otherwise indicated.
- (3) Contractor shall paint exposed surfaces of supports, framing, and surface material with exterior grade paint: one coat of primer and one coat of finish paint.
- (4) Text and Graphics: As indicated.

1.08 PUBLICITY RELEASES:

- A. Contractor shall not release any information, story, photograph, plan, or drawing relating information about the Project to anyone, including press and other public communications medium, including, without limitation, on website(s) without the written permission of the District.

PART 2 – PRODUCTS Not used.

PART 3 – EXECUTION Not used.

END OF DOCUMENT

CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL**PART 1 - GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS:**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions;
- B. Special Conditions; and
- C. Temporary Facilities and Controls.

1.02 SECTION INCLUDES:

- A. Administrative and procedural requirements for the following:
 - (1) Salvaging non-hazardous construction waste.
 - (2) Recycling non-hazardous construction waste.
 - (3) Disposing of non-hazardous construction waste.

1.03 DEFINITIONS:

- A. Construction Waste: Building and site improvement materials and other solid waste resulting from construction, remodeling, renovation, or repair operations. Construction waste includes packaging.
- B. Demolition Waste: Building and site improvement materials resulting from demolition or selective demolition operations.
- C. Disposal: Removal off-site of demolition and construction waste and subsequent sale, recycling, reuse, or deposit in landfill or incinerator acceptable to authorities having jurisdiction.
- D. Recycle: Recovery of demolition or construction waste for subsequent processing in preparation for reuse.
- E. Salvage: Recovery of demolition or construction waste and subsequent sale or reuse in another facility.
- F. Salvage and Reuse: Recovery of demolition or construction waste and subsequent incorporation into the Work.

1.04 PERFORMANCE REQUIREMENTS:

- A. General: Develop waste management plan that results in end-of Project rates for salvage/recycling of sixty-five percent (65%) by weight (or by volume, but not a combination) of total waste generated by the Work.

1.05 SUBMITTALS:

- A. Waste Management Plan: Submit waste management plan within 30 days of date established for commencement of the Work.
- B. Waste Reduction Progress Reports: Concurrent with each Application for Payment, submit copies of report. Include the following information:
 - (1) Material category.
 - (2) Generation point of waste.
 - (3) Total quantity of waste in tons or cubic yards.
 - (4) Quantity of waste salvaged, both estimated and actual in tons or cubic yards.
 - (5) Quantity of waste recycled, both estimated and actual in tons or cubic yards.
 - (6) Total quantity of waste recovered (salvaged plus recycled) in tons or cubic yards.
 - (7) Total quantity of waste recovered (salvaged plus recycled) as a percentage of total waste.
- C. Waste Reduction Calculations: Before request for final payment, submit copies of calculated end-of-Project rates for salvage, recycling, and disposal as a percentage of total waste generated by the Work.
- D. Records of Donations: Indicate receipt and acceptance of salvageable waste donated to individuals and organizations. Indicate whether organization is tax exempt.
- E. Records of Sales: Indicate receipt and acceptance of salvageable waste sold to individuals and organizations. Indicate whether organization is tax exempt.
- F. Recycling and Processing Facility Records: Indicate receipt and acceptance of recyclable waste by recycling and processing facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.
- G. Landfill and Incinerator Disposal Records: Indicate receipt and acceptance of waste by landfills and incinerator facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.

- H. Qualification Data: For Waste Management Coordinator.
- I. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.
- J. Provide verifiable documentation that the percentage of construction and demolition waste material diverted from the landfill complies with Calgreen Section 5.408.1.2.
- K. Submittal procedures and quantities are specified in Document 01 33 00.

1.06 QUALITY ASSURANCE:

- A. Waste Management Coordinator Qualifications: LEED Accredited Professional by U.S. Green Building Council.
- B. Regulatory Requirements: Comply with hauling and disposal regulations of authorities having jurisdiction.
- C. Waste Management Conference: Conduct conference at Project site to comply with requirements. Review methods and procedures related to waste management including, but not limited to, the following:
 - (1) Review and discuss waste management plan including responsibilities of Waste Management Coordinator.
 - (2) Review requirements for documenting quantities of each type of waste and its disposition.
 - (3) Review and finalize procedures for materials separation and verify availability of containers and bins needed to avoid delays.
 - (4) Review procedures for periodic waste collection and transportation to recycling and disposal facilities.
 - (5) Review waste management requirements for each trade.

1.07 WASTE MANAGEMENT PLAN:

- A. General: Develop plan consisting of waste identification, waste reduction work plan, and cost/revenue analysis. Indicate quantities by weight or volume, but use same units of measurement throughout waste management plan.
- B. Waste Identification: Indicate anticipated types and quantities of site-clearing and construction waste generated by the Work. Include estimated quantities and assumptions for estimates.

- C. Waste Reduction Work Plan: List each type of waste and whether it will be salvaged, recycled, or disposed of in landfill or incinerator. Include points of waste generation, total quantity of each type of waste, quantity for each means of recovery, and handling and transportation procedures.
- (1) Salvaged Materials for Reuse: For materials that will be salvaged and reused in this Project, describe methods for preparing salvaged materials before incorporation into the Work.
 - (2) Salvaged Materials for Sale: For materials that will be sold to individuals and organizations, include list of their names, addresses, and telephone numbers.
 - (3) Salvaged Materials for Donation: For materials that will be donated to individuals and organizations, include list of their names, addresses, and telephone numbers.
 - (4) Recycled Materials: Include list of local receivers and processors and type of recycled materials each will accept. Include names, addresses, and telephone numbers.
 - (5) Disposed Materials: Indicate how and where materials will be disposed of. Include name, address, and telephone number of each landfill and incinerator facility.
 - (6) Handling and Transportation Procedures: Include method that will be used for separating recyclable waste including sizes of containers, container labeling, and designated location on Project site where materials separation will be located.

PART 2 - PRODUCTS Not Used.

PART 3 - EXECUTION

3.01 PLAN IMPLEMENTATION:

- A. General: Implement approved waste management plan. Provide handling, containers, storage, signage, transportation, and other items as required to implement waste management plan during the entire duration of the Contract.
 - (1) Comply with Document 01 50 00 for operation, termination, and removal requirements.
- B. [Waste Management Coordinator: Engage a waste management coordinator to be responsible for implementing, monitoring, and reporting status of waste management work plan. Coordinator shall be present at Project site full time for duration of Project.]

- C. Training: Train workers, subcontractors, and suppliers on proper waste management procedures, as appropriate for the Work occurring at Project site.
 - (1) Distribute waste management plan to everyone concerned within 3 days of submittal return.
 - (2) Distribute waste management plan to entities when they first begin work on site. Review plan procedures and locations established for salvage, recycling, and disposal.

- D. Site Access and Temporary Controls: Conduct waste management operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
 - (1) Designate and label specific areas of Project site necessary for separating materials that are to be salvaged, recycled, reused, donated, and sold.
 - (2) Comply with Document 01 50 00 for controlling dust and dirt, environmental protection, and noise control.

3.02 RECYCLING CONSTRUCTION WASTE:

- A. General: Recycle paper and beverage containers used by on-site workers.

- B. Recycling Incentives: Revenues, savings, rebates, tax credits, and other incentives received for recycling waste materials shall accrue to the Contractor.

- C. Procedures: Separate recyclable waste from other waste materials, trash, and debris. Separate recyclable waste by type at Project site to the maximum extent practical.
 - (1) Provide appropriately marked containers or bins for controlling recyclable waste until they are removed from Project Site. Include list of acceptable and unacceptable materials at each container and bin.
 - (a) Inspect containers and bins for contamination and remove contaminated materials if found.
 - (2) Stockpile processed materials on site without intermixing with other materials. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
 - (3) Stockpile materials away from construction area. Do not store within drip line of remaining trees.
 - (4) Store components off the ground and protect from the weather.

- (5) Remove recyclable waste off District property and transport to recycling receiver or processor.
- D. Packaging:
 - (1) Cardboard and Boxes: Break down packaging into flat sheets. Bundle and store in a dry location.
 - (2) Polystyrene Packaging: Separate and bag material.
 - (3) Pallets: As much as possible, require deliveries using pallets to remove pallets from Project Site. For pallets that remain on Site, break down pallets into component wood pieces and comply with requirements for recycling wood.
 - (4) Crates: Break down crates into component wood pieces and comply with requirements for recycling wood.
- E. Site-Clearing Wastes: Chip brush, branches, and trees on site.
- F. Wood Materials:
 - (1) Clean Cut-Offs of Lumber: Grind or chip into small pieces.
 - (2) Clean Sawdust: Bag sawdust that does not contain painted or treated wood.
- G. Gypsum Board: Stack large clean pieces on wood pallets and store in a dry location.
 - (1) Clean Gypsum Board: Grind scraps of clean gypsum board using small mobile chipper or hammer mill. Screen out paper after grinding.

3.03 DISPOSAL OF WASTE:

- A. General: Except for items or materials to be salvaged, recycled, or otherwise reused, remove waste materials from Project Site and legally dispose of them in a landfill or incinerator acceptable to authorities having jurisdiction.
 - (1) Except as otherwise specified, do not allow waste materials that are to be disposed of accumulate on site.
 - (2) Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
- B. Burning: Do not burn waste materials.
- C. Disposal: Transport waste materials off District property and legally dispose of them.

END OF DOCUMENT

DOCUMENT 01 52 13

FIELD OFFICES**PART 1 – GENERAL****1.1 RELATED DOCUMENTS AND PROVISIONS:**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions;
- B. Special Conditions; and
- C. Temporary Facilities and Controls.

1.2 SECTION INCLUDES:

- A. Requirements for Field Offices and Field Office Trailers.

1.3 SUMMARY:

- A. General: Contractor shall provide District's Field Office Trailer and contents, for District's use exclusively, during the term of the Contract.
- B. Property: Trailer, furniture, furnishings, equipment, and the like, supplied by the Contractor with the Office Trailer shall remain the property of the Contractor; District property items installed, delivered, and the like by District within the Office Trailer will remain District's property.
- C. Modifications: District reserves the right to modify the trailer or contents, or both, as may be deemed proper by District.
- D. Condition: Trailer and contents shall be clean, neat, substantially finished, in good, proper, and safe condition for use, operation, and the like; the trailer and contents shall not be required to be new.
- E. Installation Timing: Provide safe, fully furnished, functional, proper, complete, and finished trailer properly ready for entire use, within fourteen (14) calendar days of District's notification of the issuance of Notice to Proceed.

1.4 SUBMITTALS:

- A. General: Submit submittals to District in quantity, format, type, and the like, as specified herein.
- B. Office Trailer Data: One (1) copy of manufacturer's descriptive data, technical descriptions, regulatory compliance, industry standards, installation, removal, and maintenance instructions.

- C. Equipment Data: Two (2) copies of manufacturer data for each type of equipment, if directed by District.
- D. Furniture and Furnishings Data: Two (2) copies of manufacturer data for each type of equipment, if directed by District.
- E. Plans: One (1) reproducible copy of appropriately scaled plans of trailer layout. Plans shall include, but not be limited to: lighting; furniture; equipment; telephone and electrical outlets; and the like.
- F. Product Samples: One (1) complete and entire unit of each type, if directed by District.

1.5 QUALITY ASSURANCE

- A. Standards: In the event that provisions of codes, regulations, safety orders, Contract Documents, referenced manufacturer’s specifications, manufacturer’s instructions, industry standards, and the like, are in conflict, the more restrictive and higher quality shall govern.
- B. Installer: Installer or Installers engaged by Contractor must have a minimum of five (5) years of documented and properly authenticated successful experience of specialization in the installation of the items or systems, or both, specified herein.
- C. Manufacturer: Contractor shall obtain products from nationally and industry recognized Manufacturer with five (5) years minimum, of immediately recent, continuous, documented and properly authenticated successful experience of specialization in the manufacture of the product specified herein.
- D. State Personnel Training: Provide proper training for maintenance and operations, including emergency procedures, and the like, as directed by District.
- E. Units: Shall be sound and free of defects, and shall not include any damage or defect that will impair the safety, installation, performance, or the durability of the entire Office Trailer and appurtenant systems.

1.6 REGULATORY REQUIREMENTS

- A. General: Work shall be executed in accordance with applicable Codes, Regulations, Statutes, Enactments, Rulings, Laws, each authority having jurisdiction, and including, but not limited to, Regulatory Requirements specified herein.
- B. California Building Standards Code (“CBSC”).
- C. California Code of Regulations, Title 25, Chapter 3, Sub Chapter 2, Article 3 (“CCR”).

- D. Coach Insignia: Trailer shall display California Commercial Coach Insignia; such insignia shall be deemed to show that the trailer is in accordance with the Construction and Fire Safety requirements of CCR.

PART 2 – PRODUCTS

2.1 FIELD OFFICE TRAILER

- A. General: Provide entire Field Office Trailer of type, function, operation, capacity, size, complete with controls, safety devices, accessories, and the like, for proper and durable installation. Partitions, walls, ceiling, and other interior and exterior surfaces shall be appropriately finished, including, but not limited to, trim, painting, wall base, floor covering, suspended or similar ceiling, and the like; provide systems, components, units, nuts, bolts, screws, anchoring devices, fastening devices, washers, accessories, adhesives, sealants, and other items of type, grade, and class required for the particular use, not identified but required for a complete, weather-tight, appropriately operating, and finished installation.
- B. Manufacturers: General Electric Capital Modular Space; The Space Place, Inc.; or equal.
- C. Program: Provide a wheel-mounted trailer with stairs, landings, platforms, ramps, and the like, in good, proper, safe, clean, and properly finished condition; with proper heavy duty locks, and other proper and effective security at all doors, windows, and the like. Trailer shall be maintained in good, proper, safe, clean, and properly finished condition during the Contract.
- (1) Nominal Trailer Size: Four hundred eighty (480) square feet, minimum.
 - (2) Stairs, Platform: Properly finished stairs, platforms, and ramps.
 - (3) Doors: Two (2), three (3) foot wide exterior doors with locksets; finished ramp, steps, and entry platform at each exterior door.
 - (4) Keys: Submit five (5) keys for each door, window, furniture unit, and the like. There shall be no other key copies or originals available; each key shall be identified for District; and shall be labeled, or tagged or both, as directed by District.
 - (5) HVAC: HVAC: Heating and Air-Conditioning for the field office capable of maintaining temperatures between 65 and 75 degrees.
 - (6) Lighting: Sixty-five (65) foot-candles illumination minimum at any point, at thirty (30) inches above finished floor throughout from fluorescent light source, exclusively, or as directed by District.
 - (7) Electrical Outlets: One (1) duplex outlet evenly spaced every twelve (12) linear horizontal feet of wall face, and electrical service ready for use.

- (8) Telephones and Telephone Outlets: Two (2) telephone lines wired, connected to telephone utility service, and ready for use, and two (2) telephone instruments, each with two (2)-line capability, speed dial and hands-free feature. Locate each outlet as directed by District.
- (9) Voicemail Messaging System or Answering Machine: One (1) unit, two (2)-line; digital.
- (10) Data Connection: Contractor should assume that a connection to the local utility provider is required. Provide a router to allow a minimum of six (6) users to connect.

The network shall have the following requirements:

- (a) The internet connection, if provided by the client or subcontractor, shall have at a minimum a 20-Meg upload / 20-Meg download speed. This should be accomplished via a hard-wired connection.
- (b) If it is necessary to "piggyback" off of an existing hard-wired line, the line provided to Kitchell shall be an unfiltered line, with no limitations set by the main line holder, such as access restrictions or DNS port blocking.
- (c) In the cases where a hard-wired connection is not available, the wireless connection provided must meet the same speed needs of 20-Meg upload / 20-Meg download. It shall also be of sufficient bandwidth to meet the needs of the staff.

The equipment required at the site shall be determined by Kitchell Management. However, for an office of three people or more, Kitchell will require:

- (A) A Cisco ASA 5505 network security appliance.
- (B) A Cisco switch.
- (C) Wired network connections to the workspaces for the Kitchell staff.
- (D) A wired network connection to the Printer/Scanner. Reasonable access to power for the equipment.

2.2 FIELD OFFICE TRAILER ITEMS

- A. General: Provide the Field Office Trailer with the following arranged into Four (4) workstations:
 - (1) Desks: Four (4) desks with lockable file storage: thirty-six (36) inches by sixty (60) inches; steel, laminated plastic top; locking, one (1) or two (2) file drawers single pedestal; steel; provide five (5) keys to District.

- (2) Tables: Two (2) tables; thirty-six (36) inches by sixty (60) inches; twenty-nine (29) inches high; steel, laminated plastic top tables; one (1) at each desk.
 - (3) Chairs: Four (4) chairs: swivel; steel; with seat cushion and arms; one (1) at each desk. Ten (10) collapsible chairs for Tables.
 - (4) Waste Baskets: Four (4) waste baskets and Four (4) recycling baskets, one at each desk.
- B. Furniture and Equipment: Provide in the space located to effect efficient and logical use.
- (1) File cabinet: One (1); four (4) drawer; lateral; steel locking.
 - (2) Plan Table: One (1) plan table: thirty-six (36) inches deep by seventy-two (72) inches wide by forty-two (42) inches high; adjustable; wood or steel; with lockable plan and pencil drawers.
 - (3) Drafting Stool: One (1) drafting stool; swiveling; steel; padded; adjustable; with footrest and casters.
 - (4) Bookshelf: One (1) bookshelf: thirty-six (36) inches deep by seventy-two (72) inches wide by forty-two (42) inches high; adjustable; wood or steel; with lockable plan and pencil drawer.
 - (5) Plan Rack: One (1) wheel mounted plan rack.
 - (6) Waste Baskets: One (1) large waste basket.
 - (7) Coat/Hat Hanger: Wall mounted with minimum capacity for four (4) garments and ten (10) hats.
 - (8) Document Management System: Shall include an integrated high-volume printer, copier, and facsimile machine, including stand, base, and storage cabinet; and shall include the following features:
 - (a) Type: Laser, dry electrostatic transfer, plain paper, digital, multi-function imaging system.
 - (b) Network: Ethernet or Token Ring network ready, Plug-and-Play.
 - (c) Print, send/receive facsimile from any connected workstation.
 - (d) Resolution: Six hundred (600) dots per inch by six hundred (600) dots per inch, minimum.
 - (e) Print Speed: Twenty (20) pages per minute, minimum.
 - (f) Copies: Twenty (20) copies per minute, minimum.

- (g) Document Handler: Forty (40) sheet, minimum
- (h) Collator: Forty (40) bin, minimum, with stapling.
- (i) Duplexing: Capable.
- (j) Paper Size: Capable of handling paper sizes to eleven (11) inches by seventeen (17) inches.
- (k) Paper Cassettes: One (1) each for eight and one half (8.5) inches by eleven (11) inches, eight and one half (8.5) inches by fourteen (14) inches, and eleven (11) inches by seventeen (17) inches paper sizes; minimum two hundred fifty (250) sheets per cassette.
- (l) Reduction/Enlargement: Capable of reduction to twenty-five percent (25%) and enlargement to two hundred percent (200%).
- (m) Facsimile Electronic Storage: Capable of storing minimum of fifty (50) speed dial numbers, group faxing and broadcast faxing.
- (n) Facsimile Scanning: Capable of scanning into memory a minimum of one hundred (100) pages with maximum scan time of three (3) seconds per page.
- (o) Halftone: Sixty-four (64) levels.
- (p) Redial: Automatic and Manual.
- (9) Maintenance: Contractor shall purchase service agreements for each unit of equipment for the duration of the project plus two (2) months, and shall maintain all equipment in proper working condition. Service agreements shall include provision for replacement of toner cartridges and other items required to effect proper unit use. Service agreements shall also provide for:
 - (a) Unlimited Service Calls.
 - (b) Same Day Response.
 - (c) All parts, labor, preventative maintenance and mileage.
 - (d) All chemicals, such as toner, fixing agent, and the like.
 - (e) System training and setup.
- (10) Provide an office trailer with restroom facilities inside the trailer.
- (11) Portable Toilets: Two (2); each shall include a urinal; each unit shall be a properly enclosed chemical unit conforming to ANSI Z4.3.

- (a) Location: As directed by District.
- (b) Maintenance: Maintain each unit and surrounding areas in a clean, hygienic and orderly manner, at all time. Empty, clean, and sanitize each unit each day at a location and time as directed by District.
- (c) Removal: Relocate, or remove from the site, each Portable Toilet. Upon such directive by District, the Contractor shall forthwith relocate or remove each Portable Toilet and submit the affected areas to a condition which existed prior to the installation of each Portable Toilet, within three (3) calendar days, or as directed by District in writing, at no cost to District.

(12) Microwave.

(13) Microfridge.

2.3 UTILITY AND SERVICES

- A. Telephone Service: Contractor shall provide and interface the entire telephone service, and shall properly and timely pay for telephone service for District's non-long-distance use.
- B. Electrical Service: Provide all proper connections and continuously pay for service for the duration of the Work.

2.4 FINISHES

- A. General: Manufacturer standard finish system over surfaces properly cleaned, pretreated, and prepared to obtain proper bond; all visible surfaces shall be coated.
- B. Finish: Color as selected by District from manufacturer standard palette.

PART 3 – EXECUTION

3.1 INSTALLATION

- A. General: Properly prepare area and affected items to receive the Work. Set Work accurately in location, alignment, and elevation; rigidly, securely, and firmly anchor to appropriate structure; install plumb, straight, square, level, true, without racking, rigidly anchored to proper solid blocking, substrate, and the like; provide appropriate type and quantity of reinforcements, fasteners, adhesives, self-adhesive and other tapes; lubricants, coatings, accessories, and the like, as required for a complete, structurally rigid, stable, sound, and appropriately finished installation, in accordance with manufacturer's published instructions, and as indicated. The more restrictive and higher quality requirement shall govern. Moving parts shall be properly secured, without binding, looseness, noise, and the like.

- B. Installation: Install in accordance with 25 CCR 3.2.3 and as directed by District; jack up trailer and level both ways; mount on proper concrete piers with all load off wheels; provide required tie down and accessories per Section 4368 of referenced CCR, and as directed by District.
- C. Rejected Work: Work, materials, unit, items, systems, and the like, not accepted by District shall be deemed rejected, and shall forthwith be removed and replaced with proper and new Work, materials, unit, items, systems, and the like at no cost to District.
- D. Standard: Comply with manufacturer's published instructions, or with instructions as shown or indicated; the more restrictive and higher quality requirement shall govern.
- E. Location: As directed by District.
- F. Fire Resistance: Construct and install in accordance with UL requirements.
- G. Maintenance: Contractor shall maintain trailer and adjacent areas in a safe, clean and hygienic condition throughout the duration of the Work, and as directed by District. Properly repair or replace furniture or other items, as directed by District. Properly remove unsafe, damaged, or broken furniture, or similar items, and replace with safe and proper items. Contractor shall pay cost of all services, repair, and maintenance, or replacement of each item.
- H. Janitorial Service: Provide professional janitorial services, including, but not limited to, trash, waste paper baskets, fill paper dispensers; clean and dust all furniture, files, and the like; sweep and mop resilient and similar flooring; and vacuum carpeting and similar flooring.
 - (1) Frequency: Two (2) times per week, minimum.
- I. Removal: Properly remove the Office Trailer and contents from the Site upon completion of the Contract, or as directed by District in writing. Forthwith properly patch and repair affected areas; replace damaged items with new items. Carefully and properly inventory, clean, pack, store, and protect District property; submit District property to District at a date, time and location as directed by District.

END OF DOCUMENT

**SECTION 01 5639
TEMPORARY TREE AND PLANT PROTECTION**

PART 1 GENERAL

1.01 SUMMARY

- A. Work Included:
 - 1. Furnish all Arborist services, temporary systems, labor, materials, equipment, and apparatus not specifically mentioned herein or noted on the plans, but which are incidental and necessary to complete the work specified for the protection, preservation and/or repair of trees, including care, pruning, and trimming (limbs and roots) as required to construct improvements.

- B. Contractor shall protect from damage all existing vegetation determined by the Owner to remain on the project site and on adjacent property (for trees overhanging the project site).
 - 1. Contractor shall be responsible for the repair any damage, including that to the adjacent property resulting from failure to comply with the requirements of the Contract Documents or failure to exercise reasonable care in performing the Work. If Contractor fails or refuses to repair the damage promptly and according to the Owner directions, the Owner may have the necessary work performed and charge the cost to Contractor.

- C. Tree and Plant Protection includes, but is not limited to the following:
 - 1. Protect existing trees and plants scheduled to remain against injury or damage, including cutting, breaking, or skinning of roots, trunks, or branches; soil compaction by stockpiled construction materials, excavated materials or vehicular traffic within the dripline (tree canopy). The work includes but is not limited to the following:
 - a. Protecting existing trees and plants to remain during all phases of construction, including site preparation, excavation, and trenching.
 - b. Erection, maintenance, and removal of temporary tree protection fencing.
 - c. Replacement of trees and plants damaged by work of this Contract.
 - 2. Protective Fencing and Signage surrounding the Tree protection Zone around the tree or group of trees.
 - 3. Pre-Demolition and Construction meetings on site with the Owner.
 - 4. Pre-work Clearance Pruning for demolition and construction.
 - 5. Organic mulch placed in tree protection zones.
 - 6. Irrigation of trees before and during demolition and construction.
 - 7. Dealing with protection and preservation of tree roots relative to soil grubbing, grading, structure or pavement removal, excavations, etc.

1.02 REFERENCES AND STANDARDS

- A. Best Management Practices, Tree Pruning. 2008. International Society of Arboriculture, PO Box 3129, Champaign, IL 61826-3129. 217-355-9411
- B. ANSI A300 Pruning Standards. 2008 Edition. Ibid. (Covers tree care methodology).
- C. ANSI Z133.1 Safety Requirements for Arboricultural Operations. 2006 Edition. Ibid. (Covers safety).
- D. Cooperative Extension U.C., Leaflet 21418, "Tree Evaluation and Casualty Loss".
- E. Arboriculture: The care of trees and shrubs by Dr. Richard Harris

1.03 DEFINITIONS

- A. Certified Arborist: An Arborist certified through the ISA (International Society of Arboriculture) after passing a test demonstrating basic knowledge about urban trees and their management, fulfilling an ongoing continuing education requirement, and paying regularly scheduled certification fees.

- B. Dripline (tree): The area under the total branch spread of the tree, all around the tree.
- C. Existing tree: The trees existing on property prior to any demolition or construction for a project.
- D. Neighboring tree: Existing trees on adjacent private property not owned by the Owner, but the dripline of which overhangs the Owner property.
- E. Qualified Tree Service: A tree service with a supervising arborist who has the minimum certification level of ISA (International Society of Arboriculture) Certified Arborist, in a supervisory position on the job site during execution of the tree work. The tree service shall adhere to the most current of the following arboricultural industry tree care standards.
- F. Tree: a woody perennial plant usually having one dominant trunk and a mature height greater than 15 feet. Multiple-trunk trees have more than one trunk.
- G. Tree Protection Zone (TPZ): The area inside the Tree Protection Fencing on a project, containing the tree or tree trunks and below some or the entire canopy of the tree or beyond the canopy. The TPZ and Tree Protection Fencing remain in place prior to any work on site (including demolition) until the construction project is fully completed.
- H. Tree Service: A company that performs tree pruning and tree removals as their main business.

1.04 QUALITY ASSURANCE

- A. Perform all work in accordance with the above-named references and standards.
- B. Arborist shall be approved by an ISA certified Arborist approved by the Owner with a minimum of 10 years experience.
- C. All tree protection, preservation and pruning performed shall be executed by a Qualified Tree Service company having, in full-time employment, an Arborist certified by the International Society of Arboriculture (ISA). Certification must be verified. The Arborist must be directly responsible for decisions made and should visit the work sites daily when trimming of tree limbs and roots are to be performed.

1.05 SUBMITTALS

- A. Arborist certification
- B. Tree Pruning Schedule (provided by Qualified Tree Service Contractor): Written schedule detailing scope and extent of pruning of trees to remain and that interfere with or are affected by demolition or construction
- C. Contractor shall submit a work plan and schedule for all work adjacent to the existing trees to remain to the Owner for review and approval.

1.06 TAGGING OF TREES TO BE PRESERVED

- A. All preserved trees on site and off site shall be flagged with a distinctive colored ribbon prior to Preconstruction Meeting. After flagging and prior to commencement of any work, the Contractor shall notify the Owner who will verify that the correct trees are flagged.

1.07 PROJECT CONDITIONS

- A. The Contractor will be held responsible for any damage to trees or other plants, which are to remain during construction, including limb or branch breakage, tearing of bark along trunk or excessive root damage. Large roots greater than 3" in diameter shall not be cut without the Owner approval.
- B. The following practices are prohibited within Tree Protection Zones:
 - 1. Storage of construction materials, debris, or excavated material.
 - 2. Parking vehicles or equipment.
 - 3. Placement of outhouses

4. Foot traffic.
5. Erection of sheds or structures.
6. Impoundment of water.
7. Equipment wash down.
8. Grubbing of soil surface to remove organic matter.
9. Disposal of chemicals, petroleum products, or other detrimental substances.
10. Excavation, grading, or other soil disturbance unless otherwise indicated.
11. Attachment of signs to or wrapping materials around trees unless otherwise indicated on plans

PART 2 PRODUCTS

2.01 MATERIALS

- A. Tree Protection Fencing:
 1. Polyethylene Safety Fencing; 48"width; 1 2" mesh opening; color orange; tensile strength 2000 to 2310 psi.
 - a. Posts: 2x4 Douglas Fir or heavy duty punched metal "U" posts; 13-gauge steel.
 - b. Accessories: tie wires, hog ring ties, and other accessories for a complete fence system.
- B. Tree Protection Signs:
 1. Signs shall be 8.5" x 11", aluminum or corrugated plastic.
 2. Signs shall read "WARNING - Tree Protection Zone Keep Out– This fence shall not be removed during construction."
 3. Signs shall be located one for each of the four compass points for single trees.
- C. Mulch
 1. Per planting specifications.

PART 3 EXECUTION

3.01 EXAMINATION AND PREPARATION

- A. If at any time the Contractor judges that the protection of a tree designated to be saved on site or off site is incompatible with work required, or if operations necessary threaten the health or structural stability of a tree, notify immediately the Landscape Architect and do no further work affecting the tree until a written agreement is reached concerning acceptable procedures.
- B. Erosion and Sedimentation Control: Examine the site to verify that temporary erosion and sedimentation control measures are in place. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross tree protection zones.
- C. Protect tree root systems from damage caused by runoff or spillage of noxious materials while mixing, placing, or storing construction materials. Protect root systems from ponding, eroding, or excessive wetting caused by dewatering operations.
- D. Contractor shall install 8 or 9 inch diameter straw wattling roll on the uphill side of the protective fence to divert runoff from the construction site to the protected trees. The wattle shall be maintained until protective fence is removed from the project site.
- E. Under no circumstances shall the Contractor remove existing trees that are indicated not to be removed.
- F. Tree removal may not damage existing trees or vegetation to remain; consult with Owner's Representative regarding any conflicts.

3.02 PROTECTION OF EXISTING TREES AND PLANTS

- A. Tree and Plant Protection Fencing:

1. Install Tree Protection Fencing along edges of Tree Protection Zones in a manner that will prevent people from easily entering protected area except for arborist inspection and tree maintenance. An 18-inch wide gap for arborist access and tree maintenance will be provided in each fenced off area.
 2. Locate fencing as shown on plans or as follows:
 - a. Tree Masses: around entire tree mass at the dripline (edge of tree canopy).
 - b. Single Trees: around drip line of tree.
 3. Posts: Set or drive posts into ground one-third the total height of the fence without concrete footings. Where a post is located on existing paving or concrete to remain, provide appropriate means of post support acceptable to Owner.
 4. Protection-Zone Signage: Install Tree Protection Signs every 20 feet or in each cardinal direction, whichever is more, 6 inches from the top of the fence. Signs must be securely attached to fence with 4 plastic wire ties; one tie in each corner.
 5. Erect temporary fencing before commencing any construction work. Maintain fencing during full construction period. Remove temporary fencing when no longer needed or when acceptable to Owner's Representative.
 6. Obtain approval by the Owner's Representative of proposed fencing alignment prior to installation.
 7. Maintain Tree Protection Fencing and signage in good condition as acceptable to Owner and Arborist and remove when construction operations are complete, and equipment and materials have been removed from the site. At sites where the excavation has taken place near trees to remain, and many living roots remain exposed to the air, the Contractor shall cover the exposed roots within 2 hours with sand, soil, moist burlap or other means acceptable to the Owner.
- B. Vehicles, materials storage and excavated materials are not allowed within the fenced areas and/or tree driplines.
1. If access is determined to be necessary, apply a 4-inch deep layer of approved bark mulch over the required area.
 2. If equipment access is required, place interlocking metal matting on top of the bark mulch.
- C. Temporary Systems
1. Existing trees may require fertilizers and/ or bi-weekly temporary irrigation or truck watering at the direction of the project arborist.
- D. Trenching and Excavation:
1. Excavation: All excavations and trenching adjacent to large coniferous trees both on site and offsite (Cedars, Pines, and Redwoods) shall be monitored at all times by the project Arborist.
 2. General: Hand or air spade excavate at edge of Tree Protection Zones for grading, trenches and other soil disturbance adjacent to existing trees.
 3. No rototilling or other soil disturbance shall take place within Tree Protection Zones, before, during, or after demolition or construction, unless designated within construction documents.
 4. Trenching near Trees: Where utility trenches are required within or adjacent to Tree Protection Zones, air spade or hand excavate under or around tree roots or tunnel under the roots by drilling, auger boring, or pipe jacking. Do not cut large (e.g. 2 inches in diameter or greater) roots; cut only smaller roots that interfere with installation of utilities.
 - a. Mechanical Trenching may be done outside the drip line of a tree or to within 1/3 of the tree's height, whichever is greater.
 - b. Hand trenching is required inside the tree's drip line or within the 1/3 height zone.
 5. Open trenches are not to be routed beneath the dripline of trees that are to be preserved unless this is impossible to avoid; in which case damage may be reduced by careful placement by air spading or hand-digging of trenches to avoid large roots by tunneling under rather than cutting roots greater than 2 inches or greater in diameter.
- E. Root Pruning:
1. Leave large roots exposed during excavation intact if possible, by hand excavating around the root; this is a requirement for roots 4" in diameter and larger.

2. Roots shall be cut cleanly, as far from the trunk of the tree as possible. Root pruning shall be to a depth of 18".
3. Root pruning shall be performed using a Vermeer Root Cutting Machine. Alternate equipment or techniques must be approved by the Arborist and Owner's Landscape Architect.
4. Root pruning shall be completed prior to base or subgrade preparation, or to any excavation adjacent to the tree.
 - a. Root Pruning: Prior to root cutting air spade or hand dig a trench along the edge of the excavation facing the protected tree(s), to the depth of the excavation. The trench must be at least 12 inches wide. Cut exposed roots that need to be removed cleanly back to the trench wall with sharp pruning tools. Do not break, tear, chop, or slant the cuts. Do not use a backhoe or other equipment that rips, tears, or pulls roots. Heavy equipment may be used to continue soil work but the equipment must not contact the roots that have been cut at the edge of the trench, or any soil or roots on the tree-side of the trench.
 - b. Protect cut and exposed roots 1" in diameter and larger from drying. Drape 2 layers of natural burlap from top of trench, covering roots; keep moist until soil backfill is replaced.
 - c. Moisten roots and surrounding soil and cover with a 4" thick layer of bark mulch to prevent desiccation.
 - d. Do not apply pruning seals or paint to the wounds.
 - e. Backfill as soon as possible according to requirements in Section 31 2200 - Earth Work. Wet the backfill soil thoroughly as it is placed in the trench.

F. Tree Pruning:

1. Obtain the approval of the Owner for any pruning of trees required for construction clearance.
2. All pruning work shall be performed by an ISA Certified Arborist or Tree Worker. All work shall be done in accordance with pruning techniques adopted by ISA.
3. Remove branches that are in the path of temporary and permanent construction, or within the work zone margin beyond that construction. Where trees are concerned, minimize the work zone margin to the minimum possible to accomplish demolition or construction work.
4. Tree pruning shall be performed to balance the crown and eliminate hazards. The main work performed shall be to reduce the sail effect through thinning, reducing end weights, shortening long heavy limbs, removing deadwood, weak limbs, and sucker growth. Limbs shall be pruned back to an appropriate lateral branch.
5. All final cuts shall be made at the outer edge of the branch collar. The pruning work shall be performed in a safe and proper manner, adhering to CAL-OSHA and ANSI Standards.
6. The Contractor shall be responsible for the preservation of all public and private property. Pruning includes the cutting of limbs, cleanup, removal and disposal of cuttings and debris. Elm logs must be properly disposed of per State Quarantine. Work shall be performed by a two-person crew with one climber, one ground person, a dumping chipper truck and chipper, and any other necessary saws, lines, tools, and safety equipment. The work area shall have appropriate cones and signs for safe pedestrian and vehicle traffic.

3.03 Repair and Replacement

A. Tree and Plant Repair:

1. Contractor shall repair or replace protected trees and other vegetation indicated to remain or be relocated that are damaged by construction operations at no additional cost to contract or Owner. The Owner shall specify any repair work or replacement value for damaged trees.
2. All repair work shall be performed by an ISA Certified Arborist or Tree Worker. All work shall be done in accordance with techniques adopted by ISA.

B. Tree and Plant Replacement:

1. Replace trees scheduled to remain that are damaged beyond repair by construction operations, as determined by the Owner's Representative, with trees of similar size and species, or by payment of an amount representing the value of the damaged material as

determined by the Owner in accordance with Cooperative Extension U.C., Leaflet 21418,
"Tree Evaluation and Casualty Loss

- C. Repair and replacement of trees and plants scheduled to remain and damaged by construction operations or lack of adequate protection during construction operations shall be at Contractor's expense.

3.04 Regrading

- A. Lowering Grade: Where new finish grade is indicated below existing grade around trees, slope grade beyond the protection zone. Maintain existing grades within the protection zone.
- B. Raising Grade: Where new finish grade is indicated above existing grade around trees, slope grade beyond the protection zone. Maintain existing grades within the protection zone.

3.05 Disposal of Surplus and Waste Materials

- A. Disposal: Remove excess excavated material, displaced trees, trash and debris, and legally dispose of them off Owner's property.

END OF SECTION

**SECTION 01 6211
DELEGATED DESIGN**

PART 1 - GENERAL

1.01 SUMMARY

- A. This Section includes administrative and procedural requirements for Delegated Design components of the Work.
- B. Project Record Requirements

1.02 CONTRACTOR'S DELEGATED DESIGN-RELATED PROFESSIONAL DESIGN SERVICES

- A. Coordination: Contractor's professional design services are subject to requirements of project's Conditions for Construction Contract.
- B. Base design on performance and/or design criteria indicated in individual specification sections.
 - 1. Submit a Request for Interpretation to Architect if the criteria indicated are not sufficient to perform required design services.
- C. Scope of Contractor's Professional Design Services: Provide for the following items of work:
 - 1. Structural Design of Metal Framing: As described in Section 05 4000 - Cold-Formed Metal Framing.
 - 2. Structural Design: Include physical characteristics, engineering calculations, and resulting dimensional limitations as described in Section 08 4313 - Aluminum-Framed Storefronts.
 - 3. Structural Design: Include physical characteristics, engineering calculations, and resulting dimensional limitations as described in Section 08 4613 - Glazed Aluminum Window Walls.
 - 4. Structural Calculations for Glazing System: As described in Section 08 8000 - Glazing.
 - 5. Structural Calculations for Framing System: As described in Section 09 2116 - Gypsum Board Assemblies.

1.03 DEFINITIONS

- A. Delegated Design: Certain components of the Work for which Contractor shall coordinate and assume or assign responsibility for design, engineering, calculations, submittals, fabrication, transportation, and installation. (Also called "Design-Build" components).
 - 1. Delegated Design components shall be complete systems that perform their intended functions.
- B. Authorities Having Jurisdiction: Authorities Having Jurisdiction.
- C. Architect or Engineer of Record: ABC Architect or their consulting engineer.

1.04 PERFORMANCE REQUIREMENTS

- A. Permit: Submit design and calculations to the Authorities Having Jurisdiction and secure permit for Delegated Design components:
 - 1. Separate approval is required for each delegated design component.
 - 2. Pay for permit and permit review.
- B. Comply with current codes and regulations, except where more stringent requirements are specified.
- C. Clearly define load reactions at the interface between delegated design components and structural frame to allow review by Owner and Architect.
 - 1. Note loads that are different from loads anticipated in the Contract Documents with special marking.
 - 2. Coordinate connections with appropriate subcontractors.

- D. Provide delegated design components that match as closely as possible to the design indicated in Contract Documents.

1.05 SUBMITTALS

- A. Comply with pertinent provisions of Section 01 3300 - Submittal Procedures.
 - 1. Submit to Owner and Architect prior to submitting to Authorities Having Jurisdiction
 - 2. Architect will return copies for submittal to Authorities Having Jurisdiction with "Reviewed" stamp.
 - 3. Delegated design submittal is in addition to product data, shop drawing and sample submittals.

- B. Indicate design criteria, design assumptions, details, calculations, submittals, instructions for fabrication, assembly, installation and interface with other trades, unless noted otherwise in the specific Specification Section.

- C. Design and Calculations: Engineer's seal and calculations for that portion of Work.
 - 1. Submittals without required calculations, Delegated Design Engineer's seal, or which have not been reviewed by Contractor will not be reviewed by Architect or Engineer of Record.

- D. Authorities Having Jurisdiction Requirements:
 - 1. Comply with Authorities Having Jurisdiction policies regarding delegated design components of building projects.
 - 2. Three sets of design drawings clearly and legibly showing systems, components, members, dimensions, connections, materials used, and indicating how the part is attached to the main structure.
 - a. Drawings shall be prepared, designed, and sealed by an Engineer licensed by the the State in which the Project is located to practice as such.
 - b. Shop drawings or erection drawings are not acceptable as delegated design drawings.
 - 3. One set of calculations including criteria, design assumptions, substantiating computations, and such additional data sufficient to show the correctness of the plans and compliance with the structural provisions of the Building Code
 - a. Calculations shall be prepared and sealed by the Delegated Design Engineer who prepared and sealed the drawings.
 - 4. Submit Contractor Design Summary Sheet listing Delegated Design Subcontractors and their registered Delegated Design Engineer's name and phone number prior to main permit issuance.

- E. Architect's or Engineer of Record's review of delegated design submittals will be for design intent and shall not lessen nor shift responsibility from Contractor or assigned subcontractor to Owner nor to Architect or Engineer of Record.

- F. Project Record Documents and electronic format requirements for delegated design components and systems
 - 1. Provide the Owner with 2 copies of Record Document drawings and specifications in electronic form on CD Rom as follows:
 - a. Content:
 - 1) Record Documents shall contain revisions made to project by addenda, change orders, shop drawing review and other modifications. The files shall provide the following:
 - (a) Updated delegated design CAD files indicating as-built conditions.
 - (b) Add the following, (see Format):
 - (1) Measured horizontal and vertical dimensions and locations of delegated design components and systems.
 - (2) Measured locations of appurtenances concealed in construction, referenced to visible and accessible features of the Work.
 - (3) Field changes of dimensions and details.

- (4) Details not on original Contract Drawings and associated with delegated design.
 - (5) Note to be included on each Sheet of Record Documents: "Project Record Documents - This document has been prepared using information furnished by (list Design Source Contractor Name, date, etc.)."
- b. Format:
- 1) Files saved in latest AutoCAD format.
 - 2) External reference files are to be bound, but need not be exploded.
 - 3) There should be only one file for each and every drawing sheet. The file name will include the sheet number. For example A41.dwg., E32 dwg. or L2 dwg., include the Architects' project number.
 - 4) No more than one Paper Space layout per drawing. Files are to be saved as they should look ready to plot, and shall match the plotted Record Documents.
 - 5) Put information added to CAD files, such as measured depths of foundations and utility location dimensions, on a separate layer. These are to begin with an X, for example "X-GenC-Note" for notes, or "X-GenC-Dims" for dimensions.
 - 6) Locate other CAD information modified or moved on its original layers.

1.06 QUALITY ASSURANCE

- A. Documentation: Comply with the following:
 - 1. Uniform Drawing System.
 - 2. Minimum text size: 1/8 inch (3.17 mm).
 - 3. Legible when microfilmed.
 - 4. Other requirements by Authorities Having Jurisdiction.
- B. Design Requirements: Refer to requirements within individual specification sections.
- C. Delegated Design Engineer Qualifications: A professional engineer who is legally qualified to practice in the State in which the Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of Delegated Design components that are similar to those indicated for this Project in material, design, and extent.
- D. Drawings are diagrammatic and are intended to establish basic dimension of units, sight lines, and profiles of units.

1.07 SCHEDULING AND COORDINATION

- A. Submit material required by Authorities Having Jurisdiction so that Authorities Having Jurisdiction's review will not adversely affect construction schedule.
 - 1. Prior to submittal, meet with Authorities Having Jurisdiction to identify delegated design components and review submittal requirements.
- B. Completed submission of delegated design documents prior to issuance of building permit, when required by Authorities Having Jurisdiction.
 - 1. Permit for Delegated Design must be issued and paid prior to fabrication.
- C. Owner will not be responsible for paying for delays, additional products, additional hours of work, overtime, restocking or rework required due to failure to coordinate delegated design work or to execute delegated design work in a timely manner.

PART 2 - PRODUCTS - NOT USED

PART 3 - EXECUTION - NOT USED

END OF SECTION

DOCUMENT 01 64 00

OWNER-FURNISHED PRODUCTS

PART 1 – GENERAL

1.01 RELATED DOCUMENTS AND PROVISIONS

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions;
- B. Special Conditions; and
- C. Materials and Equipment.

1.02 SECTION INCLUDES

- A. Requirements for the following:
 - (1) Installing Owner-furnished materials and equipment.
 - (2) Providing necessary utilities, connections and rough-ins.

1.03 DEFINITIONS

- A. Owner: District, who is providing/furnishing materials and equipment.
- B. Installing Contactor: Contractor, who is installing the materials and equipment furnished by the Owner.

1.04 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. Receive, store and handle products in accordance with the manufacturer's instructions.
- B. Protect equipment items as required to prevent damage during storage and construction.

PART 2 – PRODUCTS

2.01 GENERAL PRODUCT REQUIREMENTS

- A. Installing Contractor's Responsibilities:
 - (1) Verify mounting and utility requirements for Owner-furnished materials and equipment items.

Provide mounting and utility rough in for all items where required.

- (a) Rough in locations, sizes, capacities, and similar type items shall be as indicated and required by product manufacturer.
- B. Owner and Installing Contractor(s) Responsibilities:
- (1) Owner-Furnished/Contractor Installed ("OFCI"): Furnished by the Owner; installed by the Installing Contractor.
 - (a) General: Owner and Installing Contractor(s) will coordinate deliveries of materials and equipment to coincide with the construction schedule.
 - (b) The Owner furnishing specified materials and equipment is responsible to provide manufacturer guarantees as required by the Contract to the Installing Contractor.
 - (c) The Installing Contractor shall:
 - 1) Review, verify and accept the approved manufacturer's submittal/Shop Drawings for all materials and equipment required to be installed by the Installing Contractor and furnished by the Owner. Any discrepancies, including but not limited to possible space conflicts, should be brought to the attention of the Project Manager and/or Program Manager, if applicable.
 - 2) Coordinate timely delivery. Installing Contractor shall receive materials and equipment at Site when delivered and give written receipt at time of delivery, noting visible defects or omissions; if such declaration is not given, the Installing Contractor shall assume responsibility for such defects and omissions.
 - 3) Store materials and equipment until ready for installation and protect from loss and damage. Installing Contractor is responsible for providing adequate storage space.
 - 4) Coordinate with other bid package contractors and field measurement to ensure complete installation.
 - 5) Uncrate, assemble, and set in place.
 - 6) Provide adequate supports.
 - 7) Install materials and equipment in accordance with manufacturer's recommendations, instructions, and Shop Drawings, supply labor and material required, and make mechanical, plumbing, and electrical connections required to operate equipment.

- 8) Be certified by equipment manufacturer for installation of the specific equipment supplied by the Owner.
 - 9) Provide anchorage and/or bracing as required for seismic restraint per Title 24, UBC Standard 27-11 and all other applicable codes.
 - 10) Provide the contract-required warranty and guarantee for all work, materials and equipment, and installation upon its completion and acceptance by the District. Guarantee includes all costs associated with the removal, shipping to and from the Site, and re-installation of any equipment found to be defective.
- C. Compatibility with Space and Service Requirements:
- (1) Equipment items shall be compatible with space limitations indicated and as shown on the Contract Documents and specified in other sections of the Specifications.
 - (2) Modifications to equipment items required to conform to space limitations specified for rough in shall not cause additional cost to the District.
- D. Manufacturer's printed descriptions, specifications, and instructions shall govern the Work unless specifically indicated or specified otherwise.

2.02 FURNISHED MATERIALS AND EQUIPMENT

- A. All furnished materials and equipment are indicated or scheduled on the Contract Documents.

PART 3 – EXECUTION

3.01 INSTALLATION

- A. Install equipment items in accordance with the manufacturer's instructions.
- B. Set equipment items securely in place, rigidly or flexibly mounted in accordance with manufacturers' directions.
- C. Make electrical and mechanical connections as indicated and required.
- D. Touch-up and restore damaged or defaced finishes to the Owner's satisfaction.

3.02 CLEANING AND PROTECTION

- A. Repair or replace items not acceptable to the Architect or Owner.

- B. Upon completion of installation, clean equipment items in accordance with manufacturer's recommendations, and protect from damage until final acceptance of the Work by the Owner.

END OF DOCUMENT

SECTION 01 66 00

PRODUCT DELIVERY, STORAGE AND HANDLING**PART 1 - GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions, including, without limitation, Site Access, Conditions and Requirements;
- B. Special Conditions.

1.02 PRODUCTS

- A. Products are as defined in the General Conditions.
- B. Contractor shall not use and/or reuse materials and/or equipment removed from existing Premises, except as specifically permitted by the Contract Documents.
- C. Contractor shall provide interchangeable components of the same manufacturer, for similar components.

1.03 TRANSPORTATION AND HANDLING

- A. Contractor shall transport and handle Products in accordance with manufacturer's instructions.
- B. Contractor shall promptly inspect shipments to confirm that Products comply with requirements, quantities are correct, and products are undamaged.
- C. Contractor shall provide equipment and personnel to handle Products by methods to prevent soiling, disfigurement, or damage.

1.04 STORAGE AND PROTECTION

- A. Contractor shall store and protect Products in accordance with manufacturer's instructions, with seals and labels intact and legible. Contractor shall store sensitive products in weather-tight, climate controlled enclosures.
- B. For exterior storage of fabricated Products, Contractor shall place on sloped supports, above ground.
- C. Contractor shall provide off-site storage and protection when Site does not permit on-site storage or protection.

- D. Contractor shall cover products subject to deterioration with impervious sheet covering and provide ventilation to avoid condensation.
- E. Contractor shall store loose granular materials on solid flat surfaces in a well-drained area and prevent mixing with foreign matter.
- F. Contractor shall provide equipment and personnel to store Products by methods to prevent soiling, disfigurement, or damage.
- G. Contractor shall arrange storage of Products to permit access for inspection and periodically inspect to assure Products are undamaged and are maintained under specified conditions.

PART 2 – PRODUCTS Not Used.

PART 3 - EXECUTION Not Used.

END OF DOCUMENT

DOCUMENT 01 71 23

FIELD ENGINEERING**PART 1 - GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS:**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions, including, without limitation, Site Investigation, and Soils Investigation Report;
- B. Special Conditions;
- C. Site-Visit Certification.

1.02 REQUIREMENTS INCLUDED:

- A. Contractor shall provide and pay for field engineering services by a California-registered engineer, required for the project, including, without limitations:
 - (1) Survey work required in execution of the Project.
 - (2) Civil or other professional engineering services specified, or required to execute Contractor's construction methods.

1.03 QUALIFICATIONS OF SURVEYOR OR ENGINEERS:

Contractor shall only use a qualified licensed engineer or registered land surveyor, to whom District makes no objection.

1.04 SURVEY REFERENCE POINTS:

- A. Existing basic horizontal and vertical control points for the Project are those designated on the Drawings.
- B. Contractor shall locate and protect control points prior to starting Site Work and preserve all permanent reference points during construction. In addition Contractor shall:
 - (1) Make no changes or relocation without prior written notice to District and Architect.
 - (2) Report to District and Architect when any reference point is lost or destroyed, or requires relocation because of necessary changes in grades or locations.
 - (3) Require surveyor to replace Project control points based on original survey control that may be lost or destroyed.

1.05 RECORDS:

Contractor shall maintain a complete, accurate log of all control and survey work as it progresses.

1.06 SUBMITTALS:

- A. Contractor shall submit name and address of Surveyor and Professional Engineer to District and Architect prior to its/their work on the Project.
- B. On request of District and Architect, Contractor shall submit documentation to verify accuracy of field engineering work, at no additional cost to the District.
- C. Contractor shall submit a certificate signed by registered engineer or surveyor certifying that elevations and locations of improvements are in conformance or nonconformance with Contract Documents.

PART 2 – PRODUCTS Not Used.

PART 3 - EXECUTION

3.01 COMPLIANCE WITH LAWS:

Contractor is responsible for meeting all applicable codes, OSHA, safety and shoring requirements.

3.02 NONCONFORMING WORK:

Contractor is responsible for any re-surveying required by correction of nonconforming work.

END OF DOCUMENT

DOCUMENT 01 73 29

CUTTING AND PATCHING**PART 1 – GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS:**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions, including, without limitation, Inspector, Inspections, and Tests, Integration of Work, Nonconforming Work, and Correction of Work, and Uncovering Work;
- B. Special Conditions;
- C. Hazardous Materials Procedures and Requirements;
- D. Hazardous Materials Certification;
- E. Lead-Based Paint Certification;
- F. Imported Materials Certification.

1.02 CUTTING AND PATCHING:

- A. Contractor shall be responsible for all cutting, fitting, and patching, including associated excavation and backfill, required to complete the Work or to:
 - (1) Make several parts fit together properly.
 - (2) Uncover portions of Work to provide for installation of ill-timed Work.
 - (3) Remove and replace defective Work.
 - (4) Remove and replace Work not conforming to requirements of Contract Documents.
 - (5) Remove Samples of installed Work as specified for testing.
 - (6) Provide routine penetrations of non-structural surfaces for installation of piping and electrical conduit.
 - (7) Attaching new materials to existing remodeling areas – including painting (or other finishes) to match existing conditions.
- B. In addition to Contract requirements, upon written instructions from the District, Contractor shall uncover Work to provide for observations of covered Work in accordance with the Contract Documents; remove samples of

installed materials for testing as directed by District; and remove Work to provide for alteration of existing Work.

- C. Contractor shall not cut or alter Work, or any part of it, in such a way that endangers or compromises the integrity of the Work, the Project, or work of others.

1.03 SUBMITTALS:

- A. Prior to any cutting or alterations that may affect the structural safety of Project, or work of others, and well in advance of executing such cutting or alterations, Contractor shall submit written notice to District pursuant to the applicable notice provisions of the Contract Documents, requesting consent to proceed with the cutting or alteration, including the following:
 - (1) The work of the District or other trades.
 - (2) Structural value or integrity of any element of Project.
 - (3) Integrity or effectiveness of weather-exposed or weather-resistant elements or systems.
 - (4) Efficiency, operational life, maintenance or safety of operational elements.
 - (5) Visual qualities of sight-exposed elements.
- B. Contractor's Request shall also include:
 - (1) Identification of Project.
 - (2) Description of affected Work.
 - (3) Necessity for cutting, alteration, or excavations.
 - (4) Affects of Work on District, other trades, or structural or weatherproof integrity of Project.
 - (5) Description of proposed Work:
 - (a) Scope of cutting, patching, alteration, or excavation.
 - (b) Trades that will execute Work.
 - (c) Products proposed to be used.
 - (d) Extent of refinishing to be done.
 - (6) Alternates to cutting and patching.
 - (7) Cost proposal, when applicable.

- (8) The scheduled date the Contractor intends to perform the Work and the duration of time to complete the Work.
- (9) Written permission of District or other District contractor(s) whose work will be affected.

1.04 QUALITY ASSURANCE:

- A. Contractor shall ensure that cutting, fitting, and patching shall achieve security, strength, weather protection, appearance for aesthetic match, efficiency, operational life, maintenance, safety of operational elements, and the continuity of existing fire ratings.
- B. Contractor shall ensure that cutting, fitting, and patching shall successfully duplicate undisturbed adjacent profiles, materials, textures, finishes, colors, and that materials shall match existing construction. Where there is dispute as to whether duplication is successful or has been achieved to a reasonable degree, the District's decision shall be final.

1.05 PAYMENT FOR COSTS:

- A. Cost caused by ill-timed or defective Work or Work not conforming to Contract Documents, including costs for additional services of the District, its consultants, including but not limited to the Construction Manager, the Architect, the Project Inspector(s), Engineers, and Agents, will be paid by Contractor and/or deducted from the Contract by the District.
- B. District shall only pay for cost of Work if it is part of the original Contract Price or if a change has been made to the contract in compliance with the provisions of the General Conditions. Cost of Work performed upon instructions from the District, other than defective or nonconforming Work, will be paid by District on approval of written Change Order. Contractor shall provide written cost proposals prior to proceeding with cutting and patching.

PART 2 - PRODUCTS

2.01 MATERIALS:

- A. Contractor shall provide for replacement and restoration of Work removed. Contractor shall comply with the Contract Documents and with the Industry Standard(s), for the type of Work, and the Specification requirements for each specific product involved. If not specified, Contractor shall first recommend a product of a manufacturer or appropriate trade association for approval by the District.
- B. Materials to be cut and patched include those damaged by the performance of the Work.

PART 3 – EXECUTION

3.01 INSPECTION:

- A. Contractor shall inspect existing conditions of the Site and the Work, including elements subject to movement or damage during cutting and patching, excavating and backfilling. After uncovering Work, Contractor shall inspect conditions affecting installation of new products.
- B. Contractor shall report unsatisfactory or questionable conditions in writing to District as indicated in the General Conditions and shall proceed with Work as indicated in the General Conditions by District.

3.02 PREPARATION:

- A. Contractor shall provide shoring, bracing and supports as required to maintain structural integrity for all portions of the Project, including all requirements of the Project.
- B. Contractor shall provide devices and methods to protect other portions of Project from damage.
- C. Contractor shall, provide all necessary protection from weather and extremes of temperature and humidity for the Project, including without limitation, any work that may be exposed by cutting and patching Work. Contractor shall keep excavations free from water.

3.03 ERECTION, INSTALLATION AND APPLICATION:

- A. With respect to performance, Contractor shall:
 - (1) Execute fitting and adjustment of products to provide finished installation to comply with and match specified tolerances and finishes.
 - (2) Execute cutting and demolition by methods that will prevent damage to other Work, and provide proper surfaces to receive installation of repairs and new Work.
 - (3) Execute cutting, demolition excavating, and backfilling by methods that will prevent damage to other Work and damage from settlement.
- B. Contractor shall employ original installer or fabricator to perform cutting and patching for:
 - (1) Weather-exposed surfaces and moisture-resistant elements such as roofing, sheet metal, sealants, waterproofing, and other trades.
 - (2) Sight-exposed finished surfaces.
- C. Contractor shall execute fitting and adjustment of products to provide a finished installation to comply with specified products, functions, tolerances,

and finishes as shown or specified in the Contract Documents including, without limitation, the Drawings and Specifications.

- D. Contractor shall fit Work airtight to pipes, sleeves, ducts, conduit, and other penetrations through surfaces. Contractor shall conform to all Code requirements for penetrations or the Drawings and Specifications, whichever calls for a higher quality or more thorough requirement. Contractor shall maintain integrity of both rated and non-rated fire walls, ceilings, floors, etc.
- E. Contractor shall restore Work which has been cut or removed. Contractor shall install new products to provide completed Work in accordance with requirements of the Contract Documents and as required to match surrounding areas and surfaces.
- F. Contractor shall refinish all continuous surfaces to nearest intersection as necessary to match the existing finish to any new finish.

END OF DOCUMENT

DOCUMENT 01 76 00

ALTERATION PROJECT PROCEDURES**PART 1 – GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS:**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions, including, without limitation, Integration of Work, Purchase of Materials and Equipment, Uncovering of Work and Non-conforming Work and Correction of Work and Trenches;
- B. Special Conditions.

PART 2 - PRODUCTS**2.01 PRODUCTS FOR PATCHING AND EXTENDING WORK:**

- A. New Materials: As specified in the Contract Documents including, without limitation, in the Specifications, Contractor shall match existing products, conditions, and work for patching and extending work.
- B. Type and Quality of Existing Products: Contractor shall determine by inspection, by testing products where necessary, by referring to existing conditions and to the Work as a standard.

PART 3 - EXECUTION**3.01 EXAMINATION:**

- A. Contractor shall verify that demolition is complete and that areas are ready for installation of new Work.
- B. By beginning restoration Work, Contractor acknowledges and accepts the existing conditions.

3.02 PREPARATION:

- A. Contractor shall cut, move, or remove items as necessary for access to alterations and renovation Work. Contractor shall replace and restore these at completion.
- B. Contractor shall remove unsuitable material not as salvage unless otherwise indicated in the Contract Documents. Unsuitable material may include, without limitation, rotted wood, corroded metals, and deteriorated masonry and concrete. Contractor shall replace materials as specified for finished Work.

- C. Contractor shall remove debris and abandoned items from all areas of the Site and from concealed spaces.
- D. Contractor shall prepare surface and remove surface finishes to provide for proper installation of new Work and finishes.
- E. Contractor shall close openings in exterior surfaces to protect existing work from weather and extremes of temperature and humidity. Contractor shall insulate ductwork and piping to prevent condensation in exposed areas. Contractor shall insulate building cavities for thermal and/or acoustical protection, as detailed.

3.03 INSTALLATION:

- A. Contractor shall coordinate Work of all alternations and renovations to expedite completion and to accommodate District occupancy.
- B. Designated Areas and Finishes: Contractor shall complete all installations in all respects, including operational, mechanical work and electrical work.
- C. Contractor shall remove, cut, and patch Work in a manner to minimize damage and to provide a means of restoring Products and finishes to original or specified condition.
- D. Contractor shall refinish visible existing surfaces to remain in renovated rooms and spaces, to specified condition for each material, with a neat and square or straight transition to adjacent finishes.
- E. Contractor shall install products as specified in the Contract Documents, including without limitation, the Specifications.

3.04 TRANSITIONS:

- A. Where new Work abuts or aligns with existing, Contractor shall perform a smooth and even transition. Patched Work must match existing adjacent work in texture and appearance.
- B. When finished surfaces are cut so that a smooth transition with new Work is not possible, Contractor shall terminate existing surface along a straight line at a natural line of division and make a recommendation for resolution to the District and the Architect for review and approval.

3.05 ADJUSTMENTS:

- A. Where removal of partitions or walls results in adjacent spaces becoming one, Contractor shall rework floors, walls, and ceilings to a smooth plane without breaks, steps, or bulkheads.
- B. Where a change of plane of 1/4 inch or more occurs, Contractor shall submit a recommendation for providing a smooth transition to the District and the Architect for review and approval.

- C. Contractor shall trim and seal existing wood doors and shall trim and paint metal doors as necessary to clear new floor finish and refinish trim as required.
- D. Contractor shall fit Work at penetrations of surfaces.

3.06 REPAIR OF DAMAGED SURFACES:

- A. Contractor shall patch or replace portions of existing surfaces, which are damaged, lifted, discolored, or showing other imperfections, in the area where the Work is performed.
- B. Contractor shall repair substrate prior to patching finish.

3.07 CULTIVATED AREAS AND OTHER SURFACE IMPROVEMENTS:

- A. Cultivated or planted areas and other surface improvements which are damaged by actions of the Contractor shall be restored by Contractor to their original condition or better, where indicated.
- B. Contractor shall protect and replace, if damaged, all existing guard posts, barricades, and fences.
- C. Contractor shall give special attention to avoid damaging or killing trees, bushes and/or shrubs on the Premises and/or identified in the Contract Documents, including without limitation, the Drawings.

3.08 FINISHES:

- A. Contractor shall finish surfaces as specified in the Contract Documents, including without limitations, the provisions of all Divisions of the Specifications.
- B. Contractor shall finish patches to produce uniform finish and texture over entire area. When finish cannot be matched, Contractor shall refinish entire surface to nearest intersections.

3.09 CLEANING:

- A. Contractor shall continually clean the Site and the Premises as indicated in the Contract Documents, including without limitation, the provisions in the General Conditions and the Specifications regarding cleaning.

END OF DOCUMENT

DOCUMENT 01 77 00

CONTRACT CLOSEOUT AND FINAL CLEANING**PART 1 - GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions, including, without limitation, Completion of Work;
- B. Special Conditions;
- C. Temporary Facilities and Controls.

1.02 CLOSEOUT PROCEDURES

Contractor shall comply with all closeout provisions as indicated in the General Conditions.

1.03 FINAL CLEANING

- A. Contractor shall execute final cleaning prior to final inspection.
- B. Contractor shall clean interior and exterior glass and all surfaces exposed to view; remove temporary labels, tape, stains, and foreign substances, polish transparent and glossy surfaces, wax and polish new vinyl floor surfaces, vacuum carpeted and soft surfaces.
- C. Contractor shall clean equipment and fixtures to a sanitary condition.
- D. Contractor shall replace filters of operating equipment.
- E. Contractor shall clean debris from roofs, gutters, down spouts, and drainage systems.
- F. Contractor shall clean Site, sweep paved areas, and rake clean landscaped surfaces.
- G. Contractor shall remove waste and surplus materials, rubbish, and construction facilities from the Site and surrounding areas.

1.04 ADJUSTING

Contractor shall adjust operating products and equipment to ensure smooth and unhindered operation.

1.05 RECORD DOCUMENTS AND SHOP DRAWINGS

- A. Contractor shall legibly mark each item to record actual construction, including:
 - (1) Measured depths of foundation in relation to finish floor datum.
 - (2) Measured horizontal and vertical locations of underground utilities and appurtenances, referenced to permit surface improvements.
 - (3) Measured locations of internal utilities and appurtenances concealed in construction, referenced to visible and accessible features of the Work.
 - (4) Field changes of dimension and detail.
 - (5) Details not on original Contract Drawings
 - (6) Changes made by modification(s).
 - (7) References to related Shop Drawings and modifications.
- B. Contractor will provide one set of Record Drawings to District.
- C. Contractor shall submit all required documents to District and/or Architect prior to or with its final Application for Payment.

1.06 INSTRUCTION OF DISTRICT PERSONNEL

- A. Before final inspection, at agreed upon times, Contractor shall instruct District's designated personnel in operation, adjustment, and maintenance of products, equipment, and systems.
- B. For equipment requiring seasonal operation, Contractor shall perform instructions for other seasons within six months or by the change of season.
- C. Contractor shall use operation and maintenance manuals as basis for instruction. Contractor shall review contents of manual with personnel in detail to explain all aspects of operation and maintenance.
- D. Contractor shall prepare and insert additional data in Operation and Maintenance Manual when the need for such data becomes apparent during instruction.
- E. Contractor shall review contents of manual with personnel in detail to explain all aspects of operation and maintenance.

1.07 SPARE PARTS AND MAINTENANCE MATERIALS

- A. Contractor shall provide products, spare parts, maintenance, and extra materials in quantities specified in the Specifications and in Manufacturer's recommendations.

- B. Contractor shall provide District with all required Operation and Maintenance Data at one time. Partial or piecemeal submissions of Operation and Maintenance Data will not be accepted.

PART 2 – PRODUCTS Not used.

PART 3 – EXECUTION Not used.

END OF DOCUMENT

DOCUMENT 01 78 23

OPERATION AND MAINTENANCE DATA**PART 1 – GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS:**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions, including, without limitation, Completion of the Work;
- B. Special Conditions.

1.02 QUALITY ASSURANCE:

Contractor shall prepare instructions and data by personnel experienced in maintenance and operation of described products.

1.03 FORMAT:

- A. Contractor shall prepare data in the form of an instructional manual entitled "OPERATIONS AND MAINTENANCE MANUAL & INSTRUCTIONS" ("Manual").
- B. Manuals and Instructions to be submitted in both PDF and hard copy formats.
- C. Binders: Contractor shall use commercial quality, 8-1/2 by 11 inch, three-side rings, with durable plastic covers; two inch maximum ring size. When multiple binders are used, Contractor shall correlate data into related consistent groupings.
- D. Cover: Contractor shall identify each binder with typed or printed title "OPERATION AND MAINTENANCE MANUAL & INSTRUCTIONS"; and shall list title of Project and identify subject matter of contents.
- E. Contractor shall arrange content by systems process flow under section numbers and sequence of Table of Contents of the Contract Documents.
- F. Contractor shall provide tabbed fly leaf for each separate product and system, with typed description of product and major component parts of equipment.
- G. Text: The content shall include Manufacturer's printed data, or typewritten data on 24 pound paper.
- H. Drawings: Contractor shall provide with reinforced punched binder tab and shall bind in with text; folding larger drawings to size of text pages.
- I. Contractor will also submit the "OPERATIONS AND MAINTENANCE MANUAL & INSTRUCTIONS" (Manual) electronically (in PDF format) at the completion of the Project.

1.04 CONTENTS, EACH VOLUME:

- A. Table of Contents: Contractor shall provide title of Project; names, addresses, and telephone numbers of the Architect, any engineers, subconsultants, Subcontractor(s), and Contractor with name of responsible parties; and schedule of products and systems, indexed to content of the volume.
- B. For Each Product or System: Contractor shall list names, addresses, and telephone numbers of Subcontractor(s) and suppliers, including local source of supplies and replacement parts.
- C. Product Data: Contractor shall mark each sheet to clearly identify specific products and component parts, and data applicable to installation. Delete inapplicable information.
- D. Drawings: Contractor shall supplement product data to illustrate relations of component parts of equipment and systems, to show control and flow diagrams. Contractor shall not use Project Record Documents as maintenance drawings.
- E. Text: The Contractor shall include any and all information as required to supplement product data. Contractor shall provide logical sequence of instructions for each procedure, incorporating manufacturer's instructions.
- F. Warranties and Bonds: Contractor shall bind in one copy of each.

1.05 MANUAL FOR MATERIALS AND FINISHES:

- A. Building Products, Applied Materials, and Finishes: Contractor shall include product data, with catalog number, size, composition, and color and texture designations. Contractor shall provide information for re-ordering custom manufactured products.
- B. Instructions for Care and Maintenance: Contractor shall include Manufacturer's recommendations for cleaning agents and methods, precautions against detrimental agents and methods, and recommended schedule for cleaning and maintenance.
- C. Moisture Protection and Weather Exposed Products: Contractor shall include product data listing applicable reference standards, chemical composition, and details of installation. Contractor shall provide recommendations for inspections, maintenance, and repair.
- D. Additional Requirements: Contractor shall include all additional requirements as specified in the Specifications.
- E. Contractor shall provide a listing in Table of Contents for design data, with tabbed fly sheet and space for insertion of data.

1.06 MANUAL FOR EQUIPMENT AND SYSTEMS:

- A. Each Item of Equipment and Each System: Contractor shall include description of unit or system, and component parts and identify function, normal operating characteristics, and limiting conditions. Contractor shall include performance curves, with engineering data and tests, and complete nomenclature, and commercial number of replaceable parts.
- B. Panelboard Circuit Directories: Contractor shall provide electrical service characteristics, controls, and communications.
- C. Contractor shall include color coded wiring diagrams as installed.
- D. Operating Procedures: Contractor shall include start-up, break-in, and routine normal operating instructions and sequences. Contractor shall include regulation, control, stopping, shut-down, and emergency instructions. Contractor shall include summer, winter, and any special operating instructions.
- E. Maintenance Requirements: Contractor shall include routine procedures and guide for trouble-shooting; disassembly, repair, and reassembly instructions; and alignment, adjusting, balancing, and checking instructions.
- F. Contractor shall provide servicing and lubrication schedule, and list of lubricants required.
- G. Contractor shall include manufacturer's printed operation and maintenance instructions.
- H. Contractor shall include sequence of operation by controls manufacturer.
- I. Contractor shall provide original manufacturer's parts list, illustrations, assembly drawings, and diagrams required for maintenance.
- J. Contractor shall provide control diagrams by controls manufacturer as installed.
- K. Contractor shall provide Contractor's coordination drawings, with color coded piping diagrams as installed.
- L. Contractor shall provide charts of valve tag numbers, with location and function of each valve, keyed to flow and control diagrams.
- M. Contractor shall provide list of original manufacturer's spare parts, current prices, and recommended quantities to be maintained in storage.
- N. Additional Requirements: Contractor shall include all additional requirements as specified in Specification(s).
- O. Contractor shall provide a listing in Table of Contents for design data, with tabbed fly sheet and space for insertion of data.

1.07 SUBMITTAL:

- A. Contractor shall submit to the District for review two (2) copies of preliminary draft or proposed formats and outlines of the contents of the Manual within thirty (30) days of Contractor's start of Work.
- B. For equipment, or component parts of equipment put into service during construction and to be operated by District, Contractor shall submit draft content for that portion of the Manual within ten (10) days after acceptance of that equipment or component.
- C. Contractor shall submit two (2) copies of a complete Manual in final form prior to final Application for Payment. Copy will be returned with Architect/Engineer comments. Contractor must revise the content of the Manual as required by District prior to District's approval of Contractor's final Application for Payment.
- D. Contractor must submit two (2) copies of revised Manual in final form within ten (10) days after final inspection.

PART 2 – PRODUCTS Not Used.

PART 3 – EXECUTION Not Used.

END OF DOCUMENT

DOCUMENT 01 78 36

WARRANTIES**PART 1 - GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions, including, without limitation, Warranty/Guarantee Information;
- B. Special Conditions.

1.02 FORMAT

- A. Binders: Contractor shall use commercial quality, 8-1/2 by 11 inch, three-side rings, with durable plastic covers; two inch maximum ring size.
- B. Cover: Contractor shall identify each binder with typed or printed title "WARRANTIES" and shall list title of Project.
- C. Table of Contents: Contractor shall provide title of Project; name, address, and telephone number of Contractor and equipment supplier; and name of responsible principal. Contractor shall identify each item with the number and title of the specific Specification, document, provision, or section in which the name of the product or work item is specified.
- D. Contractor shall separate each warranty with index tab sheets keyed to the Table of Contents listing, providing full information and using separate typed sheets as necessary. Contractor shall list each applicable and/or responsible Subcontractor(s), supplier(s), and/or manufacturer(s), with name, address, and telephone number of each responsible principal(s).
- E. Contractor will also submit all Warranties electronically (in PDF format) at the completion of the Project.

1.03 PREPARATION:

- A. Contractor shall obtain warranties, executed in duplicate by each applicable and/or responsible subcontractor(s), supplier(s), and manufacturer(s), within ten (10) days after completion of the applicable item or work. Except for items put into use with District's permission, Contractor shall leave date of beginning of time of warranty blank until the date of completion is determined.
- B. Contractor shall verify that documents are in proper form, contain full information, and are notarized, when required.

- C. Contractor shall co-execute submittals when required.
- D. Contractor shall retain warranties until time specified for submittal.

1.04 TIME OF SUBMITTALS:

- A. For equipment or component parts of equipment put into service during construction with District's permission, Contractor shall submit a draft warranty for that equipment or component within ten (10) days after acceptance of that equipment or component.
- B. Contractor shall submit for District approval all warranties and related documents within ten (10) days after date of completion. Contractor must revise the warranties as required by the District prior to District's approval of Contractor's final Application for Payment.
- C. For items of work delayed beyond date of completion, Contractor shall provide an updated submittal within ten (10) days after acceptance, listing the date of acceptance as start of warranty period.

PART 2 - PRODUCTS Not Used.

PART 3 – EXECUTION Not Used.

END OF DOCUMENT

DOCUMENT 01 78 39

RECORD DOCUMENTS**PART 1 - GENERAL****1.01 RELATED DOCUMENTS AND PROVISIONS:**

All Contract Documents should be reviewed for applicable provisions related to the provisions in this document, including without limitation:

- A. General Conditions including, without limitation, Documents on Work;
- B. Special Conditions.
- C. Summary of Work.

PART 2 - RECORD DRAWINGS**2.01 GENERAL:**

- A. Contractor shall maintain on Site one set of the following record documents; Contractor shall record actual revisions to the Work:
 - (1) Contract Drawings.
 - (2) Specifications.
 - (3) Addenda.
 - (4) Change Orders and other modifications to the Contract.
 - (5) Reviewed shop drawings, product data, and samples.
 - (6) Field test records.
 - (7) Inspection certificates.
 - (8) Manufacturer's certificates.
- B. As indicated in the Contract Documents, the District will provide Contractor with one set of reproducible, full size original Contract Drawings (mylars).
- C. Contractor shall maintain at each Project Site one set of marked-up plans and shall transfer all changes and information to those marked-up plans, as often as required to keep information concurrent with construction progress, but in no case less than once each month. Contractor shall submit to the Project Inspector one set of reproducible vellums of the Project Record Drawings ("As-Builts") showing all changes incorporated into the Work since the preceding monthly submittal. The As-Builts shall be available at the Project

Site. The Contractor shall submit reproducible vellums at the conclusion of the Project following review of the blue line prints.

- D. Label and date each Record Drawing "RECORD DOCUMENT" in legibly printed letters.
- E. All deviations in construction including, but not limited to, pipe and conduit locations and deviations caused by without limitation Change Orders, Construction Claim Directives, RFIs, and Addenda, shall be accurately and legibly recorded by Contractor.
- F. Locations and changes shall be done by Contractor in a neat and legible manner and, where applicable, indicated by drawing a "cloud" around the changed or additional information.
- G. Contractor shall store Record Documents separate from documents used for construction. Provide files, racks, and secure storage for Record Documents and samples.

2.02 RECORD DRAWING INFORMATION:

- A. Contractor shall record the following information:
 - (1) Locations of Work buried under or outside each building, including, without limitation, all utilities, plumbing and electrical lines, and conduits.
 - (2) Actual numbering of each electrical circuit to match panel schedule.
 - (3) Locations of significant Work concealed inside each building whose general locations are changed from those shown on the Contract Drawings.
 - (4) Locations of all items, not necessarily concealed, which vary from the Contract Documents.
 - (5) Installed location of all cathodic protection anodes.
 - (6) Deviations from the sizes, locations, and other features of installations shown in the Contract Documents.
 - (7) Locations of underground work, points of connection with existing utilities, changes in direction, valves, manholes, catch basins, capped stubouts, invert elevations, etc.
 - (8) Sufficient information to locate Work concealed in each building with reasonable ease and accuracy.

In some instances, this information may be recorded by dimension. In other instances, it may be recorded in relation to the spaces in the building near which it was installed.

- B. Contractor shall provide additional drawings as necessary for clarification.
- C. Contractor shall provide reproducible record drawings, made from final Shop Drawings marked "No Exceptions Taken" or "Approved as Noted."
- D. After review and approval of the marked-up specifications by the Project Inspector, Contractor shall provide electronic copies of the drawings (in PDF format) with one file with all of the sheets and one set of individual sheet files at the conclusion of the Project.

PART 3 - RECORD SPECIFICATIONS

3.01 GENERAL:

- A. Contractor shall mark each section legibly to record:
 - (1) Manufacturer, trade name, model / catalog number, and supplier of each Product and item of equipment actually installed.
 - (2) Product substitutions or alternates utilized.
 - (3) Changes made by Addenda and Change Orders and written directives.
- B. After review and approval of the marked-up specifications by the Project Inspector, Contractor shall provide one electronic copy of the specifications (in PDF format) at the conclusion of the Project.

PART 4 - MAINTENANCE OF RECORD DOCUMENTS

4.01 GENERAL

- A. Contractor shall store Record Documents apart from documents used for construction as follows:
 - (1) Provide files and racks for storage of Record Documents.
 - (2) Maintain Record Documents in a clean, dry, legible condition and in good order.
- B. Contractor shall not use Record Documents for construction purposes.

PART 5 – PRODUCTS Not Used.

END OF DOCUMENT

SECTION 01 8114
SUSTAINABLE DESIGN REQUIREMENTS - CAL-GREEN

PART 1 GENERAL**1.01 SUMMARY**

- A. This section includes general requirements and procedures for achieving the most environmentally conscious Work possible within the limits of the construction schedule, contract sum, and available materials, equipment, and products for compliance with the 2019 California Green Building Standards Code (Effective January 1, 2020) and requirements of local Authorities Having Jurisdiction.
 - 1. The more stringent requirement shall apply.
- B. The General Contractor and subcontractors have an essential role; general requirements and procedures are the responsibility of the General Contractor to implement and document. Full cooperation of the General Contractor and subcontractors is essential to addressing the checklist items for application and review.
- C. Chapter 4 Residential Mandatory Measures needed to comply with CAL-Green minimum standards are dependent on material selections. Compliance with mandatory measures should be used as one underlying criterion to evaluate substitution requests.
- D. Additional mandatory measures (not dependent on material selections) needed to comply with CAL-Green are dependent on the Architect's design and other aspects of the project that are not part of the Work of the Contract.
- E. The General Contractor should be familiar with CAL-Green requirements and provide the necessary information and instruction to all subcontractors. Copies of the following referenced standards and materials should be kept on-site:

1.02 DEFINITIONS

- A. Agrifiber Products: Agrifiber products include wheatboard, strawboard, panel substrates and door cores, not including furniture, fixtures and equipment (FF&E) not considered base building elements.
- B. Building Commissioning: A systematic quality assurance process that spans the entire design and construction process, including verifying and documenting that building systems and components are planned, designed, installed, tested, operated and maintained to meet the owner's project requirements.
- C. Composite Wood Products: A systematic quality assurance process that spans the entire design and construction process, including verifying and documenting that building systems and components are planned, designed, installed, tested, operated and maintained to meet the owner's project requirements.
- D. MERV: Filter minimum efficiency reporting value, based on ASHRAE 52.2-2007.
- E. Product-Weighted MIR (PWMIR): The sum of all weighted-MIR for all ingredients in a product subject to this article. The PWMIR is the total product reactivity expressed to hundredths of a gram of ozone formed per gram of product (excluding container and packaging).
- F. Reactive Organic Compound: Any compound that has the potential, once emitted, to contribute to ozone formation in the troposphere.
- G. VOC: A volatile organic compound (VOC) broadly defined as a chemical compound based on carbon chains or rings with vapor pressures greater than 0.1 millimeters of mercury at room

temperature. These compounds typically contain hydrogen and may contain oxygen, nitrogen and other elements. See CCR Title 17, Section 94508(a).

1. Where specific regulations are cited from different agencies such as Bay Area Air Quality Management District (BAAQMD), California Air Resources Board (ARB or CARB), etc., the VOC definition included in that specific regulation is the one that prevails for the specific measure in question.

1.04 SUBMITTAL PROCEDURES

- A. General: Additional Sustainable Design submittal requirements are included in other sections of the Specifications.
- B. Sustainable Design submittal requirements are in addition to other submittals. If a submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated CAL-Green mandatory and voluntary measures.
- C. CAL-Green Action Plans: Provide preliminary submittals within 30 calendar days of construction start indicating how the following requirements will be met.
 - 1. Stormwater pollution prevention plan (SWPPP) complying with Sections 4.106.2 and 5.106.1 (amended per 99.05.106.1, 99.05.106.1.1, and 99.05.106.1.2).
 - 2. Construction waste management plan complying with Sections 4.408.1 and 5.408.1.1, and Specification Section 01 74 19 Construction Waste Management.
 - 3. Indoor air quality (IAQ) plan during construction complying with Sections 5.504.1.3, 4.504.1, 5.504.3, 5.504.7 (amended per 99.05.504.7), and Specification Section 01 81 19 Indoor Air Quality Requirements.
 - 4. CAL-Green Report Schedule – Provide schedule for submitting progress reports for stormwater pollution prevention, construction waste management, and indoor air quality during construction.
- D. CAL-Green Reports: Reports shall be submitted to the Architect and Sustainability Consultant at no more than 90-day intervals.
 - 1. Stormwater pollution prevention plan (SWPPP) inspection demonstrating compliance with Sections 4.106.2 and 5.106.1 (amended per 99.05.106.1, 99.05.106.1.1), and 99.05.106.1.2). Include date-stamped photos over the course of site work activities to document the prevention of pollution of stormwater runoff from construction activities through local ordinance or best management practices.
 - 2. Construction waste reduction progress reports demonstrating compliance with Sections 4.408.1, 5.408.1.1 through 5.408.1.3, and Specification Section 01 74 19 Construction Waste Management. Recycle and/or salvage for reuse a minimum 75 percent of nonhazardous construction and demolition waste.
 - 3. Excavated soil and land clearing debris reports demonstrating compliance with Section 5.408.3 and Specification Section 01 7419 Construction Waste Management. 100 percent of trees, stumps, rocks and associated vegetation and soils resulting primarily from land clearing shall be reused or recycled.
 - 4. Indoor air quality (IAQ) during construction progress reports demonstrating compliance with Sections 5.504.1.3, 4.504.1, 5.504.3, 5.504.7 (amended per 99.05.504.7), and Specification Section 01 5719 - Temporary Environmental Controls.
 - a. The permanent HVAC system shall only be used during construction if necessary to condition the building within the required temperature range for material and equipment installation. If the HVAC system is used during construction, use return air filters with a Minimum Efficiency Reporting Value (MERV) of 8, based on ASHRAE 52.1-1992. Replace all filters immediately prior to occupancy.
 - b. At the time of rough installation and during storage on the construction site until final startup of heating, cooling, and ventilating equipment, all duct and other related air distribution component openings shall be covered with tape, plastic, sheet metal or other methods acceptable to the enforcing agency to reduce the amount of dust, water and debris which may enter the system.
 - c. Where outdoor areas are provided for smoking, prohibit smoking within 25 feet of building entries, outdoor air intakes and operable windows within the building as already prohibited by other laws or regulations.
 - 5. Summary of product data collected for all low-emitting materials, adhesives and sealants complying with Sections 4.504.2.1 and 5.504.4.1, paints and coatings complying with

Sections 4.504.2.2 and 5.504.4.3, aerosol paints and coatings complying with Sections 4.504.2.3 and 5.504.4.3.1, carpet systems complying with Sections 4.504.3 and 5.504.4.4, resilient flooring systems complying with Sections 4.504.4 and 5.504.4.6, and composite wood products complying with Sections 4.504.5 and 5.504.4.5.

E. CAL-Green Documentation and Verification

1. Mandatory measure, Sections 4.106.2 and 5.106.1 (amended per 99.05.106.1, 99.05.106.1.1) Stormwater pollution prevention plan.
 - a. Storm Water Pollution Prevention Plan (SWPPP).
 - b. Construction Documentation: Date-stamped photos, which show implemented measures and any corrective action that was taken.
2. Mandatory measure, Sections 4.408.1 and 5.408.1 Construction waste management.
 - a. Identify construction waste materials to be diverted from disposal.
 - b. Determine if construction waste materials will be sorted on-site (source-separated) or bulk mixed (single stream).
 - c. Identify diversion facilities where collected construction waste material will be taken.
 - d. Specify that the amount of construction waste materials diverted shall be calculated by weight or volume, but not by both.
3. Mandatory measure, Section 5.408.3 Excavated soil and land clearing debris.
 - a. Identify excavated soil and land clearing debris to be diverted from disposal by reuse or recycling.
 - b. Determine if excavated soil and land clearing debris will be sorted on-site.
 - c. Identify reuse or recycling facilities where collected excavated soil and land clearing debris will be taken.
4. Mandatory measure, Sections 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 - a. The VOC Content Verification Checklist, LADBS Form GRN 2, shall be completed and verified prior to final inspection approval.
 - b. The manufacturer's specifications showing VOC content for all applicable products shall be readily available at the jobsite and be provided to the field inspector for verification.
5. Mandatory measure, Sections 4.504.2.2 and 5.504.4.3 Paints and coatings.
 - a. The VOC Content Verification Checklist, LADBS Form GRN 2, shall be completed and verified prior to final inspection approval.
 - b. The manufacturer's specification showing VOC content for all applicable products shall be readily available at the jobsite and be provided to the field inspector for verification.
6. Mandatory measure, Sections 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.
 - a. The VOC Content Verification Checklist, LADBS Form GRN 2, shall be completed and verified prior to final inspection approval.
 - b. The manufacturer's specification showing VOC content for all applicable products shall be readily available at the jobsite and be provided to the field inspector for verification.
7. Mandatory measure, Sections 4.504.4 and 5.504.4.6 Resilient flooring systems.
 - a. The manufacturer's specification showing pollution emissions for all applicable products shall be readily available at the jobsite and be provided to the field inspector for verification.
8. Mandatory measure, Sections 4.504.5 and 5.504.4.5 Composite wood products.
 - a. The formaldehyde Emissions Verification Checklist, LADBS Form GRN 3, shall be completed and verified prior to final inspection approval.
 - b. The manufacturer's specification showing formaldehyde content for all applicable products shall be readily available at the jobsite and be provided to the field inspector for verification.
 - c. Chain of custody certificates.
 - d. Product labeled and invoiced as meeting the Composite Wood Products regulation (see CCR, Title 17, Section 93120, et seq).
 - e. Exterior grade products marked as meeting the PS-1 or PS-2 standards of the Engineered Wood Association, the Australian AS/NZS 2269 or European 636 3S standards.

- f. Other methods acceptable to the enforcing agency.

1.05 QUALITY ASSURANCE

- A. Sustainable Design Requirements Conference: Conduct conference at the Project site. Review methods and procedures related to sustainable design requirements.

PART 2 PRODUCTS

2.01 SITE MATERIALS

- A. Mandatory measure, Sections 4.106.7 and 5.106.11 (amended per 99.04.106.7 and 99.05.106.11) Hardscape alternatives. If using light colored material as a strategy to reduce nonroof heat islands for 25% of site hardscape:
 1. Use light colored materials with an initial solar reflectance value of at least .30 as determined in accordance with the American Society for Testing and Materials (ASTM) Standards E 1918 or C 1549; or
 2. Use an open-grid pavement system or pervious or permeable pavement system.

2.02 INDOOR PLUMBING FIXTURES

- A. Mandatory measure, Sections 5.303.2 Water reduction, 4.303.1 (amended per 99.04.303.1.2) and 5.303.3 (amended per 05.303.3.2) Water conserving plumbing fixtures and fittings, 4.303.1.3.2 and 5.303.3.3.2 Multiple showerheads serving one shower, and 5.303.4 (amended per 99.05.303.4) Wastewater reduction.

1. Plumbing fixtures shall meet the maximum flow rate values shown in Table 5.303.2.3.
2. Table 5.303.2.3 **WATER REDUCTION FIXTURE FLOW RATES**

a. FIXTURE TYPE	MAXIMUM FLOW RATE
1) Kitchen faucets	1.8 gpm @ 60 psi
2) Wash fountains	1.8 rim space (in.)/20 gpm @ 60 psi
3) Metering faucets	0.20 gallons/cycle
4) Metering faucets for wash fountains	0.20 rim space (in.)/20 gpm @ 60 psi

3. Water closets: The effective flush volume of all water closets shall not exceed 1.28 gallons per flush. Tank-type water closets shall be certified to the performance criteria of the U.S. EPA WaterSense Specification for Tank-Type Toilets.
4. Urinals: The effective flush volume of urinals shall not exceed 0.125 gallons per flush.
5. Single showerheads: Showerheads shall have a maximum flow rate of not more than 2.0 gallons per minute at 80 psi. Showerheads shall be certified to the performance criteria of the U.S. EPA WaterSense Specification for Showerheads.
6. Multiple showerheads serving one shower: When a shower is served by more than one showerhead, the combined flow rate of all showerheads and/or other shower outlets controlled by a single valve shall not exceed 2.0 gallons per minute at 80 psi, or the shower shall be designed to allow only one shower outlet to be in operation at a time.
7. Residential lavatory faucets: The maximum flow rate of residential lavatory faucets shall not exceed 1.5 gallons per minute at 60 psi. The minimum flow rate of residential lavatory faucets shall not be less than 0.8 gallons per minute at 20 psi.
8. Lavatory faucets in common and public use areas: The maximum flow rate of lavatory faucets installed in common and public use areas (outside of dwellings or sleeping units) in residential buildings shall not exceed 0.5 gallons per minute at 60 psi.
9. Metering faucets: Metering faucets when installed in residential buildings shall not deliver more than 0.25 gallons per cycle.
10. Kitchen faucets: The maximum flow rate of kitchen faucets shall not exceed 1.8 gallons per minute at 60 psi. Kitchen faucets may temporarily increase the flow above maximum flow rate, but not to exceed 2.2 gallons per minute at 60 psi, and must default to a maximum flow rate of 1.8 gallons per minute at 60 psi.

2.03 FINISH MATERIAL POLLUTANT CONTROL

- A. Mandatory measure, Sections 4.504.2.1 and 5.504.4.1 Adhesives and sealants: Adhesives, sealants, and caulks used on the Project shall meet the requirements of the following standards:
1. Adhesives, adhesive bonding primers, adhesive primers, sealants, sealant primers and caulks shall comply with local or regional air pollution control or air quality management district rules where applicable or SCAQMD Rule 1168 VOC limits, as shown in Tables 4.504.1, 4.504.2, 5.504.4.1 and 5.504.4.2. Such products also shall comply with Rule 1168 prohibition on the use of certain toxic compounds (chloroform, ethylene dichloride, methylene chloride, perchloroethylene and trichloroethylene), except for aerosol products as specified in subsection 2, below.
- B. Tables 4.504.1 and 5.504.4.1 **ADHESIVE VOC LIMIT**
1. (Less Water and Less Exempt Compounds in Grams Per Liter)
 2. Architectural Applications Current VOC Limit

a. Indoor carpet adhesives	50
b. Carpet pad adhesives	50
c. Outdoor carpet adhesives	150
d. Wood flooring adhesives	100
e. Rubber floor adhesives	60
f. Subfloor adhesives	50
g. Ceramic tile adhesives	65
h. VCT and asphalt tile adhesives	50
i. Drywall and panel adhesives	50
j. Cove base adhesives	50
k. Multipurpose construction adhesives	70
l. Structural glazing adhesives	100
m. Single-ply roof membrane adhesives	250
n. Other adhesives not specifically listed	50
 3. Specialty Applications

a. PVC welding	510
b. CPVC welding	490
c. ABS welding	325
d. Plastic cement welding	250
e. Adhesive primer for plastic	550
f. Contact adhesive	80
g. Special purpose contact adhesive	250
h. Structural wood membrane adhesive	140
i. Top and trim adhesive	250
 4. Substrate Specific Applications

a. Metal to metal	30
b. Plastic foams	50
c. Porous material (except wood)	50
d. Wood	30
e. Fiberglass	80
- C. Tables 4.504.2 and 5.504.4.2 **SEALANT VOC LIMIT**
1. (Less Water and Less Exempt Compounds in Grams Per Liter)
 2. Sealants Current VOC Limit

a. Architectural	250
b. Marine deck	760
c. Nonmembrane roof	300
d. Roadway	250
e. Single-ply roof membrane	450
f. Other	420

- 3. Sealant Primers
 - a. Architectural
 - 1) Nonporous 250
 - 2) Porous 775
 - b. Modified bituminous 500
 - c. Marine deck 760
 - d. Other 750
- 4. Aerosol adhesives, and smaller unit sizes of adhesives, and sealant or caulking compounds (in units of product, less packaging, which do not consist of more than 16 fluid ounces) shall comply with statewide VOC standards and other requirements, including prohibitions on use of certain toxic compounds, of California Code of Regulations, Title 17, commencing with Section 94507.

D. Mandatory measure, Sections 4.504.2.2 and 5.504.4.3 Paints and coatings: Architectural paints and coatings shall comply with VOC limits in Table 1 of the ARB Architectural Coatings Suggested Control Measure, as shown in Tables 4.504.3 and 5.504.4.3, unless more stringent local limits apply. The VOC content limit for coatings that do not meet the definitions for the specialty coatings categories listed in Tables 4.504.3 and 5.504.4.3, shall be determined by classifying the coating as a Flat, Nonflat or Nonflat-High Gloss coating, based on its gloss, as defined in Subsections 4.21, 4.36 and 4.37 of the 2007 California Air Resources Board, Suggested Control Measure, and the corresponding Flat, Nonflat, or Nonflat-High Gloss VOC limit in Tables 4.504.3 and 5.504.4.3 shall apply.

E. Tables 4.504.3 and 5.504.4.3 **VOC CONTENT LIMITS FOR ARCHITECTURAL COATINGS**

1. (Grams of VOC Per Liter of Coating, Less Water and Less Exempt Compounds)

2. Coating Category	Current Limit
a. Flat coatings	50
b. Nonflat coatings	100
c. Nonflat high gloss coatings	150
3. Specialty Coatings	
a. Aluminum roof coatings	400
b. Basement specialty coatings	400
c. Bituminous roof coatings	50
d. Bituminous roof primers	350
e. Bond breakers	350
f. Concrete curing compounds	350
g. Concrete/masonry sealers	100
h. Driveway sealers	50
i. Dry fog coatings	150
j. Faux finishing coatings	350
k. Fire resistive coatings	350
l. Floor coatings	100
m. Form-release compounds	250
n. Graphic arts coatings (sign paints)	500
o. High-temperature coatings	420
p. Industrial maintenance coatings	250
q. Low solids coatings	120
r. Magnesite cement coatings	450
s. Mastic texture coatings	100
t. Metallic pigmented coatings	500
u. Multicolor coatings	250
v. Pretreatment wash primers	420
w. Primers, sealers and undercoaters	100
x. Reactive penetrating sealers	350
y. Recycled coatings	250
z. Roof coatings	50

- | | | |
|-----|---|-----|
| aa. | Rust preventative coatings | 250 |
| ab. | Shellacs | |
| | 1) Clear | 730 |
| | 2) Opaque | 550 |
| ac. | Specialty primers, sealers and undercoaters | 350 |
| ad. | Stains | 250 |
| ae. | Stone consolidates | 450 |
| af. | Swimming pool coatings | 340 |
| ag. | Traffic marking coatings | 100 |
| ah. | Tub and tile refinishing coatings | 420 |
| ai. | Waterproofing membranes | 250 |
| aj. | Wood coatings | 275 |
| ak. | Wood preservatives | 350 |
| al. | Zinc-rich primers | 340 |
- F. Mandatory measure, Sections 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings: Aerosol paints and coatings shall meet PWMIR Limits for ROC in Section 94522(a)(3) and other requirements, including prohibitions on use of certain toxic compounds and ozone depleting substances, in Sections 94522(c)(2) and (d)(2) of California Code of Regulations, Title 17, commencing with Section 94520.
- G. Mandatory measure, Sections 4.504.4 and 5.504.4.6 Resilient flooring systems: 80% of the total area receiving resilient flooring shall comply with one or more of the following:
1. VOC emission limits defined in CHPS High Performance Products Database.
 2. Products compliance with the CHPS criteria certified under the Greenguard Children & Schools program.
 3. Certification under the Resilient Floor Covering Institute (RCFI) FloorScore program.
 4. Meet the California Department of Public Health's Specification 01350.
 5. Verification of compliance - Documentation shall be provided verifying that resilient flooring materials meet the pollutant emissions limits.
- H. Mandatory measure, Sections 4.504.5 and 5.504.4.5 Composite wood products: New hardwood plywood, particle board, and medium density fiberboard composite wood products used in the interior or exterior of the building shall meet the formaldehyde limits listed in Tables 4.504.5 and 5.504.4.5.
- I. Tables 4.504.5 5.504.4.5 **FORMALDEHYDE LIMITS**
- | | | |
|----|---|---------------|
| 1. | (Maximum Formaldehyde Emissions in Parts per Million) | |
| 2. | Product | Current Limit |
| 3. | Hardwood plywood veneer core | 0.05 |
| 4. | Hardwood plywood composite core | 0.05 |
| 5. | Particle board | 0.09 |
| 6. | Medium density fiberboard | 0.11 |
| 7. | Thin medium density fiberboard | 0.13 |
- J. Mandatory measure, Section 5.504.3 Filters: An air filter with a Minimum Efficiency Reporting Value (MERV) of 8 or higher shall be installed in the mechanical system for outside and return air prior to occupancy.
1. Exceptions:
 2. An ASHRAE 10-percent to 15-percent efficiency filter shall be permitted for an HVAC unit meeting the 2019 California Energy Code having 60,000 Btu/h or less capacity per fan coil, if the energy use of the air delivery system is 0.4 w/cfm or less at design air flow.
 3. Existing mechanical equipment.

PART 3 EXECUTION

3.01 CONSTRUCTION WASTE MANAGEMENT

- A. Mandatory measure, Sections 4.408.1 and 5.408.1 Construction waste management, comply with Specification Section 01 74 19 Construction Waste Management.

3.02 COMMISSIONING

- A. Mandatory measure, Sections 5.410.2 (amended per 99.05.410.2.5.1) Commissioning, comply with Specification Section 01 91 13 General Commissioning Requirements.

3.03 INDOOR AIR QUALITY (IAQ) DURING CONSTRUCTION

- A. Mandatory measures, Sections 5.504.1.3, 4.504.1, 5.504.3, 5.504.7 (amended per 99.05.504.7), comply with Specification Section 01 81 19 Indoor Air Quality Requirements.

END OF SECTION

**SECTION 01 9113
GENERAL COMMISSIONING REQUIREMENTS**

PART 1 GENERAL

1.01 SUMMARY

- A. Commissioning is intended to achieve the following specific objectives; this Section specifies the Contractor's responsibilities for commissioning:
 - 1. Verify that the work is installed in accordance with the Contract Documents and the manufacturer's recommendations and instructions, and that it receives adequate operational checkout prior to startup; Startup Reports and Prefunctional Checklists executed by Contractor are utilized to achieve this requirement.
 - 2. Verify and document that functional performance is in accordance with the Contract Documents; Functional Tests executed by Contractor and witnessed by the Commissioning Authority are utilized to achieve this requirement.
 - 3. Verify that operation and maintenance manuals submitted to Owner are complete; Detailed operation and maintenance (O&M) data submittals by Contractor are utilized to achieve this requirement.
 - 4. Verify that the Owner's operating personnel are adequately trained; Formal training conducted by Contractor is utilized to achieve this requirement.
- B. Commissioning, including Functional Tests, O&M documentation review, and training, is to occur after startup and initial checkout and be completed before Substantial Completion.
- C. The Commissioning Authority directs and coordinates all commissioning activities; this Section describes some but not all of the Commissioning Authority's responsibilities.
- D. The Commissioning Authority is employed by Owner.

1.02 SCOPE OF COMMISSIONING

- A. The following are to be commissioned:
 - 1. Building envelope:
 - a. Air tightness.
 - 2. Fire Protection Systems.
 - 3. Plumbing Systems:
 - a. Water heaters.
 - b. Booster pumps.
 - c. Landscape irrigation.
 - 4. HVAC System, including:
 - a. Major and minor equipment items.
 - b. Piping systems and equipment.
 - c. Ductwork and accessories.
 - d. Terminal units.
 - e. Control system.
 - f. Sound control devices.
 - g. Vibration control devices.
 - h. Variable frequency drives.
 - 5. Electrical Systems:
 - a. Power quality.
 - b. Emergency power systems.
 - c. Uninterruptible power systems.
 - d. Lighting controls other than manual switches.
 - 6. Electronic Safety and Security:
 - a. Security system, including doors and hardware.

- b. Fire and smoke alarms.
- 7. Communications:
 - a. Voice and data systems.
 - b. Public address/paging.
- B. Other equipment and systems explicitly identified elsewhere in Contract Documents as requiring commissioning.

1.03 SUBMITTALS

- A. SUBmittals:
 - 1. Make all submittals specified in this Section, and elsewhere where indicated for commissioning purposes, directly to the Commissioning Authority, unless they require review by Architect; in that case, submit to Architect first.
- B. Manufacturers' Instructions: Submit copies of all manufacturer-provided instructions that are shipped with the equipment as soon as the equipment is delivered.
- C. Product Data: If submittals to Architect do not include the following, submit copies as soon as possible:
 - 1. Manufacturer's product data, cut sheets, and shop drawings.
 - 2. Manufacturer's installation instructions.
 - 3. Startup, operating, and troubleshooting procedures.
 - 4. Fan and pump curves.
 - 5. Factory test reports.
 - 6. Warranty information, including details of Owner's responsibilities in regard to keeping warranties in force.
- D. Manufacturers' Instructions: Submit copies of all manufacturer-provided instructions that are shipped with the equipment as soon as the equipment is delivered.
- E. Startup Plans and Reports.
- F. Completed Prefunctional Checklists.

PART 2 PRODUCTS

2.01 TEST EQUIPMENT

- A. Provide all standard testing equipment required to perform startup and initial checkout and required Functional Testing; unless otherwise noted such testing equipment will not become the property of Owner.
- B. Calibration Tolerances: Provide testing equipment of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified. If not otherwise noted, the following minimum requirements apply:
 - 1. Temperature Sensors and Digital Thermometers: Certified calibration within past year to accuracy of 0.5 degree F (0.3 degree C) and resolution of plus/minus 0.1 degree F (0.05 degree C).
 - 2. Pressure Sensors: Accuracy of plus/minus 2.0 percent of the value range being measured (not full range of meter), calibrated within the last year.
 - 3. Calibration: According to the manufacturer's recommended intervals and when dropped or damaged; affix calibration tags or keep certificates readily available for inspection.
- C. Equipment-Specific Tools: Where special testing equipment, tools and instruments are specific to a piece of equipment, are only available from the vendor, and are required in order to accomplish startup or Functional Testing, provide such equipment, tools, and instruments as part of the work at no extra cost to Owner; such equipment, tools, and instruments are to become the property of Owner.

- D. Dataloggers: Independent equipment and software for monitoring flows, currents, status, pressures, etc. of equipment.
 - 1. Dataloggers required to for Functional Tests will be provided by the Commissioning Authority and will not become the property of Owner.

PART 3 EXECUTION

3.01 COMMISSIONING PLAN

- A. Commissioning Authority has prepared the Commissioning Plan.
 - 1. Attend meetings called by the Commissioning Authority for purposes of completing the commissioning plan.
 - 2. Require attendance and participation of relevant subcontractors, installers, suppliers, and manufacturer representatives.
- B. Contractor is responsible for compliance with the Commissioning Plan.
- C. Commissioning Plan: The commissioning schedule, procedures, and coordination requirements for all parties in the commissioning process.
- D. Commissioning Schedule:
 - 1. Submit anticipated dates of startup of each item of equipment and system to Commissioning Authority within 60 days after award of Contract.
 - 2. Re-submit anticipated startup dates monthly, but not less than 4 weeks prior to startup.
 - 3. Prefunctional Checklists and Functional Tests are to be performed in sequence from components, to subsystems, to systems.
 - 4. Provide sufficient notice to Commissioning Authority for delivery of relevant Checklists and Functional Test procedures, to avoid delay.

3.02 STARTUP PLANS AND REPORTS

- A. Startup Plans: For each item of equipment and system for which the manufacturer provides a startup plan, submit the plan not less than 8 weeks prior to startup.
- B. Startup Reports: For each item of equipment and system for which the manufacturer provides a startup checklist (or startup plan or field checkout sheet), document compliance by submitting the completed startup checklist prior to startup, signed and dated by responsible entity.
- C. Submit directly to the Commissioning Authority.

3.03 PREFUNCTIONAL CHECKLISTS

- A. A Prefunctional Checklist is required to be filled out for each item of equipment or other assembly specified to be commissioned.
 - 1. No sampling of identical or near-identical items is allowed.
 - 2. These checklists do not replace manufacturers' recommended startup checklists, regardless of apparent redundancy.
 - 3. Prefunctional Checklist forms will not be complete until after award of the contract; the following types of information will be gathered via the completed Checklist forms:
 - a. Certification by installing contractor that the unit is properly installed, started up, and operating and ready for Functional Testing.
 - b. Confirmation of receipt of each shop drawing and commissioning submittal specified, itemized by unit.
 - c. Manufacturer, model number, and relevant capacity information; list information "as specified," "as submitted," and "as installed."
 - d. Serial number of installed unit.
 - e. List of inspections to be conducted to document proper installation prior to startup and Functional Testing; these will be primarily static inspections and procedures; for

- equipment and systems may include normal manufacturer's start-up checklist items and minor testing.
- f. Sensor and actuator calibration information.
- B. Contractor is responsible for filling out Prefunctional Checklists, after completion of installation and before startup; witnessing by the Commissioning Authority is not required unless otherwise specified.
1. Each line item without deficiency is to be witnessed, initialed, and dated by the actual witness; checklists are not complete until all line items are initialed and dated complete without deficiencies.
 2. Checklists with incomplete items may be submitted for approval provided the Contractor attests that incomplete items do not preclude the performance of safe and reliable Functional Testing; re-submission of the Checklist is required upon completion of remaining items.
 3. Individual Checklists may contain line items that are the responsibility of more than one installer; Contractor shall assign responsibility to appropriate installers or subcontractors, with identification recorded on the form.
 4. If any Checklist line item is not relevant, record reasons on the form.
 5. Regardless of these reporting requirements, Contractor is responsible for correct startup and operation.
 6. Submit completed Checklists to Commissioning Authority within two days of completion.
 7. See Section 01 7000 - Execution and Closeout Requirements for additional general startup requirements.
- C. Commissioning Authority is responsible for furnishing the Prefunctional Checklists to Contractor.
1. Initial Drafts: Contractor is responsible for initial draft of Prefunctional Checklist where so indicated in Contract Documents.
 2. Provide all additional information requested by Commissioning Authority to aid in preparation of checklists, such as shop drawing submittals, manufacturers' startup checklists, and O&M data.
 3. Commissioning Authority may add any relevant items deemed necessary regardless of whether they are explicitly mentioned in Contract Documents or not.
 4. When asked to review the proposed Checklists, do so in a timely manner.
- D. Commissioning Authority Witnessing: Required for:
1. Each piece of primary equipment, unless sampling of multiple similar units is allowed by the commissioning plan.
 2. A sampling of non-primary equipment, as allowed by the commissioning plan.
- E. Deficiencies: Correct deficiencies and re-inspect or re-test, as applicable, at no extra cost to Owner.
1. If difficulty in correction would delay progress, report deficiency to the Commissioning Authority immediately.

3.04 FUNCTIONAL TESTS

- A. A Functional Test is required for each item of equipment, system, or other assembly specified to be commissioned, unless sampling of multiple identical or near-identical units is allowed by the final test procedures.
- B. Contractor is responsible for execution of required Functional Tests, after completion of Prefunctional Checklist and before closeout.
- C. Commissioning Authority is responsible for witnessing and reporting results of Functional Tests, including preparation and completion of forms for that purpose.
- D. Contractor is responsible for correction of deficiencies and re-testing at no extra cost to Owner; if a deficiency is not corrected and re-tested immediately, the Commissioning Authority will document the deficiency and the Contractor's stated intentions regarding correction.

1. Deficiencies are any condition in the installation or function of a component, piece of equipment or system that is not in compliance with Contract Documents or does not perform properly.
2. When the deficiency has been corrected, the Contractor completes the form certifying that the item is ready to be re-tested and returns the form to the Commissioning Authority; the Commissioning Authority will reschedule the test and the Contractor shall re-test.
3. Identical or Near-Identical Items: If 10 percent, or three, whichever is greater, of identical or near-identical items fail to perform due to material or manufacturing defect, all items will be considered defective; provide a proposal for correction within 2 weeks after notification of defect, including provision for testing sample installations prior to replacement of all items.
4. Contractor shall bear the cost of Owner and Commissioning Authority personnel time witnessing re-testing.
5. Contractor shall bear the cost of Owner and Commissioning Authority personnel time witnessing re-testing if the test failed due to failure to execute the relevant Prefunctional Checklist correctly; if the test failed for reasons that would not have been identified in the Prefunctional Checklist process, Contractor shall bear the cost of the second and subsequent re-tests.

E. Functional Test Procedures:

1. Some test procedures are included in Contract Documents; where Functional Test procedures are not included in Contract Documents, test procedures will be determined by the Commissioning Authority with input by and coordination with Contractor.
2. Examples of Functional Testing:
 - a. Test the dynamic function and operation of equipment and systems (rather than just components) using manual (direct observation) or monitoring methods under full operation (e.g., the chiller pump is tested interactively with the chiller functions to see if the pump ramps up and down to maintain the differential pressure setpoint).
 - b. Systems are tested under various modes, such as during low cooling or heating loads, high loads, component failures, unoccupied, varying outside air temperatures, fire alarm, power failure, etc.
 - c. Systems are run through all the HVAC control system's sequences of operation and components are verified to be responding as the sequence's state.
 - d. Traditional air or water test and balancing (TAB) is not Functional Testing; spot checking of TAB by demonstration to the Commissioning Authority is Functional Testing.

- F. Deferred Functional Tests: Some tests may need to be performed later, after substantial completion, due to partial occupancy, equipment, seasonal requirements, design or other site conditions; performance of these tests remains the Contractor's responsibility regardless of timing.

3.05 SENSOR AND ACTUATOR CALIBRATION

- A. Calibrate all field-installed temperature, relative humidity, carbon monoxide, carbon dioxide, and pressure sensors and gages, and all actuators (dampers and valves) on this piece of equipment shall be calibrated. Sensors installed in the unit at the factory with calibration certification provided need not be field calibrated.
- B. Calibrate using the methods described below; alternate methods may be used, if approved by Owner beforehand. See PART 2 of this Section for test instrument requirements. Record methods used on the relevant Prefunctional Checklist or other suitable forms, documenting initial, intermediate and final results.
- C. All Sensors:
 1. Verify that sensor location is appropriate and away from potential causes of erratic operation.
 2. Verify that sensors with shielded cable are grounded only at one end.

3. For sensor pairs that are used to determine a temperature or pressure difference, for temperature make sure they are reading within 0.2 degree F (0.1 degree C) of each other, and for pressure, within tolerance equal to 2 percent of the reading, of each other.
 4. Tolerances for critical applications may be tighter.
- D. Sensors Without Transmitters - Standard Application:
1. Make a reading with a calibrated test instrument within 6 inches (150 mm) of the site sensor.
 2. Verify that the sensor reading, via the permanent thermostat, gauge or building automation system, is within the tolerances in the table below of the instrument-measured value.
 3. If not, install offset, calibrate or replace sensor.
- E. Sensors With Transmitters - Standard Application.
1. Disconnect sensor.
 2. Connect a signal generator in place of sensor.
 3. Connect ammeter in series between transmitter and building automation system control panel.
 4. Using manufacturer's resistance-temperature data, simulate minimum desired temperature.
 5. Adjust transmitter potentiometer zero until 4 mA is read by the ammeter.
 6. Repeat for the maximum temperature matching 20 mA to the potentiometer span or maximum and verify at the building automation system.
 7. Record all values and recalibrate controller as necessary to comply with specified control ramps, reset schedules, proportional relationship, reset relationship and P/I reaction.
 8. Reconnect sensor.
 9. Make a reading with a calibrated test instrument within 6 inches (150 mm) of the site sensor.
 10. Verify that the sensor reading, via the permanent thermostat, gauge or building automation system, is within the tolerances in the table below of the instrument-measured value.
 11. If not, replace sensor and repeat.
 12. For pressure sensors, perform a similar process with a suitable signal generator.
- F. Sensor Tolerances for Standard Applications: Plus/minus the following maximums:
1. Watthour, Voltage, Amperage: 1 percent of design.
 2. Pressure, Air, Water, Gas: 3 percent of design.
 3. Air Temperatures (Outside Air, Space Air, Duct Air): 0.4 degrees F (0.2 degree C).
 4. Relative Humidity: 4 percent of design.
 5. Barometric Pressure: 0.1 inch of Hg (340 Pa).
 6. Flow Rate, Air: 10 percent of design.
 7. Flow Rate, Water: 4 percent of design.
 8. AHU Wet Bulb and Dew Point: 2.0 degrees F (1.1 degrees C).
- G. Critical Applications: For some applications more rigorous calibration techniques may be required for selected sensors. Describe any such methods used on an attached sheet.
- H. Valve/Damper Stroke Setup and Check:
1. Set pump/fan to normal operating mode.
 2. Command valve/damper closed; visually verify that valve/damper is closed and adjust output zero signal as required.
 3. Command valve/damper to open; verify position is full open and adjust output signal as required.
 4. Command valve/damper to a few intermediate positions.
 5. If actual valve/damper position does not reasonably correspond, replace actuator or add pilot positioner (for pneumatics).
- I. Isolation Valve or System Valve Leak Check: For valves not associated with coils.
1. With full pressure in the system, command valve closed.
 2. Use an ultra-sonic flow meter to detect flow or leakage.

3.06 TEST PROCEDURES - GENERAL

- A. Provide skilled technicians to execute starting of equipment and to execute the Functional Tests. Ensure that they are available and present during the agreed upon schedules and for sufficient duration to complete the necessary tests, adjustments and problem-solving.
- B. Provide all necessary materials and system modifications required to produce the flows, pressures, temperatures, and conditions necessary to execute the test according to the specified conditions. At completion of the test, return all affected equipment and systems to their pre-test condition.
- C. Sampling: Where Functional Testing of fewer than the total number of multiple identical or near-identical items is explicitly permitted, perform sampling as follows:
 - 1. Identical Units: Defined as units with same application and sequence of operation; only minor size or capacity difference.
 - 2. Sampling is not allowed for:
 - a. Major equipment.
 - b. Life-safety-critical equipment.
 - c. Prefunctional Checklist execution.
 - 3. XX = the percent of the group of identical equipment to be included in each sample; defined for specific type of equipment.
 - 4. YY = the percent of the sample that if failed will require another sample to be tested; defined for specific type of equipment.
 - 5. Randomly test at least XX percent of each group of identical equipment, but not less than three units. This constitutes the "first sample."
 - 6. If YY percent of the units in the first sample fail, test another XX percent of the remaining identical units.
 - 7. If YY percent of the units in the second sample fail, test all remaining identical units.
 - 8. If frequent failures occur, resulting in more troubleshooting than testing, the Commissioning Authority may stop the testing and require Contractor to perform and document a checkout of the remaining units prior to continuing testing.
- D. Manual Testing: Use hand-held instruments, immediate control system readouts, or direct observation to verify performance (contrasted to analyzing monitored data taken over time to make the "observation").
- E. Simulating Conditions: Artificially create the necessary condition for the purpose of testing the response of a system; for example apply hot air to a space sensor using a hair dryer to see the response in a VAV box.
- F. Simulating Signals: Disconnect the sensor and use a signal generator to send an amperage, resistance or pressure to the transducer and control system to simulate the sensor value.
- G. Over-Writing Values: Change the sensor value known to the control system in the control system to see the response of the system; for example, change the outside air temperature value from 50 degrees F to 75 degrees F to verify economizer operation.
- H. Indirect Indicators: Remote indicators of a response or condition, such as a reading from a control system screen reporting a damper to be 100 percent closed, are considered indirect indicators.
- I. Monitoring: Record parameters (flow, current, status, pressure, etc.) of equipment operation using dataloggers or the trending capabilities of the relevant control systems; where monitoring of specific points is called for in Functional Test Procedures:
 - 1. All points that are monitored by the relevant control system shall be trended by Contractor; at the Commissioning Authority's request, Contractor shall trend up to 20 percent more points than specified at no extra charge.
 - 2. Other points will be monitored by the Commissioning Authority using dataloggers.

3. At the option of the Commissioning Authority, some control system monitoring may be replaced with datalogger monitoring.
4. Provide hard copies of monitored data in columnar format with time down left column and at least 5 columns of point values on same page.
5. Graphical output is desirable and is required for all output if the system can produce it.
6. Monitoring may be used to augment manual testing.

3.07 OPERATION AND MAINTENANCE MANUALS

- A. See Section 01 7800 - Closeout Submittals for additional requirements.
- B. Add design intent documentation furnished by Architect to manuals prior to submission to Owner.
- C. Submit manuals related to items that were commissioned to Commissioning Authority for review; make changes recommended by Commissioning Authority.
- D. Commissioning Authority will add commissioning records to manuals after submission to Owner.

END OF SECTION

SECTION 02 4100

DEMOLITION

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Selective demolition of built site elements.
- B. Abandonment and removal of existing utilities and utility structures.

1.02 DEFINITIONS

- A. Demolish (Demo): Dismantle a defined component of existing construction, remove it from the Site, and dispose of it either as specified or in lawful manner.
- B. Dispose: Remove from the Project Site in lawful manner.
- C. Reinstall: Install a removed component of existing construction into new construction as indicated.
- D. Remove: Dismantle a defined component of existing construction in a manner which protects and preserves the component for future use/installation; definition includes lawful disposal, unless otherwise specifically indicated to be reinstalled, salvaged, or other described action.
- E. Salvage: Remove in a manner preserving the existing condition and integrity of the component, set aside, store and protect for future reinstallation.

1.03 REFERENCE STANDARDS

- A. 29 CFR 1926 - U.S. Occupational Safety and Health Standards; current edition.
- B. NFPA 241 - Standard for Safeguarding Construction, Alteration, and Demolition Operations; 2013.

1.04 ADMINISTRATIVE REQUIREMENTS

- A. Predemolition Conference: Conduct conference at Project site.
 - 1. Inspect and discuss condition of construction to be selectively demolished.
 - 2. Review structural load limitations of existing structure.
 - 3. Review and finalize selective demolition schedule and verify availability of materials, demolition personnel, equipment, and facilities needed to make progress and avoid delays.
 - 4. Review requirements of work performed by other trades that rely on substrates exposed by selective demolition operations.
 - 5. Review areas where existing construction is to remain and requires protection.
- B. Coordination: Coordinate work with utility companies; notify before starting work and comply with their requirements; obtain required permits.

1.05 SUBMITTALS

- A. Action Submittals:
 - 1. Site Plan: Showing:
 - a. Vegetation to be protected.
 - b. Areas for temporary construction and field offices.
 - c. Areas for temporary and permanent placement of removed materials.
 - 2. Proposed Protection Measures: Submit report, including drawings, that indicates the measures proposed for protecting individuals and property, for environmental protection, for dust control and, for noise control. Indicate proposed locations and construction of barriers.
 - 3. Demolition Plan: Submit demolition plan as specified by OSHA and local authorities.
 - a. Indicate extent of demolition, removal sequence, bracing and shoring, and location and construction of barricades and fences.

- b. Identify demolition firm and submit qualifications.
- c. Include a summary of safety procedures.
- 4. Schedule of Selective Demolition Activities: Indicate the following:
 - a. Detailed sequence of selective demolition and removal work, with starting and ending dates for each activity. Ensure Owner's on-site operations are uninterrupted.
 - b. Interruption of utility services. Indicate how long utility services will be interrupted.
 - c. Coordination for shutoff, capping, and continuation of utility services.
 - d. Use of elevator and stairs.
 - e. Coordination of Owner's continuing occupancy of portions of existing building and of Owner's partial occupancy of completed Work.

B. Informational Submittals:

- 1. Inventory: Submit a list of items to be removed and salvaged and deliver to Owner prior to start of demolition.
- 2. Predemolition Photographs or Video: Submit before Work begins.
- 3. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician responsible for recovering refrigerant, stating that all refrigerant that was present was recovered and that recovery was performed according to EPA regulations. Include name and address of technician and date refrigerant was recovered.
- 4. Project Record Documents: Accurately record actual locations of capped and active utilities and subsurface construction.
- 5. Inventory: Submit a list of items that have been removed and salvaged.
- 6. Landfill Records: Indicate receipt and acceptance of hazardous wastes by a landfill facility licensed to accept hazardous wastes.
- 7. Warranties: Documentation indicated that existing warranties are still in effect after completion of selective demolition.

1.06 QUALITY ASSURANCE

- A. Demolition Firm Qualifications: Company specializing in the type of work required.
 - 1. Minimum of five years of documented experience.

1.07 FIELD CONDITIONS

- A. Owner will occupy portions of building immediately adjacent to selective demolition area. Conduct selective demolition so Owner's operations will not be disrupted.
- B. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.
- C. Notify Architect of discrepancies between existing conditions and Drawings before proceeding with selective demolition.
- D. Hazardous Materials: It is not expected that hazardous materials will be encountered in the Work.
 - 1. If suspected hazardous materials are encountered, do not disturb; immediately notify Architect and Owner. Hazardous materials will be removed by Owner under a separate contract.
- E. Storage or sale of removed items or materials on-site is not permitted.
- F. Utility Service: Maintain existing utilities indicated to remain in service and protect them against damage during selective demolition operations.
 - 1. Maintain fire-protection facilities in service during selective demolition operations.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Regulatory Requirements: Comply with governing EPA notification regulations before beginning selective demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.
- B. Standards: Comply with ANSI/ASSE A10.6 and NFPA 241.

2.02 MATERIALS

- A. Fill Material: As specified in Division 31 - Earthwork..

PART 3 EXECUTION

3.01 SCOPE

- A. Remove paving and curbs as required to accomplish new work.
- B. Remove all paving and curbs within site boundaries.
- C. Remove manholes and manhole covers, curb inlets and catch basins as indicated on Drawings.
- D. Remove other items indicated, for salvage, relocation, and recycling.
- E. Fill excavations, open pits, and holes in ground areas generated as result of removals, using specified fill; compact fill as required so that required rough grade elevations do not subside within one year after completion.

3.02 EXAMINATION

- A. Verify that utilities have been disconnected and capped before starting selective demolition operations.
- B. Review record documents of existing construction provided by Owner. Owner does not guarantee that existing conditions are same as those indicated in record documents.
- C. Survey existing conditions and correlate with requirements indicated to determine extent of selective demolition required.
- D. When unanticipated mechanical, electrical, or structural elements that conflict with intended function or design are encountered, investigate and measure the nature and extent of conflict. Promptly submit a written report to Architect.

3.03 GENERAL PROCEDURES AND PROJECT CONDITIONS

- A. Comply with other requirements specified in Section 01 7000 - Execution and Closeout Requirements.
- B. Comply with applicable codes and regulations for demolition operations and safety of adjacent structures and the public.
 - 1. Obtain required permits.
 - 2. Comply with applicable requirements of NFPA 241.
 - 3. Use of explosives is not permitted.
 - 4. Take precautions to prevent catastrophic or uncontrolled collapse of structures to be removed; do not allow worker or public access within range of potential collapse of unstable structures.
 - 5. Provide, erect, and maintain temporary barriers and security devices.
 - 6. Use physical barriers to prevent access to areas that could be hazardous to workers or the public.

7. Conduct operations to minimize effects on and interference with adjacent structures and occupants.
 8. Do not close or obstruct roadways or sidewalks without permit.
 9. Conduct operations to minimize obstruction of public and private entrances and exits; do not obstruct required exits at any time; protect persons using entrances and exits from removal operations.
- C. Do not begin removal until receipt of notification to proceed from Owner.
 - D. Do not begin removal until built elements to be salvaged or relocated have been removed.
 - E. Do not begin removal until vegetation to be relocated has been removed and specified measures have been taken to protect vegetation to remain.
 - F. Protect existing structures and other elements that are not to be removed.
 1. Provide bracing and shoring.
 2. Prevent movement or settlement of adjacent structures.
 3. Stop work immediately if adjacent structures appear to be in danger.
 - G. Minimize production of dust due to demolition operations; do not use water if that will result in ice, flooding, sedimentation of public waterways or storm sewers, or other pollution.
 - H. If hazardous materials are discovered during removal operations, stop work and notify Architect and Owner; hazardous materials include regulated asbestos containing materials, lead, PCB's, and mercury.
 - I. Perform demolition in a manner that maximizes salvage and recycling of materials.
 1. Comply with requirements of Section 01 7419.
 2. Dismantle existing construction and separate materials.
 3. Set aside reusable, recyclable, and salvageable materials; store and deliver to collection point or point of reuse.

3.04 EXISTING UTILITIES

- A. Coordinate work with utility companies; notify before starting work and comply with their requirements; obtain required permits.
- B. Protect existing utilities to remain from damage.
- C. Do not disrupt public utilities without permit from authority having jurisdiction.
- D. Do not close, shut off, or disrupt existing life safety systems that are in use without at least 7 days prior written notification to Owner.
- E. Do not close, shut off, or disrupt existing utility branches or take-offs that are in use without at least 3 days prior written notification to Owner.
- F. Locate and mark utilities to remain; mark using highly visible tags or flags, with identification of utility type; protect from damage due to subsequent construction, using substantial barricades if necessary.
- G. Remove exposed piping, valves, meters, equipment, supports, and foundations of disconnected and abandoned utilities.
- H. Prepare building demolition areas by disconnecting and capping utilities outside the demolition zone; identify and mark utilities to be subsequently reconnected, in same manner as other utilities to remain.
- I. Refrigerant: Remove refrigerant from mechanical equipment to be selectively demolished according to 40 CFR 82 and regulations of authorities having jurisdiction.

3.05 PREPARATION

- A. Site Access and Temporary Controls: Conduct selective demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
 - 1. Comply with requirements for access and protection specified in Section 01 5000 - Temporary Facilities and Controls.
- B. Temporary Facilities: Provide temporary barricades and other protection required to prevent injury to people and damage to adjacent buildings and facilities to remain.
 - 1. Provide protection to ensure safe passage of people around selective demolition area and to and from occupied portions of building.
 - 2. Provide temporary weather protection, during interval between selective demolition of existing construction on exterior surfaces and new construction, to prevent water leakage and damage to structure and interior areas.
 - 3. Protect walls, ceilings, floors, and other existing finish work that are to remain or that are exposed during selective demolition operations.
 - 4. Cover and protect furniture, furnishings, and equipment that have not been removed.
 - 5. Comply with requirements for temporary enclosures, dust control, heating, and cooling specified in Section 01 5000 - Temporary Facilities and Controls.

3.06 DEBRIS AND WASTE REMOVAL

- A. Remove debris and trash from site.
- B. Do not allow demolished materials to accumulate on-site.
- C. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.
- D. Remove debris from elevated portions of building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.
- E. Remove from site all materials not to be reused on site; comply with requirements specified in Section 01 5013.
- F. Leave site in clean condition, ready for subsequent work.
- G. Clean up spillage and wind-blown debris from public and private lands.

3.07 CLEANING

- A. Clean adjacent structures and improvements of dust, dirt, and debris caused by selective demolition operations. Return adjacent areas to condition existing before selective demolition operations began.

END OF SECTION

**SECTION 02 4413
TREE REMOVAL AND SALVAGE**

PART 1 GENERAL

1.01 SUMMARY

- A. This section includes the following:
 - 1. Tree removal, salvage, milling and disposal of the existing Sequoia sempervirens (Coast Redwood).
 - 2. Move chipped material to the back of the school for use in the planting areas.

1.02 RELATED WORK

- A. Section 06 2013 – Exterior Finish Carpentry

1.03 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Identification of trees to be removed.
 - 2. Traffic closure and management.
 - 3. Time/schedule.
 - 4. Removal, salvage, milling and disposal.

1.04 QUALITY ASSURANCE

- A. Arborists: International Society of Arboriculture (ISA) certified.

1.05 SUBMITTALS

- A. Submit photo documentation and list of salvaged wood.
- B. Submit milling facility certification.
- C. Submit kiln drying results showing moisture content of milled wood.

PART 2 PRODUCTS

2.01 SALVAGED WOOD MILLING

- A. Mill salvaged wood in an industrial wood milling facility.
 - 1. Approved facility: Green Waste Recycle Yard, 510-527-8733, or equal.
- B. Rip, surface, and trim salvaged wood to finish profiles specified in other sections and as shown on Drawings.
- C. Kiln dry rough sawn lumber, to a maximum moisture content of 19%.
- D. Stack salvaged, milled wood on site. Stacks shall be level with spacers between each piece for sufficient air flow during acclimation process.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine location and verify tree marked for removal.
- B. Verify area for safe tree felling including establishing “off-limits” areas for unauthorized persons and vehicles.
- C. Identify electrical obstructions and other hazards.

- D. Coordinate tree-felling schedule, public safety and access, vehicular traffic control, and other tree-felling operational requirements with facility management.

3.02 TREE REMOVAL, SALVAGE, AND DISPOSAL

- A. General:
 - 1. Perform tree felling work in accordance with ANSI Z133.1-2006.
 - 2. Set in place safety precautions to protect the operators and the general public and property prior to any tree removal work. Safety may not be compromised.
 - 3. Furnish necessary supervision, labor, vehicles, and equipment capable of efficient and effective tree removal. Maintain on site at all times, a competent individual authorized to represent the Contractor.
 - 4. Proceed with preparatory work and tree cutting only in the presence of facility management representative.
- B. Plan and prepare the area as approved by facility management.
 - 1. Position equipment to accomplish safe, effective, and efficient removal of trees and sections of trees while minimizing impact on improved property.
 - 2. Cordon-off with tape or ropes and clearly mark work areas “off-limits” to unauthorized persons and vehicles.
 - 3. Provide vehicular traffic controls at the work area maintaining safe and continuous traffic flow as directed by facility management, minimizing hazards and inconvenience to public.
 - 4. Use portable warning signs on all work areas. Traffic control devices shall be in accordance with the Manual on Uniform Traffic Control Devices (MUTDC).
- C. Inspection and determination of electrical hazards by a qualified arborist is required before climbing or otherwise entering or performing work on or in a tree.
 - 1. Where electrical hazards exist, perform Work only by qualified line-clearance arborists or qualified line-clearance trainees under the direct supervision of qualified line-clearance arborists.
 - 2. Perform work in proximity to electrical hazards according to the provisions of ANSI Z133.1 Section 4.2, Working in Proximity to Electrical Hazards.
- D. Cut tree as close to the ground as possible. Whenever large tree sections being removed endanger people or property, secure and lower sections with rope safely and in a controlled manner.
- E. Salvage sound tree limbs, branches, and trunks that are at least 5 inches in diameter.
- F. Cut limbs and branches to maximum truck load lengths possible.
- G. Cut tree limbs from trunk as close as possible.
 - 1. Flush cut log - no crotch or splits.
 - 2. Cut-out large holes and rot.
 - 3. Haul wood for milling.
- H. Chip small branches and limbs. Load and haul wood that is not to be salvaged and is too large to be chipped. Dispose of wood chips and wood pieces.
- I. Stump Grinding:
 - 1. Perform stump grinding in accordance with ANSI Z133.1, Section 5.1, General; and Section 5.5, Stump Cutters.
 - 2. Grind stumps using specialized equipment to a minimum depth of 12 inches below existing grade or as needed to remove all exposed root material greater than one inch in diameter.
 - 3. Rake and remove chips and debris generated by stump grinding.
 - 4. Place and compact with topsoil void left by tree stump.
- J. Immediately haul-off brush, limbs, logs, or other debris to avoid accumulation that may pose as a hazard to motorists and pedestrians.
- K. Broom clean sidewalks, curbs, gutters, and pavement areas at completion of work.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 1000
CONCRETE FORMING AND ACCESSORIES

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Formwork for cast-in place concrete, with shoring, bracing and anchorage.
- B. Openings for other work.
- C. Form accessories.
- D. Form stripping.

1.02 RELATED REQUIREMENTS

- A. Section 03 20 00 - Concrete Reinforcing.
- B. Section 03 30 00 - Cast-in-Place Concrete.
- C. Section 05 12 00 - Structural Steel Framing: Placement of embedded steel anchors and plates in cast-in-place concrete.

1.03 REFERENCE STANDARDS

- A. California Code of Regulations, Title 24, Part II, 2019 Edition with DSA Amendments, also known as the California Building Code (CBC)
- B. ACI 117 - Standard Specifications for Tolerances for Concrete Construction and Materials; 2010.
- C. ACI 301 - Specifications for Structural Concrete; 2016.
- D. ACI 318 - Building Code Requirements for Structural Concrete and Commentary; 2014 (Errata 2016).
- E. ACI 347R - Guide to Formwork for Concrete; 2014.
- F. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation; 2016.
- G. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2016.
- H. PS 1 - Structural Plywood; 2009.

1.04 SUBMITTALS

- A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.
- B. Product Data: Provide data on void form materials and installation requirements.
- C. Shop Drawings: Indicate pertinent dimensions, materials, bracing, and arrangement of joints and ties.
- D. Permanent Insulated Foam Panel Formwork Shop Drawings: Include calculations or selections from manufacturer's prescriptive design tables that indicate compliance with applicable building code and manufacturer's requirements.
 - 1. Include test reports for performance criteria specified.

1.05 QUALITY ASSURANCE

- A. Perform work of this section in accordance with California Building Code, with DSA Amendments standards of the State of California.

- B. Designer Qualifications: Design formwork under direct supervision of a Professional Structural Engineer experienced in design of concrete formwork and licensed in California.
- C. Maintain one copy of each installation standard on site throughout the duration of concrete work.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Deliver prefabricated forms and installation instructions in manufacturer's packaging.
- B. Store prefabricated forms off ground in ventilated and protected manner to prevent deterioration from moisture.
- C. Protect plastic foam products from damage and exposure to sunlight.

PART 2 PRODUCTS

2.01 FORMWORK - GENERAL

- A. Provide concrete forms, accessories, shoring, and bracing as required to accomplish cast-in-place concrete work.
- B. Design and construct to provide resultant concrete that conforms to design with respect to shape, lines, and dimensions.
- C. Chamfer outside corners of beams, joists, columns, and walls.
- D. Comply with CBC with respect to design, fabrication, erection, and removal of formwork.
- E. Comply with relevant portions of ACI 347R, ACI 301, and ACI 318.
- F. Use the following form types:
 1. Concrete Walls Not Exposed To View: Site fabricated panel forms or board forms.
 2. Concrete Walls Exposed To View: Plywood, metal, metal-framed plywood faced, or other acceptable panel-type materials, to provide continuous, straight, smooth, exposed surfaces. Furnish in largest practicable sizes to minimize number of joints and to conform to joint system shown on Drawings.

2.02 WOOD FORM MATERIALS

- A. Softwood Plywood: PS 1, B-B High Density Concrete Form Overlay, Class I. Minimum 5/8-inch thick exterior grade plywood with sealed edges
- B. Lumber: Douglas Fir Larch species; Standard grade; with grade stamp clearly visible.
- C. Board Form: Shiplap or tongue and groove lined with PS 1 grade Plyform Class I and II Exterior 1/2-inch or HDO Exterior 1/2-inch or 3/16-inch thick fiberboard conforming to FS LLL-B-810a(1), type I.

2.03 REMOVABLE PREFABRICATED FORMS

- A. Preformed Steel Forms: Minimum 16 gage, 0.0598 inch thick, matched, tight fitting, stiffened to support weight of concrete without deflection detrimental to tolerances and appearance of finished surfaces.
- B. Preformed Plastic Forms: Thermoplastic polystyrene form liner, tight fitting, stiffened to support weight of concrete without deflection detrimental to tolerances and appearance of finished surfaces.
- C. Void Forms: Moisture resistant treated paper faces, biodegradable, structurally sufficient to support weight of wet concrete mix until initial set; 2 inches thick.

2.04 PERMANENT PREFABRICATED FOAM PANEL FORMWORK

- A. Expanded Polystyrene (EPS) Insulation Board: ASTM C578, Type VIII.
 - 1. Density: 1.15 lb/cu ft.
 - 2. Flame Spread Index: 25 or less, when tested in accordance with ASTM E84.
 - 3. Smoke Developed Index: 450 or less, when tested in accordance with ASTM E84.

2.05 FORMWORK ACCESSORIES

- A. Form Ties: Removable type, galvanized metal, fixed length, cone type, with waterproofing washer, free of defects that could leave holes larger than 3/4 inch in concrete surface.
- B. Form Release Agent: Capable of releasing forms from hardened concrete without staining or discoloring concrete or forming bugholes and other surface defects, compatible with concrete and form materials, and not requiring removal for satisfactory bonding of coatings to be applied.
 - 1. Composition: Colorless reactive, mineral oil-based, soy-based, or vegetable-oil based compound.
 - 2. Do not use materials containing diesel oil or petroleum-based compounds.
 - 3. Products:
 - a. SpecChem, LLC; Bio Strip WB (water-based): www.specchemllc.com/sle.
 - b. W. R. Meadows, Inc; Duogard: www.wrmeadows.com/sle.
- C. Filler Strips for Chamfered Corners: Rigid plastic type; 1/2 inch size; maximum possible lengths.
- D. Dovetail Anchor Slot: Galvanized steel, at least 22 gage, 0.0299 inch thick, foam filled, release tape sealed slots, anchors for securing to concrete formwork.
- E. Flashing Reglets: Galvanized steel, at least 22 gage, 0.0299 inch thick, longest possible lengths, with alignment splines for joints, foam filled, release tape sealed slots, anchors for securing to concrete formwork.
- F. Nails, Spikes, Lag Bolts, Through Bolts, Anchorages: Sized as required, of sufficient strength and character to maintain formwork in place while placing concrete.
- G. Embedded Anchor Shapes, Plates, Angles and Bars: As specified in Section 05 12 00.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify lines, levels and centers before proceeding with formwork. Ensure that dimensions agree with drawings.
- B. Excavations are sufficient to permit placement, inspection and removal of forms.
- C. Excavations for earth forms have been neatly and accurately cut.
- D. Conditions are otherwise proper for formwork construction.

3.02 EARTH FORMS

- A. Construct wood edge strips at top sides of excavations
- B. Provide forms for footings wherever concrete cannot be placed against solid earth excavation
- C. Remove loose dirt and debris prior to concrete pours
- D. Foundation concrete may be placed directly into neat excavations provided the foundation trench walls are stable as determined by the Geotechnical Engineer, subject to the approval of DSA. In such case, minimum formwork shown on the drawings is mandatory to ensure clean excavations immediately prior to and during the placing of concrete.

3.03 WALL AND OTHER FORMED ELEMENTS

- A. Erect outside forms for exposed exterior walls first and obtain the Architect's approval before reinforcement is placed. Obtain Architect's approval of the reinforcement before interior form is erected.
- B. Carefully align inside and outside forms before tightening ties.
- C. Plywood Forms: Insure vertical joints are plumb and horizontal joints are level; arrange joints and ties in geometrical pattern as approved by the Architect.
- D. Form inside corners at exposed conditions with mitered boards or plywood so that no concrete is placed against form ends.
- E. After erection, seal all cracks, holes, slits, gaps, and apertures in forms so that they will withstand the pressure and will remain completely watertight.
- F. Provide a means to seal the bottom of forms at construction joints such as foam tape or other gasket devices.
- G. Apply a coating of release agent prior to the erection of formwork. Follow approved manufacturer's recommendations.

3.04 CONSTRUCTION JOINTS

- A. Provide where shown on the drawings as directed by the Architect and per CBC.
- B. Provide key indentations at all joints.
- C. Provide pour strips on inside face of forms at horizontal joints, but remove strips and thoroughly clean out reglets before placing subsequent portions of wall.
- D. Prevent formations of shoulders and ledges.
- E. Provide means for drawing forms into firm contact with concrete before placing additional concrete over previous pours where shrinking and warping has separated concrete from forms.

3.05 ERECTION - FORMWORK

- A. Erect formwork, shoring and bracing to achieve design requirements, in accordance with requirements of ACI 301.
- B. Provide bracing to ensure stability of formwork. Shore or strengthen formwork subject to overstressing by construction loads.
- C. Install permanent insulated foam panel formwork per manufacturer's recommendations.
- D. Arrange and assemble formwork to permit dismantling and stripping. Do not damage concrete during stripping. Permit removal of remaining principal shores.
- E. Align joints and make watertight. Keep form joints to a minimum.
- F. Obtain approval before framing openings in structural members that are not indicated on drawings.
- G. Install void forms in accordance with manufacturer's recommendations. Protect forms from moisture or crushing.
- H. Coordinate this section with other sections of work that require attachment of components to formwork.
- I. If formwork is placed after reinforcement, resulting in insufficient concrete cover over reinforcement, request instructions from Architect before proceeding.

3.06 APPLICATION - FORM RELEASE AGENT

- A. Apply form release agent on formwork in accordance with manufacturer's recommendations.
- B. Apply prior to placement of reinforcing steel, anchoring devices, and embedded items.
- C. Do not apply form release agent where concrete surfaces will receive special finishes or applied coverings that are affected by agent. Soak inside surfaces of untreated forms with clean water. Keep surfaces coated prior to placement of concrete.

3.07 INSERTS, EMBEDDED PARTS, AND OPENINGS

- A. Provide formed openings where required for items to be embedded in passing through concrete work.
- B. Locate and set in place items that will be cast directly into concrete.
- C. Coordinate with work of other sections in forming and placing openings, slots, reglets, recesses, sleeves, bolts, anchors, other inserts, and components of other work.
- D. Install accessories in accordance with manufacturer's instructions, so they are straight, level, and plumb. Ensure items are not disturbed during concrete placement.
- E. Install waterstops in accordance with manufacturer's instructions, so they are continuous without displacing reinforcement. Heat seal joints so they are watertight.
- F. Close temporary openings with tight fitting panels, flush with inside face of forms, and neatly fitted so joints will not be apparent in exposed concrete surfaces.

3.08 FORM CLEANING

- A. Clean forms as erection proceeds, to remove foreign matter within forms.
- B. Clean and protect permanent insulated concrete foam panel formwork per manufacturer's recommendations.
- C. Clean formed cavities of debris prior to placing concrete.
 - 1. Flush with water or use compressed air to remove remaining foreign matter. Ensure that water and debris drain to exterior through clean-out ports.

3.09 FORMWORK TOLERANCES

- A. Construct formwork to maintain tolerances required by ACI 117, unless otherwise indicated.
- B. Construct permanent insulated foam panel formwork to maintain tolerances required by ACI 301.

3.10 FIELD QUALITY CONTROL

- A. An independent testing agency will perform field quality control tests, as specified in Section 01 40 00 - Quality Requirements.
- B. Inspect erected formwork, shoring, and bracing to ensure that work is in accordance with formwork design, and to verify that supports, fastenings, wedges, ties, and items are secure.

3.11 FORM REMOVAL

- A. Do not remove forms or bracing until concrete has gained sufficient strength to carry its own weight and imposed loads.
 - 1. Vertical surfaces of walls, columns, beams: 60% of f'c and 7 days minimum.
 - 2. Beams and slabs: 75% of f'c and 14 days minimum.
- B. Loosen forms carefully. Do not wedge pry bars, hammers, or tools against finish concrete surfaces scheduled for exposure to view.

- C. Store removed forms to prevent damage to form materials or to fresh concrete. Discard damaged forms.

END OF SECTION

SECTION 03 1513

WATERSTOPS

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Waterstops

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate the installation of waterstops with size, location and installation of underground service utilities.
 2. Coordinate the installation of waterstops with formwork.
 3. Coordinate placement of embedded items with erection of concrete formwork and placement of form accessories.
- B. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to the start of the work of this Section.
 1. Required Attendance: Contractor's quality control supervisor or superintendent, Architect, structural engineer, Owner's independent testing agency, all affected trades including reinforcing subcontractor and concrete supplier, waterproofing manufacturer, and 3rd party inspector.
 2. Discuss construction document requirements, required clarifications to construction documents, construction schedule, coordination of affected trades, construction contraction and isolation joints, joint-filler strips, submittal requirements, approved submittals, and required inspections.

1.03 SUBMITTALS

- A. Action Submittals:
 1. Product Data: Submit manufacturers' data on all specified manufactured products showing compliance with specified requirements and installation instructions.
 - a. Product data for components and for system.
 - b. Property specifications for waterstop materials.
 2. Shop Drawings: Indicate proposed construction joints required to construct the structure.
 - a. Location of construction joints is subject to approval of the Architect.
- B. Informational Submittals:
 1. Installation instructions.
 - a. Recommendations for cleaning and preparing surfaces to receive waterstop.
 2. Include sample of warranty customized for this Project.

1.04 QUALITY ASSURANCE

- A. Perform work of this Section in accordance with ACI 117, ACI 301 and ACI 318 and manufacturer's published literature.
 1. Maintain one copy of each document on site.
- B. Single Source Responsibility: Furnish materials from waterproofing manufacturer.
- C. Installer Qualifications: A qualified installer who employs on Project personnel qualified as acceptable to manufacturer with experience on at least five projects of similar nature in past five years, and who is an Approved Applicator as determined by waterstop manufacturer.
- D. Manufacturer Qualifications: A firm experienced in manufacturing Products specified in this Section with minimum ten years experience.
- E. Testing and Inspection:

1. Completed Systems: Manufacturer's representative and Independent inspector will inspect completed installation and submit installation report summarizing installation and confirm installation is in conformance with manufacturer's installation requirements and the Contract Documents, and will result in a properly functioning system with no leaks.
2. Independent inspection service to verify and approve substrate prior to installation; monitor waterstop material installation compliance with the project contract documents and manufacturer's published literature and site specific details. Independent Inspection Firm shall be an approved company participating with the waterstop manufacturer's Certified Inspection Program. Inspection service shall produce reports and digital photographs documenting each inspection. Reports shall be made available to the Contractor, waterstop installer, waterstop material manufacturer, and Architect. Inspections should include substrate examination, beginning of waterproofing installation, periodic intervals, seam welding and final inspection prior to concrete or backfill placement against the waterproofing.
3. Post-Installation Observation: Inspect membrane following the installation of waterstop and structural reinforcing, but prior to the placement of concrete and other superimposed materials. Repair damage or unacceptable conditions prior to placement of concrete and other superimposed materials.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

1.06 FIELD CONDITIONS

- A. Environmental Requirements: Comply with more restrictive of following or manufacturer's written requirements under which products can be installed.

1.07 SEQUENCING

- A. Place delivery system as concrete installation proceeds, in accordance with manufacturer's instruction.

1.08 WARRANTY

- A. Special Warranty: Prepare and submit in accordance with Section 017700. Warrant installation as watertight for period of 15 years.

PART 2 PRODUCTS

2.01 BONDING AND JOINTING PRODUCTS

- A. Waterstops: Manufactured rectangular or trapezoidal strip, butyl rubber with sodium bentonite or other hydrophilic polymers, for adhesive bonding to concrete.
 1. Acceptable Products:
 - a. Carlisle Coatings & Waterproofing Inc; MiraSTOP.
 - b. CETCO; Waterstop-RX-101.
 - c. CETCO; Waterstop-RX-102.
 - d. GCP Advanced Technologies Construction Products; Adcor ES.
 - e. Henry Company, Sealants Division; Hydro-Flex.
 - f. Sika Greenstreak; Swellstop.
 - g. Tremco; Superstop.
- B. Primer: Manufacturer's standard primer.
- C. Provide wire ties and fasteners as required.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify lines, levels, and dimensions before proceeding with work of this Section.

3.02 PREPARATION

- A. Verify that forms are clean and free of rust before applying release agent.
- B. Remove all fins, projections, and other detrimental irregularities on surfaces to receive waterproofing systems; comply with waterproofing system manufacturer's requirements for surface preparation.

3.03 WATERSTOP INSTALLATION

- A. Install in accordance with ACI 117, ACI 301 and ACI 318 and manufacturer's published literature.
- B. Self-Expanding Strip Waterstops:
 - 1. Install same day or within 24 hours of concrete pour.
 - 2. Install in construction joints and at other locations indicated, according to manufacturer's written instructions, adhesive bonding, mechanically fastening, and firmly pressing into place. Install in longest lengths practicable.
 - 3. Firmly press into place.
 - 4. Set in sealant.
 - 5. Install in longest lengths practicable.
 - 6. Butt end joints together per manufacturer's instructions. Do not overlap, miter cut changes in direction.
 - 7. Support and protect from displacement by concrete placement and subsequent construction.

3.04 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed waterproofing installation before covering with other construction, and provide written report stating that installation complies with manufacturer's written instructions.
 - 1. Remove and replace applications of bentonite waterproofing where inspection indicates that it does not comply with specified requirements.
- B. Owner will provide inspection services in accordance with Section 01 4000 - Quality Requirements.
 - 1. Require manufacturer's field representative to observe waterstop system installations on a daily basis throughout the installation process when such work is being performed.
 - 2. Comply with instructions provided by manufacturer's field representative for installation of waterproofing systems, whether or not specifically included in manufacturer's printed installation instructions and specifications, to ensure that installations will comply with all system manufacturer's requirements to provide specified warranty, and to ensure that waterproofing systems will perform according to manufacturer's published performance characteristics and specifications.

END OF SECTION

SECTION 03 2000
CONCRETE REINFORCING

PART 1 GENERAL**1.01 SECTION INCLUDES**

- A. Reinforcing steel for cast-in-place concrete.
- B. Supports and accessories for steel reinforcement.

1.02 RELATED REQUIREMENTS

- A. Section 03 10 00 - Concrete Forming and Accessories.
- B. Section 03 30 00 - Cast-in-Place Concrete.

1.03 REFERENCE STANDARDS

- A. California Code of Regulations, Title 24, Part II, 2019 Edition with DSA Amendments, also known as California Building Code (CBC).
- B. ACI 301 - Specifications for Structural Concrete; 2016.
- C. ACI 318 - Building Code Requirements for Structural Concrete and Commentary; 2014 (Errata 2016).
- D. ACI SP-66 - ACI Detailing Manual; 2004.
- E. ASTM A184/A184M - Standard Specification for Welded Deformed Steel Bar Mats for Concrete Reinforcement; 2006 (Reapproved 2011).
- F. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement; 2016.
- G. ASTM A706/A706M - Standard Specification for Deformed and Plain Low-Alloy Steel Bars for Concrete Reinforcement; 2016.
- H. ASTM A1064/A1064M - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete; 2017.
- I. AWS D1.4/D1.4M - Structural Welding Code - Reinforcing Steel; 2011.
- J. CRSI (DA4) - Manual of Standard Practice; 2009.
- K. CRSI (P1) - Placing Reinforcing Bars; 2011.

1.04 SUBMITTALS

- A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.
- B. Shop Drawings: Comply with requirements of ACI SP-66. Include bar schedules, shapes of bent bars, spacing of bars, and location of splices.
- C. Manufacturer's Certificate: Certify that reinforcing steel and accessories supplied for this project meet or exceed specified requirements.
- D. Reports: Submit certified copies of mill test report of reinforcement materials analysis. Where reinforcing is to be welded, mill test reports shall verify the weldability of the steel.

1.05 QUALITY ASSURANCE

- A. Perform work of this section in accordance with ACI 301.
 - 1. Maintain one copy of each document on project site.

- B. Welders' Certificates: Submit certifications for welders employed on the project, verifying AWS qualification within the previous 12 months.
- C. The District's Testing Agency will provide tests in accordance with CBC.
 - 1. Collect mill test reports for reinforcement.
 - 2. Take samples from bundles at fabricators.
 - a. When bundles are identified by heat number and accompanied by mill analysis, two specimens shall be taken from each ten (10) tons, or fraction thereof, of each size and grade.
 - b. When reinforcement is not positively identified by heat numbers or when random sampling is intended, two specimens shall be taken from each 2½ tons, or fraction thereof, of each size and grade.
 - 3. Test for tensile and bending strengths.
 - 4. Provide inspection of welding, including prior fit-up, welding equipment, weld quality and welder certification in accordance with AWS D1.4. Chemical analysis sufficient to determine carbon equivalent and minimum preheat temperature shall be performed when reinforcement does not conform to low-alloy steel requirements of CBC.

PART 2 PRODUCTS

2.01 REINFORCEMENT

- A. Reinforcing Steel: ASTM A615/A615M, Grade 60 (60,000 psi).
 - 1. Plain billet-steel bars.
 - 2. Unfinished.
- B. Reinforcing Steel: ASTM A706/A706M, deformed low-alloy steel bars.
 - 1. Unfinished.
- C. Steel Welded Wire Reinforcement (WWR): Galvanized, deformed type; ASTM A1064/A1064M.
 - 1. WWR Style: As indicated on drawings.
- D. Welded Deformed Bar Anchors: ASTM A-104, fy = 70,000, flux filled deformed bar anchors. Same as Nelson D2L.
- E. Reinforcement Accessories:
 - 1. Tie Wire: Annealed, minimum 16 gage, 0.0508 inch.
 - 2. Chairs, Bolsters, Bar Supports, Spacers: Sized and shaped for adequate support of reinforcement during concrete placement.
 - 3. Provide stainless steel components for placement within 1-1/2 inches of weathering surfaces.

2.02 RE-BAR SPLICING

- A. Coupler Systems: Mechanical devices for splicing reinforcing bars; capable of developing full steel reinforcing design strength in tension and compression.
 - 1. Products:
 - a. Threaded coupler: Lenton Standard coupler by ERICO or equal product substituted per Section 01630. Couplers may be Type 1 except where otherwise noted.
 - 1) Type 1 Couplers shall develop 125-percent of specified yield strength reinforcement.
 - 2) Type 2 Couplers shall develop 160-percent of the tensile strength or 200-percent of the yield strength of reinforcement.
 - 2. Substitutions: See Section 01 60 00 - Product Requirements.

2.03 FABRICATION

- A. Fabricate concrete reinforcing in accordance with CRSI (DA4) - Manual of Standard Practice.

- B. Welding of reinforcement is permitted only with the specific approval of Architect. Perform welding in accordance with AWS D1.4/D1.4M.
- C. Locate reinforcing splices not indicated on drawings at point of minimum stress.
 - 1. Review locations of splices with Architect.

PART 3 EXECUTION

3.01 PLACEMENT

- A. Place, support and secure reinforcement against displacement. Do not deviate from required position.
- B. Do not displace or damage vapor barrier.
- C. Accommodate placement of formed openings.
- D. Maintain concrete cover around reinforcing as follows:
 - 1. Walls (exposed to weather or backfill): 2 inch.
 - 2. Footings and Concrete Formed Against Earth: 3 inch.
 - 3. Slabs on Fill: 1 inch.
- E. Conform to CBC code for concrete cover over reinforcement.

3.02 FIELD QUALITY CONTROL

- A. An independent testing agency, as specified in Section 01 40 00, will inspect installed reinforcement for conformance to contract documents before concrete placement.
- B. The District's testing Agency will inspect shop and field welding of reinforcing bars in accordance with CBC

END OF SECTION

SECTION 03 3000
CAST-IN-PLACE CONCRETE

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Concrete building frame members.
- B. Concrete for composite floor construction.
- C. Elevated concrete slabs.
- D. Floors and slabs on grade.
- E. Concrete shear walls, elevator shaft walls, and foundation walls.
- F. Joint devices associated with concrete work.
- G. Concrete curing.

1.02 RELATED REQUIREMENTS

- A. Section 03 10 00 - Concrete Forming and Accessories: Forms and accessories for formwork.
- B. Section 03 20 00 - Concrete Reinforcing.
- C. Section 03 35 11 - Concrete Floor Finishes: Densifiers, hardeners, applied coatings, and polishing.
- D. Section 07 92 00 - Joint Sealants: Products and installation for sealants for saw cut joints and isolation joints in slabs.

1.03 REFERENCE STANDARDS

- A. California Code of Regulations, Title 24, Part II, 2019 Edition with DSA Amendments, also known as California Building Code (CBC).
- B. ACI 117 - Standard Specifications for Tolerances for Concrete Construction and Materials; 2010.
- C. ACI 211.1 - Standard Practice for Selecting Proportions for Normal, Heavyweight, and Mass Concrete; 1991 (Reapproved 2009).
- D. ACI 211.2 - Standard Practice for Selecting Proportions for Structural Lightweight Concrete; 1998 (Reapproved 2004).
- E. ACI 301 - Specifications for Structural Concrete; 2016.
- F. ACI 302.1R - Guide for Concrete Floor and Slab Construction; 2004 (Errata 2007).
- G. ACI 304R - Guide for Measuring, Mixing, Transporting, and Placing Concrete; 2000.
- H. ACI 305R - Guide to Hot Weather Concreting; 2010.
- I. ACI 306R - Cold Weather Concreting; 2010.
- J. ACI 308R - Guide to Curing Concrete; 2001 (Reapproved 2008).
- K. ACI 318 - Building Code Requirements for Structural Concrete and Commentary; 2014 (Errata 2016).
- L. ACI 347R - Guide to Formwork for Concrete; 2014.
- M. ASTM C33/C33M - Standard Specification for Concrete Aggregates; 2016.

- N. ASTM C39/C39M - Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens; 2016b.
- O. ASTM C94/C94M - Standard Specification for Ready-Mixed Concrete; 2016a.
- P. ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 2-in. or (50-mm) Cube Specimens); 2016a.
- Q. ASTM C143/C143M - Standard Test Method for Slump of Hydraulic-Cement Concrete; 2015a.
- R. ASTM C150/C150M - Standard Specification for Portland Cement; 2016.
- S. ASTM C171 - Standard Specification for Sheet Materials for Curing Concrete; 2016.
- T. ASTM C173/C173M - Standard Test Method for Air Content of Freshly Mixed Concrete by the Volumetric Method; 2016.
- U. ASTM C260/C260M - Standard Specification for Air-Entraining Admixtures for Concrete; 2010a (Reapproved 2016).
- V. ASTM C309 - Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete; 2011.
- W. ASTM C330/C330M - Standard Specification for Lightweight Aggregates for Structural Concrete; 2014.
- X. ASTM C494/C494M - Standard Specification for Chemical Admixtures for Concrete; 2016.
- Y. ASTM C579 - Standard Test Methods for Compressive Strength of Chemical-Resistant Mortars, Grouts, Monolithic Surfacing, and Polymer Concretes; 2001 (Reapproved 2012).
- Z. ASTM C618 - Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use in Concrete; 2015.
- AA. ASTM C685/C685M - Standard Specification for Concrete Made by Volumetric Batching and Continuous Mixing; 2014.
- AB. ASTM C827/C827M - Standard Test Method for Change in Height at Early Ages of Cylindrical Specimens of Cementitious Mixtures; 2016.
- AC. ASTM C979/C979M - Standard Specification for Pigments for Integrally Colored Concrete; 2016.
- AD. ASTM C1059/C1059M - Standard Specification for Latex Agents for Bonding Fresh to Hardened Concrete; 2013.
- AE. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink); 2014a.
- AF. ASTM C1240 - Standard Specification for Silica Fume Used in Cementitious Mixtures; 2015.
- AG. ASTM C1315 - Standard Specification for Liquid Membrane-Forming Compounds Having Special Properties for Curing and Sealing Concrete; 2011.
- AH. ASTM D994/D994M - Standard Specification for Preformed Expansion Joint Filler for Concrete (Bituminous Type); 2011 (Reapproved 2016).
- AI. ASTM D1751 - Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types); 2004 (Reapproved 2013).
- AJ. ASTM E154/E154M - Standard Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover; 2008a (Reapproved 2013).

- AK. ASTM E1155 - Standard Test Method for Determining F(F) Floor Flatness and F(L) Floor Levelness Numbers; 2014.
- AL. ASTM E1643 - Standard Practice for Selection, Design, Installation and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs; 2011.
- AM. ASTM E1745 - Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs; 2011.

1.04 SUBMITTALS

- A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.
- B. Product Data: Submit manufacturers' data on manufactured products showing compliance with specified requirements and installation instructions.
 - 1. For curing compounds, provide data on method of removal in the event of incompatibility with floor covering adhesives.
- C. Mix Design: Submit proposed concrete mix design.
 - 1. Indicate proposed mix design complies with requirements of ACI 301, Section 4 - Concrete Mixtures.
 - 2. Indicate proposed mix design complies with requirements of ACI 318, Chapter 5 - Concrete Quality, Mixing and Placing.
 - 3. Certified copies of mix designs for each concrete class specified including compressive strength test reports
 - 4. Mix designs shall be sealed and signed by a California Professional Civil Engineer.
- D. Shop Drawings: Show construction, expansion and contraction joint locations. Submit to Architect for review.
- E. Samples for Pigment Color Selection: Submit manufacturer's complete sample chip set, including pigment number and required dosage rate for each color.
- F. Verification Samples: Submit sample chips of specified colors indicating pigment numbers and required dosage rates, for subsequent comparison to installed concrete.
- G. Samples: Submit samples of underslab vapor retarder to be used.
- H. Manufacturer's Installation Instructions: For concrete accessories, indicate installation procedures and interface required with adjacent construction.

1.05 QUALITY ASSURANCE

- A. Perform work of this section in accordance with ACI 301 and ACI 318.
 - 1. Maintain one copy of each document on site.
- B. Follow recommendations of ACI 305R when concreting during hot weather.
- C. Follow recommendations of ACI 306R when concreting during cold weather.

PART 2 PRODUCTS

2.01 FORMWORK

- A. Comply with requirements of Section 03 10 00.

2.02 REINFORCEMENT

- A. Comply with requirements of Section 03 20 00.

2.03 CONCRETE MATERIALS

- A. Cement: ASTM C150/C150M, Type II - Moderate Portland type.

- B. Fine and Coarse Aggregates: ASTM C 33., non-reactive per ASTM C33 Appendix XI and CBC 1903A.5
- C. Lightweight Aggregate: ASTM C330/C330M.
- D. Fly Ash: ASTM C618, Class F.
- E. Calcined Pozzolan: ASTM C618, Class N.
- F. Silica Fume: ASTM C1240, proportioned in accordance with ACI 211.1.
- G. Color Additives: Pure, concentrated mineral pigments specifically intended for mixing into concrete and complying with ASTM C979/C979M.
 - 1. Concentration: Base dosage rates on weight of Portland cement, fly ash, silica fume, and other cementitious materials but not aggregate or sand.
- H. Water: Clean and not detrimental to concrete.

2.04 ADMIXTURES

- A. Do not use chemicals that will result in soluble chloride ions in excess of 0.1 percent by weight of cement.
- B. Air Entrainment Admixture: ASTM C260/C260M.
 - 1. Manufacturers:
 - a. W.R. Grace's "Daravair," Master Builders.
 - b. Master Builders' "Micro-Air,".
 - c. Sika Corp.'s "Sika Aer,"
 - d. Substitutions: See Section 01 60 00 - Product Requirements.
- C. High Range Water Reducing Admixture: ASTM C494/C494M Type F.
 - 1. Manufacturers:
 - a. Euclid Chemical Company; PLASTOL 6420: www.euclidchemical.com/#sle.
 - b. W.R. Grace's "Daracem 19,"
 - c. Master Builders' "Rheobuild,"
 - d. Sika Corp.'s "Sikament,"
 - e. Substitutions: See Section 01 60 00 - Product Requirements.
- D. Water Reducing and Accelerating Admixture: ASTM C494/C494M Type E.
 - 1. Manufacturers:
 - a. Euclid Chemical Company; ACCELGUARD 80: www.euclidchemical.com/#sle.
 - b. W.R. Grace's "Polarset,"
 - c. Master Builder's "Pozzutec 20,"
 - d. Substitutions: See Section 01 60 00 - Product Requirements.
- E. Water Reducing and Retarding Admixture: ASTM C494/C494M Type D.
 - 1. Manufacturers:
 - a. W.R. Grace's "Daratard-17,".
 - b. Master Builders' "Pozzoliith R,"
 - c. Sika's "Plastiment,"
 - d. Substitutions: See Section 01 60 00 - Product Requirements.
- F. Water Reducing Admixture: ASTM C494/C494M Type A.
 - 1. Manufacturers:
 - a. Same as Grace Construction Materials' "WRDA with Hycol"; Master Builders "Pozzolith 322N"; Sika Corp.'s "Plastocrete 161".
 - b. Substitutions: See Section 01 60 00 - Product Requirements.
- G. Waterproofing Admixture: Admixture formulated to reduce permeability to liquid water, with no adverse effect on concrete properties. For use at Elevator Pit Walls.
 - 1. Admixture Composition: Crystalline, functioning by growth of crystals in capillary pores.

2. Manufacturers:
 - a. Xypex Chemical Corporation; XYPEX Admix C-500: www.xypex.com/#sle.
 - b. Substitutions: See Section 01 60 00 - Product Requirements.
- A. Shrinkage reducing admixture at polished (architecturally exposed) concrete slab on grade:
 1. Manufacturers:
 - a. GCP Applied Technologies "Eclipse Floor"
 - b. Substitutions: See Section 01 60 00 - Product Requirements.
 - c. See architectural drawings for extent of polished concrete.
- B. Color Pigment: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, nonfading, and resistant to lime and other alkalis.
 1. Color: As selected by Architect from manufacturer's full range.

2.05 ACCESSORY MATERIALS

- A. Non-Shrink Cementitious Grout: Premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents.
 1. Grout: Comply with ASTM C1107/C1107M.
 2. Height Change, Plastic State; when tested according to ASTM C827/C827M:
 - a. Maximum: Plus 4 percent.
 - b. Minimum: Plus 1 percent.
 3. Minimum Compressive Strength at 48 Hours, ASTM C109/C109M: 2,000 pounds per square inch.
 4. Minimum Compressive Strength at 28 Days, ASTM C109/C109M: 7,000 pounds per square inch.
 5. Flowable Products:
 - a. Euclid Chemical Company; NS GROUT: www.euclidchemical.com/#sle.
 - b. Five Star Products, Inc; Five Star Fluid Grout 100: www.fivestarprouducts.com/#sle.
 - c. Substitutions: See Section 01 60 00 - Product Requirements.
 6. Low-Slump, Dry Pack Products:
 - a. Five Star Products, Inc; Five Star Grout: www.fivestarprouducts.com/#sle.
 - b. Substitutions: See Section 01 60 00 - Product Requirements.

2.06 BONDING AND JOINTING PRODUCTS

- A. Waterstops: Bentonite and butyl rubber, complying with NSF 61 and NSF 372.
 1. Configuration: As indicated on drawings.
 2. Size: As indicated on drawings.
 3. Manufacturers:
 - a. Concrete Sealants, Inc; Conseal CS-231; Colloid Environmental Technologies Company; Volclay Waterstop-RX; TCMiraDRI: Mirastop..
 - b. Substitutions: See Section 01 60 00 - Product Requirements.
- B. Slab Isolation Joint Filler: 1/2 inch thick, height equal to slab thickness, with removable top section that will form 1/2 inch deep sealant pocket after removal.
 1. Material: ASTM D1751, cellulose fiber.
 2. Manufacturers:
 - a. W. R. Meadows, Inc; Fiber Expansion Joint Filler with Snap-Cap: www.wrmeadows.com/#sle.
 - b. Substitutions: See Section 01 60 00 - Product Requirements.
- C. Slab Construction Joint Devices: Combination keyed joint form and screed, galvanized steel, with rectangular or round knockout holes for conduit or rebar to pass through joint form at 6 inches on center; ribbed steel stakes for setting.
 1. Provide removable plastic cap strip that forms wedge-shaped joint for sealant installation.
 2. Height: To suit slab thickness.

2.07 CONCRETE MIX DESIGN

- A. Proportioning Normal Weight Concrete: Comply with ACI 211.1 recommendations.
- B. Proportioning Structural Lightweight Concrete: Comply with ACI 211.2 recommendations.
- C. Concrete Strength: Establish required average strength for each type of concrete on the basis of field experience or trial mixtures, as specified in ACI 301.
 - 1. For trial mixtures method, employ independent testing agency acceptable to Architect for preparing and reporting proposed mix designs.
- D. Admixtures: Add acceptable admixtures as recommended in ACI 211.1 and at rates recommended or required by manufacturer.
- E. Normal Weight Concrete:
 - 1. Compressive Strength, when tested in accordance with ASTM C39/C39M at 28 days: As indicated.
 - a. CLASS A (FOUNDATIONS, WALLS) = 4,000 psi
 - b. CLASS B (SLAB ON GRADE, HOUSEKEEPING PADS ON GROUND FLOOR, CURBS) = 4,000 psi
 - 2. Fly Ash Content: Maximum 25 percent of cementitious materials by weight.
 - 3. Calcined Pozzolan Content: Maximum 10 percent of cementitious materials by weight.
 - 4. Silica Fume Content: Maximum 5 percent of cementitious materials by weight.
 - 5. Water-Cement Ratio: Maximum 50 percent by weight.
 - 6. Total Air Content: 4 percent, determined in accordance with ASTM C173/C173M.
 - 7. Maximum Slump: 4 inches.
 - 8. Maximum Aggregate Size: 3/4 inch.
 - 9. Maximum dry unit weight: 145 lb per cubic foot.
- F. Structural Lightweight Concrete:
 - 1. Compressive Strength, when tested in accordance with ASTM C39/C39M at 28 days: As indicated.
 - a. CLASS C (FILL ON METAL DECK & HOUSEKEEPING PADS AT ELEVATED FLOORS) = 4,000 psi
 - 2. Water-Cement Ratio: Maximum 50 percent by weight.
 - 3. Total Air Content: 3 percent, determined in accordance with ASTM C173/C173M.
 - 4. Maximum Slump: 4 inches.
 - 5. Maximum Aggregate Size: 3/4 inch.
 - 6. Maximum dry unit weight: 115 lb per cubic foot.

2.08 MIXING

- A. Batch Plant Conditions:
 - 1. Batch plant shall be certified to comply with the requirements of the National Concrete Ready Mix Association.
 - 2. Ensure equipment and plant will afford accurate weighing, minimize segregation and will efficiently handle all materials to satisfaction of the Architect and the District's Testing Agency.
 - 3. Replace at no additional expense equipment the Architect and the District's Testing Agency deem inadequate or unsuitable.
 - 4. Use approved moisture meter capable of determining moisture content of sand.
- B. Transit Mixers: Comply with ASTM C94/C94M.

2.09 SOURCE QUALITY CONTROL

- A. The District's Testing Agency will:
 - 1. Review mix designs, certificates of compliance, and samples of materials the Contractor proposes to use.

2. Test and inspect materials, as necessary, in accordance with ACI 318 and CBC for compliance with requirements.
 3. Take samples as required from the Contractor's designated sources.
 4. Take one grab sample for each 100 tons of Portland cement except that, when used in bulk loading ready-mix plants where separate bins for pretested cement are not available, take grab samples for each shipment of cement placed in bin with not less than one sample being taken for each day's pour and subsequently test such samples if required by the Architect who may be so advised by DSA.
 5. Test both coarse and fine aggregate by use of solution of sodium or magnesium sulfate, or both whenever in the judgment of the Architect such tests are necessary to determine quality of material. Perform such tests in accordance with ASTM C88. Loss shall not exceed 6-percent of either fine or coarse aggregate. Aggregate failing to comply with this requirement may be used in the Work provided it contains less than 2-percent of shale and other deleterious particles and shows a loss in soundness test of not more than 10-percent when tested in the sodium sulphate solution. Test aggregates as required by CBC.
 6. Test for sand equivalent of fine aggregate in accordance with California Test 217.
 7. Test for cleanness value of coarse aggregate in accordance with California Test 227.
 8. Inspect plant prior to any work to verify following:
 - a. Plant is equipped with approved metering devices for determining moisture content of fine aggregate.
 - b. Other plant quality controls are adequate.
 9. Continuously inspect quality and quantity of materials used in transit mixed concrete, in batched aggregates and ready-mixed concrete at mixing plant or other location where other materials are measured.
- B. Waiver of Batch Plant Inspection
1. Continuous batch plant inspection may be waived if the plant complies with ASTM C94 and has been certified by an agency acceptable to DSA to comply with the requirements of the National Ready Mix Concrete Association.
 2. When continuous batch plant inspection is waived, the following requirements shall apply:
 - a. Testing Agency shall check the first batching at the start of work and furnish mix proportions to the licensed Weighmaster.
 - b. Licensed Weighmaster shall identify material quantities and certify each load by a ticket.
 - c. Project Inspector shall collect truck mix tickets with load identification and maintain a daily record of placement. Trucks without a load ticket identifying the mix shall be rejected. Copies of daily placement record shall be submitted to DSA.
 - d. At the end of the project, the Weighmaster shall submit an affidavit to DSA certifying that all concrete supplied conforms to proportions established by mix designs.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify lines, levels, and dimensions before proceeding with work of this section.

3.02 PREPARATION

- A. Verify that forms are clean and free of rust before applying release agent.
- B. Coordinate placement of embedded items with erection of concrete formwork and placement of form accessories.
- C. Interior Slabs on Grade: Install vapor retarder under interior slabs on grade. Lap joints minimum 6 inches. Seal joints, seams and penetrations watertight with manufacturer's recommended products and follow manufacturer's written instructions. Repair damaged vapor retarder before covering.

1. Vapor Retarder Over Granular Fill: Install compactible granular fill before placing vapor retarder as indicated on the drawings. Do not use sand.

3.03 PLACING CONCRETE

- A. Place concrete in accordance with ACI 304R.
- B. Place concrete for floor slabs in accordance with ACI 302.1R.
- C. Notify Architect not less than 24 hours prior to commencement of placement operations.
- D. Maintain records of concrete placement. Record date, location, quantity, air temperature, and test samples taken.
- E. Ensure reinforcement, inserts, waterstops, embedded parts, and formed construction joint devices will not be disturbed during concrete placement.
- F. Place concrete continuously without construction (cold) joints wherever possible; where construction joints are necessary, before next placement prepare joint surface by removing laitance and exposing the sand and sound surface mortar, by sandblasting or high-pressure water jetting.
- G. Finish floors level and flat, unless otherwise indicated, within the tolerances specified below.

3.04 SLAB JOINTING

- A. Locate joints as indicated on the drawings.
- B. Anchor joint fillers and devices to prevent movement during concrete placement.
- C. Isolation Joints: Use preformed joint filler with removable top section for joint sealant, total height equal to thickness of slab, set flush with top of slab.
- D. Load Transfer Construction and Contraction Joints: Install load transfer devices as indicated; saw cut joint at surface as indicated for contraction joints.
- E. Saw Cut Contraction Joints: Saw cut joints before concrete begins to cool, within 4 to 12 hours after placing; use 3/16 inch thick blade and cut at least 1 inch deep but not less than one quarter (1/4) the depth of the slab.
- F. Construction Joints: Where not otherwise indicated, use metal combination screed and key form, with removable top section for joint sealant.

3.05 SEPARATE FLOOR TOPPINGS

- A. Prior to placing floor topping, roughen substrate concrete surface and remove deleterious material. Broom and vacuum clean.
- B. Place required dividers, edge strips, reinforcing, and other items to be cast in.
- C. Apply bonding agent to substrate in accordance with manufacturer's instructions.
- D. Place concrete floor toppings to required lines and levels.
 1. Place topping in checkerboard panels not to exceed 20 feet in either direction.
- E. Screed toppings level, maintaining surface flatness of maximum 1:1000.

3.06 FIELD QUALITY CONTROL

- A. The District's Testing Agency will perform field quality control tests as specified below:
 1. Review concrete mix designs.
 2. Inspect concrete and grout placement continuously.
 3. Test concrete to control slumps according to ASTM C143.
 4. Continuously monitor concrete temperature as it arrives on the site.

- B. Provide free access to concrete operations at project site and cooperate with appointed firm.
- C. Submit proposed mix design of each class of concrete to inspection and testing firm for review prior to commencement of concrete operations.
- D. Tests of concrete and concrete materials may be performed at any time to ensure conformance with specified requirements.
- E. Compressive Strength Tests: ASTM C39/C39M. For each test, mold and cure four concrete test cylinders. Obtain test samples for every 50 cubic yards or 2,000 square feet of surface areas of slab and walls poured daily or less of each class of concrete placed.
 - 1. Retain one cylinder for 7-day test, two for the 28-day test and hold one cylinder for additional testing as required.
 - 2. Number each cylinder and date each set; and keep accurate record of pour each set represents.
 - 3. Transport specimen cylinders from job to laboratory after cylinders have cured for 24-hours on site. Cylinders shall be covered and kept at air temperatures between 60 and 80 degrees Fahrenheit.
- F. Take one additional test cylinder during cold weather concreting, cured on job site under same conditions as concrete it represents.
- G. Perform one slump test for each set of test cylinders taken, following procedures of ASTM C143/C143M.

3.07 DEFECTIVE CONCRETE

- A. Test Results: The testing agency shall report test results in writing to Architect and Contractor within 24 hours of test.
- B. Defective Concrete: Concrete not conforming to required lines, details, dimensions, tolerances or specified requirements.
- C. Repair or replacement of defective concrete will be determined by the Architect. The cost of additional testing shall be borne by Contractor when defective concrete is identified.
- D. Do not patch, fill, touch-up, repair, or replace exposed concrete except upon express direction of Architect for each individual area.

3.08 PROTECTION

- A. Do not permit traffic over unprotected concrete floor surface until fully cured.
- B. Protect exposed corners of concrete from traffic or use which will damage them in any way.
- C. Make provisions to keep all exposed concrete free from laitance caused by spillage or leaking forms or other contaminants. Do not allow laitance to penetrate, stain, or harden on surfaces which have been textured.

END OF SECTION

**SECTION 03 3500
CONCRETE FINISHING**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. cast-in-place concrete finishes.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Preinstallation Conference: Conduct conference at Project site.
1. Review concrete design mixture and examine procedures for ensuring quality of concrete materials and finishes. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:
 - a. Contractor's superintendent.
 - b. Independent testing agency responsible for concrete design mixtures.
 - c. Ready-mix concrete manufacturer.
 - d. Concrete Subcontractor.
 - e. Special concrete finish Subcontractor.
 2. Review concrete finishes and finishing, cold- and hot-weather concreting procedures, curing procedures, methods for achieving specified floor and slab flatness and levelness floor and slab flatness and levelness measurement, concrete repair procedures, and concrete protection.

1.03 SUBMITTALS

- A. Action Submittals:
1. Product Data: For each type of product.
 2. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.
 - a. Location of construction joints is subject to approval of the Architect.
- B. Informational Submittals:
1. Material Certificates: For each of the following, signed by manufacturers:
 - a. Curing compounds.
 - b. Floor and slab treatments.
 2. Floor surface flatness and levelness measurements indicating compliance with specified tolerances.
 3. Field quality-control reports.
 4. Minutes of preinstallation conference.

1.04 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
1. 5.504.4.3 Paints and coatings.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: A qualified installer who employs on Project personnel qualified as ACI-certified Flatwork Technician and Finisher and a supervisor who is an ACI-certified Concrete Flatwork Technician.

1.06 MOCK-UPS

- A. Mock-ups: Cast concrete slab-on-grade and formed-surface panels to demonstrate typical joints, surface finish, texture, tolerances, floor treatments, and standard of workmanship.

1. Build panel approximately 16 sq. ft. for slab-on-grade in the location indicated or, if not indicated, as directed by Architect.
 - a. Provide test panels for the following:
 - 1) Concrete finishes.
2. Mock-ups may not become part of the completed Work unless authorized by Architect.

1.07 FIELD CONDITIONS

- A. Cold-Weather Placement: Comply with ACI 306R and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
 1. When average high and low temperature is expected to fall below 40 deg F (4 deg C) for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
 2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
 3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.
- B. Hot-Weather Placement: Comply with ACI 301 (ACI 301M) and as follows:
 1. Maintain concrete temperature below 90 deg F (32 deg C) at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
 2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

1.08 WARRANTY

- A. Manufacturer's Warranty: Warrant vapor emission control treatment against manufacturing defects and improper installation for a period of 15 years. Warranty shall:
 1. Cover costs of treatment materials, cementitious compounds, and labor costs of application and preparation.
 2. Extend warranty to flooring material, adhesive, and installation labor for same period against moisture vapor emission related failure.
 3. Guarantee that concrete curing and water vapor emission control system was installed correctly.

PART 2 PRODUCTS

2.01 CONCRETE, GENERAL

- A. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:
 1. ACI 301.
 2. ACI 117.

2.02 CURING MATERIALS

- A. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. (305 g/sq. m) when dry.
- B. Moisture-Retaining Cover: Two layers kraft paper with tri-directional reinforcing fibers embedded in high grade asphalt.
 1. Basis of Design Manufacturer:
 - a. Fortifiber Building Systems Group; Orange Label Sisalkraft.
 - b. Prior approved equal.
- C. Water: Potable.

- D. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C309, Type 1, Class B, nondissipating, certified by curing compound manufacturer to not interfere with bonding of floor covering.
 - 1. Acceptable Products:
 - a. BASF Corporation-Construction Systems; MasterKure CC 160WB: www.master-builders-solutions.basf.us.
 - b. BASF Corporation-Construction Systems; MasterKure CC 1315 (Pre-2014: Kure 1315).
 - c. ChemMasters, Inc; Safe-Cure & Seal 309.
 - d. Euclid Chemical Company (The); an RPM company.; Super Rez-Seal.
 - e. L&M Construction Chemicals, Inc.; Dress & Seal WB
 - f. W.R. Meadows, Inc; Vocomp30.

- E. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C1315, Type I, Class A, nondissipating.
 - 1. Acceptable Products:
 - a. BASF Corporation-Construction Systems; MasterKure CC 160 WB (Pre-2014: Kure-N-Seal WB).
 - b. Dayton Superior; Cure & Seal 1315 EF.
 - c. L&M Construction Chemicals, Inc; Dress & Seal WB.

- F. Clear, Waterborne, Membrane-Forming Curing and Sealing Compound to Prevent Moisture Vapor Emissions: ASTM C309.
 - 1. Basis of Design Product:
 - a. Floor Seal Technology, Inc.; VaporSeal 309: www.floorseal.com.
 - b. Approved equal.
 - 2. Moisture Vapor Emissions Remedial Coating:
 - a. Performance characteristics:
 - 1) Water vapor transmission per ASTM E96 – 95% reduction.
 - 2) Concrete adhesion per ASTM D7234 – 100% concrete cohesive failure or 540+ psi
 - 3) Alkalinity resistance per ASTM D1308 – Resist pH 14 exposure for 16 days
 - b. Basis of Design Product:
 - 1) Floor Seal Technology, Inc.; MES 100: www.floorseal.com.
 - 2) Approved equal.

2.03 REPAIR MATERIALS

- A. Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 inch (3.17 mm) and that can be feathered at edges to match adjacent floor elevations.
 - 1. Cement Binder: ASTM C150/C150M, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
 - 2. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
 - 3. Aggregate: Well-graded, washed gravel, 1/8 inch (3.17 mm) to 1/4 inch (6.35 mm) or coarse sand as recommended by underlayment manufacturer.
 - 4. Compressive Strength: Not less than 4100 psi (29 MPa) at 28 days when tested according to ASTM C109/C109M.

PART 3 EXECUTION

3.01 FINISHING FORMED SURFACES

- A. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.
 - 1. Apply to concrete surfaces exposed to public view,.

2. Concrete Exposed to View: Finish formed concrete in accordance with ACI 301 - Specifications for Structural Concrete; 2010 Surface Finish 1.0 with surface tolerance to meet ACI 117 Class A.

B. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.02 FINISHING FLOORS AND SLABS

A. General: Comply with ACI 302.1R recommendations for screeding, restraighening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Scratch Finish: While still plastic, texture concrete surface that has been screeded and bull-floated or darbied. Use stiff brushes, brooms, or rakes to produce a profile amplitude of 1/4 inch (6.35 mm) in one direction.

1. Apply scratch finish to surfaces indicated.

C. Float Finish: Consolidate surface with power-driven floats or by hand floating if area is small or inaccessible to power-driven floats. Restraighten, cut down high spots, and fill low spots. Repeat float passes and restraighening until surface is left with a uniform, smooth, granular texture.

1. Apply float finish to surfaces indicated and to receive trowel finish.

D. Trowel Finish: After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.

1. Apply a trowel finish to surfaces indicated, exposed to view, and to be covered with resilient flooring, carpet, ceramic or quarry tile set over a cleavage membrane, paint, or another thin-film-finish coating system.

E. Finish surfaces to the following tolerances, according to ASTM E1155 (ASTM E 1155M), for a randomly trafficked floor surface:

1. Slab on Grade:

a. Corridor Flooring: Specified overall values of flatness, SOV FF 45; and of levelness, SOV FL 35; with minimum local values of flatness, MLV FF 30; and of levelness, MLV FL 24.

b. Floors: Specified overall values of flatness, SOV FF 35; and of SOV levelness, FL 24; with minimum local values of flatness, MLV FF 25, and of levelness, MLV FL 17.

2. Suspended Slabs

a. Corridor Flooring: Specified overall values of flatness, F(F) 45; and of levelness, F(L) 35; with minimum local values of flatness, F(F) 30; and of levelness, F(L) 24.

b. Specified overall values of flatness, SOV FF 35; and of SOV levelness, FL 20; with minimum local values of flatness, MLV FF 24.

3. Concrete Slabs to be polished in accordance with Section 033543 - Polished Concrete Floor Finishing: Specified overall values of flatness, F(F) 50; and of levelness, F(L) 30; with minimum local values of flatness, F(F) 35; and of levelness, F(L) 20.

a. Steel trowel the surface in three passes in accordance with ACI 302.1R, Class 5 floor to produce a smooth, dense surface free from blemishes including trowel burn, marks and/or visible trowel patterns and within specified tolerances for floor flatness.

F. Broom Finish: Apply a slip-resistant broom finish to exterior concrete platforms, steps, ramps, and elsewhere as indicated.

1. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with Architect before application.

3.03 CONCRETE PROTECTING AND CURING

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306R for cold-weather protection and ACI 301 (ACI 301M) for hot-weather protection during curing.
- B. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for remainder of curing period.
- C. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces.
- D. Cure concrete according to ACI 308R, by one or a combination of the following methods:
 - 1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:
 - a. Water.
 - b. Continuous water-fog spray.
 - c. Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with 12 inch (305 mm) lap over adjacent absorptive covers.
 - 2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches (305 mm), and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period, using cover material and waterproof tape.
 - a. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive floor coverings.
 - b. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive penetrating liquid floor treatments.
 - c. Cure concrete surfaces to receive floor coverings with either a moisture-retaining cover or a curing compound that the manufacturer certifies does not interfere with bonding of floor covering used on Project.
 - 3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.
 - a. Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound does not interfere with bonding of floor covering used on Project.

3.04 JOINT FILLING

- A. Prepare, clean, and install joint filler according to manufacturer's written instructions.
- B. Defer joint filling until concrete has aged at least 6 months. Do not fill joints until construction traffic has permanently ceased.
- C. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joints clean and dry.
- D. Install semirigid joint filler full depth in saw-cut joints and at least 2 inches (50.8 mm) deep in formed joints. Overfill joint and trim joint filler flush with top of joint after hardening.

3.05 CONCRETE SURFACE REPAIRS

- A. Defective Concrete: Repair and patch defective areas when approved by Architect. Remove and replace concrete that cannot be repaired and patched to Architect's approval.

- B. Patching Mortar: Mix dry-pack patching mortar, consisting of 1 part portland cement to 2-1/2 parts fine aggregate passing a No. 16 (1.18-mm) sieve, using only enough water for handling and placing.
- C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.
 - 1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2 inch (12.70 mm) in any dimension to solid concrete. Limit cut depth to 3/4 inch (19.05 mm). Make edges of cuts perpendicular to concrete surface. Clean, dampen with water, and brush-coat holes and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
 - 2. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement so that, when dry, patching mortar matches surrounding color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.
 - 3. Repair defects on concealed formed surfaces that affect concrete's durability and structural performance as determined by Architect.
- D. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.
 - 1. Repair finished surfaces containing defects. Surface defects include spalls, popouts, honeycombs, rock pockets, crazing and cracks in excess of 0.01 inch (0.25 mm) wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.
 - 2. After concrete has cured at least 14 days, correct high areas by grinding.
 - 3. Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching mortar. Finish repaired areas to blend into adjacent concrete.
- E. Repair defective areas, except random cracks and single holes 1 inch (25 mm) or less in diameter, by cutting out and replacing with fresh concrete. Remove defective areas with clean, square cuts and expose steel reinforcement with at least a 3/4 inch (19.05 mm) clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials and mixture as original concrete, except without coarse aggregate. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.
- F. Repair random cracks and single holes 1 inch (25 mm) or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.
- G. Perform structural repairs of concrete, subject to Architect's approval, using epoxy adhesive and patching mortar.
- H. Repair materials and installation not specified above may be used, subject to Architect's approval.

3.06 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a special inspector and qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.
- B. Testing Agency: Engage a qualified testing and inspecting agency to perform tests and inspections and to submit reports.

- C. Measure floor and slab flatness and levelness according to ASTM E1155 (ASTM E 1155M) within 24 hours of finishing.

3.07 PROTECTION OF TREATMENTS

- A. Protect floor treatment from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by liquid floor treatments installer.

END OF SECTION

**SECTION 03 3541
CONCRETE SEALING**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Concrete sealers.

1.02 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with sealed concrete to attend, including the following:
 - a. Contractor's superintendent.
 - b. Independent testing agency responsible for concrete design mixtures.
 - c. Ready-mix concrete manufacturer.
 - d. Cast-in-place concrete subcontractor.
 - e. Sealed concrete finishing Subcontractor.

1.03 SUBMITTALS

- A. Action Submittals:
 1. Product Data: For each type of product.
 2. Sealed Concrete Schedule: Submit plan showing sealed concrete surfaces and schedule of sealing operations for each area of sealed concrete before start of sealing operations. Include locations of all joints, including construction joints.
 3. Samples for Initial Selection: For each type of product requiring color selection.
 4. Samples for Verification: For each type of exposed color.
- B. Informational Submittals:
 1. Qualification Data: For Installer.
 2. Material Certificates: For each of the following, signed by manufacturers:
 - a. Repair materials.
 - b. Liquid floor treatments.

1.04 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green, for the following measures:
 1. 4.504.2.2 and 5.504.4.3 Paints and coatings.

1.05 QUALITY ASSURANCE

- A. Applicator's Qualifications: Company specializing in performing work of this Section with 3 years minimum experience.
- B. Coordination: Test compatibility of sealer with adhesive used for access flooring pedestals.
- C. Certifications:
 1. Submit manufacturer's certificate stating proper amount of materials was ordered and shipped to Project.
 2. Submit sealer manufacturer's certificate indicating review of Project conditions and intent to issue extended warranty. Submittal of certificate is required prior to application of materials.

1.06 MOCK-UPS

- A. Mock-up Samples:

1. Cast and finish three 48 inch (1219.20 mm) by 48 inch (1219.20 mm) sample panels for Architect's review of color consistency and workmanship. Provide workmanship and procedures necessary to match Architect approved submittal.
- B. Maintain accepted sample application during construction as standard for Work.
- C. Architect's Review:
1. Architect will review field sample for visual acceptance of materials and workmanship.
 2. Replace unsatisfactory Work as directed by Architect.
 3. Approved samples may remain as part of the Work.

1.07 FIELD CONDITIONS

- A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

1.08 SCHEDULING

- A. Schedule application of products at proper time intervals after concrete finishing and curing operations.
- B. Maintain proper moisture content of concrete before, during, and after application of specified products.

PART 2 PRODUCTS

2.01 LIQUID FLOOR TREATMENTS

- A. Water Based Acrylic Sealing Compounds:
1. ASTM C1315, Type I, Class A, VOC compliant, free of natural or petroleum waxes. Dries clear with satin sheen.
 2. Compatible with subsequent coatings and toppings.
 3. VOC Requirement: Less than 100 g/L
 4. Provide gray tint.
 5. Acceptable Products:
 - a. Euclid Chemical Company; Super Diamond Clear VOX.
 - b. L&M Construction Chemicals, Inc.; Lumiseal WB Plus.
 - c. W. R. Meadows; VOCOMP-30.
 - d. Monopole; MonoChem AquaSeal W20.
 - e. Monopole; MonoChem PermaSeal.
 - f. Approved equal.
- B. Sealers: Only use sealers in the building that meet or do not exceed the VOC limits of the CURRENT requirements of SCAQMD 1113 on the interior of the building and CAL-Green Table 5.504.4.3 for VOC Content Limits for Architectural Coatings.
1. Current requirement refers to the date on which the materials are installed in the building.
 2. SCAQMD 1113 referenced in Section 01 8114 - Sustainable Design Requirements - CAL-Green is current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.
 3. Interior refers to all building construction that is inside of the exterior weatherproofing material.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine conditions and proceed with work in accordance with Section 01 7000 - Execution and Closeout Requirements.

- B. Verify that surfaces are clean, dry, dust free, and free of efflorescence, oil or other matter detrimental to sealer application.
- C. Verify that joint sealant work in adjoining surfaces is complete prior to applications of sealers. Delay application until sealants have cured.
- D. Ensure concrete has cured for time period required by manufacturer of product to be applied 28 days minimum before application of products.

3.02 PREPARATION

- A. Provide protection as necessary to protect adjacent materials and surfaces from dirt, dust, and other surface or physical damage.
- B. Prevent migration of airborne materials by use of tarpaulins, wind breaks, and similar containment devices.
- C. Maintain control of concrete chips, dust and debris. Collect water to prevent damage to adjacent surfaces.
- D. Remove loose particles, foreign matter, and oil by method which will not affect sealer application.
- E. Prepare surfaces in accordance with manufacturer's directions.

3.03 SEALING

- A. Apply sealed concrete finish system to cured and prepared slabs to match accepted mockup.
 - 1. Apply penetrating liquid floor treatment for sealed concrete in sealing sequence and according to manufacturer's written instructions, allowing recommended drying time between successive coats.

3.04 ADJUSTING

- A. Repair or replace adjacent Work which has been damaged by finishing operations.

3.05 CLEANING

- A. Clean-up and remove debris daily.
- B. Clean spillage, overspray, or drift from adjacent surfaces; remove immediately in accordance with manufacturer's instructions

3.06 PROTECTION OF LIQUID FLOOR TREATMENTS

- A. Protect liquid floor treatment from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by liquid floor treatments installer.

END OF SECTION

SECTION 03 3543**POLISHED CONCRETE FLOOR FINISHING****PART 1 GENERAL****1.01 SECTION INCLUDES**

- A. Polished concrete finishing, including staining.
 - 1. Concrete for polished concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures is specified in Section 03 3000 - Cast-in-Place Concrete.
 - 2. Initial finishing and curing, is specified in Section 03 3500 - Concrete Finishing.

1.02 DEFINITIONS

- A. Design Reference Sample: Sample designated by Architect in the Contract Documents that reflects acceptable surface quality and appearance of polished concrete.

1.03 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - 1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with polished concrete to attend, including the following:
 - a. Contractor's superintendent.
 - b. Independent testing agency responsible for concrete design mixtures.
 - c. Ready-mix concrete manufacturer.
 - d. Cast-in-place concrete subcontractor.
 - e. Polished concrete finishing Subcontractor.
 - 2. Conduct in conjunction with cast-in-place pre-installation conference to discuss the following:
 - a. Specific mix design.
 - 1) Polished Concrete Floors: Type I portland cement; less than 15 percent fly ash, pozzolan, slag cement, and silica fume; should not be air entrained; compressive strength greater than or equal to 3,500 psi (24.1 MPa); maximum water-cementitious materials (w/c) ratio of 0.45.
 - b. Floor flatness and levelness criteria.
 - c. Specified curing methods/procedures.
 - d. Projected 3, 10, and 28 day compression strength test related to specified aggregates exposure for finished floor and project phasing.
 - e. Protection of concrete substrate during construction and prior to polishing process
 - f. Project phasing and scheduling for each step of grinding, honing and polishing operations including, but not limited to:
 - 1) Quality of qualified personnel committed to project.
 - 2) Quality and size of grinders committed to project.
 - 3) Proper disposal of concrete slurry and/or concrete dust.
 - g. Details of each step of grinding, honing, and polishing operations.
 - 1) Application of color.
 - 2) Application of liquid applied products.
 - h. Protecting polished concrete floors after polishing work is complete.
 - i. Reports: Record discussions, including decisions and agreements reached, and furnish copy of record to each party attending.
 - 3. Arrange for manufacturer's technical representative to be on Project site to advise applicator of proper procedures and precautions and to observe application methods of products.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: For each type of product.

2. Polishing Schedule: Submit plan showing polished concrete surfaces and schedule of polishing operations for each area of polished concrete before start of polishing operations. Include locations of all joints, including construction joints.
3. Samples for Initial Selection: For each type of product requiring color selection.
4. Samples for Verification: For each type of exposed color.

B. Informational Submittals:

1. Qualification Data: For Installer.
2. Material Certificates: For each of the following, signed by manufacturers:
 - a. Repair materials.
 - b. Stain materials.
3. Liquid floor treatments.

1.05 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide special submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 1. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 2. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.

1.06 QUALITY ASSURANCE

- A. Applicator's Qualifications:
 1. Experience: Company experienced in performing specified work similar in design, products, and extent to scope of this Project; with a record of successful in-service performance; and with sufficient production capability, facilities, and personnel to produce specified work.
 2. Supervision: Maintain competent supervisor who is at Project during times specified work is in progress, and is currently certified as Craftsman or Master Craftsman by Concrete Polishing Association of America (CPAA).
 3. Manufacturer Qualification: Approved by manufacturer to apply liquid applied products.
- B. Certifications:
 1. Submit manufacturer's certificate stating proper amount of materials was ordered and shipped to Project.
 2. Submit polished concrete manufacturer's certificate indicating review of Project conditions and intent to issue extended warranty. Submittal of certificate is required prior to application of materials.
 3. Submit polished concrete manufacturer's certificate indicating review of Project conditions and stating that supplied system will meet the performance requirements including the required minimum wet dynamic coefficient of friction.
- C. Walkway Auditor: Certified by CPAA or NFSI to test bonded abrasive polished concrete floors for wet dynamic coefficient of friction according to ANSI B101.3.
- D. Coefficient of Friction: Achieve following coefficient of friction by field quality control testing in accordance to the following standards:
 1. ANSI B101.3 Test Method for Measuring Wet DCOF of Common Hard-Surface Floor Materials - Achieve a minimum of 0.42 for level floor surfaces.
- E. Source Limitations: Obtain primary terrazzo materials through one source from a single manufacturer. provide secondary materials including patching and fill material, joint sealant, and repair materials of type and from source recommended by manufacturer of primary materials.
- F. Source Limitations for Aggregates: Obtain each color, grade, type, and variety of aggregate in common batch from one source with resources to provide materials of consistent quality in appearance and physical properties.

1.07 MOCK-UPS

- A. Field Sample Panels: After approval of verification sample and before casting concrete, produce field sample panels to demonstrate the approved range of selections made under Sample submittals. Produce a minimum of three sets of full-scale panels, approximately 48 inches (1219.20 mm) by 48 inches (1219.20 mm) minimum, to demonstrate the expected range of finish, color, and appearance variations.
 - 1. Locate panels as indicated or, if not indicated, as directed by Architect.
 - 2. Maintain field sample panels during construction in an undisturbed condition as a standard for judging the completed Work.
 - 3. Demolish and remove field sample panels when directed.
- B. Mock-ups: Before casting concrete, build mock-ups to verify selections made under Sample submittals and to demonstrate typical joints, surface finish, tolerances, and standard of workmanship. Build mock-ups to comply with the following requirements, using materials indicated for the completed Work:
 - 1. Build mock-ups in the location and of the size indicated or, if not indicated, as directed by Architect.
 - 2. Demonstrate curing, finishing, and protecting of polished concrete.
 - 3. Subject to compliance with requirements, approved mock-ups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.08 FIELD CONDITIONS

- A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

1.09 WARRANTY

- A. Warrant polished concrete system to be free of defects related to material deficiency and workmanship for 5 years.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Acceptable Manufacturers:
 - 1. Advanced Floor Products, Inc.: www.retroplatesystem.com.
 - 2. L&M Construction Chemicals, Inc., a subsidiary of Laticrete International, Inc.: www.lmcc.com.
 - 3. Prosoco Inc.: prosoco.com.
 - 4. Vexcon Chemicals, Inc.: www.vexcon.com.
 - 5. Approved equal.

2.02 PERFORMANCE REQUIREMENTS

- A. Performance Requirements: Improve performance of floor by installation of polished concrete floor system as measured by the following criteria:
 - 1. Wet Dynamic Coefficient of Friction (DCOF): Provide products with the following value as determined by testing identical products by the DCOF AcuTest Method per ANSI 137.1, 2012 Edition.
 - a. Walkway Surfaces: Minimum 0.42.
 - 2. General: The following terms apply to this Section. Gloss level shall be determined according to CSDA ST 115.
 - a. Gloss Level (Low Polish): Mock-up to determine final Ra number and refinement. Ra number to be logged and kept for final comparison.
 - 3. Finish surfaces to the following tolerances for suspended slabs, according to ASTM E1155, for a randomly trafficked floor surface:

- a. Specified Overall Values (SOV):
 - 1) Flatness: FF 50.
 - 2) Levelness: FL 30.
- b. Minimum Local Values (MLV):
 - 1) Flatness: FF 35.
 - 2) Levelness: FL 20.

2.03 POLISHED CONCRETE SYSTEM

- A. Polished Concrete System: Materials, equipment, and procedures designed and furnished by a single manufacturer to produce dense polished concrete of specified sheen. Materials and process include grinding, application of hardener, densifier, stain guard, surface honing, polishing, application of a micro-filming coating, and final polishing.
 - 1. Concrete Mix for Polished Floor Finish: Confirm polished concrete system manufacturer's requirements for concrete mix design specified in Section 03 3000; make necessary adjustments to specified mix design, if necessary, to comply with accepted manufacturer's requirements.
 - 2. Acceptable Systems:
 - a. Advanced Floor Products, Inc.; Retro Plate System.
 - b. L&M Construction Chemicals, Inc., a subsidiary of Laticrete International, Inc.; FGS Permashine Concrete Polishing System.
 - c. Prosoco Inc.; Consolideck Concrete Flooring System: prosoco.com.
 - d. Approved equal.

2.04 STAIN MATERIALS

- A. Comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Penetrating Stain: Water-based, acrylic latex, penetrating stain with colorfast pigments.
 - 1. Acceptable Products:
 - a. Brickform; a division of Solomon Colors; Freestyle PRO Stain.
 - b. Butterfield Color; Elements Transparent Concrete Stain.
 - c. Duckback Products; Mason's Select Transparent Acrylic Concrete Stain 6000 Series.
 - d. H&C Concrete Care Products; Semi-Transparent Decorative Stains.
 - e. Increte Systems Inc.; Vibra-Stain.
 - f. L&M Construction Chemicals, Inc., a subsidiary of Laticrete International, Inc.; Vivid Concrete Dye.
 - g. L. M. Scofieldn Company; Formula One Liquid Dye.
 - h. Prosoco Inc.; Consolideck GemTone Stain.
 - i. Westcoat Specialty Coating Systems, Inc.; SC-37 Nano Stain: www.westcoat.com.
 - j. Approved equal.

2.05 LIQUID HARDNER/DENSIFIER

- A. Liquid Densifier: Clear, waterborne solution of inorganic silicate or silicate materials and proprietary components; odorless; that penetrates, hardens, and is suitable for polished concrete surfaces.
 - 1. Basis of Design Product:
 - a. Advanced Floor Products; Retro Plate 99.
 - b. Curecrete Distribution, Inc.; Ashford Formula.
 - c. Euclid Chemical Company (The); an RPM company; Euco Diamond Hard.
 - d. L&M Construction Chemicals, Inc.; FGS Hardener Plus.
 - e. Prosoco Inc.; LS.
 - f. Approved equal.

2. Products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Sealers: Only use sealers in the building that meet or do not exceed the VOC limits of the CURRENT requirements of South Coast Air Quality Management District SCAQMD 1113 on the interior of the building and CAL-Green Table 5.504.4.3 for VOC Content Limits for Architectural Coatings.
1. Current requirement refers to the date on which the materials are installed in the building.
 2. SCAQMD 1113 referenced in Section 01 8114 - Sustainable Design Requirements - CAL-Green is current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.

2.06 FINISH COATING

- A. High Gloss Clear Coating: Transparent, non-yellowing, water- or solvent-based coating.
1. Composition: Acrylic polymer-based.
 2. Acceptable Products:
 - a. L&M Construction Chemicals, Inc., a subsidiary of Laticrete International, Inc.; Permguard SPS: www.lmcc.com.
 - b. Prosoco Inc.; Consolideck Concrete Flooring System: prosoco.com.
 - c. Approved equal.

2.07 ACCESSORIES

- A. Brass or bronze inlay strips 1/8 inch wide.
- B. Patching Compound: Compound composed of 40 percent portland cement, 45 percent limestone, and 15 percent vinyl acetate copolymer, when mixed with dust salvaged from grinding process forms a paste that hardens when surface imperfections are filled.
- C. Grout Material: Clear modified silicate sealant, containing no pore clogging latex, when mixed with dust salvaged from grinding process forms a paste that reacts with calcium hydroxide in concrete that hardens when surface imperfections are filled.
- D. Protective Cover: Non-woven, puncture and tear resistant, polypropylene fibers laminated with a multi-ply, textured membrane, not less than 18 mils in thickness.

2.08 POLISHING EQUIPMENT

- A. Field Grinding and Polishing Equipment:
1. Variable speed, multiple head, counter-rotating, walk-behind machine with not less than 600 pounds (272 kg) of down pressure on grinding or diamond polishing pads.
 2. If dry grinding, honing, or polishing, use dust extraction equipment with flow rate suitable for dust generated, with squeegee attachments.
 3. If wet grinding, honing, or polishing, use slurry extraction equipment suitable for slurry removal and containment prior to proper disposal.
- B. Edge Grinding and Polishing Equipment: Hand-held or walk-behind machines which produces same results, without noticeable differences, as field grinding and polishing equipment.
- C. Burnishing Equipment: High speed walk-behind or ride-on machines capable of generating 1000 to 2000 revolutions per minute and with sufficient head pressure of not less than 20 pounds to raise floor temperature by 20 degrees F.
- D. Diamond Tooling: Abrasive tools that contain industrial grade diamonds within a bonded matrix (such as metallic, resinous, ceramic, etc) that are attached to rotating heads to refine the concrete substrate.
1. Bonded Abrasive: Abrasive medium that is held within a bonding that erodes away to expose new abrasive medium as it is used.

- E. Resin Bond Tooling: Diamond tooling that contains industrial grade diamonds within a resinous bonded matrix (poly-phenolic, ester-phenolic, thermoplastic-phenolic) that is attached to rotating heads to refine the concrete substrate. Resin bond tooling does not have the soft/medium/hard characteristics of metal bond tooling and are typically used for the later honing and polishing stages of the polishing process.
- F. Hybrid Tooling: Diamond tooling that combines metal bond and resin bond that has the characteristics of both types of tooling. These types of tools are typically used as either transitional tooling from metal bond tools to resin bond tools or as a first cut tool on smooth concrete surfaces.
- G. Transitional Tooling: Diamond tooling that is used to refine the scratch pattern of metal bond tooling prior to the application of resin bond tooling in an effort to extend the life of resin bond tooling and to create a better foundation for the polishing process.
- H. Metal Bonded Pads: Grinding pads with embedded industrial grade diamonds of varying grits fabricated for mounting on equipment.
- I. Resin Bonded Pads: Polishing pads with embedded industrial grade diamonds of varying grits fabricated for mounting on equipment.
- J. Burnishing Pads: Maintenance pads for use with high speed burnishing equipment.
- K. Abrasive Pad: An abrasive pad, resembling a typical floor maintenance burnishing pad, that has the capability of refining the concrete surface on a microscopic level that may or may not contain industrial grade diamonds. These pads are typically used for the maintenance and/or restoration of previously installed polished concrete flooring.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine conditions and proceed with work in accordance with Section 01 7000 - Execution and Closeout Requirements.
- B. Ensure concrete has cured for sufficient amount of time before commencing polishing operations in order to match texture of approved sample.
- C. Verify that damage and defects in concrete surface have been repaired as specified in Section 03 3000 - Cast-in-Place Concrete and accepted by Architect.
- D. Cementitious Surfaces: Verify that substrates are dry enough and ready for polishing installation by testing for moisture and pH.
 - 1. Ensure concrete has cured 60 days minimum.
 - 2. Test in accordance with Section 09 0561 - Common Work Results for Flooring Preparation.
 - 3. Obtain instructions if test results are not within limits recommended by resilient flooring manufacturer and adhesive materials manufacturer.
- E. Verify that surfaces are clean, dry, dust free, and free of efflorescence, oil or other matter detrimental to sealer/hardener application.
- F. Verify that joint sealant work in adjoining surfaces is complete prior to applications of sealers. Delay application until sealants have cured.

3.02 PREPARATION

- A. Cleaning New Concrete Surfaces:
 - 1. Prepare and clean concrete surfaces.

2. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, paint splatter, and other contaminants incompatible with liquid applied products and polishing.
- B. Fill joints and saw cut joints with epoxy resin prior to being ground.
 - C. Provide protection as necessary to protect adjacent materials and surfaces from dirt, dust, and other surface or physical damage.
 - D. Remove loose particles, foreign matter, and oil by method which will not affect sealer/hardener application.
 - E. Prepare surfaces in accordance with manufacturer's directions.
 - F. Provide protection as necessary to protect adjacent materials and surfaces from dirt, dust, spillage, overspray and other surface or physical damage.
 - G. Once polished concrete flooring operations begin, do not allow construction traffic in work area until floor is completely finished and covered with protective materials to prevent damage and staining.

3.03 POLISHING

- A. General: Grind and polish concrete in accordance with manufacturer's written instructions and use same procedures and personnel used in creating approved field sample. Approved sample will be used to judge acceptability of polished concrete finishing
- B. Polish Level:
 1. Concrete: Level 3: High sheen, 800 grit.
- C. Apply polished concrete finish system to cured and prepared slabs to match accepted mockup.
 1. Machine grind floor surfaces to receive polished finishes level and smooth and to depth required to reveal aggregate to match approved mockup.
 - a. Aggregate Exposure: Class B - Fine Aggregate - Fine aggregate exposure with little to no medium aggregate exposure at random locations

3.04 SCORE JOINTS

- A. Score Joints: Saw cut 1/8 inch (3.17 mm) wide by 1/2 inch (12.7 mm) deep.

3.05 STAINING

- A. Newly placed concrete shall be at least 30 days old before staining.
- B. Prepare surfaces according to manufacturer's written instructions and as follows:
 1. Clean concrete thoroughly by scraping, applying solvents or stripping agents, sweeping and pressure washing, or scrubbing with a rotary floor machine and detergents recommended by stain manufacturer. Rinse until water is clear and allow surface to dry.
 2. Prepare surfaces to a profile equal CSP 2 or CSP-3 by grinding, sanding, or abrasive blasting. Test and continue profiling surface until water droplets immediately darken and uniformly penetrate concrete surfaces.
 3. Vacuum surface entirely and ensure that any dust or contaminants are removed, as these will deter adhesion.
- C. Penetrating Stain: Apply penetrating stain to concrete surfaces according to manufacturer's written instructions and as follows:
 1. Apply first coat of stain to dry, clean surfaces by airless sprayer or by high-volume, low-pressure sprayer.
 2. Allow to dry four hours and repeat application of stain in sufficient quantity to obtain color consistent with approved mockup.
 3. Rinse until water is clear. Control, collect, and legally dispose of runoff.

- D. Seal concrete in accordance with Section 03 3541 - Concrete Sealing.

3.06 FINISHING

- A. Apply finishes in accordance with Manufacturer's written instructions.
- B. Apply two coats of liquid densifier according to manufacturer's written instructions, allowing recommended drying time between successive coats.
- C. Allow to dry 48 hours.
- D. Remove defects and re-polish defective areas.
- E. Finish edges of floor finish adjoining other materials in a clean and sharp manner.
- F. Apply finish coating with microfiber pad. Allow to dry 4 hours.
- G. Apply additional coats as required.
- H. Burnish after final coat has dried 4 hours minimum, use high speed, 2000 RPM burnisher with soft white pad or soft natural hogs hair.

3.07 FIELD QUALITY CONTROL

- A. Field Testing: Engage a qualified walkway auditor to perform field testing to determine if polished concrete floor finish complies with specified static coefficient of friction.
 - 1. ANSI B101.3 for dynamic coefficient of friction.

3.08 ADJUSTING

- A. Repair or replace adjacent Work which has been damaged by finishing operations.

3.09 CLEANING

- A. Clean-up and remove debris daily.
- B. Clean spillage, overspray, or drift from adjacent surfaces; remove immediately in accordance with manufacturer's instructions.

3.10 PROTECTION

- A. Protect finished work in accordance with Section 01 7000 - Execution and Closeout Requirements.
- B. Once polished concrete flooring operations begin, do not allow construction traffic in work area until floor is completely finished and covered with vapor permeable protective materials to prevent damage and staining.
- C. Protect finished concrete surfaces from damage by construction equipment and operations.
- D. Covering: After completion of polishing, protect polished floors from subsequent construction activities with vapor permeable protective covering.

END OF SECTION

**SECTION 04 0511
MORTAR AND MASONRY GROUT**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Mortar for masonry.
- B. Grout for masonry.

1.02 RELATED REQUIREMENTS

- A. Section 04 2001 - Masonry Veneer: Installation of mortar.
- B. Section 08 1113 - Hollow Metal Doors and Frames: Products and execution for grouting steel door frames installed in masonry.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Include design mix and indicate whether the Proportion or Property specification of ASTM C270 is to be used. Also include required environmental conditions and admixture limitations.
 - a. Include product data for integral water repellent admixture, indicating compliance with specified performance requirements.
 - 2. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.
 - a. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C109/C109M for compressive strength, ASTM C 1506 for water retention, and ASTM C91/C91M for air content.
 - b. Include test reports, according to ASTM C1019, for grout mixes required to comply with compressive strength requirement.
- B. Informational Submittals:
 - 1. Reports: Submit reports on mortar indicating compliance of mortar to property requirements of ASTM C270 and test and evaluation reports per ASTM C780.
 - 2. Reports: Submit reports on grout indicating compliance of component grout materials to requirements of ASTM C476 and test and evaluation reports to requirements of ASTM C1019.
 - 3. Mix Designs: For each type of mortar[and grout]. Include description of type and proportions of ingredients.
 - a. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C109/C109M for compressive strength, ASTM C1506 for water retention, and ASTM C91/C91M for air content.
 - b. Include test reports, according to ASTM C1019, for grout mixes required to comply with compressive strength requirement.
 - 4. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.
 - a. Mortar admixtures.
 - b. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.
 - c. Grout mixes. Include description of type and proportions of ingredients.

1.04 QUALITY ASSURANCE

- A. Comply with provisions of ACI 530/530.1/ERTA, except where exceeded by requirements of the Contract Documents.
 - 1. Maintain one copy of each document on project site.

1.05 PRECONSTRUCTION TESTING

- A. Testing will be conducted by an independent test agency, in accordance with provisions of Section 01 4000 - Quality Requirements.
- B. Mortar Mixes: Test mortars prebatched by weight in accordance with ASTM C780 recommendations for preconstruction testing.
 - 1. Test results will be used to establish optimum mortar proportions and establish quality control values for construction testing.
- C. Grout Mixes: Test grout batches in accordance with ASTM C1019 procedures.
 - 1. Test results will be used to establish optimum grout proportions and establish quality control values for construction testing.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Maintain packaged materials clean, dry, and protected against dampness, freezing, and foreign matter.
- B. Deliver preblended, dry mortar mix in moisture-resistant containers. Store preblended, dry mortar mix in delivery containers on elevated platforms in a dry location or in covered weatherproof dispensing silos.

1.07 FIELD CONDITIONS

- A. Cold and Hot Weather Requirements: Comply with requirements of TMS 402/602 or applicable building code, whichever is more stringent.

PART 2 PRODUCTS

2.01 MORTAR AND GROUT APPLICATIONS

- A. Use only factory premixed packaged dry materials for mortar and grout, with addition of water only at project site.
- B. Mortar Mix Designs: ASTM C270, Property Specification:
 - 1. Type S.
- C. Grout Mix Designs:
 - 1. Bond Beams and Lintels: 2000 psi (13.78 MPa) strength at 28 days; 8-10 inches (200-250 mm) slump; provide premixed type in accordance with ASTM C 94/C 94M.

2.02 MATERIALS

- A. Packaged Dry Material for Mortar for Unit Masonry: Premixed Portland cement, hydrated lime, and sand; complying with ASTM C387/C387M and capable of producing mortar of the specified strength in accordance with ASTM C270 with the addition of water only.
 - 1. Type: Type S.
 - 2. Color: Mineral pigments added as required to produce approved color sample.
 - a. Match CMU.
- B. Pigments for Colored Mortar: Pure, concentrated mineral pigments specifically intended for mixing into mortar and complying with ASTM C979/C979M.
- C. Water: Clean and potable.

2.03 ADMIXTURES

- A. Integral Water Repellent Admixture: Polymeric liquid admixture added to mortar and grout at the time of manufacture; designed to reduce capillarity without reducing flexural bond strength.
 - 1. Performance of Mortar and Grout with Integral Water Repellent:

- a. Water Permeance: When tested per ASTM E514/E514M and for a minimum of 72 hours:
 - 1) No water visible on back of wall above flashing at the end of 24 hours.
 - 2) No flow of water from flashing equal to or greater than 0.032 gallons per hour (0.05 L per hour) at the end of 24 hours.
 - 3) No more than 25 percent of wall area above flashing visibly damp at end of test.
- b. Flexural Bond Strength: ASTM C1357; minimum 10 percent increase.
- c. Compressive Strength: ASTM C1314; maximum 5 percent decrease.
- d. Drying Shrinkage: ASTM C1148; maximum 5 percent increase in shrinkage.
- 2. Use only in combination with masonry units produced with integral water repellent admixture.
- 3. Acceptable Products:
 - a. ACM Chemistries; RainBloc for Mortar: www.acmchem.com.
 - b. BASF Construction Chemicals MasterPel 240MA (Pre-2014: Rheapel Plus Mortar Admixture) or MasterPel 210D (Pre-2014: Rheapel Plus D): www.construction-chemicals.basf.com.
 - c. Grace Construction Products; Dry-Block Mortar Admixture: www.gcpat.com.
 - d. Approved equal.

2.04 MORTAR MIXING

- A. Thoroughly mix mortar ingredients using mechanical batch mixer, in accordance with ASTM C270 and in quantities needed for immediate use.
- B. Maintain sand uniformly damp immediately before the mixing process.
- C. Colored Mortar: Proportion selected pigments and other ingredients to match Architect's sample, without exceeding manufacturer's recommended pigment-to-cement ratio; mix in accordance with manufacturer's instructions, uniform in coloration.
- D. Add admixtures in accordance with manufacturer's instructions; mix uniformly.
 - 1. Include specified water repellent admixture.
- E. Do not use anti-freeze compounds to lower the freezing point of mortar.
- F. If water is lost by evaporation, re-temper only within two hours of mixing.

2.05 GROUT MIXING

- A. Mix grout in accordance with ASTM C94/C94M.
- B. Thoroughly mix grout ingredients in quantities needed for immediate use in accordance with ASTM C476 for fine and coarse grout.
- C. Add admixtures in accordance with manufacturer's instructions; mix uniformly.

PART 3 EXECUTION

3.01 PREPARATION

- A. Plug clean-out holes for grouted masonry with block masonry units. Brace masonry to resist wet grout pressure.

3.02 INSTALLATION

- A. Install mortar and grout to requirements of Sections in which masonry is specified.
- B. Work grout into masonry cores and cavities to eliminate voids.
- C. Do not install grout in lifts greater than 16 inches (400 mm) without consolidating grout by rodding.
- D. Do not displace reinforcement while placing grout.

- E. Remove excess mortar from grout spaces.

3.03 GROUTING

- A. High-Lift Grouting:
 - 1. Verify that horizontal and vertical reinforcement is in proper position and adequately secured before beginning pours.
 - 2. Limit height of pours to 60 inches (1524 mm).
 - 3. Provide cleanouts for grout lifts exceeding 48 inches (1220 mm).
 - 4. Place grout for spanning elements in single, continuous pour.

3.04 FIELD QUALITY CONTROL

- A. An independent testing agency will perform field tests, in accordance with provisions of Section 01 4000 - Quality Requirements.
- B. Testing and Inspecting: Owner will engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.
- C. Test and evaluate mortar in accordance with ASTM C780 procedures.
 - 1. Test with same frequency as specified for masonry units.
- D. Test and evaluate grout in accordance with ASTM C1019 procedures.
 - 1. Test with same frequency as specified for masonry units.
- E. Prism Tests: Test masonry and mortar panels for compressive strength in accordance with ASTM C1314, and for flexural bond strength in accordance with ASTM C1072 or ASTM E518/E518M; perform tests and evaluate results as specified in individual masonry sections.
- F. Inspections: Special inspections according to Level B in TMS 402/602/ACI 530/ASCE 5.
 - 1. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.
- G. Mortar Aggregate Ratio Test (Proportion Specification): For each mix provided, according to ASTM C78/C78M.
- H. Mortar Test (Property Specification): For each mix provided, according to ASTM C78/C78M. Test mortar for compressive strength.

END OF SECTION

SECTION 04 2600
SINGLE-WYTHE UNIT MASONRY

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Concrete masonry units.
- B. Reinforcement, anchorage, and accessories.

1.02 REFERENCE STANDARDS

- A. ASTM C90 - Standard Specification for Loadbearing Concrete Masonry Units; 2016a.
- B. ASTM C140/C140M - Standard Test Methods of Sampling and Testing Concrete Masonry Units and Related Units; 2017a.
- C. ASTM D226/D226M - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing; 2017.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination: Direct and coordinate placement of metal anchors supplied for installation under other Sections.
- B. Preinstallation Meeting: Convene one week before starting work of this section.
 - 1. Convene under general provisions of Section 01 7000 - Execution and Closeout Requirements.
 - 2. Require attendance by all relevant installers.
 - 3. Require attendance of parties directly affecting work of this Section.
 - 4. Review conditions of installation, installation procedures, and coordination with related work.

1.04 SUBMITTALS

- A. Action Submittals:
- B. Product Data: Provide data for decorative and pre-faced masonry units and fabricated wire reinforcement.
 - 1. Include product data for integral water repellent admixture, indicating compliance with specified performance requirements.
- C. Shop Drawings: For the following:
 - 1. Masonry Units: Show sizes, profiles, coursing, and locations of special shapes.
 - 2. Reinforcing Steel: Detail bending and placement of unit masonry reinforcing bars. Comply with ACI 315, "Details and Detailing of Concrete Reinforcement." Show elevations of reinforced walls.
 - 3. Samples: Submit four samples of decorative block units to illustrate color, texture and extremes of color range.
- D. Informational Submittals:
 - 1. Material Certificates: Certify that products meet or exceed specified requirements. For each type and size of the following:
 - a. Statement of Compressive Strength of Masonry: For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units, mortar type, and resulting net-area compressive strength of masonry determined according to Tables 1 and 2 in ACI 530.1/ASCE 6/TMS 602.
 - b. Cold-Weather and Hot-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.
 - c. Reinforcing bars.

- d. Joint reinforcement.
 - e. Anchors, ties, and metal accessories.
 - f. Certify that water repellent admixture manufacturer has certified masonry unit manufacturer as an approved user of water repellent admixture in the manufacture of concrete block.
2. Test Reports: Concrete masonry manufacturer's test reports for units with integral water repellent admixture.

1.05 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
 - 2. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.
 - 3. A5.406.1, .2 and .3: Materials selected for longevity, reduced maintenance and recyclability.
 - 4. Section A5.405.5: Provide documentation that cement and concrete used are made with recycled content and/or alternative energy.

1.06 QUALITY ASSURANCE

- A. Comply with provisions of TMS 402/602, except where exceeded by requirements of Contract Documents.
 - 1. Maintain one copy of each document on project site.
- B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years of documented experience.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.
- B. Deliver, handle, and store masonry units by means that will prevent mechanical damage and contamination by other materials.
- C. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.
- D. Deliver, handle, and store masonry units by means that will prevent mechanical damage and contamination by other materials.
- E. Handle and store pre-faced concrete block units in protective cartons or trays. Do not remove from protective packaging until ready for installation.

1.08 FIELD CONDITIONS

- A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.
 - 1. Increase extent of cover in subparagraph below as needed to suit local climatic conditions.
 - 2. Extend cover a minimum of 24 inches (610 mm) down both sides of walls, and hold cover securely in place.
- B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.

- C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.
 - 1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
 - 2. Protect sills, ledges, and projections from mortar droppings.
 - 3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
 - 4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.
- D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.
 - 1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F (4 deg C) and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.
- E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.

PART 2 PRODUCTS

2.01 CONCRETE MASONRY UNITS

- A. Concrete Masonry Units: Comply with referenced standards and as follows:
 - 1. Size: Standard units with nominal face dimensions of 16 x 8 inches (400 x 200 mm) and nominal depth of 8 inches (200 mm).
 - 2. Special Shapes: Provide non-standard blocks configured for corners.
 - 3. Load-Bearing Units: ASTM C90, normal weight.
 - a. Hollow block.
 - b. Exposed Faces CMU Type 1: Smooth.
 - 1) Location: Areas of waterproofing.
 - 2) Color: Light tan.
 - 4. Exposed Faces CMU Type 2: Split-Faced.
 - a. Location: Areas exposed to view and as indicated on Drawings.
 - b. Color: Light tan.
- B. Integral Water Repellent: Provide units made with integral water repellent for exposed units and where indicated.
 - 1. Integral Water Repellent: Liquid polymeric, integral water-repellent admixture that does not reduce flexural bond strength. Units made with integral water repellent, when tested according to ASTM E 514/E 514M as a wall assembly made with mortar containing integral water-repellent manufacturer's mortar additive, with test period extended to 24 hours, shall show no visible water or leaks on the back of test specimen.
 - a. Acceptable Products:
 - 1) ACM Chemistries; RainBloc for Mortar: www.acmchem.com.
 - 2) BASF Construction Chemicals MasterPel 240MA (Pre-2014: Rheopel Plus Mortar Admixture) or MasterPel 210D (Pre-2014: Rheopel Plus D): www.construction-chemicals.basf.com.
 - 3) Grace Construction Products; Dry-Block Mortar Admixture: www.gcpat.com.
 - 4) Prior approved equal.

2.02 MORTAR AND GROUT MATERIALS

- A. Mortar and Grout: As specified in Section 04 0511.

2.03 REINFORCEMENT

- A. Refer to Structural Drawings.
- B. Joint Reinforcement: Use ladder type joint reinforcement where vertical reinforcement is involved and truss type elsewhere, unless otherwise indicated.
 - 1. Interior Walls: Hot-dip galvanized carbon steel.
 - 2. Exterior Walls: Hot-dip galvanized steel.
 - 3. Wire Size for Side Rods: 0.148-inch (3.77-mm) diameter.
 - 4. Wire Size for Cross Rods: 0.148-inch (3.77-mm) diameter.
 - 5. Spacing of Cross Rods: Not more than 16 inches (407 mm) o.c.
 - 6. Provide in lengths of not less than 10 feet (3 m), with prefabricated corner and tee units.
- C. Reinforcing Bar Positioners: Wire units designed to fit into mortar bed joints spanning masonry unit cells and to hold reinforcing bars in center of cells. Units are formed from 0.148-inch (3.77-mm) steel wire, hot-dip galvanized after fabrication. Provide units designed for number of bars indicated.
 - 1. Acceptable Products:
 - a. Dur-O-Wal; a Hohmann & Barnard company; D/A 810, D/A 812 or D/A 817.
 - b. Heckmann Building Products, Inc.; No. 376 Rebar Positioner..
 - c. Hohmann & Barnard, Inc; #RB or #RB-Twin Rebar Positioner.
 - d. Lock Rite; Rebar Positioners.
 - e. Wire-Bond; Core Lock Rebar Positioner or O-Ring or Double O-Ring Rebar Positioner.

2.04 ACCESSORIES

- A. Compressible Filler: Premolded filler strips complying with ASTM D 1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene, urethane, or PVC.
- B. Bond-Breaker Strips: Asphalt-saturated felt complying with ASTM D226/D226M, Type I (No. 15 asphalt felt).
- C. Proprietary Non-Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.
 - 1. Products: Provide one of the following:
 - a. PROSOCO, Inc; Enviro Klean Safety Klean.
- D. Cleaning Solution: Non-acidic, not harmful to masonry work or adjacent materials.

PART 3 EXECUTION**3.01 EXAMINATION**

- A. Verify that field conditions are acceptable and are ready to receive masonry.
- B. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
 - 1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
 - 2. Verify that foundations are within tolerances specified.
 - 3. Verify that reinforcing dowels are properly placed.
 - 4. Verify that substrates are free of substances that would impair mortar bond.
- C. Verify that related items provided under other sections are properly sized and located.
- D. Verify that built-in items are in proper location, and ready for roughing into masonry work.

- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Direct and coordinate placement of metal anchors supplied for installation under other sections.
- B. Provide temporary bracing during installation of masonry work. Maintain in place until building structure provides permanent bracing.
- C. Layout out walls in advance for accurate pattern of surface bond with uniform joint widths and for accurate location of opening, expansion joints, returns, and offsets. Avoid use of less-than-half size units at corners, jambs and other locations.

3.03 INSTALLATION, GENERAL

- A. Build chases and recesses to accommodate items specified in this and other Sections.
- B. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match construction immediately adjacent to opening.
- C. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.

3.04 COURSING

- A. Establish lines, levels, and coursing indicated. Protect from displacement.
- B. Maintain masonry courses to uniform dimension. Form vertical and horizontal joints of uniform thickness.
- C. Concrete Masonry Units:
 1. Bond: Running or as indicated on Drawings.
 2. Coursing: One unit and one mortar joint to equal 8 inches (200 mm).
 3. Mortar Joints: Concave.

3.05 PLACING AND BONDING

- A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.
- B. Lay concealed masonry with all units in a wythe in running bond or bonded by lapping not less than 8 inches (200 mm). Bond and interlock each course of each wythe at corners. Do not use units with less-than-nominal 4-inch (100-mm) horizontal face dimensions at corners or jambs.
- C. Stopping and Resuming Work: Stop work by stepping back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.
- D. Fill cores in hollow CMUs with grout 24 inches (610 mm) under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.
- E. Build nonload-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated.
 1. Install top of wall supports as indicated on Drawings.
- F. Lay hollow masonry units with face shell bedding on head and bed joints.
- G. Buttering corners of joints or excessive furrowing of mortar joints is not permitted.

- H. Remove excess mortar as work progresses.
- I. Interlock intersections and external corners, except for units laid in stack bond.
- J. Do not shift or tap masonry units after mortar has achieved initial set. Where adjustment must be made, remove mortar and replace.
- K. Perform job site cutting of masonry units with proper tools to provide straight, clean, unchipped edges. Prevent broken masonry unit corners or edges.
- L. Cut mortar joints flush where wall tile is scheduled or resilient base is scheduled.
- M. Isolate masonry partitions from vertical structural framing members with a control joint as indicated.
- N. Isolate top joint of masonry partitions from horizontal structural framing members and slabs or decks with compressible joint filler.

3.06 REINFORCEMENT AND ANCHORAGE

- A. Install horizontal joint reinforcement 16 inches (400 mm) on center.
- B. Place masonry joint reinforcement in first and second horizontal joints above and below openings. Extend minimum 16 inches (400 mm) each side of opening.
- C. Place continuous joint reinforcement in first and second joint below top of walls.
- D. Lap joint reinforcement ends minimum 6 inches (150 mm).
- E. Reinforce joint corners and intersections with strap anchors 16 inches (400 mm) on center.

3.07 GROUTED COMPONENTS

- A. Place grout in accordance with Structural Drawings.
- B. Lap splices in reinforcing bars as indicated on Drawings.
- C. Support and secure reinforcing bars from displacement. Maintain position within 1/2 inch (13 mm) of dimensioned position.
- D. Place and consolidate grout fill without displacing reinforcing.
- E. At bearing locations, fill masonry cores with grout for a minimum 12 inches (300 mm) either side of opening.

3.08 CONTROL AND EXPANSION JOINTS

- A. Install preformed control joint device in continuous lengths. Seal butt and corner joints in accordance with manufacturer's instructions.
- B. Size control joints as indicated on drawings; if not shown, 3/4 inch (19 mm) wide and deep.

3.09 TOLERANCES

- A. Maximum Variation From Unit to Adjacent Unit: 1/16 inch (1.6 mm).
- B. Maximum Variation from Plane of Wall: 1/4 inch in 10 ft (6 mm/3 m) and 1/2 inch in 20 ft (13 mm/6 m) or more.
- C. Maximum Variation from Plumb: 1/4 inch (6 mm) per story non-cumulative; 1/2 inch (13 mm) in two stories or more.
- D. Maximum Variation from Level Coursing: 1/8 inch in 3 ft (3 mm/m) and 1/4 inch in 10 ft (6 mm/3 m); 1/2 inch in 30 ft (13 mm/9 m).

- E. Maximum Variation of Joint Thickness: Head joint, minus 1/4 inch, plus 3/8 inch (minus 6.4 mm, plus 9.5 mm).
- F. Maximum Variation from Cross Sectional Thickness of Walls: 1/4 inch (6 mm).

3.10 CUTTING AND FITTING

- A. Obtain approval prior to cutting or fitting masonry work not indicated or where appearance or strength of masonry work may be impaired.

3.11 FIELD QUALITY CONTROL

- A. An independent testing agency, as specified in Section 01 4000 - Quality Requirements, will conduct field tests.
- B. Concrete Masonry Unit Tests: Test each variety of concrete unit masonry in accordance with ASTM C140/C140M for compliance with requirements of this specification.

3.12 CLEANING

- A. Remove excess mortar and mortar smears as work progresses.
- B. Replace defective mortar. Match adjacent work.
- C. Clean soiled surfaces with cleaning solution.
- D. Use non-metallic tools in cleaning operations.

3.13 PROTECTION

- A. Without damaging completed work, provide protective boards at exposed external corners that are subject to damage by construction activities.

END OF SECTION

SECTION 05 1200
STRUCTURAL STEEL FRAMING

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Structural steel framing members.
- B. Structural steel support members, sag rods, and struts.
- C. Base plates, shear stud connectors and anchor rods, elevator rail bracing.
- D. Grouting under base plates.

1.02 RELATED REQUIREMENTS

- A. Section 05 12 13 – Architecturally Exposed Steel
- B. Section 05 31 00 - Steel Decking: Support framing for small openings in deck.
- C. Section 05 50 00 - Metal Fabrications: Steel fabrications affecting structural steel work.
- D. Section 07 81 00 - Applied Fireproofing: Fireproof protection to framing and metal deck systems.

1.03 REFERENCE STANDARDS

- A. California Code of Regulations, Title 24, Part 2, with DSA Amendments, also known as the California Building Code (CBC), 2019 Edition.
- B. AISC (MAN) - Steel Construction Manual; 2011.
- C. AISC S303 - Code of Standard Practice for Steel Buildings and Bridges; 2016.
- D. AISC 360-16 - Specification for Structural Steel Buildings; 2010
- E. AISC 341-16 - Seismic Provisions for Structural Steel Buildings; 2010
- F. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2014.
- G. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2012.
- H. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold Finished; 2013.
- I. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2015.
- J. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2016a.
- K. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength; 2014.
- L. ASTM A449 - Standard Specification for Hex Cap Screws, Bolts and Studs, Steel, Heat Treated, 120/105/90 ksi Minimum Tensile Strength, General Use; 2014.
- M. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes; 2013.
- N. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing; 2014.

- O. ASTM A529/A529M - Standard Specification for High-Strength Carbon-Manganese Steel of Structural Quality; 2014.
- P. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nuts; 2015.
- Q. ASTM A563M - Standard Specification for Carbon and Alloy Steel Nuts (Metric); 2007 (Reapproved 2013).
- R. ASTM A572/A572M - Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel; 2015.
- S. ASTM A992/A992M - Standard Specification for Structural Steel Shapes; 2011 (Reapproved 2015).
- T. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable; 2016.
- U. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength; 2015.
- V. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink); 2014a.
- W. ASTM C827/C827M - Standard Test Method for Change in Height at Early Ages of Cylindrical Specimens of Cementitious Mixtures; 2016.
- X. ASTM E94 - Standard Guide for Radiographic Examination; 2004 (Reapproved 2010).
- Y. ASTM E164 - Standard Practice for Contact Ultrasonic Testing of Weldments; 2013.
- Z. ASTM E709 - Standard Guide for Magnetic Particle Testing; 2015.
- AA. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts, Steel and Alloy Steel, Heat Treated, 120 ksi (830 MPa) and 150 ksi (1040 MPa) Minimum Tensile Strength, Inch and Metric Dimensions; 2015a.
- AB. ASTM F436/F436M - Standard Specification for Hardened Steel Washers Inch and Metric Dimensions; 2016.
- AC. ASTM F959 - Standard Specification for Compressible-Washer-Type Direct Tension Indicators for Use with Structural Fasteners; 2013.
- AD. ASTM F1554 - Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength; 2015.
- AE. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination; 2012.
- AF. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2015 (with March 2016 Errata).
- AG. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel; 2008.
- AH. AWS D1.8 - Structural Welding Code - Seismic Supplement, 2009

- AT. UL (FRD) - Fire Resistance Directory; current edition.

1.04 SUBMITTALS

- A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.
- B. Plans of all levels showing dimensioned location of edge of slab, deck, and openings. Submit prior to Shop and Erection drawings.
- C. Shop Drawings:
 1. Indicate profiles, sizes, spacing, locations of structural members, openings, attachments, and fasteners.
 2. Indicate cambers.
 3. Indicate welded connections with AWS A2.4 welding symbols. Indicate net weld lengths.
 4. Identification of high-strength bolted joints as snug-tight, pretensioned or slip-critical, as required by the Contract Documents.
 5. Locations where the Construction Documents require backing bars to be removed.
 6. Locations where the Construction Documents require supplemental fillet welds where backing is permitted to remain.
 7. Locations where the Construction Documents require weld tabs to be removed.
 8. Identification of members and connections of the Seismic-Load-Resisting System.
 9. Location and dimensions of the Protected Zone.
 10. Identification of welds in the Seismic-Load-Resisting System.
 11. Identification of Demand-Critical Welds.
 12. Identification of connections and members, or portions thereof, to be treated as AESS.
 13. Shop and erection drawings shall clearly identify revisions and revision dates in accordance with AISC 303-10.
 14. Shop drawings shall include the following additional information:
 - a. Complete information necessary for the fabrication of members including cuts, copes, holes, stiffeners, and camber.
 - b. Surface preparation and finishes, including both painting and grinding.
 - c. Material grades of all members, connection material, fasteners, and weld filler metal.
 - d. Connection details drawn to scale for members of the Seismic-Load-Resisting System.
 - e. With each set of shop drawings include corresponding erection drawings identifying pieces.
 15. Erection drawings shall include the following additional information:
 - a. Identification mark of members.
 - b. Orientation and relation of members to appropriate grid lines.
 - c. Setting elevations for column bases.
 - d. Standard and special details for field connections.
 - e. Identification of joints or groups of joints in which a specific assembly order, welding sequence, welding technique, or other special precautions are required.
- D. Manufacturer's Mill Certificate: Certify that products meet or exceed specified requirements.

- E. Mill Test Reports: Indicate structural strength, destructive test analysis and non-destructive test analysis.
- F. Fabricator Test Reports: Comply with ASTM A1011/A1011M.
- G. Welding Consumables: Submit the following items:
 - 1. Manufacturer's Certifications for electrodes, fluxes and shielding gasses to be used. Certifications shall satisfy AWS A5 requirements. In addition submit a Certificate of Compliance from the Contractor supplying the materials. Submit certifications that the product meets any additional requirements of the project.
 - 2. Manufacturer's product data sheets for all welding material to be used. The data sheets shall describe the product, limitations of use, recommended welding parameters, and storage and exposure requirements, including baking and rebaking.
- H. Welded Stud Connectors: Submit the following items:
 - 1. Manufacturer's Certification that the studs, as supplied, meet the requirements of AWS D1.1.
 - 2. Certified copies of the stud manufacturer's test reports covering the last completed set of in-plant quality control mechanical tests for the diameter supplied.
 - 3. Certified material test reports from the manufacturer. The Manufacturer's Certification shall be accompanied by a Certificate of Compliance from the Contractor.
- I. Bolting and Welding Procedures: Procedures shall assign responsibility to a person or position and shall contain enough detail to be useful to the workforce without reference to governing specifications. The procedures need not act as work instructions. Procedures shall be dated and indicate the person or position that has the authority to maintain the procedure.
 - 1. Fastener Installation Procedures: Submit written procedures for the pre-installation testing, installation, snugging, pre-tensioning, and post-installation inspection of high strength fasteners.
 - 2. Welding Procedure Specifications (WPSs): Welding Procedure Specifications (WPSs) shall conform to the requirements of AWS D1.1. Submit Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQR) as required by AWS D1.1, to be used on the project to the District's Testing Agency.
 - 3. Use forms provided in Annex E of AWS D1.1 or equivalent.
 - 4. Weld Sequence Procedures: Submit written procedures indicating field welding sequences for each type of connection with multiple field-welded joints, and the sequence of such connections to be field-welded at each level.
 - 5. Weld Shrinkage and Distortion Control Plan: Where shrinkage is likely to cause distortion or other problems, submit a mitigation plan. The contractor is responsible for determining conditions requiring a Weld Shrinkage and Distortion Control Plan.
- J. Welding Performance Qualification Records (WPQRs):
 - 1. Written Welding Performance Qualification Records (WPQRs), in accordance with AWS D1.1, for all welders on the project. Submit documentation that the welder has passed all designated supplemental welder qualification testing required for the types of welding to be performed. Submit documentation showing that the welder continued to use the applicable welding process on an ongoing basis since the WPQR test was conducted.
- K. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within the previous 12 months.
- L. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is accredited under IAS AC172.

1.05 QUALITY ASSURANCE

- A. Quality Requirements in accordance with Section 01 40 00.
- B. Fabricate structural steel members in accordance with AISC (MAN) "Steel Construction Manual."

- C. Comply with Section 10 of AISC S303 "Code of Standard Practice for Steel Buildings and Bridges" for architecturally exposed structural steel.
- D. Maintain one copy of each document on site.
- E. Fabricator: Company specializing in performing the work of this section with minimum 5 years of documented experience.
- F. Fabricator Qualifications: A qualified steel fabricator that is accredited by the International Accreditation Service (IAS) Fabricator Inspection Program for Structural Steel in accordance with IAS AC172.
- G. Erector: Company specializing in performing the work of this section with minimum 5 years of documented experience.
- H. Welders: Welders, welding operators, and tackers shall be qualified in accordance with AWS D1.1 and the CBC.
 - 1. Welders shall have a valid Welding Performance Qualification Record (WPQR) for each welding procedure to be performed.
 - 2. Welders whose work fails to pass inspection shall be requalified before performing further welding.
 - 3. Supplemental Welding Personnel Testing: Welders and welding operators performing work on bottom-flange Demand-Critical Welds shall pass Supplemental Welder Qualification Testing, as prescribed in AWS D1.1, D.1.8 using the process and highest deposition rate to be used in the work. FCAW-S and FCAW-G shall be considered separate processes for welding personnel qualification. Tack welders need not perform such Supplemental Testing.
 - 4. Qualification Period: Personnel who have not welded for a period of three or more months shall be requalified. Welding personnel required to be tested using the Supplemental Welding Personnel Testing shall be qualified by test within 12 months prior to beginning welding on the project.
 - 5. The Contractor shall pay costs of certifying qualifications and requalifications.
- I. Welding Inspector Qualifications:
 - 1. All Welding Inspectors shall be trained and thoroughly experienced in inspecting welding operations, and qualified as Certified Welding Inspectors (CWI) in accordance with AWS D1.1, AWS D1.8 and AWS QC1.
 - 2. NDT Personnel Qualifications
 - a. NDT personnel shall be qualified under one of the ASNT documents referenced in this specification. NDT performed by NDT Level I personnel shall be under the close, direct supervision of an NDT Level II.
 - b. Demand-Critical Welds: UT may be performed only by UT technicians certified as Level II by their employer, or as ASNT Level III certified by examination by the ASNT. Ultrasonic testing technicians who perform flaw detection or sizing shall be trained in applicable UT procedure and shall demonstrate their competence through testing as prescribed in AWS D1.8.
- J. Bolting Inspector Qualifications: Competency shall be demonstrated through the administration of a written examination and through the hands-on demonstration by the Inspector of the methods to be used for bolt installation and inspection.
- K. Submittals: The District's Testing Agency will submit the following items:
 - 1. Quality Assurance Plan: The Quality Assurance Plan shall contain the Quality Assurance and Inspection items contained in this Section.
 - 2. Qualifications of District's Testing Agency management and personnel designated for the project.
 - 3. Qualification records for District's Testing Agency's Inspectors and NDT technicians designated for the project.
 - 4. District's Testing Agency's Quality Control Plan for the monitoring and control of the Agency's operations.

5. Written Practice for District's Testing Agencies: The District's Testing Agency shall maintain a Written Practice for the selection and administration of inspection personnel, describing the training, experience and examination requirements for qualification and certification of inspection personnel, including those of subcontracting agencies. The Written Practice shall also describe the Agency's procedures for determining the acceptability of the structure in accordance with the applicable codes, standards, and specifications. The Written Practice shall also describe the Agency's inspection procedures, including general inspection, material controls, visual welding inspection, and bolting inspection.
 - a. Bolting Inspection Procedures: Comply with RCSC Specification and the Quality Assurance Plan.
 - b. Welding Inspection Procedures: Meet the requirements of the AWS D1.1, AWS D1.8 and the Quality Assurance Plan.
 - c. Nondestructive Testing Procedures: The Written Practice shall describe the responsibility of each level of certification for determining the acceptability of material and welds in accordance with the applicable codes, standards, specifications and procedures.

1.06 STRUCTURAL STEEL PRE-CONSTRUCTION CONFERENCE

- A. Prior to performing any fabrication or erection work, the District's Representative, Architect, Structural Engineer, and District's Testing Agency, together with Steel Fabricator personnel and Steel Erector personnel supervising the shop, field and Quality Control work shall hold a Pre-construction Conference to review submittal requirements, welding procedures, bolting procedures, fabrication and erection issues, and inspection requirements for all structural steel operations.

1.07 PRODUCT DELIVERY, STORAGE AND HANDLING

- A. Deliver, store, and handle packaged materials in original containers with seals unbroken and labels intact until time of use.
- B. Structural steel shall be stored and handled in a manner that prevents damage or distortion. Discharge materials carefully; do not dump onto ground.
- C. Do not store materials on the structure in a manner that might cause distortion or damage to members of the supporting structure.
- D. Store structural steel members, whether on or off site, above ground on platforms, skids, or other support; store other materials in weather-tight, dry place until use.
- E. Store materials to permit easy access for inspection and identification.
- F. Electrode Requirements:
 1. Packaging of weld filler metals shall conform to the requirements of AWS D.1.1. FCAW electrodes shall be received in undamaged moisture-resistant containers. They shall be protected against contamination and injury during shipment and storage. When removed from protective packaging and installed on machines, care shall be taken to protect the electrodes and coatings from deterioration or damage.
 2. Modification or lubrication of an electrode after manufacture is not permitted, except that drying shall be permitted when recommended by the manufacturer.
 3. Electrode Storage and Exposure Limits for Demand-Critical Welds: The exposure time limit for FCAW electrodes shall be based upon the results of tests as prescribed in AWS D1.1 and D1.8. Spools shall be identified to facilitate monitoring of total atmospheric exposure time. FCAW electrodes that have been exposed for periods exceeding the allowable atmospheric exposure may be baked as per D1.1 if manufacturer's testing and recommendations show that baking is effective.
- G. Fasteners shall be stored in a protected place. Except for ASTM F1852 "twist-off" type assemblies, clean and relubricate bolts, nuts and washers that become dry or rusty before use.

F1852 fastener components may be relubricated following the manufacturer's written instructions, and must be retested after relubrication and prior to use to verify suitability for installation.

1.08 JOB CONDITIONS

- A. Provide the District's Testing Agency with free access to places on and off job site where materials are stored or fabricated, to places where equipment is stored or serviced, and to job site.
- B. Sequencing, Scheduling:
 - 1. Notify the Architect and District's Testing Agency in sufficient time prior to shop or field fabrication and erection to permit testing and inspection without delaying Work.
 - 2. Ensure timely delivery of items to be embedded in work of other sections; furnish setting drawings and directions for installation
 - 3. Provide templates for setting of anchor rods.

PART 2 PRODUCTS

2.01 MATERIALS

- A. Steel Angles and Plates: ASTM A36/A36M.
- B. Steel W Shapes and Tees: ASTM A992/A992M.
- C. Rolled Steel Structural Shapes: ASTM A992/A992M.
- D. Steel Shapes, Plates, and Bars: ASTM A36 carbon structural steel, Grade 36. Plates for seismic load resisting system: ASTM A572 high-strength, low-alloy structural steel Grade 50
- E. Cold-Formed Structural Tubing: ASTM A500/A500M, Grade B.
- F. Hot-Formed Structural Tubing: ASTM A501/A501M, seamless or welded.
- G. Steel Sheet: ASTM A1011/A1011M, Designation SS, Grade 30 hot-rolled, or ASTM A1008/A1008M, Designation SS, Grade 30 cold-rolled.
- H. Pipe: ASTM A53/A53M, Grade B, Finish black.
- I. Shear Stud Connectors: Made from ASTM A108 Grade 1015 bars.
- J. Sag Rods: ASTM A36/A36M.
- K. Structural Bolts and Nuts: Carbon steel, ASTM A307, Grade A and galvanized in compliance with ASTM A153/A153M, Class C.
- L. High-Strength Structural Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, with matching compatible ASTM A563 or ASTM A563M nuts and ASTM F436/F436M washers.
- M. Tension Control Bolts: Twist-off type; ASTM F3125/F3125M.
- N. Unheaded Anchor Rods: ASTM F1554, Grade 55, plain, with matching ASTM A563 or ASTM A563M nuts and ASTM F436/F436M Type 1 washers.
- O. Headed Anchor Rods: ASTM A307, Grade C, plain.
- P. Load Indicator Washers: Provide washers complying with ASTM F959 at connections requiring high-strength bolts.
- Q. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.
 - 1. Comply with AWS D1.1 with a nominal 70 ksi tensile strength.
 - 2. Supplemental Requirements for the Seismic-Load-Resisting System (SLRS or LFRS) as noted on plan:

- a. Toughness and Elongation: Weld filler metals shall be capable of providing welds with the following minimum mechanical property requirements using AWS A5 classification test methods:
 - 1) CVN toughness of 20 ft-lb at minus 20° F
 - 2) Elongation: 22% minimum.
 - b. Weld filler metals shall be low-hydrogen per AWS D1.1.
 - c. Weld procedures shall conform to the Hydrogen Control Method in AWS D1.1 Annex XI.
 - d. All welds used in members and connections in the LFRS shall be made with filler metals meeting the requirements specified in AWS D1.8 Clause 6.3. AWS D1.8 Clauses 6.3.5, 6.3.6, 6.3.7, and 6.3.8 shall apply only to demand critical welds.
 - 3. Demand-Critical Welds (as noted on plan): In addition to the requirements for Seismic-Load-Resisting System (SLRS) welds, employ weld filler metals capable of providing welds with a minimum CVN toughness of 40 ft-lb at 70° F, using AISC 341, AWS D1.8 test conditions and specimens in lieu of those in AWS A5. Demand critical welds shall be made with
- R. Grout: ASTM C1107/C1107M; Non-shrink; premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents.
- 1. Minimum Compressive Strength at 48 Hours: 2,000 pounds per square inch.
 - 2. Minimum Compressive Strength at 28 Days: 7,000 pounds per square inch.
 - 3. Height Change, Plastic State; when tested according to ASTM C827/C827M:
 - a. Maximum: Plus 4 percent.
 - b. Minimum: Plus 1 percent.
- S. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.
- T. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20, Type I - Inorganic, complying with VOC limitations of authorities having jurisdiction.

2.02 FABRICATION

- A. Shop fabricate to greatest extent possible.
- B. Coordinate as required for attachment of other work to structural steel.
- C. Where required for passage of reinforcing steel shapes, sections, plates, or bars, drill or punch holes as indicated on Contract Drawings. Notify Architect of conditions not shown or noted.
- D. Allowable Tolerances: Comply with AISC 360, Chapter M, and AISC 303, Section 6. Where more restrictive tolerances are necessary to properly install other building systems and components then adopt the more restrictive tolerances.
- E. Architecturally Exposed Structural Steel (AESS): All structural steel denoted "AESS" on the drawings shall be fabricated in accordance with the requirements of the Specifications.
- F. Holes and attachments to structural steel in areas designated as the Protected Zone are not allowed except as explicitly shown or noted on structural drawings.
- G. Connections:
 - 1. Shop Connections: Bolted or welded as noted.
 - 2. Field Connections: Locate splices only where noted or approved by Architect.
 - 3. To the extent possible, assemble structural steel in the shop prior to galvanization.
- H. Bolted Joints:
 - 1. Punch or drill holes 1/16" larger than bolt size. Material having thickness in excess of connector diameter plus 1/8" shall be drilled rather than punched.
 - 2. Ream unfair holes, but only up to next larger bolt size and install a bolt corresponding to the new hole size. Where unfairness exceeds maximum, weld hole in base material solid and drill hole of proper size.

3. Remove burrs that would prohibit solid seating of connected parts.
 4. Mark completely tightened bolts with identifying symbol.
 5. Provide hardened washers over slotted holes.
 6. Draw up tight, check threads with chisel or provide approved lock washers where bolts are not pretensioned.
 7. Assembly with Standard Threaded Fasteners: Provide beveled washers under bolt heads or nuts resting surfaces exceeding five percent slope with respect to head or nut
 8. Assembly of High-Strength Structural Bolted Joints:
 - a. Meet requirements of RCSC.
 - b. Seismic-Load Resisting System joints shall be slip-critical (friction-type) as defined in RCSC with Class A or better faying surfaces.
 - c. Provide hardened washers under provided under the element turned in the tightening procedure of high strength bolts.
 - d. Direct tension indicator washers, where used, shall be provided under the head of slip-critical high strength bolts.
- I. Welded Construction: (shop and field)
1. Weld in accordance with AISC 360, AWS D1.1, and CBC Chapter 22A.
 2. Welding shall be performed in accordance with the WPS for the joint.
 3. Welds that will be permanently exposed to view shall have burrs, flux, welding oxide air spots, and discolorations removed. Surfaces of such welds shall be reasonably smooth and uniform.
 4. Exterior welds shall be watertight.
 5. Each welder working on the project shall be assigned an identification symbol or mark. Each welder shall mark or stamp this identification symbol at each weld completed. Stamps, if used, shall be the low-stress type.
 6. Before testing, all welds to be subjected to ultrasonic testing (UT) shall be given a visible mark, "for UT," accurately placed on the steel a distance of 4" away from the root of the edge preparation.
 7. Groove welds shall be complete-joint-penetration welds, unless specifically designated otherwise.
 8. WPSs shall be available to welders and inspectors prior to and during the welding process. Prior to welding, joint fit-up shall be verified by the welder for conformance with the WPS and AWS D1.1.
 9. Supplemental Welding Requirements
 - a. Maximum Preheat and Interpass Temperature: The maximum preheat and maximum interpass temperature permitted is 550° F, measured at a distance of 1" from the point of arc initiation. This maximum temperature may not be increased by the WPS, regardless of qualification testing.
 - b. Nonfusible Backing: The use of nonfusible backing materials, including ceramic and copper, is permitted only with satisfactory welder qualification testing performed using the type of backing proposed for use and using the test plate shown in AWS D1.1, Figure 4.21, except that groove dimensions shall be as provided in the WPS and PQR. For nonfusible weld tabs and short segments of nonfusible backing bars used at the ends of welds between shear plates and column faces, or at the ends of continuity plate welds, special welding personnel and welding procedure qualification testing is not required.
 - c. Peening, Controlled Cooling, and Post-Weld Heat Treatment (PWHT): If peening, controlled cooling, or PWHT are used, they shall be performed in accordance with AWS D1.1 and a written procedure for their performance shall be incorporated into the appropriate WPS.
 - 1) If insulating blankets are used to control cooling a written procedure and temperature measurements are not required.
 - 2) The application of heat immediately following completion of a joint to maintain a nominal temperature at or below 550° F is not considered PWHT.

- d. Intermix of Filler Metals: For Demand-Critical Welds in which different weld filler metals are used, supplemental toughness testing shall be conducted as prescribed in AWS D1.8
 - e. Wind Velocity Limits: In the Seismic-Load-Resisting-System, in lieu of the wind speed limitations in AWS D1.1, welds using GMAW, FCAW-G, GTAW and EGW methods shall not be performed when the wind velocity in the immediate vicinity of the weld exceeds three miles per hour. Welding performed within an enclosed area, and not subject to drafts may be deemed to satisfy this requirement. For SMAW, FCAW-S, and SAW processes wind shall not affect the appearance of the molten weld puddle.
10. Welded Joint Details:
- a. Backing bars: The use of backing bars shall be in accordance with AWS D1.1 and D1.8. Backing bars shall be removed where required by the Contract Documents or AWS D1.1 or D1.8.
 - 1) Beam-Column Connection Joints Requiring Removal of Backing Bars: Following removal of backing, remove un-sound weld metal at the root area and any excessive weld discontinuities, and backweld. Minimize gouging and removal of base metal. A reinforcing fillet weld with a minimum leg size of 5/16" or the root opening plus 1/16", whichever is larger, shall be provided. Perform MT on the fillet weld and the immediately adjacent area.
 - 2) If groove weld backing is permitted to remain, the backing shall not exceed ?" thickness. For connections of the seismic-load-resisting system in which backing is not removed, backing shall be attached to the member or plate that does not have its surface prepared for the groove weld. Attachment shall be by either a 1/4" fillet or groove weld along the complete bar length on the side of the bar opposite the groove weld.
 - b. Weld dams are not allowed.
 - c. Weld Tabs:
 - 1) Use of Weld Tabs: Welds shall be terminated at the end of a joint in a manner that will ensure sound welds. Whenever necessary, this shall be done by use of weld tabs.
 - (a) Weld tabs shall extend beyond the edge of the joint a distance equal to a minimum of the part thickness, but not less than 1".
 - (b) Weld tabs shall be oriented parallel to the joint preparation and to the weld direction.
 - (c) Nonfusible weld tabs may be used in applications and locations where qualified in accordance with AWS D1.1, Section 4.
 - 2) SLRS Beam-Column Connection Weld Tab Removal and Finish:
 - (a) Weld tabs of SLRS connections shall be removed. Removal may be performed by air carbon arc cutting (CAC-A), grinding, chipping, or thermal cutting to within 1/8" of the base metal surface. For continuity plate weld tabs, removal within 1/4" of the plate edge is adequate. The process shall be controlled to minimize removal of base metal except for that material immediately adjacent to the weld. The edges where the weld tabs have been removed shall be finished Extra Smooth.
 - (b) In SLRS connections, gouges deeper than 1/16" at locations of removal of weld tabs shall be repaired by welding according to the requirements of this Specification for Deep Gouges. Weld filler metal requirements for Demand-Critical Welds apply. The contour of the weld at the ends shall provide a smooth transition, free of gouges and sharp corners. A minimum radius at the corner need not be provided.
 - (c) Following weld tab removal, finishing, and completion of any necessary repairs, the exposed ends of the weld shall be inspected using magnetic particle testing (MT) or Penetrant Testing (PT).
 - d. Weld toes: Weld toes, whether for groove welds or fillet welds, shall provide a smooth transition between the weld and base metal. The as-welded profile is adequate provided it satisfies the criteria of AWS D1.1, Section 5.24.

- e. Weld access holes:
 - 1) Weld access holes shall meet the dimensional, surface finish, and testing requirements of AISC 360 Chapter J1.6 and AWS D1.1, except as otherwise required by the Contract Documents.
 - 2) Where the height of the weld access hole exceeds the quantity $k-tf+1\frac{1}{2}$ " or where the length of the weld access hole exceeds 4 tf (where k and tf are defined in AISC 360), welded reinforcement is required. Notify the Architect for specific instruction.
 - 3) At welded flange joints that are part of the Seismic Load Resisting System, the weld access hole shall be provided in accordance with AWS D1.8 Part D unless the section is a Heavy Section.
 - 4) The SLRS access hole shall be ground Extra Smooth. Gouges at SLRS access holes shall be repaired according to the requirements of this Specification. Weld filler metal requirements for the Demand-Critical Welds apply.
 - 5) SLRS weld access holes shall be inspected using magnetic particle testing (MT) or liquid penetrant testing (PT) and shall be free of cracks. If a welded gouge repair has been performed, magnetic particle testing (MT) shall be performed.
 - f. Web weld details: A minimum clear distance of $\frac{1}{2}$ " shall be provided between the weld access hole and fillet welds connecting the shear plate and beam web.
 - g. Welding for Moment Connection of Bottom Beam Flange shall be sequenced so as to minimize residual stresses in the joint.
 - h. Weave Passes: Weave passes are not permitted in groove welds in the SLRS.
 - i. Column continuity plate details:
 - 1) If backing bars are used and remain in place, they shall receive a reinforcing fillet weld between the backing bar and column flange. No fillet weld should be placed between backing bar and continuity plate.
 - 2) Weld terminations near the end of the column flange tips may be completed using weld tabs. Weld tabs shall be removed to within $\frac{1}{4}$ " of the continuity plate edge and the surface finished Extra Smooth. Following finishing, the edge shall be inspected using MT. For continuity plate welds, terminations near the internal radius of the member need not be made using weld tabs. Fillet weld terminations between the continuity plate and column web shall be approximately $\frac{1}{4}$ " from each end of the joint
 - j. Tack Welds in the SLRS Protected Zones: Tack welds in the SLRS Protected Zones are permitted only if they are incorporated into a required weld.
- J. Welded Connectors: Install in accordance with AWS D1.1 and manufacturer's recommendations. There shall be no porosity or evidence of lack of fusion between the end of the stud and the steel member.
- K. Develop required camber for members.
- L. Repair of Discontinuities in Protected Zone of Seismic-Load-Resisting System.
- 1. Repair of Discontinuities: If erection aids within the Protected Zone cannot be avoided, the Structural Engineer's approval of the aid's placement, use, and the repair method is required. Air carbon arc gouging is permitted for the removal of welds to within $\frac{1}{8}$ " of the base metal surface. Any remaining weld deposits shall be removed by grinding to a depth $\frac{1}{16}$ " below the surface, faired to adjacent surfaces on a slope not to exceed 1:5.
 - 2. Air Carbon Arc Cutting and Thermal Cutting: Air carbon arc cutting (CAC-A) and thermal cutting is permitted in the Protected Zone with the prior approval of the Structural Engineer for the removal of backing bars and weld tabs, as specified in these documents.
 - 3. Gouges in members and connections in the Seismic-Load-Resisting System shall be repaired according to the requirements of this Specification. Weld filler metal requirements for the Seismic-Load-Resisting System apply, unless otherwise noted.
- M. Surface Finish
- 1. Flush Surfaces: Welds in butt joints required to be flush shall be finished so as to not reduce the thickness of the thinner base metal or weld metal by more than $\frac{1}{16}$ ", or 5% of the

material thickness, whichever is less. Remaining reinforcement shall not exceed 1/32" in height. However, all reinforcement shall be removed where the weld forms part of a faying or contact surface. All reinforcement shall blend smoothly into the plate surfaces with the transition areas free from undercut.

2. Finish Methods and Values: Chipping and gouging may be used, provided these methods are followed by grinding. Where surface finishing is required, surface shall be Extra Smooth, unless otherwise noted or specified in this document. Measurement of surface finish values by visual appearance or tactile comparison is acceptable.
- N. Repair of Gouges: Gouges are not permitted in areas requiring an Extra Smooth finish surface, or where specifically prohibited by AWS D1.1 or this Specification. Repair of gouges meet the following requirements, unless otherwise noted:
1. Shallow Gouges: Gouges up to 3/16" deep shall be removed by grinding as per D1.1, or to a radius of not less than 3/8".
 2. Deep Gouges: Gouges deeper than 3/16" shall be repaired by welding. Prior to welding, gouges shall be ground to provide an Extra Smooth contour with a radius not less than 3/8". The repair area shall be preheated to a temperature between 400° F and 550° F, measured at the point of welding approximately one minute after removal of the heating source, or shall be preheated in accordance with AWS D1.1 Annex XI for high restraint. A written repair WPS for the application shall be followed. Following completion of welding, the area shall be ground Extra Smooth, with fairing of the welded surface to adjoining surfaces where applicable, and shall be inspected using magnetic particle testing (MT).
 3. The transitional slope after gouge removal shall not exceed 1:5.

2.03 FINISH

- A. Prepare structural component surfaces in accordance with SSPC-SP 3.
- B. Shop prime structural steel members. Do not prime surfaces that will be fireproofed, field welded, in contact with concrete, or high strength bolted.
- C. Galvanization
 1. Galvanize steel where required by the Drawings or by other sections of the Specification.
 2. Galvanize Shapes in accordance with ASTM A153.
 3. Galvanize Fasteners in accordance with ASTM B695, Class 40 minimum.
- D. Performance Painting: Provide zinc-rich performance painting for exposed steel shapes, members, and fasteners. Refer to Specification Section.

2.04 SOURCE QUALITY CONTROL

- A. Provide shop testing and analysis of structural steel.
- B. The District's Testing Agency will:
 1. Review ladle analysis and certificates of compliance. Where certification is questionable, test material to verify compliance per CBC.
 2. Inspect shop fabrication per CBC Chapter 17A.
 3. Provide the management, personnel, equipment, and services required to perform the quality assurance functions required below.
 4. Verify that no improper attachments to the Protected Zone have been made.
 5. Forward copies of all product and procedure certificates, data sheets, and test and inspection reports to the District, Architect, Structural Engineer, and, Contractor, and DSA.
- C. Welding Inspection: The Welding Inspector will perform the tasks indicated in the following list. This list shall not be considered exclusive of any additional inspection tasks that may be necessary to meet the requirements of AWS D1.1, CBC Chapter 17A and the Quality Assurance Plan
 1. Review and understand the applicable portions of the specifications, the Contract Documents and the shop drawings for the project.

2. Verify that all applicable welder qualifications, welding operator qualifications and tack welder qualifications are available, current, accurate, and in compliance with these specifications.
 3. Verify welder identification and qualification. Verify that any required supplemental welder qualification testing, if required for the joint, has been executed and that the welder has passed.
 4. Verify that each welder has a unique identification mark or die stamp to identify welds.
 5. Verify that all applicable Welding Procedure Specifications (WPSs), with Procedure Qualification Records (PQRs) as needed, are available, current and accurate, and comply with AWS D1.1 and this specification.
 6. Verify that an approved Welding Procedure Specification (WPS) has been provided and that each welder performing the weld has reviewed the WPS. A copy of the appropriate WPS shall be available for each joint, although need not be present at each joint location.
 7. Review mill test reports for all main member and designated connection base material for compliance with the project requirements.
 8. Verify base material identification with the contract documents.
 9. Verify the electrode, flux and shielding gas certifications for compliance with the Contract Documents.
 10. Verify welding consumables with the approved WPSs.
 11. Verify that electrodes are used only in the permitted positions and within the welding parameters specified in the WPS.
 12. Verify that electrodes and fluxes are properly stored, and that exposure limits for the welding materials are satisfied.
 13. At suitable intervals, observe joint preparation, assembly practice, preheat temperatures, interpass temperatures, welding techniques, welder performance and any post-weld controlled cooling and heat treatment to ensure that the requirements of the WPS and AWS D1.1 are satisfied.
 14. At suitable intervals, verify current and voltage of the welding equipment in application of the WPS, if needed, by a calibrated amp and voltmeter. Current and voltage shall be measured near the arc with this equipment.
 15. Inspect the work to ensure compliance with AWS D1.1 and the specified weld acceptance criteria.
 16. Schedule NDT technicians in a timely manner, after the visual inspection is complete and the assembly has cooled. The final NDT on a specific weld shall be performed at least 24 hours after the welding has been completed.
 17. Mark the welds, parts, and joints that have been inspected, and accepted, with a distinguishing mark or die stamp, or maintain records indicating the specific welds inspected and accepted by each inspector.
 18. Document the accepted and rejected items in a written report. Transmit the report to the designated recipients in a timely manner.
- D. Nondestructive Testing of Welded Joints
1. Magnetic Particle Testing: Magnetic Particle Testing (MT) shall be conducted by the District's Testing Agency at the frequency designated in Table 2-1. MT shall be performed in accordance with AWS D1.1, and D1.8.
 2. Ultrasonic Testing: Ultrasonic testing (UT) shall be conducted by the District's Testing Agency for the percentage of joints designated in Table 2-1. UT shall be performed in accordance with AWS D1.1.
 3. Weld Acceptance Criteria shall be in accordance with AWS D1.1. Regions of welds that cannot be inspected shall be identified and recorded, and the Structural Engineer shall be notified.
 4. K-Area Welding Inspection: After welds of continuity plates and doubler plates have cooled to ambient temperature, test column webs for cracking using liquid penetrant (PT) or magnetic particle testing (MT) over a zone 3" above and below each weld.
- E. Nondestructive Testing Requirements:

Weld Category	Complete Joint Penetration (1)	Partial Joint Penetration and Fillet Welds (2)
Welds not described below	No NDT required unless otherwise noted	No NDT required unless otherwise noted
SRLS welds not described below	MT 25% of joints, full length (2) UT 25% of joints, full length (2)	MT 25% of joints, 6" spot at random (2)
Top-flange joints at cantilever beam connections (3)	MT 100% of joints, full length UT 100% of joints, full length	MT 100% of joints, full length
Demand-Critical Welds; Butt joints in column splices	MT 100% of joints, full length UT 100% of joints, full length (4)	MT 100% of joints, full length

1. UT is required only when the weld thickness is 5/16" or greater.
2. If any joint fails testing, test 100% of joints until 40 consecutive welds pass. The testing rate may then be reduced to 25%.
3. Test joint on each side of cantilever beam support.
4. Reduce the rate of UT to 25% if after 40 welds have been inspected, an individual welder's reject rate is less than 5%.

- F. High-Strength Bolts: Provide testing and verification of shop-bolted connections in accordance with RCSC (HSBOLT) "Specification for Structural Joints Using High-Strength Bolts", testing at the following:
1. Identifiable components: Fastener assemblies with components found to be identifiable in accordance with Section 1 above shall be sampled as follows:
 - a. Projects requiring the installation of less than 1,600 fastener assemblies of a type of bolt: sample one complete fastener assembly for every 400 or fraction thereof for each type of bolt to be installed in the project, but not less than three complete fastener assemblies for each type of bolt to be installed in the project.
 - b. Projects requiring the installation of 1,600 or more fastener assemblies of a type of bolt: sample identifiable fastener assemblies at a rate of one per 1,200 (or fraction thereof) but not less than three complete fastener assemblies for each type of bolt to be installed in the project.
 2. Unidentifiable components: Fastener assemblies with components found to be unidentifiable in accordance with Section 1 above shall sample three complete fastener assemblies for every 100 or fraction thereof for each type of bolt to be installed in the project.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that conditions are appropriate for erection of structural steel and that the work may properly proceed.

3.02 ERECTION

- A. Erect structural steel in compliance with AISC S303 "Code of Standard Practice for Steel Buildings and Bridges".
- B. Allow for erection loads, and provide sufficient temporary bracing to maintain structure in safe condition, plumb, and in true alignment until completion of erection and installation of permanent bracing.
- C. Field weld components and shear studs indicated on drawings.

- D. Use carbon steel bolts only for temporary bracing during construction, unless otherwise specifically permitted on drawings. Install high-strength bolts in accordance with RCSC (HSBOLT) "Specification for Structural Joints Using High-Strength Bolts".
- E. Do not field cut or alter structural members without approval of Architect.
- F. After erection, prime welds, abrasions, and surfaces not shop primed, except surfaces to be in contact with concrete.
- G. Leveling of Column Base Plates: Contractor shall specify the means and methods for leveling the column base plates during erection. The leveling method shall have sufficient strength to support the imposed loads, including construction loading.
- H. Grout solidly between column plates and bearing surfaces, complying with manufacturer's instructions for nonshrink grout. Trowel grouted surfaces smooth, splaying neatly to 45 degrees.

3.03 TOLERANCES

- A. Maximum Variation From Plumb: 1/4 inch per story, non-cumulative.
- B. Maximum Offset From True Alignment: 1/4 inch.

3.04 CLEANING

- A. After erection, thoroughly clean surfaces of foreign or deleterious matter such as dirt, mud, oil, or grease that would impair bonding of fireproofing, concrete, or other finishes as applicable.

3.05 ARCHITECTURALLY EXPOSED STRUCTURAL STEEL (AESS)

- A. If temporary braces or erection clips are used, remove braces and clips in a manner which prevents unsightly surfaces.
- B. Tack welds shall be ground smooth.
- C. Holes shall be filled with weld filler metal or body solder and ground smooth.
- D. All operations shall be performed such that the close fit and neat appearance of the structure will not be impaired.
- E. Conform to AESS Specifications. See additional requirements in Section 05 12 13.

3.06 FIELD QUALITY CONTROL

- A. The District's Testing Agency will:
 1. Verify proper anchor rod group location, elevation, and orientation prior to placement of concrete foundations, and again subsequent to placement of concrete foundations prior to arrival of structural steel.
 2. Perform field welding inspection and testing in accordance with the requirements in Part 2 of this Specification for shop fabrication, unless otherwise noted.
 3. Inspect and test high strength bolted joints in accordance with RCSC and CBC Chapter 17A
 4. Sample and test bolt assemblies that include direct tension indicators, on a daily basis to verify proper indication of deformation with required bolt tension for each size and lot. The Inspector shall have a torque wrench, calibrated daily, to verify correlation with proper tension as installation proceeds. Test at least 10 percent of the bolts with a minimum of two per connection from the start of bolting and until waived by the DSA Field Engineer upon demonstration of continued good workmanship.
 5. Inspect erected structural steel as required to establish conformity of Work with reviewed shop drawings and Contract Drawings.
 6. Perform testing and inspection of welded stud connectors in accordance with requirements of AWS D1.1 and CBC Chapter 22A except that the test studs shall be subjected to a 90 degree bend test by striking them with a heavy hammer. After the bend test, the weld section shall not exhibit any tearing or cracking.

7. Inspect structural steel to verify that the Protected Zones of members of the Seismic-Load-Resisting System are free of damage and attachments not approved by the Structural Engineer.
8. Inspect braced frame connections prior to welding of braces to gusset plate to verify that the required clear width of gusset plate between the end of the brace and the diagonal stiffener plate, noted on the drawings as the "free plate zone", is maintained.
9. Forward copies of all test and inspection reports to the District, Architect, Structural Engineer, Contractor, and DSA.

END OF SECTION

SECTION 05 1213**ARCHITECTURALLY-EXPOSED STRUCTURAL STEEL FRAMING****PART 1 GENERAL****1.01 SECTION INCLUDES**

- A. Additional requirements for structural steel members designated as architecturally-exposed structural steel (AESS).
 1. Requirements in Section 05 1200 - Structural Steel Framing also apply to AESS.

1.02 DEFINITIONS

- A. Architecturally-Exposed Structural Steel: Structural steel complying with designated AESS category as defined in AISC 303.
 1. AESS: Structural steel designated as "Architecturally Exposed Structural Steel" or "AESS" in the Contract Documents.
 2. Category AESS 1: Structural steel that is categorized by AISC 303, Section 10, as AESS 1 and may be designated AESS 1 or Category AESS 1 in the Contract Documents.
 3. Category AESS 2: Structural steel that is categorized by AISC 303, Section 10, as AESS 2 and is designated as AESS 2 or Category AESS 2 in the Contract Documents.
 4. Category AESS 3: Structural steel that is categorized by ANSI/AISC 303, Section 10, as AESS 3 and is designated as AESS 3 or Category AESS 3 in the Contract Documents.
 5. Category AESS 4: Structural steel that is categorized by ANSI/AISC 303, Section 10, as AESS 4 and is designated as AESS 4 or Category AESS 4 in the Contract Documents.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Preinstallation Meeting: Schedule and conduct a preinstallation meeting at project site one week prior to start of work of this section; require attendance by all affected installers. Coordinate requirements for shipping, special handling, storage, attachment of safety cables and temporary erection bracing, final coating, touch-up painting, mock-up coordination, Architect's observations, and other requirements for AESS.
- B. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

1.04 SUBMITTALS

- A. Action Submittals:
 1. Product Data:
 - a. Submit paint systems in accordance with Section 09 9600.
 - b. Tension-control, high-strength, bolt-nut-washer assemblies.
 - c. Corrosion-resisting (weathering steel), tension-control, high-strength, bolt-nut-washer assemblies.
 - d. Filler.
 - e. Primer.
 2. Shop Drawings: Detailing for fabrication of AESS components.
 - a. Provide erection documents clearly indicating which members are AESS members and the AESS category of each part.
 - b. Include details that clearly identify AESS requirements found in this specification. Provide connections for AESS consistent with concepts shown on drawings.
 - c. Indicate welds by AWS A2.4 symbols, distinguishing between shop and field welds, and show size, length and type of each weld. Identify grinding, finish and profile of welds as defined by the designated AESS category.

- d. Indicate orientation of hollow structural section (HSS) seams and mill marks (where applicable).
 - e. Indicate type, size, finish and length of bolts, distinguishing between shop and field bolts. Identify high-strength bolted slip-critical, direct-tensioned shear/bearing connections. Indicate orientation of bolt heads.
 - f. Indicate which surfaces or edges are exposed and what class of surface preparation is being used.
 - g. Indicate special tolerances and erection requirements as noted on drawings or defined by the designated AESS category.
 - h. Indicate vent or drainage holes for HSS members.
3. AESS 3 and AESS 4 Samples: Provide samples of specific AESS characteristics. Samples may be small size samples or components of conventional structural steel demonstrating specific AESS characteristics, including surface preparation, sharp edges ground smooth, continuous weld appearance, weld show through, and fabrication mark removal.
4. Samples: Submit Samples of AESS to set quality standards for exposed welds.
- a. Two steel plates, 3/8 inch (9.53 mm) by 8 inches (203.20 mm) by 4 inches (101.6 mm), with long edges joined by a groove weld and with weld ground smooth.
 - b. Steel plate, 3/8 inch (9.53 mm) by 8 inches (203.20 mm) by 8 inches (203.20 mm), with one end of a short length of rectangular steel tube, 4 inches (101.6 mm) by 6 inches (150 mm) by 3/8 inch (9.53 mm), welded to plate with a continuous fillet weld and with weld ground smooth and blended.
- B. Informational Submittals:
- 1. Qualification data for fabricator and erector to demonstrate their capabilities and experience. Include lists of completed projects names and address, names and addresses of architects and owners, photographs showing detail of installed AESS, and other information specified.

1.05 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements – CAL-Green, for the following measures:
 - 1. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 - 2. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.

1.06 QUALITY ASSURANCE

- A. Fabricator Qualifications: In addition to those qualifications listed in Section 05 1200, engage an AISC Certified Fabricator, experienced in fabricating AESS similar to that indicated for this project with a record of successful in-service performance, as well as sufficient production capacity to fabricate AESS without delaying the work.
- B. Erector Qualifications: In addition to those qualifications listed in Section 05 1200, engage an AISC Certified Erector, experienced in erecting AESS work similar in material, design, and extent to that indicated for this project and with a record of successful in-service performance.
- C. Comply with applicable provisions of AISC 303, Section 10 for the designated AESS category.

1.07 MOCK-UP

- A. Mockups: At least four weeks prior to fabricating AESS, construct mockups to demonstrate aesthetic effects as well as qualities of materials and execution.
- B. Review mockup during daylight hours.
- C. Provide mock-ups for AESS 3 and AESS 4 of nature and extent indicated in contract documents.

- D. Locate mock-ups in fabricator's shop. Mock-ups to be full-size unless Architect approves smaller models. Alternatively, when a mock-up is not practical, the first piece of an element or connection can be used to determine acceptability.
- E. Notify Architect one week in advance of dates and times when mock-ups will be available for review.
- F. Demonstrate applicable AESS characteristics for specified category of AESS on elements and joints in mock-up.
- G. Build mock-ups using member sizes and materials indicated for final work.
- H. Mock-up to demonstrate weld quality, contouring of welds at aligned walls of members, specified surface preparation, and finish coating.
- I. HSS members to extend at least 6 inches (152.4 mm) from joint in mock-up.
- J. Obtain Architect's written approval of mock-ups before starting fabrication.
- K. Retain and maintain mock-ups during construction in an undisturbed condition as a standard for judging completed work.
- L. Approved mock-ups in an undisturbed condition at Date of Substantial Completion may not become part of completed work.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Handle finished pieces in accordance with Section 10 of AISC 303, using nylon-type slings, or chains with softeners, or wire ropes with softeners such that they are not damaged.
- B. Store materials to permit easy access for inspection and identification. Keep steel members off ground by using pallets, platforms, or other supports. Protect steel members and packaged materials from erosion and deterioration. Use special care in handling to prevent twisting or warping of AESS members.

1.09 FIELD CONDITIONS

- A. Field Measurements: Where AESS is indicated to fit against other construction, verify actual dimensions by field measurements before fabrication.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

- A. Comply with Section 05 1200 - Structural Steel Framing, except as amended in this section for aesthetic purposes.
- B. Comply with AISC 303, Section 10 for specific AESS category designated on drawings.

2.02 PERFORMANCE REQUIREMENTS

- A. Comply with requirements of ANSI/AISC 303, Sections 1 through 9 and as modified in Section 10, "Architecturally Exposed Structural Steel."

2.03 STEEL

- A. Steel Members: As indicated in Section 05 1200 - Structural Steel Framing.

2.04 BOLTS, CONNECTORS, AND ANCHORS

- A. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F3125/F3125M, Type 1, round head with matching compatible ASTM A563 nuts and ASTM F436/F436M washers.

1. Finish: Plain.

2.05 FILLER

- A. Filler: Polyester filler intended for use in repairing dents in automobile bodies.

2.06 PRIMER

- A. Paint Maximum Product Emissions Limits: Primer paints must meet current requirements for VOC (Volatile Organic Compounds) limits of South Coast Air Quality Management District (SCAQMD 1113 and CAL-Green Table 5.504.4.3 for VOC Content Limits for Architectural Coatings.

1. CAL-Green Requirements for zinc rich primer coatings:
 - a. Zinc-Rich Primers: 340 grams per liter of product minus water.
 - b. Primers, Sealers, and Undercoaters: 100 grams per liter of product minus water.

- B. Touch-Up Primer for Galvanized Surfaces: Fabricator's standard, complying with VOC limitations specified in Section 01 8114.

- C. Zinc-Rich Primer: Shop applied.

1. Inorganic, zinc-rich, capable of providing sound foundation for field applied top coats despite prolonged exposure, cathodic protection and corrosion resistance. Similar to galvanizing.
2. Maximum Allowable Dry Time: 1 hour to touch; 12 hours to top coat.
3. Pigment Content: Minimum 63% zinc in dry film by weight.
4. Compatible with finish paint system specified in Section 09 9600 - High-Performance Coatings.
5. Product:
 - a. Tnemec Company, Inc.: 90-97 Tneme-Zinc, 2.5 to 3.5 mils total dry film thickness.

- D. Zinc-Rich Primer: Field applied.

1. Inorganic, zinc-rich, capable of providing sound foundation for field applied top coats despite prolonged exposure, cathodic protection and corrosion resistance. Similar to galvanizing.
2. Maximum Allowable Dry Time: 1 hour to touch; 12 hours to top coat.
3. Pigment Content: Minimum 63% zinc in dry film by weight.
4. Compatible with finish paint system specified in Section 09 9600 - High-Performance Coatings.
5. Product:
 - a. Tnemec Company, Inc.: 94H2O Hydro-Zinc, 2.5 to 3.5 mils total dry film thickness.

2.07 FABRICATION

- A. Fabricate and assemble AESS in shop to greatest extent possible. Locate field joints in AESS assemblies at concealed locations or as approved by Architect. Detail AESS assemblies to minimize field handling and expedite erection.

1. Use special care handling and fabricating AESS before and after shop painting to minimize damage to shop finish.

- B. Permissible tolerances for member depth, width, out of square, and camber and sweep to be as specified in ASTM A6/A6M, ASTM A500/A500M, and ASTM A1085/A1085M.

- C. Use special care in handling and shipping of AESS both before and after shop painting to minimize damage to any shop finish. Use nylon-type slings or softeners when using chains or wire rope slings.

- D. Bolted Connections:

1. Make in accordance with Section 05 1200 - Structural Steel Framing. Provide bolt type and finish as noted herein.

- E. Welded Connections:

1. Comply with AWS D1.1/D1.1M and Section 05 1200 - Structural Steel Framing.

2. Assemble and weld built-up sections by methods that will maintain alignment of members without warp exceeding tolerances of this section.
- F. Surface Preparation:
1. Remove blemishes or unsightly surfaces resulting from temporary braces or fixtures.
 2. Remove backing and run out tabs.
- G. Fabricate AESS in accordance with categories defined in AISC 303, as follows:
1. Category AESS 3:
 - a. Comply with overall profile dimensions of AWS D1.1/D1.1M for welded built-up members. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
 - b. Prepare surfaces according to Part 2 "Shop Priming" Article and SSPC-SP 6 (WAB)/NACE WAB-3.
 - c. Grind sheared, punched, and flame-cut edges to remove burrs and provide smooth surfaces and eased edges.
 - d. Make intermittent welds appear continuous, using filler or additional welding. Apply filler material over and between intermittent welds for a continuous, uniform, and smooth appearance. Verify filler material compatibility with coating system.
 - e. Seal weld open ends of hollow structural sections with 3/8 inch (9.53 mm) closure plates.
 - f. Limit butt and plug weld projections to 1/16 inch (1.58 mm).
 - g. Install bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
 - h. Remove weld spatter, slivers, and similar surface discontinuities.
 - i. Remove blemishes and surface irregularities resulting from temporary braces or fixtures by filling or grinding, before cleaning, treating, and shop priming.
 - j. Grind tack welds smooth unless incorporated into final welds.
 - k. Remove backing and runoff tabs, and grind welds smooth.
 - l. Limit as-fabricated straightness tolerance to one-half that permitted for structural-steel materials in ANSI/AISC 303.
 - m. Limit as-fabricated curved structural steel tolerance to that permitted for structural-steel materials in ANSI/AISC 303.
 - n. Limit as-fabricated straightness tolerance of welded built-up members to one-half that permitted by AWS D1.1/D1.1M.
 - o. Conceal fabrication and erection markings from view in the completed structure.
 - p. Make welds uniform and smooth.
 - q. Cut out mill marks from mill material or hide these markings from view in the completed structure. Where neither method is possible, remove mill marks by grinding and filling surfaces as approved by Architect.
 - r. Grind butt and plug welds smooth or fill, removing weld splatter exposed to view.
 - s. Orient HSS seams as indicated or away from view.
 - t. Align and match abutting member cross sections.
 - u. At visible open joints of copes, miters, and cuts, maintain uniform clear gaps of 1/8 inch (3.2 mm). At closed joints, maintain uniform contact within 1/16 inch (1.6 mm).
 - v. Fabricate with exposed surfaces smooth, square, and of surface quality approved by Architect.
 - w. In addition to the above requirements, provide the following:
 - 1) Treat HSS seams to appear seamless.
 - 2) Minimize weld show-through and distortion on the opposite side of exposed connections by grinding to a smooth profile aligned with adjacent material.

2.08 SHOP CONNECTIONS

- A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" using ASTM F3125/F3125M for type of bolt and type of joint specified.
 - 1. Joint Type: Snug tightened.
- B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work. Assemble and weld built-up sections by methods that will maintain alignment of members without warp exceeding the tolerance of this section.

2.09 GALVANIZING

- A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A123/A123M, G100,
 - 1. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
 - 2. Location of Galvanized Steel: As indicated on Drawings.

2.10 PAINT SYSTEM

- A. Compatibility: All components/procedures of AESS paint system to comply with coating system specified, submitted, and approved per Section 09 9600 - High Performance Coatings. As a minimum, identify required surface preparation, primer, intermediate coat (if applicable), and finish coat. Primer, intermediate coating, and finish coating to be from a single manufacturer combined in a system documented by manufacturer with adequate guidance for fabricator to procure and execute.

2.11 SHOP PRIMING

- A. Shop prime steel surfaces, except the following:
 - 1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches (50.8 mm).
 - 2. Surfaces to be field welded.
- B. Surface Preparation:
 - 1. Provide surface preparations to meet SSPC-SP 6.
 - 2. Coordinate required surface profile with approved paint submittal prior to beginning surface preparation.
 - 3. Prior to blasting, remove any grease and oil using solvent cleaning to meet SSPC-SP 1.
 - 4. Remove weld spatter, slivers and similar surface discontinuities.
 - 5. Ease sharp corners resulting from shearing, flame cutting or grinding.
- C. Priming - Interior Steel: Immediately after surface preparation, apply primer according to manufacturer's instructions to provide a dry film thickness of not less than 1.5 mils (0.038 mm). Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.
 - 1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
 - 2. Apply two coats of shop primer to surfaces that are inaccessible after assembly or erection.

2.12 GALVANIZING

- A. Hot-Dip Galvanized Finish - Exterior Steel: Apply zinc coating by hot-dip process to AESS indicated for galvanizing according to ASTM A123/A123M. Fabricate such that all connections of assemblies are made in the field with bolted connections where possible.

2.13 SOURCE QUALITY CONTROL

- A. Structural Requirements:

1. Comply with quality control requirements per AISC 360, Chapter N and AISC 303, Section 10. Refer to Section 05 1200 for additional requirements.
- B. AESS 3 Acceptance: Architect to observe AESS in the shop at a viewing distance consistent with final installation and determine acceptability based on approved mock-up. Quality assurance agency has no responsibility for enforcing requirements related to aesthetic effect.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify, with steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.
1. Prepare a certified survey of bearing surfaces, anchor rods, bearing plates, and other embedments, showing dimensions, locations, angles, and elevations.
- B. Erector to check AESS members upon delivery for twist, kinks, gouges or other imperfections which may result in rejection of appearance of member. Coordinate remedial action with fabricator prior to erecting steel.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Provide connections for temporary shoring, bracing and supports only where noted on approved fabrication documents. Temporary connections not shown are to be made at locations not exposed to view in final structure or as approved by Architect.
- B. Handle, lift and align pieces using nylon straps or chains with softeners required to maintain appearance of AESS through process of erection.

3.03 ERECTION

- A. Take special care during erection to avoid marking or distorting the AESS and to minimize damage to shop painting. Set AESS accurately in locations and to elevations indicated and according to ANSI/AISC 303 and ANSI/AISC 360.
1. Remove welded tabs that were used for attaching temporary bracing and safety cabling and that are exposed to view in the completed Work. Take care to avoid any blemishes, holes, or unsightly surfaces resulting from the use or removal of temporary elements.
 2. Grind tack welds smooth.
 3. Remove backing and runoff tabs, and grind welds smooth.
 4. Orient bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
 5. Remove erection bolts in Category AESS 4 AESS, fill holes with weld metal or filler, and grind or sand smooth to achieve surface quality approved by Architect.
 6. Fill weld access holes in Category AESS 4 AESS with weld metal or filler and grind, or sand smooth to achieve surface quality as approved by Architect.
 7. Conceal fabrication and erection markings from view in the completed structure.
- B. AESS 3: Feature elements in close view:
1. Erect AESS to the standard frame tolerances specified in ANSI/AISC 303 for non-AESS.
 2. Comply with AWS D1.1/D1.1M. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
 3. Remove weld spatter, slivers, and similar surface discontinuities.
 4. Grind off butt and plug weld projections larger than 1/16 inch (1.5875 mm).
 5. Continuous welds shall be of uniform size and profile.
 6. Ream holes that must be enlarged. Use of drift pins or burning is not permitted. Replace misaligned connection plates where holes cannot be aligned with acceptable appearance.

7. Splice members only where indicated on Drawings.
8. No torch cutting or field fabrication is permitted.
9. Weld profiles, quality, and finish shall be as approved by Architect.
10. Make joint welds, including tack welds, appear continuous by filling intermittent welds.
11. Field Welding: Weld profile, quality, and finish to be consistent with mock-ups approved prior to fabrication.
12. Field Welding: Weld profile, quality, and finish to be consistent with mock-ups approved prior to fabrication.

3.04 FIELD CONNECTIONS

- A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using High-Strength Bolts" for type of bolt and type of joint specified.
 1. Joint Type: Snug tightened.
- B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

3.05 FIELD QUALITY CONTROL

- A. See Section 01 4000 - Quality Requirements, for additional requirements.
- B. Testing Agency: Owner will engage a qualified testing agency to inspect AESS as specified in Section 051200 "Structural Steel Framing." The testing agency is not responsible for enforcing requirements relating to aesthetic effect.
- C. Architect will observe AESS in place to determine acceptability relating to aesthetic effect.
- D. Structural Requirements:
 1. Comply with quality control requirements per AISC 360, Chapter N and AISC 303, Section 10. Refer to Section 05 1200 for additional requirements.
 2. Quality assurance agency to review work for compliance with requirements of AISC 360, Chapter N and AISC 303, Section 10.
- E. AESS 3 Acceptance: Architect to observe AESS in place and determine acceptability based on qualification data and submittals as well as on approved mock-up. Quality assurance agency has no responsibility for enforcing requirements related to aesthetic effect.

3.06 CLEANING

- A. Touch-up Painting: Complete cleaning and touch-up painting of field welds, bolted connections, and abraded areas of shop paint to blend with adjacent surfaces of AESS. Perform touch-up work in accordance with manufacturer's instructions and as specified in Section 09 9123 - Interior Painting and 09 9600 - High Performance Coatings .

3.07 REPAIRS AND PROTECTION

- A. Remove welded tabs that were used for attaching temporary bracing and safety cabling and that are exposed to view in the completed Work. Grind steel smooth.
- B. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with field-applied zinc rich primer.
 1. Clean and prepare surfaces by SSPC-SP 6 power-tool cleaning.

END OF SECTION

SECTION 05 31 00
STEEL DECKING

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Composite floor deck.
- B. Supplementary framing for openings up to and including 18 inches.
- C. Bearing plates and angles.
- D. Stud shear connectors.

1.02 RELATED REQUIREMENTS

- A. Section 03 20 00 - Concrete Reinforcing.
- B. Section 03 30 00 - Cast-in-Place Concrete: Concrete topping over metal deck.
- C. Section 05 12 00 - Structural Steel Framing: Support framing for openings larger than 18 inches and shear stud connectors.
- D. Section 05 12 00 - Structural Steel Framing: Placement of embedded steel anchors for bearing plates in cast-in-place concrete.
- E. Section 05 50 00 - Metal Fabrications: Steel angle concrete stops at deck edges.

1.03 REFERENCE STANDARDS

- A. California Code of Regulations, Title 24, Part 2, with DSA Amendments, also known as the California Building Code (CBC), 2019 Edition.
- B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2014.
- C. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold Finished; 2013.
- D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2015.
- E. ASTM A510/A510M - Standard Specification for General Requirements for Wire Rods and Coarse Round Wire, Carbon Steel, and Alloy Steel; 2013.
- F. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2015.
- G. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable; 2016.
- H. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2015 (with March 2016 Errata).
- I. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel; 2008.
- J. ICC-ES AC43 - Acceptance Criteria for Steel Deck Roof and Floor Systems; ICC Evaluation Service, Inc; 2010 (R2013).
- K. ICC-ES AC70 - Acceptance Criteria for Fasteners Power Driven into Concrete, Steel and Masonry Elements; ICC Evaluation Service, Inc; 2013.
- L. SDI (DM) - Publication No.30, Design Manual for Composite Decks, Form Decks, and Roof Decks; 2007.

- M. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 1999 (Ed. 2004).
- N. SSPC-Paint 20 - Zinc-Rich Primers (Type I, "Inorganic," and Type II, "Organic"); 2002 (Ed. 2004).

1.04 SUBMITTALS

- A. See Section 01 30 00 - Administrative Requirements, for submittals procedures.
- B. Shop Drawings: Indicate deck plan, support locations, projections, openings, reinforcement, pertinent details, and accessories.
- C. Product Data: Provide deck profile characteristics, dimensions, structural properties, and finishes.
- D. Certificates: Certify that products furnished meet or exceed specified requirements.
- E. Submit manufacturer's installation instructions.
- F. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within the previous 12 months.
- G. Welding Procedures, WPQR if necessary.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing the work of this Section with minimum five years of documented experience.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Cut plastic wrap to encourage ventilation.
- B. Separate sheets and store deck on dry wood sleepers; slope for positive drainage.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Steel Deck:
 1. Verco Manufacturing Co. or equal product comply with ICC Report ER-1735P .
 2. Substitutions: See Section 01 60 00 - Product Requirements.

2.02 STEEL DECK

- A. All Deck Types: Select and design metal deck in accordance with SDI Design Manual.
- B. Composite Roof Deck: Fluted steel sheet embossed to interlock with concrete:
 1. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS) Grade 33/230, with G90/Z275 galvanized coating.
- C. Composite Floor Deck: Fluted steel sheet embossed to interlock with concrete:
 1. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS) Grade 33/230, with G90/Z275 galvanized coating.

2.03 ACCESSORY MATERIALS

- A. Bearing Plates and Angles: ASTM A36/A36M steel, galvanized per ASTM A123/A123M.
- B. Stud Shear Connectors: Made from ASTM A108 Grade 1015 bars.
- C. Welding Materials: AWS D1.1/D1.1M.
- D. Fasteners: Galvanized hardened steel, self tapping.

- E. Powder Actuated Mechanical Fasteners: Steel; with knurled shank and forged ballistic point. Comply with applicable requirements of ICC-ES AC70.
- F. Mechanical Fasteners: Steel; hex washer head, self-drilling, self-tapping.
- G. Weld Washers: Mild steel, uncoated, 3/4 inch outside diameter, 1/8 inch thick.
- H. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.
- I. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20, complying with VOC limitations of authorities having jurisdiction.

2.04 SOURCE QUALITY CONTROL

- A. The District's Testing Agency will:
 1. Review mill analysis and certificates of compliance.
 2. Test samples of unidentified steel as required by CBC

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify existing conditions prior to beginning work.

3.02 INSTALLATION

- A. Erect metal deck in accordance with SDI Design Manual and manufacturer's instructions. Align and level.
- B. On concrete and masonry surfaces provide minimum 4 inch bearing.
- C. On steel supports provide minimum 1-1/2 inch bearing.
- D. Fasten deck to steel support members at ends and intermediate supports at 12 inches on center maximum, parallel with the deck flute and at each transverse flute using welds.
 1. Welding: Use fusion welds through weld washers.
- E. Clinch lock seam side laps.
- F. Drive mechanical sidelap connectors completely through adjacent lapped sheets; positively engage adjacent sheets with minimum three-thread penetration.
- G. At welded male/female side laps weld at 18 inches on center maximum.
- H. Weld deck in accordance with AWS D1.3/D1.3M.
- I. Where deck (other than cellular deck electrical raceway) changes direction, install 6 inch minimum wide sheet steel cover plates, of same thickness as deck. Fusion weld 12 inches on center maximum.
- J. At floor edges, install concrete stops upturned to top surface of slab, to contain wet concrete. Provide stops of sufficient strength to remain stationary without distortion.
- K. At openings between deck and walls, columns, and openings, provide sheet steel closures and angle flashings to close openings.
- L. Weld stud shear connectors through steel deck to structural members below.
- M. Immediately after welding deck and other metal components in position, coat welds, burned areas, and damaged surface coating, with touch-up primer.

3.03 FIELD QUALITY CONTROL

- A. The District's Testing Agency will:
 1. Provide continuous inspection of welding, including prior fit-up, welding equipment, weld quality and welder certification per CBC.

2. Provide continuous inspection during installation as required to establish conformity of Work with requirements.

END OF SECTION

SECTION 05 4000
COLD-FORMED METAL FRAMING

PART 1 GENERAL**1.01 SECTION INCLUDES**

- A. Formed steel stud exterior wall and interior wall framing.
- B. Exterior wall sheathing.
- C. Formed steel joist and purlin framing and bridging.
- D. Water-resistive barrier over sheathing.

1.02 RELATED REQUIREMENTS

- A. Section 07 21 00 - Thermal Insulation: Insulation within framing members.
- B. Section 07 25 00 - Weather Barriers: Weather barrier over sheathing.
- C. Section 07 62 00 - Sheet Metal Flashing and Trim: Head and sill flashings.
- D. Section 07 92 00 - Joint Sealants.
- E. Section 09 21 16 - Gypsum Board Assemblies: Lightweight, non-load bearing metal stud framing.
- F. Section 09 21 16 - Gypsum Board Assemblies: Gypsum-based sheathing.
- G. Section 09 24 00 - Cement Plastering.
- H. Section 09 51 00 - Acoustical Ceilings: Ceiling suspension system.

1.03 REFERENCE STANDARDS

- A. California Code of Regulations, Title 24, Part II, 2019 Edition with DSA Amendments, also known as California Building Code (CBC).
- B. AISI S100-16 - North American Specification for the Design of Cold-Formed Steel Structural Members; American Iron and Steel Institute; 2012.
- C. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2016a.
- D. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2015.
- E. ASTM C955 - Standard Specification for Load-Bearing (Transverse and Axial) Steel Studs, Runners (Tracks), and Bracing or Bridging for Screw Application of Gypsum Panel Products and Metal Plaster Bases; 2015.
- F. ASTM C1007 - Standard Specification for Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories; 2011a (Reapproved 2015).
- G. ASTM C1396/C1396M - Standard Specification for Gypsum Board; 2014a.
- H. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2015 (with March 2016 Errata).
- I. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel; 2008.
- J. ICC-ES AC308 - Acceptance Criteria for Water-Resistive Barriers; ICC Evaluation Service, Inc; 2013.
- K. SSPC-Paint 20 - Zinc-Rich Primers (Type I, "Inorganic," and Type II, "Organic"); 2002 (Ed. 2004).

1.04 ADMINISTRATIVE REQUIREMENTS

- A. Coordinate with work of other sections that is to be installed in or adjacent to the metal framing system, including but not limited to structural anchors, cladding anchors, utilities, insulation, and firestopping.

1.05 SUBMITTALS

- A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.
- B. Product Data: Provide manufacturer's data on factory-made framing connectors, showing compliance with requirements.
- C. Shop Drawings: Indicate component details, framed openings, bearing, anchorage, loading, welds, and type and location of fasteners, and accessories or items required of related work.
 - 1. Indicate stud and ceiling joist layout.
 - 2. Describe method for securing studs to tracks and for bolted framing connections.
- D. Manufacturer's Installation Instructions: Indicate special procedures, conditions requiring special attention.
- E. Weld Procedures if necessary.

1.06 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the types of products specified in this section, and with minimum three years of documented experience.
- B. Installer Qualifications: Company specializing in performing the work of this section with minimum three years documented experience.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Metal Framing:
 - 1. CEMCO: www.cemcosteel.com.
 - 2. ClarkDietrich Building Systems;: www.clarkdietrich.com.
 - 3. The Steel Network, Inc: www.SteelNetwork.com.
 - 4. Substitutions: See Section 01 60 00 - Product Requirements.
- B. Framing Connectors and Accessories:
 - 1. Same manufacturer as metal framing.
 - 2. ClarkDietrich Building Systems;: www.clarkdietrich.com.
 - 3. Simpson Strong Tie: www.strongtie.com.
 - 4. Substitutions: See Section 01 60 00 - Product Requirements.

2.02 FRAMING SYSTEM

- A. Provide primary and secondary framing members, bridging, bracing, plates, gussets, clips, fittings, reinforcement, and fastenings as required to provide a complete framing system.
- B. Shop fabricate framing system to the greatest extent possible.
- C. Deliver to site in largest practical sections.

2.03 FRAMING MATERIALS

- A. Studs and Track: ASTM C955; studs formed to channel, "C", or "Sigma" shape with punched web; U-shaped track in matching nominal width and compatible height.
 - 1. Gage and Depth: As indicated on the drawings.
 - 2. Products:
 - a. CST-SLP-TRK with horizontal slots by CEMCO per ESR 2012.

- b. Substitutions: See Section 01 60 00 - Product Requirements.
- B. Joists and Purlins: Fabricated from ASTM A653/A653M steel sheet, with G90/Z275 hot dipped galvanized coating.
 - 1. Base Metal: Structural Steel (SS), Grade 33/230.
 - 2. Gage and Depth: As indicated on the drawings.
- C. Framing Connectors: Factory-made, formed steel sheet.
 - 1. Material: ASTM A653/A653M SS Grade 33 and 40 (minimum), with G90/Z275 hot dipped galvanized coating for base metal thickness less than 10 gage, 0.1345 inch, and factory punched holes and slots.
 - 2. Structural Performance: Maintain load and movement capacity required by applicable code, when evaluated in accordance with AISI S100-12.
 - 3. Movement Connections: Provide mechanical anchorage devices that accommodate movement using slotted holes, shouldered screws or screws and anti-friction or stepped bushings, while maintaining structural performance of framing. Provide movement connections where indicated on drawings.
 - a. Where continuous studs bypass elevated floor slab, connect stud to slab in manner allowing vertical and horizontal movement of slab without affecting studs; allow for minimum movement of 1/2 inch.
 - b. Where top of stud wall terminates below structural floor or roof, connect studs to structure in manner allowing vertical and horizontal movement of slab without affecting studs; allow for minimum movement of 1/2 inch.
 - c. Provide top track preassembled with connection devices spaced to fit stud spacing indicated on drawings; minimum track length of 10 feet.
 - 4. Fixed Connections: Provide non-movement connections for tie-down to foundation, floor-to-floor tie-down, roof-to-wall tie-down, joist hangers, gusset plates, and stiffeners.
 - 5. Wall Stud Bridging Connections: Provide mechanical load-transferring devices that accommodate wind load torsion and weak axis buckling induced by axial compression loads. Provide bridging connections where indicated on the drawings.
 - 6. Products:
 - a. TSN Driftclip DSLB per ESR 2049.

2.04 WALL SHEATHING

- A. Wall Sheathing: Gypsum; complying with requirements of ASTM C1396/C1396M for gypsum sheathing, V-shaped long edges, 5/8 inch Type X fire resistant.

2.05 ACCESSORIES

- A. Bracing, Furring, Bridging: Formed sheet steel, thickness determined for conditions encountered; finish to match framing components.
- B. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20, Type I - Inorganic, complying with VOC limitations of authorities having jurisdiction.
- C. Water-Resistive Barrier: As specified in Section 07 25 00.

2.06 FASTENERS

- A. Self-Drilling, Self-Tapping Screws, Bolts, Nuts and Washers: Hot dip galvanized per ASTM A153/A153M.
 - 1. Products:
 - a. ITW Commercial Construction North America; ITW CCNA-Buildex Tek's Select Series: www.ITWBuildex.com.
 - b. Substitutions: See Section 01 60 00 - Product Requirements.
- B. Anchorage Devices: Powder actuated and Drilled expansion bolts.
- C. Welding: In conformance with AWS D1.1/D1.1M.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that substrate surfaces are ready to receive work.
- B. Verify field measurements and adjust installation as required.

3.02 INSTALLATION OF STUDS

- A. Install components in accordance with manufacturers' instructions and ASTM C1007 requirements.
- B. Place studs at 16 inches on center; not more than 2 inches from abutting walls and at each side of openings. Connect studs to tracks using fastener method.
- C. Construct corners using minimum of three studs. Install double studs at wall openings, door and window jambs.
- D. Install load bearing studs full length in one piece. Splicing of studs is not permitted.
- E. Install load bearing studs, brace, and reinforce to develop full strength and achieve design requirements.
- F. Coordinate placement of insulation in multiple stud spaces made inaccessible after erection.
- G. Provide deflection allowance in stud track, directly below horizontal building framing at non-load bearing framing.
- H. Attach cross studs to studs for attachment of fixtures anchored to walls.
- I. Install framing between studs for attachment of mechanical and electrical items, and to prevent stud rotation.
- J. Touch-up field welds and damaged galvanized surfaces with primer.

3.03 INSTALLATION OF JOISTS AND PURLINS

- A. Install framing components in accordance with manufacturer's instructions.
- B. Make provisions for erection stresses. Provide temporary alignment and bracing.

3.04 WALL SHEATHING

- A. Wall Sheathing: Secure with long dimension perpendicular to wall studs, with ends over firm bearing and staggered, using self-tapping screws.
 - 1. Place water-resistive barrier horizontally over wall sheathing, weather lapping edges and ends.

END OF SECTION

**SECTION 05 4300
SLOTTED CHANNEL FRAMING**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Slotted channel framing system.
- B. Accessories.

1.02 SUBMITTALS

- A. Action Submittals:
 1. Shop Drawings: Indicate profiles, sizes, connection attachments, anchorage, size and type of fasteners, and accessories. Include erection drawings, elevations, and details where applicable.

1.03 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 1. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 2. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.
 3. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
 4. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.
 5. A5.406.1, .2 and .3: Materials selected for longevity, reduced maintenance and recyclability.

1.04 QUALITY ASSURANCE

- A. Designer Qualifications: Design slotted channel framing system under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Acceptable Manufacturers:
 1. Unistrut Corporation: www.unistrut.com.
 2. Prior approved equal.

2.02 MATERIALS

- A. General: Comply with regionally-sourced product requirements specified in Section 018114.
 1. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 20 percent.
- B. Slotted Channel Framing at Exterior: ASTM A653, Grade 33.
 1. Primary Framing Member Profile: 1-1/4 inch (30 mm); square, with holes on channel legs.
- C. Slotted Channel Framing at Interior: ASTM A1011, Grade 33.
 1. Primary Framing Member Profile: 1-1/4 inch (30 mm); square, with holes on channel legs.
- D. Slotted Channel Fittings: ASTM A1011/A1011M.
- E. Fasteners: As detailed or required for indicated applications; manufacturer's standard fasteners designed specifically for specified system.

- F. Bolts, Nuts, and Washers: ASTM A325 (ASTM A325M), Type 1, galvanized to ASTM A153/A153M where connecting galvanized components.
- G. Threaded Rod: ASTM A307; threaded full length of rod; minimum 1/2 inch diameter, or as required to suit design requirements.
- H. Paint Maximum Product Emissions Limits: Top coat and primer interior paints must meet current requirements for VOC (Volatile Organic Compounds) limits of South Coast Air Quality Management District (SCAQMD) Rule No. 1113 and CAL-Green Table 5.504.4.3 for VOC Content Limits for Architectural Coatings.
 - 1. CAL-Green Requirements for typical paint coatings:
 - a. Primers, Sealers, and Undercoaters: 100 grams per liter of product minus water.
- I. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20, Type II - Organic, complying with VOC limitations of authorities having jurisdiction.

2.03 FABRICATION

- A. Fit and field assemble items in largest practical sections.
- B. Fabricate items with joints tightly fitted and secured.
- C. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; unobtrusively located; consistent with design of component, except where specifically noted otherwise.
- D. Supply components required for anchorage of framing components. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that field conditions are acceptable and are ready to receive work.

3.02 PREPARATION

- A. Supply setting templates to the appropriate entities for steel items required to be cast into concrete or embedded in masonry.

3.03 INSTALLATION

- A. Install items plumb and level, accurately fitted, free from distortion or defects.
- B. Provide for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.
- C. Obtain approval prior to site cutting or making adjustments not scheduled.
- D. After erection, repair and refinish abrasions.

3.04 TOLERANCES

- A. Maximum Variation From Plumb: 1/4 inch (6 mm) in 10 feet, non-cumulative.
- B. Maximum Offset From True Alignment: 1/4 inch (6 mm).
- C. Maximum Out-of-Position: 1/4 inch (6 mm).

END OF SECTION

**SECTION 05 5000
METAL FABRICATIONS**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Shop fabricated steel items.

1.02 SUBMITTALS

- A. Action Submittals:
 - 1. Shop Drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories. Include erection drawings, elevations, and details where applicable.
 - a. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.
- B. Informational Submittals:
 - 1. Welders' Certificates: Submit certification for welders employed on the project, verifying AWS qualification within the previous 12 months.
 - 2. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is accredited under IAS AC172.

1.03 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements- CAL-Green, for the following measures:
 - 1. 5.504.4.1 Adhesives and sealants.
 - 2. 5.504.4.3 Paints and coatings.
 - 3. 5.504.4.3.1 Aerosol paints and coatings.

1.04 QUALITY ASSURANCE

- A. Fabricator Qualifications: A qualified steel fabricator that is accredited by IAS AC172.
- B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- C. Welding Qualifications: Qualify procedures and personnel according to the following:
 - 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - 3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

1.05 FIELD CONDITIONS

- A. If possible, design metal fabrications so that they do not have to fit other construction.
- B. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 PRODUCTS

2.01 MATERIALS - STEEL

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 20 percent.
- B. Steel Sections: ASTM A36/A36M.
- C. Steel Tubing: ASTM A501/A501M hot-formed structural tubing.

- D. Plates: ASTM A283/A283M.
- E. Plates and Bars: ASTM A36/A36M.
- F. Steel Sheet: Uncoated, cold-rolled, ASTM A 1008/A 1008M, commercial steel, exposed or electrolytic zinc-coated, ASTM A 879/A 879M, with steel sheet substrate complying with ASTM A 1008/A 1008M, commercial steel, exposed.
- G. Pipe: ASTM A53/A53M, Grade B Schedule 40, black finish.
- H. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.
- I. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.
- J. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20, Type I - Inorganic, complying with VOC limitations of authorities having jurisdiction.
- K. Paint Maximum Product Emissions Limits: Top coat and primer interior paints must meet current requirements for VOC (Volatile Organic Compounds) limits of SCAQMD 1113 and CAL-Green Table 5.504.4.3 for VOC Content Limits for Architectural Coatings.
 - 1. CAL-Green Requirements for typical paint coatings:
 - a. Primers, Sealers, and Undercoaters: 100 grams per liter of product minus water.
- L. Universal Primer:
 - 1. Manufacturer's standard, lead free primer, capable of providing sound foundation for field applied top coats despite prolonged exposure.
 - 2. Standard: FS TT-P-645.
 - 3. Compatible with finish paint system specified in Sections 09 9113 - Exterior Painting and 09 9123 - Interior Painting.
 - 4. Acceptable Products:
 - a. Sherwin-Williams; S-W Pro Industrial ProCryl Universal Acrylic Primer, B66W310. Applied at a dry film thickness of not less than 3.0 mils.
 - b. Tnemec; Series 115 Uni-Bond DF. Applied at a dry film thickness of not less than 3.0 mils.
- M. Exposed Steel Primer:
 - 1. Zinc-Rich Primer:
 - a. Inorganic, zinc-rich, capable of providing sound foundation for field applied top coats despite prolonged exposure, cathodic protection and corrosion resistance.
 - b. Apply 2.5 to 3.5 mils DFT.
 - c. Maximum Allowable Dry Time: 1 hour to touch; 12 hours to top coat.
 - d. Pigment Content: Minimum 63% zinc in dry film by weight.
 - e. Compatible with finish paint system specified in Section 09 9600 - High-Performance Coatings.
 - f. Acceptable Products:
 - 1) Tnemec Co.; 90-97 Tneme-Zinc.

2.02 FASTENERS

- A. Fastener Materials: Unless otherwise indicated, provide the following:
 - 1. Interior Aluminum Components: Type 304 stainless-steel fasteners.
 - 2. Exterior Aluminum Components: Type 316 stainless-steel fasteners.
 - 3. Interior Stainless-Steel Components: Type 304 stainless-steel fasteners.
 - 4. Exterior Stainless-Steel Components: Type 304 stainless-steel fasteners.
 - 5. Uncoated Steel Components: Plated-steel fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating where concealed; Type 304 stainless-steel fasteners where exposed.

6. Galvanized-Steel Components: Plated-steel fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating.
 7. Dissimilar Metals: Type 304 stainless-steel fasteners.
- B. Fasteners for Anchoring to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated and capable of withstanding design loads .
- C. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC01, ICC-ES AC193, ICC-ES AC58, or ICC-ES AC308.
1. Uses: Securing cold-formed steel framing to structure.
 2. Type: Torque-controlled expansion anchor or adhesive anchor.
 3. Material:
 - a. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941, Class Fe/Zn 5, unless otherwise indicated.
 - b. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 2 (A4) stainless-steel bolts, ASTM F593, and nuts, ASTM F594.
 4. Wedge Type:
 - a. Hilti Corp; KWIK BOLT 3, 1/4 inch (6.35 mm) to 1 inch (25 mm) diameter, ICC ESR-1385 and ESR-2302.
 - b. ITW Ramset; TRUBOLT WEDGE, 1/4 inch (6.35 mm) to 1-1/4 inch (31.75 mm) diameter, ICC ESR-3772.
 5. Sleeve Type:
 - a. DeWalt; Power-Bolt+ Heavy Duty Sleeve Anchor 1/4 inch (6.35 mm) to 3/4 inch (19.05 mm) diameter, ICC ESR-3260.
- D. Powder Actuated Fasteners
1. Use of Powder actuated fasteners for tension loads is limited to support of minor loads such as suspended acoustical ceilings, ductwork and conduit.
 2. Allowable Loads: Limited to less than 100 lbs.
 3. Permissible Loads:
 - a. Stone Aggregate Concrete: Minimum 0.177 inch diameter, minimum penetration 1-7/16 inch. Required Allowable Loads: 100 lbs. or 80 percent of values listed in ICC Report whichever is less.
 - 1) Hilti Corp; Low Velocity Powder-Actuated Fastners, ICC ERS-1663.
 - 2) ITW Ramset; 3300 SERIES, ICC ESR-1799.
- E. Bolts, Nuts and Washers
1. Bolts: ASTM A307, hex head.
 2. Nuts: ASTM A563, hex head.
 3. Washers: FS FF-W-92, helical spring.
 4. Plain Washers, ASTM F436, Type 1.
 5. Beveled Washers, ASTM F436, Type 1.
 6. High strength bolts, ASTM F3125/F3125M.
 7. Lag screws and lag bolts: ANSI B18.2.1; hex head.
 - a. Galvanizing for Bolts and Nuts: ASTM A153/A153M; galvanizing required for exterior applications.
 8. Nelson Studs: Use header anchors sized as shown on the drawings.

2.03 FABRICATION

- A. Fit and shop assemble items in largest practical sections, for delivery to site.
- B. Fabricate items with joints tightly fitted and secured.
- C. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

- D. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

2.04 FABRICATED ITEMS

- A. Provide and install items listed in schedule and shown on Drawings with anchorage and attachments necessary for installation.
- B. The following is a list of principal items only. Refer to Drawing details for items not specifically scheduled.
 - 1. Slotted Channel Framing System: Specified in Section 05 4300 - Slotted Channel Framing.
 - 2. Countertop Supports: 2x 2inch square steel tube, as detailed, prime paint finish.

2.05 ACCESSORIES

- A. Non-Shrink Grout: ASTM C1107/C1107M, Grade B; pre-mixed compound consisting of non-metallic aggregate, cement, and manufacturer's specified water reducing and plasticizing agents; non-staining, non-gas-forming, containing no chlorides; plastic consistency as measured according to ASTM C230/C230M; capable of developing minimum compressive strength of 7,000 psi in 28 days.

2.06 ELEVATORS

- A. Hoist Beam:
 - 1. Provide elevator equipment hoist beams required for elevator installation capable of supporting minimum 20,000 pound load.
 - 2. Provide elevator hoistway divider beams required for the support of cab and counter weight rails.
 - 3. Finish: Prime.
- B. Sill Support: Provide threshold support
- C. Guide Rails: Provide intermediate guide rail supports sized and spaced as required by code and elevator manufacturer for guide rails spanning more than 14 feet between supports.
- D. Sump Grating
 - 1. Fabricate from welded or pressure-locked steel bar grating Limit openings in gratings to no more than 1 inch (25 mm) in least dimension.
- E. Provide steel angle supports as indicated.

2.07 METAL BOLLARDS

- A. Fabricate exterior and interior metal bollards from 4 inch (102 mm) diameter Schedule 40 steel pipe.
 - 1. Concrete filled, crowned cap.
 - 2. Exterior Bollards in Slab on Grade: Penetration depth below top of slab to equal detailed height; core hole in slab on grade 2 inches (51 mm) inches larger than bollard diameter, and fill joint at slab with a non-shrink grout; prime paint finish.
- B. Prime steel bollards with zinc-rich primer.
- C. Finish Paint: As indicated in Section 09 9113 - Exterior Painting.
 - 1. Color: Paint OSHA Safety Yellow or as specified by Owner requirements.

2.08 LOOSE STEEL LINTELS

- A. Fabricate loose steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Fabricate in single lengths for each opening unless otherwise indicated. Weld adjoining members together to form a single unit where indicated.

- B. Size loose lintels to provide bearing length at each side of openings equal to 1/12 of clear span, but not less than 8 inches (200 mm) unless otherwise indicated.
- C. Prime loose steel lintels located in exterior walls with universal primer.

2.09 STEEL WELD PLATES AND ANGLES

- A. Provide steel weld plates and angles not specified in other Sections, for items supported from concrete construction as needed to complete the Work. Provide each unit with no fewer than two integrally welded steel strap anchors for embedding in concrete.

2.10 FINISHES - STEEL

- A. General:
 - 1. Prepare surfaces to be primed in accordance with SSPC-SP6, or as recommended by finish coating manufacturer.
 - 2. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.
- B. Prime paint steel items, unless otherwise specified.
 - 1. Exceptions: Do not prime surfaces in direct contact with concrete, where field welding is required, and items to be covered with sprayed fireproofing.
 - 2. Prepare surfaces to be primed in accordance with SSPC-SP6, or as recommended by finish coating manufacturer.
 - 3. Prime Painting: Zinc-rich primer, one coat.
 - 4. Finish Paint: Finish paint in accordance with Section 09 9600 - High-Performance Coatings.

2.11 FABRICATION TOLERANCES

- A. Squareness: 1/8 inch (3 mm) maximum difference in diagonal measurements.
- B. Maximum Offset Between Faces: 1/16 inch (1.5 mm).
- C. Maximum Misalignment of Adjacent Members: 1/16 inch (1.5 mm).
- D. Maximum Bow: 1/8 inch (3 mm) in 48 inches (1.2 m).
- E. Maximum Deviation From Plane: 1/16 inch (1.5 mm) in 48 inches (1.2 m).

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that field conditions are acceptable and are ready to receive work.

3.02 PREPARATION

- A. Clean and strip primed steel items to bare metal where site welding is required.
- B. Supply setting templates to the appropriate entities for steel items required to be cast into concrete or embedded in masonry.

3.03 INSTALLATION

- A. Install items plumb and level, accurately fitted, free from distortion or defects.
- B. Provide for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.
- C. Field weld components as indicated on Drawings.
- D. Obtain approval prior to site cutting or making adjustments not scheduled.

- E. After erection, prime welds, abrasions, and surfaces not shop primed, except surfaces to be in contact with concrete.

3.04 TOLERANCES

- A. Maximum Variation From Plumb: 1/4 inch (6 mm) per story, non-cumulative.
- B. Maximum Offset From True Alignment: 1/4 inch (6 mm).
- C. Maximum Out-of-Position: 1/4 inch (6 mm).

3.05 ADJUSTING AND CLEANING

- A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - 1. Apply by brush or spray to provide a minimum 2 mil (0.05 mm) dry film thickness.
- B. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 09 9113 - Exterior Painting, Section 09 9123 - Interior Painting, and Section 09 9600 - High Performance Coatings.
- C. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

END OF SECTION

SECTION 05 5100

METAL STAIRS

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Stairs with metal treads.
- B. Structural steel stair framing and supports.
- C. Design engineering for stair assemblies.

1.02 SUBMITTALS

- A. Action Submittals:
 - 1. Shop Drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories.
 - a. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.
 - b. Include the design engineer's seal and signature on each sheet of shop drawings.
- B. Informational Submittals:
 - 1. Welders' Certificates: Show certification of welders employed on the Work, verifying AWS qualification within the previous 12 months.
 - 2. Welders' Certificates.
 - 3. Designer's Qualification Statement.
 - 4. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is certified under AISC 201.

1.03 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 5.504.4.1 Adhesives and sealants.
 - 2. 5.504.4.3 Paints and coatings.
 - 3. 5.504.4.3.1 Aerosol paints and coatings.
 - 4. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
 - 5. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.
 - 6. Section A5.405.5: Provide documentation that cement and concrete used are made with recycled content and/or alternative energy.

1.04 QUALITY ASSURANCE

- A. Welder Qualifications: Show certification of welders employed on the Work, verifying AWS qualification within the previous 12 months.
- B. Fabricator Qualifications:
 - 1. A qualified steel fabricator that is certified by the American Institute for Steel Construction (AISC) under AISC 201.
 - 2. A qualified steel fabricator that is accredited by the International Accreditation Service (IAS) Fabricator Inspection Program for Structural Steel in accordance with IAS AC172.
 - 3. A company specializing in manufacturing products specified in this Section, with not less than ten years of documented experience.

- C. Certifications:
 1. Submit certificates verifying AWS qualifications for each welder employed on Project.
 2. Submit fabricator's certification that products furnished for Project meet or exceed specified requirements.
- D. Certification that fabrication and installation comply with structural requirements listed this Section.
- E. Welding Qualifications: Qualify procedures and personnel according to the following:
 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Metal Stairs: Provide stairs of the design specified, complete with landing platforms, vertical and horizontal supports, railings, and guards, fabricated accurately for anchorage to each other and to building structure.
 1. Regulatory Requirements: Provide stairs and railings complying with the most stringent requirements of local, state, and federal regulations; where requirements of Contract Documents exceed those of regulations, comply with Contract Documents.
 2. Handrails: Comply with applicable accessibility requirements of ADA Standards.
 3. Structural Design: Provide complete stair and railing assemblies complying with the applicable local code.
 - a. Stair Capacity: Uniform live load of 100 lb/sq ft (4.7 kPa) and a concentrated load of 300 lb (14.4 kg) with deflection of stringer or landing framing not to exceed 1/240 of span.
 4. Seismic Performance of Stairs: Metal stairs shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
 - a. Component Importance Factor: 1.5.
 5. Dimensions: As indicated on Drawings.
 6. Shop assemble components; disassemble into largest practical sections suitable for transport and access to site.
 7. No sharp or rough areas on exposed travel surfaces and surfaces accessible to touch.
 8. Separate dissimilar metals using paint or permanent tape.
 9. Interior stairs shall have the upper approach and lower tread marked by a stripe providing clear visual contrast. Exterior stairs shall have the upper approach and all treads marked by a stripe providing clear visual contrast.
 10. The stripe providing clear visual contrast shall be a minimum of 2 inches (50.8 mm) wide to a maximum of 4 inch (101.6 mm) wide placed parallel to, and not more than 1 inch (25 mm) from tile nose of the step or upper approach. The stripe shall extend the full width of the step or upper approach and shall be of material that is at least as slip resistant as the other treads of the stair. A painted stripe shall be acceptable. Grooves shall not be used to satisfy this requirement.
 11. The radius of curvature at the leading edge of the tread shall be no greater than 1/2 inch (12.70 mm). Nosings that project beyond risers shall have the underside of the leading edge curved or beveled. The maximum angle for a riser to slope under the tread shall be 30 degrees from vertical. Nosings shall extend 1-1/4 inch (31.75 mm) maximum over the tread below.
 12. Treads shall be 11 inches (279.40 mm) deep minimum. Risers shall be 7 inches (177.80 mm) high maximum and 4 inches (101.6 mm) high minimum. All steps on a flight of stairs shall have uniform riser heights and uniform tread depths. Open risers are not permitted.
- B. Metal Jointing and Finish Quality Levels:
 1. Architectural: All joints as inconspicuous as possible, whether welded or mechanical.
 - a. Welded Joints: Continuously welded and ground smooth and flush.
 - b. Mechanical Joints: Butted tight, flush, and hairline; concealed fastenings only.

- c. Exposed Edges and Corners: Eased to small uniform radius.
 - d. Metal Surfaces to be Painted: Sanded or ground smooth, suitable for highest quality gloss finish.
- C. Fasteners: Same material or compatible with materials being fastened; type consistent with design and specified quality level.
 - D. Anchors and Related Components: Same material and finish as item to be anchored, except where specifically indicated otherwise; provide all anchors and fasteners required.

2.02 METAL STAIRS WITH METAL TREADS

- A. Jointing and Finish Quality Level: Architectural, as defined above.
- B. Risers: Closed.
- C. Treads: Checkered steel plate.
 - 1. Tread Thickness: 1/8 inch (6 mm), minimum.
 - 2. Nosing: Plate bent to minimum radius with down return of 1 inch (25 mm).
 - 3. Anchorage to Stringers: Welded to carrier angles welded or bolted to stringers.
- D. Risers: Steel sheet.
 - 1. Riser Thickness: As required by design; 1/8 inch (6 mm) minimum.
 - 2. Riser/Nosing Profile: Sloped riser with rounded nosing of minimum radius.
- E. Stringers: Rolled steel channels.
 - 1. Stringer Depth: As indicated on Drawings, 10 inches (250 mm), minimum.
 - 2. End Closure: Sheet steel of same thickness as risers welded across ends.
- F. Landings: Same construction as treads, supported and reinforced as required to achieve design load capacity.
- G. Finish: Shop- or factory-prime painted.

2.03 MATERIALS

- A. General: Comply with recycled content product requirements specified in Section 01 8114.
- B. Steel Sections: ASTM A36/A36M.
- C. Steel Tubing: ASTM A500/A500M or ASTM A501/A501M structural tubing, round and shapes as indicated.
- D. Steel Plates: ASTM A6/A6M or ASTM A283/A283M.
- E. Ungalvanized Steel Sheet: Hot- or cold-rolled, except use cold-rolled where finished work will be exposed to view.
 - 1. Hot-Rolled Steel Sheet: ASTM A1011/A1011M, Designation CS (commercial steel).
 - 2. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, Designation CS (commercial steel).
- F. Checkered Plate: ASTM A786/A786M, rolled steel floor plate; manufacturer's standard pattern.

2.04 FASTENERS

- A. General: Provide zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 12 for exterior use, and Class Fe/Zn 5 where built into exterior walls. Select fasteners for type, grade, and class required.
- B. Bolts and Nuts: Regular hexagon-head bolts, ASTM A307, Grade A (ASTM F 568M, Property Class 4.6); with hex nuts, ASTM A563 (ASTM A 563M); and, where indicated, flat washers.
- C. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, ASTM A563 (ASTM A 563M); and, where indicated, flat washers.

1. Provide mechanically deposited or hot-dip, zinc-coated anchor bolts for stairs indicated to be galvanized.
- D. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC01, ICC-ES AC193, ICC-ES AC58, or ICC-ES AC308.
1. Uses: Securing cold-formed steel framing to structure.
 2. Type: Torque-controlled expansion anchor or adhesive anchor.
 3. Material:
 - a. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941, Class Fe/Zn 5, unless otherwise indicated.
 - b. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 2 (A4) stainless-steel bolts, ASTM F593, and nuts, ASTM F594.
 4. Wedge Type:
 - a. Hilti Corp; KWIK BOLT 3, 1/4 inch (6.35 mm) to 1 inch (25 mm) diameter, ICC ESR-1385 and ESR-2302.
 - b. ITW Ramset; TRUBOLT WEDGE, 1/4 inch (6.35 mm) to 1-1/4 inch (31.75 mm) diameter, ICC ESR-3772.
 5. Sleeve Type:
 - a. DeWalt; Power-Bolt+ Heavy Duty Sleeve Anchor 1/4 inch (6.35 mm) to 3/4 inch (19.05 mm) diameter, ICC ESR-3260.

2.05 ACCESSORIES

- A. Steel Bolts, Nuts, and Washers: ASTM A307, Grade A, plain.
- B. Steel Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, and galvanized to ASTM A153/A153M where connecting galvanized components.
- C. Steel Bolts, Nuts, and Washers: Galvanized to ASTM A153/A153M where connecting galvanized components.
- D. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.
- E. Paint Maximum Product Emissions Limits: Top coat and primer interior paints must meet current requirements for VOC (Volatile Organic Compounds) limits of South Coast Air Quality Management District SCAQMD 1113 and CAL-Green Table 5.504.4.3 for VOC Content Limits for Architectural Coatings.
 1. CAL-Green Requirements for typical paint coatings:
 - a. Primers, Sealers, and Undercoaters: 100 grams per liter of product minus water
- F. Universal Primer:
 1. Manufacturer's standard, lead free primer, capable of providing sound foundation for field applied top coats despite prolonged exposure.
 2. Standard: FS TT-P-645.
 3. Compatible with finish paint system specified in Section 099113.
 4. Location: Interior stairs.
 5. Acceptable Products:
 - a. Dunn-Edwards Corporation; BRPR00-1 Bloc-Rust Premium, Interior / Exterior, Red Oxide or White, Waterborne Alkyd Rust Preventative Metal Primer.
 - b. Sherwin-Williams; S-W Pro Industrial ProCryl Universal Acrylic Primer, B66W310.
 - c. Tnemec; Series 115 Uni-Bond DF.

2.06 FABRICATION, GENERAL

- A. Provide complete stair assemblies, including metal framing, hangers, struts, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.
 1. Join components by welding unless otherwise indicated.
 2. Use connections that maintain structural value of joined pieces.

- B. Assemble stairs in shop to greatest extent possible.
 - 1. Disassemble units only as necessary for shipping and handling limitations.
 - 2. Clearly mark units for reassembly and coordinated installation.
- C. Cut, drill, and punch metals cleanly and accurately.
 - 1. Remove burrs and ease edges to a radius of approximately 1/32 inch (0.79 mm) unless otherwise indicated.
 - 2. Remove sharp or rough areas on exposed surfaces.
- D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- E. Form exposed work with accurate angles and surfaces and straight edges.
- F. Weld connections to comply with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. Delete first subparagraph below if appearance is not important or if economy is more important.
 - 5. Weld exposed corners and seams continuously unless otherwise indicated.
 - 6. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Finish #1 - No evidence of welded joint.
- G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible.
 - 1. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated.
 - 2. Locate joints where least conspicuous.
 - 3. Fabricate joints that will be exposed to weather in a manner to exclude water.
 - 4. Provide weep holes where water may accumulate internally.

2.07 FABRICATION OF STEEL-FRAMED STAIRS

- A. NAAMM Stair Standard: Comply with NAAMM AMP 510, "Metal Stairs Manual," for Architectural Class, unless more stringent requirements are indicated.
- B. Stair Framing:
 - 1. Fabricate stringers of steel channels as indicated on Drawings.
 - a. Stringer Size: As indicated on Drawings.
 - b. Provide closures for exposed ends of channel and rectangular tube stringers.
 - c. Finish: Shop primed.
 - 2. Construct platforms of steel steel tube headers and miscellaneous framing members as indicated on Drawings.
 - a. Provide closures for exposed ends of channel and rectangular tube framing.
 - b. Finish: Shop primed.
 - 3. Weld stringers to headers; weld or bolt framing members to stringers and headers. If using bolts, fabricate and join so bolts are not exposed on finished surfaces.
 - 4. Where masonry walls support metal stairs, provide temporary supporting struts designed for erecting steel stair components before installing masonry.
- C. Metal Pan Stairs: Form risers, subtread pans, and subplatforms to configurations shown from steel sheet of thickness needed to comply with performance requirements, but not less than 0.067 inch (1.7 mm).
 - 1. Fabricate treads and landing subplatforms of exterior stairs so finished walking surfaces slope to drain.
 - 2. Steel Sheet: Galvanized-steel sheet.

3. Directly weld metal pans to stringers; locate welds on top of subtreads where they will be concealed by concrete fill. Do not weld risers to stringers.
 4. At Contractor's option, provide stair assemblies with metal pan subtreads filled with reinforced concrete during fabrication.
 5. Provide subplatforms of configuration indicated or, if not indicated, the same as subtreads. Weld subplatforms to platform framing.
 - a. Smooth Soffit Construction: Construct subplatforms with flat metal under surfaces to produce smooth soffits.
- D. Abrasive-Coating-Finished, Formed-Metal Stairs: Form risers, treads, and platforms to configurations shown from steel sheet of thickness needed to comply with performance requirements, but not less than 0.097 inch (2.5 mm).
1. Steel Sheet: Uncoated, hot-rolled steel sheet unless otherwise indicated.
 2. Directly weld risers and treads to stringers; locate welds on underside of stairs.
 3. Form treads with integral nosing and back edge stiffener. Form risers of same material as treads.
 4. Weld steel supporting brackets to stringers and weld treads to brackets.
 5. Fabricate platforms with integral nosings matching treads and weld to platform framing.
 6. Fabricate treads and platforms of exterior stairs so finished walking surfaces slope to drain.
 7. Provide platforms of configuration indicated or, if not indicated, the same as treads. Weld platforms to platform framing.
 8. Finish tread and platform surfaces with manufacturer's standard epoxy-bonded abrasive finish.

2.08 SHOP FINISHING

- A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.
- B. Galvanizing: Hot-dip galvanize to minimum requirements of ASTM A123/A123M, G80.
 1. Touch up abraded areas after fabrication using specified touch-up primer for galvanized surfaces.
 2. Galvanize exterior stairs and as indicated on Drawings.
- C. Apply shop primer to uncoated surfaces of metal stair components, except those with galvanized finishes and those to be embedded in concrete or masonry unless otherwise indicated. Comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that field conditions are acceptable and are ready to receive work.
- B. Verify elevations of floors, bearing surfaces and locations of bearing plates, and other embedments for compliance with requirements.
 1. For wall-mounted railings, verify locations of concealed reinforcement within gypsum board and plaster assemblies.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. When field welding is required, clean and strip primed steel items to bare metal.
- B. Supply items required to be cast into concrete with setting templates.

3.03 INSTALLATION - GENERAL

- A. Install components plumb and level, accurately fitted, free from distortion or defects.

- B. Provide anchors, plates and angles required for connecting stairs to structure.
- C. Allow for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.
- D. Provide welded field joints where specifically indicated on Drawings. Perform field welding in accordance with AWS D1.1/D1.1M.
- E. Other field joints may be either welded or bolted provided the result complies with the limitations specified for jointing quality levels.
- F. Obtain approval prior to site cutting or creating adjustments not scheduled.
- G. After erection, prime welds, abrasions, and surfaces not shop primed or galvanized, except surfaces to be in contact with concrete.

3.04 INSTALLING METAL STAIRS WITH METAL TREADS

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction.
 - 1. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
- C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.
 - 1. Grouted Baseplates: Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces.
 - a. Clean bottom surface of baseplates.
 - b. Set steel stair baseplates on wedges, shims, or leveling nuts.
 - c. After stairs have been positioned and aligned, tighten anchor bolts.
 - d. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with grout.
 - e. Promptly pack grout solidly between bearing surfaces and plates to ensure that no voids remain.
 - 1) Neatly finish exposed surfaces; protect grout and allow to cure.
 - 2) Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.
- D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.
- E. Fit exposed connections accurately together to form hairline joints.
 - 1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.
 - 2. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
 - 3. Comply with requirements for welding in "Fabrication, General" Article.

3.05 TOLERANCES

- A. Maximum Variation From Plumb: 1/4 inch (6 mm) per story, non-cumulative.
- B. Maximum Offset From True Alignment: 1/4 inch (6 mm).

3.06 ADJUSTING AND CLEANING

- A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
1. Apply by brush or spray to provide a minimum 2.0-mil (0.05-mm) dry film thickness.

END OF SECTION

SECTION 05 5133

METAL LADDERS

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Shop-fabricated metal ladders.

1.02 SUBMITTALS

- A. Action Submittals:
 1. Product Data: Provide manufacturer's data sheets on each ladder safety system product to be used, including installation instructions.
 2. Shop Drawings:
 - a. Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories. Include erection drawings, elevations, and details where applicable.
 - b. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.
- B. Informational Submittals:
 1. Certificate: Provide documentation that ladder safety system products of this section meet or exceed cited 29 CFR 1910.28, 29 CFR 1910.29, ANSI/ASSP Z359.16, and ANSI A14.3 requirements.
 2. Welders' Certificates: Submit certification for welders employed on the project, verifying AWS qualification within the previous 12 months.
 3. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is accredited under IAS AC172.

1.03 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide special submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements- CAL-Green, for the following measures:
 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.
 4. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
 5. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.
 6. Section A5.405.5: Provide documentation that cement and concrete used are made with recycled content and/or alternative energy.

1.04 WARRANTY

- A. Warranty: Manufacturer's standard five year warranty against defects in materials, fabrication, finishes, and installation commencing on Date of Substantial Completion.

PART 2 PRODUCTS

2.01 MATERIALS - STEEL

- A. Steel Sections: ASTM A36/A36M.
- B. Plates: ASTM A283/A283M.

- C. Mechanical Fasteners: Same material or compatible with materials being fastened; type consistent with design and specified quality level.
- D. Bolts, Nuts, and Washers: ASTM A307, plain.
- E. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.
- F. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

2.02 FABRICATION

- A. Fit and shop assemble items in largest practical sections, for delivery to site.
- B. Fabricate items with joints tightly fitted and secured.
- C. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.
- D. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

2.03 FABRICATED LADDERS

- A. Ladders: Steel; in compliance with ANSI A14.3; with mounting brackets and attachments; prime paint finish.
 1. Side Rails: 3/8 by 2 inches (9 by 50 mm) members spaced at 20 inches (500 mm).
 2. Rungs: One inch (25 mm) diameter solid round bar spaced 12 inches (300 mm) on center.
 3. Space rungs 7 inches (175 mm) from wall surface.

2.04 FINISHES - STEEL

- A. Prepare surfaces to be primed in accordance with SSPC-SP2.
- B. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.
- C. Prime Painting: One coat.

2.05 FABRICATION TOLERANCES

- A. Squareness: 1/8 inch (3 mm) maximum difference in diagonal measurements.
- B. Maximum Offset Between Faces: 1/16 inch (1.5 mm).
- C. Maximum Misalignment of Adjacent Members: 1/16 inch (1.5 mm).
- D. Maximum Bow: 1/8 inch (3 mm) in 48 inches (1.2 m).
- E. Maximum Deviation From Plane: 1/16 inch (1.5 mm) in 48 inches (1.2 m).

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that field conditions are acceptable and are ready to receive work.
- B. Confirm that the ladder structure to which the ladder safety system is installed is capable of withstanding the loads applied by the system in the event of a fall.

3.02 PREPARATION

- A. Clean and strip primed steel items to bare metal where site welding is required.

- B. Supply setting templates to the appropriate entities for steel items required to be cast into concrete or embedded in masonry.

3.03 INSTALLATION

- A. Install items plumb and level, accurately fitted, free from distortion or defects.
- B. Provide for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.
- C. Field weld components as indicated on drawings.
- D. Perform field welding in accordance with AWS D1.1/D1.1M.
- E. Obtain approval prior to site cutting or making adjustments not scheduled.
- F. After erection, prime welds, abrasions, and surfaces not shop primed, except surfaces to be in contact with concrete.

3.04 TOLERANCES

- A. Maximum Variation From Plumb: 1/4 inch (6 mm) per story, non-cumulative.
- B. Maximum Offset From True Alignment: 1/4 inch (6 mm).
- C. Maximum Out-of-Position: 1/4 inch (6 mm).

END OF SECTION

**SECTION 05 5213
PIPE AND TUBE RAILINGS**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Wall mounted handrails.
- B. Stair railings and guardrails.
- C. Free-standing railings at steps.
- D. Structural design of railing systems.

1.02 SUBMITTALS

- A. Action Submittals:
 - 1. Shop Drawings: Indicate profiles, sizes, connection attachments, anchorage, size and type of fasteners, and accessories.
 - a. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.
 - b. Include the design engineer's seal and signature on each sheet of shop drawings.
 - 2. Samples: Submit two, 12 inch (305 mm) long samples of handrail. Submit two samples of elbow, wall bracket, and end stop.
 - 3. Fabricator's Qualification Statement.
- B. Informational Submittals:
 - 1. Welders' Certificates: Show certification of welders employed on the Work, verifying AWS qualification within the previous 12 months.
 - 2. Welders' Certificates.
 - 3. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is certified under AISC 201.
 - 4. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is accredited under IAS AC172.

1.03 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 - 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 - 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.
 - 4. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
 - 5. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.

1.04 QUALITY ASSURANCE

- A. Welder Qualifications: Show certification of welders employed on the Work, verifying AWS qualification within the previous 12 months.
- B. Fabricator Qualifications:
 - 1. A qualified steel fabricator that is certified by the American Institute for Steel Construction (AISC) under AISC 201.
 - 2. A company specializing in manufacturing products specified in this section, with not less than ten years of documented experience.

1.05 MOCK-UPS

- A. Mock-Ups: Build mock-ups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.
1. Build mock-ups for each form and finish of railing consisting of two posts, top rail, infill area, and anchorage system components that are full height and are not less than 24 inches (610 mm) in length.
 2. Subject to compliance with requirements, approved mock-ups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

1.07 FIELD CONDITIONS

- A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 PRODUCTS**2.01 PERFORMANCE REQUIREMENTS**

- A. Design and fabricate railing and handrails in accordance with California Building Code 11B-505.
1. Top of gripping surfaces of handrails shall be 34 inches (863.60 mm) minimum and 38 inches (965.20 mm) maximum vertically above walking surfaces, stair nosings, and ramp surfaces. Handrails shall be at a consistent height above such surfaces.
 2. Clearance between handrail gripping surfaces and adjacent surfaces shall be 1-1/2 inches (38 mm) minimum. Handrail may be located in a recess if the recess is 3 inches (76.20 mm) maximum deep and 18 inches (457.20 mm) minimum clear above the top of the handrail.
 3. Handrail gripping surfaces shall be continuous along their length and shall not be obstructed along their tops or sides. The bottoms of handrail gripping surfaces shall not be obstructed for more than 20 percent of their length. Where provided, horizontal projections shall occur 1-1/2 inches (38 mm) minimum below the bottom of the handrail gripping surfaces.
 4. Handrail gripping surfaces with a circular cross section shall have an outside diameter of 1-1/4 inches (31.75 mm) minimum and 2 inch (50.8 mm) maximum.
 5. Handrail gripping surfaces with a non-circular cross section shall have an outside dimension of 4 inches (101.60 mm) minimum and 6-1/4 inches (158.75 mm) maximum, and a cross-sectional dimension of 2-1/4 inches (57.15 mm) maximum.
 6. Handrail gripping surfaces and any surfaces adjacent to them shall be free of sharp or abrasive elements and shall have rounded edges.
 7. Handrails shall not rotate within their fittings.
 8. Handrail gripping surfaces shall extend beyond and in the same direction of stair flights and ramp runs in accordance with CBC Section 11B-505.10. Such extensions are not required for continuous handrails at the inside turn of switchback or dogleg stairs and ramps.
 9. A 2 inch (50.8 mm) minimum high curb or barrier shall be provided to prevent the passage of a 4 inches (101.60 mm) diameter sphere, where any portion of the sphere is within 4 inches (101.60 mm) of the finish floor or ground surface. Such a curb or a barrier shall be continuous and uninterrupted along the length of a ramp. CBC Section 11B-405.9.2.
- B. Design, fabricate, and test railing assemblies in accordance with the most stringent requirements of ASTM E985 and applicable local code.
- C. Distributed Loads: Design railing assembly, wall rails, and attachments to resist distributed force of 75 pounds per linear foot (1095 N/m) applied to the top of the assembly and in any direction, without damage or permanent set. Test in accordance with ASTM E935.

- D. Concentrated Loads: Design railing assembly, wall rails, and attachments to resist a concentrated force of 200 pounds (890 N) applied at any point on the top of the assembly and in any direction, without damage or permanent set. Test in accordance with ASTM E935.
- E. Allow for expansion and contraction of members and building movement without damage to connections or members.
- F. Dimensions: Refer to Drawings for configurations and heights.
- G. Provide anchors and other components as required to attach to structure, made of same materials as railing components unless otherwise indicated; where exposed fasteners are unavoidable provide flush countersunk fasteners.
 - 1. For anchorage to concrete, provide inserts to be cast into concrete, for bolting anchors.
 - 2. For anchorage to stud walls, provide backing plates, for bolting anchors.
 - 3. Posts: Provide adjustable flanged brackets.
- H. Design, fabricate, and test railing assemblies in accordance with the most stringent requirements of applicable local code.
- I. Allow for expansion and contraction of members and building movement without damage to connections or members.
- J. Dimensions: Refer to drawings for configurations and heights.
 - 1. Top Rails and Wall Rails: 1-1/2 inches (38 mm) diameter, round.
 - 2. Posts: 1-1/2 inches (38 mm) diameter, round.
- K. Provide anchors and other components as required to attach to structure, made of same materials as railing components unless otherwise indicated; where exposed fasteners are unavoidable provide flush countersunk fasteners.

2.02 STEEL RAILING SYSTEM

- A. Steel Tube: ASTM A500/A500M, Grade B cold-formed structural tubing.
- B. Steel Pipe: ASTM A53/A53M, Grade B Schedule 40, black finish.
- C. Welding Fittings: Factory- or shop-welded from matching pipe or tube; seams continuously welded; joints and seams ground smooth.
- D. Exposed Fasteners: Flush countersunk screws or bolts; consistent with design of railing.
- E. Interior Railings: Prime painted.
 - 1. 1-1/2 inch (38 mm) diameter posts, top rail and handrail with 1/2 inch (12.70 mm) square vertical pickets.

2.03 FASTENERS

- A. General: Provide the following:
 - 1. Ungalvanized-Steel Railings: Plated steel fasteners complying with ASTM B 633 or ASTM F 1941 (ASTM F 1941M), Class Fe/Zn 5 for zinc coating.
 - 2. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.
- B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated and capable of withstanding design loads.
- C. Post-Installed Anchors: Torque-controlled expansion anchors or chemical anchors capable of sustaining, without failure, a load equal to 6 times the load imposed when installed in unit masonry and 4 times the load imposed when installed in concrete, as determined by testing according to ASTM E 488/E 488M, conducted by a qualified independent testing agency.

1. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B 633 or ASTM F 1941 (ASTM F 1941M), Class Fe/Zn 5, unless otherwise indicated.

2.04 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
- B. Paint Maximum Product Emissions Limits: Top coat and primer interior paints must meet current requirements for VOC (Volatile Organic Compounds) limits of South Coast Air Quality Management District (SCAQMD) Rule No. 1113 and CAL-Green Table 5.504.4.3 for VOC Content Limits for Architectural Coatings.
 1. CAL-Green Requirements for typical paint coatings:
 - a. Primers, Sealers, and Undercoaters: 100 grams per liter of product minus water.
- C. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.
- D. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

2.05 FABRICATION

- A. Accurately form components to suit specific project conditions and for proper connection to building structure.
- B. Fit and shop assemble components in largest practical sizes for delivery to site.
- C. Fabricate components with joints tightly fitted and secured.
- D. Welded Joints:
 1. Exterior Components: Continuously seal joined pieces by continuous welds. Drill condensate drainage holes at bottom of members at locations that will not encourage water intrusion.
 2. Interior Components: Continuously seal joined pieces by continuous welds.
 3. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

2.06 STEEL AND IRON FINISHES

- A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.
- B. Do not prime surfaces in direct contact with concrete or where field welding is required.
- C. Galvanizing: Hot-dip galvanize to minimum requirements of ASTM A123/A123M.
 1. Touch up abraded areas after fabrication using specified touch-up primer for galvanized surfaces.
 2. Hot-dip galvanize exterior steel railings, including hardware, after fabrication.
 - a. Comply with ASTM A123/A123M for hot-dip galvanized railings.
 - b. Comply with ASTM A153/A153M for hot-dip galvanized hardware.
- D. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
- E. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- F. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.
- G. Preparing Galvanized Railings for Shop Priming: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.

- H. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that field conditions are acceptable and are ready to receive work.

3.02 PREPARATION

- A. Supply items required to be cast into concrete or embedded in masonry with setting templates, for installation as work of other sections.

3.03 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Install components plumb and level, accurately fitted, free from distortion or defects, with tight joints.
- C. Install railings in compliance with ADA Standards and the California Building Code for accessible design at applicable locations.
- D. Anchor railings securely to structure.
- E. Field weld anchors as indicated on drawings. Touch-up welds with primer. Grind welds smooth.
- F. Conceal anchor bolts and screws whenever possible. Where not concealed, use flush countersunk fastenings.

3.04 TOLERANCES

- A. Maximum Variation From Plumb: 1/4 inch (6 mm) per floor level, non-cumulative.
- B. Maximum Offset From True Alignment: 1/4 inch (6 mm).
- C. Maximum Out-of-Position: 1/4 inch (6 mm).

3.05 ADJUSTING AND CLEANING

- A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas, and repair galvanizing to comply with ASTM A780/A780M.

3.06 PROTECTION

- A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

END OF SECTION

**SECTION 05 7011
DECORATIVE METAL STAIRS**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Decorative stairs.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Pre-Installation Meeting: Schedule and conduct a preinstallation meeting one week before starting work of this Section.
 - 1. Attendees shall include, but not be limited to:
 - a. Contractor.
 - b. Manufacturer's representative.
 - c. Architect.
 - d. Owner's representative.
 - e. Other subcontractors of adjacent work.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Shop Drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories.
 - a. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.
 - b. Include the design engineer's seal and signature on each sheet of shop drawings.
 - 2. Samples: Submit three of each item below for each type and condition shown.
- B. Informational Submittals:
 - 1. Welders' Certificates: Show certification of welders employed on the Work, verifying AWS qualification within the previous 12 months.
 - 2. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is certified under AISC 201.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide special submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 - 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 - 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in installing decorative stairs and railing systems and acceptable to manufacturer.
- B. Templates: Supply installation templates, reinforcing and required anchorage devices.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in factory provided protective coverings and packaging.
- B. Protect materials against damage during transit, delivery, storage, and installation at site.

- C. Inspect materials upon delivery for damage. Repair damage to be indistinguishable from undamaged areas; if damage cannot be repaired to be indistinguishable from undamaged parts and finishes, replace damaged items.
- D. Prior to installation, store materials and components under cover, in a dry location.

PART 2 PRODUCTS

2.01 METAL STAIRS

- A. Decorative Metal Stairs: Provide stairs of the design specified, complete with landing platforms, vertical and horizontal supports, railings, and guards, fabricated accurately for anchorage to each other and to building structure.
 - 1. Regulatory Requirements: Provide stairs and railings complying with the most stringent requirements of local, state, and federal regulations; where requirements of the contract documents exceed those of regulations, comply with the contract documents.
 - 2. Structural Design: Provide complete stair and railing assemblies complying with the following:
 - a. Stair Capacity:
 - 1) Live Load: Uniform live load of 100 lb/sq ft (4.7 kPa) and a maximum concentrated load of 300 lb (136 kg) with deflection of stringer or landing framing not to exceed 1/360 of span.
 - 2) Dead Load: Weight of stair, associated railing system, any concrete fill, cladding and other finishes.
 - 3) Deflection Limits: Deflection of stringer or landing framing not to exceed 1/360 of span.
 - b. Railing Assemblies: See "Railing Systems" below. Comply with ASTM E985.
 - 3. Seismic Performance of Stairs: Metal stairs shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
 - a. Component Importance Factor: 1.5.
 - 4. Dimensions: As indicated on Drawings.
 - 5. Shop assemble components; disassemble into largest practical sections suitable for transport and access to site.
 - 6. No sharp or rough areas on exposed travel surfaces and surfaces accessible to touch.
 - 7. Separate dissimilar metals using paint or permanent tape.
 - 8. Interior stairs shall have the upper approach and lower tread marked by a stripe providing clear visual contrast. Exterior stairs shall have the upper approach and all treads marked by a stripe providing clear visual contrast.
 - 9. The stripe providing clear visual contrast shall be a minimum of 2 inches wide to a maximum of 4 inches wide placed parallel to, and not more than 1 inch from tile nose of the step or upper approach. The stripe shall extend the full width of the step or upper approach and shall be of material that is at least as slip resistant as the other treads of the stair. A painted stripe shall be acceptable. Grooves shall not be used to satisfy this requirement.
 - 10. The radius of curvature at the leading edge of the tread shall be no greater than 1/2 inch. Nosings that project beyond risers shall have the underside of the leading edge curved or beveled. The maximum angle for a riser to slope under the tread shall be 30 degrees from vertical. Nosings shall extend 1-1/4 inches maximum over the tread below.
 - 11. Treads shall be 11 inches deep minimum. Risers shall be 7 inches high maximum and 4 inches high minimum. All steps on a flight of stairs shall have uniform riser heights and uniform tread depths. Open risers are not permitted.
- B. Metal Jointing and Finish Quality Levels:
 - 1. Architectural: All joints as inconspicuous as possible, whether welded or mechanical.
 - a. Welded Joints: Continuously welded and ground smooth and flush.
 - b. Mechanical Joints: Butted tight, flush, and hairline; concealed fastenings only.
 - c. Exposed Edges and Corners: Eased to small uniform radius.

- d. Metal Surfaces to be Painted: Sanded or ground smooth, suitable for highest quality gloss finish.
- C. Fasteners: Same material or compatible with materials being fastened; type consistent with design and specified quality level.
- D. Anchors and Related Components: Same material and finish as item to be anchored, except where specifically indicated otherwise; provide all anchors and fasteners required.

2.02 METAL STAIRS WITH CONCRETE TREADS

- A. Jointing and Finish Quality Level: Architectural, as defined above.
- B. Risers: Closed.
- C. Treads: Metal pan with field-installed concrete fill.
 - 1. Concrete Depth: 1-1/8 inches (28.57 mm), minimum.
 - 2. Terrazzo: Provide 3/8 inch (9.53 mm) thick terrazzo in accordance with Section 09 6623 - Resinous Matrix Terrazzo Flooring.
 - 3. Tread Pan Material: Steel sheet.
 - 4. Tread Pan Thickness: As required by design; 14 gage, 0.075 inch (1.9 mm) minimum.
 - 5. Concrete Reinforcement: Welded wire mesh.
 - 6. Concrete Finish: Steel troweled.
- D. Finish Risers: Integral with treads.
 - 1. Riser/Nosing Profile: Sloped riser with rounded nosing of minimum radius, as indicated on Drawings.
 - 2. Nosing Depth: Not more than 1 inch (25.4 mm) overhang.
- E. Stringers: Steel tube.
 - 1. Stringer Depth: As indicated on drawings, minimum.
 - 2. End Closure: Sheet steel of same thickness as risers welded across ends.
- F. Landings: Same construction as treads, supported and reinforced as required to achieve design load capacity.
- G. Tread and Riser Finish Material: Precast terrazzo as indicated in Section 09 6623 - Resinous Matrix Terrazzo Flooring.

2.03 MATERIALS

- A. Steel Components:
 - 1. Sections, Shapes, Plate and Bar: ASTM A36/A36M.
 - 2. Tubing: 1 structural tubing, round and shapes as indicated.
 - 3. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193 or ICC-ES AC308.
 - a. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941 (ASTM F 1941M), Class Fe/Zn 5, unless otherwise indicated.
 - 4. Welding Materials: 1; type required for materials being welded.

2.04 ACCESSORIES

- A. Low-Emitting Paints and Coatings: Paints and coatings applied to interior decorative metal railings shall comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

- B. Paint Maximum Product Emissions Limits: Top coat and primer interior paints must meet current requirements for VOC (Volatile Organic Compounds) limits of South Coast Air Quality Management District (SCAQMD) Rule No. 1113 and Cal-GREEN Table 5.504.4.3 for VOC Content Limits for Architectural Coatings.
 - 1. Cal-GREEN Requirements for typical paint coatings:
 - a. Primers, Sealers, and Undercoaters: 100 grams per liter of product minus water.
- C. Welding Fittings: Factory- or shop-welded from matching pipe or tube; joints and seams ground smooth.
- D. Anchors and Fasteners: Provide anchors and other materials as required to attach to structure, made of same materials as railing components unless otherwise indicated; where exposed fasteners are unavoidable provide flush countersunk fasteners.
 - 1. For anchorage to concrete, provide inserts to be cast into concrete for bolting anchors.
 - 2. For anchorage to masonry, provide brackets to be embedded in masonry for bolting anchors.
 - 3. For anchorage to stud walls, provide backing plates for bolting anchors.
- E. Bituminous Coating: Cold-applied asphalt mastic, noncorrosive compound free of asbestos, sulfur, and other deleterious impurities; 0.015 inch (0.4 mm) dry film thickness per coat.
- F. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 - 1. Manufacturer's standard, lead free primer, capable of providing sound foundation for field applied top coats despite prolonged exposure.
 - 2. Standard: FS TT-P-645.
 - 3. Compatible with finish paint system specified in Sections 099113 and 099123.
 - 4. Acceptable Products:
 - a. Dunn-Edwards Corporation; BRPR00-1 Bloc-Rust Premium, Interior / Exterior, Red Oxide or White, Waterborne Alkyd Rust Preventative Metal Primer.
 - b. Glidden Professional; 4160-XXXX Devguard Multi-Purpose Tank & Structural Primer.
 - c. BRPR00-1 Bloc-Rust Premium, Interior / Exterior, Red Oxide or White, Waterborne Alkyd Rust Preventative Metal Primer, Dunn-Edwards Corporation.
 - d. Sherwin-Williams; S-W Pro Industrial ProCryl Universal Acrylic Primer, B66W310.
 - e. Tnemec; Series 115 Uni-Bond DF.
 - 5. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.

2.05 FABRICATION, GENERAL

- A. Provide complete stair assemblies, including metal framing, hangers, struts, clips, brackets, bearing plates, and other components necessary to support and anchor stairs and platforms on supporting structure.
 - 1. Join components by welding unless otherwise indicated.
 - 2. Use connections that maintain structural value of joined pieces.
- B. Assemble stairs in shop to greatest extent possible.
 - 1. Disassemble units only as necessary for shipping and handling limitations.
 - 2. Clearly mark units for reassembly and coordinated installation.
- C. Cut, drill, and punch metals cleanly and accurately.
 - 1. Remove burrs and ease edges to a radius of approximately 1/32 inch (0.79 mm) unless otherwise indicated.
 - 2. Remove sharp or rough areas on exposed surfaces.
- D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- E. Form exposed work with accurate angles and surfaces and straight edges.
- F. Weld connections to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 2. Obtain fusion without undercut or overlap.
 3. Remove welding flux immediately.
 4. Delete first subparagraph below if appearance is not important or if economy is more important.
 5. Weld exposed corners and seams continuously unless otherwise indicated.
 6. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Finish #1 - No evidence of welded joint.
- G. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible.
1. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts unless otherwise indicated.
 2. Locate joints where least conspicuous.
 3. Fabricate joints that will be exposed to weather in a manner to exclude water.
 4. Provide weep holes where water may accumulate internally.

2.06 FABRICATION OF STEEL-FRAMED STAIRS

- A. NAAMM Stair Standard: Comply with NAAMM AMP 510, "Metal Stairs Manual," for Architectural Class, unless more stringent requirements are indicated.
- B. Stair Framing:
1. Steel plate stringers are less expensive than channels or rectangular tubes, except for longer spans, and allow railing posts to be welded to face of stringer. Allowing plates, channels, or rectangular tubes gives fabricator maximum flexibility.
 2. Fabricate stringers of steel channels as indicated on Drawings.
 - a. Stringer Size: As indicated on Drawings.
 - b. Provide closures for exposed ends of channel and rectangular tube stringers.
 - c. Finish: Galvanized and shop primed.
 3. Construct platforms of steel channel headers and miscellaneous framing members as indicated on Drawings.
 - a. Provide closures for exposed ends of channel and rectangular tube framing.
 - b. Finish: Galvanized and shop primed.
 4. Weld stringers to headers; weld or bolt framing members to stringers and headers. If using bolts, fabricate and join so bolts are not exposed on finished surfaces.
 5. Where stairs are enclosed by gypsum board assemblies, provide hanger rods or struts to support landings from floor construction above or below.
 - a. Locate hanger rods and struts where they do not encroach on required stair width and are within the fire-resistance-rated stair enclosure.
 6. Where masonry walls support metal stairs, provide temporary supporting struts designed for erecting steel stair components before installing masonry.
- C. Metal Pan Stairs: Form risers, subtread pans, and subplatforms to configurations shown from steel sheet of thickness needed to comply with performance requirements, but not less than 0.067 inch (1.7 mm).
1. Fabricate treads and landing subplatforms of exterior stairs so finished walking surfaces slope to drain.
 2. Steel Sheet: Uncoated, cold-rolled steel sheet unless otherwise indicated.
 3. Steel Sheet: Galvanized-steel sheet.
 4. Directly weld metal pans to stringers; locate welds on top of subtreads where they will be concealed by concrete fill. Do not weld risers to stringers.
 5. At Contractor's option, provide stair assemblies with metal pan subtreads filled with reinforced concrete during fabrication.
 6. Provide subplatforms of configuration indicated or, if not indicated, the same as subtreads. Weld subplatforms to platform framing.

- a. Smooth Soffit Construction: Construct subplatforms with flat metal under surfaces to produce smooth soffits.

2.07 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

2.08 STEEL AND IRON FINISHES

- A. Preparing Nongalvanized Items for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with requirements indicated below:
 - 1. Stairs Indicated to Receive Universal Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - 2. Other Railings: SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."
- B. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.
 - 1. Shop prime uncoated stairs with universal shop primer indicated.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that substrate and site conditions are acceptable and ready to receive work.
- B. Verify field dimensions of locations and areas to receive work.
- C. Notify Architect immediately of conditions that would prevent satisfactory installation.
- D. Do not proceed with work until detrimental conditions have been corrected.
- E. Furnish components to be installed in other work to installer of that other work, including but not limited to blocking, sleeves, inserts, anchor bolts, embedded plates and supports for attachment of anchors.

3.02 PREPARATION

- A. Review installation drawings before beginning installation. Coordinate diagrams, templates, instructions and directions for installation of anchorages and fasteners.
- B. Clean surfaces to receive units. Remove materials and substances detrimental to the installation.

3.03 INSTALLATION, GENERAL

- A. Fit exposed connections together to form tight, hairline joints.
- B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.

1. Do not weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
- C. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
 1. Coat concealed surfaces of [aluminum] [and] [copper alloys] that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- D. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction

3.04 INSTALLATION

- A. Comply with manufacturer's drawings and written instructions.
- B. Install components plumb and level, accurately fitted, free from distortion or defects and with tight joints, except where necessary for expansion.
- C. Anchor securely to structure.
- D. Conceal anchor bolts and screws whenever possible. Where not concealed, use flush countersunk fastenings.
- E. Weld connections that cannot be shop welded due to size limitations.
 1. Weld in accordance with 1.
 2. Match shop welding and bolting.
 3. Clean welds, bolted connections and abraded areas.
 4. Touch up shop primer and factory applied finishes.
 5. Repair galvanizing with galvanizing repair paint per 1.
- F. Isolate dissimilar materials with bituminous coating, bushings, grommets or washers to prevent electrolytic corrosion.

3.05 INSTALLING METAL PAN STAIRS

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing metal stairs to in-place construction.
 1. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal stairs. Set units accurately in location, alignment, and elevation, measured from established lines and levels and free of rack.
- C. Install metal stairs by welding stair framing to steel structure or to weld plates cast into concrete unless otherwise indicated.
 1. Grouted Baseplates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates.
 - a. Clean bottom surface of plates.
 - b. Set plates for structural members on wedges, shims, or setting nuts.
 - c. Tighten anchor bolts after supported members have been positioned and plumbed.
 - d. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
 - e. Promptly pack grout solidly between bearing surfaces and plates so no voids remain.
 - 1) Neatly finish exposed surfaces; protect grout and allow to cure.
 - 2) Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.
- D. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

- E. Fit exposed connections accurately together to form hairline joints.
 - 1. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.
 - 2. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
 - 3. Comply with requirements for welding in "Fabrication, General" Article.
- F. Place and finish concrete fill for treads and platforms to comply with Section 03 3000 - Cast-in-Place Concrete.
 - 1. Install abrasive nosings with anchors fully embedded in concrete.
 - 2. Center nosings on tread width.
- G. Install terrazzo in accordance with Section 09 6623 - Resinous Matrix Terrazzo Flooring.

3.06 TOLERANCES

- A. Maximum Variation From Plumb: 1/4 inch (6 mm) per floor level, non-cumulative.
- B. Maximum Offset From True Alignment: 1/4 inch (6 mm).
- C. Maximum Out-of-Position: 1/4 inch (6 mm).

3.07 CLEANING

- A. Remove protective film from exposed metal surfaces.
- B. Metal: Clean exposed metal finishes with potable water and mild detergent, in accordance with manufacturer recommendations; do not use abrasive materials or chemicals, detergents or other substances that may damage the material or finish.
- C. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - 1. Apply by brush or spray to provide a minimum 2.0-mil (0.05-mm) dry film thickness.

3.08 PROTECTION

- A. Protect installed components and finishes from damage after installation.
- B. Repair damage to exposed finishes to be indistinguishable from undamaged areas.
 - 1. If damage to finishes and components cannot be repaired to be indistinguishable from undamaged finishes and components, replace damaged items.

END OF SECTION

**SECTION 05 7013
DECORATIVE METAL**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Decorative metal screening panels.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Pre-Installation Meeting: Schedule and conduct a preinstallation meeting one week before starting work of this section.
 - 1. Attendees shall include, but not be limited to:
 - a. Contractor.
 - b. Architect.
 - c. Owner's representative.
 - d. Other subcontractors of adjacent work.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Submit manufacturer's product data including description of materials, components, finishes, fabrication details, glass, anchors, and accessories.
 - 2. Shop Drawings: Indicate system elevations and sections, details of profile, dimensions, sizes, connection attachments, anchorage, size and type of fasteners, and accessories. Indicate anchor and joint locations, brazed connections, transitions, and terminations.
 - 3. Samples: Submit three of each item below for each type and condition shown.
 - a. Each type of exposed metal: 12 inch by 12 inch (305 mm by 305 mm), illustrating color, thickness and edge condition.
- B. Informational Submittals:
 - 1. Test Reports: Submit test reports from an independent testing agency showing compliance with specified design and performance requirements.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide special submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 - 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 - 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in installing decorative metal and acceptable to manufacturer.
- B. Templates: Supply installation templates, reinforcing and required anchorage devices.

1.06 MOCK-UP

- A. Mock-Ups: Construct an example of each item specified. Locate mock-ups where directed. Mock-ups may remain as part of the work.
- B. Locate where directed.
- C. Mock-up may remain as part of the Work.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in factory provided protective coverings and packaging.
- B. Protect materials against damage during transit, delivery, storage, and installation at site.
- C. Inspect materials upon delivery for damage. Repair damage to be indistinguishable from undamaged areas; if damage cannot be repaired to be indistinguishable from undamaged parts and finishes, replace damaged items.
- D. Prior to installation, store materials and components under cover, in a dry location.

1.08 FIELD CONDITIONS

- A. Do not install decorative metal until project is enclosed and ambient temperature of space is minimum 65 degrees F (18.3 degrees C) and maximum 95 degrees F (35 degrees C).
- B. Maintain ambient temperature of space at minimum 65 degrees F (18.3 degrees C) and maximum 95 degrees F (35 degrees C) for 24 hours before, during, and after railing installation.

PART 2 PRODUCTS

2.01 SCREE WALL PANELS

- A. Perforated screens including metals for complete system as indicated on Drawings.

2.02 MATERIALS

- A. Refer to Finish Schedule for selected products and finishes.
- B. General:
 - 1. Provide architecturally exposed metals free from surface blemishes in finished unit. Exposed-to-view surfaces exhibiting pitting, seam marks, roller marks, stains, discolorations, or other imperfections on finished units are not acceptable.
 - 2. Provide architectural grade steel where exposed to view.
- C. Aluminum Components:
 - 1. Aluminum Sheet: ASTM B209, Alloy 3003 or 5005, 0.125 inch thick.
 - 2. Extruded Bar and Shape: ASTM B221, 6063-T6
 - 3. Extruded Pipe and Tube: ASTM B429, 6063-T6
 - 4. Sheet: ASTM B209, 3003 or 5005, thickness as required for purposed intended.
 - a. Expanded flattened metal.
 - 5. Perforated Aluminum Plate: ASTM B209, Alloy 3003 or 5005, 0.125 inch thick with 1/4 inch (6.35 mm) holes 1/2 inch (12.70 mm) o.c.
- D. Steel Components:
 - 1. Sections, Shapes, Plate and Bar: ASTM A36/A36M.
 - 2. Tubing: ASTM A501/A501M structural tubing, round and shapes as indicated.
 - 3. Bolts, Nuts, and Washers: ASTM A325 (ASTM A325M), Type 1, and galvanized to ASTM A153/A153M where connecting galvanized components.
 - 4. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

2.03 ACCESSORIES

- A. Anchors and Fasteners: Provide anchors and other materials as required to attach to structure, made of same materials as railing components unless otherwise indicated; where exposed fasteners are unavoidable provide flush countersunk fasteners.
 - 1. Exposed Fasteners: Flush countersunk screws or bolts; consistent with design of panel.
- B. Universal Primer:

1. Manufacturer's standard, lead free primer, capable of providing sound foundation for field applied top coats despite prolonged exposure.
 2. Standard: FS TT-P-645.
 3. Compatible with finish paint system specified in Sections 099113 and 099123.
 4. Acceptable Products:
 - a. Dunn-Edwards Corporation; BRPR00-1 Bloc-Rust Premium, Interior / Exterior, Red Oxide or White, Waterborne Alkyd Rust Preventative Metal Primer.
 - b. Glidden Professional; 4160-XXXX Devguard Multi-Purpose Tank & Structural Primer.
 - c. Sherwin-Williams; S-W Pro Industrial ProCryl Universal Acrylic Primer, B66W310.
 - d. Tnemec; Series 115 Uni-Bond DF.
- C. Bituminous Coating: Cold-applied asphalt mastic, noncorrosive compound free of asbestos, sulfur, and other deleterious impurities; 0.015 inch (0.4 mm) dry film thickness per coat.
- D. Welding Electrodes and Filler Metal: Type and alloy of filler metal and electrodes as recommended by producer of metal to be welded, complying with applicable AWS specifications, and as required for color match, strength, and compatibility in fabricated items.

2.04 FASTENERS

- A. Fastener Materials: Unless otherwise indicated, provide the following:
1. Exterior Aluminum Components: Type 316 stainless-steel fasteners.
 2. Galvanized-Steel Components: Plated-steel fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating.
 3. Dissimilar Metals: Type 316 stainless-steel fasteners.
- B. Fasteners for Anchoring to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated and capable of withstanding design loads .
- C. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193 .
1. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 2 (A4) stainless-steel bolts, ASTM F 593 (ASTM F 738M), and nuts, ASTM F 594 (ASTM F 836M).

2.05 FABRICATION

- A. General:
1. Form decorative metalwork to required shapes and sizes, with true curves, lines, and angles.
 2. Provide components in sizes and profiles indicated, but not less than required to comply with requirements for structural performance.
 3. Form decorative metal to required shapes and sizes, true to line and level with true curves and accurate angles and surfaces. Finish exposed surfaces to smooth, sharp, well-defined lines and arris.
 4. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing the Work.
 5. Form simple and compound curves in bars, pipe, tubing, and extruded shapes by bending members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces.
 6. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch (0.79 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces
 7. Provide necessary rebates, lugs, and brackets to assemble units and to attach to other work.
 - a. Drill and tap for required fasteners.
 - b. Use concealed fasteners wherever possible.

8. Comply with AWS for recommended practices in shop welding. Weld behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded joints of flux, and dress exposed and contact surfaces.
 - a. Where welding cannot be concealed behind finished surfaces, finish joints to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 1 Welds: no evidence of a welded joint.
 9. Joints:
 - a. Mill joints to tight, hairline fit.
 - b. Cope or miter corner joints.
 - c. Form joints exposed to weather to exclude water penetration.
 10. Provide castings sound and free of warp, cracks, blow holes, or other defects that impair strength or appearance. Grind, wire brush, sandblast, and buff castings to remove seams, gatemarks, casting flash, and other casting marks.
 11. Finish exposed surfaces to smooth, sharp, well-defined lines and arrises.
 12. Assemble items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.
- B. Sheet Metal Work:
1. Provide materials selected for their surface flatness, smoothness and freedom from surface blemishes where exposed to view in the finished unit.
 2. Do not use materials having exposed-to-view surfaces exhibiting pitting, seam marks, roller marks "oil canning", stains, discoloration or other imperfections.
 3. Sheet Steel: Commercial quality cold-rolled carbon steel sheet as follows, unless otherwise indicated:
 - a. Sheet Steel: ASTM A1008/A1008M, Class I, matte finish.
 4. Provide Phillips flat-head or hex-head machine screws for exposed fasteners.
 5. Form sheet metal items in maximum lengths with minimum joints.
 6. Do not expose cut edges of sheet metal.
 7. Fold back exposed ends of unsupported sheet metal to form 1/2 inch wide hem of concealed side or ease exposed edges with backing to radius of approximately 1/32 inch.
 8. Form items with flat, flush surfaces, true to line and level, without cracking or grain separation at bends.
 9. Install with fastener patterns indicated.
- C. Shop Assembly: Preassemble items in shop to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
1. Fasteners and Connections: Concealed.
 2. Exterior Joints: Weathertight.
 3. Formed or Bent Corners: 1/4 inch minimum radius.
 4. Clips, Braces, and Miscellaneous Attachments: Hot-dip galvanized steel or aluminum.

2.06 FINISHES

- A. Finishes, General: Comply with NAAMM 500-06.
1. Complete mechanical finishes before fabrication. After fabrication, finish joints, bends, abrasions and surface blemishes to match sheet.
 2. Protect mechanical finishes on exposed surfaces from damage.
 3. Finish: Mill.
- B. Aluminum Finishes:
1. Superior Performing Organic Coatings: AAMA 2605 multiple coat, thermally cured polyvinylidene fluoride system.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that substrate and site conditions are acceptable and ready to receive work.
- B. Verify field dimensions of locations and areas to receive work.
- C. Notify Architect immediately of conditions that would prevent satisfactory installation.
- D. Do not proceed with work until detrimental conditions have been corrected.
- E. Furnish components to be installed in other work to installer of that other work, including but not limited to blocking, sleeves, inserts, anchor bolts, embedded plates and supports for attachment of anchors.

3.02 PREPARATION

- A. Review installation drawings before beginning installation. Coordinate diagrams, templates, instructions and directions for installation of anchorages and fasteners.
- B. Coordinate and furnish anchorages and setting drawings, diagrams, templates, instructions, and directions for installing items having integral anchors that are to be embedded in concrete or masonry construction.
- C. Clean surfaces to receive units. Remove materials and substances detrimental to the installation.

3.03 INSTALLATION

- A. Comply with manufacturer's drawings and written instructions.
- B. Install components plumb and level, accurately fitted, free from distortion or defects and with tight joints, except where necessary for expansion.
- C. Provide anchorage devices and fasteners where necessary for securing decorative metal items to in place construction.
 - 1. Anchor securely to structure.
- D. Conceal anchor bolts and screws whenever possible. Where not concealed, use flush countersunk fastenings.
- E. Perform cutting, drilling, and fitting required to install decorative metalwork.
- F. Set products accurately in location, alignment, and elevation, plumb, level, and true, measured from established lines and levels.
- G. Fit exposed connections to form tight, hairline joints or, where indicated, with uniform reveals and spaces for sealants and joint fillers.
- H. Restore finishes to eliminate evidence of cutting, welding, and grinding.
- I. Do not cut or abrade finishes that cannot be completely restored in field. Return such items to shop for required alterations, followed by complete refinishing, or provide new units.
- J. Install concealed gaskets, joint fillers, insulation, and flashings as work progresses, to make work weatherproof, soundproof, or lightproof where necessary for proper performance.
- K. Field Welding: Comply with applicable AWS specification for procedures of manual shielded metal-arc welding, for appearance and quality of welds made, and for methods used in correcting welding work.
 - 1. Weld connections that are not to be left as exposed joints but cannot be shop-welded because of shipping size limitations.
 - 2. Grind exposed welded joints smooth and restore finish to match finish of adjacent surfaces.

- L. Weld connections that cannot be shop welded due to size limitations.
 - 1. Weld in accordance with AWS D1.1/D1.1M.
 - 2. Match shop welding and bolting.
 - 3. Clean welds, bolted connections and abraded areas.
- M. Isolate dissimilar materials with bituminous coating, bushings, grommets or washers to prevent electrolytic corrosion.

3.04 TOLERANCES

- A. Maximum Variation From Plumb: 1/16 inch (1.58 mm) per floor level, non-cumulative.
- B. Maximum Offset From True Alignment: 1/16 inch (1.58 mm).

3.05 ADJUSTING

- A. Touchup Finishing: Immediately after erection, clean abraded areas and refinish to match adjacent exposed areas with same material.

3.06 CLEANING

- A. Remove protective film from exposed metal surfaces.
- B. Metal: Clean exposed metal finishes with potable water and mild detergent, in accordance with manufacturer recommendations; do not use abrasive materials or chemicals, detergents or other substances that may damage the material or finish.

3.07 PROTECTION

- A. Protect installed components and finishes from damage after installation.
- B. Repair damage to exposed finishes to be indistinguishable from undamaged areas.
 - 1. If damage to finishes and components cannot be repaired to be indistinguishable from undamaged finishes and components, replace damaged items.

END OF SECTION

**SECTION 05 7300
DECORATIVE METAL RAILINGS**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Railing and guardrail assemblies.
- B. Design engineering of railing systems.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination: Review and coordinate setting drawings, shop drawings, templates, and instructions for installation of related items to be embedded in concrete and masonry.
- B. Pre-Installation Meeting: Schedule and conduct a preinstallation meeting one week before starting work of this Section.
 - 1. Convene under general provisions of Section 01 7000 - Execution and Closeout Requirements.
 - 2. Require attendance by the following:
 - a. Contractor.
 - b. Manufacturer's representative.
 - c. Architect.
 - d. Owner's representative.
 - e. Other subcontractors of adjacent work.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Submit manufacturer's product data including description of materials, components, finishes, fabrication details, infill, anchors, and accessories.
 - 2. Shop Drawings: Indicate railing system elevations and sections, details of profile, dimensions, sizes, connection attachments, anchorage, size and type of fasteners, and accessories. Indicate anchor and joint locations, brazed connections, transitions, and terminations.
 - 3. Samples for Verification: For each type of exposed finish required.
 - a. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters.
 - b. Fittings and brackets.
 - c. Assembled Samples of railing systems, made from full-size components, including top rail, post, handrail, and infill. Show method of finishing members at intersections. Samples need not be full height.
- B. Informational Submittals:
 - 1. Manufacturer's Certification: Certify that railings have been designed to meet the design criteria of the specified code; include all conditions or limitations of the design necessary to achieve the necessary strength for the loading specified.
 - 2. Manufacturer's Installation Instructions.
 - 3. Maintenance Data: Manufacturer's instructions for care and cleaning.

1.04 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum three years of documented experience.
- B. Installer Qualifications: Company specializing in installing glazed railing systems and acceptable to manufacturer.

1.05 MOCK-UP

- A. Comply with general mock-up requirements specified in Section 01 4000 - Quality Requirements.
- B. Mock-up: Construct a railing of each type specified.
 - 1. Locate where directed.
 - 2. Mock-up may remain as part of the Work.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Deliver railing materials in factory provided protective coverings and packaging.
- B. Protect railing materials against damage during transit, delivery, storage, and installation at site.
- C. Inspect railing materials upon delivery for damage. Repair damage to be indistinguishable from undamaged areas; if damage cannot be repaired to be indistinguishable from undamaged parts and finishes, replace damaged items.
- D. Prior to installation, store materials and components under cover, in a dry location.

1.07 FIELD CONDITIONS

- A. Do not install railings until project is enclosed and ambient temperature of space is minimum 65 degrees F (18.3 degrees C) and maximum 95 degrees F (35 degrees C).
- B. Maintain ambient temperature of space at minimum 65 degrees F (18.3 degrees C) and maximum 95 degrees F (35 degrees C) for 24 hours before, during, and after railing installation.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Metal and Glass Materials - General: Comply with recycled content product requirements specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green.
- B. Railings - General: Factory- or shop-fabricated in design indicated, to suit specific project conditions, and for proper connection to building structure, and in largest practical sizes for delivery to site.
 - 1. Design Criteria: Design and fabricate railings and anchorages to resist the following loads without failure, damage, or permanent set; loads do not need to be applied simultaneously.
 - a. Distributed Loads: Design railing assembly, wall rails, and attachments to resist distributed force of 50 pounds per linear foot (730 N/m) applied to the top of the assembly and in any direction, without damage or permanent set. Test in accordance with ASTM E935.
 - b. Concentrated Loads: Design railing assembly, wall rails, and attachments to resist a concentrated force of 200 pounds (890 N) applied at any point on the top of the assembly and in any direction, without damage or permanent set. Test in accordance with ASTM E935.
 - c. Allow for expansion and contraction of members and building movement without damage to connections or members.
 - d. Concentrated Loads on Intermediate Rails: 50 pounds per square ft (0.22 per sq m), minimum.
 - 2. Assembly: Join lengths, seal open ends, and conceal exposed mounting bolts and nuts using slip-on non-weld mechanical fittings, flanges, escutcheons, and wall brackets.
 - 3. Joints: Tightly fitted and secured, machined smooth with hairline seams.
 - 4. Field Connections: Provide sleeves to accommodate site assembly and installation.
 - 5. Welded and Brazed Joints: Make exposed joints butt tight, flush, and hairline; use methods that avoid discoloration and damage of finish; grind smooth, polish, and restore to required finish.
 - a. Ease exposed edges to small uniform radius.

- b. Welded Joints:
 - 1) Carbon Steel: Perform welding in accordance with AWS D 1.1/D1.1M.
 - 2) Stainless Steel: Perform welding in accordance with AWS D 1.6.

2.02 RAILING SYSTEMS

- A. Provide anchors and other components as required to attach to structure, made of same materials as railing components unless otherwise indicated; where exposed fasteners are unavoidable provide flush countersunk fasteners.
- B. Post Railing System: Engineered, post supported railing system with metal grating infill panels.
 - 1. Configuration and Size: As indicated on Drawings.
 - 2. Handrail: Stainless steel tube, 1-1/2 inch diameter by 0.145 inch wall thickness.
 - 3. Handrail Brackets:
 - a. Same metal as railing.

2.03 MATERIALS

- A. Stainless Steel Components:
 - 1. Pipe: ASTM A 312/A 312M, Grade TP 304.
- B. Steel Components:
 - 1. Bars: Hot-rolled, carbon steel complying with ASTM A29/A29M, Grade 1010.
 - 2. Plates and Shapes: ASTM A36/A36M.
 - 3. Steel Tube: ASTM A500/A500M, Grade B cold-formed structural tubing.
 - 4. Welded Steel Grating:
 - a. Bearing Bar Spacing:
 - b. Bar Size: 1-1/2 inches (38 mm) by 3/16 inch (5 mm).
 - c. Bar Spacing: 11/16 inch (17.46 mm)
 - d. Surface: Plain.
 - e. Basis of Design Product:
 - 1) McNichols Co., Inc.; CMW-4-150.
 - 2) Prior approved equal.
 - 5. Exposed Fasteners: Flush countersunk screws or bolts; consistent with design of railing.

2.04 ACCESSORIES

- A. Anchors and Fasteners: Provide anchors and other materials as required to attach to structure, made of same materials as railing components unless otherwise indicated; where exposed fasteners are unavoidable provide flush countersunk fasteners.
 - 1. For anchorage to concrete, provide inserts to be cast into concrete for bolting anchors.
 - 2. For anchorage to stud walls, provide backing plates for bolting anchors.
- B. Hydraulic Expansion Cement: ASTM C1107/C1107M.
- C. Sealant: As specified in Section 07 9200 - Joint Sealants.

2.05 FASTENERS

- A. General: Provide zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 12 for exterior use, and Class Fe/Zn 5 where built into exterior walls. Select fasteners for type, grade, and class required.
 - 1. Hot-Dip Galvanized Railings: Type 304 stainless-steel or hot-dip zinc-coated steel fasteners complying with ASTM A 153/A 153M or ASTM F 2329 for zinc coating.
 - 2. Stainless-Steel Railings: Type 304 stainless-steel fasteners.
 - 3. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.
- B. Fasteners for Anchoring to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated and capable of withstanding design loads.

- C. Bolts and Nuts: Regular hexagon-head bolts, ASTM A307, Grade A (ASTM F 568M, Property Class 4.6); with hex nuts, ASTM A563 (ASTM A 563M); and, where indicated, flat washers.
- D. ICC-ES AC193 is for mechanical anchors and ICC-ES AC308 is for adhesive anchors.
- E. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC01, ICC-ES AC193, ICC-ES AC58, or ICC-ES AC308.
 - 1. Uses: Securing cold-formed steel framing to structure.
 - 2. Type: Torque-controlled expansion anchor or adhesive anchor.
 - 3. Material:
 - a. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941, Class Fe/Zn 5, unless otherwise indicated.
 - b. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 2 (A4) stainless-steel bolts, ASTM F593, and nuts, ASTM F594.
 - 4. Wedge Type:
 - a. Hilti Corp; KWIK BOLT II, 1/4 inch (6.35 mm) to 1 inch (25 mm) diameter, ICC ESR-1385 and ESR-2302.
 - b. ITW Ramset; TRUBOLT WEDGE, 1/4 inch (6.35 mm) to 1-1/4 inch (31.75 mm) diameter, ICC ESR-3772.
 - 5. Sleeve Type:
 - a. ITW Ramset; DYNABOLT SLEEVE, 1/4 inch (6.35 mm) to 3/4 inch (19.05 mm) diameter, California State Fire Marshall..
 - 6. Shell Type:
 - a. Hilti Corp; SERIES HDI, 1/4 inch (6.35 mm) to 1 inch (25 mm) diameter, ICC ESR-4236.
 - b. ITW Ramset; MULTI-SET II, 1/32 inch (0.79 mm) to 3/4 inch (19.05 mm) diameter, LA RR2748, California State Fire Marshall.

2.06 MISCELLANEOUS MATERIALS

- A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
 - 1. For stainless-steel railings, provide type and alloy as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.
- B. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
 - 1. Basis of Design Product:
 - a. Cloverdale; ClovaClean
 - b. Krud Kutter; Metal Clean and Etch.
 - c. Great Lakes Laboratories; Clean'n Etch.
- C. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
- D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.
- E. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

2.07 FABRICATION

- A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.
- B. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for

reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.

- C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- D. Form work true to line and level with accurate angles and surfaces.
- E. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.
- F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- G. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove flux immediately.
 - 4. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 1 welds; no evidence of a welded joint.
- H. Mechanical Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
 - 1. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.
- I. Form changes in direction as follows:
 - 1. As detailed.
- J. Close exposed ends of hollow railing members with prefabricated end fittings.
- K. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work where indicated.
 - 1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers, or other means to transfer loads through wall finishes to structural supports and to prevent bracket or fitting rotation and crushing of substrate.
- L. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.

2.08 GENERAL FINISH REQUIREMENTS

- A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.
- B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- C. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

2.09 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.

- C. Directional Satin Finish: No. 4.
- D. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

2.10 STEEL FINISHES

- A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.
- B. Do not prime surfaces in direct contact with concrete or where field welding is required.
- C. Prime Painting: Use specified shop- and touch-up primer.
 - 1. Preparation of Steel: In accordance with SSPC-SP 3, Power Tool Cleaning.
 - 2. Number of Coats: One.
 - 3. Interior Railings: Universal primer.
- D. Exterior Railings: Galvanized.
- E. Galvanizing: Hot-dip galvanize to minimum requirements of ASTM A123/A123M, G80.
 - 1. Touch up abraded areas after fabrication using specified touch-up primer for galvanized surfaces.
 - 2. Hot-dip galvanize exterior steel railings, including hardware, after fabrication.
 - a. Comply with ASTM A123/A123M, Grade 100 for hot-dip galvanized railings.
 - b. Comply with ASTM A153/A153M for hot-dip galvanized hardware.
- F. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
- G. Fill vent and drain holes that are exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.
- H. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.
- I. Preparing Galvanized Railings for Shop Priming: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.
- J. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - 1. Exterior Railings: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
- K. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Shop, Field, and Maintenance Painting of Steel," for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.
- L. Shop prime uncoated railings with universal shop primer unless zinc-rich primer is indicated.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that substrate and site conditions are acceptable and ready to receive work.
- B. Verify field dimensions of locations and areas to receive work.
- C. Notify Architect immediately of conditions that would prevent satisfactory installation.
- D. Do not proceed with work until detrimental conditions have been corrected.
- E. Furnish components to be installed in other work to installer of that other work, including but not limited to blocking, sleeves, inserts, anchor bolts, embedded plates and supports for attachment of anchors.

3.02 PREPARATION

- A. Protect existing work.
- B. Review installation drawings before beginning installation. Coordinate diagrams, templates, instructions and directions for installation of anchorages and fasteners.
- C. Clean surfaces to receive units. Remove materials and substances detrimental to the installation.

3.03 INSTALLATION

- A. Comply with manufacturer's drawings and written instructions.
- B. Install components plumb and level, accurately fitted, free from distortion or defects and with tight joints, except where necessary for expansion.
- C. Anchor securely to structure.
- D. Conceal anchor bolts and screws whenever possible. Where not concealed, use flush countersunk fastenings.
- E. Isolate dissimilar materials with bituminous coating, bushings, grommets or washers to prevent electrolytic corrosion.

3.04 TOLERANCES

- A. Maximum Variation From Plumb: 1/4 inch (6 mm) per floor level, non-cumulative.
- B. Maximum Offset From True Alignment: 1/4 inch (6 mm).
- C. Maximum Out-of-Position: 1/4 inch (6 mm).

3.05 FIELD QUALITY CONTROL

- A. Field Services: Provide the services of the manufacturer for field observation of installation of railings.

3.06 CLEANING

- A. Remove protective film from exposed metal surfaces.
- B. Metal: Clean exposed metal finishes with potable water and mild detergent, in accordance with manufacturer recommendations; do not use abrasive materials or chemicals, detergents or other substances that may damage the material or finish.
- C. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - 1. Apply by brush or spray to provide a minimum 2.0-mil (0.05-mm) dry film thickness.

3.07 PROTECTION

- A. Protect installed components and finishes from damage after installation.
- B. Repair damage to exposed finishes to be indistinguishable from undamaged areas.
 - 1. If damage to finishes and components cannot be repaired to be indistinguishable from undamaged finishes and components, replace damaged items.

END OF SECTION

SECTION 05 7313
GLAZED DECORATIVE METAL RAILINGS

PART 1 GENERAL**1.01 SECTION INCLUDES**

- A. Glazed decorative railings and guardrail assemblies.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination: Review and coordinate setting drawings, shop drawings, templates, and instructions for installation of related items to be embedded in concrete and masonry.
- B. Pre-Installation Meeting: Schedule and conduct a preinstallation meeting one week before starting work of this Section.
 - 1. Convene under general provisions of Section 01 7000 - Execution and Closeout Requirements.
 - 2. Attendees shall include, but not be limited to:
 - a. Contractor.
 - b. Manufacturer's representative.
 - c. Architect.
 - d. Owner's representative.
 - e. Other subcontractors of adjacent work.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Submit manufacturer's product data including description of materials, components, finishes, fabrication details, glass, anchors, and accessories.
 - 2. Shop Drawings: Indicate railing system elevations and sections, details of profile, dimensions, sizes, connection attachments, anchorage, size and type of fasteners, and accessories. Indicate anchor and joint locations, brazed connections, transitions, and terminations.
 - 3. Samples: Submit three of each item below for each type and condition shown.
 - a. Glass: 12 inch by 12 inch (305 mm by 305 mm), illustrating color, thickness and edge condition.
 - b. Railing: 12 inch (305 mm) long section of handrail illustrating color, finish and connection detail.
- B. Informational Submittals:
 - 1. Test Reports: Submit test reports from an independent testing agency showing compliance with specified design and performance requirements.
 - 2. Manufacturer's Installation Instructions.
 - 3. Maintenance Data: Manufacturer's instructions for care and cleaning.
 - 4. Manufacturer's Certification: Certify that railings have been designed to meet the design criteria of the specified code; include all conditions or limitations of the design necessary to achieve the necessary strength for the loading specified.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 5.504.4.1 Adhesives and sealants.
 - 2. 5.504.4.3 Paints and coatings.
 - 3. 5.504.4.3.1 Aerosol paints and coatings.

4. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
5. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.
6. A5.406.1, .2 and .3: Materials selected for longevity, reduced maintenance and recyclability.

1.05 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum three years of documented experience.
- B. Installer Qualifications: Company specializing in installing decorative railing systems and acceptable to manufacturer.
- C. Templates: Supply installation templates, reinforcing and required anchorage devices.

1.06 MOCK-UP

- A. Comply with general mock-up requirements specified in Section 01 4000.
- B. Mock-ups: Construct an example of each item specified. Locate mock-ups where directed.
- C. Provide full size mock-up of each type of railing system 6 feet long as directed by Architect.
 1. Locate where directed.
 2. Mock-up may remain as part of the Work.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in factory provided protective coverings and packaging.
- B. Protect materials against damage during transit, delivery, storage, and installation at site.
- C. Inspect materials upon delivery for damage. Repair damage to be indistinguishable from undamaged areas; if damage cannot be repaired to be indistinguishable from undamaged parts and finishes, replace damaged items.
- D. Prior to installation, store materials and components under cover, in a dry location.

1.08 FIELD CONDITIONS

- A. Do not install railings until project is enclosed and ambient temperature of space is minimum 65 degrees F (18.3 degrees C) and maximum 95 degrees F (35 degrees C).
- B. Maintain ambient temperature of space at minimum 65 degrees F (18.3 degrees C) and maximum 95 degrees F (35 degrees C) for 24 hours before, during, and after railing installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Basis of Design Product:
 1. C. R. Laurence Co., Inc.: www.crl-arch.com.
 2. Other Acceptable Manufacturers:
 - a. Global Glass Railings; Hercules system (base mounted): www.architecturalglassrailings.com.
 - b. Handrail Design Inc.: www.handrail-design.com.
 - c. Livers Bronze Co.: www.liversbronze.com.
 - d. Approved equal.

2.02 PERFORMANCE REQUIREMENTS

- A. Design and fabricate railing and handrails in accordance with California Building Code 11B-505.

1. Top of gripping surfaces of handrails shall be 34 inches (863.60 mm) minimum and 38 inches (965.20 mm) maximum vertically above walking surfaces, stair nosings, and ramp surfaces. Handrails shall be at a consistent height above such surfaces.
 2. Clearance between handrail gripping surfaces and adjacent surfaces shall be 1-1/2 inches (38 mm) minimum. Handrail may be located in a recess if the recess is 3 inches (76.20 mm) maximum deep and 18 inches (457.20 mm) minimum clear above the top of the handrail.
 3. Handrail gripping surfaces shall be continuous along their length and shall not be obstructed along their tops or sides. The bottoms of handrail gripping surfaces shall not be obstructed for more than 20 percent of their length. Where provided, horizontal projections shall occur 1-1/2 inches (38 mm) minimum below the bottom of the handrail gripping surfaces.
 4. Handrail gripping surfaces with a circular cross section shall have an outside diameter of 1-1/4 inches (31.75 mm) minimum and 2 inch (50.8 mm) maximum.
 5. Handrail gripping surfaces with a non-circular cross section shall have an outside dimension of 4 inches (101.60 mm) minimum and 6-1/4 inches (158.75 mm) maximum, and a cross-sectional dimension of 2-1/4 inches (57.15 mm) maximum.
 6. Handrail gripping surfaces and any surfaces adjacent to them shall be free of sharp or abrasive elements and shall have rounded edges.
 7. Handrails shall not rotate within their fittings.
 8. Handrail gripping surfaces shall extend beyond and in the same direction of stair flights and ramp runs in accordance with CBC Section 11B-505.10. Such extensions are not required for continuous handrails at the inside turn of switchback or dogleg stairs and ramps.
- B. Railings - General: Factory- or shop-fabricated in design indicated, to suit specific project conditions, and for proper connection to building structure, and in largest practical sizes for delivery to site.
1. Design Criteria: Design and fabricate railings and anchorages to resist the following loads without failure, damage, or permanent set; loads do not need to be applied simultaneously.
 - a. Distributed Loads: Design railing assembly, wall rails, and attachments to resist distributed force of 50 pounds per linear foot (730 N/m) applied to the top of the assembly and in any direction, without damage or permanent set. Test in accordance with ASTM E935.
 - b. Concentrated Loads: Design railing assembly, wall rails, and attachments to resist a concentrated force of 200 pounds (890 N) applied at any point on the top of the assembly and in any direction, without damage or permanent set. Test in accordance with ASTM E935.
 - c. Allow for expansion and contraction of members and building movement without damage to connections or members.
 - d. Concentrated Loads on Intermediate Rails: 50 pounds per square ft (0.22 per sq m), minimum.
 - e. AWS D1.6 - Structural Welding Code - Stainless Steel; 1999.
 2. Assembly: Join lengths, seal open ends, and conceal exposed mounting bolts and nuts using slip-on non-weld mechanical fittings, flanges, escutcheons, and wall brackets.
 3. Joints: Tightly fitted and secured, machined smooth with hairline seams.
 4. Field Connections: Provide sleeves to accommodate site assembly and installation.
 5. Welded and Brazed Joints: Make exposed joints butt tight, flush, and hairline; use methods that avoid discoloration and damage of finish; grind smooth, polish, and restore to required finish.
 - a. Ease exposed edges to small uniform radius.
 - b. Welded Joints:
 - 1) Carbon Steel: Perform welding in accordance with AWS D 1.1/D1.1M.
 - 2) Stainless Steel: Perform welding in accordance with AWS D 1.6.

2.03 RAILING SYSTEM

- A. Dimensions: Refer to drawings for configurations and heights.

- B. Structural Glass Railing System - Base-Mounted: Engineered, base supported railing system with structural glass.
1. Configuration: Guardrail where top rail is also a handrail.
 - a. Stair Locations: Guardrail with separate handrail.
 2. Top Cap: 1-7/16 inch wide by 1-7/16 inch high by 11 gauge stainless steel; No. 4 satin finish.
 - a. Basis of Design Manufacturer:
 - 1) C.R. Laurence Company, Inc; L10 BS.
 3. Rubber Glass Insert: Flexible black rubber insert barrier between metal and glass for 27/32 inch thick laminated glass.
 - a. Basis of Design Manufacturer:
 - 1) C.R. Laurence Company, Inc; LR21PV.
 4. Base Shoe, Aluminum: ASTM B221 or ASTM B221M, 6063 alloy, T5 temper; 2-3/4 inch (69.85 mm) wide by 4-1/8 inch (105 mm) high, rectangular profile.
 - a. Basis of Design Product:
 - 1) C.R. Laurence Company, Inc; CRL L21S Series Mill Aluminum Square Base Shoe with drilled mounting holes.
 5. Cladding:
 - a. Material: 18 gage, 0.0500 inch (1.27 mm) stainless steel; No. 4 satin finish.
 - 1) Basis of Design Product:
 - (a) C.R. Laurence Company, Inc; CRL BSCBS10.
 6. Type GL-14 - Glass: Laminated safety glass; ASTM C1172, unless otherwise indicated.
 - a. Ionoplast Interlayer: Minimum 0.060 inch (1.52 mm) thick.
 - b. Impact Strength: Category II, tested in accordance with 16 CFR 1201.
 - c. Thickness: 3/4 inch (19 mm).
 - d. Configuration: As indicated on Drawings.
 - e. Edges: Ground smooth and polished.
 - f. Color: Clear, no tint.
 - g. Basis of Design Product:
 - 1) C.R. Laurence Company, Inc; CRL MG 19CC.
 7. Handrail: 1-1/2 inch outside diameter by 1/8 inch thick.
 - a. Stainless Steel Finish, Exposed Surfaces: No. 4 satin finish.
 - b. Basis of Design Product:
 - 1) C.R. Laurence Company, Inc; CRL HR15HBS 1-1/2 inch outside diameter tube.
 8. Handrail Brackets:
 - a. Stainless Steel Finish, Exposed Surfaces: No. 4 satin finish.
 - b. Basis of Design Product:
 - 1) C.R. Laurence Company, Inc; CRL HR15GBS.
 9. Fasteners:
 - a. Attachment to Concrete:
 - 1) Provide anchors capable of sustaining, without failure, a load equal to four times the load imposed when installed in concrete, tested in accordance with ASTM E488/E488M.
 - 2) Provide 12 inch (305 mm) center-to-center hole spacing; 1/2 by 4 inch (13 by 102 mm) concrete anchors.
 10. Basis of Design Manufacturer:
 - a. C.R. Laurence Company, Inc; CRL GRS TAPER-LOC Dry Glaze Glass Railing System: www.crl-arch.com.
 - 1) Approvals:
 - (a) ICC-ES ERS-3269.

2.04 MATERIALS

- A. Aluminum Components: ASTM B221 or ASTM B221M.
1. Mill Finish.

- B. Stainless Steel Components:
 1. ASTM A666, Type 304.
 2. Stainless Steel Finish: No. 4 Brushed Polished finish.

2.05 ACCESSORIES

- A. Low-Emitting Paints and Coatings: Paints and coatings applied to interior decorative metal railings shall comply with the testing and product requirements of the California Department of Public Health's (formerly, the California Department of Health Services') "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Paint Maximum Product Emissions Limits: Top coat and primer interior paints must meet current requirements for VOC (Volatile Organic Compounds) limits of South Coast Air Quality Management District (SCAQMD) Rule No. 1113 and CAL-Green Table 5.504.4.3 for VOC Content Limits for Architectural Coatings.
 1. CAL-Green Requirements for typical paint coatings:
 - a. Primers, Sealers, and Undercoaters: 100 grams per liter of product minus water.
- C. Welding Fittings: Factory- or shop-welded from matching pipe or tube; joints and seams ground smooth.
- D. Anchors and Fasteners: Provide anchors and other materials as required to attach to structure, made of same materials as railing components unless otherwise indicated; where exposed fasteners are unavoidable provide flush countersunk fasteners.
 1. For anchorage to concrete, provide inserts to be cast into concrete for bolting anchors.
 2. For anchorage to masonry, provide brackets to be embedded in masonry for bolting anchors.
 3. For anchorage to stud walls, provide backing plates for bolting anchors.

2.06 FABRICATION

- A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.
- B. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.
- C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
- D. Form work true to line and level with accurate angles and surfaces.
- E. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.
- F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
- G. Connections: Fabricate railings with welded connections unless otherwise indicated.
- H. Mechanical Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.
 1. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.
- I. Form changes in direction as follows:
 1. As detailed.

- J. Bend members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
- K. Close exposed ends of hollow railing members with prefabricated end fittings.
- L. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns, unless clearance between end of rail and wall is 1/4 inch (6 mm) or less.

2.07 GENERAL FINISH REQUIREMENTS

- A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.
- C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- D. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

2.08 STAINLESS-STEEL FINISHES

- A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
- B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1. Run grain of directional finishes with long dimension of each piece.
- C. Directional Satin Finish: No. 4.
- D. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that substrate and site conditions are acceptable and ready to receive work.
- B. Verify field dimensions of locations and areas to receive work.
- C. Notify Architect immediately of conditions that would prevent satisfactory installation.
- D. Do not proceed with work until detrimental conditions have been corrected.
- E. Furnish components to be installed in other work to installer of that other work, including but not limited to blocking, sleeves, inserts, anchor bolts, embedded plates and supports for attachment of anchors.

3.02 PREPARATION

- A. Protect existing work.
- B. Review installation drawings before beginning installation. Coordinate diagrams, templates, instructions and directions for installation of anchorages and fasteners.
- C. Clean surfaces to receive units. Remove materials and substances detrimental to the installation.

3.03 INSTALLATION, GENERAL

- A. Fit exposed connections together to form tight, hairline joints.
- B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
 - 1. Do not weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
- C. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.
 - 1. Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.
- D. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction

3.04 INSTALLATION

- A. Comply with manufacturer's drawings and written instructions.
- B. Install components plumb and level, accurately fitted, free from distortion or defects and with tight joints, except where necessary for expansion.
- C. Anchor securely to structure.
- D. Conceal anchor bolts and screws whenever possible. Where not concealed, use flush countersunk fastenings.
- E. Isolate dissimilar materials with bituminous coating, bushings, grommets or washers to prevent electrolytic corrosion.

3.05 TOLERANCES

- A. Maximum Variation From Plumb: 1/4 inch (6 mm) per floor level, non-cumulative.
- B. Maximum Offset From True Alignment: 1/4 inch (6 mm).
- C. Maximum Out-of-Position: 1/4 inch (6 mm).

3.06 FIELD QUALITY CONTROL

- A. Field Services: Provide the services of the manufacturer for field observation of installation of railings.

3.07 CLEANING

- A. Remove protective film from exposed metal surfaces.
- B. Metal: Clean exposed metal finishes with potable water and mild detergent, in accordance with manufacturer recommendations; do not use abrasive materials or chemicals, detergents or other substances that may damage the material or finish.
- C. Glass and Glazing: Clean glazing surfaces; remove excess glazing sealant compounds, dirt, and other substances.

3.08 PROTECTION

- A. Protect installed components and finishes from damage after installation.
- B. Repair damage to exposed finishes to be indistinguishable from undamaged areas.

1. If damage to finishes and components cannot be repaired to be indistinguishable from undamaged finishes and components, replace damaged items.

END OF SECTION

**SECTION 05 7511
ORNAMENTAL METAL MESH PANELS**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Ornamental metal mesh panels for exit stairs and as indicated on Drawings.

1.02 SUBMITTALS

- A. Action Submittals:
 1. Product Data: Submit manufacturer's product data including description of materials, components, finishes, fabrication details, glass, anchors, and accessories.
 2. Shop Drawings: Indicate system elevations and sections, details of profile, dimensions, sizes, connection attachments, anchorage, size and type of fasteners, and accessories. Indicate anchor and joint locations, brazed connections, transitions, and terminations.
 3. Samples: Submit three of each item below for each type and condition shown.
 - a. Each type of exposed metal: 12 inch by 12 inch (305 mm by 305 mm), illustrating color, thickness and edge condition.
- B. Informational Submittals:
 1. Test Reports: Submit test reports from an independent testing agency showing compliance with specified design and performance requirements.

1.03 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide special submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.

1.04 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in installing decorative metal and acceptable to manufacturer.
- B. Templates: Supply installation templates, reinforcing and required anchorage devices.

1.05 MOCK-UP

- A. Mock-Ups: Construct an example of each item specified. Locate mock-ups where directed. Mock-ups may remain as part of the work.
- B. Locate where directed.
- C. Mock-up may remain as part of the Work.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials in factory provided protective coverings and packaging.
- B. Protect materials against damage during transit, delivery, storage, and installation at site.
- C. Inspect materials upon delivery for damage. Repair damage to be indistinguishable from undamaged areas; if damage cannot be repaired to be indistinguishable from undamaged parts and finishes, replace damaged items.

- D. Prior to installation, store materials and components under cover, in a dry location.

PART 2 PRODUCTS

2.01 MATERIALS

- A. Ornamental mesh as indicated on Drawings.
- B. Panel Frames: Angle or channel frames of same material as mesh.

2.02 FABRICATION

- A. Fabricate panel frames and supports as indicated on Drawings.
 - 1. Provide mechanically jointed mitered corners.
- B. Install metal mesh in frames with wires parallel to frames in both directions; make mesh square prior to installation in accordance with manufacturer's instructions.
- C. After fabrication, touch up finishes or re-polish as required to restore original finish.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that substrates to receive panels are ready for installation.

3.02 INSTALLATION

- A. Install panels as indicated.
- B. Whenever mesh panels are installed prior to completion of rough work, provide protective covers until the project is ready for occupancy.

END OF SECTION

SECTION 06 1053
MISCELLANEOUS ROUGH CARPENTRY

PART 1 GENERAL**1.01 SUMMARY**

- A. Section Includes:
1. Wood blocking and nailers.
 2. Plywood backing panels.

1.02 DEFINITIONS

- A. Blocking: Wood used for plates, furring, shimming, stripping, sleepers, grounds, curbing, cants, bracing, nailers, and filling in between framing members.
- B. Dimension Lumber: Lumber of 2 inches nominal or greater but less than 5 inches nominal in least dimension.
- C. Lumber grading agencies, and the abbreviations used to reference them, include the following:
1. NLGA: National Lumber Grades Authority.
 2. WCLIB: West Coast Lumber Inspection Bureau.
 3. WWPA: Western Wood Products Association.

1.03 SUBMITTALS

- A. Action Submittals:
1. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
 - a. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.
 - b. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
 - c. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency according to ASTM D 5664.
 - d. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
 - e. Include copies of warranties from chemical treatment manufacturers for each type of treatment.
 2. Evaluation Reports: For the following, from ICC-ES:
 - a. Fire-retardant-treated wood.
 - b. Power-driven fasteners.
 - c. Powder-actuated fasteners.
 - d. Metal framing anchors.

1.04 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 2. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
 3. 5.504.4.5 Formaldehyde Limit requirements.

1.05 QUALITY ASSURANCE

- A. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.
- B. Grade Marks:
 - 1. Identify lumber and plywood by official grade mark.
 - 2. Lumber: Include symbol of grading agency, mill name, grade, species, grading rules, and condition of seasoning at time of manufacturer.
 - 3. Plywood: Include type, class identification index, and agency mark.
 - 4. Pressure treatment: Include quality mark of grading agency which maintains continued supervision, testing, inspection, and re-examination service over product quality as described in AWWPA standards.
 - 5. Fire-retardant treated wood: Imprint each piece with mark attesting to FR-S rating.
- C. Certifications: Submit manufacturer's certification that products furnished for Project meet or exceed specified requirements.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Stack lumber flat with spacers beneath and between each bundle to provide air circulation. Protect lumber from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 PRODUCTS

2.01 WOOD PRODUCTS, GENERAL

- A. Certified Wood: Lumber and Plywood shall be produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001 and FSC STD-40-004.
- B. Regional Materials: Dimension lumber shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.
- C. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, provide lumber that complies with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Provide lumber graded by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.
 - 1. Factory mark each piece of lumber with grade stamp of grading agency.
 - 2. Provide dressed lumber, S4S, unless otherwise indicated.
- D. Maximum Moisture Content of Lumber: 15 percent for 2 inch (50.8 mm) nominal thickness or less, 19 percent for more than 2-inch nominal thickness unless otherwise indicated.

2.02 PRESERVATIVE-TREATED PLYWOOD

- A. Preservative Treatment by Pressure Process: AWWPA U1:
 - 1. Use Category UC3b for exterior construction not in contact with ground.
 - 2. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium.
- B. Mark plywood with appropriate classification marking of an inspection agency acceptable to authorities having jurisdiction.

2.03 FIRE-RETARDANT-TREATED MATERIALS

- A. General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.
- B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame spread index of 25 or less when tested according to ASTM E84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet beyond the centerline of the burners at any time during the test.
 - 1. Use treatment that does not promote corrosion of metal fasteners.
 - 2. Interior Type A: Treated materials shall have a moisture content of 28 percent or less when tested according to ASTM D 3201 at 92 percent relative humidity. Use where exterior type is not indicated.
- C. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent.
- D. Identify fire-retardant-treated wood with appropriate classification marking of testing and inspecting agency acceptable to authorities having jurisdiction.
- E. For exposed items indicated to receive a stained or natural finish, use chemical formulations that do not bleed through, contain colorants, or otherwise adversely affect finishes.
- F. Application: Treat all miscellaneous carpentry unless otherwise indicated.

2.04 DIMENSION LUMBER FRAMING

- A. Framing: Construction or No. 2
 - 1. Douglas fir-larch; WCLIB or WWPA.

2.05 MISCELLANEOUS LUMBER

- A. General: Provide miscellaneous lumber indicated and lumber for support or attachment of other construction, including the following:
 - 1. Blocking.
 - 2. Nailers.
- B. For items of dimension lumber size, provide Construction or No. 2 grade lumber and any of the following species:
 - 1. Douglas fir-larch; WCLIB or WWPA.
 - 2. Hem-fir; WCLIB or WWPA.
- C. For blocking not used for attachment of other construction, Utility, Stud, or No. 3 grade lumber of any species may be used provided that it is cut and selected to eliminate defects that will interfere with its attachment and purpose.
- D. For blocking and nailers used for attachment of other construction, select and cut lumber to eliminate knots and other defects that will interfere with attachment of other work.
- E. For furring strips for installing plywood or hardboard paneling, select boards with no knots capable of producing bent-over nails and damage to paneling.

2.06 PLYWOOD PANELS

- A. Equipment Panel Boards:
 - 1. Rated Sheathing.
 - 2. Exposure 1.
 - 3. Grade: A-CX, void free.
 - 4. Thickness: 23/32 inch (18.25 mm) minimum.

- 5. Painted.

2.07 FASTENERS

- A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
 - 1. Where carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity, provide fasteners of Type 304 stainless steel.
- B. Nails, Brads, and Staples: ASTM F1667.
- C. Power-Driven Fasteners: NES NER-272.
- D. Wood Screws: ASME B18.6.1.
- E. Screws for Fastening to Metal Framing: ASTM C 954, length as recommended by screw manufacturer for material being fastened.
- F. Lag Bolts: ASME B18.2.1.
- G. Bolts: Steel bolts complying with ASTM A307, Grade A; with ASTM A563 hex nuts and, where indicated, flat washers.
- H. Expansion Anchors: Anchor bolt and sleeve assembly of material indicated below with capability to sustain, without failure, a load equal to 6 times the load imposed when installed in unit masonry assemblies and equal to 4 times the load imposed when installed in concrete as determined by testing per ASTM E488/E488M conducted by a qualified independent testing and inspecting agency.
 - 1. Material: Carbon-steel components, zinc plated to comply with ASTM B633, Class Fe/Zn 5.
 - 2. Material: Stainless steel with bolts and nuts complying with ASTM F593 and ASTM F594, Alloy Group 1 or 2.

2.08 METAL FRAMING ANCHORS

- A. Galvanized-Steel Sheet: Hot-dip, zinc-coated steel sheet complying with ASTM A653/A653M, G60 coating designation.
 - 1. Use for interior locations unless otherwise indicated.
- B. Hot-Dip Heavy-Galvanized Steel Sheet: ASTM A653/A653M; Structural Steel (SS), high-strength low-alloy steel Type A (HSLAS Type A), or high-strength low-alloy steel Type B (HSLAS Type B); G185 coating designation; and not less than 0.036 inch thick.
 - 1. Use for wood-preservative-treated lumber and where indicated.
- C. Stainless-Steel Sheet: ASTM A666, Type 304.
 - 1. Use for exterior locations and where indicated.

2.09 MISCELLANEOUS MATERIALS

- A. Adhesives for Gluing Furring to Concrete or Masonry: Formulation complying with ASTM D3498 that is approved for use indicated by adhesive manufacturer.
 - 1. Adhesives shall have a VOC content of 70 g/L or less.
 - 2. Adhesives shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 - 3. Adhesives and sealants shall meet or exceed the VOC and chemical component limits of SCAQMD 1168, CAL-Green Table 5.504.4.1 Adhesive VOC Limit, and CAL-Green Table 5.504.4.2 Sealant VOC Limit requirements.
 - a. Current requirement refers to the date on which the materials are installed in the building.

- b. A copy of SCAQMD 1168 is referenced in Section 01 8114 that was current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.

PART 3 EXECUTION

3.01 INSTALLATION, GENERAL

- A. Set carpentry to required levels and lines, with members plumb, true to line, cut, and fitted. Fit carpentry to other construction; scribe and cope as needed for accurate fit. Locate furring, nailers, blocking, and similar supports to comply with requirements for attaching other construction.
- B. Where wood-preservative-treated lumber is installed adjacent to metal decking, install continuous flexible flashing separator between wood and metal decking.
- C. Framing Standard: Comply with AF&PA's WCD 1, "Details for Conventional Wood Frame Construction," unless otherwise indicated.
- D. Install plywood backing panels by fastening to studs; coordinate locations with utilities requiring backing panels. Install fire-retardant treated plywood backing panels with classification marking of testing agency exposed to view.
- E. Metal Framing Anchors: Install metal framing anchors to comply with manufacturer's written instructions. Install fasteners through each fastener hole.
- F. Provide blocking and framing as indicated and as required to support facing materials, fixtures, specialty items, and trim.
 - 1. Provide metal clips for fastening gypsum board or lath at corners and intersections where framing or blocking does not provide a surface for fastening edges of panels. Space clips not more than 16 inches o.c.
- G. Sort and select lumber so that natural characteristics will not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of member or pieces that are too small to use with minimum number of joints or optimum joint arrangement.
- H. Securely attach carpentry work to substrate by anchoring and fastening as indicated, complying with the following:
 - 1. NES NER-272 for power-driven fasteners.
 - 2. Table 2304.9.1, "Fastening Schedule," in ICC's International Building Code.
 - 3. Table R602.3(1), "Fastener Schedule for Structural Members," and Table R602.3(2), "Alternate Attachments," in ICC's International Residential Code for One- and Two-Family Dwellings.
- I. Use steel common nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood. Drive nails snug but do not countersink nail heads unless otherwise indicated.

3.02 WOOD BLOCKING, AND NAILER INSTALLATION

- A. Attach items to substrates to support applied loading. Recess bolts and nuts flush with surfaces unless otherwise indicated.

3.03 WOOD FURRING INSTALLATION

- A. Install level and plumb with closure strips at edges and openings. Shim with wood as required for tolerance of finish work.
- B. Furring to Receive Plywood or Hardboard Paneling: Install 1 inch (25 mm) by 3 inch (76.20 mm) nominal-size furring horizontally and vertically at 24 inches (610 mm) o.c.

3.04 PROTECTION

- A. Protect miscellaneous rough carpentry from weather. If, despite protection, miscellaneous rough carpentry becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

END OF SECTION

**SECTION 06 1643
GYPSUM SHEATHING**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Gypsum sheathing.
- B. Sheathing joint and penetration treatment.

1.02 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Provide technical data on application instructions.
- B. Informational Submittals:
 - 1. Manufacturer's Certificate: Certify that gypsum sheathing exceed specified requirements.

1.03 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 - 2. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
 - 3. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 PRODUCTS

2.01 CONSTRUCTION PANELS

- A. Wall Sheathing: Glass mat faced gypsum, ASTM C1177/C1177M, square long edges, 5/8 inch Type X fire-resistant (16 mm Type X fire-resistant).
 - 1. At Assemblies Indicated with Fire-Rating: Use type required by indicated tested assembly.
 - 2. Edges: Square, for vertical application.
 - 3. Basis of Design Product:
 - a. Georgia-Pacific Building Products; Dens-Glass Gold Sheathing.
 - b. National Gypsum Company; Gold Bond eXP Extended Exposure Sheathing.
 - c. Temple-Inland Building Products by Georgia-Pacific; GreenGlass Exterior Sheathing.
 - d. United States Gypsum Co.; SecureRock.

2.02 ACCESSORIES

- A. Fasteners and Anchors:
 - 1. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B117.

- a. For steel framing less than 0.0329 inch (0.835 mm) thick, use screws that comply with ASTM C1002.
 - b. For steel framing from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick, use screws that comply with ASTM C954.
- B. Thermal Barrier Strips: Nanoporous aerogel thermal barrier strips.
- 1. Location: Between metal studs and gypsum sheathing, and as indicated on Drawings.
 - 2. Basis of Design Product:
 - a. Advanced Insolutions Inc; Proloft: www.advancedinsolutions.com.

2.03 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIALS

- A. Sealant at Glass Fiber Faced Gypsum Sheathing: Silicone-General Purpose (Designation S GP): ASTM C920, Type S, Grade NS:
- 1. Class: 50. Joint movement range without cohesive/adhesive failure: Plus 50 percent to minus 50 percent of joint width.
 - 2. Uses: NT, M, G, A, O
 - 3. Low modulus, single component, neutral curing, non-staining, non-bleeding silicone sealant.
 - 4. Color: Manufacturer standard.
 - 5. Acceptable Products:
 - a. Dow Corning; 795.
 - b. General Electric; Silpruf.
 - c. Rhone-Poulenc, Inc.; Rhodorsil 5C.
- B. Sealant for Glass-Mat Gypsum Sheathing: Silicone emulsion sealant complying with ASTM C834, compatible with sheathing tape and sheathing and recommended by tape and sheathing manufacturers for use with glass-fiber sheathing tape and for covering exposed fasteners.
- 1. Sheathing Tape: Self-adhering glass-fiber tape, minimum 2 inches (50 mm) wide, 10 by 10 or 10 by 20 threads/inch (390 by 390 or 390 by 780 threads/m), of type recommended by sheathing and tape manufacturers for use with silicone emulsion sealant in sealing joints in glass-mat gypsum sheathing and with a history of successful in-service use.
- C. Sheathing Tape: Self-adhering rubberized asphalt tape.
- 1. Capable of being applied at temperature of 25 degrees F.
 - 2. Thickness: 30 mils.
 - 3. Permeance: 0.1 perms.
 - 4. Puncture Resistance: ASTM E514, 40 pounds-force, minimum.
 - 5. Tensile Strength of Membrane: ASTM D412, 600 PSI, minimum.
 - 6. Pliability: 180 degree bend over 1 inch (25 mm) at 25 degrees F.
 - 7. Primer: Manufacturer's required surface primer.
 - 8. Acceptable Products and Manufacturers:
 - a. Carlisle Coatings and Waterproofing; CCW MiraDRI 400VB Air/Vapor Barrier.
 - b. Grace Construction Products; Perm-A-Barrier Wall Membrane.
 - c. Henry Company; Henry Blueskin SA.

PART 3 EXECUTION

3.01 PREPARATION

- A. Coordinate installation of framing members specified in other sections.

3.02 INSTALLATION - GENERAL

- A. Select material sizes to minimize waste.
- B. Reuse scrap to the greatest extent possible; clearly separate scrap for use on site as accessory components, including: shims, bracing, and blocking.

3.03 INSTALLATION OF CONSTRUCTION PANELS

- A. Wall Sheathing: Secure with long dimension perpendicular to wall studs, with ends over firm bearing and staggered, using screws.

3.04 GYPSUM SHEATHING INSTALLATION

- A. Comply with GA-253 and with manufacturer's written instructions.
 - 1. Fasten gypsum sheathing to wood framing with screws.
 - 2. Fasten gypsum sheathing to cold-formed metal framing with screws.
 - 3. Install boards with a 3/8-inch gap where non-load-bearing construction abuts structural elements.
 - 4. Install boards with a 1/4-inch gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.
- B. Apply fasteners so heads bear tightly against face of sheathing, but do not cut into facing.
- C. Horizontal Installation: Install sheathing with V-grooved edge down and tongue edge up. Interlock tongue with groove to bring long edges in contact with edges of adjacent boards without forcing. Abut ends of boards over centers of studs, and stagger end joints of adjacent boards not less than one stud spacing. Attach boards at perimeter and within field of board to each steel stud.
 - 1. Space fasteners approximately 8 inches (203.20 mm) o.c. and set back a minimum of 3/8 inch (9.53 mm) from edges and ends of boards.
 - 2. For sheathing under stucco cladding, boards may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.
- D. Vertical Installation: Install board vertical edges centered over studs. Abut ends and edges of each board with those of adjacent boards. Attach boards at perimeter and within field of board to each stud.
 - 1. Space fasteners approximately 8 inches (203.20 mm) o.c. and set back a minimum of 3/8 inch (9.53 mm) from edges and ends of boards.

END OF SECTION

SECTION 06 2013
EXTERIOR FINISH CARPENTRY

PART 1 GENERAL

1.01 INCLUDED WORK

- A. Provide Exterior wood construction as shown and specified on the Landscape Drawings. The work includes:
 - 1. Wood Benches
 - 2. Log Stumps and Steps

1.02 RELATED WORK

- A. Section 31 2000 – Earth Moving
- B. Section 32 1313 - Site Concrete

1.03 REFERENCES AND STANDARDS

- A. Lumber: Comply with American Softwood Lumber Standard PS-20-05. Provide lumber species complying with grading rules of following associations.
 - 1. Douglas Fir: Western Lumber Grading Rules, published by Western Wood Products Association (WWPA), or Standard Grading Rules for West Coast Lumber, Number 16, published by West Coast Lumber Inspection Bureau (WCLIB).
 - 2. Western Spruce, Pine, and Fir: Western Spruce-Pine-Fir Association (WSPFA) and current Canadian Grading Rules by National Grades Association Canada.
- B. Redwood: "Standard Specification of Grades of Redwood Lumber" of the California Redwood Association (CRA).
- C. Plywood: Grade-marked and manufactured in accordance with U.S. Product Standard PS-1-74, Softwood Plywood Construction and Industrial or one of American Plywood Association (APA) performance standards.
- D. Recycled Polymer Plastic Lumber: comply with pre-approved manufacturer's printed specifications.
- E. Design and detailing of wood framing connections: National Forest Products Association (NFPA) National Design Specifications for Wood Construction.
- F. Fasteners and nails: comply with NFPA Recommended Nailing Schedule of the Manual for House Framing.
- G. Wood Treatment: American Wood Preservers Association (AWPA) standards for wood preservative treatment scheduled.
- H. California Building Code, Chapter 23, 2013 Edition, unless otherwise noted.
- I. American Society for Testing and Materials, (ASTM).

1.04 QUALITY ASSURANCE

- A. Landscape Carpentry work shall comply with these specifications and all applicable sections of the above-named References and Standards.
- B. Provide each piece of plywood and/or lumber, factory grade-marked.
- C. Samples of Recycled Polymer Plastic Lumber.

1.05 SUBMITTALS

- A. Wood Treatment Data: Submit certification by treating plant indicating chemicals and process used and compliance with specified requirements.
- B. Submit manufacturer's product data for rough carpentry accessory and hardware items.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Keep materials dry during delivery and site storage. Stack materials to ensure proper drainage and ventilation. Protect from weather damage and deterioration.
- B. Store and protect rough hardware from weather damage and deterioration.

1.07 PROJECT CONDITIONS

- A. Coordination: Fit carpentry work to other work. Scribe and cope as required for accurate fit. Coordinate location of nailers, blocking, and similar supports to allow proper attachment of other work.
- B. Layout, cut, fit, and erect framing for rough and finished work. Provide blocking, nailers, and all other rough carpentry work. Do cutting work in connection with carpentry work for other trades. Brace, plumb, and level all members in true alignment and rigidly secure in place with sufficient nails, spikes, screws, and bolts as necessary.
- C. Lay out project work, set stakes, and batter boards.
- D. Provide wood framing, nailers, bracing, and supports required to support construction during formative stages. Set wood framing accurately to required lines and levels. Anchor members securely in place.
- E. Provide temporary rough carpentry work as indicated or required to construct the work. Maintain temporary items for the life of the work. Remove when no longer needed.
- F. Furnish and install miscellaneous hardware in connection with carpentry work.

PART 2 PRODUCTS

2.01 MATERIALS

- A. Lumber:
 - 1. Nominal sizes are indicated. Provide actual size complying with PS-20-05 for moisture content indicated for each use, except where net sizes are indicated by detail dimensions.
 - 2. Provide dressed dimensioned lumber, S4S, kiln-dried or air-dried with maximum 19% moisture content.
 - 3. Provide rough sawn lumber, kiln-dried or air-dried with maximum 19% moisture content.
 - 4. Provide Western lumber WWPA, WCLIB, CRA or WSPFA species meeting stresses and grades scheduled.
 - a. All redwood to be deck heart construction grade
 - 5. Provide lumber pressure preservative treated, where wood comes into contact with soil and wherever indicated on the Drawings.
- B. Rough Hardware:
 - 1. Furnish bolts, plates, anchors, hangers, and other miscellaneous steel and iron shapes as required for framing and supporting woodwork and for anchoring or securing woodwork to structures.
 - 2. Provide manufactured or fabricated items of sizes, shapes, and dimensions required.
 - 3. Bolts: ASTM A307, provide with malleable iron washers.
 - 4. Steel: ASTM A36.
 - 5. Mild Steel: ASTM A 283.

6. Fasteners and anchorages: Provide size, type, material, and finish required for nails, screws, bolts, nuts, washers, and anchoring devices. Provide with aluminum, stainless steel or hot-dip galvanized finish fasteners and anchorages size and type to suit application.
7. Provide toggle bolt type anchorage of framing to hollow masonry and expansion shield and lag bolt type for anchorage to solid masonry or concrete and bolts or power activated type for anchorage to steel.
8. Metal connectors: Galvanized steel hangers, ties, and anchors sized for full load carrying capacity of supported members. Simpson or equal.

PART 3 EXECUTION

3.01 INSPECTION

- A. Examine the substrate under which carpentry work is to be installed. Notify the Architect, in writing, of conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Obtain field measurements and verify dimensions and details before proceeding with rough carpentry work.

3.03 INSTALLATION

- A. Set wood framing accurately to required lines and levels. Provide with framing members of sizes and on spacings shown. Cut, join, and tightly fit framing around other work. Do not splice structural members between supports.
- B. Set posts plumb and true to line and grade.
- C. Use only treated, sound, thoroughly seasoned materials of longest practical lengths and sizes to minimize joints. Use materials free of warp unless warp can be easily corrected by anchorage and attachment. Make tight connections between members. No shimming will be allowed.
- D. All wood surfaces shall be sanded where necessary to remove undesirable rough edges. All knot holes, pitch pockets, or sappy portions shall be sealed with an approved resin sealer.
- E. Metal work shall be fabricated to the details shown, shall have all brackets necessary for the attachment of woodwork.
- F. Select individual pieces of lumber so that knots and obvious minor defects will not interfere with placing of bolts, proper nailing, or making of proper connections. In exposed locations, select for appearance satisfactory to the Architect.
- G. Framing shall be closely fitted, accurately set in plumb planes to required lines and levels and rigidly secured in place. Beams shall be set with crowned edge up; bottom edges shall be free from pronounced defects. Special framing or construction, not explicitly shown or specified, shall be provided as directed by the Architect to complete work in the best workmanlike manner.
- H. Provide all bolting, nailing and other fastenings required to complete the wood construction shown on the Drawings.
- I. Bolt holes shall be 1/32-inch to 1/16-inch larger than bolts and shall be accurately located to permit proper alignment of members and easy driving of bolts. A malleable iron washer, or the equivalent thereof, shall be installed between each bolt head and nut and wood. Bolts shall be taken up snug and shall be retightened at the latest practicable time during the construction work.
 1. Vandal-proof all bolting and other connections by burring threads.
- J. Anchor and nail framing to comply with NFPA Recommended Nailing Schedule of the Manual for House Framings.

- K. Nailing shall be done in a workmanlike manner; care being exercised to avoid splitting wood. All nailing clips, hangers, and the like shall receive full number of nails of proper size as furnished with clips or recommended in manufacturer's printed instructions.
- L. Edges of handrails, beams, etc. where contact with people will occur shall be rounded and smoothed.
- M. Provide sill plates where wood framing is supported by concrete or masonry. Anchor to embedded bolts.
- N. Brush apply 2 coats of an acceptable wood preservative to surfaces of preservative treated lumber that are field cut, dressed, or drilled.
- O. Prior to filling the boxes with soil, install the gopher wire, turn down the wire into the soil and staple it to the edges of the box.

3.04 CLEANING

- A. Clean up debris and cuttings on a regular periodic basis.
- B. Perform cleaning during installation of the work and upon completion of the work. Remove from site all excess materials, debris, tools, and equipment. Repair damage resulting from rough carpentry work.

END OF SECTION

SECTION 06 4116

PLASTIC-LAMINATE-FACED ARCHITECTURAL CABINETS

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Specially fabricated cabinet units.
- B. Cabinet hardware.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination: Coordinate fabrication schedule with construction progress to avoid delaying the Work.
 - 1. Field verify critical dimensions and clearances prior to fabrication of casework items; assure that field conditions are as required to comply with indicated design requirements.
 - 2. By accurate field measurements before being enclosed, verify locations of concealed framing, blocking, reinforcements, and furring that support woodwork; record measurements on shop drawings.
 - 3. Coordinate construction to ensure that actual dimensions correspond to established required dimensions.
- B. Preinstallation Meeting: Convene a preinstallation meeting not less than one week before starting work of this Section; require attendance by all affected installers.
 - 1. Agenda:
 - a. Discuss and agree upon acceptable delivery, storage, and handling, environmental conditions, preparatory work, and methods of installation.
 - b. Review coordination and environmental controls required for proper installation and ambient temperature and humidity conditioning in areas to receive woodwork.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Shop Drawings: Indicate materials, component profiles, fastening methods, jointing details, and accessories.
 - 2. Minimum Scale of Detail Drawings: 1-1/2 inch to 1 foot (1:8).
 - 3. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
 - 4. Show locations and sizes of cutouts and holes for electrical switches and outlets and other items installed in architectural wood cabinets.
 - 5. Show plastic laminate with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
 - 6. Provide the information required by AWMAC/WI (NAAWS).
 - 7. Shop drawings are required to be generated as separate digital drawings specific to this Project, not utilizing Architect's digital drawing files in any manner.
 - 8. Show all adjacent construction including abutting walls, columns and similar elements affecting casework installation.
 - 9. Use Owner's casework designation system on shop drawings; system will be provided by Owner prior to preparation of shop drawings.
 - 10. Product Data: Provide data for hardware accessories.
 - 11. Samples: Submit actual samples of architectural cabinet construction, minimum 12 inches (300 mm) square, illustrating proposed cabinet, countertop, and shelf unit substrate and finish.
 - 12. Samples: Submit actual sample items of proposed pulls, hinges, shelf standards, and locksets, demonstrating hardware design, quality, and finish.
 - 13. Samples for Verification:

- a. Plastic laminates, 12 by 12 inches (300 by 300 mm), for each type, color, pattern, and surface finish, with one sample applied to core material and specified edge material applied to one edge.
 - b. Wood-grain plastic laminates, 12 by 24 inches (300 by 600 mm), for each type, pattern and surface finish, with one sample applied to core material and specified edge material applied to one edge.
 - c. Thermoset decorative panels, 8 by 10 inches (200 by 250 mm), for each color, pattern, and surface finish, with edge banding on one edge.
 - d. Corner pieces as follows:
 - 1) Cabinet-front frame joints between stiles and rails, as well as exposed end pieces, 18 inches (452.70 mm) high by 18 inches (452.70 mm) wide by 6 inches (150 mm) deep.
 - 2) Miter joints for standing trim.
 - e. Exposed cabinet hardware and accessories, one unit for each type and finish.
- B. Informational Submittals:
- 1. Qualification Data: For installer.
 - 2. Product Certificates: For each type of product.
 - a. Composite wood and agrifiber products.
 - b. Thermoset decorative panels.
 - c. Adhesives.
 - 3. Woodwork Quality Standard Compliance Certificates: WI Certified Compliance Program certificates.
 - 4. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements - LEED.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 - 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 - 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.
 - 4. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
 - a. Plastic-laminate cabinets shall be manufactured within 500 miles of project site.
 - 5. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.
 - 6. A5.406.1, .2 and .3: Materials selected for longevity, reduced maintenance and recyclability.

1.05 QUALITY ASSURANCE

- A. Single Source Responsibility: Single manufacturer shall provide and install work described in this Section.
- B. Fabricator Qualifications: Company specializing in fabricating the products specified in this section with minimum five years of documented experience.
 - 1. Company with at least one project in the past 5 years with value of woodwork within 20 percent of cost of woodwork for this Project.
 - 2. Accredited participant in the specified certification program prior to the commencement of fabrication and throughout the duration of the project.
- C. Installer Qualifications: Fabricator of products, Certified participant in AWI's Quality Certification Program and Licensee of WI's Certified Compliance Program.

- D. Quality Certification: Provide WI Certified Compliance Program (CCP) inspection report and quality certification of completed work.
- E. Fabrication and Installation Standards: Fabricate and install in accordance with North American Architectural Woodwork Standards – 3.0 as listed below.
 - 1. Lumber grades: Section 3.
 - 2. Panel products: Section 4.
 - 3. Casework: Section 10.
- F. Woodwork Certification:
 - 1. Before delivery to jobsite, woodwork supplier shall submit Woodwork Institute Certified Compliance Certificate indicating millwork products being supplied and certifying that products fully meet the requirements of Grade or Grades specified.
 - 2. Each elevation of casework, each laminated plastic top, and each solid surface top shall bear Woodwork Institute Certified Compliance Label.
 - 3. At completion of installation, woodwork installer shall provide Woodwork Institute Certified Compliance Certificate indicating the products installed, and Certifying that the installation of these products fully meets the requirements of the Grade or Grades specified.
 - 4. All fees charged by the Woodwork Institute for their Certified Compliance program are responsibility of millwork manufacturer and/or installer and shall be included in their bid.
 - 5. The foregoing shall not be construed to limit power and authority of Owner to reject any millwork which does not in Owner's opinion meet with any one or more of the specifications of this Contract.
- G. Fees charged by Woodwork Institute for Monitored Compliance Program are responsibility of Contractor.

1.06 MOCK-UP

- A. Comply with general mock-up requirements specified in Section 01 4000 - Quality Requirements.
- B. Provide mock-up of typical base cabinet, wall cabinet, and countertop, including hardware, finishes, and plumbing accessories.
 - 1. Locate where directed.
 - 2. Mock-up may remain as part of the Work.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Deliver casework items to installation areas only after clean, well ventilated, and temperature-controlled installation areas are available. Do not deliver casework items to installation areas until painting and similar operations are complete in those areas.
- B. Protect units from moisture and impact damage during transit, delivery, and storage; use protective covers during delivery, storage, and handling operations..

1.08 ENVIRONMENTAL CONDITIONS

- A. Environmental Limitations: Do not deliver or install cabinets until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature between 60 deg F (15.5 deg C) and 90 deg F (32 deg C) and relative humidity between 25 and 55 percent during the remainder of the construction period.
- B. During and after installation of custom cabinets, maintain temperature and humidity conditions in building spaces at same levels planned for occupancy.
- C. Field Measurements: Where cabinets are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Locate concealed framing, blocking, and reinforcements that support cabinets by field measurements before being enclosed, and indicate measurements on Shop Drawings.

1.09 WARRANTY

- A. Furnish warranty with provisions for repairing or replacing, at no additional cost to Owner, architectural woodwork items that exhibit defects in material or workmanship for 2 years.

PART 2 PRODUCTS

2.01 CABINETS

- A. Operable parts for all accessible casework shall comply with CBC Section 11B-309.
- B. Quality Grade: Unless otherwise indicated provide products of quality specified by North American Architectural Woodwork Standards – 3.0 for Custom Grade.
 1. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with those selections and requirements in addition to the quality standard.

2.02 PLASTIC-LAMINATE-FACED ARCHITECTURAL CABINETS

- A. Refer to Finish Schedule for selected products and finishes
- B. Quality Standard: Premium Grade, in accordance with AWMAC/WI (NAAWS) , unless noted otherwise.
 1. Provide certificates from WI certification program indicating that woodwork, including installation, complies with requirements of grades specified.
 2. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with those selections and requirements in addition to the quality standard.
- C. Regional Materials: Plastic-laminate cabinets shall be manufactured within 500 miles (800 km) of Project site.
- D. Certified Wood: Plastic-laminate cabinets shall be made from wood products certified as "FSC Pure" or "FSC Mixed Credit" according to FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship," and FSC STD-40-004, "FSC Standard for Chain of Custody Certification."
- E. Drawers, doors, leg mechanisms, trays, and other operating parts must be wobble, rattle, and squeak free, well fitted, properly aligned, and smoothly operable without loose or sloppy action.
- F. Finished Goods: Meet ASTM F2057 Anti-Tipping Test and/or appropriate restraining methods must be noted on shop drawings and supplied with each unit.
- G. Millworker to provide weight information of units and advise any/all necessary in -wall / in-ceiling blocking to support weight of unit, where applicable.
- H. All public space millwork must be suited for heavy F&B environments.
- I. Millwork bases must be able to structurally support specified tops without easily tipping over when weight is applied to any one side and must have self-leveling capabilities or use FLAT Technology to avoid rocking and tipping.
- J. Type of Construction: Frameless.
- K. Cabinet and Door and Drawer Front Interface Style: Flush overlay.
- L. Case: Plywood with plastic laminate.
- M. Drawer Sides and Backs: Solid-hardwood lumber.
 1. Species: Birch, flear coat.

AE3 Partners

DSA Application No. 01-119166
September 7, 2021

Increment 1
06 4116 - 4

Merritt College
Child Development Center
PLASTIC-LAMINATE-FACED
ARCHITECTURAL CABINETS

- N. Drawer Bottoms: Hardwood plywood.
 - 1. Species: Birch, flear coat.
- O. Concealed Backs of Panels with Exposed Plastic-Laminate Surfaces: High-pressure decorative laminate, NEMA LD 3, Grade BKL.
- P. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.
 - 1. Join subfronts, backs, and sides with glued dovetail joints.
- Q. Cabinets :
 - 1. Finish - Exposed Exterior Surfaces: Decorative laminate.
 - 2. Finish - Exposed Interior Surfaces: Thermoset decorative panels.
 - 3. Finish - Concealed Surfaces: Thermoset decorative panels.
 - 4. Casework Construction Type: Type A - Frameless.
 - 5. Interface Style for Cabinet and Door: Style 1 - Overlay; flush overlay.

2.03 WOOD-BASED COMPONENTS

- A. Regional Materials: Wood products shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.
- B. Certified Wood: Wood products shall be certified as "FSC Pure" or "FSC Mixed Credit" according to FSC STD-01-001 and FSC STD-40-004.
- C. General: Comply with regionally-sourced, recycled content, adhesives and sealants, and aerosol adhesives product requirements specified in Section 018113.
- D. Adhesives: Comply with urea-formaldehyde prohibition, adhesives and sealants, and VOC limitations product requirements specified in Section 018113.
- E. Wood fabricated from old growth timber is not permitted.
- F. Provide sustainably harvested wood, certified or labeled as specified in Section 018113.
- G. Provide wood harvested within a 500 mile (805 km) radius of the project site.

2.04 LAMINATE MATERIALS

- A. Refer to Finish Schedule for selected products and finishes.
- B. High Pressure Decorative Laminate (HPDL) - Plastic Laminate: NEMA LD 3, types as recommended for specific applications.
 - 1. Provide specific types as follows:
 - a. Horizontal Surfaces: HGS, 0.048 inch (1.22 mm) nominal thickness, through color, colors as scheduled, finish as scheduled.
 - b. Vertical Surfaces: VGS, 0.028 inch (0.71 mm) nominal thickness, through color, colors as scheduled, finish as scheduled.
 - c. Post-Formed Horizontal Surfaces: HGP, 0.039 inch (1.0 mm) nominal thickness, through color, colors as scheduled, finish as scheduled.
 - d. Post-Formed Vertical Surfaces: VGP, 0.028 inch (0.71 mm) nominal thickness, through color, colors as scheduled, finish as scheduled.
 - e. Cabinet Liner: CLS, 0.020 inch (0.51 mm) nominal thickness, through color, colors as scheduled, finish as scheduled.
 - f. Laminate Backer: BKL, 0.020 inch (0.51 mm) nominal thickness, undecorated; for application to concealed backside of panels faced with high pressure decorative laminate.
 - g. Edges: Grade HGS.

- 1) Semiexposed Surfaces: Grade HGS.
 - 2) Edges of Thermoset Decorative Panel Shelves: PVC T-mold matching laminate in color, pattern, and finish.
- h. Pattern Direction: Vertically for drawer fronts, doors, and fixed panels.

2.05 COUNTERTOPS

- A. Countertops: Specified in Section 12 3600 - Countertops.

2.06 WOOD MATERIALS

- A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.
1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than 3 inches (76.20 mm) wide.
 2. Wood Moisture Content: 5 to 10 percent.
- B. Composite Wood and Agrifiber Products: Provide materials that comply with requirements of referenced quality standard for each type of woodwork and quality grade specified unless otherwise indicated.
1. Recycled Content of Medium-Density Fiberboard and Particleboard: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 20 percent.
 2. Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.
 3. Composite Wood and Agrifiber Products: Products shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 4. Medium-Density Fiberboard: ANSI A208.2, Grade 130 and made with binder containing no urea formaldehyde.
 5. Thickness:
 - a. Panel structural components: Minimum 3/4 inch (19.05 mm) thick.
 - b. Back Panels, Drawer Components, and Drawer Bottoms: Minimum 1/2 inch (12.70 mm) thick.
 - c. Fixed Shelves, Dividers, Mounting Stretchers: Minimum 3/4 inch (19.05 mm) thick.
 - d. Semi-exposed Adjustable Shelves in Cabinets under 36 inches (914 mm) Wide: Minimum 3/4 inch (19.05 mm) thick.
 - e. Shelves in Cabinets 36 inches (914 mm) Wide or Greater: Minimum 1 inch (25 mm) thick.

2.07 ACCESSORIES

- A. Adhesive: Type recommended by WI to suit application.
- B. Fasteners: Size and type to suit application.
- C. Bolts, Nuts, Washers, Lags, Pins, and Screws: Of size and type to suit application; galvanized or chrome-plated finish in concealed locations and stainless steel or chrome-plated finish in exposed locations.
- D. Concealed Joint Fasteners: Threaded steel.
- E. Grommets: Standard plastic, painted metal, or rubber grommets for cut-outs, in color to match adjacent surface.

2.08 HARDWARE

- A. Refer to Finish Schedule for selected products and finishes.

AE3 Partners

DSA Application No. 01-119166
September 7, 2021

Increment 1
06 4116 - 6

Merritt College
Child Development Center
PLASTIC-LAMINATE-FACED
ARCHITECTURAL CABINETS

- B. Hardware Finish: With exception of finish hardware items which have finishes specified, hardware shall be furnished with dull chrome US 26D or dull stainless steel US 32D finish.
- C. Hardware: BHMA A156.9, types as recommended by fabricator for quality grade specified.
- D. Shelf Rests: BHMA A156.9, B04013; metal.
 - 1. Location: 4 per shelf.
 - 2. Basis of Design Product:
 - a. Hafele 282.04.711.
 - b. Hafele 282.24.13.
 - c. Knape & Vogt 333.
 - d. Lamp SS 323.
 - e. Approved equal.
- E. Drawer and Door Pulls: "U" shaped wire pull, steel with chrome finish, 4 inch centers ("U" shaped wire pull, steel with chrome finish, 100 mm centers).
 - 1. Finish: Satin Nickel on steel.
 - 2. Acceptable Manufacturers:
 - a. Basis of Design: Hafele 116.07.622, or equal.
 - b. Approved equal.
- F. Locks:
 - 1. Key locks inside one room alike. Furnish 3 keys for each lock keyed separately, and 2 keys for each lock keyed alike in groups. Master keys shall be tagged and delivered to the Owner Representative. Locks and keys shall be stamped with coded set number/direct digit.
 - 2. series. Change keys shall also be stamped with set numbers direct digit.
 - 3. Cabinet locks shall be master-keyed and keyed alike. Backside of cabinet lock bolts (on visible side following installation) and change keys shall be stamped with manufacturer's code, either direct digit or coded.
 - 4. Master Keys: National GM2
 - 5. Drawer Locks: Keyed cabinet-grade lock, two keys per lock, steel with satin finish.
 - a. General: Disc or pin tumbler, surface mounted.
 - b. Acceptable Products:
 - 1) National Cabinet Lock; 68-3718 x 68-2480C brass strike.
 - 2) Olympus; 200 DW x 12-1 strike.
 - 3) Approved equal.
 - 6. Cabinet Locks: Keyed cabinet-grade lock, two keys per lock, steel with satin finish.
 - a. General: Disc or pin tumbler, surface mounted.
 - b. Acceptable Products:
 - 1) National Cabinet Lock; No. 3713 x 2475-172.
 - 2) Olympus; 100DR x 12-1 strike.
 - 3) Approved equal.
 - 7. Sliding Door Locks: Keyed cabinet-grade lock, two keys per lock, steel with satin finish.
 - a. General: Disc or pin tumbler, surface mounted.
 - b. Acceptable Products:
 - 1) National Cabinet Lock; No. 3713 x 2475-172.
 - 2) Olympus; 100DR x 12-1 strike.
 - 3) Approved equal.
- G. Catches: Push-in magnetic catches, BHMA A156.9, B03131.
 - 1. Acceptable Products:
 - a. Epco; No. 592.
 - b. Lawrence; No. SC1364-AL.
 - c. Approved equal.
- H. Drawer Slides

1. Type: Full extension, self-closing, with positive in-stop, out-stop and out-keeper to maintain drawer in 80 percent open position.
 2. Captive nylon rollers, front and rear.
 3. Adjuster cam to regulate body side sway.
 4. Finish: Epoxy powder coated to match drawer body color.
 5. Static Load Capacity: Commercial grade.
 - a. Grade 1HD-100 unless noted otherwise.
 - b. For drawers more than 6 inches (150 mm) high or more than 24 inches (610 mm) wide, provide Grade 1HD-100.
 - c. File Drawers: Full extension, 3-part progressive opening slide, Grade 1HD-100 minimum.
 - 1) File Drawer Accessory: Follower and track assembly.
 - (a) Knape & Vogt Manufacturing Company; No. 476.
 - (b) Pendaflex Rack.
 - d. Paper Storage Drawers: Full extension, 3-part progressive opening slide, Grade 1HD-100 minimum.
 - e. For computer keyboard shelves, provide Grade 1HD-100
 - f. For trash bins not more than 20 inches (500 mm) high and 16 inches (400 mm) wide, provide Grade 1HD-200.
 6. Mounting: Side mounted.
 7. Stops: Integral type.
 8. Features: Provide self closing/stay closed type. Grade 1
 9. Acceptable Manufacturers:
 - a. Grass America Inc.: www.grassusa.com.
 - b. Hettich America, LP: www.hettichamerica.com.
 - c. Knape & Vogt Manufacturing Company: www.knapeandvogt.com.
 - d. Approved equal.
- I. Standard Hinges: European style concealed, self-closing type, steel with satin finish.
1. Opening: 170 degrees of opening, self-closing.
 2. Acceptable Manufacturers:
 - a. Hafele America Co.; No. 326.05: www.hafele.com
 - b. Julius Blum, Inc.; No. B71650: www.blum.com.
 - c. Mepla, No. MD61-253-Z00
 - d. Approved equal.
- J. Mutes: Rubber, approximately 1/4 inch (6.35 mm) diameter, colors to match adjacent finish.

2.09 FABRICATION

- A. Fabricate woodwork to dimensions, profiles, and details indicated. Ease edges to radius indicated for the following:
 1. Corners of Cabinets: 1/16 inch (1.58 mm) unless otherwise indicated.
- B. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
 1. Notify Architect seven days in advance of the dates and times woodwork fabrication will be complete.
 2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.
- C. Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to

produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

- D. Assembly: Shop assemble cabinets for delivery to site in units easily handled and to permit passage through building openings.
- E. Edges: Solid wood and slightly eased square mitered corners, sanded smooth, sealed, finished.
- F. Millwork must be properly scribed to adjacent walls and ceilings as necessary where applicable.
- G. Back Panels: Glued and securely fastened by screws or gun staples.
- H. Route lines, cutouts or grooves must be smoothly machined and/or sanded. Shapes, carvings, and 'U' cuts are to be finished smoothly with no visible unfinished or rough areas.
- I. Drawers and Doors:
 - 1. Fitted, properly aligned, and must operate smoothly under various atmospheric conditions.
 - 2. Top edges of drawer sides and backs must be sanded flat with beveled edges and rounded bottom and covered with a clear lacquer sealer coat. Glued-up stock must match in color.
 - 3. Drawer Sides: Finished smooth with clear lacquer sealer coat or melamine in appropriately coordinated color.
 - 4. Drawer Joints: Multi (English) dovetail or linear (French) dovetail and well-glued, fitted, puttied and sanded.
 - 5. Drawer Bottoms: Contained in dadoes on all four sides, and glue-blocked in place to assure continuing squareness.
 - 6. Drawer Box Screws: Recessed into drawer box.
 - 7. Drawers: Sealed on inside backs, fronts, side partitions, bottoms, outside sides and backs.
 - 8. Doors: Finished same on both face and interior of door panel.
 - 9. Doors: Uniform in clearance. Catches must be properly aligned and installed.
 - 10. Provide rubber bumper pads on door panels to prevent door from improperly banging into divider panel.
- J. Edging: Fit shelves, doors, and exposed edges with specified edging. Do not use more than one piece for any single length.
- K. Fitting: When necessary to cut and fit on site, provide materials with ample allowance for cutting. Provide matching trim for scribing and site cutting.
- L. Plastic Laminate: Apply plastic laminate finish in full uninterrupted sheets consistent with manufactured sizes. Fit corners and joints hairline; secure with concealed fasteners. Slightly bevel arises. Locate counter butt joints minimum 2 feet (600 mm) from sink cut-outs.
 - 1. Apply laminate backing sheet to reverse side of plastic laminate finished surfaces.
 - 2. Apply low pressure laminate to inside of cabinets on exposed and semi-exposed surfaces, and to shelving surfaces.
 - 3. Cap exposed plastic laminate finish edges with material of same finish and pattern.
- M. Provide cutouts for plumbing fixtures. Verify locations of cutouts from on-site dimensions. Prime paint cut edges.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify adequacy of backing and support framing.
- B. Verify location and sizes of utility rough-in associated with work of this Section.
- C. Verify critical clearances and dimensions prior to installation of casework items.

3.02 PREPARATION

- A. Before installation, condition cabinets to average prevailing humidity conditions in installation areas.
 - 1. Condition cabinets to humidity conditions 72 hours minimum.
- B. Before installing cabinets, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.03 INSTALLATION

- A. Grade: Install cabinets to comply with same grade as item to be installed.
- B. Assemble cabinets and complete fabrication at Project site to the extent that it was not completed in the shop
- C. Set and secure custom cabinets in place, assuring that they are rigid, plumb, and level.
- D. Use fixture attachments in concealed locations for wall mounted components.
- E. Use concealed joint fasteners to align and secure adjoining cabinet units.
- F. Carefully scribe casework abutting other components, with maximum gaps of 1/32 inch (1 mm). Do not use additional overlay trim for this purpose.
- G. Secure cabinets, counter bases, and other casework to floor using appropriate angles and anchorages.
- H. Secure full height cabinets, shelving units, and similar casework items exceeding 60 inches in height to floor using appropriate angles and anchorages
- I. Cabinets: Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
 - 1. Install cabinets with no more than 1/8 inch (3.17 mm) in 96 inches (2438.40 mm) sag, bow, or other variation from a straight line.
 - 2. Maintain veneer sequence matching of cabinets with transparent finish.
 - 3. Provide fabricator's standard concealed fasteners.
 - 4. Fasten wall cabinets through back, near top and bottom, and at ends not more than 16 inches (400 mm) o.c. with No. 10 wafer-head screws sized for not less than 1-1/2-inch (38-mm) penetration into wood framing, blocking, or hanging strips.

3.04 ADJUSTING

- A. Adjust installed work.
- B. Adjust moving or operating parts to function smoothly and correctly.
- C. Repair damaged and defective cabinets, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.

3.05 CLEANING

- A. Clean casework, counters, shelves, hardware, fittings, and fixtures.

3.06 PROTECTION

- A. Protect installed casework items from damage due to subsequent construction operations.

END OF SECTION

SECTION 06 8316
FIBER GLASS REINFORCED PLASTIC (FRP) PANELS

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Fiberglass reinforced plastic panels.
- B. Accessories and trim.

1.02 SUBMITTALS

- A. Refer to Section 013300 - Interior Doors Performance Requirements, for submittal procedures.
- B. Action Submittals:
 - 1. Product Data: Provide data on specified products, describing physical and performance characteristics; including sizes, patterns and colors available; and installation instructions.
 - 2. Samples: Submit two samples 4 by 4 inch (102 by 102 mm) in size illustrating material and surface design of panels.
- C. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
 - 1. See Section 01 6000 - Product Requirements, for additional provisions.
 - 2. Extra Panels: Quantity equal to 5 percent of total installed.

1.03 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.

1.04 DELIVERY, STORAGE, AND HANDLING

- A. Store panels flat, indoors, on a clean, dry surface. Remove packaging and allow panels to acclimate to room temperature for 48 hours prior to installation.
- B. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.05 PROJECT CONDITIONS

- A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

PART 2 PRODUCTS

2.01 MANUFACTURERS - GENERAL

- A. Refer to Finish Schedule for finish material selections and finishes.

2.02 PANEL SYSTEMS

- A. Wall Panels:
 - 1. Panel Size: 4 by 10 feet (1.2 by 3.0 m).
 - 2. Panel Thickness: 0.09 inch (2.3 mm).
 - 3. Surface Design: Smooth.
 - 4. Color: White.
 - 5. Attachment Method: Adhesive only, with trim and sealant in joints.

2.03 MATERIALS

- A. Panels: Fiberglass reinforced plastic (FRP), complying with ASTM D5319.
 - 1. Surface Burning Characteristics: Maximum flame spread index of 25 and smoke developed index of 450; when system tested in accordance with ASTM E84.
 - 2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
 - 3. Scratch Resistance: Barcol hardness score greater than 35, when tested in accordance with ASTM D2583.
 - 4. Impact Strength: Greater than 6 ft lb force per inch (320 J per m), when tested in accordance with ASTM D256.
 - 5. Sanitation and Cleanability: Comply with 9 CFR 416.2.
 - 6. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- B. Trim: Vinyl; color coordinating with panel..
- C. Adhesive: Type recommended by panel manufacturer.
 - 1. Adhesives & Sealants: Only use adhesives and sealants in the interior of the building that meet or do not exceed the VOC limits of the CURRENT requirements of South Coast Air Quality Management District (SCAQMD) Rule No. 1168, CAL-Green Table 5.504.4.1 Adhesive VOC Limit, and CAL-Green Table 5.504.4.2 Sealant VOC Limit requirements.
 - a. Current requirement refers to the date on which the materials are installed in the building.
 - b. A copy of SCAQMD 1168 is referenced in Section 01 8114 - Greenhouses that was current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.
- D. Sealant: Mildew-resistant, single-component, neutral-curing or acid-curing silicone sealant recommended by plastic paneling manufacturer and complying with requirements in Section 07 9200 - Joint Sealants.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify existing conditions and substrate flatness before starting work.
- B. Verify that substrate conditions are ready to receive the work of this section.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Prepare substrate by sanding high spots and filling low spots as needed to provide flat, even surface for panel installation.
- B. Clean substrates of substances that could impair adhesive bond, including oil, grease, dirt, and dust.
- C. Condition panels by unpacking and placing in installation space before installation according to manufacturer's written recommendations.
- D. Lay out paneling before installing. Locate panel joints so that trimmed panels at corners are not less than 12 inches (300 mm) wide.
 - 1. Mark plumb lines on substrate at panel joint locations for accurate installation.
 - 2. Locate panel joint to allow clearance at panel edges according to manufacturer's written instructions.

3.03 INSTALLATION - WALLS

- A. Install panels in accordance with manufacturer's instructions.
- B. Cut and drill panels with carbide tipped saw blades, drill bits, or snips.
- C. Apply adhesive to the back side of the panel using trowel as recommended by adhesive manufacturer.
- D. Apply panels to wall with seams plumb and pattern aligned with adjoining panels.
- E. Install panels with manufacturer's recommended gap for panel field and corner joints.
- F. Place trim on panel before fastening edges, as required.
- G. Fill channels in trim with sealant before attaching to panel.
- H. Install trim with adhesive and screws or nails, as required.
- I. Seal gaps at floor, ceiling, and between panels with applicable sealant to prevent moisture intrusion.
- J. Remove excess sealant after paneling is installed and prior to curing.

FIBER GLASS REINFORCED PLASTIC
(FRP) PANELS

**SECTION 07 1413
HOT FLUID-APPLIED RUBBERIZED ASPHALT WATERPROOFING**

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. 215 mil Rubberized-asphalt waterproofing with membrane reinforcement.
2. Protection course.

B. Related work specified elsewhere:

1. Division 03: Cast-in-place concrete, precast concrete.
2. Division 04: Unit masonry.
3. Division 07: Flashing and sheet metal, metal wall cladding panels, thermal insulation, moisture protection, joint sealant.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Show locations and extend of waterproofing. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins to adjoining waterproofing, and other termination conditions.

C. Certifications: Submit material certifications signed by manufacturer certifying materials comply with specific performance characteristics and physical requirements.

1. Certification must evident that all materials are supplied by a single source manufacturer.

D. Installer Qualifications: Submit at time of bid, manufacturer's written document that installer is certified as a current Approved Applicator with manufacturer.

E. Product test reports:

1. Manufacturer's test reports.
2. Field water test reports.

F. Warranty: Submit sample copy of manufacturer's warranty identifying the terms and conditions.

1. Warranty covering hot rubberized asphalt waterproofing, air and moisture barrier, and singly ply roofing system shall be provided by a single manufacturer.

G. Provide Manufacturers ISO 9001 Certificate.

H. Financial Certification: Provide the building owner with a signed and notarized (sealed) affidavit by an officer of the system supplier which confirms a current minimum corporate asset-to-liability ratio of not less than 3:1 for the supplier, or its parent corporation. Financial support information and affidavit must be dated within 30 days prior to the product submittal.

I. Manufacturers Inspections: Provide notarized statement signed by a corporate officer of the hot rubberized asphalt waterproofing system guaranteeing the requirements listed in 3.5 FIELD QUALITY CONTROL will be provided to the owner and architect at no charge to the district.

1.3 QUALITY ASSURANCE

- A. Installer Qualifications: Installer must be a company with a minimum of at least (3) three years' experience in work of the type required by this section, who can comply with the manufacturer's warranty requirements, and who is an approved Applicator as determined by manufacturer.
- B. Pre-Installation Conference: Conduct conference at project site.
- C. Manufacturer Qualifications: Manufacturer must be a company with a minimum of forty (40) years in the direct production and sales of waterproofing materials.
 - 1. Manufacturer shall be capable of providing field service representation during construction and recommending installation methods.
 - 2. Manufacturer shall have certified, approved applicators for membrane installation.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Delivery: Deliver materials in original unopened package, clearly marked with manufacturers labels indicating name of manufacturer, product, and all identifying numbers.
- B. Storage: Storage of materials must be in an appropriate location and manner as to protect from any construction damage, as well as damage from weather, prolonged sunlight, excessive temperature and sources of ignition. Remove any damaged material from job-site and dispose of in accordance with applicable regulations. Do not double stack pallets during shipping or storage. Allow adequate ventilation.
- C. Handling: Handling of materials to be in accordance with manufacturer's instructions. Melting equipment shall consist of double jacketed, oil bath melter with mechanical agitator. Avoid overheating of hot applied rubberized asphalt.

1.5 PROJECT CONDITIONS

- A. Regulatory Requirements: All federal, state, and local regulations, codes, and safety standards must be adhered to always.
- B. Installation Requirements
 - 1. Do not apply waterproofing system if temperature is less than 0°F. Application of hot applied rubberized asphalt shall not be performed during rain, snow, or inclement weather; or on frost or wet covered surfaces.
 - 2. The deck must be properly cleaned and prepared free of all contaminations then primed with specified primer.
 - 3. The work area must be adequately ventilated. Warn personnel against breathing of vapors and contact of material with skin and eyes. Limit access to required personnel during the installation process. Do not use flammable products near spark or an open flame. Do not allow the uses of spark producing equipment during application and until all vapors have dissipated. Post "NO SMOKING" signs. Wear appropriate protective clothing and respiration protection gear always.
 - 4. Protect adjoining surfaces not to be waterproofed against damage or soiling, including plants, vegetation, and animals that may be affected by the waterproofing operations.
 - 5. Protection at completion of work: Provide adequate protection for membrane after installation. Do not allow any foot or vehicular traffic on unprotected membrane. Do not allow any material or waste product to contaminate membrane. Contact manufacturer to determine performance impedance, if any, caused by contamination of the membrane.

1.6 WARRANTY

- A. Upon completion of work, contractor shall provide owner with a single source warranty.
 - 1. Warranty must be validated by manufacturer confirming acceptance of installation, including inspection reports, in accordance with all applicable instructions.
 - 2. Warranty for hot fluid applied rubber asphalt waterproofing, air/moisture barrier, and single ply roof membrane shall be provided by a single manufacturer.

- B. Manufacturer’s Warranty: Upon completion and acceptance of the work required by this section, the waterproofing materials manufacturer will provide a written ten (10) year limited warranty to the project owner. Manufacturer’s warranty shall be independent from any other warranties made by the contractor under requirements of the Contract Documents and may run concurrent with the other warranties. Issuance of manufacturer’s warranty requires the following:
 - 1. Waterproofing system products, drainage, and insulation course products, and subsequent assembly products shall have been provided by a single manufacturer.
 - 2. Installation of waterproofing products, drainage and insulation course (if used) products and subsequent products by Manufacturer’s Approved Applicator.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Provide waterproofing and assembly materials manufactured or supplied by The Garland Company, 3800 East 91st, Cleveland, Ohio 44105 USA. Local representative: Doug Clark (925) 784-6701 email: dclark@garlandind.com
 - 1. OR EQUAL

2.2 WATERPROOFING MEMBRANE

- A. Dura-Walk CWH: Hot Fluid-Applied, Rubberized-Asphalt Waterproofing membrane: Single component; 100 percent solids; hot fluid-applied, rubberized asphalt.
- B. Flashing Sheet: Versiply 80 – 80-mil high strength, puncture and fatigue resistant SBS rubber modified roofing membrane.
- C. Primer: ASTM D 31, asphaltic primer: Garla-Prime VOC
- D. Protection/Separation layer: Versiply 80 - 80-mil high strength, puncture and fatigue resistant SBS rubber modified roofing membrane.
- E. Sealants and Accessories: Tuff-Stuff MS and as recommended by manufacturer.
- F. Reinforcing Fabric: HPR Polyscrim Plus – 5.9-oz/yd² continuous filament, point bonded, chemically treated, polyester mat.

PART 3 - PREPERATION & EXECUTION

3.1 PREPERATION

- A. Cast-in-place concrete or composition decks must be monolithic, smooth, and free of voids, spalled areas, laitance, honeycombs, and protrusions. New concrete should be cured 28-days with a light brush of wood float finish texture. A steel float finish will provide too smooth of a surface for proper adhesion of the waterproofing materials, therefore concrete surfaces that have a steel float finish must be mechanically treated prior to the application of the waterproof material.
- B. All joints must be grouted.

- C. Remove all dirt, debris, oil, grease, cement laitance or other foreign matter which will impair the adhesion and performance of the waterproofing membrane.
- D. Protect adjacent work areas and finished surfaces from damage or contamination during installation operations.
- E. Expansion joints should be sealed with applicable expansion joint material. Detail waterproofing membrane to expansion joint per manufacturer's standard details.
- F. Clean and prepare substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for waterproofing application.
- G. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.
- H. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.
- I. Remove Grease, oil, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
- J. Remove fins, ridges, and other projections and fill honeycomb, aggregate pockets, and other voids.

3.2 JOINTS, CRACKS, AND TERMINATIONS

- A. Prepare and treat substrates to receive waterproofing membrane, including joints and cracks, deck drains, corners, and penetrations according to manufacturer's written instructions.
- B. All details and flashings must be completed in accordance with Manufacturer's most recent installation guidelines and detail drawings. Non-moving cracks and joints up to 1/16" (1.6mm) require no special treatment.
- C. Reinforce all non-moving cracks and joints 1/16" to 3/16" in width with minimum 6" wide strip of Versiply 80 or a minimum 6" wide strip of HPR Polyscrim Plus fabric reinforcement embedded in 90-mil thick by 9" wide tack coat of Dura-Walk CWH. Embed the reinforcement while the tack coat is still warm and tacky. Overlap reinforcement strip ends a minimum 2", ensuring lap receives rubberized asphalt.
- D. Reinforce all non-moving cracks and joints 3/16" to 1/2" in width with minimum 6" wide strip of VERSIPLY 80 or HPR POLYSCRIM PLUS embedded in 90-mil thick by 9" wide tack coat of DURA-WALK CWH. Embed the reinforcing while the tack coat is still warm and tacky. Overlap reinforcing strip ends a minimum 2", ensuring lap receives rubberized asphalt.
- E. Deck-to Deck Wall Transitions: Install VERSIPLY 80 up face of wall per project requirements and extend flashing onto deck a minimum 6" without wrinkles or fish mouths. Overlap flashing end laps a minimum 6". Apply DURA-WALK CWH membrane to deck corner over flashing extending onto horizontal deck; with HPR POLYSCRIM PLUS reinforcing fabric terminating minimum 1" prior to membrane termination at deck corner.
- F. Deck-to Below Property Line Wall Transitions: Install minimum 90-mil thick by 12" wide tack coat of DURA-WALK CWH at perimeter deck edge along property line wall. Apply minimum 90-mil base layer of DURA-WALK CWH membrane as a continuous monolithic coat over entire deck area to be waterproofed. Fully embed a layer of HPR POLYSCRIM PLUS reinforcement fabric into the top surface of the base coat. Apply minimum 125-mil top layer of HPR POLYSCRIM PLUS hot applied rubberized asphalt membrane over the reinforcing fabric in a continuous monolithic coat. While the top layer is still warm and tacky, lay down and embed the minimum 12" exposed section of the property line wall waterproofing membrane into the top coat of the DURA-WALK CWH. Finally, apply a minimum 60-mil thick by 18" wide seal coat of DURA-WALK CWH at perimeter deck edge along property line wall.
- G. At expansion joints and discontinuous deck-to-wall or deck-to-deck joints, bridge joints with elastomeric sheet per manufacturer's recommendations

3.3 FLASHING INSTALLTION

- A. Install elastomeric flashing sheets at terminations of waterproofing membrane according to manufacturer's written instructions.

3.4 MEMBRANE APPLICATION

- A. Apply primer, at manufacturer's recommended rate, over prepared substrate and allow drying.
- B. Heat and apply rubberized asphalt according to manufacturer's written instructions.
- C. Reinforced Membrane: Apply hot rubberized asphalt to substrates and adjoining surfaces indicated. Spread to a thickness of 90 mils; embed reinforcing fabric, overlapping sheets 2 inches; spread another 125-mil- thick layer to provide a uniform, reinforced, seamless membrane 215 mils thick.
- D. Apply waterproofing over prepared joints and up wall terminations and vertical surfaces to heights indicated or required by manufacturer.
- E. Cover waterproofing with protection course per manufacturer's' recommendations.

3.5 FIELD QUALITY CONTROL

- A. Notify the Owner/Architect one day prior to date of performing tests. Before concealment, cover rubberized asphalt waterproofing horizontal surfaces over finished spaces with ponded water (minimum 2" in depth) for 24 hours. Do not add water after start of 24-hour period. Carefully measure water level at beginning and end of 24-hour period. If water level falls, remove water and inspect waterproofing membrane and the underside of the concrete structural deck. Make repairs or replacement as directed and repeat test. DO NOT proceed with work that conceals membrane waterproofing before receiving approval and acceptance of owner/architect in writing. Record results and submit all test reports as sections are completed.
- B. A full-time employee of the manufacturer must provide job site inspections a minimum of 3 times per work week and provide detailed report to owner and architect with pictures and comments of the project progress.

3.6 PROTECTION AND CLEANING

- A. Protect waterproofing from damage and wear during remainder of construction period.
- B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

**SECTION 07 2100
THERMAL INSULATION**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Board insulation.
- B. Batt insulation
- C. Batt insulation for filling perimeter window and door shim spaces and crevices in exterior wall and roof.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination: Coordinate work of this Section with requirements for vapor retarder and air barrier seal specified in Section 07 2500 - Weather Barriers.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Provide data on product characteristics, performance criteria, and product limitations.
- B. Informational Submittals:
- C. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.
 - 1. Manufacturer's Installation Instructions: Include information on special environmental conditions required for installation and installation techniques.
 - 2. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.

1.05 QUALITY ASSURANCE

- A. Comply with fire resistance and flammability ratings as shown and specified.
- B. Thicknesses specified are for the thermal conductivity (k-value at 75 degrees F) specified for each material. Provide adjusted thicknesses for approved use of substituted materials with different thermal conductivity ratings. Where insulation is specified to have a specific "R" value, furnish manufacturer's standard thickness required to equal or exceed the specified value.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Do not allow insulation materials to become wet, soiled, or covered with ice or snow. Comply with manufacturer's recommendations for handling, storage, and protection during installation.
- B. Protect plastic insulation from exposure to direct sunlight.
- C. Do not deliver plastic insulation materials to the project site ahead of time of installation. Protect at all times against ignition. Complete the installation and concealment of plastic materials as soon as possible in each area of work.

1.07 FIELD CONDITIONS

- A. Do not install insulation adhesives when temperature or weather conditions are detrimental to successful installation.

PART 2 PRODUCTS

2.01 INSULATION MATERIALS

- A. General: Comply with regionally-sourced, recycled content, urea-formaldehyde prohibition, adhesives and sealants, aerosol adhesives, and volatile organic compound (VOC) product requirements specified in Section 018114.
- B. Where units are included in fire rated wall, ceiling, or floor construction, provide insulation units which have been tested and rated as required for the indicated assembly.
- C. Materials of This Section: Provide a continuous thermal, and vapor and air barrier at building enclosure elements.

2.02 FOAM BOARD INSULATION MATERIALS

- A. Polyisocyanurate (ISO) Board Insulation: Rigid cellular foam, complying with ASTM C1289.
 - 1. Classifications:
 - a. Type I: Faced with aluminum foil on both major surfaces of the core foam.
 - 1) Class 2 - Glass fiber reinforced or non-reinforced core foam.
 - 2) Compressive Strength: Classes 1-2-3, Grade 3 - 25 psi (172 kPa), minimum.
 - 3) Thermal Resistance, R-value (RSI-value): At 1-1/2 inch (38.1 mm) thick; 9.0 (1.59), minimum, at 75 degrees F (24 degrees C).
 - 2. Board Size: 48 inch by 96 inch (1220 mm by 2440 mm).
 - 3. Board Thickness: As indicated on Drawings.
 - 4. Basis of Design Product:
 - a. Dow Chemical Company; THERMAX Heavy Duty: www.dowbuildingsolutions.com.
 - b. GAF; EnergyGuard Polyiso Insulation: www.gaf.com/#sle.
 - c. Hunter Panels; Xci Foil (Class A): www.hunterpanels.com/#sle.
 - d. Johns Manville; AP Foil-Faced: www.jm.com/#sle.
 - e. Approved equal.

2.03 BATT INSULATION MATERIALS

- A. Where batt insulation is indicated, either glass fiber or mineral fiber batt insulation may be used, at Contractor's option.
- B. LEED Requirements: 25% postconsumer recycled content or 50% pre-consumer recycled content minimum.
- C. Glass Fiber Batt Insulation: Flexible preformed batt or blanket, complying with ASTM C665; friction fit.
 - 1. Complies with fire-resistance requirements shown on the Drawings as part of an exterior non-load-bearing exterior wall assembly when tested in accordance with NFPA 285, 2012 Edition.
 - 2. Flame Spread Index: 25 or less, when tested in accordance with ASTM E84, 2009 Edition.
 - 3. Smoke Developed Index: 50 or less except as otherwise specified, when tested in accordance with ASTM E84, 2009 Edition.
 - 4. Combustibility: Non-combustible, when tested in accordance with ASTM E136, except for facing, if any.
 - 5. Formaldehyde Content: Zero.
 - 6. Provide insulation made with minimum 25 percent recycled glass content.
 - 7. Thermal Resistance: As noted on Drawings, minimum value.
 - 8. Facing: Provide un-faced.

9. Acceptable Manufacturers:
 - a. CertainTeed Corporation: www.certainteed.com.
 - b. Johns Manville: www.jm.com.
 - c. Owens Corning Corp.: www.owenscorning.com.
 - d. Prior approved equal.

- D. Mineral Fiber Batt Insulation: Flexible or semi-rigid preformed batt or blanket, complying with ASTM C665; friction fit; unfaced flame spread index of 0 (zero) when tested in accordance with ASTM E84.
 1. Complies with fire-resistance requirements shown on the Drawings as part of an exterior non-load-bearing exterior wall assembly when tested in accordance with NFPA 285.
 2. Flame Spread Index: 25 or less, when tested in accordance with ASTM E84.
 3. Smoke Developed Index: 0 (zero), when tested in accordance with ASTM E84.
 4. Acceptable Products:
 - a. Johns Manville; Mineral Wool TempControl Batts: www.jm.com.
 - b. Knauf Insulation; EcoBatt Insulation: www.knaufinsulation.com.
 - c. ROCKWOOL (ROXUL, Inc); AFB: www.rockwool.com.
 - d. Thermafiber, Inc; SAFB FF: www.thermafiber.com.
 - e. Approved equal.

2.04 ACCESSORIES

- A. Spray Foam Fill Insulation: Single component polyurethane-based spray foam.
 1. Location: Tight spaces that batt insulation will not fit.

- B. Adhesively Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of specified thickness securely in position with self-locking washer in place.
 1. Plate: Perforated, galvanized carbon-steel sheet, 0.030 inch (0.762 mm) thick by 2 inches (50 mm) square.
 2. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch (2.67 mm) in diameter; length to suit depth of insulation.
 3. Products:
 - a. AGM Industries, Inc; Series T TACTOO Insul-Hangers.
 - b. Gemco; Spindle Type.
 - c. Approved equal.

- C. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick galvanized-steel sheet, with beveled edge for increased stiffness, sized as required to hold insulation securely in place, but not less than 1-1/2 inches (38 mm) square.
 1. Products:
 - a. AGM Industries, Inc;; SC150.
 - b. Gemco;; S-150.
 - c. Approved equal.

- D. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates without damaging insulation, fasteners, or substrates.
 1. Products:
 - a. AGM Industries, Inc; TACTOO Adhesive.
 - b. Gemco; Tuff Bond Hanger Adhesive.
 - c. Approved equal.

- E. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inch (31.75 mm), wall attachment flange of 7/8 inch (22.22 mm), minimum bare-metal thickness of 0.33 inch (0.84 mm), and depth required to fit insulation thickness indicated.

- F. Adhesive: Type recommended by insulation manufacturer for indicated applications.
 1. Comply with adhesives and sealants and volatile organic compound (VOC) product requirements specified in Section 08 8114.

- G. Adhesives shall meet VOC and chemical component limits of SCAQMD 1168 and CAL-Green Table 5.504.4.1 Adhesive VOC Limit requirements.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that substrate, adjacent materials, and insulation materials are dry and that substrates are ready to receive insulation.

3.02 INSTALLATION OF BOARD INSULATION BELOW ROOF/CEILING DECK

- A. Install board insulation in accordance manufacturer's written instructions.
- B. Adhere impaling clip in accordance with manufacturer's recommendations.
- C. Impale insulation onto impaling clip. Butt joints tight and tape. Install retaining washer.

3.03 ATTACHMENT AND SUPPORT FRAMING INSTALLATION

- A. Z-Shaped Furring Members:
 1. Erect insulation, horizontally and hold in place with Z-shaped furring members spaced 16 inches (406 mm) o.c maximum and as indicated on Drawings.
 2. Except at exterior corners, securely attach narrow flanges of furring members to wall with concrete stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches (610 mm) o.c.
 3. At exterior corners, attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw-attach short flange of furring channel to web of attached channel. At interior corners, space second member no more than 12 inches (305 mm) from corner and cut insulation to fit.
 4. Installation Tolerance: Install each furring member so fastening surfaces vary not more than 1/8 inch (3 mm) from the plane formed by faces of adjacent framing.

3.04 BATT INSTALLATION

- A. Installation - General:
 1. Install insulation at locations indicated and in accordance with manufacturer's instructions.
 2. Install in exterior wall spaces without gaps or voids. Do not compress insulation.
 3. Trim insulation neatly to fit spaces. Insulate miscellaneous gaps and voids.
 4. Fit insulation tightly in cavities and tightly to exterior side of mechanical and electrical services within the plane of the insulation.
- B. Metal Stud Framing: Tape insulation batts in place.

3.05 PROTECTION

- A. Do not permit installed insulation to be damaged prior to its concealment.

END OF SECTION

SECTION 07 2616
BELOW-GRADE VAPOR RETARDERS

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Vapor retarders for use below slabs-on-grade.
- B. Vapor retarder accessories.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Preinstallation Meeting: Conduct a preinstallation meeting one week prior to the start of the work of this Section; require attendance by all affected installers.
 - 1. Required Attendance: Contractor's quality control supervisor or superintendent, Architect, all affected trades including reinforcing subcontractor and concrete supplier, and weather barrier manufacturer.
 - 2. Discuss installation, protection, and coordination with other work.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Manufacturer's data sheets on each product to be used, including:
 - a. Product Test Reports: For each product, for tests performed by a qualified testing agency.
 - b. Preparation instructions and recommendations.
 - c. Storage and handling requirements and recommendations.
 - d. Installation methods.
 - e. Typical Details.
 - 2. Shop Drawings: Provide typical details called out on plans and elevations.
- B. Informational Submittals:
 - 1. Sample warranty.

1.04 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this Section, with not less than 10 years of documented experience.
- B. Installer Qualifications: Company specializing in performing the work of this Section with minimum 5 years of documented experience; approved by vapor barrier system manufacturer.
- C. Single Source Responsibility for Weather barrier: Provide and install products from single source.
- D. Copies of Documents at Project Site: Maintain at the project site a copy of each referenced document that prescribes execution requirements.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.
- B. Store products in manufacturer's unopened packaging until ready for installation.
- C. Store materials in a clean, dry area in accordance with manufacturer's instructions.
- D. Protect materials during handling and installation to prevent damage.

1.06 WARRANTY

- A. Warranty: Provide written five year material warranty issued by the membrane manufacturer upon completion of work.

PART 2 PRODUCTS

2.01 VAPOR RETARDERS

- A. Sheet Vapor Retarder: ASTM E1745, Class A. Include manufacturer's recommended adhesive or pressure-sensitive tape.
 - 1. Minimum Permeance per ASTM E96/E96M: 0.04 Perms
 - 2. Water Vapor Barrier Per ASTM E1745 Meets or exceeds Class C.
 - 3. Acceptable Products:
 - a. GCP Applied Technologies; Florprufe 120.
 - b. Insulation Solutions, Inc; VIPER VAPORCHECK II 15-MIL: www.isibp.com
 - c. Poly America; Yellow Guard Vapor Barrier: www.poly-america.com
 - d. Raven Industries, Inc.; Vapor Block 15.
 - e. Reef Industries, Inc.; Griffolyn 15 mil Green.
 - f. Stego Industries, LLC; Stego Wrap 15 mil Class A.
 - g. W.R. Meadows, Inc.; Perminator 15 mil.

2.02 ACCESSORIES

- A. General: Ensure accessories are manufactured or recommended same manufacturer as vapor retarders.
- B. Tape: Manufacturer's standard tape compatible with other system components.
 - 1. Description: Black, double-sided, asphaltic, pressure-sensitive, mastic tape.
- C. Self-Adhesive Repair Tape: Manufacturer's standard tape compatible with other system components.
- D. Sealant: Manufacturer's recommended sealant.
- E. Pipe Boots: Manufacturer's standard pipe boots, factory-fabricated, sized to precisely fit diameter of each individual pipe/conduit.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine surfaces and areas to receive vapor retarders. Notify Architect in writing defects of work and other unsatisfactory site conditions that would cause defective installation of vapor retarders. Do not begin installation until unacceptable conditions have been corrected.
- B. Verify site dimensions.
- C. Commencement of work will imply acceptance of substrate.

3.02 PREPARATION

- A. Clean substrates of substances that are harmful to vapor retarders, including removing projections capable of puncturing vapor retarders.

3.03 INSTALLATION

- A. Install vapor retarders in accordance with manufacturer's instructions and ASTM E1643 at concrete slabs, and as follows.
 - 1. Fine grade under slab soils to smooth and level surface prior to installation of slab on grade edge and construction joint forms.

2. Tamp and level subbase soil materials to within plus zero inches to minus 3/4 inch (19.05 mm) from required subgrade elevation.
 3. Unroll vapor barrier with longest dimension parallel with direction of pour.
 4. Lap vapor barrier up and over foundation elements and seal to foundation walls.
 5. Lap joints 2 inches (50.8 mm) minimum and seal.
 6. Seal penetrations, including pipes, with manufacturer's recommended details; no penetrations of vapor barrier membrane are permitted except for reinforcing steel and permanent utilities.
 7. Turn up sheets 12 inches (305 mm) at perimeter; at footers and vertical walls, and against penetrations. Seal joints and terminations with tape. Cut off excess material after concrete has been installed and reviewed by the Architect.
 8. Do not disturb or damage vapor barrier while placing concrete. Repair damaged vapor barrier by cutting patches of vapor barrier, overlapping damaged area 6 inches (150 mm) minimum and taping all four side with seal tape.
- B. Install vapor retarders continuously at locations as indicated on the Drawings. Ensure there are no discontinuities in vapor retarder at seams and penetrations.
- C. Install vapor retarders in largest practical widths.
- D. Ensure surface beneath vapor retarder is smooth with no sharp projections.
- E. Join sections of vapor retarder and seal penetrations in vapor retarder with seam tape. Ensure vapor retarder surfaces to receive mastic tape are clean and dry.
- F. Immediately repair holes in vapor retarder with self-adhesive repair tape.
- G. Seal around pipes and other penetrations in vapor retarder with pipe boots in accordance with manufacturer's instructions.

3.04 PROTECTION

- A. Protect vapor retarders from damage during installation of reinforcing steel and utilities and during placement of granular materials or concrete slab.
- B. Immediately repair damaged vapor retarder in accordance with manufacturer's instructions.
- C. Use only concrete dobies.
- D. Confirm membrane is free of debris prior to concrete placement.

END OF SECTION

**SECTION 07 2620
FLUID APPLIED AIR, WATER, & VAPOR BARRIER**

PART 1 - GENERAL

1.01 SUMMARY

- A. Work described in this section includes fluid applied vapor retarder and water resistive air barrier membrane system.
- B. Work includes all necessary fluid membrane materials, miscellaneous sheet goods, flashing, tapes, mastics, and sealants to ensure a complete water resistive, vapor retarding air barrier wall system including:
 - 1. Connections of wall air barrier to roof membrane.
 - 2. Connection of wall air barrier to below grade and/or foundation air barrier.
 - 3. Air barriers across construction, control, seismic and expansion joints.
 - 4. Opening and penetrations for windows, doors, vents, ducts, pipes, and curtain wall systems.
 - 5. Brick ties, bolts, and similar hardware penetrations.
 - 6. All other joints, opening, and pathways in the building wall enclosure with potential for air leakage or moisture infiltration.
- C. Related work specified elsewhere:
 - 1. Division 03: Cast-in-place concrete, precast concrete.
 - 2. Division 04: Unit masonry.
 - 3. Division 05: Steel studs, girts, and furring.
 - 4. Division 06: Gypsum sheathing, wood framing, wood sheathing, rough carpentry.
 - 5. Division 07: Flashing and sheet metal, metal wall cladding panels, thermal insulation, moisture protection, joint sealant.

1.2 DEFINITIONS

- A. American Society for Testing and Materials (ASTM):
 - 1. C794-18: Test Method for Adhesion-in-Peel of Elastomeric Joint Sealants.
 - 2. C836-15: Standard Specification for High Solids Content, Cold Liquid Applied Elastomeric Waterproofing Membrane for Use with Separate Wearing Course.
 - 3. C1305-16: Test Method for Crack Bridging Ability of Liquid-Applied Waterproofing Membrane
 - 4. C1306-08(2016) e1: Standard Test Method for Hydrostatic Pressure Resistance of a Liquid-Applied Waterproofing Membrane.
 - 5. C1522-05(2013) Standard Test Method for Extensibility After Heat Aging of Cold Liquid-Applied Elastomeric Waterproofing Membranes.
 - 6. D412-16: Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers – Tension.
 - 7. D1970-17a: Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection.
 - 8. D2939-03: Standard Test Methods for Emulsified Bitumens Used as Protective Coatings.
 - 9. D4263-83(2012): Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method.
 - 10. D4541-17: Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers.
 - 11. E96-16: Standard Test Method for Vapor Transmission of Materials.

12. E783-02(2010): Standard Test Method for Field Measurement of Air Leakage Through Installed Exterior Windows and Doors.
13. E1105-15: Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform or Cyclic Static Air Pressure Difference.
14. E1186-17: Standard Practices for Air Leakage Site Detection in Building Envelopes and Air Barrier Systems.
15. E2178-13: Standard Test Method for Air Permeance of Building Materials.

B. International Code Council Evaluation Services, Inc. (ICC-ES):

1. AC29: Acceptance Criteria for Cold, Liquid-applied Below-grade, Exterior Damp proofing and Waterproofing Materials.

1.3 DESIGN AND PERFORMANCE CRITERIA.

- A. General Performance: Fluid applied water resistive, vapor retarding air barrier system shall be furnished and installed without failure due to defective manufacture, application, installation, or other defects in construction.
 1. Product shall be tested in accordance with ICC-ES AC 29. ICC-ES ESR reports shall be made available upon request.
- B. Air Leakage.
 1. The fluid applied air barrier shall have less than 0.001 cfm/ft² (0.005 L/s/m²) at 1.57 psf (75 Pa) when tested in accordance with ASTM E2178.
- C. Vapor Permeance: The fluid applied air barrier shall meet the requirements of a Class II vapor retarder and shall have a vapor permeance between 0.1 and 1.0 perms (0.07 and 0.7 metric perms) when tested in accordance with ASTM E96.
- D. Physical Properties
 1. Thickness: The fluid applied water resistive air and vapor barrier shall measure a minimum of 40 mils (1.0 mm) nominal dry film thickness in accordance with the test methods of ASTM D1970.
 2. Low Temperature Flexibility: The fluid applied air barrier shall be tested in accordance with the low temperature flexibility testing of ASTM D1970 and pass at a temperature of 14.8°F (-26°C).
 3. Elongation: The fluid applied air barrier shall have a minimum elongation of 850% when tested in accordance with ASTM D412, Die C.
 4. Adhesion to Concrete: Minimum of 1.0 lb-f per inch-width (0.18 kg per cm-width) when tested in accordance with ASTM C794 under the conditions specified by ASTM C836, section 6.9.
 5. Low Temperature Crack Bridging: The fluid applied water resistive air and vapor barrier shall result in "No Cracking" when tested in accordance with ASTM C1305 as required by ASTM C836, section 6.7.
 6. Hydrostatic Pressure Resistance: The fluid applied water resistive air and vapor barrier shall have a resistance to hydrostatic pressure of 3 psi (20.7 kPa) over a 1/16-inch (1.5mm) wide crack when tested in accordance with ASTM C1306 as required by ICC-ES AC29.
 7. Resistance to Water: The fluid applied water resistive air and vapor barrier shall result in no blistering or re-emulsification when tested in accordance with ASTM D2939 as required by ICC-ES AC29.
 8. Remains in Place During Application: The fluid applied water resistive air and vapor barrier shall remain in place during application as evidenced by testing in accordance with ASTM C836, section 6.8 as is required by ICC-ES AC29.

9. Extensibility After Heat Aging: The fluid applied water resistive air and vapor barrier shall not crack when extended 1/4-inch (6mm) as per test method ASTM C1522 as is required by ICC-ES AC29.
10. VOC Content: The fluid applied air barrier shall have a maximum VOC of [50 g/l].

1.4 SUBMITTALS.

- A. General, Rainscreen Wall Assembly Components: Complete submittals shall be made jointly and simultaneously for all components of the Rainscreen wall assembly, including:
 1. Exterior wall sheathing board, if applicable;
 2. Air, water, and vapor barrier;
 3. Rainscreen wall continuous exterior insulation;
 4. Metal rainscreen wall cladding panels and sub framing components;
 5. All other trim, flashing, sealants, and components necessary for a complete rainscreen wall assembly as required by these specifications.
- B. Product Data: Manufacturer's data sheets on each product to be used, including:
 1. Preparation instructions and recommendations.
 2. Storage and handling requirements and recommendations.
 3. Installation methods.
- C. Shop drawings.
 1. Show complete rain screen wall system with air, water, and vapor barrier, continuous exterior insulation, sub framing system, metal cladding panels, ventilation components, flashings and accessories in elevation, sections, and details. Include membrane and metal thicknesses and finishes, panel lengths, joining details, anchorage details, flashings and special fabrication provisions for termination and penetrations. Indicate relationships with adjacent and interfacing work.
 2. All components shall be integrated into a single comprehensive and complete shop drawing set prepared by the metal cladding system manufacturer.
 3. Shop drawings shall identify each product and component by manufacturer, product name, and thickness, size, style, or other uniquely distinguishing characteristics.
 4. Shop drawings shall be signed and sealed by a California Licensed Professional Engineer.
- D. Financial Certification: Provide the building owner with a signed and notarized (sealed) affidavit by an officer of the system supplier which confirms a current minimum corporate asset-to-liability ratio of not less than 3:1 for the supplier, or its parent corporation. Financial support information and affidavit must be dated within 30 days prior to the product submittal.
- E. Warranty: Provide unexecuted specimen warranty documents for each warranty as required in specification article 1.11.
- F. Samples.
 1. Submit three (3) samples of fluid applied, water-resistive, vapor permeable air barrier sheet, 4" x 4" minimum size.
 2. Submit samples of each system accessory, including membrane flashings, seam tapes, mastics, sealants, and any other system components or accessories depicted on shop drawings.
- G. Manufacturer Quality Standards: provide manufacturers ISO 9001 approval certificate.

- H. Manufacturers Inspections: Provide notarized statement signed by a corporate officer of the air barrier manufacturer guaranteeing the requirements listed in 3.4 FIELD QUALITY CONTROL will be provided to the owner and architect at no charge to the district.

1.5 QUALITY CRITERIA/INSTALLER QUALIFICATIONS.

- A. Engage an experienced air barrier contractor (installer) to install fluid applied, water resistive, vapor retarding air barrier system who has a minimum of three (3) years of experience specializing in the installation of air barrier systems.
- B. Air Barrier Association of America (ABAA) Quality Assurance Program.
 - 1. This project is specified to participate in the ABAA Quality Assurance Program.
 - 2. The air barrier subcontractor shall be accredited by the Air Barrier Association of America (ABAA) prior to bidding this project.
 - 3. The air barrier subcontractor must maintain at least one ABAA installer on the jobsite throughout the air barrier installation phase that is certified by the ABAA for fluid applied air barriers.
 - 4. The air barrier subcontractor shall perform daily inspections, tests, and reporting required by the ABAA Quality Assurance Program.
 - 5. The air barrier subcontractor shall coordinate, cooperate, and comply with the recommendations of the ABAA third party auditor/inspector.
- C. Successful contractor must obtain all components of the air barrier system from a single manufacturer. Any secondary products that are required which cannot be supplied by the specified manufacturer must be recommended and approved in writing by primary manufacturer prior to bidding.
- D. Air barrier subcontractor shall submit work experience and evidence of adequate financial responsibility. Architect reserves the right to inspect fabrication facilities in determining qualifications.

1.6 MOCK-UPS.

- A. Where directed by architect, construct typical exterior wall panel, 6-foot (2.8m) long by 6-foot (2.8m) wide incorporating the sheathing board or substrate, sill pan protection system, window frame and attachment method, clips, sub framing, attachment of insulation and detailing of water-resistive vapor retarding air barrier membrane application and lap seams.
- B. Mock-up Testing.
 - 1. Perform the air leakage tests and water penetration test of mock-up prior to installation of cladding and trim but after installation of all fasteners for cladding subframing and after installation of other penetrating elements.
 - 2. Air Leakage Tests: Test mock-up for air leakage location in accordance with ASTM E1186 and for air leakage quantity in accordance with ASTM E783. Use smoke tracer to locate sources of air leakage. Deficiencies shall include air leakage in excess of 0.04 cfm/ft² (0.2 L/s/m²) and unsatisfactory workmanship.
 - 3. Water Penetration: Test mock-up for water leakage in accordance with ASTM E1105. Deficiencies shall include uncontrolled water leakage and unsatisfactory workmanship.

4. Membrane Adhesion: Test mock-up of fluid applied membrane for adhesion in accordance with ASTM D 4541 using a Type 1 pull tester except that the disk used shall be 4-inches (100mm) in diameter and the membrane shall be cut through to separate the material attached to the disk from the surrounding material. Perform test after curing period recommended by the manufacturer. Record mode of failure and area which failed in accordance with ASTM D 4541. When the air barrier material manufacturer has established a minimum adhesion level for the product on the particular substrate, the inspection report shall indicate whether this requirement has been met. Where the manufacturer has not declared a minimum adhesion value for their product/substrate combination, then the inspector shall simply record the value.
5. Document and correct deficiencies in mock-up and tests. Retest until satisfactory results are obtained.

1.7 DELIVERY, STORAGE, AND HANDLING.

- A. Inspect materials upon delivery.
- B. Handle materials to prevent damage.
- C. Store materials in an interior temperature-controlled environment and in their original packaging. Materials shall be stored such that a temperature in is maintained between 60°F - 80°F (15°C - 27°C) at all times.
- D. Protect stored material from direct sunlight and inclement weather until ready for use. Do not allow material to freeze or be exposed to excessive heat for direct flame.

1.8 PROJECT CONDITIONS

- A. Work to be performed according to manufacturer's written instructions and warranty requirements.
- B. Weather Limitations.
 1. Proceed with installation of air barrier system only when existing and forecasted weather conditions permit application to be performed within the ambient air and substrate surface temperature range recommended by the supplier.
 2. Do not install fluid applied air barrier when temperatures below 20°F (-6°C) are expected within 24 hours. When temperature is below 40°F (5°C), maintain materials in climate-controlled storage space until immediately prior to use.
 3. Do not install fluid applied air barrier to damp or wet substrate.
 4. Do not install air and vapor barrier in snow, rain, fog, or mist.
- C. Field Measurements: Verify actual dimensions of construction contiguous with air barrier system by field measurements before installation.

1.9 COORDINATION

- A. Coordinate sizes and locations of windows, doors, and wall penetrations with actual equipment provided.
- B. Coordinate air barrier continuity and connections with adjacent surfaces, such as roof, foundation, and changes in wall construction.

1.10 WARRANTIES

- A. Endorse and forward to owner the following warranties:
 - 1. Manufacturer's standard material warranty in which manufacturer agrees to provide replacement material for the fluid applied water-resistive vapor retarding air barrier installed in accordance with manufacturer's instructions that fails due to material defects within three (3) years of the date of Substantial Completion.
 - 2. Installer's three (3) year warranty from date of Substantial Completion, including all components of the air and vapor barrier assembly, against failures including loss of air tight seal, loss of watertight seal, loss of adhesion, loss of cohesion, failure to cure properly.
 - 3. Special Rainscreen System Water Tightness Warranty: The water-resistive air barrier supplier shall provide a five (5) year warranty from date of Substantial Completion against uncontrolled water leakage to the interior of the building. The warranty shall identify by manufacturer, product name, and model number each component of the Rainscreen wall system, including each of those components listed in Article 1.5 A of this specification.
- B. Warranty provided for Air/moisture barrier, hot applied rubber asphalt waterproofing, and single ply membrane shall be provided by single manufacturer.
- C. Warranties shall commence on date of substantial completion.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Air Barrier Membrane Materials.
 - 1. The basis of design shall be IntelliWrap LVB by Innovative Metals Company, Inc. (IMETCO), Norcross, GA 800-646-3826. IMETCO is a subsidiary of Garland Industries. Local Representative: Doug Clark (925) 784-6701 email: dclark@garlandind.com
 - a. OR EQUAL.
- B. General: Obtain all primary air barrier components and accessories from the same supplier to ensure total system compatibility and integrity.
 - 1. Alternate manufacturers are subject to full compliance with specification requirements, and shall be submitted for approval as follows.
 - a. Manufacturers not listed above must submit for approval, ten (10) days prior to bid date, the following: Manufacturer's literature; certification of testing in accordance with specification requirements and sections 1.4 and 1.5; sample warranties in accordance with specification section 1.11; installer qualifications in accordance with specification section 1.6, and a list of five (5) similar projects in size and scope of work.

- b. In addition to the above requirements, requests for substitute products for this section of the specification shall be accompanied by a notarized statement from a corporate officer of the Air and Water Barrier manufacturer stating that the proposed alternate air barrier product is specifically acceptable for issuance of the Special Rainscreen System Water Tightness Warranty required in Article 1.11 A 3 of this specification, which the Air and Water Barrier manufacturer is required to provide upon substantial completion of this project. This notarized statement shall identify by manufacturer, product name, and model number each component of the Rainscreen wall system, including each of those components listed in Article 1.5 A of this specification that the Air and Water Barrier manufacturer will cover under this warranty.
 - c. No substitutions will be permitted after the bid date of this project.
2. Material: Fluid applied vapor retarding single component, polymer modified, asphalt emulsion air membrane that cures to form a water resistive, vapor retardant air barrier.
 3. Application Rate/Thickness: Apply at a rate as recommended by manufacturer to achieve a minimum wet film thickness of 60 mils (1.5 mm) and cured minimum dry film thickness of 40 mils (1.0 mm).
 4. Density: 8.4 lbs/gal (0.84 kg/l); approximately 62% solids by weight.
 5. UV Exposure: 30 days maximum allowable exposure to sunlight.
 6. Application Method: Airless sprayer, roller, or brush.
 7. Application Temperature: Ambient temperature must be above 20 °F (-6 °C) and not expected to drop below stated temperature for 24 hours.
 8. Cure Time: Under normal conditions, the product shall be fully cured within 24 hours of application.
 9. VOC Content: Material shall contain no solvent, exhibit no odor, and not be subject to any VOC restrictions.
- C. Air Barrier Transition and Flashing Membrane.
1. Transition and flashing air barrier membrane shall be IntelliWrap Flashing, a self-adhering, self-sealing waterproofing tape, composed of a silver polymer film coated with an aggressive asphalt adhesive.
 2. Flashing membrane shall be used as indicated on drawings for the following applications:
 - a. Window and door jambs and head.
 - b. Through-wall flexible membrane flashings.
 - c. Transitions to foundation/below-grade, roof, and other adjacent exterior surfaces. Connect the wall flashing membrane with adjacent air barrier membrane systems according manufacturer's details, recommendations, and shop drawings.
 - d. Primary air barrier membrane reverse seam laps.
 - e. Other conditions where the primary air barrier membrane and/or flashing membranes require additional adhesion at their seams, laps, joints, edges, or ends.
 3. Roll Dimensions: 9-inches (230mm) wide by 100-ft (30.5m) long.
- D. Air Barrier Flexible Flashing and Penetration Tapes
1. Penetrations and other flashings requiring a flexible tape membrane shall use IntelliWrap FlexxBand, a flexible waterproofing tape comprised of a rubberized asphalt adhesive laminated to a cross-laminated polyethylene crepe film.
 2. Flexible flashing membrane shall be used as indicated on drawings for the following applications:

- a. Window sills and arched or round through-wall openings.
 - b. Pipe, duct, or other service penetrations.
 - c. Other flashing conditions which necessitate the use of a flexible flashing.
3. Roll Dimensions: 6-inches (150mm) wide by 50-ft (15m) long.

2.2 ACCESSORY MATERIALS

- A. Primer: For concrete, masonry, cementitious fiber board, OSB, and weathered surfaces, provide an asphalt-based commercial primer in accordance with manufacturers recommendations.
- B. Provide termination bars, sealants and other accessories as required for a complete system installation.

PART 3 - PREPERATION & EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, substrate surfaces, and other conditions affecting performance of the Work.
- B. Examine solid wall sheathing to verify that sheathing joints are supported by framing or blocking, and that installation is within flatness tolerances required by metal wall panel manufacturer. Do not proceed with installation until unsatisfactory conditions have been corrected.
- C. Verify substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D4263 and take suitable measurements until substrate passes moisture test.
- D. Verify all surfaces are dry, sound, clean, and free of oil, grease, dirt, excess mortar or other contaminants detrimental to the adhesion of the water resistive air barrier membrane and flashings. Use mastic or non-shrinking grout as recommended by air barrier manufacturer to fill voids, cracks, honeycombs, and gaps in substrate greater than 1/16-inch (6mm) in width to provide an even surface. Strike masonry joints full-flush.
- E. Mechanical fasteners used to secure sheathing boards or penetrate sheathing boards shall be set flush with the sheathing and fastened into solid backing material. All joints in sheathing board should be taped with 2-inch (50mm) wide exterior sheathing tape prior to installation of fluid applied air barrier.
- F. Examine roughing-in for components and systems penetrating the rainscreen wall assembly to verify actual locations of penetrations.
- G. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- H. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean substrates of substances harmful to air barrier installation, including removing projections capable of interfering with air barrier.
- B. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through water-resistive air barrier and at protrusions.
- C. Establish straight, side and crosswise benchmarks
- D. All walls shall be checked for square and straightness. Inside and outside corners may not be plumb; set a true line for the corner flashing with string line.

- E. Ensure all preparatory work is complete prior to installing fluid applied water-resistive air barrier membrane.
- F. Minimum application temperature of fluid applied membrane and flashings to be above 20°F (-6°C), and expected to remain above said temperature for at least 24 hours. When temperature is below 40°F (5°C), maintain materials in climate controlled storage space until immediately prior to use.

3.3 AIR BARRIER INSTALLATION

- A. Vapor Retarding Air Barrier Installation: Install transition strip materials and fluid-applied vapor retarding air barrier to provide continuity throughout the building envelope. Install materials in accordance with manufacturer's recommendations and as follows, unless manufacturer recommends other procedures in writing based on project conditions or particular requirements of their recommended materials:
 - 1. Apply primer for transition strips at rate recommended by manufacturer. Allow primer to dry completely before transition strip application. Apply as many coats as necessary for proper adhesion.
 - 2. Apply primer for fluid-applied vapor retarding air barrier as recommended by fluid-applied vapor permeable air barrier manufacturer. Based on manufacturer's recommendation, no primer may be required for the fluid-applied materials.
 - 3. Apply fluid-applied vapor retarding air barrier by airless sprayer, roller, or brush, using equipment and methods recommended by manufacturer, to achieve a dry film thickness as recommended by the manufacturer.
 - a. A two-pass application is generally recommended to ensure sufficient dry film thickness.
 - b. When applying by airless sprayer, warm the material to 100 - 130°F (38 - 55°C) immediately prior to spraying to ensure a smooth, consistent spray pattern.
 - c. Do not apply over standing water.
 - d. Allow concrete and mortar joints to cure for a minimum of 16-hours before application of fluid-applied vapor retarding air barrier.
 - 4. At changes in substrate plane, provide transition material (bead of sealant, mastic, extruded silicone sealant, membrane counterflashing or other material recommended by manufacturer) under transition and flashing membrane to eliminate all sharp 90 degree inside corners and to make a smooth transition from one plane to another.
 - 5. Do not allow materials to come in contact with chemically incompatible materials.
 - 6. Do not leave the vapor retarding air barrier exposed to sunlight for more than 30 days.
 - 7. Inspect installation prior to enclosing assembly and repair punctures, damaged areas and inadequately lapped seams with a patch of membrane lapped as recommended by manufacturer.
 - 8. At end of each working day, seal top edge of membrane to substrate with termination mastic.
- B. Window, Door, and Other Wall Openings.
 - 1. To avoid waste, predetermine best method and sequence to the install self-adhered air barrier transition and flashing membrane around window or wall openings subject to the opening size and installation of window, door or louver type.
 - 2. Cover horizontal sill by aligning flexible flashing edge with inside edge of sill. Adhere to rough opening across sill and up jambs a minimum of 6 inches (150

mm). Secure flashing tightly into corners by working in along the sill before adhering up the jambs.

3. Fan flexible flashing at bottom corners onto face of wall. Firmly press in place.
4. Wrap self-adhered air barrier transition and flashing membrane into wall openings to cover jambs and head. It is not required to install continuous sheets through corners.
5. Remove release film, align flashing membrane and apply pressure to ensure positive contact. Roll Lap seams to ensure adhesion. Provide lap seams to shed water.
6. Subject to window installation requirements, install preformed sill pan system and seal to installed self-adhered air barrier window flashing membrane with sealant.
7. Install windows in accordance with window manufacturer's details and cover nail flange with flashing tape. Install flashing tape along jamb and across head flanges of window and seal to installed self-adhered air barrier transition membrane. Roll tape to ensure positive contact to substrate. Seal exposed leading edge of tape.
8. For windows without nail flange, install specified aluminized tape around perimeter of opening to accommodate placement of backer rod and sealant between window frame and self-adhered air barrier transition membrane.

C. Building Transition Conditions.

1. Tie-in to structural beams, columns, floor slabs and intermittent floors, parapet curbs, foundation walls, roofing systems and at the interface of dissimilar materials with self-adhering air barrier transition and flashing membrane.
2. Position subsequent sheets of transition strips applied above so that membrane overlaps the membrane sheet below by a minimum of 2 inches (50 mm), unless greater overlap is recommended by manufacturer. Roll into place with roller.
3. Overlap horizontally adjacent pieces of transition strips a minimum of 2 inches (50 mm), unless greater overlap is recommended by manufacturer. Roll seams with roller.
4. Apply fluid-applied vapor retarding air barrier and transition strips to shed water naturally without interception by a sheet edge, unless that edge is sealed with permanently flexible termination mastic.
5. Connect air and vapor barrier in exterior wall assembly continuously to the air barrier of the roof, to concrete below-grade structures, to windows, curtain wall, storefront, louvers, exterior doors and other intersection conditions and perform sealing of penetrations, using accessory materials and in accordance with the manufacturer's recommendations.
6. Provide mechanically fastened non-corrosive metal sheet to span gaps in substrate plane and to make a smooth transition from one plane to the other. Membrane shall be continuously supported by substrate.
7. At deflection and control joints, provide backup for the membrane to accommodate anticipated movement.
8. At expansion and seismic joints provide transition to the joint assemblies.
9. Apply a bead or trowel coat of mastic along membrane seams at reverse lapped seams, rough cuts, and as recommended by the manufacturer.

D. Mechanical Equipment Penetrations.

1. Mechanical pipe, electrical conduit and/or duct work must be secured solid into position prior to installation of fluid applied vapor retarding air barrier membrane.
2. Electrical services penetrating the wall assembly and fluid applied vapor retarding air barrier membrane must be placed in appropriate conduit and secured solid into position.
3. Install manufactured flanged penetration sleeves as recommended by sleeve manufacturer.

4. For straight sided penetrations, cut and fit self-adhered air barrier transition membrane to accommodate sleeve, install specified single sided flashing tape to seal the air barrier membrane to ductwork or preformed flange sleeve.
5. For pipe penetrations, refer to manufacturer's standard details.
6. Seal around all penetrations with termination mastic, extruded silicone sealant, membrane counterflashing or other procedure in accordance with manufacturer's recommendations.
7. At through-wall flashings, provide an additional 6-inch (150 mm) wide strip of manufacturer's recommended membrane counterflashing to seal top of through-wall flashing to membrane or as recommended by manufacturer. Seal exposed top edge of strip with bead of mastic or as recommended by manufacturer.

3.4 FIELD QUALITY CONTROL

- A. Air Barrier Association of America Installer Audits: Cooperate with ABAA's testing agency. Allow access to work areas and staging. Notify Owner's testing agency in writing of schedule for Work of this Section to allow sufficient time for testing and inspection. Do not cover Work of this Section until testing and inspection is accepted.
- B. Remove and replace applications of air barrier membrane system where inspections indicate that they do not comply with specified requirements.
- C. A full time employee of the manufacturer must provide job site inspections a minimum of 3 times per work week and provide detailed report to owner and architect with pictures and comments of the project progress.

3.5 PROTECTION AND CLEANING

- A. Protect wall areas covered with fluid applied water-resistive vapor retarding air barrier from damage due to construction activities, high wind conditions, and extended exposure to inclement weather.
- B. Review condition of fluid applied water-resistive vapor retarding air barrier prior to installation of exterior cladding, insulation, glazing, and fenestration products. Repair, or remove and replace damaged sections with new membrane.
- C. Recommend to cap and protect exposed back-up walls against wet weather conditions during and after application of membrane, including wall openings and construction activity above completed fluid applied water-resistive vapor retarding air barrier installations.
- D. Do not allow materials to come in contact with chemically incompatible materials.
- E. Remove and replace water-resistive weather barrier membrane affected by chemical spills or surfactants.

END OF SECTION

**SECTION 07 4213
METAL WALL PANELS**

PART 1 GENERAL**1.01 SECTION INCLUDES**

- A. Metal panels for walls, with related flashings and accessory components.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
1. Coordinate placement of wall panel system anchors and back-up support framing.
 2. Coordinate installation of vapor retarder and air barrier seals.
- B. Preinstallation Meeting: Convene one week before starting work of this Section.
1. Convene under general provisions of Section 01 7000 - Execution and Closeout Requirements.
 2. Require attendance by the Owner, Architect, installer and relevant sub-contractors.
 3. Include metal sheet manufacturer's representative and wall system manufacturer's representative to review storage and handling procedures.
 4. Review scheduling of wall system manufacturer's representative site inspection visits.
 5. Review submittals.
 6. Review procedures for protection of work and other construction.

1.03 SUBMITTALS

- A. Action Submittals:
1. Product Data: Manufacturer's data sheets on each product to be used, including thickness, physical characteristics, and finish, and:
 - a. Finish manufacturer's data sheet showing physical and performance characteristics.
 - b. Storage and handling requirements and recommendations.
 - c. Fabrication instructions and recommendations.
 - d. Specimen warranty for finish, as specified herein.
 2. Shop Drawings:
 - a. Indicate dimensions, layout, joints, project specific construction details, and methods of anchorage.
 - b. Show locations and extent of metal panels on plans / elevations with detail callouts.
- B. Informational Submittals:
1. Certificate: Certify that products meet or exceed specified requirements.
 - a. Manufacturer's Project Acceptance Document: Certification that manufacturer and installer will warrant the waterproofing for the specific site, design, details, and application indicated for this project.
 - b. Installer Certification: Written document from Manufacturer stating installer is certified, approved, and licensed, or acceptable to install specified products.
 2. Manufacturer's Installation Instructions: Indicate special procedures.
 3. Structural calculations by design engineer.
 4. Samples: Submit three samples of wall panel, 12 inch (304.8 mm) x 12 inch (304.8 mm) in size illustrating finish color, sheen, and texture.
 5. Warranty:
 - a. Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.
 - b. Submit installer's certification that installation complies with all warranty conditions for the waterproof membrane.
 6. Maintenance Data: Care of finishes and warranty requirements.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 - 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 - 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.
 - 4. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
 - 5. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.

1.05 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum three years of documented experience.
- B. Installer Qualifications: Company specializing in installing the products specified in this Section with minimum 5 years of documented experience and approved by the manufacturer.
- C. Single Source Responsibility for Waterproofing: Provide and install products from single source.

1.06 MOCK-UP

- A. Comply with general mock-up requirements specified in Section 01 4000 - Quality Requirements.
- B. Mock-up: Construct mock-up of typical installation attachments to building frame, associated vapor retarder and air seal materials, weep drainage system, sealants and seals, related insulation in mock-up.
 - 1. Locate where directed by Architect.
 - 2. Mock-up may remain as part of the Work.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Protect panels from accelerated weathering by removing or venting sheet plastic shipping wrap.
- B. Store prefabricated material off the ground and protected from weather; prevent twisting, bending, or abrasion; provide ventilation; slope metal sheets to ensure proper drainage.
- C. Prevent contact with materials that may cause discoloration or staining of products.

1.08 FIELD CONDITIONS

- A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.09 WARRANTY

- A. Refer to Section 01 7800 - Closeout Submittals, for additional warranty requirements.
- B. Correct defective work within a 10 year period after Substantial Completion:
 - 1. For degradation of panel finish, including color fading caused by exposure to weather.
 - 2. Include defects in water tightness and integrity of seals.
- C. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:

- a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Basis of Design Manufacturers Metal Wall Panels - Concealed Fasteners:
 1. RHEINZINK America, Inc.; Flat Lock Tile Façade System: www.rheinzink.us.

2.02 PERFORMANCE REQUIREMENTS

- A. General: Provide metal wall panel assemblies meeting performance requirements as determined by application of specified tests by a qualified testing agency on manufacturer's standard assemblies.
- B. Air Infiltration: Maximum 0.06 cu ft/min/sq ft (0.3 L/s/sq m) per ASTM E283 at a static-air-pressure difference of 1.57 lb./sq. ft. (75 Pa), using minimum 10 feet (3 m) by 10 feet (3 m) test panel that includes side joints.
- C. Water Penetration, No uncontrolled water penetration per ASTM E331 at a minimum static differential pressure of 6.24 pounds per square foot (300 Pa), using minimum 10 feet (3 m) by 10 feet (3 m) test panel that includes side joints.
- D. Structural Performance: Provide metal wall panel assemblies capable of withstanding the effects of indicated loads and stresses within limits and under conditions indicated for disengagement, per ASTM E72.
 1. Wind Loads: Determine loads based on uniform pressure, importance factor, exposure category, and basic wind speed indicated on drawings.
 2. Limits of Deflection: Metal wall panel assembly shall withstand scheduled wind pressure with the following allowable deflection:
 - a. Maximum allowable deflection limited to L/180 deflection of panel perimeter normal to plane of wall with no evidence of failure.
 3. Secondary Metal Framing: Design secondary metal framing for metal wall panel assembly according to AISI's "Standard for Cold-Formed Steel Framing - General Provisions."
 4. Side Joint Disengagement: Panels must be designed and tested under Negative load per ASTM E72.
 5. Thermal Movements: Allow for thermal movements from variations in both ambient and internal temperatures. Accommodate movement of support structure caused by thermal expansion and contraction.

2.03 MANUFACTURED METAL PANELS

- A. Wall Panel System: Factory fabricated prefinished metal panel system, site assembled.
 1. Single-skin concealed fastener metal wall panels over wall framing.
 2. Provide exterior panels and subgirt framing assembly.
 3. Design and size components to support assembly dead loads, and to withstand live loads caused by positive and negative wind pressure acting normal to plane of wall.
 4. Design Pressure: In accordance with applicable codes.
 5. Movement: Accommodate movement within system without damage to components or deterioration of seals, movement between system and perimeter components when subject to seasonal temperature cycling; dynamic loading and release of loads; and deflection of structural support framing.
 6. Drainage: Provide positive drainage to exterior for moisture entering or condensation occurring within panel system.
 7. Fabrication: Formed true to shape, accurate in size, square, and free from distortion or defects; pieces of longest practical lengths.

8. Corners: Factory-fabricated in one continuous piece with minimum 2 inch (51 mm) returns.

B. Exterior Panels:

1. Ribbed-profile, exposed fastener.
2. Profile: As indicated on Drawings.
3. Material: Precoated steel sheet, 24 gage, 0.028 inch (0.71 mm) minimum thickness.
4. Panel Size: As indicated on Drawings.
5. Panel Coverage: 39 inches (996.6 mm).
6. Rib Height: 1-1/2 inches (38.10 mm).
7. Major Rib Spacing: 13 inches (330.20 mm) on center.
8. Texture: Smooth.
9. Color: As indicated on Drawings.
10. Basis of Design Product:
 - a. ATAS International, Inc; Belvedere Grand R.
 - b. Prior approved equal.

C. Exterior Panels MTL-3:

1. Flat Lock Tile: Concealed fastener.
2. Profile: As indicated on Drawings.
3. Side Seams: Double-interlocked, tight-fitting.
4. Material: Precoated aluminum sheet, 22 gage, 0.0299 inch (0.76 mm) minimum thickness.
5. Material: Zinc; manufacturer's standard sheet; minimum 20 gage (1.0 mm) thick.
6. Panel Size: As indicated on Drawings.
7. Texture: Smooth.

D. Internal and External Corners: Same material, thickness, and finish as exterior sheets; profile to suit system; shop cut and factory mitered to required angles.

E. Trim: Same material, thickness and finish as exterior sheets; brake formed to required profiles.

F. Fasteners and Anchors: Stainless steel.

2.04 MATERIALS

A. Zinc: DIN EN 988; minimum 99.99 percent Zn (Z1 according to DIN EN 1179); manufacturer's standard pre-patina sheet; color as selected from manufacturer's full line.

2.05 ACCESSORIES

A. Manufacturer's standard accessories and other items essential to completeness of standing seam wall panel.

B. Sealants: As specified in Section 07 9200 - Joint Sealants.

C. Profile Closures: Polyethylene foam, die-cut or formed to panel configuration.

D. Formed Flashing and Trim: Match material, thickness, and color of metal wall panel face sheets.

E. Fasteners: Manufacturer's standard type to suit application; stainless steel.

1. Metal-to-Metal Fasteners: Stainless steel self-drilling, self-tapping screws.
2. Washers: Neoprene.

F. Field Touch-up Paint: As recommended by panel manufacturer.

G. Provide manufacturer's factory-formed clips, shims, flashings, sealants, and tapes for a complete installation.

2.06 FABRICATION

A. General: Fabricate and finish metal wall panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements

demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.

- B. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.
 - 1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 - 2. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 - 3. Sealed Joints: Form non-expansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
 - 4. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
 - 5. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
 - a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that building framing members are ready to receive panels.
- B. Wall Substrate: Confirm that wall substrate is within tolerances acceptable to metal wall panel system manufacturer.
 - 1. Maximum deviations acceptable:
 - a. 1/4 inch (6.35 mm) in 20 feet (6 m) vertically or horizontally from face plane of framing.
 - b. 1/2 inch (12.70 mm) across building elevation.
 - c. 1/8 inch (3.17 mm) in 60 inches (1524 mm).
- C. Verify that water-resistive barrier has been installed over substrate completely and correctly.

3.02 INSTALLATION

- A. Install panels on walls and soffits in accordance with manufacturer's instructions.
- B. Protect surfaces in contact with dissimilar metals with bituminous paint. Allow to dry prior to installation.
- C. Fasten panels to structural supports; aligned, level, and plumb.
- D. Locate joints over supports.
- E. Provide expansion joints where indicated.
- F. Use concealed fasteners unless otherwise approved by Architect.
- G. Seal and place gaskets to prevent weather penetration. Maintain neat appearance.

3.03 ACCESSORY INSTALLATION

- A. General: Install metal wall panel accessories, provide for thermal expansion. Coordinate installation with flashings and other components.
 - 1. Install related flashings and sheet metal trim per requirements of Section 0762000 - Sheet Metal Flashing and Trim.
 - 2. Install components required for a complete metal wall panel assembly, including trim, copings, corners, lap strips, flashings, sealants, fillers, closure strips, and similar items.

3. Comply with performance requirements and manufacturer's written installation instructions.
4. Provide concealed fasteners except where noted on approved shop drawings.
5. Set units true to line and level as indicated.

3.04 TOLERANCES

- A. Maximum Offset From True Alignment Between Adjacent Members Butting or In Line: 1/16 inch (1.6 mm).
- B. Maximum Variation from Plane or Location Indicated on Drawings: 1/8 inch (3 mm).

3.05 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a service representative authorized by metal wall panel manufacturer to inspect completed installation. Submit written report. Correct deficiencies noted in report.

3.06 CLEANING

- A. Remove site cuttings from finish surfaces.
- B. Clean and wash prefinished surfaces with mild soap and water; rinse with clean water.

3.07 PROTECTION

- A. Protect installed panel system from damage during construction.

END OF SECTION

**SECTION 07 5420
SINGLE PLY MEMBRANE ROOFING**

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes an adhered Solar Bright 60 Evaloy KEE single ply roofing system.
- B. Related Work Specified Elsewhere:
 - 1. Section 06: Rough Carpentry
 - 2. Section 07: Summary of Work
 - 3. Section 07: Sheet Metal Flashing and Trim
 - 4. Section 07: Coping System

1.2 SUBMITTALS

- A. Product Data: Provide manufacturer's technical product data for each type of roofing product specified. Include data substantiating that materials comply with specified requirements.
- B. Samples: Submit two (2) samples of the following:
 - 1. Membrane
 - 2. Fasteners / Plates
 - 3. Insulation Board
- C. Specimen Warranty: Provide an unexecuted copy of the warranty specified for this Project, identifying the terms and conditions required of the Manufacturer and the Owner.
- D. Design Pressure Calculations: Submit design pressure calculations for the roof area in accordance with ASCE-7 and local Building Code requirements. Include a roof system attachment analysis report, certifying the system's compliance with applicable wind load requirements before work begins. Report shall be signed and sealed by a professional engineer registered in the state of CA who has provided roof system attachment analysis for not less than 5 consecutive years.
- E. Any material submitted as equal to or better than the specified material must be accompanied by a report signed and sealed by a professional engineer licensed in the state in which the installation is to take place. This report shall show that the submitted equal meets the Design and Performance criteria in this specification. Material substitutions may only be submitted by prime bidding contractors. Substitution requests submitted with a licensed engineer stamp or by non-prime bidding contractors will be rejected for non-conformance.
- F. Certificates: Cool Roofing certified by Cool Roof Rating Council.
- G. Manufacturer's Fire Compliance Certificate: Certify that the roof system furnished is approved by Factory Mutual (FM), Underwriters Laboratories (UL), Warnock Hersey (WH), or approved third party testing facility in accordance with ASTM E108, Class A for external fire and meets local or nationally recognized building codes.
- H. Shop Drawings: For roofing system. Include plans, elevations, sections, details and attachments to other Work.
- I. Samples: If specifically requested for specified products; required for alternate products.
- J. Installer Qualifications: Provide evidence that installers meet the requirements of Article 1.4.
- K. Manufacturer Qualifications and Participation:
 - 1. Provide manufacturers ISO 9001 certification and evidence of a minimum twelve years of documented experience manufacturing specified materials.

2. Provide notarized statement signed by a corporate officer of the roofing system manufacturer that all items outlined in (3.4) FIELD QUALITY CONTROL, will be provided at no charge to the owner or design professional.
- L. Closeout Submittals:
1. O & M Manuals: Maintenance instructions.
 2. Guarantee: Provide completed form per Article 1.5.
 3. Manufacturer's weekly inspection reports noting issues, corrections, and final inspection photos.

1.2. QUALITY ASSURANCE

- A. Installer Qualifications:
1. Minimum of 5 years of experience on similar work; knowledge and understanding of standards referenced herein; skill necessary to perform in compliance with this specification. Installers failing to demonstrate the required experience, knowledge, or skill shall be removed from the project.
 2. Factory trained and approved applicator.
 3. Installer's Field Supervision: Maintain a full-time Supervisor/Foreman on job site during all phases of roofing work while roofing work is in progress. Maintain proper supervision of workmen.
 4. Source Limitations: Obtain all components of roof system from a single manufacturer. Secondary products that are required shall be recommended and approved in writing by the roofing system Manufacturer.
- B. Testing Characteristics: UL Class A roof; I-90 wind uplift.
- C. Applicator-Manufacturer Review: Provide Drawings and Specifications reviewed by Applicator with agent of roofing manufacturer; obtain manufacturer's agreement that specified system is proper for application shown.
- D. Manufacturers Participation:
1. Pre-Application Job-Site Conference: Arranged by Applicator, with a minimum of 1-week advance notice; for review of storage, handling, protection, surface preparation, materials and application specifications; attended by applicator, his foreman, Architect, inspector, and manufacturer's agent.
 2. When the Project is in progress, the roofing system manufacturer will provide the following:
 - a. Report progress and quality of the work as observed.
 - b. Provide job site inspections a minimum of three (3) days a week throughout the course of construction.
 - c. Provide electronic inspection reports submitted weekly to the Owner and/or Architect.
 - d. Report to the Architect and/or Owner in writing any failure or refusal of the Contractor to correct unacceptable practices called to the Contractor's attention.
 - e. Confirm after completion that manufacturer has observed no application procedures in conflict with the specifications other than those that may have been previously reported and corrected.

1.3. WARRANTY

- A. Manufacturer: Provide a twenty (20) year warranty on manufacturers form. Warranty shall period shall begin on date of acceptance of roofing by Owner.

- B. Manufacturer will provide the following services at years 2, 5, 10, & 15 at no cost to the owner.
 - 1. Inspection by a technical service representative and delivery of a written inspection report documenting roof conditions.
 - 2. General rooftop housekeeping, subject to limits but generally including removal of incidental debris.
- C. Provide one warranty by a single approved manufacturer for membrane roof areas, coping metal systems and transitions between the material types.
- D. Installer: Provide in required form for a period of two (2) years from date of acceptance by Owner.
- E. Warranty for Single Ply roof system, air barrier, and hot rubberized asphalt waterproofing to be provided by a single manufacturer under one warranty system.

2.PART 2 – PRODUCTS

2.1. KEE SINGLE-PLY ROOFING

- A. Acceptable Products:
 - 1. Basis of Design: Materials, manufacturer's product designations, and/or manufacturer's names specified herein shall be regarded as the minimum standard of quality required for work of this section.
 - 2. The design is based upon roofing systems by The Garland Company Inc./Viking Products, Local representative: Doug Clark (925) 784-6701.
 - a. Solar Bright FB 60 Membrane (ASTM D 751)
 - b. Membrane Thickness: (ASTM D 751) 60 mil nominal.
 - c. Breaking Strength (ASTM D 751): 515 lbf/in
 - d. Tearing Strength (ASTM D 751): 275 lbf/in
 - e. Factory Seam Strength (ASTM D 751) 90 lbf
 - f. Solar Reflectivity (ASTM E 903) 81%
 - g. Emissivity (ASTM E 903) 95%
- B. OR EQUAL per submittal guidelines.
- C. Parapet Wall Covering: 22 gauge, pre-painted, ANSI-SPRI ES-1 approved R-Mer Edge Coping.

2.2. UNDERLAYMENT

- A. Slip Sheet: N/A

2.3. NAILERS

- A. Douglas Fir; No. 2 or better, pressure treated; no creosote or asphalt preservatives allowed.

2.4. ROOF BOARD INSULATION

- A. Roof Insulation base layer 4' x 8' max dimension: Hunter or equal, ASTM C 1289, Type II, Class 1, Grade 2, (20psi) polyisocyanurate rigid insulation board.
 - 1. Thickness: 2"

2. R-Factor: 11"
 3. Attachment Method: Adhesive applied.
- B. Roof Insulation top layer: Georgia Pacific Dens Deck Prime Roof Board.
1. Max Dimension: 4' x 8'
 2. Thickness: ½" inch at all roof areas, 1/4" at all vertical wall areas.
 3. Attachment Method: Mechanically Attached per ASCE-7 wind uplift calculations.
- C. Tapered Insulation: Tapered roof board insulation to be used as required for tapered insulation system or tapered crickets. Hunter or equal, ASTM C 1289, Type II, Class 1, Grade 2, (20psi) polyisocyanurate insulation board.
1. Field Slope: 1/4" inch per foot.
 2. Sump Slope: 1/2" inch per foot.
 3. Cricket Slope: 1/2" inch per foot as needed for crickets and proper slope.
 4. Attachment Method: Mechanically Attached or Adhered in an approved insulation adhesive.
- D. Insulation Adhesive: Insul-Lock HR

2.5. FASTENERS

- A. Heavy duty #15 threaded fastener with a #3 Phillips drive used with barbed fastening plate to secure Mechanically Fastened Roofing Systems. It is used on minimum 22-gauge steel decks or minimum 15/32" CDX plywood decks. It is also designed to offer an optimum combination of driving performance, back-out and corrosion resistance with excellent pullout performance.
- B. Fastening Plate: A 2-3/8" diameter metal barbed fastening plate used with HP-X, CD-10 or HD 14-10 Fasteners for membrane or insulation securement. This plate can be used for membrane or insulation securement on Mechanically Fastened Roofing Systems.
- C. Insulation Fastening Plate: A nominal 3-inch metal plate used for insulation attachment in conjunction with the appropriate fastener.

2.6. ACCESSORIES

- A. Solar Bright 60 membrane shall be used for all flashing requirements to match the field membrane and warranty expectations selected for the roofing system.
- B. Solar Bright 60 Inside Corners: Pre-molded corner flashing for inside corners. 80 mil thickness. Color - White.
- C. Solar Bright Outside Corners: Pre-molded corner flashing for outside corners. 80 mil thickness. Color - White.
- D. Solar Bright T-Joint Covers: 40 mil thick non-reinforced PVC flashing cut into a 4.5-inch (114mm) diameter circle used to seal step-offs at splice intersections.
- E. Solar Bright Pipe Flashings: A pre-molded flashing and clamping ring used for pipe penetrations. Available for 1 inch to 6-inch (25 - 152mm) diameter pipes.
- F. Solar Bright Split Pipe Seals: Pre-fabricated flashing consisting of 80 mil reinforced Membrane for pipes 1 inch to 6 inch (25 - 152mm) in diameter. A split (cut) and overlap tab are incorporated to allow the pipe seal to be opened and wrapped around the pipe when it is not possible to pull a standard pipe flashing over a round penetration.
- G. Solar Bright Non-Reinforced Flashing: 80 mil thick rolls 12 inches and 24 inches wide. Used for inside/outside corners and field fabricated pipe flashings when use of pre-molded accessories is not feasible.
- H. Solar Bright Heat Weldable Walkway Rolls: offering superior tear, puncture and weather resistance and designed to protect membrane in those areas exposed to repetitive foot traffic

or other hazards. Walkway material may be heat welded to membrane using an automated heat welder or hand-held heat welder. Walkway Rolls are 36 inches (914mm) wide by 60 feet (18.3 M) long and are nominal 80 mils thick.

- I. Single ply Coated Sheet Metal: Provide where flashing, gravel stops and sheet metal are in contact with single ply roofing membrane.
- J. 100% recycled rubber Dura-Block supports for pipes, HVAC systems, ducting, Conduit, etc.

2.7. SOLVENT, SEALANT, AND ADHESIVES

- A. As recommended by manufacturer.
 - 1. KEE-Lock Foam: Two component, highly elastomeric, low-rise polyurethane foam adhesive.
 - a. Tensile Strength: 250 psi (ASTM D412)
 - b. Peel Strength: 17 lb./in. (ASTM D 903)
 - c. Flexibility: Pass @ -70 degrees F (ASTM D 816)

3. PART 3 - EXECUTION

3.1. EXAMINATION

- A. Do not begin installation until substrates have been properly prepared.
- B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.
- C. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.
- D. Do not commence Work until all other work trades have completed jobs that require them to traverse the deck on foot or with equipment.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2. PREPARATION

- A. Do not apply wet roofing, on wet application surface, or when temperature of deck less than 50 degrees F.
- B. Provide entire roof system including treated wood nailers, Single-ply coated sheet metal, and coordination of items such as roof drains, sumps, jacks, etc.
- C. Protect adjoining materials from stains particularly around perimeter of building; prevent debris from clogging roof drains.
- D. Deck surface swept clean and dry; keep free of loose and foreign materials.

3.3. INSTALLATION

- A. Install in conformance with referenced standards, manufacturer's written directions, as shown, and as specified.
 - 1. Install insulation or membrane underlayment over the substrate with boards butted tightly together with no joints or gaps greater than 1/4 inch (6 mm). Stagger joints both horizontally and vertically if multiple layers are provided.
 - 2. Secure insulation to the substrate with the required mechanical fasteners or insulation adhesive in accordance with the manufacturer's current application guidelines and as specified in section 07 54 20, 2.4, A, B, & C above.
 - 3. Securely attach insulation to the roof deck for Adhered or Mechanically Fastened Roofing Systems. Attachment must have been successfully tested to meet or exceed

the calculated uplift pressure required by Factory Mutual (FM I-90) & the International Building Code (ASCE-7) or ANSI/SPRI WD-1.

B. Application; Adhered system over roof deck

1. Position SolarBright membrane over the acceptable substrate. Fold membrane sheet back lengthwise so half the underside of the membrane is exposed.
2. Apply KEE-Lock Foam Adhesive in accordance with the manufacturer's published instructions, to the exposed underside of the membrane and the corresponding substrate area. Do not apply Bonding Adhesive along the splice edge of the membrane to be hot air welded over the adjoining sheet. Allow the adhesive to properly rise prior to adhering.
3. Roll the coated membrane into the coated substrate while avoiding wrinkles. Brush down the adhered section of the membrane sheet immediately after rolling the membrane into the adhesive with a soft bristle push broom to achieve maximum contact.
4. Fold back the unbonded half of the sheet lengthwise and repeat the adhesive procedures.
5. Position adjoining sheets to allow a minimum overlap of 2 inches (51mm).
6. Hot-air weld the SolarBright membrane sheets using the Automatic Hot Air Welding Machine or Hot Air Hand Welder in accordance with the manufacturer's hot air welding procedures.
7. Continue to install adjoining membrane sheets in the same manner, overlapping edges a minimum of 2 inches (51mm) and complete the bonding procedures as stated previously.
8. Parapet Wall Covering: Install as shown, extend to full height of parapet; lap under parapet cap flashing and over wall substrate 2 inches minimum on the back side of the wall. Secure in adhesive and attach at 9" on center on the outside face to assure a completely watertight installation.
9. Walkway: Per manufacturer's instructions and as shown on drawings. If drawings do not show walkways a minimum required will be;
 - a. A path from the main roof access point to and around all HVAC units, to and around all serviceable roof top equipment, to and around all roof hatches, to and around all access points as designated by the owner, and as needed for protection of the roofing system will have walkway installed.
 - b. All support blocking will have walkway pad installed as a protection mat.

C. Fasteners:

1. General: Per manufacturer's recommendation; fastening length and pattern based on performance values supplied by the fastener/disc manufacturer and conforming to Factory Mutual I-90 fastening pattern.
2. Walkway Fastening: Provide 2-inch continuous heat weld strip around perimeter of membrane. A 3" opening is to be left non-welded at the lower side of the walkway pad to allow drainage and venting.

D. Hot Air Welding

1. All field seams exceeding 10 feet in length shall be welded with an approved automatic welder.
2. All field seams must be clean and dry prior to initiating any field welding.
3. Remove foreign materials from the seams (dirt, oils, etc.) with Acetone or authorized alternative. Use CLEAN WHITE COTTON cloths and allow approximately five minutes

for solvents to dissipate before initiating the automatic welder. **Do not use denim or synthetic rags for cleaning.**

4. All welding shall be performed only by qualified personnel to ensure the quality and continuity of the weld.
5. Contaminated areas within a seam will inhibit proper welding and will require a membrane patch or replacement of the membrane.

E. Hand Welding

1. The lap or seam area of the membrane should be intermittently tack welded to hold the membrane in place.
2. The back "interior" edge of the membrane shall be welded first, with a thin, continuous weld to concentrate heat along the exterior edge of the lap during the final welding pass.
3. The nozzle of the hand-held hot air welder shall be inserted into the lap at a 45° angle to the lap. Once the polymer on the material begins to flow, a hand roller shall be used to apply pressure at a right angle to the tip of the hand welder. Properly welded seams shall utilize a 1-1/2-inch-wide nozzle, to create a homogeneous weld, a minimum of 1-1/2 inches in width.
4. Smaller nozzles may be used for corners, and other field detailing, maintaining a minimum 1-inch weld.

F. Automatic Machine Welding

1. Follow all manufacturers' instructions for the safe operation of the automatic welder.
2. Follow local code requirements for electric supply, grounding and surge protection.
3. The use of a dedicated, portable generator is highly recommended to ensure a consistent electrical supply, without fluctuations that can interfere with weld consistency.
4. Properly welded seams shall utilize a 1-1/2-inch-wide nozzle, to create a homogeneous weld, a minimum of 1-1/2 inches in width.

G. Inspection

1. The job foreman and/or supervisor shall initiate daily inspections of all completed work which shall include, but is not limited to the probing of all field welding with a dull pointed instrument to assure the quality of the application and ensure that any equipment or operator deficiencies are immediately resolved.
2. Ensure that all aspects of the installation (sheet layout, attachment, welding, flashing details, etc.) are in strict accordance with the most current Solar Bright Roofing Systems Specifications and Details.
3. Excessive patching of field seams because of inexperienced or poor workmanship will not be accepted at time of final inspection for warranty acceptance.

H. Metal Flashings:

1. General: Fabricate and install per Section 07601 - FLASHING AND SHEET METAL, as shown and per manufacturer's recommendations. Install KEE coated metal flashing at intersections of roofs with sloped or vertical surfaces, roof interruptions and penetrations.
2. Base Flashing: Extend up vertical surfaces 6 inches, minimum, and onto the horizontal roof surfaces not less than 3 inches, unless otherwise noted. Provide KEE coated

metal flashing with 2 inches minimum overlap of roofing membrane; heat weld in the horizontal plane, with subsequent sealing of seams with sealant.

3. All perimeter edge details are to be fabricated from Garland/Viking Products SolarBright Clad Metal.
4. Ensure all fascia extend a minimum of 2 inch lower than the bottom of the wood nailers.
5. Fasten all metal flashing to wood nailers or approved substrate with approved fasteners eight (8") inches on center.
6. Manufacture and install Solar Bright Clad metal in accordance with approved details, ensuring proper attachment, maintaining 1/2 inch expansion joints and the installation of a minimum 2 inch bond breaker tape prior to sealing the joint.
7. Solidly weld Solar Bright Clad expansion joints with a 6 inch strip of Solar Bright membrane welded to the Solar Bright Clad, covering the bond breaker tape (cover plates are optional).

I. Roof Drains

1. Flash all roof drains in accordance with Solar Bright roof drain details.
2. Replace all worn or broken parts that may cut the Solar Bright membrane or prevent a watertight seal. This includes the clamping ring and strainer basket.
3. Replace all drain bolts or clamps used to hold the drain compression ring to the drain bowl.
4. Solar Bright non-reinforced 60 mil membrane shall be used for flashing the drain assembly. Drain assemblies and basins or "sumps" must be free of any asphalt or coal tar pitch residue prior to installation.
5. The drain target sheet should be sized and installed to provide for a minimum of 12 inch of exposed 60 mil on all sides of the drain.

3.4. FIELD QUALITY CONTROL

- A. Perform field inspection and testing as required under provisions of Division 01 Section Quality Requirements & manufacturers recommendations.
- B. Heat weld test cuts will be required. One (1) test cut per 5,000 square feet will be required.
- C. Correct defects or irregularities discovered during field inspection.
- D. Require attendance of roofing materials manufacturers' representatives at site during installation of the roofing system a minimum of three (3) days per week. A copy of the specification should also be on site at all times.

3.5. CLEANING

- A. Keep premises free from accumulation of waste and debris. At completion of installation remove surplus materials and debris.
- B. At completion clean exposed surfaces in a manner that will not damage finish.

3.6. FINAL INSPECTION

- A. At completion of roofing installation and associated work, meet with Contractor, Architect, installer, installer of associated work, Owner, roofing system manufacturer's representative, and other representatives directly concerned with performance of roofing system.
- B. Walk roof surface areas of the building, inspect perimeter building edges as well as flashing of roof penetrations, walls, curbs and other equipment. List all items requiring correction or completion and furnish copy of list to each party in attendance.

- C. The roofing system manufacturer reserves the right to request a thermographic scan of the roof during final inspection to determine if any damp or wet materials have been installed. The thermographic scan shall be provided by the Roofing Contractor.
- D. If core cuts verify the presence of damp or wet materials, the Roofing Contractor shall be required to replace the damaged areas at his own expense.
- E. Repair or replace deteriorated or defective work found at time above inspection as required to produce an installation which is free of damage and deterioration at time of Substantial Completion and according to warranty requirements
- F. Notify the Contractor, Architect, & Owner upon completion of corrections.
- G. Following the final inspection, provide written notice of acceptance of the installation from the roofing system manufacturer.

END OF SECTION

SECTION 07 6200
SHEET METAL FLASHING AND TRIM

PART 1 GENERAL**1.01 SECTION INCLUDES**

- A. Fabricated sheet metal items, including flashings, counterflashings, gutters, and downspouts.
- B. Sealants for joints within sheet metal fabrications.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate with roofing and waterproofing work for scheduling installation of counterflashing, rain drainage and similar items related to roofing and waterproofing.
 - 2. Coordinate with the work of Section 07 9200 - Joint Sealants for installation of related sealants.
- B. Preinstallation Meeting: Convene one week minimum before starting work of this Section.
 - 1. Convene a pre-installation meeting under general provisions of Section 01 7000 - Execution and Closeout Requirements.
 - 2. Require attendance of parties directly concerned with the work of this Section, including those who are required to coordinate with the work, and those who are required to protect the work upon completion. Include the manufacturer's technical representative, Owner and Architect.
 - 3. Review approved submittals.
 - 4. Review preparation and installation procedures and coordinating and scheduling required with related work.
 - 5. Review construction schedule. Verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 6. Review special roof details, roof drainage, roof-penetration flashing, equipment curbs, and condition of other construction that affect sheet metal flashing and trim.
 - 7. Review requirements for insurance and certificates if applicable.
 - 8. Review sheet metal flashing observation and repair procedures after flashing installation.
- C. Sequencing: Do not proceed with installation of flashing and sheet metal work until substrate construction, cants, blocking, reglets, and other construction are ready to receive the work of this Section.

1.03 SUBMITTALS

- A. Action Submittals
 - 1. Product Data: Provide product criteria, characteristics, accessories, jointing and seaming methods, and termination conditions.
 - a. Product Data: Submit for each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
 - 2. Shop Drawings: Indicate material profile, jointing pattern, jointing details, fastening methods, flashings, terminations, and installation details.
 - a. Include plans, elevations, sections, and attachment details. reference details to plans. elevations, and sections. Key details to plans. elevations and sections.
 - b. Detail fabrication and installation layouts, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled work.
 - c. Include identification of material, thickness, weight, and finish for each item and location in Project.
 - d. Include details for forming, including profiles, shapes, seams, laps, and dimensions.
 - e. Include details for joining, supporting, and securing, including layout and spacing of fasteners, cleats, clips, and other attachments. Include pattern of seams.

- f. Include details of termination points and assemblies.
 - g. Include details of roof-penetration flashing.
 - h. Include details of edge conditions, including eaves, ridges, valleys, rakes, crickets, and counterflashings as applicable.
 - i. Include details of special conditions.
 - j. Include details of connections to adjoining work.
 - k. Detail formed flashing and trim at scale of not less than 1-1/2 inches (38 mm) per 12 inches (305 mm).
3. Samples for Initial Selection: For each type of sheet metal and accessory indicated with factory-applied finishes.
- B. Informational Submittals:
- 1. Sample warranty for finishes.
 - 2. Qualification Data: For Fabricator and Installer.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide special submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 - 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 - 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.

1.05 QUALITY ASSURANCE

- A. Perform work in accordance with SMACNA (ASMM) requirements and standard details, except as otherwise indicated.
- B. Fabricator and Installer Qualifications: Company specializing in sheet metal work with 5 years of documented experience.
 - 1. For copings and roof edge flashings that are SPRI ES-1 tested and FM Approvals approved, shop shall be listed as able to fabricate required details as tested and approved.

1.06 MOCK-UP

- A. Comply with general mock-up requirements specified in Section 01 4000 - Quality Requirements.
- B. Build mockup of typical roof edge, including built-in gutter and fascia, approximately 10 feet long, including supporting construction cleats, seams, attachments and accessories.
 - 1. Provide sheet metal flashing and accessories as required to meet system mock-up requirements in other Sections.
- C. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
- D. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Stack material to prevent twisting, bending, and abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.
- B. Prevent contact with materials that could cause discoloration or staining.

1.08 WARRANTY

- A. Refer to Section 01 7800 - Closeout Submittals, for additional warranty requirements.

- B. Correct defective Work within a two year period after Date of Substantial Completion. Defective work includes failure of watertightness or seals.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. General: Sheet metal flashing and trim assemblies shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.
- B. Sheet Metal Standard for Flashing and Trim: Comply with NRCA's "The NRCA Roofing Manual" and SMACNA's "Architectural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.
- C. FM Approvals Listing: Manufacture and install roof edge flashings that are listed in FM Approvals' "RoofNav" and approved for windstorm classification, Class 1-90. Identify materials with name of fabricator and design approved by FM Approvals.
- D. SPRI Wind Design Standard: Manufacture and install roof edge flashings tested according to SPRI ES-1 and capable of resisting the following design pressure:
 - 1. Design Pressure: As indicated on Drawings.
- E. Recycled Content of Steel-Sheet Flashing and Trim: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 20 percent.
- F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change: 120 deg F (50 deg C), ambient; 180 deg F (82 deg F), material surfaces.

2.02 SHEET METAL FLASHING AND TRIM ASSEMBLIES

- A. Flashing Assemblies:
 - 1. Capable of withstanding structural movement, thermally induced movement, and exposure to wind and weather without failure or permanent deformation.
 - 2. Physically protect roofing systems, roof accessories, and other building elements and systems from damage that would permit water leakage to building interior under all weather conditions.
- B. Roof Edge Flashing Assemblies:
 - 1. Pull-Off Resistance: Tested in accordance with SPRI ES-1 RE-1, RE-2, and RE-3 as applicable to positive and negative design wind pressure as defined by applicable code.
 - 2. Capable of withstanding structural movement, thermally induced movement, and exposure to wind and weather without failure or permanent deformation.
 - 3. Physically protect roofing systems, roof accessories, and other building elements and systems from damage that would permit water leakage to building interior under all weather conditions.
 - 4. Create watertight transition between adjacent waterproofing systems.

2.03 SHEET MATERIALS

- A. General: Comply with recycled content product requirements specified in Section 01 8114.
- B. Galvanized Steel: ASTM A653/A653M, with G90/Z275 zinc coating; minimum 22 gage, 0.0299 inch (0.76 mm) thick base metal, and thickness as indicated on Drawings.

1. Applications: Flashings, counterflashings, cleats and flashing assemblies not exposed to view, temporary construction, and as indicated on Drawings.

- C. Stainless Steel: ASTM A666, Type 304, soft temper, 28 gage (0.0156 inch) (0.40 mm) thick, smooth No. 4 finish.

2.04 ACCESSORIES

- A. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal or manufactured item.
1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
 - a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating. Provide metal-backed EPDM or PVC sealing washers under heads of exposed fasteners bearing on weather side of metal.
 2. Fasteners for Aluminum Sheet: Series 300 stainless steel.
 3. Fasteners for Zinc-Coated (Galvanized) Steel Sheet: Series 300 stainless steel or hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.
- B. Self-Adhered High Temperature Underlayment: 30 mil, cold applied, self-adhering membrane composed of a high strength polyethylene film coated on one side with a layer of butyl rubber adhesive and interwound with a disposable release sheet. An embossed, slip resistant surface is provided on the polyethylene.
1. Product:
 - a. GCP Applied Technologies; Grace Ultra.
- C. Protective Backing Paint: Asphaltic mastic, ASTM D4479 Type I.
- D. Sealant to be Concealed in Completed Work: Non-curing butyl sealant.
- E. Sealant: Specified in Section 07 9200 - Joint Sealants.
- F. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.
- G. Solder: ASTM B32; Sn50 (50/50) type.
- H. Stainless steel band clamp.
- I. Solid Rivets: Made from same materials as product being inserted into.

2.05 MANUFACTURED SHEET METAL FLASHING AND TRIM

- A. Reglets: Units of type, material, and profile required, formed to provide secure interlocking of separate reglet and counterflashing pieces, and compatible with flashing indicated with factory-mitered and -welded corners and junctions and with interlocking counterflashing on exterior face, of same metal as reglet.
1. Basis of Design Product:
 - a. Fry Reglet Corporation; MA, SM, and ST.
 - b. Other Acceptable Manufacturers:
 - 1) Hickman Company, W. P.
 - 2) Keystone Flashing Company, Inc.
 2. Material: Galvanized steel, 0.022 inch thick.
 3. Surface-Mounted Type: Provide with slotted holes for fastening to substrate, with neoprene or other suitable weatherproofing washers, and with channel for sealant at top edge.
 4. Accessories:
 - a. Flexible-Flashing Retainer: Provide resilient plastic or rubber accessory to secure flexible flashing in reglet where clearance does not permit use of standard metal counterflashing or where Drawings show reglet without metal counterflashing.
 - b. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of counterflashing's lower edge.

5. Finish: Mill.

2.06 OTHER FABRICATED SHEET METAL FLASHING AND TRIM

- A. Description:
 1. Elevator Hoistway Guards: Fabricate from at least 0.0359-inch base metal thickness (MSG 20) HDG metallic-coated steel sheet.
 2. Other Fabricated Sheet Metal Flashing and Trim: Unless otherwise indicated, comply with following:
 - a. Flashing and Trim in Contact with Soil and Elsewhere Indicated: Fabricate from at least 0.0250-inch thick (MSG 24) stainless steel sheet.
 - b. Other Flashing and Trim: Unless otherwise noted, fabricate from at least 0.0239- inch base metal thickness (MSG 24) galvanized steel sheet, or from at least 0.0250-inch thick (MSG 24) stainless steel sheet.

2.07 FABRICATION

- A. Sheet Metal Thickness/Mass:
 1. Flashing: In accordance with SMACNA Chapter 4.
 2. Gutters: In accordance with SMACNA Table 1-5.
 3. Downspouts: In accordance with SMACNA Table 1-9.
 4. Coping: In accordance with SMACNA Table 3-1.
- B. Flashing and Counter Flashing:
 1. Fabricate as indicated on Drawings and in accordance with SMACNA Architectural Sheet Metal Manual, Chapter 4.
 2. Hem exposed flashings on underside 1/2 inch (12.70 mm); miter and seam corners.
 3. Fabricate vertical faces with bottom edge formed outward 1/4 inch (6.35 mm) and hemmed to form drip.
 4. Fabricate flashings to allow toe to extend minimum 2 inches (50.8 mm) over wall surfaces.
 5. Shop fabricate items where practicable.
 6. Obtain field measurements for accurate fit before shop fabrication
- C. Form sections true to shape, accurate in size, square, and free from distortion or defects.
- D. Fabricate cleats and starter strips of same material as exposed sheet, one gage thickness heavier than exposed sheet, and interlockable with exposed sheet.
 1. Provide continuous cleat strips for metal copings and flashings.
- E. Form pieces in longest possible lengths.
- F. Hem exposed edges on underside 1/2 inch (13 mm); miter and seam corners.
- G. Form material with flat lock seams, except where otherwise indicated; at moving joints, use sealed lapped, bayonet-type or interlocking hooked seams.
- H. Seams: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with Solder unless otherwise recommended by sealant manufacturer for intended use. Rivet joints where necessary for strength.
 1. Tin edges to be seamed, form seams, and solder.
 - a. Solder
 - 1) Mechanically fasten and solder and seal metal joints except those indicated or required to be expansive type joints.
 - 2) After soldering, remove flux. Wipe and wash solder joints clean.
 - 3) Do not use graphite pencils to mark metal surfaces.
- I. Fabricate corners from one piece with minimum 18 inch (450 mm) long legs; seam for rigidity, and mechanically fastened and solder.
 1. All corners, saddles, pans, etc. shall have joints w/ mechanically fastened and soldered watertight; only simple lap joints of self adhered metal may be sealed (box-cross method).

- J. Fabricate vertical faces with bottom edge formed outward 1/4 inch (6 mm) and hemmed to form drip.
- K. Fabricate flashings to allow toe to extend minimum 4 inches (100 mm) over roofing terminations. Return and brake edges.
- L. Fabricate sheet metal saddles and collars with 4 inch minimum flanges that are mechanically fastened and soldered watertight. Return and brake edges.
- M. Formed Metal Copings: Fabricate cross joints between coping sheets with 3/16 inch (5 mm) expansion joint between sheets, and 6 inch (150 mm) wide cover plate formed to profile of coping. Form cross joints in coping according to SMACNA. Miter, seam, and seal corners of coping.
 - 1. Provide fully welded joints, except as required for expansion/contraction control.
 - 2. Provide copings in accordance with Section 13 3419 - Metal Building Systems.
- N. Provide for thermal expansion/contraction of all exposed sheet metal work exceeding 15 feet in running length, except as otherwise indicated.

2.08 GUTTER AND DOWNSPOUT FABRICATION

- A. Hanging Gutters: Fabricate to cross section required, complete with end pieces, outlet tubes, and other accessories as required. Fabricate in minimum 96 inches (2438.40 mm) long sections. Furnish flat-stock gutter brackets and flat-stock gutter spacers and straps fabricated from same metal as gutters, of size recommended by cited sheet metal standard but with thickness not less than twice the gutter thickness. Fabricate expansion joints, expansion-joint covers, and gutter accessories from same metal as gutters. Shop fabricate interior and exterior corners.
 - 1. Gutter Supports: Straps with finish matching the gutters.
 - 2. Expansion Joints: Lap type.
 - 3. Accessories: Wire ball downspout strainer and flat ends.
 - 4. Gutters with Girth up to 15 Inches: Fabricate from the following materials:
 - a. Stainless Steel: 0.016 inch thick.
 - 5. Sealant: Shall be polyurethane or silicon based water-proofing type, compatible with aluminum gutter, downspout, and abutting dissimilar materials for intended application.
- B. Downspouts: Profile as indicated on Drawings.
 - 1. Fabricate from the following materials:
 - a. Stainless Steel: 0.016 inch thick.
- C. Downspouts: Size for rainfall intensity determined by a storm occurrence of 1 in 10 years in accordance with SMACNA (ASMM).
- D. Gutters and Downspouts: Size indicated.
- E. Accessories: Profiled to suit downspouts.
 - 1. Downspout Supports: Straps.
 - a. Space downspouts 1/2 inch (12.70 mm) clear from wall surfaces.
- F. Downspout Extenders: Same material and finish as downspouts.
- G. Seal metal joints.

2.09 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

- A. The NRCA, SMACNA, and FM Global offer recommendations for profiles, thicknesses, fastenings, and installation of low-slope roof sheet metal fabrications. Base-metal thicknesses cited for zinc-tin alloy-coated stainless-steel and copper sheets, for copper-clad stainless-steel sheet, and for zinc sheet are from manufacturer's literature.
- B. Copings: Fabricate in minimum 96-inch- long, but not exceeding 12-foot- long, sections. Fabricate joint plates of same thickness as copings. Furnish with continuous cleats to support edge of

external leg and[drill elongated holes for fasteners on] interior leg. Miter corners, fasten and seal watertight. Shop fabricate interior and exterior corners.

1. Coping Profile: Profile as indicated on Drawings.
 - a. Joint Style: Butted with expansion space and 6-inch- wide, concealed backup plate.
 - 1) Fabricate from the Following Materials:
 - (a) Galvanized Steel: 22 gage, 0.0299 inch (0.76 mm) thick.
- C. Base Flashing: Shop fabricate interior and exterior corners. Fabricate from the following materials:
 1. Galvanized Steel: 22 gage, 0.0299 inch (0.76 mm).
 2. Aluminum-Zinc Alloy-Coated Steel: 0.028 inch thick.
- D. Counterflashing: Shop fabricate interior and exterior corners. Fabricate from the following materials:
 1. Galvanized Steel: 22 gage, 0.0299 inch (0.76 mm) thick.
- E. Roof-Penetration Flashing: Fabricate from the following materials:
 1. Galvanized Steel: 22 gage, 0.0299 inch (0.76 mm) thick.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify roof openings, curbs, pipes, sleeves, ducts, and vents through roof are solidly set, reglets in place, and nailing strips located.
- B. Verify roofing termination and base flashings are in place, sealed, and secure.

3.02 PREPARATION

- A. Install starter and edge strips, and cleats before starting installation.
- B. Back paint concealed metal surfaces with protective backing paint to a minimum dry film thickness of 15 mil (0.4 mm).

3.03 INSTALLATION - GENERAL

- A. Comply with SMACNA Architectural Sheet Metal Manual.
- B. General: Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.
- C. Separate stainless steel work from dissimilar metals, wood and cementitious materials with approved separation material. Use bituminous coating only where high-temperature self-adhering membrane underlayment cannot be used, or is not recommended by metal manufacturer.
- D. Cleats and Edge Strips: Secure edges of sheet metal members over 12 inches (305 mm) wide, and at other indicated locations with cleats. Fasten cleats at maximum 12 inch (305 mm) on center unless otherwise indicated. Provide continuous edge strips at eaves and gable ends for attaching exposed terminating edge of copings, gravel stops, or fascias. Provide minimum 1/8 inch (3.17 mm) butt joints as required to accommodate thermal movement.
- E. Formed Metal Copings: Extend front and back edges of coping down over continuous interlocking edge strip. Terminate rear edge with hemmed and folded edge over roof base flashings, or interlock with adjacent flashings as indicated. Miter, seam, weld, and seal corners.
- F. Recessed Reglet Flashings and Counterflashings: Insert flashings full depth into recessed reglet. Anchor by mechanical means, including driven wedges of lead or other compatible metal spaced at 12 inches on center. Seal joint with elastomeric sealant specified in Section 07 9200 - Joint Sealants.

- G. Surface Mounted Reglet Flashings and Counterflashings: Place surface mounted reglet not less than 9 inches above top of finish roof surface.. Place sealant in preformed groove on back of reglet and on lap before installation. Secure reglet to wall with power driven pins through neoprene washers spaced not less than 16 inches (406.40 mm) on center. Fill top groove with elastomeric sealant specified in Section 07 9200 - Joint Sealants.
 - 1. Lap counterflashing end joints minimum 3 inches (76.20 mm). Do not solder joints. Provide continuous and soldered counterflashings at angles and corners, and lap over roof base flashings minimum 4 inches (101.6 mm), unless detailed otherwise.
- H. Pipe or Post Counterflashing: Install counterflashing umbrella with close-fitting collar with top edge flared for silicone sealant, extending a minimum of 4 inches (101.6 mm) over base flashing. Install stainless-steel draw band and tighten.
- I. Secure flashings in place using concealed fasteners, and use exposed fasteners only where permitted..
- J. Apply weather barrier sealant between metal flashings and self-adhesive flashings.
- K. At rainscreen drainage wall assemblies with continuous concealed air barrier, provide fully soldered collar flashings at all penetrations. Collar flashings shall have continuous, minimum 4 inches (101.6 mm) wide flanges around the penetration for integration with air barrier.
- L. Fit flashings tight in place. Make corners square, surfaces true and straight in planes, and lines accurate to profiles. Extend counter flashings 4 in. minimum over roofing or waterproofing.
- M. Extend counter flashings 4 inches (101.6 mm) minimum over roofing or waterproofing.
- N. Lap joints over minimum 8 inch (203.20 mm) wide backer plate in butyl sealant bed.
- O. Lap joints over minimum 8 inches (203.20 mm) wide backer plate in butyl sealant bed.
- P. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches (610 mm) of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not be sufficiently watertight, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with sealant concealed within joints.
- Q. Solder metal joints for full metal surface contact, and after soldering wash metal clean with neutralizing solution and rinse with water.
 - 1. Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets to be soldered to a width of 1-1/2 inches (38 mm) except where pre-tinned surface would show in finished Work.
 - 2. Stainless-Steel Soldering: Pre-tin edges of uncoated sheets to be soldered using solder recommended for stainless steel and phosphoric acid flux. Promptly wash off acid flux residue from metal after soldering.

3.04 INSTALLATION - PRE-FINISHED SHEET METAL

- A. Take special care in the handling and installation to avoid damage to finish.
- B. Remove protective film from each unit after installation.
- C. Touch up minor damage or defects to match factory finish. Replace units which are excessively damaged as determined by Architect.

3.05 INSTALLATION - STAINLESS STEEL

- A. Separate stainless steel and copper work from dissimilar metals, wood and cementitious materials with polyethylene underlayment. Use bituminous coating only where underlayment cannot be used, or is not recommended by metal manufacturer.

3.06 UNDERLAYMENT INSTALLATION

- A. Self-Adhering Sheet Underlayment: Install wrinkle free. Apply primer if required by underlayment manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation; use primer rather than nails for installing underlayment at low temperatures. Apply in shingle fashion to shed water. Overlap edges not less than 3-1/2 inch (88.90 mm). Roll laps with roller. Cover underlayment within 14 days.

3.07 INSTALLATION - DOWNSPOUTS

- A. Install as recommended by SMACNA. Join lengths with formed seams sealed watertight. Flash and seal gutters to downspouts.
- B. Apply bituminous paint on surfaces to be in contact with dissimilar materials.
- C. Secure downspouts to wall with 3 inch wide steel straps or concealed clamp supports, spaced not more than 8 feet oc. Fasten straps or clamps to building with non-corrosive expansion screws.
- D. At exterior EIFS surfaces, install non-corrosive expansion screws through continuous non-corrosive metal sleeve full thickness of EIFS insulation. Seal outer end of sleeve behind straps or clamps with polyurethane sealant specified in Section 07 9200 - Joint Sealants.
- E. Set splash pad under each downspout.

3.08 FIELD QUALITY CONTROL

- A. Refer to Section 01 4000 - Quality Requirements, for field inspection requirements.
- B. Inspection will involve surveillance of work during installation to ascertain compliance with specified requirements.

3.09 CLEANING AND PROTECTION

- A. On completion of installation, clean finished surfaces, including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain in a clean condition during construction.
- B. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond d successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

**SECTION 07 7100
ROOF SPECIALTIES**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Manufactured roof specialties, including copings, fascias, and gravel stops.

1.02 PREINSTALLATION CONFERENCE: CONDUCT CONFERENCE AT PROJECT SITE.

- A. Meet with Owner, Architect, Owner's insurer if applicable, roofing-system testing and inspecting agency representative, roofing Installer, roofing-system manufacturer's representative, Installer, structural-support Installer, and installers whose work interfaces with or affects roof specialties, including installers of roofing materials and accessories.
- B. Examine substrate conditions for compliance with requirements, including flatness and attachment to structural members.
- C. Review special roof details, roof drainage, and condition of other construction that will affect roof specialties.
- D. Review approved submittals.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Provide data on shape of components, materials and finishes, anchor types and locations.
 - 2. Shop Drawings:
 - a. Include plans, elevations, expansion-joint locations, project specific keyed details. Distinguish between shop- and field-assembled work.
 - b. Show locations and extent of components on plans / elevations with detail callouts.
 - c. Indicate configuration and dimension of components, adjacent construction, required clearances and tolerances, and other affected work.
 - 3. Samples: Submit two appropriately sized samples of coping and gravel stop.
- B. Informational Submittals:
 - 1. Manufacturer's Installation Instructions: Indicate special procedures, fasteners, supporting members, and perimeter conditions requiring special attention.
 - 2. Installer and Manufacturer Qualifications.

1.04 QUALITY ASSURANCE

- A. Perform work in accordance with SMACNA (ASMM) details.
- B. Source Limitations: Obtain roof specialties approved by manufacturer providing roofing-system warranty specified in Section 07 5400 - Thermoplastic Membrane Roofing.
- C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and set quality standards for fabrication and installation.
 - 1. Build mockup of typical roof edge as part of Integrated Exterior Mockup specified in Section 01 4000 - Quality Requirements.
 - 2. Build mockup of typical roof edge, including coping and fascia, approximately 10 feet (3.0 m) long, including supporting construction, seams, attachments, underlayment, and accessories.
 - 3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Do not store roof specialties in contact with other materials that might cause staining, denting, or other surface damage. Store roof specialties away from uncured concrete and masonry.
- B. Protect strippable protective covering on roof specialties from exposure to sunlight and high humidity, except to extent necessary for the period of roof-specialty installation.

1.06 FIELD CONDITIONS

- A. Field Measurements: Verify profiles and tolerances of roof-specialty substrates by field measurements before fabrication, and indicate measurements on Shop Drawings.
- B. Coordination: Coordinate roof specialties with flashing, trim, and construction of parapets, roof deck, roof and wall panels, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.
 - 1. Coordinate with installer where work is to be performed on a daily basis so that personnel, equipment, and materials below work area are properly protected.
- C. Installation shall not proceed if unusual condition is discovered or one that will preclude work to be performed in accordance with Drawings and Specifications. Contractor shall immediately report this finding to the Architect for discussion and resolution.
- D. Roofing and waterproofing surfaces shall be kept clean and free of debris.

1.07 WARRANTY

- A. Roofing-System Warranty: Roof specialties are included in warranty provisions in Section 07 5400 - Thermoplastic Membrane Roofing.

PART 2 PRODUCTS

2.01 ROOFING COMPONENTS

- A. Provide products of selected manufacturer of roof membrane as specified in Section 07 5400 - Thermoplastic Membrane Roofing.
- B. Roof Edge Flashings: Factory fabricated to sizes required; corners mitered; concealed fasteners.
 - 1. Configuration: Fascia and edge securement for roof membrane;
 - 2. Pull-Off Resistance: Tested in accordance with ANSI/SPRI/FM 4435/ES-1 using test methods RE-1 and RE-2 to positive and negative design wind pressure as defined by applicable local building code.
 - 3. Finish: 70 percent polyvinylidene fluoride.
- C. Copings: Factory fabricated to sizes required; corners mitered; concealed fasteners.
 - 1. Configuration: Concealed continuous hold down cleat at both legs; internal splice piece at joints of same material, thickness, and finish as cap; concealed stainless steel fasteners.
 - 2. Pull-Off Resistance: Tested in accordance with ANSI/SPRI/FM 4435/ES-1 using test method RE-3 to positive and negative design wind pressure as defined by applicable local building code.
 - 3. Material: Formed steel sheet, galvanized, 24 gauge, 0.024 inch (0.6 mm) thick, minimum.
 - 4. Anchor/Support Cleats: 20 gage, 0.036 inch (0.9 mm) thick prepunched galvanized cleat with 12 inch (305 mm) wide stainless steel spring mechanically locked to cleat at 72 inches (1820 mm) on center.
 - 5. Special Shaped Components: Provide factory-fabricated pieces necessary for complete installation, including miters, corners, intersections, curves, pier caps, and end caps; minimum 14 inch (355 mm) long legs on corner, intersection, and end pieces.
 - 6. Fasteners: Factory-furnished; electrolytically compatible; minimum pull out resistance of 240 pounds (109 kg) for actual substrate used; no exposed fasteners.
 - 7. Finish: 70 percent polyvinylidene fluoride.

8. Color: As indicated on drawings.
9. Basis of Design Product:
 - a. Firestone Building Products, Firestone Coping.

2.02 ACCESSORIES

- A. Sealant for Joints in Linear Components: As recommended by component manufacturer.
- B. Sealant: Specified in Section 07 9200 - Joint Sealants.

2.03 FINISHES

- A. PVDF (Polyvinylidene Fluoride) Coating: Superior Performance Organic Finish, AAMA 2605; multiple coat, thermally cured fluoropolymer finish system; color to match Architect's sample.

2.04 ACCESSORIES

- A. Sealant for Joints in Linear Components: As recommended by component manufacturer.
- B. Adhesive for Anchoring to Roof Membrane: Compatible with roof membrane and approved by roof membrane manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrate, areas, and conditions, with installer present.
- B. Verify that deck, curbs, roof membrane, base flashing, and other items affecting work of this Section are in place and positioned correctly.

3.02 INSTALLATION

- A. Install components in accordance with manufacturer's instructions and NRCA (RM) applicable requirements.
- B. Seal joints within components when required by component manufacturer.
- C. Anchor components securely.
- D. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
- E. Coordinate installation of components of this Section with installation of roofing membrane and base flashings.
- F. Coordinate installation of sealants and roofing cement with work of this Section to ensure water tightness.

3.03 PROTECTION AND CLEANING

- A. Protect copings, roof edges flashings, and expansion joints from damage and wear during the remainder of the construction period.
- B. Clean over-spray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

**SECTION 07 7200
ROOF ACCESSORIES**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Curbs.
- B. Equipment rails.
- C. Roof penetrations mounting curbs.
- D. Non-penetrating pedestals.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate with Section 07 5300 - Elastomeric Membrane Roofing for submittal requirements.
 - 2. Coordinate with installation of roofing system and related flashings for weather tight installation.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Manufacturer's data sheets on each product to be used.
 - a. Preparation instructions and recommendations.
 - b. Storage and handling requirements and recommendations.
 - c. Installation methods.
 - d. Maintenance requirements.
 - 2. Shop Drawings: For non-penetrating rooftop supports, submit detailed layout developed for this project, with design calculations for loadings and spacings.
- B. Informational Submittals:
 - 1. Certificate: For smoke hatches, provide certificate of approval from authority having jurisdiction.
 - 2. Warranty Documentation:
 - a. Submit manufacturer warranty.
 - b. Ensure that forms have been completed in Owner's name and registered with manufacturer.
 - c. Submit documentation that roof accessories are acceptable to roofing manufacturer, and do not limit the roofing warranty.

1.04 REGULATORY REQUIREMENTS

- A. Provide certificate of compliance from authority having jurisdiction indicating approval of fire rated units.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Store products in manufacturer's unopened packaging until ready for installation.
- B. Store products under cover and elevated above grade.

1.06 WARRANTY

- A. Refer to Section 01 7800 - Closeout Submittals, for additional warranty requirements.
- B. Correct defective Work within a two year period after Date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURED CURBS

- A. Acceptable Products:
1. Pate Company (The); Style PC-5.
 2. Roof Products and Systems (RPS); a division of Hart & Cooley, Inc.; Model RC-4A.
 3. Roof Products, Inc.; RPPF-2.
 4. ThyCurb; Model TC-1.
 5. Prior approved equal.
- B. Manufactured Curbs, Equipment Rails, and Other Roof Mounting Assemblies: Factory-assembled hollow sheet metal construction with fully mitered and welded corners, integral counterflashing, internal reinforcing, and top side and edges formed to shed water.
1. Applications: Roof curbs used for roof penetrations/openings as indicated on drawings.
 2. Sheet Metal: Hot-dip zinc coated steel sheet complying with ASTM A653/A653M, SS Grade 33 (230); G90 (Z275) coating designation; 18 gage, 0.048 inch (1.21 mm) thick.
 - a. Finish: Factory primed.
 3. Roofing Cants: Provide integral sheet metal roofing cants dimensioned to begin slope at top of roofing system at 1:1 slope; minimum cant height 4 inches (102 mm).
 4. Fabricate curb bottom and mounting flanges for installation directly on metal roof panel system to match slope and configuration of system.
 - a. Extend side flange to next adjacent roof panel seam and comply with seam configurations and seal connection, providing at least 6 inch (152 mm) clearance between curb and metal roof panel flange allowing water to properly flow past curb.
 - b. Where side of curb aligns with metal roof panel flange, attach fasteners on upper slope of flange to curb connection allowing water to flow past below fasteners, and seal connection.
 - c. Maintain at least 12 inch (305 mm) clearance from curb, and lap upper curb flange on underside of down sloping metal roof panel, and seal connection.
 - d. Lap lower curb flange overtop of down sloping metal roof panel and seal connection.
 5. Provide the layouts and configurations shown on the Drawings.
 6. Coordinate height of curbs to provide a 10 inch minimum upturn for both base and counter flashing and membrane termination.
- C. Curbs Adjacent to Roof Openings: Provide curb on each side of opening, with top of curb horizontal for equipment mounting.
1. Provide preservative treated wood nailers along top of curb.
 2. Insulate inside curbs with 1-1/2 inch (38 mm) thick fiberglass insulation.
 3. Height Above Finished Roof Surface: 10 inches (254 mm), minimum.
 4. Height Above Roof Deck: 14 inches (356 mm), minimum.

2.02 NON-PENETRATING ROOFTOP SUPPORTS/ASSEMBLIES

- A. Non-Penetrating Rooftop Support/Assemblies: Manufacturer-engineered and factory-fabricated, with pedestal bases that rest on top of roofing membrane, and not requiring any attachment to roof structure and not penetrating roofing assembly.
1. Design Loadings and Configurations: As required by applicable codes.
 2. Support Spacing and Base Sizes: As required to distribute load sufficiently to prevent indentation of roofing assembly.
 3. Steel Components: Stainless steel, or carbon steel hot-dip galvanized after fabrication in accordance with ASTM A123/A123M.
 4. Hardware, Bolts, Nuts, and Washers: Stainless steel, or carbon steel hot-dip galvanized after fabrication in accordance with ASTM A153/A153M.
- B. Adjustable-Height Roller-Bearing Pipe Supports:
1. Basis-of-Design Product:

- a. B-Line, DURA-BLOK.
 - b. Prior approved equal.
 - 2. Curb Base: 100% recycled rubber and polyurethane prepolymer with a uniform load capacity of 500 pounds per linear foot of support.
 - a. Dimensions: 6-inches wide by 6-3/4 inches tall by 20 inches long.
 - 3. Steel frame: Steel, 14gage strut galvanized per ASTM A653 or 12gage strut galvanized per ASTM A653 for bridge series.
 - 4. Roller housing, with stainless-steel threaded rod designed for adjusting support height, accommodating up to 20 diameter pipe or conduit; with provision for pipe retainer and with manufacturer's support pad or deck plate as recommended for penetration-free installation over roof membrane type; as required for quantity of pipe runs and sizes.
- C. Duct Supports: with manufacturer's recommended hardware for mounting to structure or structural roof deck.
- 1. Basis-of-Design Product:
 - a. B-Line, DURA-BLOK.
 - b. Prior approved equal.
 - 2. Curb Base: 100% recycled rubber and polyurethane prepolymer with a uniform load capacity of 500 pounds per linear foot of support.
 - a. Dimensions: 6-inches wide by 6-3/4 inches tall by 42 inches long.
 - 3. Steel frame: Steel, 14gage strut galvanized per ASTM A653 or 12gage strut galvanized per ASTM A653 for bridge series.
 - 4. Roller housing, with stainless-steel threaded rod designed for adjusting support height, accommodating up to 20 diameter pipe or conduit; with provision for pipe retainer and with manufacturer's support pad or deck plate as recommended for penetration-free installation over roof membrane type; as required for quantity of pipe runs and sizes.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Do not begin installation until substrates have been properly prepared.
- B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 PREPARATION

- A. Clean surfaces thoroughly prior to installation.
- B. Prepare surfaces using methods recommended by manufacturer for achieving acceptable results for applicable substrate under project conditions.

3.03 INSTALLATION

- A. Install in accordance with manufacturer's instructions, in manner that maintains roofing system weather-tight integrity.
- B. Apply bituminous paint on surfaces of units in contact with cementitious materials or dissimilar metals.
- C. Roof Curb Installation: Install each roof curb so top surface is level.
- D. Equipment Support Installation: Install equipment supports so top surfaces are level with each other.

3.04 ADJUSTING

- A. Adjust hardware for smooth operation.

3.05 CLEANING

- A. Clean installed work to like-new condition.
- B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing according to ASTM A 780/A 780M.
- C. Touch up factory-primed surfaces with compatible primer ready for field painting according to Section 09 9113 - Exterior Painting.
- D. Clean exposed surfaces according to manufacturer's written instructions.
- E. Clean off excess sealants.
- F. Replace roof accessories that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

3.06 PROTECTION

- A. Protect installed products until completion of project.
- B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION

SECTION 07 8400**FIRESTOPPING****PART 1 GENERAL****1.01 SECTION INCLUDES**

- A. Firestopping systems, materials, and accessories.
- B. Perimeter fire/smoke barriers.
- C. Fire-resistive joint systems.
- D. Firestopping at electrical junction boxes in fire-rated walls.
- E. Firestopping of all penetrations and interruptions to fire rated assemblies, whether indicated on Drawings or not, and other openings indicated.
- F. Contractor's responsibility for determining required scope of firestopping system work, and for determining applicable tested/listed systems for the entire project, and for securing jurisdictional authority approval of firestopping systems.

1.02 SYSTEM DESCRIPTION

- A. General: Make firestop and smoke seal assembly selections that comply with UL Fire Resistance Directory, authority having jurisdiction, and applicable codes for:
 - 1. Materials, fabrication, and installation of firestops and smoke seals.
 - 2. Fire containment.
 - 3. Fire resistant construction joints.
 - 4. Dynamic partition head details.
 - 5. Edge of slab and curtain wall conditions.
 - 6. Penetrations through fire-rated floors, walls, and shafts.
 - 7. Duct and damper firestops.
 - 8. Intumescent wraps and pads at receptacle boxes and recessed items within fire rated walls.
 - 9. Coordinate with mechanical and electrical to provide single manufacturer for all firestopping materials.
- B. Firestop Voids and Openings in Following Locations:
 - 1. Duct, cable, cable tray, conduit, piping, and other penetrations through floor slabs (except on-grade slabs) and through fire rated walls and partitions.
 - 2. Penetrations of vertical shafts, pipe chases, elevator shafts, and utility shafts.
 - 3. Openings between floor slab edges and exterior walls, including glass and aluminum curtain walls.
 - 4. Openings, gaps, and cracks at abutting fire rated assemblies and components, such as wall-to-wall and wall-to-floor including overhead floor and roof decks.
 - 5. Blank openings into or through fire rated floors and walls.
 - 6. Other locations indicated or scheduled.
- C. Design Requirements:
 - 1. Firestop materials used to fill floor openings in which smallest dimension is 4 inches shall support same loads that floor was designed to support. If equal floor loading capacity cannot be obtained with firestop material, provide fire rated permanent covering to support loads and traffic, capable of being removed to allow access.
 - 2. Insulated Piping and Duct Penetrations: Install firestop systems intended for use with type of insulation on penetrating item.
 - a. Install firestop systems intended for use with type of insulation on penetrating item.
 - b. If compatible firestop system is unavailable, remove insulation at contact area with firestop material

- c. Coordinate with trades who installed insulation to ensure proper re-sealing of cut edges of insulation.
- 3. Provide Products that Do Not Deteriorate when Exposed to Following Conditions:
 - a. Plumbing and Wet-Pipe Sprinkler Systems: Moisture-resistant through-penetration firestop.
 - b. Exposed to View:
 - 1) Flame-spread value of less than 25 and smoke-developed value of less than 450, ASTM E84.
 - 2) Compatible with applied finishes.
- D. F and T Rating Requirements: Conform to F and T ratings, ASTM E 814 (ANSI/UL 1479).
 - 1. Comply with applicable codes and authority having jurisdiction.
 - 2. F Ratings: Equal to fire resistance rating of assembly being penetrated but not less than one hour.
 - 3. T Ratings: Equal to F ratings or as required by authority having jurisdiction.
- E. Testing Requirements:
 - 1. Utilize systems and materials tested and approved by UL or other nationally recognized independent testing agency acceptable to authorities having jurisdiction.
 - 2. Determine fire ratings in accordance with ASTM E814 (ANSI/UL 1479) for through penetration firestops, ASTM E119 (UL263) for fire rated assemblies, and as required by applicable codes and authority having jurisdiction.
- F. Large openings may be closed with same type construction as adjacent floor, roof, and wall assembly.
- G. Sealing around penetrations fire rated assemblies without approved firestop system is not permitted. Methods and materials not permitted include but are not limited to:
 - 1. Joint compound at gypsum board assemblies.
 - 2. Mortar at masonry and concrete assemblies.
 - 3. Use of joint sealants.
- H. Whenever finished firestop materials are scheduled to receive finish paint or other coatings, test compatibility of firestop materials with coatings to be applied.

1.03 DEFINITIONS

- A. Firestopping: A material or combination of materials used to retain the integrity of fire- and smoke-rated construction by maintaining an effective barrier against the spread of flame, and to impede the passage of smoke, gases, and moisture through penetrations, blank openings, construction joints, and perimeter fire/smoke containment in or adjacent to fire-and smoke-rated wall, floor, ceiling, and other rated construction assemblies.
- B. Assembly: Particular arrangement of materials specific to type of construction described or detailed in referenced UL or other approved design.
- C. Barrier: Time-rated fire walls, smoke barrier walls, time-rated floor/ceiling assemblies, and structural floors.
- D. Penetration: Opening or foreign material passing through or into barrier or structural floor such that full thickness of rated materials is interrupted.
- E. Membrane Penetration: An opening made through one side of an assembly without passing completely through the assembly.
- F. Construction Gaps: Gaps between adjacent sections of walls, exterior walls, top of wall and ceiling, structural floors or roof decks, and adjacent sections of structural floors.
- G. System: Specific products and applications, classified and numbered by UL or other approved testing agency to close specific barrier penetrations.

- H. Sleeve: Metal fabrication or pipe section extending through thickness of barrier used to permanently guard penetration.
- I. VOC: Volatile organic compound(s).

1.04 ADMINISTRATIVE REQUIREMENTS

- A. Coordination: Coordinate installation of firestopping systems with affected trades and adjacent work.
- B. Preinstallation Meeting: Convene one week before starting work of this Section. Notify Owner, who may request attendance by an independent consultant.
 - 1. Convene under general provisions of Section 01 7000 - Execution and Closeout Requirements.
 - 2. Require attendance of parties directly concerned with the work of this Section, including those who are required to coordinate with the work, and those who are required to protect the work upon completion. Include the manufacturer's technical representative.
 - 3. Review installation procedures and coordination required with related work, and conditions which could affect successful performance of the work.
 - 4. Product and classification schedule.
 - 5. Test firestop materials to confirm compatibility with adjacent materials and chemicals and solvents with which they may come into contact during construction.
- C. Sequencing: Sequence work to permit firestopping materials to be installed after adjacent and surrounding work is complete.
 - 1. Do not cover or conceal firestopping installations until Owner's inspection agency and jurisdictional authority have inspected each installation.

1.05 SUBMITTALS

- A. Action Submittals:
 - 1. Jurisdictional Authority Submittal: Prior to submission to Architect, submit to jurisdictional authority and local fire department complete product data indicating proposed product characteristics, performance characteristics, limitation criteria, and documentation of proposed firestop materials and systems for actual project conditions.
 - a. Include manufacturer's complete installation instructions and UL Design or other approved testing agency data sheets for each proposed firestop system.
 - b. Include complete test data forms or jurisdictional acceptance for proposed assemblies not conforming to specific UL Design numbers or other approved testing agency system designs.
 - c. Submit certificate from authority having jurisdiction indicating approval of materials and systems to be used, with one complete copy, for information only, of the approved jurisdictional authority submittal.
 - 2. Schedule of Firestopping: List each type of penetration, fire rating of the penetrated assembly, and firestopping test or design number.
 - 3. Product Data: Provide data on product characteristics, performance ratings, and limitations.
- B. Informational Submittal:
 - 1. Provide manufacturer's certification stating:
 - a. Each penetration of fire rated walls and floor, partition heads, and edge of slabs will be firestopped with a firestopping system tested by UL or other recognized testing agency for substrate and penetrating item.
 - b. Authorities having jurisdiction have approved firestopping systems for this project.
 - c. Products and Classifications Schedule:
 - 1) Provide tabular form schedule for firestops, fire containment, and fire resistant construction joints.
 - 2) Schedule to identify:
 - (a) Construction penetrated including fire resistance rating.

- (b) Penetrating item.
 - (c) Products and manufacturers included in each system.
 - (d) Form material used.
 - (e) Firestop classification and description from UL or other nationally recognized independent testing agency acceptable to authority having jurisdiction.
 - (f) Fire containment and fire resistant construction joint description.
 - (g) F and T ratings.
- 3) Update schedule periodically to include addition and changes.
 2. Manufacturer's Installation Instructions: Indicate preparation and installation instructions.
 3. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.
 4. Installer's qualification statement.

1.06 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 1. 5.504.4.1 Adhesives and sealants.
 2. 5.504.4.3 Paints and coatings.

1.07 QUALITY ASSURANCE

- A. Fire Testing: Provide firestopping assemblies of designs that provide the scheduled fire ratings when tested in accordance with methods indicated.
 1. Listing in UL (FRD), FM (AG), or ITS (DIR) will be considered as constituting an acceptable test report.
 2. Valid evaluation report published by ICC Evaluation Service, Inc. (ICC-ES) at www.icc-es.org will be considered as constituting an acceptable test report.
 3. Submission of actual test reports is required for assemblies for which none of the above substantiation exists.
- B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum three years documented experience.
- C. Installer Qualifications: Company specializing in performing the work of this section and:
 1. Trained by manufacturer.
 2. Approved by Factory Mutual Research under FM Standard 4991, Approval of Firestop Contractors, or meeting any two of the following requirements:
 - a. With minimum 5 years documented experience installing work of this type.
 - b. Verification of at least five satisfactorily completed projects of comparable size and type.
 - c. Licensed by local authorities having jurisdiction (AHJ).
- D. Obtain firestop systems for each type and condition of penetration from a single manufacturer; intermixing of system components for each type and condition of penetration by different manufacturers is not permitted.
- E. Listed and tested assemblies and systems must be utilized, if they exist, before alternative systems requiring Engineering Judgement (EJ) or Equivalent Fire Resistance Rated Assembly (EFRRRA) will be considered. Comply with IFC and FCIA for EJ and EFRRRA design and submittal requirements.
- F. Testing Requirements:
 1. Utilize systems and materials tested and approved by UL or other nationally recognized independent testing agency acceptable to authorities having jurisdiction.
 2. Determine fire ratings in accordance with ASTM E814 (ANSI/UL 1479) for through penetration firestops, ASTM E119 (UL263) for fire rated assemblies, and as required by applicable codes and authority having jurisdiction.

1.08 REGULATORY REQUIREMENTS

- A. Comply with execution requirements of authority having jurisdiction including, if applicable, the requirement that all firestopping work be performed by a single qualified firm or subcontractor.

1.09 MOCK-UP

- A. Comply with general mock-up requirements specified in Section 01 4000 - Quality Requirements.
- B. Mock-up: Install one firestopping assembly representative of each fire rating design required on project.
 - 1. Where one design may be used for different penetrating items or in different wall constructions, install one assembly for each different combination.
 - 2. Where firestopping is intended to fill a linear opening, install minimum of 1 linear ft (1/3 linear m).
 - 3. Obtain approval of authorities having jurisdiction (AHJ) before proceeding.
 - 4. If accepted, mock-up will represent minimum standard for the work.
 - 5. If accepted, mock-up may remain as part of this work. Remove and replace mock-ups not accepted.

1.10 DELIVERY, STORAGE, AND PROTECTION

- A. Deliver materials in original unopened containers identified with manufacturer's brand designation and applicable UL label.
- B. Do not use damaged or expired materials.

1.11 FIELD CONDITIONS

- A. Comply with firestopping manufacturer's recommendations for temperature and conditions during and after installation; maintain minimum temperature before, during, and for three days after installation of materials.
- B. Provide ventilation in areas where solvent-cured materials are being installed.

1.12 WARRANTY

- A. Include agreement to repair or replace joint sealers which fail in joint adhesion, extrusion resistance, migration resistance, general durability, or apparent deterioration beyond manufacturer's printed limitations for stipulated warranty period from Date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Acceptable Manufacturers:
 - 1. Bio Fireshield: www.biofireshield.com.
 - 2. Hilti, Inc.: www.us.hilti.com.
 - 3. 3M Fire Protection Products: www.3m.com.
 - 4. RectorSeal: www.rectorseal.com.
 - 5. Specified Technologies, Inc.: www.stifirestop.com.

2.02 FIRESTOPPING - GENERAL REQUIREMENTS

- A. General: Use firestopping systems which are acceptable for those applications for which they are specifically designed. Use of other UL listed systems is Contractor's Option, subject to compliance with specified performance, regulatory, and quality assurance requirements.
 - 1. Fire Ratings: Refer to Drawings for required systems and ratings.

2. Where there is no specific tested and classified firestop system for an indicated condition, obtain from the firestopping system manufacturer an Engineering Judgement (EJ) or Equivalent Fire Resistance Rated Assembly (EFRRA) according to IFC and FCIA.
 3. Materials, fabrication, and installation of firestops and smoke seals.
 4. Fire containment.
 5. Fire resistant construction joints.
 6. Dynamic partition head details.
 7. Edge of slab and curtain wall conditions.
 8. Penetrations through fire-rated floors, walls, and shafts.
 9. Duct and damper firestops.
 10. Intumescent wraps and pads at receptacle boxes and recessed items within fire rated walls.
 11. Coordinate with mechanical and electrical to provide single manufacturer for all firestopping materials.
- B. Large openings may be closed with same type construction as adjacent floor, roof, and wall assembly.
- C. Sealing around penetrations fire rated assemblies without approved firestop system is not permitted. Methods and materials not permitted include but are not limited to:
1. Joint compound at gypsum board assemblies.
 2. Mortar at masonry and concrete assemblies.
 3. Use of joint sealants.
- D. Whenever finished firestop materials are scheduled to receive finish paint or other coatings, test compatibility of firestop materials with coatings to be applied.
- E. Primers, Sleeves, Forms, Insulation, Packing, Stuffing, and Accessories: Type required for tested assembly design.
- F. Scope: Install firestopping at all locations requiring protected openings where piping, conduit, cables, sleeves, ductwork and similar items penetrate fire-resistive, fire-rated, and smoke assemblies, including but not limited to:
1. Penetrations through wall, floor, and roof assemblies, including empty openings and openings containing penetrations.
 2. Membrane penetrations where items penetrate one side of the barrier assembly.
 3. Joints between rated assemblies to allow independent movement.
 4. Perimeter barriers between exterior wall assemblies and floor and roof assemblies.
 5. Joints, through-penetrations, and membrane penetrations in smoke-rated assemblies.
- G. Materials: Comply with ASTM E814, UL 1479, and UL 2079 as applicable to achieve indicated fire ratings.
- H. General Characteristics:
1. Surface Burning: ASTM E84 and UL 723; flame spread less than 25, smoke developed less than 450.
 2. Mold Resistance: Provide firestopping materials with mold and mildew resistance rating of 0 as determined by ASTM G21.
 3. Air Leakage of Perimeter Firestopping Barriers and Penetrations: UL 2079; L-rating less than 2.0 cfm/sf or 5.0 cfm/lf as applicable to the type and location of joint.
 4. Durability and Longevity: Permanent.
 5. Side Effects During Installation: Non-toxic.
 6. Side Effects Under Fire Exposure: Non-toxic.
 7. Long Term Side Effects: None.
- I. Perimeter Fire Containment Firestopping: Use system that has been tested according to ASTM E2307 to have fire resistance F Rating equal to required fire rating of floor assembly.
1. Movement: Provide systems that have been tested to show movement capability as indicated.
 2. Temperature Rise: Provide systems that have been tested to show T Rating as indicated.

3. Air Leakage: Provide systems that have been tested to show L Rating as indicated.
 4. Where floor assembly is not required to have a fire rating, provide systems that have been tested to show L Rating as indicated.
- J. Head-of-Wall (HW) Joint System Firestopping at Joints Between Fire-Rated Wall Assemblies and Non-Rated Horizontal Assemblies: Use system that has been tested according to ASTM E2837 to have fire resistance F Rating equal to required fire rating of wall assembly.
1. Movement: Provide systems that have been tested to show movement capability as indicated.
- K. Floor-to-Floor (FF), Floor-to-Wall (FW), Head-of-Wall (HW), and Wall-to-Wall (WW) Joints, Except Perimeter, Where Both Are Fire-Rated: Use system that has been tested according to ASTM E1966 or UL 2079 to have fire resistance F Rating equal to required fire rating of the assembly in which the joint occurs.
1. Movement: Provide systems that have been tested to show movement capability as indicated.
 2. Air Leakage: Provide systems that have been tested to show L Rating as indicated.
 3. Watertightness: Provide systems that have been tested to show W Rating as indicated.
 4. Listing by FM (AG), ITS (DIR), UL (DIR), or UL (FRD) in their certification directories will be considered evidence of successful testing.
- L. Through Penetration Firestopping: Use system that has been tested according to ASTM E814 to have fire resistance F Rating equal to required fire rating of penetrated assembly.
1. Temperature Rise: Provide systems that have been tested to show T Rating as indicated.
 2. Air Leakage: Provide systems that have been tested to show L Rating as indicated.
 3. Watertightness: Provide systems that have been tested to show W Rating as indicated.
 4. Listing by FM (AG), ITS (DIR), UL (DIR), or UL (FRD) in their certification directories will be considered evidence of successful testing.
- M. Fire Rated Joint Systems: Integrity and indicated fire-resistance ratings as determined by UL 2079, ASTM E1399 or ASTM E1966.
- N. Fire Rated Construction: Maintain barrier and structural floor fire resistance ratings including resistance to cold smoke at all penetrations, connections with other surfaces and types of construction, at separations required to permit building movement and sound or vibration absorption, and at other construction gaps.
- O. Smoke Barrier Construction: Maintain barrier and structural floor resistance to cold smoke at all penetrations, connections with other surfaces and types of construction, at separations required to permit building movement and sound or vibration absorption, and at other construction gaps.
- P. Sealant shall have a VOC content of 250 g/L or less.
- Q. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- R. Select adhesives, primers and sealants meeting CAL-Green requirements.
1. Adhesives shall meet or exceed the VOC and chemical component limits of CAL-Green Table 5.504.4.1 Adhesive VOC Limit requirements.
 2. Sealants and Sealant Primers shall meet or exceed the VOC and chemical component limits of CAL-Green Table 5.504.4.2 Sealant VOC Limit requirements.
 3. Current requirement refers to the date on which the materials are installed in the building.
 4. SCAQMD Rule #1168 is referenced in section 018114 that was current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.
 5. Interior refers to all building construction that is inside of the exterior weatherproofing material.

2.03 MATERIALS

- A. General: Comply with regionally-sourced, adhesives and sealants, and volatile organic compound (VOC) product requirements specified in Section 018114 - Greenhouses.
- B. Firestop Mortars: Polypropylene-fiber reinforced pumpable mortar.
 - 1. 3M Brand; Fire Barrier Mortar
 - 2. Bio Fireshield; K-10+ Firestop Mortar.
 - 3. RectorSeal Corporation; Metacaulk Mortar.
- C. Putty Compound: 100 percent solids intumescent or vinyl-type formulation, free of asbestos, silicones, solvents, halogens, PCB's, and inorganic fibers; flame spread/smoke developed rating 25/25 when tested in accordance with ASTM E84; paintable, not sensitive to freezing after set.
 - 1. Product:
 - a. 3M Brand; "Fire Barrier" Moldable Putty.
 - b. 3M Brand; MPS-2 Moldable Putty Stix.
 - c. 3M Brand; MMP-4S Moldable Putty Pads.
 - d. Bio Fireshield; BIOSTOP Moldable Putty and Putty Pads.
 - e. RectorSeal Corporation; Metacaulk Putty and Putty Pads.
- D. Sealant Compound: One-part intumescent, endothermic, ablative, or elastomeric acrylic water-based calking material required by applicable UL Design; flame spread/smoke developed rating 25/25 when tested in accordance with ASTM E84.
 - 1. Product:
 - a. 3M Brand; "Fire Barrier" CP 25WB+ Caulk.
 - b. Bio Fireshield; Biotherm 100 and Biotherm™ 200 Firestop Sealants.
 - c. Bio Fireshield; BIOSTOP 500+, 750, and BF150+ Intumescent Firestop Caulks.
 - d. Metacaulk; 950, 835+, 1000, 1200, and MC150+ Intumescent Firestop Caulks.
- E. Firestopping Sealant: Silicone elastomer type; single component; non-sagging; neutral cure, re-entrable and repairable; UL classified.
 - 1. Product:
 - a. 3M Brand; "Fire Barrier" 2000+ Silicone Sealant.
- F. Wall Opening Protective Materials:
 - 1. Product:
 - a. 3M Brand; MPS-2 Moldable Putty Stix.
 - b. 3M Brand; MMP-4S Moldable Putty Pads.
 - c. Bio Fireshield; BIOSTOP Moldable Putty and Putty Pads.
 - d. RectorSeal Corporation; Metacaulk Putty and Putty Pads.
- G. Intumescent Fire Retardant Firestop Mastic:
 - 1. Product:
 - a. Bio Fireshield; 700 Firestop Mastic.
 - b. RectorSeal Corporation; Metacaulk 1100 Firestop Mastic.
- H. Non-Intumescent Firestop Spray Sealant:
 - 1. Products:
 - 2. 3M Brand; Firedam Spray.
 - 3. Bio Fireshield; BIOSTOP 750 Firestop Spray.
 - 4. RectorSeal Corporation; Metacaulk 1200 Firestop Spray.
- I. Spray-Applied Compound: Water-based, flexible coating which dries to form a flexible seal; tested in accordance with ASTM E1399, complying with wind sway and thermal category, 500 cycles at minimum 10 cycles/minute.
 - 1. Product: 3M Brand; "FireDam Spray 100.
- J. Foam Compound: Two-part, liquid-silicone elastomer formulated to foam in place when mixed; flame spread/smoke developed rating 25/25 when tested in accordance with ASTM E84.

- K. Plastic Pipe Device: Intumescent strip material, factory or site fabricated in flexible metal collar with adjustable, screw-tightened stainless steel clamp; UL classified for use with PVC, CPVC, CCPVC, CCABS, PVDF, PP, PB, and FRPP plastic pipe.
 - 1. Product:
 - a. 3M PPD.
 - b. Bio Fireshield; BIOSTOP Plastic Pipe Collar.
 - c. RectorSeal Corporation; Metacaulk Plastic Pipe Collar.

- L. Firestop Pillows.
 - 1. Products:
 - a. 3M Brand; Firestop Pillows.
 - b. Bio Fireshield, BIOSTOP Firestop PILLOWS.
 - c. RectorSeal Corporation; Metacaulk PILLOWS.

- M. Wall Opening Protective Materials.
 - 1. Products:
 - a. 3M Brand; Moldable Putty Pads.
 - b. Bio Fireshield; Firestopping Gasket.
 - c. Bio Fireshield; LECTRA-STOP Fire Rated Electrical Box Inserts
 - d. Bio Fireshield; BIOSTOP Fire Rated Putty Pads.
 - e. RectorSeal Corporation; Metacaulk BOX GUARD Fire Rated Electrical Box Inserts
 - f. RectorSeal Corporation; Metacaulk Putty Pads.
 - g. RectorSeal Corporation; Metacaulk Cover Guard.

- N. Fire Rated Joint Backing Material.
 - 1. Products:
 - a. 3M Brand; Fire Barrier Packing Material.
 - b. Bio Fireshield; BIOSTOP Joint Strips.
 - c. RectorSeal Corporation; Metacaulk Joint Strips.

- O. Composite Sheet: Composite, intumescent sheet, designed for firestopping large openings in conjunction with other firestopping components, capable of being cut to size in the field and fabricated to fit required penetration openings.
 - 1. Product:
 - a. 3M Brand; "Fire Barrier" CS-195+ Composite Sheet.
 - b. Bio Fireshield; BIOSTOP Composite Sheet.
 - c. RectorSeal Corporation; Metacaulk® Composite Sheet.

- P. Blanket Material: Refractory ceramic fiber blanket encapsulated with aluminum foil scrim complying with NFPA 96; widths and thicknesses required by applicable UL Design; specifically designed as a flexible, fireproof enclosure for kitchen exhaust ducts and fire-rated air ductwork.

- Q. Fire-Safing Insulation: ASTM C665, Type I; high-melt mineral fibers and resinous binders formed into blankets, density not less than 4.0 lbs/cu ft, tested for 3-hour fire containment for required depths and dimensions.

- R. Firestopping Pads: Intumescent, dielectric fire putty formed to 7 x 7 or 9.5 x 9.5 inch self-adhering pads, 2-hour fire rating listed by UL.
 - 1. Product:
 - a. 3M Brand; Fire Barrier Wrap/Strip FS 195.
 - b. Bio Fireshield; BIOSTOP Intumescent Wrap Strips.
 - c. RectorSeal Corporation; Metacaulk Intumescent Wrap Strips.

- S. Fire Rated Cable Pathways: Re-enterable device modules comprised of steel raceway with intumescent foam pads allowing 0 to 100 percent cable fill. These device modules shall be engineered such that two or more devices may be ganged together for greater capacity.
 - 1. Basis-of-Design Product:
 - a. Specified Technologies, Inc.; EZ-Path

- 1) One to Two Cables: EZ-Path Firestop Grommet.
 - 2) One to Nine Cables: EZ-Path Series 22.
 - 3) Ten or more cables: EZ-Path Series 33 and 44.
 - 4) Approved equal.
- T. Mineral Wool: 4 pcf (64 kg/m³) minimum, mineral wool batt insulation forming material cut to the shape of the fluted floor units or roof deck and toher locations required, and friction fit to completely fill the flutes above the steel straps.
1. Acceptable Products:
 - a. Hilti Construction Chemicals, Div Of Hilti Inc; Cp777 Speed Plugs.
 - b. Industrial Insulation Group L L C; Minwool-1200 Safing.
 - c. Johns Manville; Safing.
 - d. Rock Wool Manufacturing Co.; Delta Board.
 - e. Rockwool; Safe.
 - f. Thermafiber Inc; Type Saf
 - g. Approved equal.

2.04 ACCESSORIES

- A. Provide necessary accessory materials specified in UL Design to achieve complete firestop system at each penetration. Include collars, sleeves, attachment devices, intumescent materials, and other items required.
- B. Primers, Sleeves, Forms, and Accessories: Type required for tested assembly design, and as recommended by firestopping manufacturer for specific substrate surfaces.
- C. Dam Material: Mineral fiberboard, mineral fiber matting, sheet metal, alumina silicate fire board, or other permanent material required as part of the firestopping system, or removable if not specifically required as part of the firestopping system.
- D. Retainers: Impale type clips to support mineral fiber safing blankets.
- E. Foam Type: Foam backer rod.
- F. Sleeves:
 1. Steel Type: Cylindrical; gauge, seam lap, and length as required by UL system listing.
 2. Wire Mesh Type: #8 steel wire cloth fabricated from galvanized steel wire that is 0.020 inch diameter by 1/8 inch (3.17 mm) on center in both directions.
- G. Labels:
 1. Provide label for each firestop condition.
 2. Type information in non-fading ink on 20 pound (minimum) paper.
 3. Include following information on each label:
 - a. Manufacturer's name.
 - b. Product name.
 - c. Product type (sealant, putty, mortar, or other generic material description).
 - d. F-Rating.
 - e. T-Rating. State when not required for condition.
 - f. Testing and listing agency filing number, such as UL System number

2.05 CURTAIN WALL FIRE STOPPING SYSTEMS

- A. Fire Retardant Sealants and Insulation:
- B. Insulation: Approved semi-rigid curtain wall insulation and firesafing materials; coordinate with Section 07 2100 - Thermal Insulation for materials to create fire rated assembly.
- C. Smoke seal.
- D. Single component, asbestos free, neutral cure.

- E. Rated and approved for dynamic edge of slab conditions.
- F. Provide assembly that is tested and listed for use with glass and aluminum curtain wall system.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.
- B. Verify openings are ready to receive the work of this Section.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Surface Cleaning: Clean out openings immediately before installing penetration firestopping to comply with manufacturer's written instructions and with the following requirements:
 1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of penetration firestopping.
 2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with penetration firestopping. Remove loose particles remaining from cleaning operation.
 3. Remove laitance and form-release agents from concrete.
- B. Priming: Prime substrates where recommended in writing by manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.
- C. Masking Tape: Use masking tape to prevent penetration firestopping from contacting adjoining surfaces that will remain exposed on completion of the Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove stains. Remove tape as soon as possible without disturbing firestopping's seal with substrates.
- D. Remove incompatible materials that could adversely affect bond.
- E. Install backing or damming materials required to arrest liquid material leakage.

3.03 INSTALLATION - GENERAL

- A. Install materials in manner described in fire test report and in accordance with manufacturer's instructions, completely closing openings.
- B. Do not cover installed firestopping until inspected by Owner's Independent Testing Agency.
- C. Apply firestopping materials in sufficient thicknesses to achieve scheduled fire ratings, to uniform density and texture.
- D. Install material at openings which contain penetrating sleeves, piping, ductwork, conduit and other items requiring firestopping.
- E. Remove dam material after firestopping material has cured only if dam material is not required as part of the firestopping system; otherwise dam material to remain permanently in place.
- F. Do not cover installed firestopping until inspected by authorities having jurisdiction.
- G. Install labeling required by code.

3.04 INSTALLATION - FIRE SAFING INSULATION

- A. Install safing insulation to completely fill spaces between floor slab edges and spandrel construction as detailed.
- B. Install safing insulation to completely fill voids between floor and roof deck flutes and top of wall construction where wall ratings are indicated.
- C. Install and support safing insulation permanently in position to comply with tested fire assembly and applicable building code requirements.

3.05 INSTALLATION - FIRESTOPPING PADS

- A. Install firestopping pads on back side of electrical junction boxes in fire-rated walls where boxes are located in same stud space on opposite sides of same wall, and elsewhere required by jurisdictional authority and local fire department.

3.06 IDENTIFICATION

- A. Identify penetration firestopping with preprinted metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches (150 mm) of firestopping edge so labels will be visible to anyone Refer toking to remove penetrating items or firestopping. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
 1. The words "Warning - Penetration Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
 2. Contractor's name, address, and phone number.
 3. Designation of applicable testing and inspecting agency.
 4. Date of installation.
 5. Manufacturer's name.
 6. Installer's name.
 7. Wall partitions are required to have protected openings or penetrations permanently identified with signs or stenciling. Such identification shall be located in accessible concealed floor, floor-ceiling or attic spaces:
 - a. Be repeated at intervals not exceeding 30 feet (10 m) measured horizontally along the wall or partition; and
 - b. Include lettering not less than 1/2 inch (12.70 mm) in height, incorporating the suggested wording: "FIRE AND/OR SMOKE BARRIER-PROTECT ALL OPENINGS," also identify wall specific rating 1 HR, 2 HR etc...as indicated on architectural drawings.
 8. Include UL design number

3.07 FIELD QUALITY CONTROL

- A. Perform field inspection and testing in accordance with Section 01 4000 - Quality Requirements.
- B. Inspect installed firestopping systems according to applicable requirements of ASTM E2174 and ASTM E2393.
- C. Independent Testing Agency: Inspection agency employed and paid by Owner, will examine penetration firestopping in accordance with ASTM E2174, "Standard Practice for On-Site Inspection of Installed Fire Stops and ASTM E2393, "Standard Practice for On-Site Inspection of Installed Fire Stop Joint Systems.
- D. Do not conceal firestops, fire containments, and fire resistant construction joints prior to required inspection.
- E. Notify authority having jurisdiction and designated inspectors of work released for inspection.
- F. Inspection Requirements:

1. Visually examine firestopping, fire containments, and fire resistant construction joints to verify compliance with Contract Documents.
2. Examine firestopping, fire containments, and fire resistant construction joints for proper installation, adhesion, and curing appropriate for each material.
3. Submit written inspection report including following information:
 - a. Identify construction penetrated including fire resistance rating.
 - b. Identify penetrating item.
 - c. Identify products and manufacturers included in each system.
 - d. Identify form material used.
 - e. Firestop classification and description from UL, FM, Warnock Hersey or other independent testing agency.
 - f. Fire containment and fire resistant construction joint description.
 - g. F and T rating.
 - h. State whether firestop, fire containment, and fire resistant construction joint is or is not in full compliance with testing agency classification, description and manufacturer's requirements. If variations occur confirm acceptance of variation by manufacturer and authority having jurisdiction.
- G. Re-examine firestopping, fire containments, and fire resistant construction joints immediately prior to concealment by other construction to ensure no damage has occurred since initial inspection.
- H. Repair or replace penetration firestopping and joints at locations where inspection results indicate firestopping or joints do not meet specified requirements.

3.08 CLEANING

- A. Clean adjacent surfaces of firestopping materials.
- B. Clean off excess fill materials adjacent to openings as the Work progresses by methods and with cleaning materials that are approved in writing by penetration firestopping manufacturers and that do not damage materials in which openings occur.
- C. Provide final protection and maintain conditions during and after installation that ensure that penetration firestopping is without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, immediately cut out and remove damaged or deteriorated penetration firestopping and install new materials to produce systems complying with specified requirements.

3.09 PROTECTION

- A. Protect adjacent surfaces from damage by material installation.

END OF SECTION

SECTION 07 9200

JOINT SEALANTS

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Nonsag gunnable joint sealants.
- B. Self-leveling pourable joint sealants.
- C. Joint backings and accessories.

1.02 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.
- B. Convene pre-installation conference 3 weeks prior to commencing work of this Section.
- C. Conference Purpose and Agenda:
 - 1. Required Attendance: Contractor's quality control supervisor or superintendent, Architect, affected trades, and sealant manufacturer.
 - 2. Visit Project site to analyze site conditions, and inspect surfaces and joints to be sealed in order that recommendations may be made should adverse conditions exist.
 - 3. Review mock-up and field sample.
 - 4. Discuss following items:
 - a. Approved submittals.
 - b. Substrate conditions.
 - c. Preparatory work.
 - d. Weather conditions under which work will be done.
 - e. Anticipated frequency and extent of joint movement.
 - f. Joint design.
 - g. Sealant installation procedures.

1.03 SUBMITTALS

- A. Action Submittals
 - 1. Product Data for Sealants: Submit manufacturer's technical data sheets for each product to be used, that includes the following.
 - a. Physical characteristics, including movement capability, VOC content, hardness, cure time, and color availability.
 - b. List of backing materials approved for use with the specific product.
 - c. Substrates that product is known to satisfactorily adhere to and with which it is compatible.
 - d. Substrates the product should not be used on.
 - e. Substrates for which use of primer is required.
 - f. Substrates for which laboratory adhesion and/or compatibility testing is required.
 - g. Installation instructions, including precautions, limitations, and recommended backing materials and tools.
 - h. Sample product warranty.
 - i. Certification by manufacturer indicating that product complies with specification requirements.
 - j. Product Data for Accessory Products: Submit manufacturer's technical data sheet for each product to be used, including physical characteristics, installation instructions, and recommended tools.
 - k. Product test reports: For sealant, based on evaluation of comprehensive tests performed by a qualified testing agency including applicable lab testing for substrates on project.

2. Shop Drawings: In schedule form including:
 - a. Joint location and designation.
 - b. Product manufacturer, name, formulation, and color
 - c. Detailed drawings for each installation condition, including joint conditions, sealant profiles, backings, substrates, and other application related information; manufacturer's standard drawing details are acceptable if necessary information is conveyed.
3. Color Cards for Selection: Where sealant color is not specified, submit manufacturer's color cards showing standard colors available for selection.
4. Initial samples of cured sealants indicating full range of colors available.
5. Samples for Verification: Where custom sealant color is specified, obtain directions from Architect and submit at least two physical samples for verification of color of each required sealant.

B. Informational Submittals:

1. Certificate: Certify that products meet or exceed specified requirements.
 - a. Manufacturer's Project Acceptance Document: Certification that manufacturer and installer will warrant sealant for specific site, design, details, and application indicated for this project.
 - b. Installer Certification: Written document from Manufacturer stating installer is certified, approved, licensed, or acceptable to install specified products.
2. Preconstruction Laboratory Test Reports: Submit at least four weeks prior to start of installation.
3. Installation Plan: Submit at least four weeks prior to start of installation.
4. Preinstallation Field Adhesion Test Plan: Submit at least two weeks prior to start of installation.
5. Field Quality Control Plan: Submit at least two weeks prior to start of installation.
6. Preinstallation Field Adhesion Test Reports: Submit filled out Preinstallation Field Adhesion Test Reports log within 10 days after completion of tests; include bagged test samples and photographic records.
7. Installation Log: Submit filled out log for each length or instance of sealant installed.
8. Field Quality Control Log: Submit filled out log for each length or instance of sealant installed, within 10 days after completion of inspections/tests; include bagged test samples and photographic records, if any.
9. Manufacturer and Installer qualification.
10. Warranties: Sample of special warranties.

1.04 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.

1.05 QUALITY ASSURANCE

- A. Maintain one copy of each referenced document covering installation requirements on site.
- B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum 20 years documented experience.
- C. Installer Qualifications: Company specializing in performing the work of this section with minimum 5 years documented experience and approved by manufacturer.
- D. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.
- E. Preconstruction Laboratory Testing: Arrange for sealant manufacturer(s) to test each combination of sealant, substrate, backing, and accessories.
 1. Adhesion Testing: In accordance with ASTM C794.
 2. Compatibility Testing: In accordance with ASTM C1087.

3. Stain Testing: In accordance with ASTM C1248; required only for stone substrates.
 4. Allow sufficient time for testing to avoid delaying the work.
 5. Deliver to manufacturer sufficient samples for testing.
 6. Report manufacturer's recommended corrective measures, if any, including primers or techniques not indicated in product data submittals.
 7. Testing is not required if sealant manufacturer provides data showing previous testing, not older than 24 months, that shows satisfactory adhesion, lack of staining, and compatibility with project specific substrates.
- F. Installation Plan: Include schedule of sealed joints, including the following:
1. Joint width indicated in Contract Documents.
 2. Joint depth indicated in Contract Documents; to face of backing material at centerline of joint.
 3. Method to be used to protect adjacent surfaces from sealant droppings and smears, with acknowledgement that some surfaces cannot be cleaned to like-new condition and therefore prevention is imperative.
 4. Approximate date of installation, for evaluation of thermal movement influence.
 5. Installation Log Form: Include the following data fields, with known information filled out.
 - a. Unique identification of each length or instance of sealant installed.
 - b. Location on project.
 - c. Substrates.
 - d. Sealant used.
 - e. Stated movement capability of sealant.
 - f. Primer to be used, or indicate as "No primer" used.
 - g. Size and actual backing material used.
 - h. Date of installation.
 - i. Name of installer.
 - j. Actual joint width; provide space to indicate maximum and minimum width.
 - k. Actual joint depth to face of backing material at centerline of joint.
 - l. Air temperature.
- G. Preinstallation Field Adhesion Test Plan: Include destructive field adhesion testing of one sample of each combination of sealant type and substrate, except interior acrylic latex sealants, and include the following for each tested sample.
1. Identification of testing agency.
 2. Name(s) of sealant manufacturers' field representatives who will be observing
 3. Preinstallation Field Adhesion Test Log Form: Include the following data fields, with known information filled out.
 - a. Substrate; if more than one type of substrate is involved in a single joint, provide two entries on form, for testing each sealant substrate side separately.
 - b. Test date.
 - c. Location on project.
 - d. Sealant used.
 - e. Stated movement capability of sealant.
 - f. Test method used.
 - g. Date of installation of field sample to be tested.
 - h. Date of test.
 - i. Copy of test method documents.
 - j. Age of sealant upon date of testing.
 - k. Test results, modeled after the sample form in the test method document.
 - l. Indicate use of photographic record of test.
- H. Field Quality Control Plan:
1. Visual inspection of entire length of sealant joints.
 2. Non-destructive field adhesion testing of sealant joints, except interior acrylic latex sealants.
 - a. For each different sealant and substrate combination, allow for one test every 12 inches (305 mm) in the first 10 linear feet (3 linear m) of joint and one test every 24 inches (610 mm) thereafter.

- b. If any failures occur in the first 10 linear feet (3 linear m), continue testing at 12 inches (305 mm) intervals at no extra cost to Owner.
 - 3. Destructive field adhesion testing of sealant joints, except interior acrylic latex sealant.
 - a. For each different sealant and substrate combination, allow for one test every 100 feet (30 m) in the first 1000 linear feet (305 linear m), and one test per 1000 linear feet (305 linear m) thereafter, or once per floor on each elevation.
 - b. If any failures occur in the first 1000 linear feet (305 linear m), continue testing at frequency of one test per 500 linear feet (152 linear m) at no extra cost to Owner.
 - 4. Field testing agency's qualifications.
 - 5. Field Quality Control Log Form: Show same data fields as on Preinstallation Field Adhesion Test Log, with known information filled out and lines for multiple tests per sealant/substrate combinations; include visual inspection and specified field testing; allow for possibility that more tests than minimum specified may be necessary.
- I. Field Adhesion Test Procedures:
 - 1. Allow sealants to fully cure as recommended by manufacturer before testing.
 - 2. Have a copy of the test method document available during tests.
 - 3. Record the type of failure that occurred, other information required by test method, and the information required on the Field Quality Control Log.
 - 4. When performing destructive tests, also inspect the opened joint for proper installation characteristics recommended by manufacturer, and report any deficiencies.
 - 5. Deliver the samples removed during destructive tests in separate sealed plastic bags, identified with project, location, test date, and test results, to Owner.
 - 6. If any combination of sealant type and substrate does not show evidence of minimum adhesion or shows cohesion failure before minimum adhesion, report results to Architect.
- J. Non-Destructive Field Adhesion Test: Test for adhesion in accordance with ASTM C1521, using Nondestructive Spot Method.
 - 1. Record results on Field Quality Control Log.
 - 2. Repair failed portions of joints.
- K. Destructive Field Adhesion Test: Test for adhesion in accordance with ASTM C1521, using Destructive Tail Procedure.
 - 1. Sample: At least 18 inches (457 mm) long.
 - 2. Minimum Elongation Without Adhesive Failure: Consider the tail at rest, not under any elongation stress; multiply the stated movement capability of the sealant in percent by two; then multiply 1 inch (25.4 mm) by that percentage; if adhesion failure occurs before the "1 inch mark" is that distance from the substrate, the test has failed.
 - 3. If either adhesive or cohesive failure occurs prior to minimum elongation, take necessary measures to correct conditions and re-test; record each modification to products or installation procedures.
 - 4. Record results on Field Quality Control Log.
 - 5. Repair failed portions of joints.
- L. Field Adhesion Tests of Joints: Test for adhesion using most appropriate method in accordance with ASTM C1521, or other applicable method as recommended by manufacturer.

1.06 MOCKUPS

- A. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for materials and execution.
 - 1. Install sealant in mockups of assemblies specified in other Sections that are indicated to receive joint sealants specified in this Section. Use materials and installation methods specified in this Section. Provide as many mock-ups as required until approved.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.07 DELIVERY, STORAGE, AND HANDLING.

- A. Deliver materials to Project site in original unopened containers or bundles with manufacturer's labels. Labels on delivered materials shall show manufacturer, product name and designation, color, expiration period for use, pot life, curing time, and mixing instructions for multicomponent materials.
- B. Store and handle materials to prevent their deterioration or damage due to moisture , temperature changes, contaminants or other causes.

1.08 FIELD CONDITIONS

- A. Do not proceed with installation of joint sealants under the following conditions:
 1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F (4 deg C).
 2. When joint substrates are wet.
 3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
 4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.
- B. Weather Conditions: Proceed with work only when existing and forecasted weather conditions permit installation according to manufacturer's instructions and warranty requirements.

1.09 WARRANTY

- A. Refer to Section 01 7800 - Closeout Submittals, for additional warranty requirements.
- B. Special Installer's Warranty: Installer agrees to repair or replace non-silicone joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
 1. Warranty Period: Two years from date of Substantial Completion.
- C. Special Manufacturer's Warranty: Manufacturer agrees to furnish joint sealants to repair or replace those joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
 1. Silicone Sealants: 20 years from date of Substantial Completion.
 2. Urethane Sealants: 5 years from date of Substantial Completion.
 3. Others: 2 years from date of Substantial Completion.
- D. Special warranties specified in this article exclude deterioration or failure of joint sealants from the following:
 1. Movement of the structure caused by stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
 2. Disintegration of joint substrates from causes exceeding design specifications.
 3. Mechanical damage caused by individuals, tools, or other outside agents.
 4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.
- E. Warranty: Include coverage for installed sealants and accessories that fail to achieve watertight seal , exhibit loss of adhesion or cohesion, or do not cure.

PART 2 PRODUCTS

2.01 JOINT SEALANT APPLICATIONS

- A. Scope:

1. Interior Joints: Do not seal interior joints unless specifically indicated to be sealed. Interior joints to be sealed include, but are not limited to, the following items.
 - a. Joints between door, window, and other frames and adjacent construction.
 - b. In sound-rated wall and ceiling assemblies, gaps at electrical outlets, wiring devices, piping, and other openings; between wall/ceiling and other construction; and other flanking sound paths.
 - 1) Exception: Such gaps and openings in gypsum board finished stud walls and suspended ceilings.
 - 2) Exception: Through-penetrations in sound-rated assemblies that are also fire-rated assemblies.
 - c. Other joints indicated below.
2. Do not seal the following types of joints.
 - a. Intentional weepholes in masonry.
 - b. Joints indicated to be treated with manufactured expansion joint cover or some other type of sealing device.
 - c. Joints where sealant is specified to be provided by manufacturer of product to be sealed.
 - d. Joints where installation of sealant is specified in another section.
 - e. Joints between suspended panel ceilings/grid and walls.

B. Exterior Joints: Use nonsag non-staining silicone sealant, unless otherwise indicated.

2.02 JOINT SEALANTS - GENERAL

- A. Sealants: Only use sealants that meet or do not exceed the VOC limits of the CURRENT requirements of South Coast Air Quality Management District (SCAQMD) Rule No. 1168, CAL-Green Table 5.504.4.2 Sealant VOC Limit requirements.
 1. Current requirement refers to the date on which the materials are installed in the building.
 2. A copy of SCAQMD Rule #1168 is referenced in Section 01 8114 - Greenhouses that was current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.
- B. Colors: As indicated on drawings.

2.03 NONSAG JOINT SEALANTS

- A. Type JS-5 Silicone, S, NS, 50, NT: Single-component, nonsag, plus 50 percent and minus 50 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant; ASTM C 920, Type S, Grade NS, Class 50, Use NT, G, A, and O.
 1. General purpose, metal to metal joints.
 2. Acceptable Products:
 - a. Dow Corning Corporation; 795.
 - b. GE Construction Sealants; Momentive Performance Materials Inc.; SCS2000 SilPruf.
 - c. Sika Corporation; Sikasil WS-295: www.usa-sika.com.
 - d. Tremco; Spectrum 2.
 - e. Prior approved equal.
- B. Type JS-3 - Non-Staining Silicone Sealant: ASTM C920, Grade NS, Uses NT, G, M, A and O; not expected to withstand continuous water immersion or traffic.
 1. Movement Capability: Plus and minus 50 percent, minimum.
 2. Non-Staining To Porous Stone: Non-staining to light-colored natural stone when tested in accordance with ASTM C1248.
 3. Dirt Pick-Up: Reduced dirt pick-up compared to other silicone sealants.
 4. Color: To be selected by Architect from manufacturer's standard range.
 5. Cure Type: Single-component, neutral moisture curing.
 6. Service Temperature Range: Minus 65 to 180 degrees F (Minus 54 to 82 degrees C).
 7. Acceptable Products:
 - a. Dow Corning Corporation; 756 SMS Building Sealant: www.dowcorning.com.

- b. GE Construction Sealants; Momentive Performance Materials Inc.; SilPruf NB.
 - c. Pecora Corporation; 890NST Ultra Low Modulus Architectural Silicone Sealant - Class 100: www.pecora.com.
 - d. Tremco Incorporated; Spectrem 2.
 - e. Pecora Corporation; 895NST Medium Modulus Structural Glazing & Weatherproofing Silicone Sealant - Class 50: www.pecora.com.
 - f. Sika Corporation; Sikasil WS-290: www.usa-sika.com.
 - g. Sika Corporation; Sikasil WS-295: www.usa-sika.com.
 - h. Sika Corporation; Sikasil 728NS: www.usa-sika.com.
 - i. Prior approved equal.
- C. Type JS-6 - Silicone Sealant: ASTM C920, Grade NS, Uses M and A; not expected to withstand continuous water immersion or traffic.
- 1. Movement Capability: Plus 100 percent, minus 50 percent.
 - 2. Hardness Range: 15 to 35, Shore A, when tested in accordance with ASTM C661.
 - 3. Color: To be selected by Architect from manufacturer's standard range.
 - 4. Cure Type: Single-component, neutral moisture curing
 - 5. Service Temperature Range: Minus 65 to 180 degrees F (Minus 54 to 82 degrees C).
 - 6. Acceptable Products:
 - a. Dow Corning Corporation; 758 Silicone Weather Barrier Sealant: www.dowcorning.com.
 - b. GE Construction Sealants; Momentive Performance Materials Inc.;SSG4000 UltraGlaze.
 - c. Polymeric Systems, Inc.; PSI-631.
 - d. Schnee-Morehead, Inc., an ITW company; SM5731 Poly-Glaze Plus.
 - e. Sika Corporation; Sikasil-N Plus: www.usa-sika.com.
- D. Type JS-4 - Mildew-Resistant Silicone Sealant: ASTM C920, Grade NS, Uses M and A; single component, mildew resistant; not expected to withstand continuous water immersion or traffic.
- 1. Color: As selected by Architect from manufacturer's full range.
 - 2. Acceptable Products:
 - a. Dow Corning Corporation; 786-M White.
 - b. GE Construction Sealants; Momentive Performance Materials Inc.; SCS1700 Sanitary.
 - c. Pecora Corporation; 898NST Sanitary Silicone Sealant - Class 50: www.pecora.com.
 - d. Tremco Incorporated; Tremsil 200.
- E. Type JS-1 Urethane, Immersible, M, P, 25, T, NT, I: Immersible nonsag, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C 920, Type M, Grade P, Class 25, Uses T, M, O. Shore A Hardness: 40 minimum, when tested in accordance with ASTM C661.
- 1. Acceptable Products:
 - a. Pecora; NR-201.
 - b. Sika Corporation; Sikaflex 15 LM SL.
 - c. Sonneborn; Sikaflex-2C SL.
 - d. Tremco; Vulkem 245.
- F. Type JS-2 Urethane, S, P, 25, T, NT: Pourable, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C 920, Type S, Grade P, Class 25, Uses T, M, O.
- 1. Acceptable Products:
 - a. BASF Building Systems; MasterSeal SL 1.
 - b. Bostik, Inc.; Chem-Calk 950.
 - c. May National Associates, Inc.; Bondaflex PUR 35 SL.
 - d. Pecora Corporation; NR-201.
 - e. Sika; Sikaflex-2C SL.
 - f. Tremco; Vulkem 245.

- G. Type JS-1 Urethane, Immersible, M, P, 25, T, NT, I: Immersible nonsag, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C 920, Type M, Grade P, Class 25, Uses T, M, O. Shore A Hardness: 40 minimum, when tested in accordance with ASTM C661.
 - 1. Acceptable Products:
 - a. Pecora; NR-201.
 - b. Sika Corporation; Sikaflex 15 LM SL.
 - c. Sonneborn; Sikaflex-2C SL.
 - d. Tremco; Vulkem 245.

- H. Type JS-7 Acrylic Latex: Acrylic latex or siliconized acrylic latex, ASTM C 834, Type OP, Grade NF.
 - 1. Acceptable Products:
 - a. BASF Building Systems; Sonolac.
 - b. Bostik, Inc.; Chem-Calk 600.
 - c. May National Associates, Inc.; Bondaflex Sil-A 700.
 - d. Pecora Corporation, AC-20.
 - e. Sonneborn Building Products, Sonolac.
 - f. Schnee-Morehead, Inc.; SM 8200
 - g. Tremco, Inc., Acrylic Latex Tremflex 834.

2.04 ACCESSORIES

- A. Backer Rod: Cylindrical cellular foam rod with surface that sealant will not adhere to, compatible with specific sealant used, and recommended by backing and sealant manufacturers for specific application.
 - 1. Type for Joints Not Subject to Pedestrian or Vehicular Traffic: ASTM C1330; Type O - Open Cell Polyurethane.
 - a. Location: Interior.
 - 2. Open Cell: 40 to 50 percent larger in diameter than joint width.
 - 3. Closed Cell: 25 to 33 percent larger in diameter than joint width.
 - a. Location: Exterior.

- B. Bond Breaker Tape: Self-adhesive polyethylene tape with surface that sealant will not adhere to and recommended by tape and sealant manufacturers for specific application.
 - 1. Pressure sensitive polyethylene tape or tetrafluorethylene self-adhesive tape required by sealant manufacturer to suit application.
 - 2. Minimum Thickness of 11 mils.

- C. Masking Tape: Self-adhesive, nonabsorbent, non-staining, removable without adhesive residue, and compatible with surfaces adjacent to joints and sealants.

- D. Joint Cleaner: Non-corrosive and non-staining type, type recommended by sealant manufacturer; compatible with joint forming materials.

- E. Primers: Type recommended by sealant manufacturer to suit application; non-staining.
 - 1. Non-staining to joint substrate beyond the substrate surface.
 - 2. Required for use unless not required by results of:
 - a. "Manufacturer's sealant-substrate compatibility and adhesion test" described under Source Quality Control.
 - b. "Field hand-pull adhesion test" under Field Quality Control.

- F. Tooling Liquids: Non-staining material approved by manufacturer to reduce adhesion of sealant to joint finishing tools.

2.05 SOURCE QUALITY CONTROL

- A. Tests:
 - 1. Coordinate testing of sealant compatibility and adhesion to:

- a. Sealant backing materials.
 - b. Metals specified in Section 07 4213 - Metal Wall Panels.
 - c. Metals specified in Section 07 4213.23 - Metal Composite Material Wall Panels.
 - d. Entrance system specified in Section 08 4313 - Aluminum-Framed Storefronts.
 - e. Curtain wall system specified in Section 08 4413 - Glazed Aluminum Curtain Walls.
 - f. Tile specified in Section 09 3000 - Tiling.
2. Manufacturer's Sealant-Substrate Compatibility and Adhesion Test:
- a. Test Methods:
 - 1) Determine if priming and other specific joint preparation techniques are not required to obtain rapid, optimum adhesion of sealants to joint substrates.
 - 2) Comply with ASTM C510, ASTM C794, and ASTM C1087.
 - b. Submit not less than 9 pieces, 3 by 5 inches in size of each type of material, including joint substrates, shims, sealant backing, and miscellaneous materials.
 - c. Schedule sufficient time for testing and analysis of results to prevent delay in the progress of the Work.
 - d. Investigate sealant material's failing compatibility/adhesion tests and obtain manufacturer's written instructions for corrective measures, including the use of specially formulated primers.
 - e. Include in Test Report, Manufacturer's:
 - 1) Interpretation of test results regarding sealant performance.
 - 2) Primers and substrate preparation required to achieve adhesion.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that joints are ready to receive work.
- B. Verify that backing materials are compatible with sealants.
- C. Verify that backer rods are of the correct size.
- D. Preinstallation Adhesion Testing: Install a sample for each test location indicated in the test plan.
 - 1. Test each sample as specified in PART 1 under QUALITY ASSURANCE article.
 - 2. Notify Architect of date and time that tests will be performed, at least seven days in advance.
 - 3. Arrange for sealant manufacturer's technical representative to be present during tests.
 - 4. Record each test on Preinstallation Adhesion Test Log as indicated.
 - 5. If any sample fails, review products and installation procedures, consult manufacturer, or take whatever other measures are necessary to ensure adhesion; re-test in a different location; if unable to obtain satisfactory adhesion, report to Architect.
 - 6. After completion of tests, remove remaining sample material and prepare joint for new sealant installation.

3.02 PREPARATION

- A. Remove loose materials and foreign matter that could impair adhesion of sealant.
- B. Clean joints, and prime as necessary, in accordance with manufacturer's instructions.
- C. Perform preparation in accordance with manufacturer's instructions and ASTM C1193.
- D. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.
- E. Provide isolation joints where necessary to prevent surface cracking of concrete topping
- F. Concrete Floor Joints That Will Be Exposed in Completed Work: Test joint filler in inconspicuous area to verify that it does not stain or discolor slab.

3.03 INSTALLATION

- A. Perform work in accordance with sealant manufacturer's requirements for preparation of surfaces and material installation instructions.
- B. Perform installation in accordance with ASTM C1193.
- C. Measure joint dimensions and size joint backers to achieve width-to-depth ratio, neck dimension, and surface bond area as recommended by manufacturer, except where specific dimensions are indicated.
- D. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.
 - 1. Prime joint substrates unless priming is not required by:
 - a. "Manufacturer's sealant-substrate compatibility and adhesion test" described in Source Quality Control article.
 - b. "Field hand-pull adhesion test" described in Field Quality Control article.
 - 2. Apply primer to substrate areas where joint sealant is to adhere.
 - 3. Comply with manufacturer's sequencing requirements for joint priming and sealant backing bond breaker rod installation to assure required primer application coverage and rate without placement of primer on backer rod surface to be in contact with sealant and avoid three-sided sealant adhesion.
 - 4. Do not allow spillage and migration of primer onto surfaces not to receive primer.
 - 5. Install sealant to primed substrates after primer has cured.
- E. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
 - 1. Do not leave gaps between ends of sealant backings.
 - 2. Do not stretch, twist, puncture, or tear sealant backings.
 - 3. Remove absorbent sealant backings that have become wet before sealant application, and replace them with dry materials.
 - 4. Install closed cell backings at exterior locations.
 - 5. Install open cell backings at interior locations.
- F. Install bond breaker backing tape where backer rod cannot be used.
- G. Install sealant free of air pockets, foreign embedded matter, ridges, and sags, and without getting sealant on adjacent surfaces.
- H. Do not install sealant when ambient temperature is outside manufacturer's recommended temperature range, or will be outside that range during the entire curing period, unless manufacturer's approval is obtained and instructions are followed.
- I. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
 - 1. Place sealants so they directly contact and fully wet joint substrates.
 - 2. Completely fill recesses in each joint configuration.
 - 3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.
- J. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
 - 1. Remove excess sealant from surfaces adjacent to joints.

2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
3. Provide concave joint profile per Figure 8A in ASTM C 1193 unless otherwise indicated.
4. Provide flush joint profile at locations indicated on Drawings and according to Figure 8B in ASTM C 1193.
5. Provide recessed joint configuration of recess depth and at locations indicated on Drawings and according to Figure 8C in ASTM C 1193.
 - a. Use masking tape to protect surfaces adjacent to recessed tooled joints.

K. Nonsag Sealants: Tool surface concave, unless otherwise indicated; remove masking tape immediately after tooling sealant surface.

L. Concrete Floor Joint Filler: After full cure, shave joint filler flush with top of concrete slab.

3.04 FIELD QUALITY CONTROL

A. Perform field quality control inspection/testing as specified in PART 1 under QUALITY ASSURANCE article.

B. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:

1. Extent of Testing: Test completed and cured sealant joints as follows:
 - a. Perform 10 tests for the first 1000 feet (300 m) feet of joint length for each kind of sealant and joint substrate.
 - b. Perform one test for each 1000 feet (300 m) feet of joint length thereafter or one test per each floor per elevation.
2. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193 or Method A, Tail Procedure, in ASTM C 1521.
 - a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
3. Inspect tested joints and report on the following:
 - a. Whether sealants filled joint cavities and are free of voids.
 - b. Whether sealant dimensions and configurations comply with specified requirements.
 - c. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion complies with sealant manufacturer's field-adhesion hand-pull test criteria.
4. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant material, sealant configuration, and sealant dimensions.
5. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.

C. Evaluation of Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

D. Non-Destructive Adhesion Testing: If there are any failures in first 100 linear feet (30 linear m), notify Architect immediately.

E. Destructive Adhesion Testing: If there are any failures in first 1000 linear feet (300 linear m), notify Architect immediately.

F. Remove and replace failed portions of sealants using same materials and procedures as indicated for original installation.

G. Repair destructive test location damage immediately after evaluation and recording of results.

3.05 CLEANING AND CURING

- A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.
- B. Cure sealants in compliance with manufacturer's instructions and recommendations to obtain high early-bond strength, internal cohesive strength, and surface durability.

3.06 PROTECTION

- A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

3.07 POST-OCCUPANCY

- A. Post-Occupancy Inspection: Perform visual inspection of entire length of project sealant joints at a time that joints have opened to their greatest width; i.e. at low temperature in thermal cycle. Report failures immediately and repair.

3.08 JOINT-SEALANT SCHEDULE

- A. Joint-Sealant Application: Exterior joints in horizontal traffic surfaces JS-1.
 - 1. Joint Locations:
 - a. Isolation and contraction joints in cast-in-place concrete slabs.
 - b. Joints between plant-precast architectural concrete paving units.
 - c. Joints in stone paving units, including steps.
 - d. Tile control and expansion joints.
 - e. Joints between different materials listed above.
 - f. Other joints as indicated on Drawings.
 - 2. Joint Sealant: Urethane, M, P, 50, T, NT.
 - 3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.
- B. Joint-Sealant Application: Interior joints in horizontal traffic surfaces JS-2.
 - 1. Joint Locations:
 - a. Isolation joints in cast-in-place concrete slabs.
 - b. Control and expansion joints in tile flooring.
 - c. Other joints as indicated on Drawings.
 - 2. Joint Sealant: Urethane, S, P, 25, T, NT.
 - 3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.
- C. Joint-Sealant Application: Exterior joints in vertical surfaces and horizontal nontraffic surfaces JS-3.
 - 1. Joint Locations:
 - a. Construction joints in cast-in-place concrete, natural stone.
 - b. Control and expansion joints in unit masonry.
 - c. Joints between different materials listed above.
 - d. Control and expansion joints in overhead surfaces.
 - e. Other joints as indicated on Drawings.
 - 2. Joint Sealant: Silicone, nonstaining, S, NS, 50, NT.
 - 3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.
- D. Joint-Sealant Application: Mildew-resistant interior joints in vertical surfaces and horizontal nontraffic surfaces JS-4.
 - 1. Joint Locations:
 - a. Joints between plumbing fixtures and adjoining walls, floors, and counters.

- b. Tile control and expansion joints in bathrooms, public restrooms, and where indicated.
 - c. Other joints as indicated on Drawings.
 - 2. Joint Sealant: Silicone, mildew resistant, acid curing, S, NS, 25, NT.
 - 3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.
- E. Joint-Sealant Application: General purpose JS-5.
- 1. Joint Locations:
 - a. Construction joints in cast-in-place concrete.
 - b. Control and expansion joints in unit masonry.
 - c. Joints in glass unit masonry assemblies.
 - d. Joints between metal panels.
 - e. Joints between different materials listed above.
 - f. Control and expansion joints in overhead surfaces.
 - g. Other joints as indicated on Drawings.
 - 2. Joint Sealant: Silicone, nonstaining, S, NS, 50, NT.
 - 3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.
- F. Joint-Sealant Application: Weather barriers JS-6.
- 1. Joint Locations:
 - a. Construction joints in weather barriers.
 - b. Joints between weather barrier and other materials.
 - 2. Joint Sealant: Silicone, nonstaining, NS, M and A.
 - 3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.
- G. Joint-Sealant Application: Interior joints in vertical surfaces and horizontal nontraffic surfaces not subject to significant movement JS-7.
- 1. Joint Locations:
 - a. Control joints on exposed interior surfaces of exterior walls.
 - b. Perimeter joints between interior wall surfaces and frames of interior doors, wood trim, millwork, windows and elevator entrances.
 - c. Other joints as indicated on Drawings.
 - 2. Joint Sealant: Acrylic latex.
 - 3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.

END OF SECTION

SECTION 07 9219
ACOUSTICAL JOINT SEALANTS

PART 1 GENERAL**1.01 SUMMARY**

- A. Section includes acoustical joint sealants.

1.02 SUBMITTALS

- A. Action Submittals:
1. Product Data: For each acoustical joint sealant.
 2. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view.
 3. Samples for Verification: For each kind and color of acoustical joint sealant required, provide Samples with joint sealants in 1/2 inch (13 mm) wide joints formed between two 6 inch (150 mm) long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.
 4. Acoustical-Joint-Sealant Schedule: Include the following information:
 - a. Joint-sealant application, joint location, and designation.
 - b. Joint-sealant manufacturer and product name.
 - c. Joint-sealant formulation.
 - d. Joint-sealant color.
- B. Informational Submittals:
1. Product Test Reports: For each kind of acoustical joint sealant, for tests performed by a qualified testing agency.
 2. Sample Warranties: For special warranties.

1.03 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants

1.04 WARRANTY

- A. Special Installer's Warranty: Installer agrees to repair or replace acoustical joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
1. Warranty Period: Two years from date of Substantial Completion.
- B. Special Manufacturer's Warranty: Manufacturer agrees to furnish acoustical joint sealants to repair or replace those joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
1. Warranty Period: Five years from date of Substantial Completion.

PART 2 PRODUCTS**2.01 PERFORMANCE REQUIREMENTS**

- A. Provide acoustical joint-sealant products that effectively reduce airborne sound transmission through perimeter joints and openings in building construction, as demonstrated by testing representative assemblies according to ASTM E 90.
- B. VOC Content of Interior Sealants: Sealants and sealant primers shall comply with the following:
1. Acoustical sealants and sealant primers shall have a VOC content of 250 g/L or less.

- C. Sealants: Only use sealants that meet or do not exceed the VOC limits of the CURRENT requirements of South Coast Air Quality Management District (SCAQMD) Rule No. 1168, CAL-Green Table 5.504.4.2 Sealant VOC Limit requirements.
 - 1. Current requirement refers to the date on which the materials are installed in the building.
 - 2. A copy of SCAQMD 1168 is referenced in Section 01 8114 - Greenhouses that was current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.

2.02 ACOUSTICAL JOINT SEALANTS

- A. Acoustical Sealant for Exposed Joints Non-Rated: Manufacturer's standard nonsag, paintable, nonstaining, non-hardening latex acoustical sealant complying with ASTM C 834 Grade 0.
 - 1. Basis of Design Product:
 - a. General Electric Company; Sil Pruf, SCS 2000.
 - b. Pecora Corporation; AC-20 FTR.
 - c. Sonneborn; Sonolac.
 - d. Tremco; Tremco Acoustical Sealant .
 - e. United State Gypsum Company; SHEETROCK Acoustical Sealant.
 - 2. Acoustical joint sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 3. Acoustical joint sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 - 4. Colors of Exposed Acoustical Joint Sealants: As selected by Architect from manufacturer's full range of colors.
- B. Acoustical Sealant for Exposed Joints Fire-Rated: Manufacturer's standard nonsag, paintable, nonstaining, non-hardening latex acoustical sealant complying with ASTM C 834 Grade 0.
 - 1. Basis of Design Product:
 - a. 3M; Fire Barrier 2001 Silicone RTV Foam.
 - b. HILTI ; CP 601 S Elastomeric Firestop Sealant.
 - c. Johns Manville; Firetemp CI Caulk.
 - d. Specified Technologies, Inc.; Spec Seal ES100.
 - 2. Acoustical joint sealant shall have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - 3. Acoustical joint sealant shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
 - 4. Colors of Exposed Acoustical Joint Sealants: As selected by Architect from manufacturer's full range of colors.
- C. Acoustical Sealant for Concealed Joints: Manufacturer's standard nonsag, nondrying, nonhardening, nonskinning, nonstaining, gunnable, synthetic-rubber acoustical sealant.
 - 1. Products:
 - a. Pecora Corporation; AC-20 Acoustical Sealant.
 - b. Sonneborn; Sonolac.
 - c. Tremco; Acoustical Sealant.
 - d. United State Gypsum Company; USG Firecode Sound - Smoke Sealant.
- D. Acoustical Outlet Box Pads
 - 1. Minimum thickness: 1/8 inch (3.17 mm).
 - 2. Adhesion: Adheres readily to metal or plastic.
 - 3. Service Temperature: 30 degrees to 200 degrees F.
 - 4. Shall contain no asbestos.
 - 5. Acceptable Non Fire Rated Products:
 - a. Harry A. Lowry & Associates, Inc.; Lowry's Outlet Box Pads.
 - b. L.H. Dottie Co.; Sound Pad #68.

- c. Equal.
- 6. Acceptable Fire Rated Products:
 - a. 3M; Fire Barrier Moldable Putty Pads type MPP-X to fit box size.
 - b. GCP Industries; Flamesafe FSP 1077 Putty Pads.
 - c. Hilti; CP617 Putty Pads.
 - d. Nelson; Firestop Putty Pads.
 - e. RectorSeal; Metacaulk Putty Pads.
 - f. Specified Technologies Inc.; SpecSeal Firestop Putty Pads.

2.03 MISCELLANEOUS MATERIALS

- A. Primer: Material recommended by acoustical-joint-sealant manufacturer where required for adhesion of sealant to joint substrates.
- B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.
- C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine joints indicated to receive acoustical joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Surface Cleaning of Joints: Clean out joints immediately before installing acoustical joint sealants to comply with joint-sealant manufacturer's written instructions.
- B. Joint Priming: Prime joint substrates where recommended by acoustical-joint-sealant manufacturer. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.
- C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.03 INSTALLATION OF ACOUSTICAL JOINT SEALANTS

- A. Comply with acoustical joint-sealant manufacturer's written installation instructions unless more stringent requirements apply.
- B. Junction boxes in partitions that include batt insulation in cavity require either acoustical outlet box pads, or fire rated outlet box pads if the partition is fire rated. Install according to manufacturer's installation instructions. The entire surface area of the junction box that is exposed within the partition cavity must be fully covered with the box pad."
- C. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical joint sealant. Install acoustical joint sealants at both faces of partitions, at perimeters, and through penetrations. Comply with ASTM C 919, ASTM C 1193, and manufacturer's written recommendations for closing off sound-flanking paths

around or through assemblies, including sealing partitions to underside of floor slabs above acoustical ceilings.

- D. Acoustical Ceiling Areas: Apply acoustical joint sealant at perimeter edge moldings of acoustical ceiling areas in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
- E. Use continuous beads of acoustical sealant to seal assemblies at the head, sill, perimeter and penetrations, and joints between layers of sound isolating gypsum board constructions

3.04 CLEANING

- A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of acoustical joint sealants and of products in which joints occur.

3.05 PROTECTION

- A. Protect acoustical joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated acoustical joint sealants immediately so installations with repaired areas are indistinguishable from original work.

END OF SECTION

SECTION 07 9513
EXPANSION JOINT COVER ASSEMBLIES

PART 1 GENERAL**1.01 SECTION INCLUDES**

- A. Expansion joint cover assemblies for floor, wall, and ceiling surfaces.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Installation Templates: For frames and anchors to be embedded in concrete or masonry, furnish templates to relevant installers; include installation instructions and tolerances.

1.03 SUBMITTALS

- A. Action Submittals:
 1. Product Data: Provide joint assembly profiles, profile dimensions, anchorage devices and available colors and finish.
 2. Shop Drawings: Indicate joint and splice locations, miters, layout of the work, affected adjacent construction, anchorage locations.
 3. Samples: Submit three samples 12 inch (305 mm) long, illustrating profile, dimension, color, and finish selected.
- B. Informational Submittals:
 1. Manufacturer's Installation Instructions: Indicate rough-in sizes and required tolerances for item placement.
 2. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
 - a. Refer to Section 01 6000 for additional provisions.
 3. Extra Resilient Joint Filler: 10 ft (3048 mm) length and any special tools required for installation.

1.04 MOCKUPS

- A. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 1. Provide sample of 12 feet long indicating installation and joining of sections including corners.
 2. Locate as directed by Architect.
 3. Approved mockup may remain.

1.05 WARRANTY

- A. Special Warranty: Manufacturer and installer agrees to repair or replace components of aluminum-framed entrances and storefronts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
 1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 - c. Failure of moving components.
 2. Verify available warranties and warranty periods for aluminum-framed entrances and storefronts.
 3. Warranty Period: Ten years from date of Substantial Completion.

PART 2 PRODUCTS**2.01 MANUFACTURERS**

Child Development Center

EXPANSION JOINT COVER ASSEMBLIES

1. Construction Specialties, Inc.: www.c-sgroup.com.
2. Other Acceptable Manufacturers:
 - a. Balco, Inc.; : www.balcousa.com.
 - b. Inpro: www.inprocorp.com.
 - c. MM Systems Corp.: www.mm-systemscorp.com.
 - d. Nystrom, Inc: www.nystrom.com.
 - e. Watson Bowman Acme Corp.;
 - f. Substitutions: See Section 01 6000 - Product Requirements.

2.02 EXPANSION JOINT COVER ASSEMBLY APPLICATIONS

- A. Floor-to-Floor:
 1. Basis of Design Product:
 - a. Construction Specialties, Inc.; RCF-300.
 2. Design Criteria:
 - a. Nominal Joint Width: 3 inches (76 mm).
 - b. Maximum Joint Width: 6 inches (156 mm).
 - c. Minimum Joint Width: 1-1/4 inches (32 mm).
 - d. Type of Movement: Seismic.
 - e. Load Capacity: Heavy duty.
 - 1) Uniform Load: 150 lb/sq. ft. (732 kg/sq. m).
 - 2) Concentrated Load: 2000 lb (907 kg).
 3. Type: Cover plate.
 - a. Cover-Plate Design: Smooth, 1/8 inch thick aluminum plate.
 - 1) Cover-Plate Recess Depth: As required to accommodate adjacent flooring.
 - b. Metal: Aluminum.
 - 1) Finish: Clear anodic, Class I.
 - c. Water Barrier: Flexible EPDM, Class I, ASTM D4637, 60 mils (1.5 mm) thick (minimum) sheet.
 - d. Fire Barrier:
 - 1) Model RFX-3F Fire Barrier - 2 hour.
 - 2) Heat Shield: Manufacturer's standard stainless steel.

2.03 MATERIALS

- A. Extruded Aluminum: ASTM B221 (ASTM B221M), 6063 alloy, T6 temper; or ASTM B308/B308M, 6061 alloy, T6 temper.
 1. Exposed Finish Outdoors: Clear anodized.
 - a. Class II, Clear Anodic Finish: Architectural Class II, clear coating 0.010 mm or thicker, complying with AAMA 611.
- B. Adhesives & Sealants: Only use adhesives and sealants in the interior of the building that meet or do not exceed the VOC limits of the CURRENT requirements of South Coast Air Quality Management District (SCAQMD) Rule No. 1168, Cal-GREEN Table 5.504.4.1 Adhesive VOC Limit, and Cal GREEN Table 5.504.4.2 Sealant VOC Limit requirements.
 1. Current requirement refers to the date on which the materials are installed in the building.
 2. A copy of SCAQMD 1168 is referenced in Section 01 8114 that was current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.
- C. Fasteners: Manufacturer's recommended fasteners, suitable for application and designed to withstand design loads.
 1. Exposed Fasteners: Gasketed. Use screws with hex washer heads matching color of material being fastened.
- D. Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist the passage of flame and hot gases through a movement joint and to meet performance criteria for required fire-resistance rating.

1. Product:
 - a. Construction Specialties, Inc.; Reflex Wall Series/Model RFX.
- E. Accessories: Manufacturer's standard anchors, clips, fasteners, set screws, spacers, and other accessories compatible with material in contact, as indicated or required for complete installations.
- F. Backing Paint for Aluminum Components in Contact with Cementitious Materials: Asphaltic type.

2.04 ALUMINUM FINISHES

- A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that joint preparation and dimensions are acceptable and in accordance with manufacturer's requirements.
- B. Verify that frames and anchors installed by others are in correct locations and suitable for installation of remainder of assembly.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Provide anchoring devices for installation and embedding under Section 04 2600 - Single-Wythe Unit Masonry.
 1. Provide templates and rough-in measurements.
- B. Provide anchoring devices for installation .
 1. Provide templates and rough-in measurements.
- C. Prepare substrates according to expansion control system manufacturer's written instructions.
- D. Coordinate and furnish anchorages, setting drawings, and instructions for installing expansion control systems. Provide fasteners of metal, type, and size to suit type of construction indicated and to provide for secure attachment of expansion control systems.

3.03 INSTALLATION - GENERAL

- A. General: Comply with manufacturer's written instructions for handling and installing roof expansion joints.
 1. Install expansion joints true to line and elevation; with limited oil-canning and without warping, jogs in alignment, buckling, or tool marks.
 2. Provide for linear thermal expansion of roof expansion joint materials.
 3. Provide uniform profile of roof expansion joint throughout its length; do not stretch or squeeze membranes.
 4. Provide uniform, neat seams.
 5. Install expansion joints to fit substrates and to result in watertight performance.
 6. Torch cutting of expansion joints is not permitted.
 7. Do not use graphite pencils to mark aluminum surfaces.
- B. Directional Changes and Other Expansion-Control Joint Systems: Coordinate installation of expansion joints with other expansion-control joint systems to result in watertight performance. Install factory-fabricated units at directional changes and at transitions between roof expansion joints and exterior expansion-control joint systems specified in Section 07 7129 - Manufactured Roof Expansion Joints to provide continuous, uninterrupted, and watertight joints.
- C. Splices: Splice expansion joints with materials provided by expansion joint manufacturer for this purpose, to provide continuous, uninterrupted, and waterproof joints.

1. Install waterproof splices and prefabricated end dams to prevent leakage of secondary-seal membrane.
- D. Fire Barrier: Install fire barrier where indicated to provide continuous, uninterrupted fire resistance throughout length of roof expansion joint, including transitions and end joints.

3.04 INSTALLATION

- A. Install components and accessories in accordance with manufacturer's instructions.
- B. Metal Frames: Perform cutting, drilling, and fitting required to install expansion control systems.
1. Install in true alignment and proper relationship to joints and adjoining finished surfaces measured from established lines and levels.
 2. Adjust for differences between actual structural gap and nominal design gap due to ambient temperature at time of installation. Notify Architect where discrepancies occur that will affect proper expansion control system installation and performance.
 3. Cut and fit ends to accommodate thermal expansion and contraction of metal without buckling of frames.
 4. Repair or grout blockout as required for continuous frame support using nonmetallic, shrinkage-resistant grout.
 5. Install frames in continuous contact with adjacent surfaces.
 - a. Shimming is not permitted.
 6. Locate anchors at interval recommended by manufacturer, but not less than 3 inches (76.20 mm) from each end and not more than 24 inches (610 mm) o.c.
- C. Seals in Metal Frames: Install elastomeric seals and membranes in frames to comply with manufacturer's written instructions. Install with minimum number of end joints.
1. Provide in continuous lengths for straight sections.
 2. Seal transitions according to manufacturer's written instructions. Vulcanize or heat-weld field-spliced joints as recommended by manufacturer.
 3. Installation: Mechanically lock seals into frames or adhere to frames with adhesive or pressure-sensitive tape as recommended by manufacturer.
- D. Terminate exposed ends of expansion control systems with field- or factory-fabricated termination devices.
- E. Fire-Resistance-Rated Assemblies: Coordinate installation of expansion control system materials and associated work so complete assemblies comply with assembly performance requirements.
1. Fire Barriers: Install fire barriers to provide continuous, uninterrupted fire resistance throughout length of joint, including transitions and field splices.
- F. Align work plumb and level, flush with adjacent surfaces.
- G. Rigidly anchor to substrate to prevent misalignment.

3.05 PROTECTION

- A. Do not permit traffic over unprotected floor joint surfaces.
- B. Do not remove protective covering until finish work in adjacent areas is complete. When protective covering is removed, clean exposed metal surfaces to comply with manufacturer's written instructions.
- C. Protect the installation from damage by work of other Sections. Where necessary due to heavy construction traffic, remove and properly store cover plates or seals and install temporary protection over expansion control systems. Reinstall cover plates or seals prior to Substantial Completion of the Work.

END OF SECTION

**SECTION 08 1113
HOLLOW METAL DOORS AND FRAMES**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Non-fire-rated hollow metal doors and frames.
- B. Hollow metal frames for wood doors.
- C. Hollow metal borrowed lites glazing frames.

1.02 ABBREVIATIONS AND ACRONYMS

- A. ANSI: American National Standards Institute.
- B. ASCE: American Society of Civil Engineers.
- C. HMMA: Hollow Metal Manufacturers Association.
- D. NAAMM: National Association of Architectural Metal Manufacturers.
- E. NFPA: National Fire Protection Association.
- F. SDI: Steel Door Institute.
- G. UL: Underwriters Laboratories.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate with wall construction for anchor placement.
 - 2. Coordinate installation of hardware.
- B. Preinstallation Conference: Conduct conference at Project site.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Materials and details of design and construction, hardware locations, reinforcement type and locations, anchorage and fastening methods, and finishes; and one copy of referenced grade standard.
 - 2. Shop Drawings: Details of each opening, showing elevations, glazing, frame profiles, and any indicated finish requirements.
- B. Informational Submittals:
 - 1. Installation Instructions: Manufacturer's published instructions, including any special installation instructions relating to this project.
 - 2. Manufacturer's Certificate: Certification that products meet or exceed specified requirements.
 - a. Submit manufacturer's certification that oversize fire rated assemblies conform to design, materials, and construction equivalent to requirements of individual listings for tested assemblies.

1.05 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 - 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 - 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.

1.06 QUALITY ASSURANCE

- A. Conform to requirements of ANSI A250.8 - SDI-100, and as supplemented in this Section.
- B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum three years documented experience.
 - 1. Provide hollow metal frames from SDI Certified manufacturer.
- C. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience.
- D. Maintain at project site copies of reference standards relating to installation of products specified.

1.07 REGULATORY REQUIREMENTS

- A. Conform to applicable Building Code for fire rated assemblies.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Comply with NAAMM HMMA 840 or ANSI/SDI A250.8 (SDI-100) in accordance with specified requirements.
- B. Protect with resilient packaging; avoid humidity build-up under coverings; prevent corrosion and adverse effects on factory applied painted finish.
- C. Inspect hollow metal products upon delivery for damage. Minor damage may be repaired provided refinishing is equal in all respects to new work and is acceptable to Architect; otherwise replace damaged items with new products as specified.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Acceptable Manufacturers:
 - 1. Ceco Door, an Assa Abloy Group company: www.assaabloydss.com.
 - 2. Amweld Building Products, Inc.: www.amweld.com.
 - 3. ASSA ABLOY, Ceco or Curries: www.assaabloydss.com.
 - 4. Pioneer Industries : www.pioneerindustries.com.
 - 5. Republic Doors, an Allegion brand: www.republicdoor.com.
 - 6. Steelcraft, an Allegion brand: www.allegion.com/us.
 - 7. Amweld Building Products, Inc.: www.amweld.com.
 - 8. Deansteel Manufacturing, Inc.: www.deansteel.com.
 - 9. Krieger Steel Products: www.kriegersteel.com.
 - 10. Approved equal.

2.02 PERFORMANCE REQUIREMENTS

- A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than required in Section 01 8114 - Sustainable Design Requirements - CAL-Green.
- B. Requirements for Hollow Metal Doors and Frames:
 - 1. Steel Sheet: Comply with one or more of the following requirements; galvanized steel complying with ASTM A653/A653M, cold-rolled steel complying with ASTM A1008/A1008M, or hot-rolled pickled and oiled (HRPO) steel complying with ASTM A1011/A1011M, commercial steel (CS) Type B, for each.
 - 2. Accessibility: Comply with ICC A117.1 and ADA Standards.
 - 3. Exterior Door Top Closures: Flush end closure channel, with top and door faces aligned.
 - 4. Door Edge Profile: Hinged edge square, and lock edge beveled.
 - 5. Typical Door Face Sheets: Flush.

6. Glazed Lights: Non-removable stops on non-secure side; sizes and configurations as indicated on Drawings.
 7. Hardware Preparations, Selections and Locations: Comply with NAAMM HMMA 830 and NAAMM HMMA 831 or BHMA A156.115 and ANSI/SDI A250.8 (SDI-100) in accordance with specified requirements.
 8. Zinc Coating for Typical Interior and/or Exterior Locations: Provide metal components zinc-coated (galvanized) and/or zinc-iron alloy-coated (galvannealed) by the hot-dip process in accordance with ASTM A653/A653M, with manufacturer's standard coating thickness, unless noted otherwise for specific hollow metal doors and frames.
 - a. Based on SDI Standards: Provide at least A40/ZF120 (galvannealed) when necessary, coating not required for typical interior door applications, and at least A60/ZF180 (galvannealed) for corrosive locations.
- C. Combined Requirements: If a particular door and frame unit is indicated to comply with more than one type of requirement, comply with all the specified requirements for each type. Where two requirements conflict, comply with the most stringent.

2.03 HOLLOW METAL DOORS

- A. Door Finish: Factory finished.
- B. Interior Doors, Non-Fire-Rated:
 1. Based on SDI Standards: ANSI/SDI A250.8 (SDI-100).
 - a. Level 3 - Extra Heavy-duty.
 - b. Physical Performance Level A, 1,000,000 cycles; in accordance with ANSI/SDI A250.4.
 - c. Model 2 - Seamless.
 - d. Door Face Metal Thickness: 16 gage, 0.053 inch (1.3 mm), minimum.
 2. Core Material: Manufacturers standard core material/construction and in compliance with requirements.
 3. Door Thickness: 1-3/4 inches (44.5 mm), nominal.

2.04 HOLLOW METAL FRAMES

- A. Comply with standards and/or custom guidelines as indicated for corresponding door in accordance with applicable door frame requirements.
- B. Frame Finish:
 1. Standard Hollow Metal Frames: Factory finished.
- C. Interior Door Frames, Non-Fire Rated: Full profile/continuously welded type.
 1. Frame Metal Thickness: 14 gage, 0.067 inch (1.7 mm), minimum.
- D. Frames for Glazing or Borrowed Lights: Construction and face dimensions to match door frames, and as indicated on Drawings.
- E. Transom Bars: Fixed, of profile same as jamb and head.
- F. Provide mortar guard boxes for hardware cut-outs in frames to be installed in masonry or to be grouted.
- G. Frames Wider than 48 inches (1219 mm): Reinforce with steel channel fitted tightly into frame head, flush with top.

2.05 FINISHES

- A. Primer: Rust-inhibiting, complying with ANSI/SDI A250.10, door manufacturer's standard.

2.06 FRAME ANCHORS

- A. Frame Anchors: ASTM A879/A879M, Commercial Steel (CS), 04Z (12G) coating designation; mill phosphatized.

1. For anchors built into exterior walls, steel sheet complying with ASTM A1008/A1008M or ASTM A1011/A1011M, hot-dip galvanized according to ASTM A153/A153M, Class B.
- B. Jamb Anchors:
 1. Masonry Type: Wire anchors not less than 0.177 inch thick.
 2. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 0.042 inch thick.
- C. Floor Anchors: Formed from same material as frames, minimum thickness of 0.042 inch, and as follows:
 1. Monolithic Concrete Slabs: Adjustable-type anchors with two holes to receive fasteners.
 2. Separate Topping Concrete Slabs: Adjustable-type anchors with extension clips, allowing not less than 2-inch height adjustment. Terminate bottom of frames at finish floor surface.

2.07 ACCESSORIES

- A. Glazing: As specified in Section 08 8000 - Glazing.
- B. Removable Stops: Formed sheet steel, mitered corners; prepared for countersink style tamper proof screws.
- C. Mechanical Fasteners for Concealed Metal-to-Metal Connections: Self-drilling, self-tapping, steel with electroplated zinc finish.
- D. Silencers: Resilient rubber, fitted into drilled hole; provide three on strike side of single door, three on center mullion of pairs, and two on head of pairs without center mullions.
- E. Temporary Frame Spreaders: Provide for factory- or shop-assembled frames.
- F. Inserts, Bolts, and Fasteners: Hot-dip galvanized according to ASTM A153/A153M.
- G. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hollow-metal frames of type indicated.
- H. Grout: ASTM C476, except with a maximum slump of 4 inches (101.6 mm), as measured according to ASTM C143/C143M.
- I. Mineral-Fiber Insulation: ASTM C665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E136 for combustion characteristics.
- J. Bituminous Coating: Cold-applied asphalt mastic, compounded for 15 mil (0.4 mm) dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.08 FABRICATION

- A. Fabricate hollow-metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for metal thickness. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
- B. Comply with ANSI A250.8 - SDI-100.
- C. Reinforce frames wider than 48 inches (1219.20 mm) with roll formed steel channels fitted tightly into frame head, flush with top.
- D. Prepare scheduled frames for silencers. Provide three single silencers for single doors and mullions of double doors on strike side and two single silencers on frame head at double doors without mullions.
- E. Attach required fire rating label to each frame, panel and door unit.

- F. Configure exterior frames with special profile to receive snap-in weatherstripping.
- G. Prepare doors and frames for hardware in accordance with templates provided under Section 08 7100 - Door Hardware.
- H. Hollow-Metal Doors:
 - 1. Steel-Stiffened Door Cores: Provide minimum thickness 0.026 inches, steel vertical stiffeners of same material as face sheets extending full-door height, with vertical webs spaced not more than 6 inch (150 mm) apart. Spot weld to face sheets no more than 5 inches o.c. Fill spaces between stiffeners with glass- or mineral-fiber insulation.
 - 2. Vertical Edges for Single-Acting Doors: Bevel edges 1/8 inch in 2 inches .
 - 3. Top Edge Closures: Close top edges of doors with inverted closures, except provide flush closures at exterior doors of same material as face sheets.
 - 4. Bottom Edge Closures: Close bottom edges of doors where required for attachment of weather stripping with end closures or channels of same material as face sheets.
 - 5. Exterior Doors: Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape. Seal joints in top edges of doors against water penetration.
- I. Hollow-Metal Frames: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.
 - 1. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
 - 2. Grout Guards: Weld guards to frame at back of hardware mortises in frames to be grouted.
 - 3. Floor Anchors: Weld anchors to bottoms of jambs with at least four spot welds per anchor; however, for slip-on drywall frames, provide anchor clips or countersunk holes at bottoms of jambs.
 - 4. Jamb Anchors: Provide number and spacing of anchors as follows:
 - a. Stud-Wall Type: Locate anchors not more than 18 inches (452.70 mm) from top and bottom of frame. Space anchors not more than 32 inches (812.80 mm) o.c. and as follows:
 - 1) Three anchors per jamb up to 60 inches (1524 mm) high.
 - 2) Four anchors per jamb from 60 inches (1524 mm) to 90 inches (2286.00 mm) high.
 - 3) Five anchors per jamb from 90 inches (2286.00 mm) to 96 inches (2438.40 mm) high.
 - 4) Five anchors per jamb plus one additional anchor per jamb for each 24 inches (610 mm) or fraction thereof above 96 inches (2438.40 mm) high.
 - 5. Head Anchors: Two anchors per head for frames more than 42 inches (1066.8 mm) wide and mounted in metal-stud partitions.
 - 6. Door Silencers: Except on weather-stripped frames, drill stops to receive door silencers as follows. Keep holes clear during construction.
 - a. Single-Door Frames: Drill stop in strike jamb to receive three door silencers.
 - b. Double-Door Frames: Drill stop in head jamb to receive two door silencers.
- J. Fabricate concealed stiffeners and edge channels from either cold- or hot-rolled steel sheet.
- K. Hardware Preparation: Factory prepare hollow-metal work to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to SDI A250.6, the Door Hardware Schedule, and templates.
 - 1. Reinforce doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.
 - 2. Comply with applicable requirements in ANSI/SDI A250.6 and BHMA A156.115 for preparation of hollow-metal work for hardware.
- L. Stops and Moldings: Provide stops and moldings around glazed lites and louvers where indicated. Form corners of stops and moldings with butted or mitered hairline joints.
 - 1. Single Glazed Lites: Provide fixed stops and moldings welded on secure side of hollow-metal work.

2. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames.
3. Provide loose stops and moldings on inside of hollow-metal work.
4. Coordinate rabbet width between fixed and removable stops with glazing and installation types indicated.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify existing conditions before starting work.
- B. Verify that opening sizes and tolerances are acceptable.
- C. Verify that finished walls are in plane to ensure proper door alignment.
- D. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.
- B. Drill and tap doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.
- C. Coat inside of frames to be installed in masonry or to be grouted, with bituminous coating, prior to installation.

3.03 INSTALLATION

- A. General: Install hollow-metal work plumb, rigid, properly aligned, and securely fastened in place. Comply with Drawings and manufacturer's written instructions.
- B. Install doors and frames in accordance with manufacturer's instructions and related requirements of specified door and frame standards or custom guidelines indicated.
 1. Comply with ASTM E2112 for installation of weather barrier materials in conjunction with installation of doors.
- C. Install fire rated units in accordance with NFPA 80.
- D. Hollow-Metal Frames: Install hollow-metal frames for doors, transoms, sidelites, borrowed lites, and other openings, of size and profile indicated. Comply with SDI A250.11 or NAAMM-HMMA 840 as required by standards specified.
 1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
 - a. Where frames are fabricated in sections because of shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.
 - b. Install frames with removable stops located on secure side of opening.
 - c. Install door silencers in frames before grouting.
 - d. Remove temporary braces necessary for installation only after frames have been properly set and secured.
 - e. Check plumb, square, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.

- f. Field apply bituminous coating to backs of frames that will be filled with grout containing antifreezing agents.
- 2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with postinstalled expansion anchors.
 - a. Floor anchors may be set with power-actuated fasteners instead of postinstalled expansion anchors if so indicated and approved on Shop Drawings.
- 3. Metal-Stud Partitions: Solidly pack mineral-fiber insulation inside frames.
- 4. Concrete Walls: Solidly fill space between frames and concrete with mineral-fiber insulation.
- 5. Installation Tolerances: Adjust hollow-metal door frames for squareness, alignment, twist, and plumb to the following tolerances:
 - a. Squareness: Plus or minus 1/16 inch (1.58 mm), measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - b. Alignment: Plus or minus 1/16 inch (1.58 mm), measured at jambs on a horizontal line parallel to plane of wall.
 - c. Twist: Plus or minus 1/16 inch (1.58 mm), measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - d. Plumbness: Plus or minus 1/16 inch (1.58 mm), measured at jambs at floor.
- E. Hollow-Metal Doors: Fit hollow-metal doors accurately in frames, within clearances specified below. Shim as necessary.
 - 1. Non-Fire-Rated Steel Doors:
 - a. Between Door and Frame Jambs and Head: 1/8 inch (3.17 mm) plus or minus 1/32 inch (0.79 mm).
 - b. Between Edges of Pairs of Doors: 1/8 inch (3.17 mm) to 1/32 inch (0.79 mm) plus or minus 1/32 inch (0.79 mm).
 - c. At Bottom of Door: 3/4 inch (19.05 mm) plus or minus 1/32 inch (0.79 mm).
 - d. Between Door Face and Stop: 1/16 inch (1.58 mm) to 1/8 inch (3.17 mm) plus or minus 1/32 inch (0.79 mm).
- F. Glazing: Comply with installation requirements in Section 08 8000 - Glazing and with hollow-metal manufacturer's written instructions.
 - 1. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches (230 mm) o.c. and not more than 2 inches (51 mm) o.c. from each corner.
- G. Install door hardware as specified in Section 08 7100 - Door Hardware.
- H. Touch up damaged factory finishes.

3.04 ADJUSTING

- A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including hollow-metal work that is warped, bowed, or otherwise unacceptable.
- B. Remove grout and other bonding material from hollow-metal work immediately after installation.
- C. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust-inhibitive primer.
- D. Metallic-Coated Surface Touchup: Clean abraded areas and repair with galvanizing repair paint according to manufacturer's written instructions.
- E. Touchup Painting: Cleaning and touchup painting of abraded areas of paint are specified in painting Sections.
- F. Adjust for smooth and balanced door movement.

3.05 SCHEDULE

- A. Refer to Door and Frame Schedule on the drawings.

END OF SECTION

**SECTION 08 1416
FLUSH WOOD DOORS**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Flush wood doors; flush configuration; fire rated and non-rated.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate the work with door opening construction, door frame and door hardware installation.
 2. Coordinate installation of glazing.

1.03 SUBMITTALS

- A. Action Submittals:
 1. Product Data: Indicate door core materials and construction; veneer species, type and characteristics.
 2. Shop Drawings: Show doors and frames, elevations, sizes, types, swings, undercuts, beveling, blocking for hardware, factory machining, factory finishing, cutouts for glazing and other details.
 - a. Provide information as required by AWMAC/WI (NAAWS).
 3. Samples: Submit accepted manufacturer's plastic laminate selector guide.
 - a. After initial color selection, submit three samples 12 by 12 inches (305 by 305 mm) in size illustrating selected face veneers and stain color for selection, and specified finishes.
- B. Informational Submittals:
 1. Certificate: Submit labels and certificates required by quality assurance and quality control programs.
 2. Manufacturer's Installation Instructions: Indicate special installation instructions.
 3. Warranty, executed in Owner's name.

1.04 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.
 4. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
 5. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.
 6. A5.406.1, .2 and .3: Materials selected for longevity, reduced maintenance and recyclability.

1.05 QUALITY ASSURANCE

- A. Maintain one copy of the specified door quality standard on site for review during installation and finishing.
- B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section, with not less than three years of documented experience.
 1. Accredited participant in the specified certification program prior to the commencement of fabrication and throughout the duration of the project.

- 2. A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
- C. Installer Qualifications: Company specializing in performing work of the type specified in this section, with not less than three years of documented experience.
- D. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.
- E. Quality Certification: Provide AWI (QCP) inspection report and quality certification of completed work.
 - 1. Comply with WI (CCP) woodwork association quality certification service/program in accordance with requirements for work specified in this section: www.woodworkinstitute.com/#sle.
 - 2. Provide labels or certificates indicating that the installed work complies with AWI (AWS) requirements for grade or grades specified.
 - 3. Provide designated labels on shop drawings as required by certification program.
 - 4. Submit certifications upon completion of installation that verifies this work is in compliance with specified requirements.
- F. Single Source Responsibility: Furnish each type of door from one manufacturer, unless otherwise acceptable to Architect, or specified.

1.06 REGULATORY REQUIREMENTS

- A. Conform to applicable Building Code for fire rated assemblies.
- B. Fire rated assembly construction to conform to NFPA 252 and UL 10B or UL 10C.
- C. Installed Frame and Door Assemblies: Comply with NFPA 80 for fire rated class indicated.
- D. Installed Fire-rated Window Assemblies: Comply with NFPA 257 for fire rated class indicated.
- E. Installed Smoke Control Frame and Door Assemblies: Comply with NFPA 105.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Package, deliver and store doors in accordance with specified quality standard.
- B. Accept doors on site in manufacturer's packaging, and inspect for damage.
- C. Protect doors with resilient packaging sealed with heat shrunk plastic; do not store in damp or wet areas or areas where sunlight might bleach veneer; seal top and bottom edges with tinted sealer if stored more than one week, and break seal on site to permit ventilation.

1.08 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and HVAC system is operating and maintaining temperature between 60 deg F (15.5 deg C) and 90 deg F (32 deg C) and relative humidity between 25 and 55 percent during remainder of construction period.

1.09 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Warping (bow, cup, or twist) more than 1/4 inch (6.35 mm) in a 42 by 84 inch (1067 by 2134 mm) section.
 - b. Telegraphing of core construction in face veneers exceeding 0.01 inch (0.25 mm) in a 3 inch (76 mm) span.
 - c. Delamination in any degree.

2. Warranty shall also include installation and finishing that may be required due to repair or replacement of defective doors.
 - a. Include hanging and installation of hardware.
 3. Warranty Period for Solid-Core Interior Doors: Life of installation.
- B. Interior Doors: Provide manufacturer's warranty for the life of the installation.
- C. Include coverage for delamination of veneer, warping beyond specified installation tolerances, defective materials, and telegraphing core construction.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Acceptable Manufacturers - Wood Veneer Faced Doors:
1. Algoma Hardwoods, Inc.
 2. Graham Wood Doors: www.architectural.masonite.com.
 3. Marshfield DoorSystems, Inc.: www.marshfielddoors.com.
 4. Oskosh Door Company: oshkoshdoor.com.
 5. Oregon Door: www.oregondoor.com.
 6. VT Industries, Inc: www.vtindustries.com.
 7. Approved equal.

2.02 WOOD-BASED DOOR COMPONENTS

- A. Regional Materials: Wood doors shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.
- B. Certified Wood: 25 percent minimum of wood door cores shall be certified as "FSC Pure" or "FSC Mixed Credit" according to FSC STD-01-001 and FSC STD-40-004.
- C. Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.
- D. General: Comply with rapidly renewable material content, sustainably harvested wood, urea-formaldehyde prohibition, adhesives and sealants, and aerosol adhesives product requirements specified in Section 01 8113 - Sustainable Design Requirements - LEED.
 1. Provide core materials certified by the Forest Stewardship Council.
- E. Wood doors fabricated from old growth timber are not permitted.
- F. Provide doors manufactured with composite wood materials and components using bonding agents that contain no added urea formaldehyde resins; refer to Section 018114 - Greenhouses.
- G. Adhesives: Only use adhesives that meet or do not exceed the VOC limits of the current requirements of South Coast Air Quality Management District (SCAQMD) Rule No. 1168 and CAL-Green Table 5.504.4.1 Adhesive VOC Limit.
 1. Current requirement refers to the date on which the materials are installed in the building.
 2. SCAQMD Rule #1168 referenced in Section 018114 is current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.
 3. Interior refers to all building construction that is inside of the exterior weatherproofing material.
 4. Comply with CAL-Green Table 5.504.4.5 - Formaldehyde Limits for composite wood and agri-fiber products.

2.03 DOORS

- A. All Doors:
 1. Quality Level - Door Type 1: Custom Grade, Extra Heavy Duty performance, in accordance with AWMAC/WI (NAAWS).
 2. Wood Veneer Faced Doors: 5-ply unless otherwise indicated.
- B. Interior Doors: 1-3/4 inches (44 mm) thick unless otherwise indicated; flush construction.
 1. Provide solid core doors at all locations.
 2. Fire Rated Doors: Tested to ratings indicated on drawings in accordance with ICC (IBC) - Positive Pressure; Underwriters Laboratories Inc (UL) or Intertek/Warnock Hersey (WHI) labeled without any visible seals when door is open.
 3. Wood veneer facing with factory transparent finish.

2.04 DOOR AND PANEL CORES

- A. General Requirement: Provide door cores fully bonded to stiles and rails.
- B. Non-Rated Solid Core and Doors: Type particleboard core (PC), plies and faces as indicated.

2.05 DOOR FACINGS

- A. Veneer Facing for Transparent Finish Door: White birch, HPVA Grade A, rotary cut, with book match between leaves of veneer, balance match of spliced veneer leaves assembled on door or panel face.
 1. Vertical Edges: Same species as face veneer, solid wood edges, minimum 0.25 inch thick.
 2. "Pair Match" each pair of doors; "Set Match" pairs of doors within 10 feet (3 m) of each other when doors are closed.
- B. Facing Adhesive: Type II - water resistant.

2.06 DOOR CONSTRUCTION

- A. Fabricate doors in accordance with door quality standard specified.
- B. Cores constructed with stiles and rails:
 1. Provide solid blocks at lock edge and top of door for closer for hardware reinforcement.
 - a. Provide solid blocking for other throughbolted hardware.
 2. Provide minimum 6 inch high solid wood top rail and minimum 16 inch high solid wood bottom rail, all doors; fire-resistant treated at fire-rated doors.
- C. Glazed Openings: Non-removable stops on non-secure side; sizes and configurations as indicated on drawings.
- D. Factory machine doors for hardware other than surface-mounted hardware, in accordance with hardware requirements and dimensions.
 1. Locate hardware to comply with DHI-WDHS-3. Comply with final hardware schedules, door frame Shop Drawings, BHMA-156.115-W, and hardware templates.
 2. Coordinate with hardware mortises in metal frames to verify dimensions and alignment before factory machining.
- E. Factory fit doors for frame opening dimensions identified on shop drawings, with edge clearances in accordance with specified quality standard.
 1. Exception: Doors to be field finished.
- F. Cut and configure exterior door edge to receive recessed weatherstripping devices.
- G. Provide edge clearances in accordance with the quality standard specified.

2.07 FACTORY FINISHING - WOOD VENEER DOORS

- A. Paint Maximum Product Emissions Limits: Top coat and primer interior paints must meet current requirements for VOC (Volatile Organic Compounds) limits of South Coast Air Quality Management District (SCAQMD) Rule No. 1113 and CAL-Green Table 5.504.4.3 for VOC Content Limits for Architectural Coatings.
 - 1. CAL-Green Requirements for typical paint coatings:
 - a. Primers, Sealers, and Undercoaters: 100 grams per liter of product minus water.
 - b. Flats: 50 grams per liter of product minus water.
 - c. Non-flats: 100 grams per liter of product minus water.
 - d. Non-flat High Gloss: 150 grams per liter of product minus water.
- B. Finish work in accordance with AWMAC/WI (NAAWS), Section 5 - Finishing for grade specified and as follows:
 - 1. Transparent:
 - a. System - 11, Polyurethane, Catalyzed.
 - b. Stain: As selected by Architect from manufacturer's full range.
 - c. Sheen: Satin.
- C. Factory finish doors in accordance with approved sample.
- D. Seal door top edge with color sealer to match door facing.

2.08 ACCESSORIES

- A. Glazed Openings:
 - 1. As specified in Section 08800 Glazing and on Finish Schedule.
- B. Glazing Stops: Wood, of same species as door facing, butted corners; prepared for countersink style tamper proof screws.
- C. Door Hardware: As specified in Section 08 7100 - Door Hardware.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify existing conditions before starting work.
- B. Examine doors and installed door frames, with Installer present, before hanging doors.
 - 1. Verify that installed frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
 - 2. Reject doors with defects.
- C. Verify that opening sizes and tolerances are acceptable.
- D. Do not install doors in frame openings that are not plumb or are out-of-tolerance for size or alignment.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Hardware: For installation, refer to Section 08 7100 - Door Hardware.
- B. Install doors in accordance with manufacturer's instructions and specified quality standard.
 - 1. Install fire-rated doors in accordance with NFPA 80 requirements.
 - 2. Install smoke and draft control doors in accordance with NFPA 105 requirements.
- C. High Pressure Decorative Laminate (HPDL) Faced Doors: Do not field cut or trim; if fit or clearance is not correct, replace door.

- D. Adjust width of non-rated doors by cutting equally on both jamb edges.
 - 1. Trim maximum of 3/4 inch (19 mm) off bottom edges.
 - 2. Trim fire-rated doors in strict compliance with fire rating limitations.
- E. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.
- F. Use machine tools to cut or drill for hardware.
- G. Coordinate installation of doors with installation of frames and hardware.
- H. Coordinate installation of glazing.
- I. Install door louvers plumb and level.

3.03 TOLERANCES

- A. Comply with specified quality standard for fit and clearance tolerances.
- B. Comply with specified quality standard for telegraphing, warp, and squareness.
- C. Maximum Undercut at Fire-Rated Doors: 3/4 inch (19.05 mm) clearance to non-combustible finish floor surface.

3.04 ADJUSTING

- A. Operation: Rehang or replace doors that do not swing or operate freely.
- B. Adjust doors for smooth and balanced door movement.
- C. Adjust closers for full closure.
- D. Restore finish on all edges of shop finished doors before installation, if fitting or machining is required on site.
- E. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if Work complies with requirements and shows no evidence of repair or refinishing.

3.05 SCHEDULE

- A. Refer to Door and Frame Schedule on the Drawings.

END OF SECTION

**SECTION 08 1433
STILE AND RAIL WOOD DOORS**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Wood doors, stile and rail design; non-fire rated.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 1. Coordinate the work with door opening construction, door frame and door hardware installation.

1.03 SUBMITTALS

- A. Action Submittals:
 1. Product Data: Indicate stile and rail core materials and construction; veneer species, type and characteristics.
 2. Shop Drawings: For stile and rail wood doors. Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data, including those for stiles, rails, panels, and moldings (sticking); and other pertinent data, including the following:
 - a. Dimensions of doors for factory fitting.
 - b. Locations and dimensions of mortises and holes for hardware.
 - c. Undercuts.
 - d. Doors to be factory finished and finish requirements.
 3. Samples: Submit two samples of door construction, 12 by 12 inch inch (300 by 300 mm) in size cut from top corner of door.
- B. Informational Submittals:
 1. Certificate: Submit labels and certificates required by quality assurance and quality control programs.
 2. Manufacturer's Installation Instructions: Indicate special installation instructions.
 3. Manufacturer's qualification statement.
 4. Installer's qualification statement.
 5. Warranty, executed in Owner's name.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.

1.05 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum 5 years of documented experience.
 1. Company with at least one project within past five years with value of woodwork within at least 20 percent of cost of woodwork for this project.
 2. Accredited participant in specified certification program prior to commencement of fabrication and throughout duration of project.

- B. Installer Qualifications: Company specializing in performing work of the type specified in this section, with not less than three years of documented experience.
- C. Quality Certification: Provide WI (CCP) inspection report and quality certification of completed work.
 - 1. Comply with WI (CCP) woodwork association quality certification service/program in accordance with requirements for work specified in this section: www.woodworkinstitute.com.
 - 2. Provide labels or certificates indicating that installed work will comply with AWMAC/WI (NAAWS) requirements for grade or grades specified.
 - 3. Provide designated labels on shop drawings as required by certification program.
 - 4. Provide designated labels on installed products as required by certification program.
 - 5. Submit certifications upon completion of installation that verifies this work is in compliance with specified requirements.

1.06 FIELD CONDITIONS

- A. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during remainder of construction period.
- B. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and HVAC system is operating and maintaining temperature between 60 deg F (15.5 deg C) and 90 deg F (32 deg C) and relative humidity between 25 and 55 percent during remainder of construction period.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Package, deliver, and store doors in accordance with quality standard specified.
- B. Protect doors with resilient packaging sealed with heat shrunk plastic; do not store in damp or wet areas or areas where sunlight might bleach veneer; seal top and bottom edges with tinted sealer if stored more than one week, and break seal on site to permit ventilation.

1.08 WARRANTY

- A. Interior Doors: Provide manufacturer's warranty for the life of the installation.
 - 1. Include coverage for delamination of veneer, warping beyond specified installation tolerances, defective materials, and telegraphing core construction.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Acceptable Manufacturers:
 - 1. Algoma Hardwoods, Inc.; : www.algomahardwoods.com.
 - 2. Marshfield DoorSystems, Inc.: www.marshfielddoors.com.
 - 3. TruStile Doors, LLC; www.trustile.com.
 - 4. VT Industries, Inc: www.vtindustries.com.
 - 5. Approved equal.

2.02 DOORS

- A. Quality Level: Custom Grade, Standard Duty performance, in accordance with AWMAC/WI (NAAWS).
- B. Interior Doors: 1-3/4 inches (44.45 mm) thick unless otherwise indicated; solid lumber construction; mortise and tenon joints. Transparent finish where indicated on drawings.

- C. Wood veneer facing with factory opaque finish as indicated on drawings.

2.03 DOOR FACINGS

- A. Materials for Opaque Finishes: Closed-grain wood veneer or other composite material.
- B. Interior Door Adhesive: Type II - Water Resistant.
- C. Adhesives: Only use adhesives and sealants that meet or do not exceed the VOC limits of the current requirements of South Coast Air Quality Management District (SCAQMD) Rule No. 1168 and Cal-GREEN Table 5.504.4.1 Adhesive VOC Limits.
 - 1. Current requirement refers to the date on which the materials are installed in the building.
 - 2. SCAQMD 1168 referenced in Section 01 8114 - Sustainable Design Requirements - CAL-Green is current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.

2.04 DOOR CONSTRUCTION

- A. Vertical Exposed Edge of Stiles: Of same species as veneer facing.
- B. Fit door edge trim to edge of stiles after applying veneer facing.
- C. Bond edge banding to cores.
- D. Panel Design: As indicated on Door Schedule.
- E. Factory machine doors for finish hardware in accordance with hardware requirements and dimensions. Do not machine for surface hardware.
- F. Factory fit doors to suit frame-opening sizes indicated, with the following uniform clearances and bevels unless otherwise indicated:
 - 1. Clearances: Provide 1/8 inch (3.17 mm) at heads, jambs, and between pairs of doors. Provide 1/2 inch (12.70 mm) from bottom of door to top of decorative floor finish or covering. Where threshold is shown or scheduled, provide not more than 3/8 inch (9.53 mm) from bottom of door to top of threshold.
 - 2. Bevel non-fire-rated doors 1/8 inch (3.17 mm) in 2 inches (50.8 mm) (3-1/2 degrees) at lock and hinge edges.
- G. Glazed Openings: Trim openings indicated for glazing with solid wood moldings, with one side removable. Miter wood moldings at corner joints.
- H. Factory install glazing in doors in compliance with quality standards specified, using manufacturer's standard elastomeric glazing sealant.

2.05 SHOP PRIMING

- A. Doors for Opaque Finish: Shop prime faces, all four edges, edges of cutouts, and mortises with one coat of wood primer specified in Section 09 9113 - Exterior Painting and Section 09 9123 - Interior Painting

2.06 ACCESSORIES

- A. Hollow Metal Door Frames: See Section 08 1113.
- B. Glazed Openings:
 - 1. Fully Tempered Glass: ASTM C1048.
- C. Door Hardware: See Section 08 7100 - Door Hardware.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify existing conditions before starting work.
- B. Verify that opening sizes and tolerances are acceptable.
 - 1. Verify that installed frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
 - 2. Reject doors with defects.
- C. Do not install doors in frame openings that are not plumb or are out of tolerance for size or alignment.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. Hardware: For installation, see Section 08 7100 - Door Hardware.
- B. Install doors in accordance with manufacturer's instructions and specified quality standards.
- C. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.
- D. Factory-Finished Doors: Do not field cut or trim; if fit or clearance is not correct, replace door.
- E. Trim door height by cutting bottom edges to a maximum of 3/4 inch (19 mm).
- F. Machine cut for hardware.

3.03 TOLERANCES

- A. Comply with specified quality standard for fit, clearance, and joinery tolerances.
- B. Maximum Width Distortion (Cup): 1/8 inch (3.2 mm) measured with straight edge or taut string, edge to edge, over an imaginary 36 by 84 inch (915 by 2130 mm) surface area.

3.04 ADJUSTING

- A. Adjust doors for smooth and balanced door movement.
- B. Operation: Rehang or replace doors that do not swing or operate freely.
- C. Adjust closers for full closure.

3.05 SCHEDULE

- A. Refer to Door and Frame Schedule on the Drawings.

END OF SECTION

**SECTION 08 3100
ACCESS DOORS AND PANELS**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Wall and ceiling mounted access units.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination: Coordinate installation with work of other trades, and obtain information on door sizes and exact locations from other trades.
 - 1. The number of access panels is to be limited as much as possible. Review and coordinated in MEP coordination meeting at beginning of construction.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Provide sizes, types, finishes, hardware, scheduled locations, and details of adjoining work.
 - 2. Shop Drawings: Indicate exact position of each access door and/or panel unit.
- B. Informational Submittals:
 - 1. Manufacturer's Installation Instructions: Indicate installation requirements and rough-in dimensions.
 - 2. Project Record Documents: Record actual locations of each access unit.

1.04 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 - 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 - 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.
 - 4. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
 - 5. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.
 - 6. A5.406.1, .2 and .3: Materials selected for longevity, reduced maintenance and recyclability.

1.05 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years documented experience.
- B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years documented experience.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Basis-of-Design Manufacturers:
 - 1. Bauco Access Panel Solutions Inc: www.accesspanelsolutions.com.
 - 2. Nystrom: www.nystrom.com.
 - 3. Other Acceptable Manufacturers:
 - a. Acudor Products Inc.: www.acudor.com.
 - b. Babcock-Davis.: www.babcockdavis.com.
 - c. Bauco Access Panel Solutions Inc: www.accesspanelsolutions.com.

- d. J. L. Industries: www.jlindustries.com.
- e. Milcor by Commercial Products Group of Hart & Cooley, Inc.: www.milcorinc.com.

2.02 ACCESS DOORS AND PANELS ASSEMBLIES

- A. Interior Walls and Ceilings, Unless Otherwise Indicated:
 - 1. Location: As indicated on drawings.
 - 2. Panel Material: Steel.
 - 3. Frame Thickness: 16 gage, 0.0508 inch (1.9 mm).
 - 4. Door Thickness: 14 gage, 0.079 inch (2.01 mm).
 - 5. Hinge: Continuous.
 - 6. Finish: Factory prime.
 - 7. Size:
 - a. Hand Access: 12 by 12 inches (305 by 305 mm).
 - b. Partial Body Access: 18 inch (457.20 mm) by 18 inch (457.20 mm).
 - c. Full Body Access: 24 inch (610 mm) by 24 inch (610 mm).
 - 8. Low Security Area Lock: Mortise preparation.
 - 9. Latch: Tool-operated spring or cam lock; no handle.
 - 10. Wall Mounting Criteria: Provide surface-mounted face frame and door surface flush with frame surface.
 - 11. Finish: Powder coat.
 - a. Color: Gray.
 - 12. Acceptable Products:
 - a. Acudor Products Inc., UF-5000.
 - b. Milcor; Commercial Products Group of Hart & Cooley, Inc.; DW.
 - c. Nystrom; NT series.
- B. Fire Rated Walls and Ceilings: Refer to Drawings for fire ratings.
 - 1. Material: Steel.
 - 2. Finish: Factory prime.
 - 3. Size:
 - a. Hand Access: 12 by 12 inches (305 by 305 mm).
 - b. Partial Body Access: 18 inch (457.20 mm) by 18 inch (457.20 mm).
 - c. Full Body Access: 24 inch (610 mm) by 24 inch (610 mm).
 - 4. Hinge: Continuous.
 - 5. Insulated, double skin door panel.
 - 6. Low Security Area Lock: Mortise preparation.
 - 7. Latch: Tool-operated spring or cam lock; no handle.
 - 8. Fire-Resistance Rating: Not less than that of adjacent construction.
 - 9. Temperature-Rise Rating: 250 deg F (139 deg C) at the end of 30 minutes.
 - 10. Hardware: Spanner head cam latch, cylinder lock and key and tamper resistant screws for all exposed screws.
 - 11. Wall Mounting Criteria: Provide surface-mounted face frame and door surface flush with frame surface.
 - 12. Finish: Powder coat.
 - a. Color: Gray.
 - 13. Acceptable Products:
 - a. Acudor Products Inc., FW-5015.
 - b. Milcor; Commercial Products Group of Hart & Cooley, Inc.; UFR.
 - c. Nystrom; IT Series.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

- B. Verify that rough openings are correctly sized and located.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Clean surfaces thoroughly prior to proceeding with this work.
- B. Prepare surfaces using methods recommended by manufacturer for applicable substrates in accordance with project conditions.

3.03 INSTALLATION

- A. Install units in accordance with manufacturer's instructions.
- B. Install frames plumb and level in openings, and secure units rigidly in place.
- C. Position units to provide convenient access to concealed equipment when necessary.
- D. Adjust hardware and panels for proper operation.

3.04 ADJUSTING

- A. Adjust doors and hardware, after installation, for proper operation.
- B. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

END OF SECTION

SECTION 08 3223

SLIDING AND FOLDING GLAZED WALLS AND DOORS

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Factory fabricated sliding glazed door/wall with top and bottom rails and operating hardware
 - 1. Aluminum panel frame system.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate installation with placement of vapor seal at frame perimeter.
 - 2. Coordinate installation with placement of air seal at frame perimeter.
 - 3. Coordinate installation of thermal insulation at shim spaces at frame perimeter.
- B. Preinstallation Meeting: Conduct a preinstallation meeting one week before starting work of this Section; require attendance by all affected installers.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Provide information on dimensions, frame and sill construction, glazing, and hardware.
 - 2. Test Report: Provide independent agency test report showing compliance with specified performance requirements.
 - 3. Shop Drawings: Include plans, elevations, sections, full-size details, and attachments to other work.
 - a. Submit shop drawings created by storefront manufacturer covering fabrication, installation, and finish of specified systems.
 - b. Include following:
 - 1) Fully dimensioned plans and elevations with detail coordination keys.
 - 2) Locations of exposed fasteners and joints.
 - c. Provide Detailed Drawings of:
 - 1) Composite members.
 - 2) Joint connections for framing systems and for entrance doors.
 - 3) Anchorage.
 - 4) System reinforcements.
 - 5) Drainage patterns and sill extrusions.
 - 6) Expansion and contraction provisions.
 - 7) Hardware, including locations, mounting heights, reinforcements and special installation provisions.
 - 8) Glazing methods and accessories.
 - 9) Internal sealant requirements and recommended types.
 - 10) Thermal breaks.
 - d. Schedule of finishes.
 - e. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
 - 4. Samples: Submit three samples, 12 by 12 inch (305 by 305 mm) in size illustrating typical frame corner construction, accessories, and finishes.
 - 5. Submit three samples of door hardware.
- B. Informational Submittals:
 - 1. Manufacturer's Installation Instructions: Include complete preparation, installation, and cleaning requirements.

2. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.
3. Manufacturer's Certificate: Certify that the products supplied meet or exceed the specified requirements.
4. Design Data: Provide framing member structural and physical characteristics, engineering calculations, and dimensional limitations.
5. Hardware Schedule: Complete itemization of each item of hardware to be provided for each door, cross-referenced to door identification numbers in Contract Documents.
6. Report of field testing for water leakage.
7. Designer Qualifications Statement.
8. Manufacturer Qualifications Statement.
9. Installer Qualifications Statement.
10. Delegated-Design Submittal: For aluminum-framed storefronts indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.04 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green for the following measures:
 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings

1.05 QUALITY ASSURANCE

- A. Single Source Responsibility:
 1. To ensure quality of appearance and performance, obtain materials for systems from either a single manufacturer or from manufacturer approved by systems manufacturer.
 2. Glass, glazing, and perimeter sealants for entrance and storefront systems are required as work of this Section.
- B. Designer Qualifications: Design structural support framing components under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.
- C. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with not less than three years of documented experience.
- D. Installer Qualifications: Company specializing in installation of products of the type specified, with not fewer than three years of documented experience.
- E. Testing Agency Qualifications: Independent firm specializing in performing testing of type specified in this section.
- F. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
 1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.
- G. Certifications:
 1. Submit manufacturer's certification that products furnished for Project meet or exceed specified requirements.
 2. Submit manufacturer's certification stating that installed system is in compliance with specified requirements.

3. Submit manufacturer's certificate stating that sealed insulating glass meet or exceed specified requirements.
4. Submit coating manufacturer's certification stating fluoropolymer coating formulation is fluorosurfactant free (FSF).
5. Engineering certifications. Include statement attesting components, including frames and glass, will withstand design wind loads and that maximum allowable deflections will not be exceeded.
6. Submit certification stating acceptance of installation procedures signed by glass manufacturer, and systems manufacturer.

1.06 MOCK-UP

- A. Comply with general mock-up requirements specified in Section 01 4000.
- B. Mock-up: Provide first installed unit as mock-up including components occurring on project. Assemble to illustrate component assembly including glazing materials, weep drainage system, attachments, anchors, and perimeter sealant.
 1. Locate on-site where directed. Mock-up may remain as part of the Work.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Deliver products to project site and store in manufacturer's protective cartons until openings are ready for installation.
- B. Protect finished surfaces with wrapping paper or strippable coating during installation. Do not use adhesive papers or sprayed coatings that bond to substrate when exposed to sunlight or weather.

1.08 FIELD CONDITIONS

- A. Do not install sealants when ambient temperature is less than 40 degrees F (5 degrees C).
- B. Maintain this minimum temperature during and 24 hours after installation of sealants.

1.09 WARRANTY

- A. Refer to Section 01 7800 - Closeout Submittals, for additional warranty requirements.
- B. Correct defective Work within a 10 year period after Date of Substantial Completion.
- C. Provide 10 year manufacturer warranty against failure of glass seal on insulating glass units, including interpane dusting or misting. Include provision for replacement of failed units.
- D. Provide 10 year manufacturer warranty against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, or flaking.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Basis of Design Product - Sliding/Folding Glazed Doors/Walls:
 1. NanaWall Systems, Inc; NanaWall SL84 : www.nanawall.com.
 2. Other Acceptable Manufacturers:
 - a. Arcadia, Inc: www.arcadiainc.com.
 - b. Fleetwood Windows & Doors: www.fleetwoodusa.net
 - c. LaCantina Doors: www.lacantindoors.com
 - d. Approved equal.

2.02 PERFORMANCE REQUIREMENTS

- A. Performance Requirements: For units mounted in exterior walls and that require weather performance, provide systems that comply with the following:

AE3 Partners

DSA Application No. 01-119166
September 7, 2021

Increment 1
08 3223 - 3

Merritt College
Child Development Center
SLIDING AND FOLDING GLAZED WALLS
AND DOORS

1. Structural Performance: Design to withstand design wind loads without damage or permanent set, when tested in accordance with ASTM E330/E330M.
2. Member Deflection: Limit member deflection to flexure limit of glass in any direction, with full recovery of glazing materials.
3. Air Infiltration per ASTM E283:
 - a. 0.15 cfm/ft² (0.76 L/s/m²) at a static air pressure difference of 6.24 psf (300 Pa)
4. Water Penetration per ASTM E331 and ASTM E547: No uncontrolled water leakage at a static test pressure in:
 - a. No uncontrolled water leakage at a static test pressure of 9 psf (450 Pa).

2.03 SLIDING AND FOLDING GLAZED DOORS/WALLS

- A. Aluminum Sliding/Folding Glazed Doors/Walls: Extruded aluminum sliding/folding and operable panel frames, thermally broken, factory fabricated; complete with, flashings, support and anchorage devices, and glazing.
 1. Configuration: As shown on Drawings.
 2. Support System: Floor track supported with upper guide track.
 3. Standard Sill: ADA compliant flush sill (thermally broken) with high heel protector insert, with sealant, shims and fasteners at necessary locations.
 - a. Finish: Clear anodized.
 4. Top Rail Height: 2-5/8 inch (67 mm), square edge.
 5. Vertical Stile Width: 3-7/8 inch (99 mm), square edge.
 6. Bottom Rail Height: 10 inch (254 mm), square edge.
 7. Aluminum Frames: Factory finished, thermally broken; manufacturer's standard corner construction.
 - a. Frame Depth: 3-9/16 inch (91 mm).
 - b. Head Track Width: 3-7/8 inch (99 mm) with anti-tilt feature.
 - c. Side Jamb Width: 2-13/16 inch (72 mm)
 8. Drainage: Provide drainage to exterior for moisture entering joints and glazing spaces and for condensation occurring within frame construction.
 9. Glazing Insert: Snap-in type for 1 inch infill.
 10. Glass Stops: Same material and color as frame.
 11. Aluminum Frame Finish: PVDF coating in accordance with AAMA 2605.
 - a. Color: Match windows.
 12. Basis-of-Design Product:
 - a. Nana Wall Systems, Inc.; NanaWall SL84.

2.04 FACTORY ASSEMBLY

- A. Factory assemble operable sliding and folding panel frames as single unit, including head, jambs, and bottom sections; provide concealed fasteners.
 1. Sizes: Allow for tolerances of rough framed openings, clearances, and shims at perimeter of assemblies.
 2. Joints and Corners: Flush, hairline and waterproof, accurately fitted and secured; prepared to receive anchors; fasteners and attachments concealed from view; reinforced as required for imposed loads.
 3. Glazing: Factory installed.

2.05 COMPONENTS

- A. Glazing: As specified in Section 08 8000 - Glazing.
- B. Sliding/Folding Hardware: Provide manufacturer's standard hardware including carriages with sealed ball bearing rollers, and top or bottom tracks.
 1. Lower Running Carriage Carrying Capacity: 240 lb. (110 kg). Lower running carriage provided with two vertical stainless steel wheels with double ball bearings and two horizontal polyamide wheels.

2. Vertical wheels with Gothic arch feature to ride on top of stainless steel guide track covers over the full length of the sill track. Wheels riding on aluminum surfaces NOT acceptable.
 3. Upper guide carriage with two horizontal polyamide guiding wheels. For configurations with pairs of panels that can slide left or right, additional concealed, additional vertical tilt protection hardware.
 4. Hinges: Clear anodized aluminum with stainless steel security hinge pins and set-screws. Additional patent pending TwinX reinforcements between panels for a tight seal.
- C. Locking: US mortise cylinder that can accommodate 5 pin, SFIC, FSIC or LFIC cores.
 - D. Lock Cylinders: As specified in Section 08 7100 - Door Hardware.
 - E. Levers: as specified in Section 08 7100 - Door Hardware.
 - F. Weatherstripping: Manufacturer's standard, continuous and replaceable; provide between exterior doors, panels, frame and track.
 1. Hard-backed polypile weatherstrip installed in frame and interlockers and meeting stiles of bi-parting doors. Sliding panel supplied with double sweep at sill.
 - G. Anchors: Hot-dipped galvanized or stainless steel in accordance with project and manufacturer's installation requirements.
 - H. Sealant for Setting Sills and End Dams: Elastomeric sealant acceptable to door manufacturer.
 - I. Sealant and Backing Materials: As specified in Section 07 9200 - Joint Sealants.
 - J. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M, Type I.

2.06 MATERIALS

- A. Adhesives & Sealants: Only use adhesives and sealants in the interior of the building that meet or do not exceed the VOC limits of the CURRENT requirements of South Coast Air Quality Management District (SCAQMD) Rule No. 1168, CAL-Green Table 5.504.4.1 Adhesive VOC Limit, and CAL-Green Table 5.504.4.2 Sealant VOC Limit requirements.
 1. Current requirement refers to the date on which the materials are installed in the building.
 2. A copy of SCAQMD 1168 is referenced in Section 018114 that was current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.
- B. Extruded Aluminum: ASTM B221/ASTM B221M.
- C. Sheet Aluminum: ASTM B209/ASTM B209M.
- D. Structural Steel Sections: ASTM A36/A36M; shop primed.
- E. Fasteners: Stainless steel.
- F. Exposed Flashings: Aluminum sheet, 20 gage, 0.032 inch (0.81 mm) minimum thickness; finish to match framing members.
- G. Concealed Flashings: Stainless steel, 26 gage, 0.0187 inch (0.48 mm) minimum thickness.
- H. Perimeter Sealant: As specified in Section 07 9200 - Joint Sealants.
- I. Glazing Gaskets: Type to suit application to achieve weather, moisture, and air infiltration requirements.
- J. Glazing and Accessories: As specified in Section - 08 8000 - Glazing.

2.07 FABRICATION

- A. Fabricate sliding/folding doors/walls in sizes indicated. Include a complete system for assembling components and anchoring doors.

AE3 Partners

DSA Application No. 01-119166
September 7, 2021

Increment 1
08 3223 - 5

Merritt College
Child Development Center
SLIDING AND FOLDING GLAZED WALLS
AND DOORS

- B. Fabricate sliding/folding doors/walls that are reglazable without dismantling panel framing.
- C. Stiles and Rails: Tubular sections accurately joined, flush and hairline at corners with heavy concealed reinforcement brackets secured with machine bolts welded. Exposed screws not permitted.
- D. Prepare internal reinforcement for hardware.
- E. Weather Stripping: Provide operable panels with a double row of sliding weather stripping in horizontal rails and single- or double-row weather stripping in meeting or jamb stiles. Provide compression-type weather stripping at the perimeter of each movable panel where sliding-type weather stripping is not appropriate.
 - 1. Provide weather stripping locked into extruded grooves in door panels or frames.
- F. Submit custom hardware templates and physical hardware prior to any fabrication.

2.08 FINISHES

- A. Superior Performance Organic Coating System: AAMA 2605 multiple coat, thermally cured polyvinylidene fluoride system.
 - 1. Polyvinylidene fluoride (PVDF) multi-coat thermoplastic fluoropolymer coating system, including minimum 70 percent PVDF color topcoat and minimum total dry film thickness of 0.9 mil (0.023 mm); color and gloss as indicated on drawings.
 - 2. Color: Match storefront system.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that openings are ready to receive work and opening dimensions and clearances are as indicated on Drawings.
- B. Verify that overhead structural supports are adequate and deflection is in compliance with manufacturer's installation requirements.

3.02 PREPARATION

- A. Prepare opening to permit correct installation of door unit in coordination with air and vapor seal.
- B. Apply two coats of bituminous paint with minimum of 16 mils, 0.016 inch (0.406 mm) dry film thickness (DFT), or as recommended by coating manufacturer, on concealed aluminum surfaces in contact with cementitious or dissimilar materials.
 - 1. Allow bituminous paint to dry prior to installation of aluminum component.
 - 2. Dipping of aluminum into bituminous paint is not permitted.

3.03 INSTALLATION

- A. Install assemblies in accordance with manufacturer's instructions.
- B. Install exterior doors in accordance with ASTM E2112.
- C. Attach frame and shims to perimeter opening to accommodate construction tolerances and other irregularities.
- D. Use anchorage devices to securely fasten assembly to adjacent construction without distortion or imposed stresses.
- E. Set exterior sills in full bed of sealant, with end dams and non-blocking sill drainage openings.
- F. Install shims at exterior wall sill locations and ensure water dams are not created and sill weep openings are not blocked due to shim placement and orientation.

- G. Provide sealed end dams at exterior wall locations.
- H. Install perimeter sealant in accordance with requirements of Section 07 9200 - Joint Sealants.
- I. Install perimeter trim.

3.04 TOLERANCES

- A. Maintain dimensional tolerances and alignment with adjacent work.
- B. Maximum Variation from Plumb: 1/16 inch (1.5 mm).
- C. Maximum Variation from Level: 1/16 inch (1.5 mm).
- D. Longitudinal or Diagonal Warp: Plus or minus 1/8 inch (3 mm) from 10 feet (3.05 m) straight edge.

3.05 ADJUSTING

- A. Adjust hardware for smooth operation.
- B. Lubricate hardware and moving parts.
- C. Adjust operating panels and screens to provide a tight fit at contact points and weather stripping for smooth operation, without binding, and a weathertight closure.
- D. Adjust hardware for proper alignment, smooth operation, and proper latching without unnecessary force or excessive clearance.
- E. Clean aluminum surfaces immediately after installing sliding doors. Comply with manufacturer's written recommendations for final cleaning and maintenance. Avoid damaging protective coatings and finishes. Remove nonpermanent labels, and clean surfaces.
- F. Refinish or replace sliding storefronts with damaged finishes.
- G. Replace damaged components.

3.06 CLEANING

- A. Remove protective material from factory finished surfaces.
- B. Remove labels and visible markings.
- C. Wash surfaces by method recommended and acceptable to sealant and window manufacturer; rinse and wipe surfaces clean.
- D. Upon completion of installation, thoroughly clean door aluminum surfaces in accordance with AAMA 609 & 610.
- E. Remove excess sealant by moderate use of mineral spirits or other solvent acceptable to sealant manufacturer.

3.07 PROTECTION

- A. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION

AE3 Partners
DSA Application No. 01-119166
September 7, 2021

Increment 1
08 3223 - 8

Merritt College
Child Development Center
SLIDING AND FOLDING GLAZED WALLS
AND DOORS

SECTION 08 4313
ALUMINUM-FRAMED STOREFRONTS

PART 1 GENERAL**1.01 SECTION INCLUDES**

- A. Aluminum-framed storefront, with vision glass.
- B. Sun shades.
- C. Design engineering of framing system and load-bearing connections to building structural frame system.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate attachment and seal of perimeter air and vapor barrier materials.
 - 2. Coordinate with installation of other components that comprise the exterior enclosure.
- B. Preinstallation Meeting: Conduct a preinstallation meeting one week before starting work of this Section; require attendance by all affected installers.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Provide component dimensions, describe components within assembly, anchorage and fasteners, glass and infill, and internal drainage details.
 - 2. Shop Drawings: For aluminum-framed storefronts. Include plans, elevations, sections, full-size details, and attachments to other work.
 - a. Submit shop drawings created by storefront manufacturer covering fabrication, installation, and finish of specified systems.
 - b. Include following:
 - 1) Fully dimensioned plans and elevations with detail coordination keys.
 - 2) Locations of exposed fasteners and joints.
 - c. Provide Detailed Drawings of:
 - 1) Composite members.
 - 2) Joint connections for framing systems and for entrance doors.
 - 3) Anchorage.
 - 4) System reinforcements.
 - 5) Drainage patterns and sill extrusions.
 - 6) Expansion and contraction provisions.
 - 7) Hardware, including locations, mounting heights, reinforcements and special installation provisions.
 - 8) Glazing methods and accessories.
 - 9) Internal sealant requirements and recommended types.
 - 10) Thermal breaks.
 - d. Schedule of finishes.
 - e. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
 - 3. Samples: Submit three samples 12 by 12 inches (305 by 305 mm) in size illustrating finished aluminum surface, glass, glazing materials.
- B. Informational Submittals:
 - 1. Manufacturer's Certificate: Certify that the products supplied meet or exceed the specified requirements.
 - 2. Design Data: Provide framing member structural and physical characteristics, engineering calculations, and dimensional limitations.

3. Manufacturer's Certificate: Certify that the products supplied meet or exceed the specified requirements.
4. Field Quality Control Submittals: Report of field testing for water penetration and air leakage.
5. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.
6. Delegated-Design Submittal: For aluminum-framed storefronts indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green for the following measures:
 1. 5.504.4.1 Adhesives and sealants.
 2. 5.504.4.3 Paints and coatings.
 3. 5.504.4.3.1 Aerosol paints and coatings

1.05 QUALITY ASSURANCE

- A. Single Source Responsibility:
 1. To ensure quality of appearance and performance, obtain materials for systems from either a single manufacturer or from manufacturer approved by systems manufacturer.
 2. Glass, glazing, and perimeter sealants for entrance and storefront systems are required as work of this Section.
- B. Designer Qualifications: Design structural support framing components under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.
- C. Installer Qualifications: Company specializing in the installation of aluminum glazing systems with minimum three years of documented experience.
- D. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
 1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.
- E. Certifications:
 1. Submit manufacturer's certification that products furnished for Project meet or exceed specified requirements.
 2. Submit manufacturer's certification stating that installed system is in compliance with specified requirements.
 3. Submit manufacturer's certificate stating that sealed insulating glass meet or exceed specified requirements.
 4. Submit coating manufacturer's certification stating fluoropolymer coating formulation is fluorosurfactant free (FSF).
 5. Engineering certifications. Include statement attesting components, including frames and glass, will withstand design wind loads and that maximum allowable deflections will not be exceeded.
 6. Submit certification stating acceptance of installation procedures signed by glass manufacturer, and systems manufacturer.

1.06 MOCK-UP

- A. Comply with general mock-up requirements specified in Section 01 4000 - Quality Requirements.
- B. Mock-up: Provide mock-up for integrated exterior mockup including all components occurring on project. Assemble to illustrate component assembly including glazing materials, weep drainage system, attachments, anchors, and perimeter sealant.
 - 1. Locate on-site where directed. Mock-up may remain as part of the Work.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Handle products of this Section in accordance with AAMA CW-10.
- B. Protect finished aluminum surfaces with wrapping. Do not use adhesive papers or sprayed coatings that bond to aluminum when exposed to sunlight or weather.

1.08 FIELD CONDITIONS

- A. Do not install sealants when ambient temperature is less than 40 degrees F (5 degrees C). Maintain this minimum temperature during and 48 hours after installation.

1.09 WARRANTY

- A. Special Warranty: Manufacturer agrees to repair or replace components of aluminum-framed storefronts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
- B. Failures include, but are not limited to, the following:
 - 1. Structural failures, including, but not limited to, excessive deflection.
 - 2. Noise or vibration created by wind and thermal and structural movements.
 - 3. Water penetration through fixed glazing and framing areas.
 - 4. Failure of operating components.
- C. Warranty Period: 5 years from date of Substantial Completion.
- D. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.
 - 1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
 - b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
 - 2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS:

- A. Aluminum-Framed Storefront: Factory fabricated, factory finished aluminum framing members with infill, and related flashings, anchorage and attachment devices.
 - 1. Glazing Rabbet: For 1 inch (25 mm) insulating glazing.
 - 2. Glazing Position: Centered (front to back)
 - 3. Factory finish all surfaces that will be exposed in completed assemblies.
 - a. Touch-up surfaces cut during fabrication so that no natural aluminum is visible in completed assemblies, including joint edges.
 - b. Coat concealed metal surfaces that will be in contact with cementitious materials or dissimilar metals with bituminous paint.
 - 4. Fabrication: Joints and corners flush, hairline, and weatherproof, accurately fitted and secured; prepared to receive anchors and hardware; fasteners and attachments concealed from view; reinforced as required for imposed loads.

- a. Fabricate individual system frame members, comp heads, sill pans, and other system components in single, continuous pieces; splices are not permitted unless specifically required by project installation conditions.
 5. Construction: Eliminate noises caused by wind and thermal movement, prevent vibration harmonics, and prevent "stack effect" in internal spaces.
 6. System Internal Drainage: Drain to the exterior by means of a weep drainage network any water entering joints, condensation occurring in glazing channel, and migrating moisture occurring within system.
 7. Expansion/Contraction: Provide for expansion and contraction within system components caused by cycling temperature range of 170 degrees F (95 degrees C) over a 12 hour period without causing detrimental effect to system components, anchorages, and other building elements.
 8. Movement: Allow for movement between storefront and adjacent construction, without damage to components or deterioration of seals.
 9. Perimeter Clearance: Minimize space between framing members and adjacent construction while allowing expected movement.
 10. Air and Vapor Seal: Maintain continuous air barrier and vapor retarder throughout assembly, primarily in line with inside pane of glazing and heel bead of glazing compound.
- B. Design and size components to withstand the specified load requirements without damage or permanent set, when tested in accordance with ASTM E330/E330M, using loads 1.5 times the design wind loads and 10 second duration of maximum load.
1. Manufacturer is responsible for designing system, including anchorage to structural system and necessary modifications to meet specified requirements and maintain visual design concepts.
 2. Drawings are diagrammatic and do not purport to identify nor solve problems of thermal or structural movement, glazing, anchorage, or moisture disposal.
 3. Requirements shown by details are intended to establish basic dimension of units, sight lines and profiles of members.
 4. Provide concealed fastening wherever possible.
 5. Provide entrance and storefront systems, including necessary modifications, to meet specified requirements and maintaining visual design concepts.
 6. Attachment considerations are to take into account site peculiarities and expansion and contraction movements so there is no possibility of loosening, weakening or fracturing connection between units and building structure or between units themselves.
 7. Anchors, fasteners and braces shall be structurally stressed not more than 50 percent of allowable stress when maximum loads are applied.
 8. Provide for expansion and contraction due to structural movement without detriment to appearance or performance.
 9. Assemblies shall be free from rattles, wind whistles and noise due to thermal and structural movement and wind pressure.
 10. Comply with CPSC 16 CFR 1201 and ANSI Z97.1 for safety requirements of glazing materials.
 11. Anticipated Live Load Interior Beam Deflections: 1/360 of beam length.
 12. Design Wind and Seismic Loads: Comply with requirements of ASCE 7.
 13. The out-of-plane deflection limit for window wall framing supporting individual panes of glass shall be in accordance with CBC Section 2403.3 (L/175, 3/4" maximum).
 14. Out-of-Plane Deflection Limit for Window Wall Framing Supporting Multiple Panes of Glass: Design in accordance with American Architectural Manufacturers Association (AAMA) Technical Information Report (TIR) A11, "Maximum Allowable Deflection of Framing Systems for Building Cladding Components at Design Wind Loads" which prescribes design deflection limits of L/175 for a clear span "L" up to 13 feet 6 inches and L/240 + 1/4 inch for spans greater than 13 feet 6 inches, but equal to or less than 40 feet.
 15. Provide reinforced mullion sections as may be required to comply with specified design requirements, for manufacturer's specified system.

- C. Water Penetration Resistance: No uncontrolled water on interior face, when tested in accordance with ASTM E331 at pressure differential of 10 lbf/sq ft (480 Pa), minimum.
- D. Air Leakage: Maximum of 0.06 cu ft/min/sq ft (0.3 L/s/sq m) of wall area, when tested in accordance with ASTM E283 at 6.24 pounds per square foot (300 Pa) pressure differential across assembly.
- E. Condensation Resistance Factor of Framing: 50, minimum, measured in accordance with AAMA 1503.

2.02 STOREFRONT SYSTEM

- A. Aluminum Framing Members SF-1: Tubular aluminum sections, drainage holes and internal weep drainage system.
 - 1. Construction: Thermally broken.
 - 2. Glazing System: Retained mechanically with gaskets on four sides
 - 3. Glazing Position:
 - a. Centered (front to back).
 - 4. Glazing Rabbet: 1 inch insulating at interior.
 - 5. Glazing Stops: Flush.
 - 6. Cross-Section: 1-3/4 inches wide by 4-1/2 inches deep (44.5 mm wide by 114.3 mm deep) nominal dimension.
 - 7. Reinforced Mullions: As required or recommended by manufacturer using manufacturer's standard profile of extruded aluminum with internal reinforcement of steel shaped structural section.
 - 8. Basis of Design Product:
 - a. Kawneer North America; Trifab VG 451 (Non-Thermal) : www.kawneer.com.
 - b. Approved equal.
- B. Aluminum Framing Members SF-2: Tubular aluminum sections, drainage holes and internal weep drainage system.
 - 1. Construction: Thermally broken.
 - 2. Glazing System: Retained mechanically with gaskets on four sides.
 - 3. Glazing Rabbet: 1 inch insulating
 - 4. Glazing Stops: Flush.
 - 5. Cross-Section: 2 wide by 6 inches deep (50.8 by 152.4 mm) nominal dimension.
 - 6. Reinforced Mullions: As required or recommended by manufacturer using manufacturer's standard profile of extruded aluminum with internal reinforcement of steel shaped structural section.
 - 7. Structurally Reinforced Members: Extruded aluminum with internal reinforcement of structural steel member.
 - 8. Basis of Design Product:
 - 9. Kawneer North America; 601T Thermal Framing System: www.kawneer.com.
- C. Aluminum Framing Members SF-3: Tubular aluminum sections, drainage holes and internal weep drainage system.
 - 1. Construction: Nonthermal.
 - 2. Glazing System: Retained mechanically with gaskets on four sides.
 - 3. Glazing Rabbet: 1/4 inch monolithic
 - 4. Glazing Stops: Flush.
 - 5. Cross-Section: 2 wide by 6 inches deep (50.8 by 152.4 mm) nominal dimension.
 - 6. Reinforced Mullions: As required or recommended by manufacturer using manufacturer's standard profile of extruded aluminum with internal reinforcement of steel shaped structural section.
 - 7. Structurally Reinforced Members: Extruded aluminum with internal reinforcement of structural steel member.
 - 8. Basis of Design Product:

9. Kawneer North America; 601 Non-Thermal Framing System: www.kawneer.com.
- D. Aluminum Framing Members SF-4: Tubular aluminum sections, drainage holes and internal weep drainage system.
1. Construction: Nonthermal.
 2. Glazing System: Retained mechanically with gaskets on four sides.
 3. Glazing Rabbet: 3/8 inch (10 mm).
 4. Glazing Stops: Flush.
 5. Cross-Section: 1-3/4 inches wide by 4 inches deep (44.5 mm wide by 101.6 mm deep) nominal dimension.
 6. Reinforced Mullions: As required or recommended by manufacturer using manufacturer's standard profile of extruded aluminum with internal reinforcement of steel shaped structural section.
 7. Structurally Reinforced Members: Extruded aluminum with internal reinforcement of structural steel member.
 8. Basis of Design Product:
 9. Kawneer North America; Trifab 400 Framing System (Non-Thermal): www.kawneer.com.
- E. Glazing: As specified in Section 08 8000 - Glazing.
- F. Swing Doors: Glazed aluminum, thermally broken.
1. Wide style.
 - a. Thickness: 1-3/4 inches (43 mm).
 - b. Top Rail: 5 inches (127 mm) wide.
 - c. Vertical Stiles: 5 inches (127.00 mm) wide.
 - d. Bottom Rail: 10 inches (254 mm) wide.
 - e. Glazing Rabbet: 1/4 inch monolithic
 - f. Glazing Stops: Square.
 - g. Finish: Same as storefront..
 - h. Design exterior doors for one inch insulating glass units.
 - i. Basis of Design Product:
 - 1) Kawneer North America; 500.
 - 2) Approved equal.
- G. Operable Sash: Aluminum project-out awning; finished to match storefront; turn handle latch with manufacturer's standard insect screen.
1. Class: AW-PG.
 2. Grade: 90AP
 3. Frame Depth: 2-1/4 inch (57.15 mm).
 4. Hardware:
 - a. Locking:
 - 1) Cast white bronze cam locks.
 - b. Hinging:
 - 1) 4-Bar hinges.
 - c. Limit Stops: Type approved by Authorities Having Jurisdiction and Owner. Limit opening to 4 inches maximum.
 5. Maximum opening and closing force not to exceed 5 lbs.
 6. Insect Screens: Extruded aluminum frame with mitered and reinforced corners; screen mesh taut and secure to frame; secured to window with adjustable hardware allowing screen removal without use of tools.
 - a. Hardware: Spring loaded steel pins; four per screen unit.
 - b. Screen Mesh: Aluminum, window manufacturer's standard mesh.
 - c. Frame Finish: Same as frame and sash.
 7. Basis of Design Product:
 - a. Kawneer North America; NX 3500.
 - b. Approved equal.

2.03 MATERIALS

- A. Adhesives & Sealants: Only use adhesives and sealants in the interior of the building that meet or do not exceed the VOC limits of the CURRENT requirements of South Coast Air Quality Management District SCAQMD 1168, CAL-Green Table 5.504.4.1 Adhesive VOC Limit, and CAL-Green Table 5.504.4.2 Sealant VOC Limit requirements.
 - 1. Current requirement refers to the date on which the materials are installed in the building.
 - 2. A copy of SCAQMD 1168 is referenced in Section 01 8114 that was current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.
- B. Extruded Aluminum: ASTM B221 (ASTM B221M).
- C. Sheet Aluminum: ASTM B209 (ASTM B209M).
- D. Structural Steel Sections: ASTM A36/A36M; shop primed.
- E. Fasteners: Stainless steel.
- F. Exposed Flashings: Aluminum sheet, 20 gauge, 0.032 inch (0.81 mm) minimum thickness; finish to match framing members.
- G. Concealed Flashings: Stainless steel, 26 gauge, 0.0187 inch (0.48 mm) minimum thickness.
- H. Sill Flashing Sealant: Elastomeric, silicone or polyurethane, compatible with flashing material.
- I. Perimeter Sealant: Type specified in Section 07 9200 - Joint Sealants.
- J. Glazing Gaskets: Type to suit application to achieve weather, moisture, and air infiltration requirements.
- K. Glazing Accessories: As specified in Section - 08 8000 - Glazing.
- L. Shop and Touch-Up Primer for Steel Components: Zinc oxide, alkyd, linRefer tod oil primer appropriate for use over hand cleaned steel.

2.04 SUN CONTROL DEVICES

- A. Aluminum Sun Shades: Shop fabricated, shop finished, extruded aluminum outriggers, louvers, and fascia, free of defects impairing strength, durability or appearance.
 - 1. Configuration: As indicated on Drawings.
 - 2. Blade Type: Planar.
 - 3. Outrigger Shape: Straight.
 - 4. Fascia: Bullnose.
 - 5. Size: As indicated on Drawings.
 - 6. Extension Length: 30 inches (762 mm).
 - 7. Aluminum Finish: Match storefront system.
 - 8. Provide a complete system ready for erection at project site.
 - 9. Shop fabricate to the greatest extent possible; disassemble if necessary for shipping.
 - 10. Basis of Design Product:
 - a. Kawneer North America; Versoleil SunShade - Outrigger System.
 - b. Approved equal.

2.05 ACCESSORIES

- A. Reinforcement: Where fasteners screw-anchor into aluminum less than 1/8 inch thick, reinforce the interior with aluminum or non-magnetic stainless steel to receive screw threads, or provide standard non-corrosive, pressed-in splined grommet nuts.
- B. Brackets: High-strength aluminum brackets and reinforcements where possible; otherwise provide non-magnetic stainless steel or galvanized steel complying with ASTM A123/A123M.

- C. Inserts: Cast iron, malleable iron, or 12 gage galvanized steel for required anchorage to concrete or masonry.
- D. Sill Pans: Manufacturer's standard extruded profile, designed to direct moisture to the exterior at sill conditions; including splice sleeves and continuously sealed end dams.
- E. Comp-Heads: Manufacturer's standard extruded profile, designed to accommodate minimum one inch deflection of building elements at head conditions.
- F. Water Deflectors: Manufacturer's standard internal system accessory specifically designed to route internal water drainage away from top surfaces of insulated glass units.
- G. Expansion Anchors: Lead shield or toothed steel, drilled in type expansion bolts for required attachment to concrete or masonry.
- H. Bituminous Coatings: Cold-applied asphalt mastic, compounded for 30 mil thickness per coat.
- I. Internal System Sealants and Gaskets: As recommended by manufacturer for use within the framing system for fabrication, assembly, and installation. Use products which will remain permanently elastic, non-shrinking, and waterproof.

2.06 FINISHES

- A. Class I Clear Anodized Finish: AAMA 611 AA-M12C22A41 Clear anodic coating not less than 0.7 mils (0.018 mm) thick.
 - 1. Location: As indicated on Drawings.
- B. Superior Performance Organic Coating System: AAMA 2605 multiple coat, thermally cured polyvinylidene fluoride system.
 - 1. Polyvinylidene fluoride (PVDF) multi-coat thermoplastic fluoropolymer coating system, including minimum 70 percent PVDF color topcoat and minimum total dry film thickness of 1.2 mil (0.030 mm).
 - 2. 3 coat metallic system.
 - 3. Color and Gloss: As selected by Architect from manufacturer's full range.
 - 4. Location: As indicated on Drawings.
- C. Touch-Up Materials: As recommended by coating manufacturer for field application.

2.07 HARDWARE

- A. Door Hardware: As specified in Section 08 7100 - Door Hardware.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Verify dimensions, tolerances, and method of attachment with other work.
- C. Verify that wall openings and adjoining air and vapor seal materials are ready to receive work of this Section.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Prepare surfaces that are in contact with structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

3.03 INSTALLATION

- A. General:
 - 1. Comply with manufacturer's written instructions.
 - 2. Do not install damaged components.
 - 3. Fit joints to produce hairline joints free of burrs and distortion.
 - 4. Rigidly secure nonmovement joints.
 - 5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
 - 6. Seal perimeter and other joints watertight unless otherwise indicated.
- B. Metal Protection:
 - 1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with materials recommended by manufacturer for this purpose or by installing nonconductive spacers.
 - 2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- C. Install wall system in accordance with manufacturer's instructions.
- D. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.
- E. Provide alignment attachments and shims to permanently fasten system to building structure.
- F. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent work.
- G. Provide thermal isolation where components penetrate or disrupt building insulation.
- H. Where fasteners penetrate sill flashings, make watertight by seating and sealing fastener heads to sill flashing.
- I. Install sill pans with end dams; do not obstruct weep paths with sealants. Locate sill pan joints, if required, minimum 12 inches (305 mm) from centerline of vertical mullions. Seal to adjacent work to form water tight dam.
- J. Install comp-head units where detailed; do not secure comp-heads to primary storefront head frames.
- K. Install operating sash.
- L. Set thresholds in bed of sealant and secure.
- M. Entrance Doors: Install doors to produce smooth operation and tight fit at contact points.
 - 1. Exterior Doors: Install to produce weathertight enclosure and tight fit at weather stripping.
 - 2. Indicate entrance door hardware mounting heights on Drawings or insert in "Field-Installed Entrance Door Hardware" Subparagraph below.
 - 3. Field-Installed Entrance Door Hardware: Install surface-mounted entrance door hardware according to entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.
- N. Install glass in accordance with Section 08 8000, using glazing method required to achieve performance criteria.
- O. Install internal system sealants as installation progresses. Seal sill pan splices, end dams, water deflectors, and other components to ensure that proper water weepage paths are established and maintained within the system.
- P. Install perimeter sealant in accordance with Section 07 9200 - Joint Sealants.

1. Install sealants according to storefront manufacturer's instructions; do not obstruct weep paths.

- Q. Touch-up minor damage to factory applied finish; replace components that cannot be satisfactorily repaired.

3.04 TOLERANCES

- A. Maximum Variation from Plumb: 0.06 inch per 3 feet (1.5 mm per m) non-cumulative or 0.06 inch per 10 feet (1.5 mm per 3 m), whichever is less.
- B. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch (0.8 mm).
- C. Location: Limit variation from plane or dimensioned location to 1/8 inch in 12 feet, non-cumulative, and 1/2 inch in overall length of member.

3.05 FIELD QUALITY CONTROL

- A. Provide services of storefront manufacturer's field representative to observe for proper installation of system and submit report.
- B. Refer to Section 01 4000 - Quality Requirements, for independent testing and inspection requirements. Inspection will monitor quality of installation and glazing.
- C. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- D. Water-Spray Test: Before installation of interior finishes has begun, areas designated by Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.
 1. Perform tests in each test area as directed by Architect. Perform at least three tests, prior to 10, 35, and 70 percent completion.
- E. Test two samples; size samples according to ASTM E122.
- F. Refer to Section 01 4000 - Quality Requirements for retesting and reinspecting requirements and Section 01 7000 - Execution and Closeout Requirements Requirements for requirements for correcting the Work.
- G. Aluminum-framed entrances and storefronts will be considered defective if they do not pass tests and inspections.
- H. Prepare test and inspection reports.

3.06 ADJUSTING

- A. Adjust operating hardware and sash for smooth operation.

3.07 CLEANING

- A. Remove protective material from pre-finished aluminum surfaces.
- B. Wash down surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths, and take care to remove dirt from corners and to wipe surfaces clean.
- C. Upon completion of installation, thoroughly clean aluminum surfaces in accordance with AAMA 609 & 610.
- D. Remove excess sealant by method acceptable to sealant manufacturer.

3.08 PROTECTION

- A. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION

SECTION 08 4413
GLAZED ALUMINUM CURTAIN WALLS

PART 1 GENERAL**1.01 SECTION INCLUDES**

- A. Aluminum-framed curtain wall, with vision glazing and glass infill panels.
- B. Aluminum doors and frames.
- C. Anchorage and fastening systems.
- D. Associated sheet metal flashings and trim.
- E. Field and preconstruction testing of installed systems.
- F. Design engineering of framing system and load-bearing anchorage systems and connections to building structural frame.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate with installation of other components that comprise the exterior enclosure.
 - 2. Coordinate compatibility and design integrity to secure a weather and water tight seal with all systems, adjacent surfaces and related materials.
 - 3. Coordinate attachment and seal of perimeter air and vapor barrier materials.
 - 4. Coordinate and assume responsibility for compatibility and proper performance of sealants used as part of the work of this Section with sealants used by other trades that may be in direct contact with or adjacent to sealants used as part of the work of this Section.
- B. Preinstallation Meeting: Conduct a preinstallation meeting one week before starting work of this Section.
 - 1. Convene under general provisions of Section 01 7000 - Execution and Closeout Requirements.
 - 2. Discuss construction document requirements, required clarifications to construction documents, construction schedule, coordination of affected trades, construction contraction and isolation joints, joint-filler strips, submittal requirements, approved submittals, and required inspections.
 - 3. Required Attendance: Contractor's quality control supervisor or superintendent, Architect, Owner's independent testing agency, and all affected trades including reinforcing subcontractor and concrete supplier.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Pre-submittal Package:
 - a. Submit profile drawings for all typical areas of building including relationship to adjacent construction, indicating same quality and content of scope required for building drawings, except that non-typical conditions need not be included.
 - b. Provide itemized list of specification requirements and architectural drawing requirements which are not explicitly included in contract documents, but which are required to achieve specified performance.
 - 1) Identify specification Section and paragraph, and Drawing sheet, elevation, plan, section or detail for each item.
 - 2) Deviations not specifically identified in pre-submittal package may be cause for disapproval during submittal review.
 - 3) If no deviations are identified, provide written statement of full compliance with contract documents.

- 4) Failure to provide itemized list of deviations, if any, or statement of full compliance may be cause for return of submittals without review; any resulting delay is responsibility of Contractor.
- c. Dewpoint Analysis: Project specific indoor dewpoint analysis report for each individual system utilizing NFRC-Approved THERM(r) computer simulation software.
 - 1) Utilize project specific design shapes for each system, ambient indoor and outdoor temperatures, and relative humidity; performed by qualified design professional to determine indoor dewpoint temperature and indoor metal surface temperatures.
 - 2) Indoor and Outdoor Temperatures and Relative Humidity: Use same numerical values used in HVAC system design.
2. Prior To Commencement of Construction:
 - a. Provide glass manufacturers wind and thermal stress analysis, and center deflection calculations indicating that specified maximum probabilities of breakage are not exceeded.
 - b. Provide glass manufacturer's written statement that insulated, heat treated, reflective, spandrel and laminated glass is suitable for indicated applications. Submit letter stating manufacturer has reviewed curtain wall submittals and has approved glazing specifications and details included in curtain wall submittals.
 - c. Provide sealant manufacturers test reports confirming adhesion of sealant to all relevant substrates.
 - 1) Provide samples of sealant materials to sealant manufacturer for adhesion tests.
 - 2) Evaluate adhesion, confirm acceptability after initial cure and after water immersion for seven days.
 - 3) Evaluate adhesion of immersed samples immediately after removal from water.
 - 4) Provide stain test reports on stone and precast panels.
 - 5) Provide written certification from sealant manufacturer that specified sealants are compatible with all adjacent materials and finishes.
 - 6) Provide submittal review by sealant manufacturer.
3. Product Data: Provide component dimensions, describe components within assembly, anchorage and fasteners, internal drainage details, glazing, and infill.
4. Shop Drawings: Indicate materials in place on building including coordination of related and adjoining work, insert drawings, and erection diagrams. Show relative layout for all adjacent walls, beams, columns slabs, ceilings, and similar items. Include elevations, floor plans, sections and full size details. Provide isometric details of jamb sill, jamb head, and intermediate mullion joinery, and any conditions, as requested by the Architect. Include the following information:
 - a. Full size details, fully drawn, not outlined. Provide isometric details of any conditions, if requested by Architect.
 - 1) Joinery and internal weather seals.
 - 2) Glass and metal thicknesses, including tolerances.
 - 3) Metal alloy, temper, and finish.
 - 4) Glass manufacturer strength, thickness, tint, coating, opacifier or ceramic frit, safety backing, and rating of insulated units.
 - 5) Fastener manufacturer, material alloy, plating, diameter, length, spacing, embedment, and edge distances.
 - 6) Glazing materials identification.
 - 7) Sealant identification by product name and manufacturer, including cleaning and priming requirements.
 - 8) Relative layout of walls, beams, columns and slabs with dimensions noted. Dimension all tolerances required or which can be accommodated.
 - 9) Field connections, weld sizes, anchorages and fasteners, embedment length and edge distances.
 - 10) Dimensioned position of glass edge relative to metal daylight.
 - 11) Re-glazing and glazing procedures.
 - 12) Dimension limits of movements for all moving joints, and provisions for expansion and contraction.

- 13) Spotting plans for preset inserts in structure or in adjacent construction.
 - 14) Perimeter sealant joint sizes, including tolerances and minimum/maximum joint sizes required.
 - 15) Seal and signature of professional engineer currently registered in the State in which the Project is located; same engineer who seals and signs design calculations.
5. Samples: Submit three samples of all materials included in the work of this Section, in size required to adequately illustrate material properties and characteristics. Include:
- a. Extrusions, flat sheet, infill panels, or formed shapes showing finish. Provide range samples showing variations in color and texture, if any; minimum 12 x 12 inch size.
 - b. Fabrication samples showing prime members, joinery, anchorage, expansion provisions, glazing, sealant details, profiles, and intersections.
 - c. Technical data on proposed sealants, with color chart and cured samples; 6 inch long.
 - d. Gasket and sealant test reports, and technical data on all glazing accessories.
- B. Informational Submittals:
1. Manufacturer's Certificate: Certify that the products supplied meet or exceed the specified requirements.
 2. Test Reports: Submit results of full-size mock-up (preconstruction) testing. Reports of tests previously performed on the same design are acceptable provided they meet the performance requirements of this specification.
 3. Delegated-Design Submittal: For glazed aluminum curtain walls indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - a. Design Data: Provide framing member structural and physical characteristics and engineering calculations, and identify dimensional limitations; include load calculations at points of attachment to building structure.
 - b. Structural Calculations: Provide structural calculations, sealed and signed by a professional engineer licensed in the State in which the Project is located. Test reports are not an acceptable substitute for calculations. Include the following information:
 - 1) Analysis for applicable loads on framing members.
 - 2) Analysis for applicable loads on anchors, including anchors embedded in concrete.
 - 3) Section property computations for framing members.
 - 4) Analysis of structural silicone at structural glazing applications, identifying minimum required sealant bite and width required to transfer design loads from glass to framing.
 4. Field Quality Control Submittals: Report of field testing for water penetration and air leakage.
 5. Designer's Qualification Statement.
 6. Manufacturer's Qualification Statement.
 7. Installer's Qualification Statement.
 8. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.
 9. Maintenance Data: For glazed aluminum wall system including in maintenance manuals.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide special submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 1. 5.504.4.1 Adhesives and sealants.
 2. 5.504.4.3 Paints and coatings.
 3. 5.504.4.3.1 Aerosol paints and coatings.

1.05 QUALITY ASSURANCE

- A. Designer Qualifications: Design curtain wall and its structural support framing components under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed at the State in which the Project is located.
- B. Laboratory Mockup Testing Agency Qualifications: Qualified according to ASTM E 699 for testing indicated and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025 and AAMA certified.
- C. Testing Agency Qualifications: Qualified according to ASTM E 699 for testing indicated and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025.
- D. Verify that each component is appropriate for use in structural sealant glazing (SSG) application in regards to at least the following properties; size, shape, dimensions, material, self-life, storage conditions, and color.
- E. Manufacturer and Installer Qualifications: Company specializing in manufacturing aluminum glazing systems with minimum 10 years of documented experience.
 - 1. Engage single firm to assume sole responsibility for fabrication, installation, and coordination of all components of the work of this Section.
- F. Installer Qualifications: Company specializing in performing work of type specified and with at least five years of documented experience.
- G. Owner and Architect reserve right to visit fabricating and manufacturing facilities, sub-contractor or material supplier, and testing laboratory at any time during progress of work.
 - 1. Shop and field materials, and workmanship, are subject to observation and evaluation by Architect or his representative at all times.
 - 2. Such inspections do not relieve Contractor from obligation to provide curtain wall system conforming to all requirements of the Contract Documents.

1.06 MOCK-UP

- A. Comply with general mock-up requirements specified in Section 01 4000.
- B. Provide mock-up including all components occurring on project. Assemble to illustrate component assembly including glazing materials, weep drainage system, attachments, anchors, insulation, window washing tie-backs, finishes, and perimeter sealant.
 - 1. Scope of mock-up is as shown on mock-up scope drawings.
 - 2. Construct mock-ups in strict accordance with approved mock-up shop drawings. Deviation of details from mock-up shop drawings are subject to approval of Architect.
 - 3. Do not use excessive amounts of sealant, nor other special measures or techniques, which are not representative of those to be used on the building.
 - 4. Delay installation of thermal insulation until completion of initial air, water and structural tests.
 - 5. Locate on-site where directed. Mock-up may remain as part of the Work.
- C. Provide at least one extra light of glass for each type and size on mock-up. Replace glass which breaks during testing with new glass, and continue test.
 - 1. Repeated glass breakage at design pressures constitutes failure.
- D. Mock-up is subject to observation by Contractor, Architect and its consultants throughout construction and testing.
 - 1. Provide minimum three weeks notice before beginning construction of mock-up.
 - 2. Provide materials and personnel for prompt continuous construction of mock-up.
 - 3. Delays in mock-up construction could result in Contractor being charged for fees and travel expenses of observers.
- E. Prior To Mock-up Installation:

1. Provide to sealant manufacturer samples of all relevant substrates, including finished aluminum, coated glass, gaskets, panels, backers, and other substrates which will require sealant contact.
2. Identify and label samples for this project.
3. Perform tests by sealant manufacturer to verify adhesion, staining, and chemical compatibility.
4. Use sealants and substrates only in combinations for which favorable adhesion and compatibility results have been obtained.
5. Submit sealant manufacturer's written test reports and recommendations for cleaning and priming required to obtain acceptable adhesion.

1.07 PRECONSTRUCTION TESTING

- A. Full-Size Mock-up Testing: Have a specimen representative of project conditions tested by an independent testing agency for compliance with specified structural, air infiltration, water penetration, thermal, and sound attenuation criteria.
- B. Testing Facility: Conduct tests at an AAMA accredited independent testing laboratory, approved by Contractor and Architect. Testing laboratory responsible for conducting and reporting tests, statement in report whether or not test specimen conforms to requirements of contract documents, and notation of specific deviations, if any.
 1. Submit testing facility's proposed test procedure for Architect's approval minimum four weeks prior to erection. Do not commence erection at testing laboratory prior to review of testing facility's proposed test procedure.
- C. Testing Laboratory Limitations: Not permitted to act as consultant to Contractor or any subcontractor on this project, modify contract document requirements, modify mock-up configuration, or dismantle mock-ups until notified that no further testing is required. At direction of Architect, deliver mock-up or selected portions of mock-up, boxed, to Project Site or or dispose of mock-up properly.
- D. Test Failures: If failures occur, revise and re-test mock-up. Modifications must be realistic in terms of job conditions, must maintain specified standards of quality and durability, and are subject to approval of Architect.
- E. Performance Requirements: Requirements specified apply to test mock-ups and samples and actual building. Variations in criteria such as wind pressure over surface of building are to be taken into account in testing of mock-ups and samples. Where certain performance is required for specific test conditions of mock-ups and samples, that same performance is also required of the actual building, for natural conditions equivalent to or less severe than the test conditions.
- F. Laboratory Test Report: Accompanied by "as built" mock-up drawing showing revisions or corrective measures taken during testing, if any. Modifications to mock-up must be implemented on Project, unless specifically approved otherwise by Architect. Mock-up must be supervised and installed by same work crew that will supervise and install the work on the Project.
- G. Test mock-up test specimen in following order:
 1. Preload specimen at 50 percent of inward (positive) design pressure.
 2. Air leakage according to ASTM E283/E283M using a pressure of 6.24 psf (50 mph wind). Air leakage not to exceed 0.06 cfm per square foot of projected gross wall area. Individual components not to exceed 0.06 cfm per square foot of component. Verify air flow thru each component of the specimen.
 3. Static water penetration according to ASTM E331 using a pressure of 12 psf. Uncontrolled water penetration not permitted.
 4. Dynamic water penetration according to AAMA 501.1 using a pressure of 12 psf. Uncontrolled water penetration not permitted.
 5. Thermal performance test according to AAMA 501.5 for three complete thermal cycles.
 6. Repeat air leakage test.
 7. Repeat static water test.

8. Structural performance according to ASTM E330/E330M using 30 psf positive and 35 psf negative design load pressures. Measure and record deflections.
 9. Test window washer tie-back to 150 lb. design loads. Apply loads in lateral direction, parallel to wall, left and right, pull out perpendicular to wall, and pull up and down parallel to wall. Signs of deformation or yielding not permitted.
 10. Repeat static water penetration test according to ASTM E331 using a pressure of 12 psf. Uncontrolled water penetration not permitted.
 11. Structural overload test according to ASTM E330/E330M using 1.5 times the design load pressure. Measure and record deflections. Permanent set of more than L/1000 not permitted. Permanent set in anchors of more than 1/16 inch not permitted.
 12. Interstory Drift: AAMA 501.4 at 100 percent of design displacement. Repeat the following:
 - a. Air Infiltration: ASTM E283/E283M.
 - b. Water Penetration under Static Pressure: ASTM E331.
 13. Vertical Interstory Movement: AAMA 501.7. Repeat the following:
 - a. Air Infiltration: ASTM E283/E283M.
 - b. Water Penetration under Static Pressure: ASTM E331.
 14. Test window washer tie-back to 4 times design load. Apply loads in directions as indicated for window washer tie-back test. Yielding and loosening may occur, but catastrophic failures are not permitted.
- H. Where test sequence or test failures require successive water infiltration tests, the only means permitted to drain water from internal cavities is gravity drainage through weep system for minimum 15 minutes. Air pressure, removal of parts, or other means of draining water is not permitted.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Handle products of this Section in accordance with AAMA CW-10.
- B. Protect finished aluminum surfaces with wrapping. Do not use adhesive papers or sprayed coatings that bond to aluminum when exposed to sunlight or weather.

1.09 FIELD CONDITIONS

- A. Do not install sealants when ambient temperature is less than 40 degrees F (5 degrees C). Maintain this minimum temperature during and 48 hours after installation.
- B. Take required precautions to properly isolate and prevent any degree of incompatibility between sealants, in strict accordance with sealant manufacturer's specifications, recommendations, and instructions.
- C. Periodically test sealants in place for adhesion using methods recommended by sealant manufacturer. Promptly replace sealants which do not adhere or fail to cure.

1.10 WARRANTY

- A. Refer to Section 01 7800 - Closeout Submittals, for additional warranty requirements.
- B. Correct defective Work within a two year period after Date of Substantial Completion.
 1. Defective work is defined to include, but not be limited to, evidence of:
 - a. Penetration of water into building.
 - b. Air infiltration exceeding specified limits.
 - c. Structural failure of components resulting from forces within specified limits.
 - d. Delamination of laminated glass or failure of insulated glass units.
 - e. Secondary glass damage or damage due to falling components.
 - f. Adhesive or cohesive failure of sealants.
 - g. Cracking on surface of non-structural sealants.
 - h. Non-structural sealant hardening beyond Shore A durometer 50 or softening below 20.
 - i. Failure to comply with specified performance requirements.
 - j. Failure of operating parts to function normally and properly.

- C. Provide ten year manufacturer warranty against failure of glass seal on insulating glass units, including interpane dusting or misting. Include provision for replacement of failed units.
- D. Provide 20 year manufacturer warranty against excessive degradation of exterior finish. Include provision for replacement of units with excessive fading, chalking, flaking, pitting, peeling, crazing, or non-uniformity of finish.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Basis of Design Manufacturer:
 - 1. Kawneer North America: www.kawneer.com.
 - 2. Other Acceptable Manufacturers:
 - a. Arcadia, Inc: www.arcadiainc.com.
 - b. C.R. Laurence Company, Inc; U.S. Aluminum: www.crl-arch.com.
 - c. Kawneer North America: www.kawneer.com.
 - d. Oldcastle Building Envelope: www.oldcastlebe.com.
 - e. Approved equal.

2.02 CURTAIN WALL SYSTEM - GENERAL

- A. Aluminum-Framed Curtain Wall: Factory fabricated, factory finished aluminum framing members with infill, and related flashings, anchorage and attachment devices.
 - 1. Outside glazed, with pressure plate and mullion cover.
 - 2. Fabrication Method: Field fabricated stick system.
 - 3. Glazing Method: Field glazed system.
 - 4. Provide flush joints and corners, weathersealed, accurately fitted and secured; prepared to receive anchors; fasteners and attachments concealed from view; reinforced as required for imposed loads.
 - a. Fabricate individual system frame members, comp heads, and other system components in single, continuous pieces; splices are not permitted unless specifically required by project installation conditions, or for designed expansion control of system.
 - 5. Construction: Eliminate noises caused by wind and thermal movement, prevent vibration harmonics, and prevent "stack effect" in internal spaces.
 - 6. System Internal Drainage: Drain any water entering joints to the exterior by means of a weep drainage network; this includes condensation occurring in glazing channel and migrating moisture occurring within system.
 - a. Install pressure plates with weep holes located above glazing support flanges to properly allow water to weep to exterior through cover plates. Provide minimum of 2 weep holes in each exterior face cap section.
 - 7. Air and Vapor Seal: Maintain continuous air barrier and vapor retarder throughout assembly, primarily in line with inside pane of glazing and heel bead of glazing compound.
 - 8. Perimeter Clearance: Minimize space between framing members and adjacent construction while allowing expected movement.

2.03 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 4000 - Quality Requirements, to design glazed aluminum curtain walls.
- B. General Performance: Comply with performance requirements specified, as determined by testing of glazed aluminum curtain walls representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
 - 1. Glazed aluminum curtain walls shall withstand movements of supporting structure including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
 - 2. Failure also includes the following:

- a. Thermal stresses transferring to building structure.
 - b. Glass breakage.
 - c. Noise or vibration created by wind and thermal and structural movements.
 - d. Loosening or weakening of fasteners, attachments, and other components.
3. Failure of operating units
- C. Structural Performance Requirements: Design and size components to withstand the following load requirements without damage or permanent set.
- 1. Design Wind Loads: Comply with the following:
 - a. Wind Loads: As indicated on Drawings.
 - b. Other Design Loads: As indicated on Drawings
 - c. Maximum Water Leakage: According to AAMA 501.1. No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.
 - d. Measure performance by testing in accordance with ASTM E330/E330M, using test loads equal to 1.5 times the design wind loads and 10 second duration of maximum pressure.
 - e. Member Deflection: For spans less than 13 feet 6 inches (4115 mm), limit member deflection to flexure limit of glass in any direction, and maximum of 1/175 of span or 3/4 inch (19 mm), whichever is less and with full recovery of glazing materials.
 - f. Member Deflection: For spans over 13 feet 6 inches (4115 mm) and less than 40 feet (12.2 m), limit member deflection to flexure limit of glass in any direction, and maximum of 1/240 of span plus 1/4 inch (1/240 of span plus 6.4 mm), with full recovery of glazing materials.
 - 2. Seismic Loads: Design and size components to withstand seismic loads and sway displacement in accordance with requirements of ASCE 7.
 - 3. Interstory Differential Lateral Movement: Meeting pass/fail criteria of AAMA 501.4 for Use Group I, Standard Occupancy, when tested at design displacement of 0.010 times greater adjacent story height, maximum, and 1.5 times design displacement, through three complete cycles.
 - 4. Movement: Accommodate the following movement without damage to components or deterioration of seals:
 - a. Expansion and contraction caused by 180 degrees F (82 degrees C) surface temperature.
 - b. Expansion and contraction caused by cycling temperature range of 170 degrees F (77 degrees C) over a 12 hour period.
 - c. Movement of curtain wall relative to perimeter framing.
 - d. Deflection of structural support framing, under permanent and dynamic loads.
- D. Water Penetration Resistance on Manufactured Assembly: No uncontrolled water on indoor face when tested as follows:
- 1. Test Pressure Differential: 12 psf (575 Pa).
 - 2. Maximum Water Leakage: According to AAMA 501.1. No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.
- E. Air Leakage: Maximum of 0.06 cu ft/min sq ft (0.3 L/sec sq m) of wall area, when tested in accordance with ASTM E283 at 6.27 psf (300 Pa) pressure differential across assembly.
- F. Thermal Performance Requirements:
- 1. Condensation Resistance Factor of Framing: 70, minimum, measured in accordance with AAMA 1503.
- G. Door Opening Force
- 1. Interior hinged doors: 5 pounds maximum.
 - 2. Required fire doors: 15 pounds maximum.

3. Exterior hinged doors: 5 pounds maximum

2.04 CURTAIN WALL - STICK SYSTEM

- A. Aluminum Curtain Wall: Thermally broken, factory fabricated, factory finished aluminum framing members with infill, related flashings, anchorage, and attachment devices.
 1. Outside glazed, with pressure plate and mullion cover where indicated.
 2. Two-side structural sealant glazed with horizontal pressure plates and exterior covers, where indicated Four-side structural sealant glazed.

2.05 COMPONENTS

- A. Aluminum Framing Members: Tubular aluminum sections, drainage holes and internal weep drainage system.
 1. Vertical Framing Member Cross-Section: 2-1/2 by 10-1/2 inches (63.5 by 267 mm).
 2. Horizontal Framing Member Cross-Section: 2-1/2 by 7-1/2 inches (63.5 by 190.5 mm) nominal dimension.
 3. Reinforced Mullions: As recommended by manufacturer using manufacturer's standard profile of extruded aluminum with internal reinforcement of steel shaped structural section.
 4. Structurally Reinforced Members: Extruded aluminum with internal reinforcement of structural steel member.
 5. Glazing System: Retained mechanically with gaskets on four sides.
 6. Glazing Rabbet: 1 inch insulated
 7. Glazing Plane: Front.
 8. Integrated brackets for support of vertical fins (where occurs).
 9. Basis of Design Product:
 - a. Kawneer North America; 1600 UT Systems 1: www.kawneer.com.
- B. Swing Doors: As specified in Section 08 4313 - Aluminum-Framed Storefronts.
- C. Glazing: As specified in Section 08 8000 - Glazing.
- D. Operable Sash: As specified in Section 08 4313 - Aluminum-Framed Storefronts.

2.06 MATERIALS

- A. Recycled Content of Aluminum Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 20 percent.
- B. Extruded Aluminum: ASTM B221 (ASTM B221M).
- C. Sheet Aluminum: ASTM B209 (ASTM B209M), color to match framing.
- D. Structural Steel Sections: ASTM A36/A36M; galvanized in accordance with requirements of ASTM A123/A123M.
- E. Structural Supporting Anchors: As specified in Section 05 1200 - Structural Steel Framing.
- F. Exposed Flashings: Aluminum sheet, 20 gauge, 0.032 inch (0.81 mm) minimum thickness; finish to match framing members.
- G. Concealed Flashings: Stainless steel, 24 gage, 0.025 inch (0.64 mm) minimum thickness.
- H. Anchorage and Fasteners: Concealed unless specifically approved to be exposed by Architect; carbon steel galvanized according to ASTM B633. Exposed fasteners if approved, and fasteners in wet areas of the wall; series 300 stainless steel.
 1. Finish of Exposed Items: Match adjacent mullion color.
 2. Self Drilling Fasteners: Dril-Flex as manufactured by Elco Industries, Inc.; substitutions not permitted.
 3. Nuts Used at Expansion or Moving Connections: Designed to provide positive means of preventing disengagement.
 - a. Not Permitted: Stacking of bolts, use of lock washers, or thread deformation.

- b. Use matched bolts, nuts, and washers at friction connections.
- I. Exposed Flashings: Minimum 0.040 inch (1.0 mm) thick aluminum sheet; finish to match framing members.
- J. Concealed Flashings: 0.018 inch (0.5 mm) thick stainless steel.
- K. Firestopping: As specified in Section 07 8400 - Firestopping.
- L. Weatherseal Sealant: Silicone, with adhesion in compliance with ASTM C794; compatible with glazing accessories.
- M. Sill Flashing Sealant: Silicone compatible with flashing material.
- N. Perimeter Sealant: As specified in Section 07 9200 - Joint Sealants.
- O. Glazing Gaskets: Type to suit application to achieve weather, moisture, and air infiltration requirements.
- P. Glazing Accessories: As specified in Section 08 8000 - Glazing.
- Q. Shop and Touch-Up Primer for Steel Components: Zinc oxide, alkyd, linseed oil primer appropriate for use over hand cleaned steel.
- R. Touch-Up Primer for Galvanized Steel Surfaces: SSPC-Paint 20, zinc rich.

2.07 SUN CONTROL DEVICES

- A. Refer to Section 08 4313 - Aluminum-Framed Storefronts.

2.08 ACCESSORIES

- A. Reinforcement: Where fasteners screw-anchor into aluminum less than 1/8 inch thick, reinforce the interior with aluminum or non-magnetic stainless steel to receive screw threads, or provide standard non-corrosive, pressed-in splined grommet nuts.
- B. Brackets: High-strength aluminum brackets and reinforcements where possible; otherwise provide non-magnetic stainless steel or galvanized steel complying with ASTM A123/A123M.
- C. Inserts: Cast iron, malleable iron, or 12 gage galvanized steel for required anchorage to concrete or masonry.
- D. End Dam Blocks: Manufacturer's standard internal system accessory specifically designed to seal internal gaps and route internal water drainage to weeps.
- E. Expansion Anchors: Lead shield or toothed steel, drilled in type expansion bolts for required attachment to concrete or masonry.
- F. Bituminous Coatings: Cold-applied asphalt mastic, compounded for 30 mil thickness per coat.
- G. Shims: 100 percent nylon; high density.
- H. Internal System Sealants and Gaskets: As recommended by manufacturer for use within the framing system for fabrication, assembly, and installation. Use products which will remain permanently elastic, non-shrinking, and waterproof.

2.09 FABRICATION

- A. To fullest extent practicable, fabricate and assemble each system at factory. Where factory assembly is not practicable, fabricate, shop fit, and mark system components to ensure proper assembly in field.
- B. Fabricate components with clearances and shim spacing around perimeter of assembly that will accommodate system and building movements, and construction tolerances, and enabling

installation and dynamic movement of perimeter sealers. Design for sealant joint width as specified in Section 07 9200 - Joint Sealants.

- C. Fabricate individual system frame members, comp heads, and other system components in single, continuous pieces; splices are not permitted unless specifically required by project installation conditions, or for designed expansion control of system.
- D. Accurately fit and secure joints and corners. Make joints flush, hairline, and weatherproof.
- E. Fabricate all miter and 90 degree joints at the factory.
- F. Develop drainage paths with moisture weep to exterior. Install pressure plates with weep holes located above glazing support flanges to properly allow water to weep to exterior through cover plates. Provide minimum of 2 weep holes, no more than 24 inches (610 mm) on center, in each exterior face cap section.
- G. Pressure-equalized system or double barrier design with primary air and vapor barrier at interior side of glazed aluminum wall system and secondary seal weeped and vented to exterior. Prepare components to receive anchor devices. Fabricate anchors.
- H. Coat concealed metal surfaces that will be in contact with cementitious materials or dissimilar metals with bituminous paint.
- I. Arrange all fasteners and attachments to be concealed from view.
- J. Fasteners shall not penetrate gutters or drainage systems.
- K. Arrange all welds to be concealed from view. Welds may not telegraph to finished surfaces.
- L. Completely seal all welds in areas intended to retain water with an approved sealant.
- M. Reinforce framing members for imposed loads.
- N. Finishing: Apply factory finish to all surfaces that will be exposed in completed assemblies, including exposed fasteners.
 - 1. Touch-up surfaces cut during fabrication so that no natural aluminum is visible in completed assemblies, including joint edges.

2.10 FINISHES

- A. Class I Clear Anodized Finish: AAMA 611 AA-M12 2241 clear anodic coating or AAMA 612 clear anodic coating with electrolytically deposited organic seal; not less than 0.7 mils (0.018 mm) thick.
- B. Touch-Up Materials: As recommended by coating manufacturer for field application.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Verify dimensions, tolerances, and method of attachment with other related work.
- C. Verify that wall openings and adjoining air and vapor seal materials are ready to receive work of this Section.
- D. Verify that anchorage devices have been properly installed and located.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Prepare surfaces that will contact structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

3.03 INSTALLATION

- A. General:
 1. Install curtain wall systems in accordance with manufacturer's instructions.
 2. Do not install damaged components.
 3. Fit joints to produce hairline joints free of burrs and distortion.
 4. Rigidly secure nonmovement joints.
 5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
 6. Where welding is required, weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
 7. Seal joints watertight unless otherwise indicated.
- B. Metal Protection:
 1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with primer, applying sealant or tape, or installing nonconductive spacers as recommended by manufacturer for this purpose.
 2. Where aluminum is in contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- C. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.
- D. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.
- E. Provide alignment attachments and shims to permanently fasten system to building structure.
- F. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent work.
- G. Provide thermal isolation where components penetrate or disrupt building insulation.
- H. Install sill, head, and sill pan flashings. Turn up ends and edges; seal to adjacent work to form water tight dam.
- I. Install comp-head units where detailed; do not secure comp-heads to primary head frames.
- J. Coordinate installation of firestopping at each floor slab edge.
- K. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.
- L. Install flashings and other specified accessory components.
- M. Pressure Plate Framing: Install glazing in accordance with Section 08 8000, using exterior dry glazing method.
 1. Secure vertical face caps to pressure plates to prevent migration of face caps due to gravity or temperature cycling; use matching finish flush head screws, of size and length that will not contact glass unit.
- N. Install internal system sealants as installation progresses. Seal end dam blocks and other components to ensure that proper water weepage paths are established and maintained within the system.

- O. Install perimeter sealant in accordance with Section 07 9200 - Joint Sealants.
 - 1. Install sealants according to curtainwall manufacturer's instructions; do not obstruct weep paths.
 - 2. Design joint width in accordance with ASTM C1472 and sealant manufacturer's recommendations.
- P. Touch-up minor damage to factory applied finish; replace components that cannot be satisfactorily repaired.

3.04 TOLERANCES

- A. Plumb: 1/8 inch (3.17 mm) in 10 feet (3 m); 1/4 inch (6.35 mm) in 40 feet (12.2 m).
- B. Level: 1/8 inch (3.17 mm) in 20 feet (6 m); 1/4 inch (6.35 mm) in 40 feet (12.2 m).
- C. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch (0.8 mm).
- D. Sealant Space Between Curtain Wall Mullions and Adjacent Construction: Maximum of 3/4 inch (19 mm) and minimum of 3/16 inch.
- E. Alignment: Where surfaces abut in plane, limit offset to 1/16 inch (1.58 mm); where reveal or protruding element separates aligned surfaces by less than 2 inches, limit offset to 1/4 inch (6.35 mm).
- F. Location: Limit variation from plane or dimensioned location to 1/8 inch (3.17 mm) in 12 feet, non-cumulative, and 1/2 inch (12.70 mm) in overall length of member.

3.05 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
- B. Provide services of curtain wall manufacturer's field representative to observe for proper installation of system and submit report.
- C. Refer to Section 01 4000 - Quality Requirements, for general testing and inspection requirements.
- D. Test installed curtain wall for water leakage in accordance with AAMA 501.2 with a uniform test pressure difference of 12 psf with no reduction for in-field testing.
 - 1. Perform a minimum of three tests in areas as directed by Architect.
- E. Provide field testing of installed curtain wall system by independent laboratory in accordance with AAMA 503 during construction process and before installation of interior finishes.
 - 1. Perform a minimum of two tests in each designated area as indicated on drawings.
 - 2. Conduct tests in each area prior to 10 percent and 50 percent completion of this work.
 - 3. Field test for water penetration in accordance with ASTM E1105 with uniform static air pressure difference (Procedure A) not less than 4.18 psf (200 Pa).
 - a. Maximum allowable rate of water penetration in 15-minute test is 0.5 ounce (14 gram) that is not contained in an area with provisions to drain to exterior, or collected on surface of interior horizontal framing member.
 - 4. Field test for air leakage in accordance with ASTM E783 with uniform static air pressure difference of 1.57 psf (75 Pa).
- F. Air Infiltration: ASTM E783 at 1.5 times the rate specified for laboratory testing in "Performance Requirements" Article but not more than 0.09 cfm/sq. ft. (0.45 L/s per sq. m) at a static-air-pressure differential of 1.57 lbf/sq ft (75 Pa).
 - 1. Perform a minimum of two tests in areas as directed by Architect.
- G. Test two samples; size samples according to ASTM E122.
- H. Repair or replace curtain wall components that have failed designated field testing, and retest to verify performance complies with specified requirements.

3.06 ADJUSTING

- A. Adjust operating sash for smooth operation.

3.07 CLEANING

- A. Remove protective material from pre-finished aluminum surfaces.
- B. Wash down surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths, take care to remove dirt from corners, and wipe surfaces clean.
- C. Upon completion of installation, thoroughly clean aluminum surfaces in accordance with AAMA 609 & 610.
- D. Remove excess sealant by method acceptable to sealant manufacturer.

3.08 PROTECTION

- A. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION

**SECTION 08 4500
TRANSLUCENT WALL AND ROOF ASSEMBLIES**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Self supporting aluminum framed sloped glazing system.
- B. Sandwich panels of translucent skins separated with an aluminum grid.
- C. Design engineering of framing system and load-bearing connections to building structural frame system.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate with installation of firestopping, air barrier, and vapor retarder.
 - 2. Coordinate installation of air stop at edge of construction.
 - 3. Coordinate attachment and seal of perimeter air and vapor barrier materials.
- B. Preinstallation Meeting: Convene one week before starting work of this Section.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Provide component dimensions, describe components within assembly, anchorage and fasteners, panel configuration, internal drainage details and finishes for aluminum components of panel assemblies.
 - 2. Shop Drawings: Indicate system dimensions, framed opening requirements and tolerances, anticipated deflection under load, affected related work, weep drainage network, expansion and contraction joint location and details, and field welding required.
 - a. Include plans, elevations, sections, details, and attachments to other work.
 - b. Include details of provisions for assembly expansion and contraction and for draining moisture within the assembly to the exterior.
 - 3. Samples: In manufacturer's standard size.
 - a. For each type of fiberglass-sandwich panel.
 - b. For each type of exposed finish for framing members.
 - 4. Fabrication Samples: Of each framing system intersection and adjacent panels, made from 12-inch (305-mm) lengths of full-size framing members and showing details of the following:
 - a. Joinery.
 - b. Anchorage.
 - c. Expansion provisions.
 - d. Fiberglass-sandwich panels.
 - e. Flashing and drainage.
- B. Informational Submittals:
 - 1. Delegated-Design Submittal: For panel assemblies indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation. Design Data: Show structural and physical characteristics, engineering calculations, and dimensional limitations.
 - 2. Test Reports: Substantiating engineering data, test results of previous tests by independent laboratory demonstrating compliance with performance requirements.
 - 3. Installation Data: Special installation requirements.
 - 4. Designer's Qualification Statement.
- C. Closeout Submittals:
 - 1. Maintenance Data: For panel assemblies to include in maintenance manuals.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 - 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 - 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings

1.05 QUALITY ASSURANCE

- A. Perform work in accordance with AAMA CW-DG-1.
- B. Designer Qualifications: Design structural support framing components under direct supervision of Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.
- C. Manufacturer Qualifications: Company specializing in manufacturing products specified in this Section, with not less than three years of documented experience.
- D. Installer Qualifications: Company specializing in performing the work of this section with at least three years of documented experience.

1.06 REGULATORY REQUIREMENTS

- A. Conform to applicable code for fire resistance ratings.

1.07 MOCK-UPS

- A. Comply with general mock-up requirements specified in Section 01 4339.
- B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.
 - 1. Build mockup of typical panel assemblies as shown on Drawings.
 - 2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Handle work of this Section in accordance with AAMA CW-10.
- B. Protect prefinished aluminum surfaces with wrapping; do not use adhesive papers or sprayed coatings that bond when exposed to sunlight or weather.
 - 1. Puncture wrappings at ends for ventilation.

1.09 FIELD CONDITIONS

- A. Do not install sealants when ambient temperature is less than 40 degrees F (5 degrees C).
- B. Maintain this minimum temperature during and after installation of sealants.

1.10 WARRANTY

- A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.
- B. Manufacturer's Warranty: Manufacturer agrees to repair or replace components of panel assemblies that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
 - a. Structural failures including, but not limited to, excessive deflection.
 - b. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 - c. Water leakage.
 2. Warranty Period: Five years from date of Substantial Completion.
- C. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace translucent panels that exhibit defects in materials or workmanship within specified warranty
1. Defects include, but are not limited to, the following:
 - a. Delamination.
 - b. Color changes exceeding requirements.
 - c. Losses in light transmission beyond 6 percent from original when measured according to ASTM D 1003.
 2. Warranty Period: 10 years from date of Substantial Completion.
- D. Special Aluminum-Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.
1. Failures include, but are not limited to, checking, crazing, peeling, chalking, and fading of finishes.
 2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Basis of Design Manufacturer Sandwich Panel - Translucent Canopy Assemblies:
1. Kalwall: www.kalwall.com.
 2. Other Acceptable Manufacturers:
 - a. Enduro Composites, Inc: www.endurocomposites.com.
 - b. Major Industries, Inc.: www.majorskylights.com.
 - c. SABIC Innovative Plastics US LLC: www.sabic.com.
 - d. Approved equal.

2.02 PERFORMANCE REQUIREMENTS

- A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design translucent structural panel assemblies.
- B. Structural Loads: As indicated on Drawings.
- C. Deflection Limits:
1. Vertical Panel Assemblies: Limited to 1/120 of clear span for each assembly component.
 2. Overhead Panel Assemblies: Limited to 1/60 of clear span for each assembly component.
- D. Structural-Test Performance: Panel assemblies tested according to ASTM E 330, as follows:
1. When tested at positive and negative wind-load design pressures, assemblies do not show evidence of deflection exceeding specified deflection limits.
 2. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not show evidence of material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
 3. Test Durations: As required by design wind velocity, but not less than 10 seconds.
- E. Water Penetration under Static Pressure: Provide panel assemblies that do not evidence water penetration through fixed glazing and framing areas when tested according to ASTM E 331 at a

minimum static-air-pressure difference of 20 percent of positive wind-load design pressure, but not less than 10 lbf/sq. ft. (480 Pa).

- F. Water Penetration under Dynamic Pressure: Provide panel assemblies that do not evidence water leakage through fixed glazing and framing areas when tested according to AAMA 501.1 under dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft. (300 Pa).
 - 1. Maximum Water Leakage: According to AAMA 501.1. Water leakage does not include water that is controlled by flashing and gutters and drained to the exterior, or water that cannot damage adjacent materials or finishes.
- G. Thermal Movements: Allow for thermal movements from ambient- and surface-temperature changes. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - 1. Temperature Change (Range): 120 deg F (50 deg C), ambient; 180 deg F (82 deg F), material surfaces.
- H. Energy Performance: Provide panel assemblies with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:
 - 1. Thermal Transmittance (U-Factor): Fixed glazing and framing areas shall have U-factor of not more than 0.80 Btu/sq. ft. x h x deg F (4.54 W/sq. m x K) as determined according to NFRC 100.
 - 2. Solar-Heat-Gain Coefficient (SHGC): Fixed glazing and framing areas shall have an SHGC of no greater than 0.7 as determined according to NFRC 200.
 - 3. Air Infiltration: Maximum air leakage through fixed glazing and framing areas of 0.30 cfm/sq. ft. (1.50 L/s per sq. m) of fixed wall area as determined according to ASTM E 283 at a minimum static-air-pressure differential of 6.24 lbf/sq. ft. (300 Pa).
 - 4. Air Infiltration: Maximum air leakage through fixed glazing and skylight framing assemblies of 0.20 cfm/sq. ft. (1.02 L/s per sq. m) of fixed wall area as determined according to ASTM E 283 at a minimum static-air-pressure differential of 1.57 lbf/sq. ft. (75 Pa).
 - 5. Air Infiltration: Maximum air leakage through fixed window glazing and framing assemblies of 0.20 cfm/sq. ft. (1.02 L/s per sq. m) of fixed wall area as determined according to ASTM E 283 at a minimum static-air-pressure differential of 1.57 lbf/sq. ft. (75 Pa).
 - 6. Air Infiltration: Maximum air leakage through fixed curtain wall glazing and framing assemblies of 0.06 cfm/sq. ft. (0.30 L/s per sq. m) of fixed wall area as determined according to ASTM E 283 at a minimum static-air-pressure differential of 1.57 lbf/sq. ft. (75 Pa).

2.03 FIBERGLASS-SANDWICH-PANEL ASSEMBLIES

- A. Fiberglass-Sandwich-Panel Assemblies: Translucent assemblies that are supported by aluminum framing and glazed with fiberglass-sandwich panels.
 - 1. Basis of Design Manufacturer:
 - a. Kalwall Corporation; 2 3/4" Kalwall Supported Roof : www.kalwall.com.
 - b. Other Acceptable Manufacturers:
 - 1) Major Industries, Inc..
 - 2) Prior approved equal.

2.04 COMPONENTS

- A. Translucent Roof System: Structurally reinforced translucent panels, with self supporting framing, shop fabricated, factory prefinished, battens, cap strips, related flashings, anchorage and attachment devices.
- B. Fiberglass-Sandwich Panels: Uniformly colored, translucent, thermoset, fiberglass-reinforced-polymer face sheets bonded to both sides of a grid core.
 - 1. Core Insulation: NONE
 - 2. Panel Thickness: 2 3/4"

- C. Grid Core: Mechanically interlocked, extruded-aluminum or thermally broken I-beams, with a minimum flange width 7/16 inch (11 mm).
 - 1. Extruded Aluminum: ASTM B221 (ASTM B221M), in alloy and temper recommended in writing by manufacturer.
 - 2. I-Beam Construction: TYPE 2 - One piece, extruded aluminum or TYPE 1 - Thermally broken TBH, see drawings.
- D. Exterior Face Sheet:
 - 1. Thickness: 0.070 inch (1.78 mm).
 - 2. Color: Crystal.
 - 3. Protective Weathering Surface: Manufacturer's standard.
- E. Interior Face Sheet:
 - 1. Thickness: 0.045 inch (1.14 mm).
 - 2. Color: White.
- F. Fiberglass-Sandwich-Panel Adhesive: Manufacturer's standard for permanent adhesion of facings to cores.
- G. Face Sheets: Fiberglass reinforced polymer (FRP).
 - 1. Type: Flat panel.
 - 2. Exterior Face Sheet: Translucent, and smooth.
 - 3. Interior Face Sheet: Translucent, and smooth.

2.05 FRAMING MATERIALS

- A. Components: Manufacturer's standard extruded-aluminum members of thickness required and reinforced as required to support imposed loads.
 - 1. Construction: One piece, extruded aluminum.
- B. Aluminum Materials - General: Comply with recycled content product requirements specified in Section 01 8114.
- C. Extruded Aluminum: ASTM B221 (ASTM B 221M).
- D. Sheet Aluminum: ASTM B209 (ASTM B 209M).
- E. Structural Profiles: ASTM B308/B308M.
- F. Closure system:
 - 1. Extruded aluminum 6063-T6 and 6063-T5 alloy and temper clamp-tite screw type closure system.
- G. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning skylight components.
- H. Fasteners and Accessories: Manufacturer's standard, corrosion-resistant, nonstaining, and nonbleeding fasteners and accessories; compatible with adjacent materials.
 - 1. At closures, retaining caps, or battens, use ASTM A193 (/A 193M), 300 series stainless-steel screws.
 - 2. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 - 3. At movement joints, use slip-joint linings, spacers, and sleeves of material and type recommended in writing by manufacturer.

- I. Concealed Flashing: Corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.
- J. Framing Gaskets: Manufacturer's standard.
- K. Corrosion-Resistant Coating: Cold-applied asphalt mastic, compounded for 15-mil (0.4-mm) dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.06 ACCESSORIES

- A. Reinforcement: Where fasteners screw-anchor into aluminum less than 1/8 inch thick, reinforce the interior with aluminum or non-magnetic stainless steel to receive screw threads, or provide standard non-corrosive, pressed-in splined grommet nuts.
- B. Brackets: High-strength aluminum brackets and reinforcements where possible; otherwise provide non-magnetic stainless steel or galvanized steel complying with ASTM A123/A123M.
- C. Adhesives & Sealants: Only use adhesives and sealants in the interior of the building that meet or do not exceed the VOC limits of the CURRENT requirements of Bay Area Air Quality Management District (BAAQMD), CAL-Green Table 5.504.4.1 Adhesive VOC Limit, and CAL-Green Table 5.504.4.2 Sealant VOC Limit requirements.
 - 1. Current requirement refers to the date on which the materials are installed in the building.
 - 2. A copy of (BAAQMD) is referenced in Section 018114 that was current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.
- D. Sealants and Gaskets: As recommended by manufacturer for use within the framing system for fabrication, assembly, and installation. Use products which will remain permanently elastic, non-shrinking, and weatherproof. Perimeter and glazing sealants are specified in other Sections.

2.07 FABRICATION

- A. Frame System Fabrication:
 - 1. Fabricate components that, when assembled, have the following characteristics:
 - a. Profiles that are sharp, straight, and free of defects or deformations.
 - b. Accurately fitted joints with ends coped or mitered.
 - c. Internal guttering systems or other means to drain water passing through joints, and moisture migrating within assembly to exterior.
 - 2. Fabricate sill closures with weep holes and for installation as continuous component.
 - 3. Reinforce components as required to receive fastener threads.
- B. Panel Fabrication: Factory assemble and seal panels.
 - 1. Laminate face sheets to grid core under a controlled process using heat and pressure to produce straight adhesive bonding lines that cover width of core members and that have sharp edges.
 - 2. Fabricate with grid pattern that is symmetrical about centerlines of each panel.
 - 3. Fabricate panel to allow condensation within panel to escape.
 - 4. Reinforce panel corners.
- C. Fabricate system components with minimum clearances and shim spacing around perimeter of assembly, and ensure proper installation and dynamic movement of perimeter seals.
- D. Accurately fit and secure joints and corners. Make joints flush and hairline.

2.08 FINISHES

- A. Manufacturer's factory applied finish which meets the performance requirements of AAMA 2604. Color to match Kalwall KCRF Alum No. 79.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Verify dimensions, tolerances, and method of attachment with other work.
- C. Verify wall openings and adjoining air barrier and vapor retarder materials are ready to receive work of this Section.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

- A. General: Comply with manufacturer's written instructions.
 - 1. Do not install damaged components.
 - 2. Fit joints between aluminum components to produce hairline joints free of burrs and distortion.
 - 3. Rigidly secure nonmovement joints.
 - 4. Install anchors with separators and isolators to prevent metal corrosion, electrolytic deterioration, and immobilization of moving joints.
 - 5. Seal joints watertight unless otherwise indicated.
- B. Metal Protection: Where aluminum components will contact dissimilar materials, protect against galvanic action by painting contact surfaces with corrosion-resistant coating or by installing nonconductive spacers as recommended in writing by manufacturer for this purpose.
- C. Install components plumb and true in alignment with established lines and elevations.
- D. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.
- E. Provide alignment attachments and shims to permanently fasten system to building structure.
- F. Skylight Assemblies: Install continuous aluminum sill closures with weatherproof expansion joints and locked and sealed corners. Locate weep holes at rafters. Install components to drain water passing through joints and moisture migrating within assembly to exterior.
- G. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances and align with adjacent work.

3.03 TOLERANCES

- A. Maximum Variation from Plumb: 0.06 inch per 3 feet (1.5 mm/m) non-cumulative or 1/2 inch per 100 feet (12.7 mm/30 m), whichever is less.
- B. Sealant Space Between Panel System Members and Adjacent Construction: Maximum of 3/4 inch (19 mm) and minimum of 1/4 inch (6.4 mm).
- C. Alignment: Where surfaces abut in plane, limit offset to 1/16 inch; where reveal or protruding element separates aligned surfaces by less than 2 inches, limit offset to 1/4 inch.
- D. Location: Limit variation from plane or dimensioned location to 1/8 inch in 12 feet, non-cumulative, and 1/2 inch in overall length of member.

3.04 FIELD QUALITY CONTROL

- A. Provide the services of the manufacturer's field representative to observe installation and make report.
- B. Provide independent inspection under provisions of Section 01 4000 - Quality Requirements.
- C. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
 - 1. Water-Spray Test: Before installation of interior finishes has begun, panel assemblies shall be tested according to AAMA 501.2 and shall not show evidence of water penetration.
 - 2. Water Penetration under Static Pressure: Before installation of interior finishes has begun, areas shall be tested according to ASTM E1105.
 - a. Test Procedures: Test under uniform static-air pressure.
 - b. Static-Air-Pressure Difference.
 - c. Water Penetration: None.

3.05 CLEANING

- A. Remove protective material from prefinished aluminum surfaces.
- B. Wash down interior and exterior surfaces with solution of mild detergent in warm water, applied with soft, clean wiping cloths; remove dirt from corners and wipe surfaces clean.
- C. Remove excess sealant by moderate use of mineral spirits or other solvent acceptable to sealant manufacturer.

3.06 PROTECTION

- A. Protect finished work from damage until Date of Substantial Completion.

END OF SECTION

**SECTION 08 7100
DOOR HARDWARE**

PART 1 GENERAL

1.01 RELATED DOCUMENTS

- A. Drawings and general provisions of Contract, including General and Supplementary Conditions of Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

- A. This Section includes items known commercially as finish or door hardware that are required for swing, sliding, and folding doors, except special types of unique hardware specified in the same sections as the doors and door frames on which they are installed.
- B. This Section includes the following, but is not necessarily limited to:
 - 1. Door Hardware, including electric hardware.
 - 2. Storefront and Entrance door hardware.
 - 3. Low-energy door operators plus sensors and actuators.
 - 4. Thresholds, gasketing and weather-stripping.
 - 5. Door silencers or mutes.

1.03 REFERENCES (USE DATE OF STANDARD IN EFFECT AS OF BID DATE.)

- A. 2019 California Building Code, CCR, Title 24.
- B. BHMA – Builders' Hardware Manufacturers Association
- C. CCR – California Code of Regulations, Title 24, Part 2, California State Accessibility Standards.
- D. DHI – Door and Hardware Institute
- E. NFPA - National Fire Protection Association.
 - 1. NFPA 80 - Fire Doors and Other Opening Protectives
 - 2. NFPA 105 - Smoke and Draft Control Door Assemblies
- F. UL - Underwriters Laboratories.
 - 1. UL 10C - Fire Tests of Door Assemblies
 - 2. UL 305 - Panic Hardware
- G. WHI - Warnock Hersey Incorporated
- H. SDI - Steel Door Institute

1.04 SUBMITTALS & SUBSTITUTIONS

- A. General: Submit in accordance with Conditions of the Contract and Division 1 Specification sections.
- B. Submit product data (catalog cuts) including manufacturers' technical product information for each item of door hardware, installation instructions, maintenance of operating parts and finish, and other information necessary to show compliance with requirements.
- C. Submit six (6) copies of schedule organized vertically into "Hardware Sets" with index of doors and headings, indicating complete designations of every item required for each door or opening. Include following information:
 - 1. Include a Cover Sheet with;
 - a. Job Name, location, telephone number.
 - b. Architects name, location and telephone number.
 - c. Contractors name, location, telephone number and job number.

- d. Suppliers name, location, telephone number and job number.
- e. Hardware consultant's name, location and telephone number.
- 2. Job Index information included;
 - a. Numerical door number index including; door number, hardware heading number and page number.
 - b. Complete keying information (referred to DHI hand-book "Keying Systems and Nomenclature"). Provision should be made in the schedule to provide keying information when available; if it is not available at the time the preliminary schedule is submitted.
 - c. Manufacturers' names and abbreviations for all materials.
 - d. Explanation of abbreviations, symbols, and codes used in the schedule.
 - e. Mounting locations for hardware.
 - f. Clarification statements or questions.
 - g. Catalog cuts and manufacturer's technical data and instructions.
- 3. Vertical schedule format sample:

Heading Number 1 (Hardware group or set number – HW -1)					
			(a) 1 Single Door #1 - Exterior from Corridor 101	(b) 90°	(c) RH
			(d) 3' 0"x7' 0" x 1-3/4" x (e) 20 Minute (f) WD x HM		
(g) 1	(h)	(i) ea	(j) Hinges - (k) 5BB1HW 4.5 x 4.5 NRP (l) ½ TMS	(m) 626	(n) IVE
2	6AA	1 ea	Lockset - ND50PD x RHO x RH x 10-025 x JTMS	626	SCH

(a) - Single or pair with opening number and location. (b) - Degree of opening (c) - Hand of door(s) (d) - Door and frame dimensions and door thickness. (e) - Label requirements if any. (f) - Door by frame material. (g) - (Optional) Hardware item line #. (h) - Keyset Symbol. (i) - Quantity. (j) - Product description. (k) - Product Number. (l) - Fastenings and other pertinent information. (m) - Hardware finish codes per ANSI A156.18. (n) - Manufacture abbreviation.

- D. Make substitution requests in accordance with Division 1. Substitution requests must be made prior to bid date. Include product data and indicate benefit to the project. Furnish samples of any proposed substitution.
- E. Wiring Diagrams: Provide product data and wiring and riser diagrams for all electrical products listed in the Hardware Schedule portion of this section.
- F. Keying Schedule: Submit separate detailed schedule indicating clearly how the Owner's final instructions on keying of locks has been fulfilled.
- G. Templates for doors, frames, and other work specified to be factory prepared for the installation of door hardware. Check shop drawings of other work to confirm that adequate provisions are made for locating and installing door hardware to comply with indicated requirements.
- H. Furnish as-built/as-installed schedule with close-out documents, including keying schedule and transcript, wiring/riser diagrams, manufacturers' installation and adjustment and maintenance information.
- I. Fire Door Assembly Testing: Submit a written record of each fire door assembly to the Owner to be made available to the Authority Having Jurisdiction (AHJ) for future building inspections.
- J. LEED Certification Points: Submit information and certifications necessary to achieve maximum points for LEED certification; coordinate and cooperate with Owner and Architect in providing information necessary for required LEED rating.

1.05 QUALITY ASSURANCE

- A. Obtain each type of hardware (latch and lock sets, hinges, closers, exit devices, etc.) from a single manufacturer.
- B. Supplier Qualifications: A recognized architectural door hardware supplier, with warehousing facilities in the project's vicinity, that has a record of successful in-service performance for supplying door hardware similar in quantity, type, and quality to that indicated for this project and that employs an experienced architectural hardware consultant (AHC) who is available to Owner, Architect, and Contractor, at reasonable times during the course of the Work, for consultation.
 - 1. Responsible for detailing, scheduling and ordering of finish hardware.
 - 2. Meet with Owner to finalize keying requirements and to obtain final instructions in writing. To maintain the integrity of patented key systems provide a letter of authorization from the specified manufacturer indicating that supplier has authorization to purchase the key system directly from the manufacturer.
 - 3. Stock parts for products supplied and are capable of repairing and replacing hardware items found defective within warranty periods.
- C. Hardware Installer: Company specializing in the installation of commercial door hardware with five years documented experience.
- D. Fire-Rated Openings: Provide door hardware for fire-rated openings that complies with NFPA Standard No. 80 and requirements of authorities having jurisdiction. Provide only items of door hardware that are listed and tested by UL or Warnock Hersey for given type/size opening and degree of label. Provide proper latching hardware, door closers, approved-bearing hinges and seals whether listed in the Hardware Schedule or not.
 - 1. Where emergency exit devices are required on fire-rated doors, (with supplementary marking on doors' UL labels indicating "Fire Door to be Equipped with Fire Exit Hardware") provide UL label on exit devices indicating "Fire Exit Hardware".
- E. Exit Doors: Operable from inside with single motion without the use of a key or special knowledge or effort.
- F. Product packaging to be labelled in compliance with CA Prop 65, Safe Drinking Water and Toxic Enforcement Act of 1986.

1.06 DELIVERY, STORAGE AND HANDLING

- A. Coordinate delivery of packaged hardware items to the appropriate locations (shop or field) for installation.
- B. Hardware items shall be individually packaged in manufacturers' original containers, complete with proper fasteners. Clearly mark packages on outside to indicate contents and locations in hardware schedule and in work.
- C. Provide locked storage area for hardware, protect from moisture, sunlight, paint, chemicals, etc.
- D. Contractor to inventory door hardware jointly with representatives of hardware supplier and hardware installer until each all are satisfied that count is correct.

1.07 WARRANTY

- A. Provide warranties of respective manufacturers' regular terms of sale from day of final acceptance as follows:
 - 1. Locksets: "ND" Ten (10) years.
 - 2. Electronic: One (1) year.
 - 3. Closers: Thirty (30) years--except electronic closers shall be two (2) years.
 - 4. Exit devices: Three (3) years.
 - 5. All other hardware: Two (2) years.

1.08 MAINTENANCE

- A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

1.09 PRE-INSTALLATION CONFERENCE

- A. Convene a pre-installation conference at least one week prior to beginning work of this section.
- B. Attendance: Architect, Construction Manager, Contractor, Security Contractor, Hardware Supplier, Installer, Key Owner Personnel, and Project Inspector.
- C. Agenda: Review hardware schedule, products, installation procedures and coordination required with related work. Review Owner's keying standards.

PART 2 PRODUCTS

2.01 MANUFACTURERS

<u>Item</u>	<u>Manufacturer</u>	<u>Acceptable Substitutes</u>
Hinges	Ives	None-Owner Standard
Locks, Latches & Cylinders	Schlage	None-Owner Standard
Exit Devices	Von Duprin	None-Owner Standard
Closers	LCN	None-Owner Standard
Auto Operators	LCN	None-Owner Standard
Push, Pulls & Protection Plates	Ives	None-Owner Standard
Flush Bolts	Ives	None-Owner Standard
Dust Proof Strikes	Ives	None-Owner Standard
Coordinators	Ives	None-Owner Standard
Stops	Ives	None-Owner Standard
Overhead Stops	Glynn-Johnson	None-Owner Standard
Thresholds	Zero	None-Owner Standard
Seals & Bottoms	Zero	None-Owner Standard

MATERIALS

- A. Hinges: Exterior out-swinging door butts shall be non-ferrous material and shall have stainless steel hinge pins. All doors to have non-rising pins.
 - 1. Hinges shall be sized in accordance with the following:
 - a. Height:
 - 1) Doors up to 42" wide: 4-1/2" inches.
 - 2) Doors 43" to 48" wide: 5 inches.
 - b. Width: Sufficient to clear frame and trim when door swings 180 degrees.

- c. Number of Hinges: Furnish 3 hinges per leaf to 7'-5" in height. Add one for each additional 2 feet in height.
 - 2. Furnish non-removable pins (NRP) at all exterior out-swing doors and interior key lock doors with reverse bevels.
- B. Continuous Hinges: As manufactured by Ives, an Allegion Company. UL rated as required.
- C. Heavy Duty Cylindrical Locks and Latches: Schlage "ND" Series as scheduled with "Rhodes" design, fastened with through-bolts and threaded chassis hubs.
 - 1. Provide cylindrical locksets exceeding the ANSI/BHMA A156.2 Grade 1 performance standards for strength, security, and durability in the categories below:
 - a. Abusive Locked Lever Torque Test – minimum 3,100 inch-pounds without gaining access
 - b. Offset lever pull – minimum 1,600 foot pounds without gaining access
 - c. Vertical lever impact – minimum 100 impacts without gaining access
 - 2. Cycle life - tested to minimum 16 million cycles per ANSI/BHMA A156.2 Cycle Test with no visible lever sag or use of performance aids such as set screws or spacers
 - 3. UL 10C for 4'-0" x 10'-0" 3-hour fire door.
 - 4. Cylinders: Refer to "KEYING" article, herein.
 - 5. Provide solid steel anti-rotation through bolts and posts to control excessive rotation of lever.
 - 6. Provide lockset that allows lock function to be changed to over twenty other common functions by swapping easily accessible parts.
 - 7. Provide locks with standard 2-3/4 inches (70 mm) backset, unless noted otherwise, with 1/2 inch latch throw capable of UL listing of 3 hours on a 4' x 10' opening. Provide proper latch throw for UL listing at pairs.
 - 8. Provide locksets with separate anti-rotation thru-bolts, and no exposed screws.
 - 9. Provide independently operating levers with two external return spring cassettes mounted under roses to prevent lever sag.
 - 10. Provide standard ASA strikes unless extended lip strikes are necessary to protect trim.
 - 11. Provide wired electrified options as scheduled in the hardware sets.
 - a. 12 through 24 volt DC operating capability, auto-detecting
 - b. Selectable EL (fail safe)/EU (fail secure) operating mode via switch on chassis
 - c. 0.230A (230mA) maximum current draw
 - d. 0.010A (10mA) holding current
 - e. Modular / "plug in" request to exit switch
 - 12. Lever Trim: Solid cast levers without plastic inserts, and wrought roses on both sides.
- D. Exit devices: Von Duprin as scheduled.
 - 1. Provide certificate by independent testing laboratory that device has completed over 1,000,000 cycles and can still meet ANSI/BHMA A156.3 - 2001 standards.
 - 2. All internal parts shall be of cold-rolled steel with zinc dichromate coating.
 - 3. Mechanism case shall have an average thickness of .140".
 - 4. Compression spring engineering.
 - 5. Non-handed basic device design with center case interchangeable with all functions.
 - 6. All devices shall have quiet return fluid dampeners.
 - 7. All latchbolts shall be deadlocking with 3/4" throw and have a self-lubricating coating to reduce friction and wear.
 - 8. Device shall bear UL label for fire and or panic as may be required.
 - 9. All surface strikes shall be roller type and utilize a plate underneath to prevent movement.
 - 10. Lever Trim: "Breakaway" design, forged brass or bronze escutcheon with a minimum of .130" thickness, match lockset lever design.
 - 11. Removable Mullions: Removable with single turn of building key. Securely reinstalled without need for key.
 - 12. Furnish glass bead kits for vision lites where required.
 - 13. All Exit Devices to be sex-bolted to the doors.
 - 14. Panic Hardware shall comply with CBC Section 11B.404.2.7 and shall be mounted between 34" and 44" above the finished floor surface.

- a. Provide exit devices UL certified to meet maximum 5 pound requirements according to the California Building Code section 11B-309.4, and UL listed for Panic Exterior Fire Exit Hardware.
- E. Closers: LCN as scheduled. Place closers inside building, stairs, room, etc.
1. Door closer cylinders shall be of high strength cast iron construction with double heat treated pinion shaft to provide low wear operating capabilities of internal parts throughout the life of the installation. All door closers shall be tested to ANSI/BHMA A156.4 test requirements by a BHMA certified testing laboratory. A written certification showing successful completion of a minimum of 10,000,000 cycles must be provided.
 2. All door closers shall be fully hydraulic and have full rack and pinion action with a shaft diameter of a minimum of 11/16 inch and piston diameter of 1 inch to ensure longevity and durability under all closer applications.
 3. All parallel arm closers shall incorporate one piece solid forged steel arms with bronze bushings. 1-9/16" steel stud shoulder bolts, shall be incorporated in regular arms, hold-open arms, arms with hold open and stop built in. All other closers to have forged steel main arms for strength, durability, and aesthetics for versatility of trim accommodation, high strength and long life.
 4. All parallel arm closers so detailed shall provide advanced backcheck for doors subject to severe abuse or extreme wind conditions. This advanced backcheck shall be located to begin cushioning the opening swing of the door at approximately 45 degrees. The intensity of the backcheck shall be fully adjustable by tamper resistant non-critical screw valve.
 5. Closers shall be installed to permit doors to swing 180 degrees.
 6. All closers shall utilize a stable fluid withstanding temperature range of 120 degrees F. to -30 degrees F. without requiring seasonal adjustment of closer speed to properly close the door.
 7. Provide the manufactures drop plates, brackets and spacers as required at narrow head rails and special frame conditions. NO wood plates or spacers will be allowed.
 8. Maximum effort to operate closers shall not exceed 5 lbs., such pull or push effort being applied at right angles to hinged doors. Compensating devices or automatic door operators may be utilized to meet the above standards. When fire doors are required, the maximum effort to operate the closer may be increased but shall not exceed 15 lbs. when specifically approved by fire marshal. All closers shall be adjusted to operate with the minimum amount of opening force and still close and latch the door. These forces do not apply to the force required to retract latch bolts or disengage other devices that hold the door in a closed position. Per 11B-404.2.8.1, door shall take at least 5 seconds to move from an open position of 90 degrees to a position of 12 degrees from the latch jamb.
- F. Electro-Mechanical Automatic Operators - LCN Senior Swing.
1. Requirements:
 - a. Provide low energy automatic operator units that are electro-mechanical design complying with ANSI/BHMA A156.19.
 - 1) Opening: Powered by DC motor working through reduction gears.
 - 2) Closing: Spring force.
 - 3) Manual, hydraulic, or chain drive closers: Not permitted.
 - 4) Operation: Motor is off when door is in closing mode. Door can be manually operated with power on or off without damage to operator. Provide variable adjustments, including opening and closing speed adjustment.
 - 5) Cover: Aluminum.
 - b. Provide units with manual off/auto/hold-open switch, push and go function to activate power operator, vestibule interface delay, electric lock delay, hold-open delay adjustable from 2 to 30 seconds, and logic terminal to interface with accessories, mats, and sensors.
 - c. Provide drop plates, brackets, or adapters for arms as required to suit details.
 - d. Provide hard-wired motion sensors and/or actuator switches for operation as specified. Provide weather-resistant actuators at exterior applications.
 - e. Provide complete assemblies of controls, switches, power supplies, relays, and parts/material recommended and approved by manufacturer of automatic operator for

each individual leaf. Actuators control both doors simultaneously at pairs. Sequence operation of exterior and vestibule doors with automatic operators to allow ingress or egress through both sets of openings as directed by Architect. Locate actuators, key switches, and other controls as directed by Architect.

- 1) Actuators to comply with CBC 11B-404.3.5 Controls.
- f. Provide units with inputs for smoke evacuation doors, where specified, which allow doors to power open upon fire alarm activation and hold open indefinitely or until fire alarm is reset, presence detector input, which prevents closed door from opening or door that is fully opened from closing, hold open toggle input, which allows remote activation for indefinite hold open and close second time input is activated, vestibule inputs, which allow sequencing operation of two units, and SPDT relay for interfacing with latching or locking devices.
- G. Flush Bolts & Dust Proof Strikes: Automatic Flush Bolts shall be of the low operating force design. Utilize the top bolt only model for interior doors where applicable and as permitted by testing procedures.
1. Manual flush bolts only permitted on storage or mechanical openings as scheduled.
 2. Provide dust proof strikes at openings using bottom bolts.
- H. Door Stops:
1. Unless otherwise noted in Hardware Sets, provide floor type with appropriate fasteners. Where wall type cannot be used, provide floor type. If neither can be used, provide overhead type.
 2. Do not install floor stops more than four (4) inches from the face of the wall or partition (CBC Section 11B-307).
 3. Overhead stops shall be made of stainless steel and non-plastic mechanisms and finished metal end caps. Field-changeable hold-open, friction and stop-only functions.
- I. Protection Plates: Fabricate either kick, armor, or mop plates with four beveled edges. Provide kick plates 10" high and 2" LDW. Sizes of armor and mop plates shall be listed in the Hardware Schedule. Furnish with machine or wood screws of bronze or stainless to match other hardware.
- J. Thresholds: As Scheduled and per details.
1. Thresholds shall not exceed 1/2" in height, with a beveled surface of 1:2 maximum slope.
 2. Set thresholds in a full bed of butyl-rubber or polyisobutylene mastic sealant complying with requirements in Division 7 "Thermal and Moisture Protection".
 3. Use 1/4" fasteners, red-head flat-head sleeve anchors (SS/FHSL).
 4. Thresholds shall comply with CBC Section 11B-404.2.5.
- K. Seals: Provide silicone gasket at all rated and exterior doors.
1. Fire-rated Doors, Resilient Seals: UL10C Classified complies with NFPA 80 & NFPA 252. Coordinate with selected door manufacturers' and selected frame manufacturers' requirements.
 2. Fire-rated Doors, Intumescent Seals: Furnished by selected door manufacturer. Furnish fire-labeled opening assembly complete and in full compliance with UL10C Classified complies with NFPA 80 & NFPA 252. Where required, intumescent seals vary in requirement by door type and door manufacture -- careful coordination required.
 3. Smoke & Draft Control Doors, Provide UL10C Classified complies with NFPA 80 & NFPA 252 for use on "S" labeled Positive Pressure door assemblies.
- L. Door Shoes & Door Top Caps: Provide door shoes at all exterior wood doors and top caps at all exterior out-swing doors.
- M. Silencers: Furnish silencers for interior hollow metal frames, 3 for single doors, 2 for pairs of doors. Omit where sound or light seals occurs, or for fire-resistive-rated door assemblies.

2.02 KEYING

- A. Furnish a Proprietary Schlage masterkey system as directed by the owner or architect. Key system to be designated and combined by the Schlage Master Key Department even if pinned by the Authorized Key Center, Authorized Security Center or a local authorized commercial dealer.
- B. Extend the original Schlage masterkey system established for Merritt College
- C. Furnish all cylinders in the Patent Protected Schlage Small Format Interchangeable Core. (SFIC) "Everest B" family of keyways. Pack change keys independently (PKI)
 - 1. Confirm keyway with PCCD prior to ordering
- D. Furnish construction keying for doors requiring locking during construction.
 - 1. For SFIC systems provide 80-035 Small Format Construction Cores in either "BRN" or "GRN" combination for all locks that need to be locked during construction and M204-152 Disposable Cores for all cylinders not required to be locked.
 - 2. For SFIC systems provide ten 48-310 Const. Keys in either "BRN" or "GRN" combination to match cores in # 1 above.
 - 3. For SFIC systems provide two 48-311 Control Keys in either "BRN" or "GRN" combination to match cores in # 1 above. (const.)
 - 4. For SFIC systems provide two control keys for installing the permanent cores (either 48-311 for non-patented keyways or 49-356 for patented keyways such as "Everest -B" family)
- E. Furnish all keys with visual key control. *(Not all options listed below are*
 - 1. Stamp key "Do Not Duplicate".
 - 2. Stamp (BHMA) key symbol on key.
- F. Furnish all cylinders with visual key control.
 - 1. Stamp (BHMA) key symbol on side of cylinder (CKC).
- G. Furnish mechanical keys as follows:
 - 1. Furnish 2 cut change keys for each different change key code.
 - 2. Furnish 1 uncut key blank for each change key code.
 - 3. Furnish 6 cut masterkeys for each different masterkey set.
 - 4. Furnish 3 uncut key blanks for each masterkey set.
 - 5. Furnish 2 cut control keys cut to the top masterkey for permanent I/C cylinders.
 - 6. Furnish 1 cut control key cut to each SKD combination.
- H. Furnish Schlage Padlocks and the cylinders to tie them into the masterkey system for gates, storage boxes, utility valve security, roof hatches and roll-up doors keyed as directed in the keying schedule.
 - 1. Furnish KS41D1200 padlock for use with SFIC Schlage cylinders. Furnish 80-037 (Everest-B) with above.
- I. Furnish one Schlage cabinet lock for each cabinet door or drawer so designated on the drawings or keying schedule to match the masterkey system.
 - 1. Furnish CL721G for use with SFIC Schlage cylinders.

2.03 FINISHES

- A. Generally to be satin chrome US26D (626 on bronze and 652 on steel) unless otherwise noted.
- B. Furnish push plates, pull plates and kick or armor plates in satin stainless steel US32D (630) unless otherwise noted.
- C. Door closers shall be powder-coated to match other hardware, unless otherwise noted.
- D. Aluminum items to be finished anodized aluminum except thresholds which can be furnished as standard mill finish.

2.04 FASTENERS

- A. Screws for strikes, face plates and similar items shall be flat head, countersunk type, provide machine screws for metal and standard wood screws for wood.
- B. Screws for butt hinges shall be flathead, countersunk, full-thread type.
- C. Fastening of closer bases or closer shoes to doors shall be by means of sex bolts and spray painted to match closer finish.
- D. Provide expansion anchors for attaching hardware items to concrete or masonry.
- E. All exposed fasteners shall have a phillips head.
- F. Finish of exposed screws to match surface finish of hardware or other adjacent work.
- G. All Exit Devices and Lock Protectors shall be fastened to the door by the means of sex bolts or through bolts.

PART 3 EXECUTION

3.01 INSPECTION

- A. Verify that doors and frames are square and plumb and ready to receive work and dimensions are as instructed by the manufacturer.
- B. Beginning of installation means acceptance of existing conditions.
- C. Fire-Rated Door Assembly Inspection: Upon completion of the installation, all fire door assemblies shall be inspected to confirm proper operation of the closing device and latching device and that only the manufacturer's furnished fasteners are used for installation and that it meets all criteria of a fire door assembly per NFPA 80 (Standard for Fire Doors and Other Opening Protectives) 2016 Edition. A written record shall be maintained and transmitted to the Owner to be made available to the Authority Having Jurisdiction (AHJ). The inspection of the swinging fire doors shall be performed by a certified FDAI (Fire Door Assembly Inspector) with knowledge and understanding of the operating components of the type of door being subjected to the inspection. The record shall list each fire door assembly throughout the project and include each door number, an itemized list of hardware set components at each door opening, and each door location in the facility.

3.02 INSTALLATION

- A. Install hardware in accordance with manufacturer's instructions and requirements of DHI.
- B. Use the templates provided by hardware item manufacturer.
- C. Mounting heights for hardware shall be as recommended by the Door and Hardware Institute. Operating hardware will to be located between 34" and 44" AFF.
- D. Set units level, plumb and true to line and location. Adjust and reinforce the attachment substrate as necessary for proper installation and operation.
- E. Drill and countersink units that are not factory-prepared for anchorage fasteners. Space fasteners and anchors in accordance with industry standards.
- F. Set thresholds for exterior doors in full bed of butyl-rubber sealant.
- G. If hand of door is changed during construction, make necessary changes in hardware at no additional cost.
- H. Hardware Installer shall coordinate with security contractor to route cable to connect electrified locks, panic hardware and fire exit hardware to power transfers or electric hinges at the time these items are installed so as to avoid disassembly and reinstallation of hardware.

- I. Hardware Installer shall also be present with the security contractor when the power is turned on for the testing of the electronic hardware applications. Installer shall make adjustments to solenoids, latches, vertical rods and closers to insure proper and secure operation.
- J. All wiring for electro-mechanical hardware mounted on the door shall be connected through the power transfer and terminated in the interface junction box specified for in the Electrical Section.
- K. Conductors shall be minimum 18 gage stranded, multicolored. A minimum 12 in. loop of conductors shall be coiled in the interface junction box. Each conductor shall be permanently marked with its function.
- L. If a power supply is specified in the hardware sets, all conductors shall be terminated in the power supply. Make all connections required for proper operation between the power supply and the electro-mechanical hardware. Provide the proper size conductors as specified in the manufacturer's technical documentation.

3.03 ADJUST AND CLEAN

- A. Adjust and check each operating item of hardware and each door, to ensure proper operation or function of every unit. Replace units which cannot be adjusted to operate freely and smoothly as intended for the application made.
- B. Clean adjacent surface soiled by hardware installation.
- C. Final Adjustment: Wherever hardware installation is made more than one month prior to acceptance or occupancy, return to that work area and make final check and adjustment of all hardware items in such space or area. Clean operating items as necessary to restore proper function and finish of hardware and doors. Adjust door control devices to compensate for final operation of heating and ventilating equipment.
- D. Instruct Owner's Personnel in proper adjustment and maintenance of hardware finishes, during the final adjustment of hardware.
- E. Continued Maintenance Service: Approximately six months after the completion of the project, the Contractor accompanied by the Architectural Hardware Consultant, shall return to the project and re-adjust every item of hardware to restore proper functions of doors and hardware. Consult with and instruct Owner's personnel in recommended additions to the maintenance procedures. Replace hardware items which have deteriorated or failed due to faulty design, materials or installation of hardware units. Prepare a written report of current and predictable problems (of substantial nature) in the performance of the hardware.

3.04 HARDWARE LOCATIONS

- A. Conform to CCR, Title 24, Part 2; and ADAAG; and the drawings for access-compliant positioning requirements for the disabled.

3.05 FIELD QUALITY CONTROL

- A. Contractor is responsible for providing the services of an Architectural Hardware Consultant (AHC) or a proprietary product technician to inspect installation and certify that hardware and its installation have been furnished and installed in accordance with manufacturers' instructions and as specified herein.

3.06 SCHEDULE

- A. The items listed in the following schedule shall conform to the requirements of the foregoing specifications.
- B. While the hardware schedule is intended to cover all doors, and other movable parts of the building, and establish type and standard of quality, the contractor is responsible for examining the Plans and Specifications and furnishing proper hardware for all openings whether listed or not. If there are any omissions in hardware groups in regard to regular doors they shall be called

to the attention of the Architect prior to bid opening for instruction; otherwise, list will be considered Complete. No extras will be allowed for omissions.

C. The Door Schedule on the Drawings indicates which hardware set is used with each door.

Manufacturers Abbreviations (Mfr.)

DAC	=	DAC Industries	Butterfly Gate Latch
FIN	=	Fingersafe	Fingerguard
GLY	=	Glynn-Johnson Corporation	Overhead Door Stops
IVE	=	Ives	Hinges, Pivots, Bolts, Coordinators, Dust Proof Strikes, Push Pull & Kick Plates, Door Stops & Silencers

END OF SECTION

SECTION 08 8000**GLAZING****PART 1 GENERAL****1.01 SECTION INCLUDES**

- A. Insulating glass units.
- B. Monolithic glass units.
- C. Glazing compounds.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.
- B. Preinstallation Meeting: Convene a preinstallation meeting one week before starting work of this section; require attendance by each of the affected installers.
 - 1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
 - 2. Review temporary protection requirements for glazing during and after installation.
 - 3. Convene under general provisions of Section 01 7000.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data on Insulating Glass Unit and Monolithic Glass Unit Glazing Types: Provide structural, physical and environmental characteristics, size limitations, special handling and installation requirements.
 - 2. Product Data on Glazing Compounds and Accessories: Provide chemical, functional, and environmental characteristics, limitations, special application requirements, and identify available colors.
 - 3. Samples: Submit two samples 12 by 12 inch (300 by 300 mm) in size.
 - 4. Samples: Submit 2 inch (50 mm) long bead of glazing sealant, color as selected.
- B. Informational Submittals:
 - 1. Certificate: Certify that products of this section meet or exceed specified requirements.
 - 2. Delegated-Design Submittal: For glass indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - 3. Warranty Documentation: Submit manufacturer warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide special submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.

1.05 QUALITY ASSURANCE

- A. Perform Work in accordance with GANA (GM), GANA (SM), and IGMA TM-3000 for glazing installation methods.
- B. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years of documented experience.

- C. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years documented experience.
- D. Engineer Qualifications: Registered professional engineer licensed to practice structural engineering, with minimum of 5 years experience in design of glass and glazing.
- E. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.
- F. Certifications:
 1. Manufacturer's letter certifying glass and glazing materials compatibility.
 2. Manufacturer's letter certifying that sealed insulating glass units meet or exceed specification.
 3. Engineering certifications.

1.06 MOCK-UPS

- A. Mock-ups: Build mock-ups to demonstrate aesthetic effects and to set quality standards for materials and execution.
 1. Install glazing in mock-ups specified in Section 08 4313 Aluminum-Framed Entrances and Storefronts to match glazing systems required for Project, including glazing methods.
 2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.
- B. Provide on-site glazing mock-up with the specified glazing components.
- C. Locate where directed.
- D. Mock-ups may remain as part of the Work.

1.07 PRECONSTRUCTION TESTING

- A. Preconstruction Adhesion and Compatibility Testing: Test each glass product, tape sealant, gasket, glazing accessory, and glass-framing member for adhesion to and compatibility with elastomeric glazing sealants.
 1. Testing is not required if data are submitted based on previous testing of current sealant products and glazing materials matching those submitted.
 2. Use ASTM C1087 to determine whether priming and other specific joint-preparation techniques are required to obtain rapid, optimum adhesion of glazing sealants to glass, tape sealants, gaskets, and glazing channel substrates.
 3. Test no fewer than 8 samples of each type of material, including joint substrates, shims, sealant backings, secondary seals, and miscellaneous materials.
 4. Schedule enough time for testing and analyzing results to prevent delaying the Work.
 5. For materials failing tests, submit sealant manufacturer's written instructions for corrective measures including the use of specially formulated primers.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Comply with manufacturer's instructions for shipping, handling, storing, and protection of glass and glazing materials. Exercise exceptional care to prevent edge damage to glass, and damage to coatings.
- B. Where insulating glass units will be exposed to substantial altitude changes during shipping, comply with manufacturer's recommendations for venting and sealing.

1.09 FIELD CONDITIONS

- A. Do not install glazing when ambient temperature is less than 40 degrees F (4 degrees C).
- B. Maintain minimum ambient temperature before, during and 24 hours after installation of glazing compounds.

- C. Install sealants only when ambient temperature conditions can be maintained at or above 40 degrees F (4 degrees C) during installation and 48 hours immediately following installation.

1.10 WARRANTY

- A. Refer to Section 01 7800 - Closeout Submittals, for additional warranty requirements.
- B. Insulating Glass Units: Provide a 10 year manufacturer warranty to include coverage for seal failure, interpane dusting or misting, including replacement of failed units.
 - 1. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS - EXTERIOR GLAZING ASSEMBLIES

- A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
- B. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 Quality Requirements, to design glazing.
- C. Provide type and thickness of exterior glazing assemblies to support assembly dead loads, and to withstand live loads caused by positive and negative wind pressure acting normal to plane of glass.
 - 1. Design Pressure: Calculated in accordance with ASCE 7.
 - 2. Comply with ASTM E1300 for design load resistance of glass type, thickness, dimensions, and maximum lateral deflection of supported glass.
 - 3. Seismic Loads: Design and size glazing components to withstand seismic loads and sway displacement in accordance with the requirements of ASCE 7.
 - 4. Provide glass edge support system sufficiently stiff to limit the lateral deflection of supported glass edges to less than 1/175 of their lengths under specified design load.
 - 5. Glass thicknesses listed are minimum.
 - 6. Differential Shading: Design glass to resist thermal stresses induced by differential shading within individual glass lites.
- D. Vapor Retarder and Air Barrier Seals: Provide completed assemblies that maintain continuity of building enclosure vapor retarder and air barrier.
 - 1. In conjunction with vapor retarder and joint sealer materials described in other sections.
 - a. Refer to Section 07 2500 - Weather Barriers.
- E. Thermal and Optical Performance: Provide exterior glazing products with performance properties as indicated. Performance properties are in accordance with manufacturer's published data as determined with the following procedures and/or test methods:
 - 1. Center of Glass U-Value: Comply with NFRC 100 using Lawrence Berkeley National Laboratory (LBNL) WINDOW 6.3 computer program.
 - 2. Center of Glass Solar Heat Gain Coefficient (SHGC): Comply with NFRC 200 using Lawrence Berkeley National Laboratory (LBNL) WINDOW 6.3 computer program.
 - 3. Solar Optical Properties: Comply with NFRC 300 test method.

2.02 GLASS PRODUCTS, GENERAL

- A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.

1. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."
- B. Safety Glazing Labeling: Where safety glazing is indicated, and at locations required by code, permanently mark glazing with certification label of the SGCC. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
- C. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IGCC.
- D. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass that complies with performance requirements and is not less than the thickness indicated.
- E. Strength: Where annealed float glass is indicated, provide annealed float glass, heat-strengthened float glass, or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where heat-strengthened float glass is indicated, provide heat-strengthened float glass or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where fully tempered float glass is indicated, provide fully tempered float glass.

2.03 GLASS MATERIALS

- A. Float Glass: Provide float glass based glazing unless otherwise indicated.
 1. Kind HS - Heat-Strengthened Type: Complies with ASTM C1048.
 2. Fully Tempered Safety Glass: Complies with ANSI Z97.1 or 16 CFR 1201 criteria for safety glazing used in hazardous locations.
- B. Laminated Glass: Float glass laminated in accordance with ASTM C1172.
 1. Laminated Safety Glass: Complies with ANSI Z97.1 - Class B or 16 CFR 1201 - Category I impact test requirements.

2.04 INSULATING GLASS UNITS

- A. Insulating Glass Units: Types as indicated.
 1. Durability: Certified by an independent testing agency to comply with ASTM E2190.
 2. Metal Edge Spacers: Aluminum, bent and soldered corners.
 3. Spacer Color: Black.
 4. Edge Seal:
 - a. Dual-Sealed System: Provide polyisobutylene sealant as primary seal applied between spacer and glass panes, and silicone, polysulfide, or polyurethane sealant as secondary seal applied around perimeter.
 5. Color: Black.
 6. Purge interpane space with dry argon, hermetically sealed.
- B. GL-31 Insulating Glass Units: Vision glass, double glazed.
 1. Applications: Exterior glazing unless otherwise indicated. Fully tempered where required by code.
 2. Space between lites filled with air.
 3. Outboard Lite: Fully tempered float glass, 1/4 inch (6 mm) thick, minimum.
 - a. Tint: Clear.
 - b. Coating: Low-E (passive type), on #2 surface.
 4. Inboard Lite: Laminated float glass, 1/4 inch (6 mm) thick, minimum.
 - a. Tint: Clear.
 5. Total Thickness: 1 inch (25.4 mm).
 6. Thermal Transmittance (U-Value), Winter - Center of Glass: 0.29, nominal.
 7. Visible Light Transmittance (VLT): 54 percent, nominal.
 8. Solar Heat Gain Coefficient (SHGC): 28 percent, nominal.
 9. Visible Light Reflectance, Outside: 13 percent, nominal.
 10. Visible Light Reflectance, Inside: 18 percent, nominal.
 11. Glazing Method: Dry glazing method, gasket glazing.

12. Basis of Design Product:
 - a. Guardian Glass, LLC.; Superneutral 54
 - b. Approved equal.

- C. GL-32 Insulating Glass Units: Vision glass, double glazed.
 1. Applications: Exterior glazing unless otherwise indicated. Fully tempered where required by code.
 2. Space between lites filled with air.
 3. Outboard Lite: Fully tempered float glass, 1/4 inch (6 mm) thick, minimum.
 - a. Tint: Clear.
 - b. Coating: Low-E (passive type), on #2 surface.
 4. Inboard Lite: Laminated, patterned float glass, No. 4 surface, 1/4 inch (6 mm) thick, minimum.
 - a. Tint: Clear,
 5. Total Thickness: 1 inch (25.4 mm).
 6. Thermal Transmittance (U-Value), Winter - Center of Glass: 0.29, nominal.
 7. Visible Light Transmittance (VLT): 54 percent, nominal.
 8. Solar Heat Gain Coefficient (SHGC): 28 percent, nominal.
 9. Visible Light Reflectance, Outside: 13 percent, nominal.
 10. Visible Light Reflectance, Inside: 18 percent, nominal.
 11. Glazing Method: Dry glazing method, gasket glazing.
 12. Basis of Design Product:
 - a. Guardian Glass, LLC; Superneutral 54 with Berman Esto pattern glass in horizontal orientation.
 - b. Approved equal.

- D. GL-33 Insulating Glass Units: Vision glass, double glazed.
 1. Applications: Exterior glazing unless otherwise indicated. Fully tempered where required by code.
 2. Space between lites filled with air.
 3. Outboard Lite: Fully tempered float glass, 1/4 inch (6 mm) thick, minimum.
 - a. Tint: Clear.
 - b. Coating: Low-E (passive type), on #2 surface.
 4. Inboard Lite: Laminated float glass, 1/4 inch (6 mm) thick, minimum.
 - a. Tint: Clear.
 5. Total Thickness: 1 inch (25.4 mm).
 6. Thermal Transmittance (U-Value), Winter - Center of Glass: 0.29, nominal.
 7. Visible Light Transmittance (VLT): 54 percent, nominal.
 8. Solar Heat Gain Coefficient (SHGC): 28 percent, nominal.
 9. Visible Light Reflectance, Outside: 13 percent, nominal.
 10. Visible Light Reflectance, Inside: 18 percent, nominal.
 11. Glazing Method: Dry glazing method, gasket glazing.
 12. Basis of Design Product:
 - a. Guardian Glass, LLC.; Superneutral 54
 - b. Approved equal.

- E. GL-34 Insulating Glass Units: Vision glass, double glazed.
 1. Applications: Exterior glazing unless otherwise indicated. Fully tempered where required by code.
 2. Space between lites filled with air.
 3. Outboard Lite: Fully tempered float glass, 1/4 inch (6 mm) thick, minimum.
 - a. Tint: Clear.
 - b. Coating: Low-E (passive type), on #2 surface.
 4. Inboard Lite: Laminated float glass with ceramic frit, 1/4 inch (6 mm) thick, minimum.
 - a. Tint: Clear.
 - b. Ceramic Frit Pattern: 1/8 inch (3.17 mm) wide white horizontal stripes at 1/4 inch (6.35 mm) on center.

- 1) Surface: No. 3.
 5. Total Thickness: 1 inch (25.4 mm).
 6. Thermal Transmittance (U-Value), Winter - Center of Glass: 0.29, nominal.
 7. Visible Light Transmittance (VLT): 54 percent, nominal.
 8. Solar Heat Gain Coefficient (SHGC): 28 percent, nominal.
 9. Visible Light Reflectance, Outside: 13 percent, nominal.
 10. Visible Light Reflectance, Inside: 18 percent, nominal.
 11. Glazing Method: Dry glazing method, gasket glazing.
 12. Basis of Design Product:
 - a. Guardian Glass, LLC.; Superneutral 54
 - b. Approved equal.
- F. GL-35 Insulating Glass Units: Vision glass, double glazed.
1. Applications: Exterior glazing unless otherwise indicated. Fully tempered where required by code.
 2. Space between lites filled with air.
 3. Outboard Lite: Fully tempered float glass, 1/4 inch (6 mm) thick, minimum.
 - a. Tint: Clear.
 - b. Coating: Low-E (passive type), on #2 surface.
 4. Inboard Lite: Laminated, patterned float glass, No. 4 surface, 1/4 inch (6 mm) thick, minimum.
 - a. Tint: Clear,
 5. Total Thickness: 1 inch (25.4 mm).
 6. Thermal Transmittance (U-Value), Winter - Center of Glass: 0.29, nominal.
 7. Visible Light Transmittance (VLT): 54 percent, nominal.
 8. Solar Heat Gain Coefficient (SHGC): 28 percent, nominal.
 9. Visible Light Reflectance, Outside: 13 percent, nominal.
 10. Visible Light Reflectance, Inside: 18 percent, nominal.
 11. Glazing Method: Dry glazing method, gasket glazing.
 12. Basis of Design Product:
 - a. Guardian Glass, LLC; Superneutral 54 with Berman Esto pattern glass in horizontal orientation.
 - b. Approved equal.

2.05 MONLITHIC GLAZING UNITS

- A. GL-11 - Monolithic Interior Vision Glazing:
 1. Applications: Interior glazing unless otherwise indicated.
 2. Glass Type: Annealed float glass.
 3. Tint: Clear.
 4. Thickness: 3/8 inch (10 mm), nominal.
- B. GL-12 - Monolithic Interior Vision Glazing:
 1. Applications: Interior glazing unless otherwise indicated.
 2. Glass Type: Fully tempered float glass.
 3. Tint: Clear.
 4. Thickness: 3/8 inch (10 mm), nominal.
- C. GL-15 - Monolithic Interior Vision Glazing:
 1. Applications: Interior glazing unless otherwise indicated.
 2. Glass Type: Fully tempered; monolithic glass system.
 3. Tint: Clear.
 4. Thickness: 1/2 inch (13 mm), nominal.
- D. Type GL-13 - Direct to Glass Ceramic Printing: Ceramic frit is fused into glass creating permanent designs.
 1. Glass Type: Fully tempered; monolithic glass system.
 2. Thickness: 3/8 inch (10 mm), nominal.

3. Ceramic Frit Pattern: 1/8 inch (3.17 mm) wide white horizontal stripes at 1/4 inch (6.35 mm) on center.
 - a. Surface: No. 2.
 - b. Location: 24 inches (610 mm) above finish floor to 72 inches (1829 mm) above finish floor.

2.06 LAMINATED GLASS

- A. GL-21 - Monolithic Interior Vision Glazing:
 1. Applications: Interior glazing unless otherwise indicated.
 2. Glass Type: Laminated float glass.
 3. Tint: Clear.
 4. Thickness: 3/8 inch (10 mm), nominal.
 - a. Two lites of 3/16 inch (5 mm) glass.
 5. Polyvinyl Butyral (PVB) Interlayer: 0.030 inch (0.762 mm) thick, minimum.
 - a. Color/Pattern: Clear.
- B. GL-22 - Monolithic Interior Vision Glazing:
 1. Applications: Exterior glazing unless otherwise indicated.
 2. Glass Type: Laminated, heat-strengthened float glass.
 3. Tint: Clear.
 4. Thickness: 1/2 inch (13 mm), nominal.
 - a. Two lites of 1/4 inch (6 mm) glass.
 5. Ionoplast Interlayer: 0.035 inch (0.889 mm) thick, minimum.
 - a. Color/Pattern: Clear.
- C. GL-23 - Monolithic Interior Vision Glazing:
 1. Applications: Interior glazing unless otherwise indicated.
 2. Glass Type: Laminated float glass.
 3. Tint: Clear.
 4. Thickness: 3/8 inch (10 mm), nominal.
 - a. Two lites of 3/16 inch (5 mm) glass.
 5. Polyvinyl Butyral (PVB) Interlayer: 0.030 inch (0.762 mm) thick, minimum.
 - a. Color/Pattern: Clear.
 6. Ceramic Frit Pattern: 1/8 inch (3.17 mm) wide white horizontal stripes at 1/4 inch (6.35 mm) on center.
 - a. Surface: No. 2.
 - b. Location: 24 inches (610 mm) above finish floor to 72 inches (1829 mm) above finish floor.
- D. GL-24 - Monolithic Interior Vision Glazing:
 1. Applications: Interior glazing unless otherwise indicated.
 2. Glass Type: Laminated float glass.
 3. Tint: Clear.
 4. Thickness: 3/8 inch (10 mm), nominal.
 - a. Two lites of 3/16 inch (5 mm) glass.
 5. Polyvinyl Butyral (PVB) Interlayer: 0.030 inch (0.762 mm) thick, minimum.
 - a. Color/Pattern: Clear.
 6. Ceramic Frit Pattern:
 - a. Surface: No. 2.

E.

2.07 GLAZING COMPOUNDS

- A. General Requirements:
 1. Provide black exposed glazing accessory materials, unless specifically indicated otherwise.
 2. Provide materials of hardness as recommended by manufacturer for required application and condition of installation in each case. Provide only compounds which are known to be fully

compatible with surfaces contacted, including glass products, seals, and glazing channel surfaces.

3. Adhesives & Sealants: Only use adhesives and sealants in the interior of the building that meet or do not exceed the VOC limits of the CURRENT requirements of South Coast Air Quality Management District (SCAQMD) Rule No. 1168 , CAL-Green Table 5.504.4.1 Adhesive VOC Limit, and CAL-GreenTable 5.504.4.2 Sealant VOC Limit requirements.
 - a. Current requirement refers to the date on which the materials are installed in the building.
 - b. A copy of SCAQMD 1168 is referenced in Section 018114 - Greenhouses that was current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.
 4. Comply with volatile organic compound (VOC) product requirements specified in Section 018114 - Greenhouses.
- B. Silicone Sealant: Single component; neutral curing; capable of water immersion without loss of properties; non-bleeding, non-staining; ASTM C920, Type S, Grade NS, Class 25, Uses M, A, and G; with cured Shore A hardness range of 15 to 25; clear.

2.08 ACCESSORIES

- A. Setting Blocks: Silicone, with 80 to 90 Shore A durometer hardness; ASTM C864 Option II. Length of 0.1 inch for each square foot (25 mm for each square meter) of glazing or minimum 4 inch (100 mm) by width of glazing rabbet space minus 1/16 inch (1.5 mm) by height to suit glazing method and pane weight and area.
- B. Spacer Shims: Neoprene, 50 to 60 Shore A durometer hardness; ASTM C864 Option II. Minimum 3 inch (75 mm) long by one half the height of the glazing stop by thickness to suit application, self adhesive on one face.
- C. Glazing Tape, Back Bedding Mastic Type: Preformed, butyl-based, 100 percent solids compound with integral resilient spacer rod applicable to application indicated; 5 to 30 cured Shore A durometer hardness; coiled on release paper; black color.
 1. Width: As required for application.
 2. Thickness: As required for application.
 3. Spacer Rod Diameter: As required for application.
- D. Glazing Gaskets: Resilient silicone extruded shape to suit glazing channel retaining slot; ASTM C864 Option II; color black.
- E. Glass Standoffs: Fabricated from stainless steel ASTM A 666, 304 Alloy.
 1. Holes for Glass Attachment: 5/8 inch (16 mm) hole per attachment.
 2. Standoff: 1-1/2 inch diameter by 2 inches in length.
 3. Cap: Manufacture's standard cap.
 4. Washers" Vinyl.
 5. Finish: No. 4 Brushed.
 6. Basis of Design Product:
 - a. C.R. Laurence Co., Inc.; CRL 1-1/2" Diameter x 2" Long Stainless Standoff Bases: www.crlaurence.com.

2.09 FABRICATION OF GLAZING UNITS

- A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
 1. Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.

- a. Differential values in "Temperature Change" Subparagraph below (for aluminum in particular) are suitable for most of the United States.
- b. Temperature Change: 120 deg F (50 deg C), ambient; 180 deg F (82 deg F), material surfaces.

PART 3 EXECUTION

3.01 VERIFICATION OF CONDITIONS

- A. Verify that openings for glazing are correctly sized and within tolerances, including those for size, squareness, and offsets at corners.
- B. Verify that the minimum required face and edge clearances are being provided.
- C. Verify that surfaces of glazing channels or recesses are clean, free of obstructions that may impede moisture movement, weeps are clear, and support framing is ready to receive glazing system.
- D. Verify that sealing between joints of glass framing members has been completed effectively.
- E. Proceed with glazing system installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Clean contact surfaces with appropriate solvent and wipe dry within maximum of 24 hours before glazing. Remove coatings that are not tightly bonded to substrates.
- B. Seal porous glazing channels or recesses with substrate compatible primer or sealer.
- C. Prime surfaces scheduled to receive sealant where required for proper sealant adhesion.

3.03 INSTALLATION, GENERAL

- A. Install glazing in compliance with written instructions of glass, gaskets, and other glazing material manufacturers, unless more stringent requirements are indicated, including those in glazing referenced standards.
- B. Install glazing sealants in accordance with ASTM C1193, GANA (SM), and manufacturer's instructions.
- C. Do not exceed edge pressures around perimeter of glass lites as stipulated by glass manufacturer.
- D. Set glass lites of system with uniform pattern, draw, bow, and similar characteristics.

3.04 INSTALLATION - DRY GLAZING METHOD (GASKET GLAZING)

- A. Application - Exterior and/or Interior Glazed: Set glazing infills from either the exterior or the interior of the building.
- B. Place setting blocks at 1/4 points with edge block no more than 6 inch (152 mm) from corners.
- C. Rest glazing on setting blocks and push against fixed stop with sufficient pressure on gasket to attain full contact.
- D. Install removable stops without displacing glazing gasket; exert pressure for full continuous contact.

3.05 FIELD QUALITY CONTROL

- A. Glass and Glazing product manufacturers to provide field surveillance of the installation of their products.
- B. Monitor and report installation procedures and unacceptable conditions.

3.06 CLEANING

- A. Remove excess glazing materials from finish surfaces immediately after application using solvents or cleaners recommended by manufacturers.
- B. Remove nonpermanent labels immediately after glazing installation is complete.
- C. Clean glass and adjacent surfaces after sealants are fully cured.
- D. Clean glass on both exposed surfaces not more than 4 days prior to Date of Substantial Completion in accordance with glass manufacturer's written recommendations.

3.07 PROTECTION

- A. After installation, mark pane with an 'X' by using removable plastic tape or paste; do not mark heat absorbing or reflective glass units.
- B. Remove and replace glass that is damaged during construction period prior to Date of Substantial Completion.

END OF SECTION

SECTION 08 9100

LOUVERS

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Louvers, frames, and accessories.

1.02 SUBMITTALS

- A. Action Submittals:
 1. Product Data: Provide data describing design characteristics, maximum recommended air velocity, design free area, materials and finishes.
 2. Shop Drawings: Indicate louver layout plan and elevations, opening and clearance dimensions, and tolerances; head, jamb and sill details; blade configuration, screens, blank-off areas required, and frames.
 3. Samples for Initial Selection: Submit three samples for units with factory-applied color finishes.
 4. Samples: Submit two samples 2 by 2 inches (50 by 50 mm) in size illustrating finish and color of exterior and interior surfaces.
- B. Informational Submittals
 1. Test Reports: Independent agency reports showing compliance with specified performance criteria.
 2. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.
- C. Closeout Submittals
 1. Maintenance Data: Include lubrication schedules, adjustment requirements.

1.03 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.

1.04 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with minimum three years of documented experience.
- B. Installer Qualifications: Company specializing in performing work of type specified and with at least three years of documented experience.

1.05 WARRANTY

- A. Refer to Section 01 7800 - Closeout Submittals, for additional warranty requirements.
- B. Provide five year manufacturer's warranty against distortion, metal degradation, and connection failures of louver components.
 1. Finish: Include twenty year coverage against degradation of exterior finish.

PART 2 PRODUCTS

2.01 LOUVERS

- A. Refer to Exterior Material Schedule for selected products and finishes.
- B. Louvers: Factory fabricated and assembled, complete with frame, mullions, and accessories; AMCA Certified in accordance with AMCA 511.
 - 1. Wind Load Resistance: Design to resist positive and negative wind load as required by code without damage or permanent deformation.
 - 2. Screens: Provide insect screens at intake louvers and bird screens at exhaust louvers.
- C. Stationary Louvers: Horizontal blade, extruded aluminum construction.
 - 1. Free Area: 51 percent, minimum.
 - 2. Blades: Drainable V-shaped blade with front gutter for water diversion to jambs.
 - 3. Frame: 5 inches deep (127 mm deep), channel profile; corner joints mitered and, with continuous recessed caulking channel each side.
 - 4. Aluminum Thickness: Frame 12 gage, 0.0808 inch (2.05 mm) minimum; blades 12 gage, 0.0808 inch (2.05 mm) minimum.
 - 5. Aluminum Finish: Superior performing organic coatings; finish welded units after fabrication.
 - 6. Basis of Design Product:
 - a. Airolite Company, LLC (The).; Airolite K605: www.airolite.com.
 - b. Other Acceptable Manufacturers:
 - 1) Air Flow Company, Inc.
 - 2) Architectural Louvers
 - 3) Construction Specialties, Inc: www.c-sgroup.com.
 - 4) Greenheck Fan Corporation.
 - 5) Ruskin Company.
 - 6) Approved equal.

2.02 MATERIALS

- A. Fasteners: Use types and sizes to suit unit installation conditions.
 - 1. Use hex-head or Phillips pan-head screws for exposed fasteners unless otherwise indicated.
 - 2. For fastening galvanized steel, use hot-dip-galvanized steel or 300 series stainless-steel fasteners.
 - 3. For color-finished louvers, use fasteners with heads that match color of louvers.
- B. Postinstalled Fasteners for Concrete and Masonry: Torque-controlled expansion anchors, made from stainless-steel components, with capability to sustain, without failure, a load equal to 4 times the loads imposed, for concrete, or 6 times the load imposed for masonry, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.
- C. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.03 ACCESSORIES

- A. Insect Screen: 16 x 1 size steel mesh, 0.04 inch (1.0 mm) wire.
- B. Fasteners and Anchors: Stainless steel.
- C. Flashings: Of same material as louver frame, formed to required shape, single length in one piece per location.
- D. Sealant as specified in Section 07 9200 - Joint Sealants.

2.04 FABRICATION

- A. Factory assemble louvers to minimize field splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- B. Vertical Assemblies: Where height of louver units exceeds fabrication and handling limitations, fabricate units to permit field-bolted assembly with close-fitting joints in jambs and mullions, reinforced with splice plates.
- C. Maintain equal louver blade spacing, including separation between blades and frames at head and sill, to produce uniform appearance.
- D. Fabricate frames, including integral sills, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.
 - 1. Frame Type: Tube unless otherwise indicated.
- E. Include supports, anchorages, and accessories required for complete assembly.
- F. Provide subsills made of same material as louvers for recessed louvers.
- G. Join frame members to each other and to fixed louver blades with fillet welds , threaded fasteners, or both, as standard with louver manufacturer unless otherwise indicated or size of louver assembly makes bolted connections between frame members necessary.

2.05 FINISHES

- A. Superior Performing Organic Coatings: AAMA 2605 two coat, thermally cured polyvinylidene fluoride system.
 - 1. Polyvinylidene fluoride (PVDF) multi-coat thermoplastic fluoropolymer coating system, including minimum 70 percent PVDF color topcoat and minimum total dry film thickness of 1.2 mil (0.03 mm).
 - 2. Color: as selected by Architect from manufacturer’s full range.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that prepared openings and flashings are ready to receive this work and opening dimensions are as indicated on shop drawings.
- B. Verify that field measurements are as indicated.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to Project site.

3.03 INSTALLATION

- A. Install louver assembly in accordance with manufacturer's instructions.
- B. Install louvers level and plumb.
- C. Set sill members and sill flashing in continuous bead of sealant.
- D. Install flashings and align louver assembly to ensure moisture shed from flashings and diversion of moisture to exterior.

- E. Secure louver frames in openings with concealed fasteners.
- F. Form closely fitted joints with exposed connections accurately located and secured.
- G. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.
- H. Protect unpainted galvanized and nonferrous-metal surfaces that are in contact with concrete, masonry, or dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.
- I. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Section 079200 "Joint Sealants" for sealants applied during louver installation.
- J. Coordinate with installation of mechanical ductwork.

3.04 ADJUSTING

- A. Restore louvers damaged during installation and construction so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.
 - 1. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

3.05 CLEANING

- A. Strip protective finish coverings.
- B. Clean surfaces and components.

END OF SECTION

SECTION 09 0561

COMMON WORK RESULTS FOR FLOORING PREPARATION

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. This section applies to floors identified in Contract Documents that are receiving the following types of floor coverings:
 - 1. Resilient tile flooring.
 - 2. Carpet tile.
 - 3. Thin-set ceramic tile.
- B. Preparation of new concrete floor slabs for installation of floor coverings.
- C. Testing of concrete floor slabs for moisture and alkalinity (pH).
- D. Remediation of concrete floor slabs due to unsatisfactory moisture or alkalinity (pH) conditions.
 - 1. Perform specified remediation of concrete floor slabs.
 - 2. Contractor shall perform specified remediation of concrete floor slabs. If such remediation is indicated by testing agency's report and is due to a condition not under Contractor's control or could not have been predicted by examination prior to entering into the contract, a contract modification will be issued.
- E. Patching compound.
- F. Remedial floor coatings.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordinate scheduling of cleaning and testing, so that preliminary cleaning has been completed for at least 24 hours prior to testing.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Remedial Materials Product Data: Manufacturer's published data on each product to be used for remediation.
 - a. Manufacturer's qualification statement.
 - b. Test reports indicating compliance with specified performance requirements, performed by nationally recognized independent testing agency.
 - c. Manufacturer's installation instructions.
 - d. Specimen Warranty: Copy of warranty to be issued by coating manufacturer and certificate of underwriter's coverage of warranty.
 - 2. Visual Observation Report: For existing floor coverings to be removed.
 - 3. Floor Covering and Adhesive Manufacturers' Product Literature: For each specific combination of substrate, floor covering, and adhesive to be used; showing:
 - a. Moisture and alkalinity (pH) limits and test methods.
 - b. Manufacturer's required bond/compatibility test procedure.
 - c. Product Test Reports: For each MVE-control system, for tests performed by a qualified testing agency.
- B. Informational Submittals:
 - 1. Testing Agency's Report:
 - a. Description of areas tested; include floor plans and photographs if helpful.
 - b. Summary of conditions encountered.
 - c. Moisture and alkalinity (pH) test reports.
 - d. Copies of specified test methods.

- e. Recommendations for remediation of unsatisfactory surfaces.
 - f. Product data for recommended remedial coating.
 - g. Include certification of accuracy by authorized official of testing agency.
 - h. Submit report to Architect.
 - i. Submit report not more than two business days after conclusion of testing.
2. Adhesive Bond and Compatibility Test Report.

1.04 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 - 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 - 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.
 - 4. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
 - 5. A5.406.1, .2 and .3: Materials selected for longevity, reduced maintenance and recyclability.
 - 6. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.

1.05 QUALITY ASSURANCE

- A. Moisture and alkalinity (pH) testing will be performed by an independent testing agency employed and paid by Owner.
- B. Testing Agency Qualifications: Independent testing agency experienced in the types of testing specified.
 - 1. ICRI certified independent testing agency.
 - 2. Submit evidence of experience consisting of at least 3 test reports of the type required, with project Owner's project contact information.
- C. Contractor's Responsibility Relating to Independent Agency Testing:
 - 1. Provide access for and cooperate with testing agency.
 - 2. Confirm date of start of testing at least 10 days prior to actual start.
 - 3. Allow at least 4 business days on site for testing agency activities.
 - 4. Achieve and maintain specified ambient conditions.
 - 5. Notify Architect when specified ambient conditions have been achieved and when testing will start.
- D. Remedial Coating Installer Qualifications: Company specializing in performing work of the type specified in this section, trained by or employed by coating manufacturer, and able to provide at least 3 project references showing at least 3 years' experience installing moisture emission coatings.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Deliver, store, handle, and protect products in accordance with manufacturer's instructions and recommendations.
- B. Deliver materials in manufacturer's packaging; include installation instructions.
- C. Keep materials from freezing.

1.07 FIELD CONDITIONS

- A. Maintain ambient temperature in spaces where concrete testing is being performed, and for at least 48 hours prior to testing, at not less than 65 degrees F (18 degrees C) or more than 85 degrees F (30 degrees C).

- B. Maintain relative humidity in spaces where concrete testing is being performed, and for at least 48 hours prior to testing, at not less than 40 percent and not more than 60 percent.
- C. Comply with MVE-control system manufacturer's written instructions for substrate and ambient temperatures, humidity, ventilation, and other conditions affecting system installation.
 - 1. Store system components in a temperature-controlled environment and protected from weather and at ambient temperature of not less than 65 deg F (18 deg C) and not more than 85 deg F (29 deg C) at least 48 hours before use.
 - 2. Maintain ambient temperature and relative humidity in installation areas within range recommended in writing by MVE-control system manufacturer, but not less than 65 deg F (18 deg C) or more than 85 deg F (29 deg C) and not less than 40 or more than 60 percent relative humidity, for 48 hours before installation, during installation, and for 48 hours after installation unless longer period is recommended in writing by manufacturer.
 - 3. Install MVE-control systems where concrete surface temperatures will remain a minimum of 5 deg F (- 15 deg C) higher than the dew point for ambient temperature and relative humidity conditions in installation areas for 48 hours before installation, during installation, and for 48 hours after installation unless longer period is recommended in writing by manufacturer.

PART 2 PRODUCTS

2.01 MATERIALS

- A. Patching Compound: Floor covering manufacturer's recommended product, suitable for conditions, and compatible with adhesive and floor covering. In the absence of any recommendation from flooring manufacturer, provide a product with the following characteristics:
- B. Alternate Flooring Adhesive: Floor covering manufacturer's recommended product, suitable for the moisture and pH conditions present; low-VOC. In the absence of any recommendation from flooring manufacturer, provide a product recommended by adhesive manufacturer as suitable for substrate and floor covering and for conditions present.
 - 1. Adhesive shall meet VOC and chemical component limits of SCAQMD 1168 and CAL-Green Table 5.504.4.2 Sealant VOC Limit requirements.
- C. Remedial Floor Coating: ASTM F3010 qualified, fluid-applied, two-component, epoxy-resin, membrane-forming system; formulated for application on concrete substrates to reduce MVER to level required for installation of floor coverings indicated and acceptable to manufacturers of floor covering products indicated, including adhesives.
 - 1. Thickness: 1/8 inch (3.2 mm), maximum.
 - 2. If testing agency recommends any particular products, use one of those.
 - 3. Acceptable Products:
 - a. ARDEX Engineered Cements; ARDEX MC ULTRA with ARDEX FEATHERFINISH: www.ardexamericas.com.
 - b. Koster American Corporation; Koster VAP I 2000 with Koster SL Premium overlay: www.kosterusa.com.
 - 4. Substrate Primer: Provide MVE-control system manufacturer's concrete-substrate primer if required for system indicated by substrate conditions.
 - 5. Cementitious Underlayment Primer: If required for subsequent installation of cementitious underlayment products, provide MVE-control system manufacturer's primer to ensure adhesion of products to MVE-control system.

2.02 ACCESSORIES

- A. Patching and Leveling Material: Moisture-, mildew-, and alkali-resistant product recommended in writing by MVE-control system manufacturer and with minimum of 3000 psi (20.68 MPa) compressive strength after 28 days when tested according to ASTM C109/C109M.

- B. Crack-Filling Material: Resin-based material recommended in writing by MVE-control system manufacturer for sealing concrete substrate crack repair.
- C. Cementitious Underlayment: If required to maintain manufacturer's warranty, provide MVE-control system manufacturer's gypsum cement-based underlayment.

PART 3 EXECUTION

3.01 CONCRETE SLAB PREPARATION

- A. Follow recommendations of testing agency.
- B. Preinstallation Testing:
 - 1. Testing Agency: Engage a qualified testing agency to perform tests.
 - 2. Alkalinity Testing: Perform pH testing according to ASTM F710. Install MVE-control system in areas where pH readings are less than 7.0 and in areas where pH readings are greater than 8.5.
 - 3. Moisture Testing: Perform tests so that each test area does not exceed 1000 sq. ft. (304.8 sq. m), and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
 - a. Anhydrous Calcium Chloride Test: ASTM F1869. Install MVE-control system in locations where concrete substrate MVER exceeds 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
 - b. Internal Relative Humidity Test: Using in situ probes, ASTM F2170. Install MVE-control system in locations where concrete substrates exhibit relative humidity level greater than 75 percent.
 - 4. Tensile-Bond-Strength Testing: For typical locations indicated to receive installation of MVE-control system, install minimum 100-sq. ft. (9.29-sq. m) area of MVE-control system to prepared concrete substrate and test according to ASTM D 7234.
 - a. Proceed with installation only where tensile bond strength is greater than 200 psi (1.38 MPa) with failure in the concrete.
- C. Perform following operations in the order indicated:
 - 1. Existing concrete slabs (on-grade and elevated) with existing floor coverings:
 - a. Visual observation of existing floor covering, for adhesion, water damage, alkaline deposits, and other defects.
 - b. Removal of existing floor covering.
 - 2. Preliminary cleaning.
 - 3. Anhydrous calcium chloride test; 3 tests in the first 1000 square feet (100 square meters) and one test in each additional 1000 square feet (100 square meters), unless otherwise indicated or required by flooring manufacturer.
 - 4. Internal relative humidity tests; in same locations as moisture vapor emission tests, unless otherwise indicated.
 - 5. Alkalinity (pH) tests; in same locations as moisture vapor emission tests, unless otherwise indicated.
 - 6. Specified remediation, if required.
 - 7. Patching, smoothing, and leveling, as required.
 - 8. Other preparation specified.
 - 9. Adhesive bond and compatibility test.
 - 10. Protection.
- D. Remediations:
 - 1. Active Water Leaks or Continuing Moisture Migration to Surface of Slab: Correct this condition before doing any other remediation; re-test after correction.
 - 2. Excessive Moisture Emission or Relative Humidity: If an adhesive that is resistant to the level of moisture present is available and acceptable to flooring manufacturer, use that

adhesive for installation of the flooring; if not, apply remedial floor coating or remedial sheet membrane over entire suspect floor area.

3. Excessive Alkalinity (pH): If remedial floor coating is necessary to address excessive moisture, no additional remediation is required; if not, if an adhesive that is resistant to the level present is available and acceptable to the flooring manufacturer, use that adhesive for installation of the flooring; otherwise, apply a skim coat of specified patching compound over entire suspect floor area.
- E. Concrete Substrates: Prepare and clean substrates according to MVE-control system manufacturer's written instructions to ensure adhesion of system to concrete.
1. Remove coatings and other substances that are incompatible with MVE-control system and that contain soap, wax, oil, or silicone, using mechanical methods recommended in writing by MVE-control system manufacturer. Do not use solvents.
 2. Provide concrete surface profile complying with ICRI 310.2R CSP 3 by shot blasting using apparatus that abrades the concrete surface with shot, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
 3. After shot blasting, repair damaged and deteriorated concrete according to MVE-control system manufacturer's written instructions.
 4. Protect substrate voids and joints to prevent resins from flowing into or leaking through them.
 5. Fill surface depressions and irregularities with patching and leveling material.
 6. Fill surface cracks, grooves, control joints, and other nonmoving joints with crack-filling material.
 7. Allow concrete to dry, undisturbed, for period recommended in writing by MVE-control system manufacturer after surface preparation, but not less than 24 hours.
 8. Before installing MVE-control systems, broom sweep and vacuum prepared concrete.
- F. Protect walls, floor openings, electrical openings, door frames, and other obstructions during installation.

3.02 REMOVAL OF EXISTING FLOOR COVERINGS

- A. Comply with local, State, and federal regulations and recommendations of RFCI (RWP) Recommended Work Practices for Removal of Resilient Floor Coverings, as applicable to floor covering being removed.
- B. Dispose of removed materials in accordance with local, State, and federal regulations and as specified.

3.03 PRELIMINARY CLEANING

- A. Clean floors of dust, solvents, paint, wax, oil, grease, asphalt, residual adhesive, adhesive removers, film-forming curing compounds, sealing compounds, alkaline salts, excessive laitance, mold, mildew, and other materials that might prevent adhesive bond.
- B. Do not use solvents or other chemicals for cleaning.

3.04 PREPARATION

- A. See individual floor covering section(s) for additional requirements.
- B. Comply with recommendations of testing agency.
- C. Comply with requirements and recommendations of floor covering manufacturer.
- D. Fill and smooth surface cracks, grooves, depressions, control joints and other non-moving joints, and other irregularities with patching compound.
- E. Do not fill expansion joints, isolation joints, or other moving joints.

3.05 ADHESIVE BOND AND COMPATIBILITY TESTING

- A. Comply with requirements and recommendations of floor covering manufacturer.

3.06 APPLICATION OF REMEDIAL FLOOR COATING

- A. If required as a result of testing apply remedial floor coating.
- B. Comply with requirements and recommendations of coating manufacturer.
- C. General: Install MVE-control system according to ASTM F3010 and manufacturer's written instructions to produce a uniform, monolithic surface free of surface deficiencies such as pin holes, fish eyes, and voids.
 - 1. Install primers as required to comply with manufacturer's written instructions.
- D. Do not apply MVE-control system across substrate expansion, isolation, and other moving joints.
- E. Apply system, including component coats if any, in thickness recommended in writing by MVE-control system manufacturer for MVER indicated by preinstallation testing.
- F. Cure MVE-control system components according to manufacturer's written instructions. Prevent contamination or other damage during installation and curing processes.
- G. After curing, examine MVE-control system for surface deficiencies. Repair surface deficiencies according to manufacturer's written instructions.
- H. Install cementitious underlayment over cured membrane if required to maintain manufacturer's warranty and in thickness required to maintain the warranty.

3.07 FIELD QUALITY CONTROL

- A. Testing Agency: Owner will engage a qualified testing agency to perform tests.
- B. Installation Inspections: Inspect substrate preparation and installation of system components to ensure compliance with manufacturer's written instructions and to ensure that a complete MVE-control system is installed without deficiencies.
 - 1. Verify that surface preparation meets requirements.
 - 2. Verify that component coats and complete MVE-control-system film thicknesses comply with manufacturer's written instructions.
 - 3. Verify that MVE-control-system components and installation areas that evidence deficiencies are repaired according to manufacturer's written instructions.
- C. MVE-control system will be considered defective if it does not pass inspections.

3.08 PROTECTION

- A. Protect MVE-control system from damage, wear, dirt, dust, and other contaminants before floor covering installation. Use protective methods and materials, including temporary coverings, recommended in writing by MVE-control system manufacturer.
- B. Do not allow subsequent preinstallation examination and testing for floor covering installation to damage, puncture, or otherwise compromise the MVE-control system membrane.
- C. Cover prepared floors with building paper or other durable covering.

END OF SECTION

SECTION 09 2116
GYPSUM BOARD ASSEMBLIES

PART 1 GENERAL**1.01 SECTION INCLUDES**

- A. Performance criteria for gypsum board assemblies.
- B. Metal stud wall framing.
- C. Security mesh reinforcing in wall assemblies.
- D. Cementitious backing board.
- E. Gypsum board.
- F. Impact-resistant wallboard.
- G. Joint treatment and accessories.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination:
 - 1. Coordinate with mechanical and electrical work. Do not attach or support metal framing to ducts, pipes, conduit, or similar items.
 - 2. Coordinate installation of ceiling suspension system with installation of overhead structural systems to ensure that inserts and other structural anchorage provisions have been installed to receive ceiling anchors in a manner that will develop their full strength and at spacing required to support ceiling.
 - 3. Coordinate gypsum board work with requirements of Section 07 8400 - Firestopping to maintain integrity of fire-rated and smoke-rated partitions required to comply with specified regulatory requirements.

1.03 SUBMITTALS

- A. Action Submittals
 - 1. Shop Drawings: Indicate special details associated with fireproofing and acoustic seals.
 - 2. Product Data: Provide data on metal framing, gypsum board, accessories, and joint finishing system.
 - 3. Product Data: Provide manufacturer's data on partition head to structure connectors, showing compliance with requirements.
 - 4. Samples: Submit Three samples of gypsum board finished with proposed texture application, 12 by 12 inches (300 by 300 mm) in size, illustrating finish color and texture.
- B. Informational Submittals
 - 1. Test Reports: For stud framing products that do not comply with ASTM C645 or ASTM C754, provide independent laboratory reports showing maximum stud heights at required spacings and deflections.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 - 2. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 - 3. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing gypsum board installation and finishing, with minimum 5 years of experience.
- B. Copies of Documents at Site: Maintain at the project site a copy of each referenced document that prescribes execution requirements.
- C. Stud Framing: Products that do not comply with ASTM C645 or C754 are not permitted.

1.06 MOCK-UP

- A. Mock-up: Construct gypsum board system mock-up where indicated on the Drawings, incorporating all components specified for the location.
 - 1. Minimum size of mock-up is indicated on the Drawings.
 - 2. Approved mock-up may remain as part of the Work.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Store and protect products in accordance with referenced standards.
- B. Handle gypsum boards to prevent damage to ends, edges, and surfaces.

1.08 FIELD CONDITIONS

- A. Environmental Limitations: Comply with ASTM C840 requirements or gypsum board manufacturer's written instructions, whichever are more stringent.
- B. Do not install paper-faced gypsum panels until installation areas are enclosed and conditioned.
- C. Do not install panels that are wet, moisture damaged, and mold damaged.
 - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.
- D. Maintain ambient temperatures at not less than 50 deg F (10 deg C) for a period 48 hours before gypsum board finishing, during installation, and after installation of board materials.

PART 2 PRODUCTS

2.01 GYPSUM BOARD ASSEMBLY PERFORMANCE REQUIREMENTS

- A. Design Requirements: Contractor is responsible for designing metal framing used to comply with performance requirements, including anchorage to structural system and necessary modifications to meet specified requirements and maintain visual design concepts.
- B. Performance Requirements:
 - 1. Interior Suspended Gypsum Board Ceilings, Soffits, and Bulkheads: Design and install to provide deflection of not more than 1/360 of distance between supports.
 - 2. Interior Metal Stud/Gypsum Board Assemblies: Design and install to withstand lateral loading (air pressure) of 5 PSF with deflection limit not more than 1/240 of partition height.
 - 3. Interior Metal Stud/Gypsum Board Assemblies at Locations with Ceramic Tile or Other Hard Surface Finishes: Design and install to withstand lateral loading (air pressure) with deflection limit not more than L/360 of partition height.
 - 4. Where documents indicate a stud size, size shall be considered minimum. Increase gage to meet minimum performance requirements.
 - 5. Accommodate building structure deflections in connections to structure.

- C. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated, according to ASTM E119 by an independent testing agency.
 - 1. Construct assemblies identical to those indicated by reference to GA 600 or to design designations listed by Factory Mutual, Underwriters Laboratories, Warnock Hersey, or listing of other agencies acceptable to authorities having jurisdiction.
 - 2. Provide partition head assemblies for fire-rated full height partitions that have been successfully tested to accommodate deck deflection.
- D. Provide completed assemblies complying with ASTM C840 and GA-216.
- E. Interior Partitions, Indicated as Acoustic: Provide completed assemblies with the following characteristics:
 - 1. Acoustic Attenuation: STC as indicated calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.
 - 2. Provide materials and construction identical to those tested in assembly indicated, according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.
- F. Shaft Walls at HVAC Shafts: Provide completed assemblies with the following characteristics:
 - 1. Air Pressure Within Shaft: Sustained loads of 5 lbf/sq ft (0.24 kPa) with maximum mid-span deflection of L/240.
 - 2. Acoustic Attenuation: STC of 35-39 calculated in accordance with ASTM E413, based on tests conducted in accordance with ASTM E90.
- G. Fire Rated Assemblies: Provide completed assemblies specified on Drawings.
 - 1. ICC IBC Item Numbers: Comply with applicable requirements of ICC IBC for the particular assembly.
 - 2. Gypsum Association File Numbers: Comply with requirements of GA-600 for the particular assembly.
 - 3. UL Assembly Numbers: Provide construction equivalent to that listed for the particular assembly in the current UL (FRD).
 - 4. Where any specified rated assembly requires the use of proprietary gypsum board system products, installation methods or procedures, comply with specified rated assembly requirements including requirements associated with assembly options which may be selected by Contractor.

2.02 METAL FRAMING MATERIALS

- A. Acceptable Manufacturers:
 - 1. Angeles Metal Systems
 - 2. ClarkDietrich Building Systems LLC: www.clarkdietrich.com.
 - 3. CEMCO; California Expanded Metal Company: www.cemcosteel.com.
 - 4. Marino: www.marinoware.com.
 - 5. SCAFECO Corporation: www.scafco.com.
- B. Metal Framing - General: Provide framing materials complying with specified standards and tested assemblies; galvanized sheet steel, 20 gage unless specified, noted, scheduled, or detailed otherwise.
- C. Metal Stud Framing System Components - Non-Loadbearing: ASTM C645; galvanized sheet steel, of size and properties necessary to comply with ASTM C754 for the spacing indicated, with maximum deflection of wall framing of L/360 at 10 psf (480 Pa).
 - 1. Protective Coating: ASTM A 653/A 653M, G60 (Z180), hot-dip galvanized unless otherwise indicated.
 - 2. Refer to Drawings for stud sizes.
 - 3. Studs: "C" shaped with flat or formed webs.
 - a. Type 25:
 - 1) Return flange lip minimum dimension: 3/16 inch (5 mm).

- 2) Flange width minimum dimension: 1-1/4 inch (31.75 mm).
- 3) Uncoated sheet steel thickness: 0.0179 inches (0.45 mm).
- b. Type 22:
 - 1) Return flange lip minimum dimension: 3/16 inch (5 mm).
 - 2) Flange width minimum dimension: 1-1/4 inch (31.75 mm).
 - 3) Uncoated sheet steel thickness: 0.0270 inches (0.65 mm).
- c. Type 20:
 - 1) Return flange lip minimum dimension: 3/16 inch (5 mm).
 - 2) Flange width minimum dimension: 1-1/4 inch (31.75 mm).
 - 3) Uncoated sheet steel thickness: 0.0329 inches (0.83 mm).

STUD SIZE	MAXIMUM HEIGHT, FEET			DESIGN BASED ON SSMA SIZE
	SPACING, INCHES			
	12	16	24	
3 5/8" x 25 gauge	13'-8"	12'-5"	10'-10"	350S125-18
3 5/8" x 20 gauge	18'-5"	16'-9"	14'-7"	362S137-33
6" x 20 gauge	27'-5"	24'-11"	21'-9"	600S137-33
8" x 20 gauge	34'-8"	31'-6"	27'-6"	800S137-33

- 4. Bracing Members: Size as required to meet design requirements, same size as studs, minimum.
 - 5. Runners: U shaped, sized to match studs.
 - 6. Ceiling Channels: C-shaped.
 - 7. Cold-Rolled Furring Channels: 0.053 inch (1.35 mm) uncoated-steel thickness, with minimum 1/2 inch (12.70 mm) wide flanges.
 - a. Depth: 7/8 inch.
 - b. Furring Brackets: Adjustable, corrugated-edge type of steel sheet with minimum uncoated-steel thickness of 0.033 inch (0.84 mm).
 - c. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062 inch (1.57 mm) diameter wire, or double strand of 0.048 inch (1.22 mm) diameter wire.
 - 8. Furring: Hat-shaped sections, minimum depth of 7/8 inch (22 mm), ASTM C645.
 - a. Minimum Base-Metal Thickness: As indicated on Drawings.
 - 9. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.
 - a. Minimum Base-Metal Thickness: 0.097 inch .
 - b. Width: 8 inches (203.20 mm).
 - 10. Hat-Shaped, Rigid Furring Channels: ASTM C645.
 - a. Minimum Base-Steel Thickness: 0.0329 inch (0.836 mm)
 - b. Depth: As indicated on Drawings
 - 11. Resilient Furring Channels: 1/2 inch (12 mm) depth, for attachment to substrate through one leg only.
 - a. Acceptable Manufacturers - Resilient Furring Channels:
 - 1) Dietrich; RC Deluxe.
 - 2) No substitutions
- D. Shaft Wall Studs and Accessories: ASTM C645; galvanized sheet steel, of size and properties necessary to comply with ASTM C754 and specified performance requirements.
- 1. Acceptable Manufacturers - Shaft Wall Studs and Accessories:
 - a. Same manufacturer as other framing materials.
- E. Ceiling Hangers: Type and size as specified in ASTM C754 for spacing required.
- F. Stud System Accessories: Manufacturer's standard clips, shoes, ties, reinforcements, fasteners, and other accessories as required for a complete stud framing system.

- G. Partition Head to Structure Connections: Provide mechanical anchorage devices that accommodate deflection using slotted holes, screws and anti-friction bushings, preventing rotation of studs while maintaining structural performance of partition.
1. Structural Performance: Maintain lateral load resistance and vertical movement capacity required by applicable code, when evaluated in accordance with AISI SG02-1.
 2. Material: ASTM A653/A653M steel sheet, SS Grade 50/340, with G60/Z180 hot dipped galvanized coating.
 3. Deflection and Firestop Track:
 - a. Provide mechanical anchorage devices as described above that accommodate deflection while maintaining the fire-rating of the wall assembly.
 - b. Acceptable Products:
 - 1) ClarkDietrich Building Systems; SLP-TRK Slotted Deflection Track.
 - 2) Fire Trak Corp; Posi Clip.
 - 3) MBA Building Supplies; Slotted Deflecto Track.
 - 4) Steel Network, Inc. (The); VertiClip SLD.
 - 5) Telling Industries; Vertical Slip Track.
 - 6) Substitutions: See Section 01 6000 - Product Requirements.
 4. Provide top track preassembled with connection devices spaced to fit stud spacing indicated on Drawings; minimum track length of 12 feet (3660 mm).

2.03 CEILING SUSPENSION SYSTEM COMPONENTS

- A. Gypsum Board Interior Ceiling Suspension System:
1. Ceiling Hangers: Type and size as specified in ASTM C754 for conditions and spacing required.
 2. Ceiling Hanger Wire: ASTM A641/A641M, Class 1 coating; soft temper, pre-stretched, yield stress load at least three times design load, but not less than 12 gage.
 3. Ceiling Hanger Angles: Not less than 7/8 inch (22.22 mm) by 7/8 inch (22.22 mm) by 16 gage, 0.0508 inch (1.29 mm) galvanized steel formed angles; ASTM A653/A653M, G90 coating, with minimum 5/16 inch (7.94 mm) diameter bolted connections.
 4. Ceiling Hanger Anchors: Size for three times imposed loads, as determined by ASTM E488/E488M; corrosive resistant materials with loops or holes for attachment of hanger wires.
- B. Ceiling Attachment Devices:
1. General:
 - a. Size devices for 5 times load imposed by completed system as determined in accordance with ASTM E488/E488M.
 - b. Powder-actuated fasteners in concrete: Size devices for 10 times load imposed by completed system as determined in accordance with ASTM E1190.
 2. Hanger Anchorage Devices: Screws, clips, bolts, inserts or other devices applicable to indicated method of structural anchorage for ceiling hangers and whose suitability for use intended has been proven by certified test data.
 3. Hangers: Comply with requirements of ASTM C754 for maximum ceiling area and loads to be supported.
- C. Grid Suspension System for Gypsum Board Ceilings: ASTM C 645, direct-hung system composed of main beams and cross-furring members that interlock, Fire Rated.
1. Acceptable Products:
 - a. Armstrong World Industries, Inc.; Drywall Grid Systems.
 - 1) Approvals:
 - (a) ICC-ES ESR-1289.
 - b. CertainTeed Ceilings; QuickSpan Locking Drywall Grid System: www.certainteed.com.
 - 1) Approvals:
 - (a) ICC-ES ESR-3336.
 - c. Chicago Metallic Corporation; 640/660 Drywall Ceiling Suspension.
 - 1) Approvals:

- (a) ICC-ES ESR-2631.
- d. USG Corporation; Drywall Suspension System.
 - 1) Approvals:
 - (a) ICC-ES ESR-1222.
- e. Worthington Steel; DFR-Series Fire-Rated Drywall Furring System.
 - 1) Approvals:
 - (a) ICC-ES ESR-1308.

2.04 BOARD MATERIALS

- A. Acceptable Manufacturers - Gypsum-Based Board:
 - 1. CertainTeed Corporation: www.certainteed.com.
 - 2. Georgia-Pacific Building Products: www.gpgypsum.com.
 - 3. National Gypsum Company: www.nationalgypsum.com.
 - 4. PABCO Gypsum: www.pabco gypsum.com.
 - 5. USG Corporation: www.usg.com.
 - 6. American Gypsum Company: www.americangypsum.com.
- B. Board Materials - General:
 - 1. Maximize use of recycled or synthetic gypsum with minimum of 10 percent.
 - 2. Comply with ASTM C1396/C1396M.
 - 3. Type X or manufacturer's proprietary fire rated core for fire rated assemblies and locations where indicated; regular type at other assemblies.
 - 4. Maximum available lengths to minimize end-to-end butt joints, square cut ends, tapered edge.
 - 5. Thickness: 5/8 inch (15.87 mm), except where indicated otherwise
- C. Gypsum Board: Gypsum panels as defined in ASTM C1396/C1396M; sizes to minimize joints in place; ends square cut.
 - 1. Applications: Use for vertical surfaces, unless otherwise indicated.
 - 2. Thickness: As indicated on Drawings.
 - a. Vertical Surfaces: 5/8 inch (16 mm).
 - b. Multi-Layer Assemblies: Thicknesses as indicated on Drawings.
 - 3. Acceptable Mold-Resistant Paper-Faced Products:
 - a. Location: Tile backing panels, Toilet room areas without tile, and as indicated on Drawings.
 - b. Acceptable Products:
 - 1) American Gypsum Company; M-Bloc: www.americangypsum.com/#sle.
 - 2) Certainteed, Proroc Moisture And Mold Resistant With M2tech.
 - 3) National Gypsum Company; Gold Bond exp Tile Backer.
 - 4) USG, Sheetrock Brand Mold Tough.
 - 5) Prior approved equal.
- D. Gypsum Board Type X: Gypsum panels as defined in ASTM C1396/C1396M; sizes to minimize joints in place; ends square cut.
 - 1. Applications: Use for fire rated vertical surfaces and ceilings, unless otherwise indicated.
 - 2. Thickness: As indicated on Drawings.
 - a. Vertical Surfaces: 5/8 inch (16 mm).
 - b. Ceilings: 5/8 inch (16 mm).
 - c. Multi-Layer Assemblies: Thicknesses as indicated on Drawings.
 - 3. Basis of Design Product:
 - a. National Gypsum Company; Gold Bond Fire-Shield Gypsum Board.
 - b. Approved equal.
- E. Gypsum Board, Type C: ASTM C 1396/C 1396M. Manufactured to have increased fire-resistive capability.
 - 1. Applications: Rated ceilings, unless otherwise indicated.
 - 2. Thickness: 5/8 inch (15.9 mm).

3. Long Edges: Tapered.
 4. Basis of Design Product:
 - a. American Gypsum; 5/8" FireBloc Type C Gypsum Wallboard.
 - b. CertainTeed Corporation; ProRoc Type C.
 - c. Georgia-Pacific Gypsum; Fireguard C.
 - d. National Gypsum Company; Gold Bond Fire-Shield C.
 - e. Pacific Coast Building Products, Inc.; Flame Curb Type Super C.
 - f. USG Corporation; USG Sheetrock Brand Firecode C Gypsum Panels.
- F. Backing Board For Tiled Areas:
1. Applications: Surfaces behind tile in wet areas including toilet rooms.
 2. Mold Resistance: Score of 10, when tested in accordance with ASTM D3273.
 3. ANSI Cement-Based Backing Board: Non-gypsum-based; aggregated Portland cement panels with glass fiber mesh embedded in front and back surfaces complying with ANSI A118.9 or ASTM C1325.
 - a. Thickness: 5/8 inch (1.58 mm).
 - b. Acceptable Products:
 - 1) Custom Building Products Wonderboard: www.custombuildingproducts.com.
 - 2) National Gypsum Company; PermaBase Cement Board: www.nationalgypsum.com.
 - 3) USG Corporation; Durock Cement Board: www.usg.com.
- G. Ceiling Board: Special sag-resistant gypsum ceiling board as defined in ASTM C1396/C1396M; sizes to minimize joints in place; ends square cut.
1. Applications: Ceilings, unless otherwise indicated.
 2. Thickness: 1/2 inch (13 mm).
 3. Edges: Tapered.
- H. Shaftwall and Coreboard: Type X; 1 inch (25 mm) thick by 24 inches (610 mm) wide, beveled long edges, ends square cut.
1. Paper-Faced Type: Gypsum shaftliner board or gypsum coreboard as defined ASTM C1396/C1396M; water-resistant faces.
 2. Acceptable Paper-Faced Products:
 - a. American Gypsum Company; M-Bloc Shaft Liner: www.americangypsum.com/#sle.
 - b. CertainTeed Corporation; M2Tech Type X Shaftliner: www.certainteed.com/#sle.
 - c. Georgia-Pacific Gypsum; ToughRock Shaftliner: www.gpgypsum.com/#sle.
 - d. National Gypsum Company; Gold Bond Fire-Shield Shaftliner XP: www.nationalgypsum.com/#sle.
 - e. Pacific Coast Building Products, Inc.; PABCORE Gypsum Shaftliner Board type X.
 - f. USG Corporation; Gypsum Liner Panels.
 - g. Approved equal.

2.05 GYPSUM WALLBOARD ACCESSORIES

- A. Acoustic Insulation: As specified in Section 09 8100 - Acoustic Insulation.
- B. Acoustic Sealant: As specified in Section 07 9219 - Acoustical Joint Sealants.
- C. Isolation Strip at Exterior Walls or as Indicated on Drawings: Provide the following:
 1. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch (3.2 mm) thick, in width to suit steel stud size.
- D. Finishing Accessories: ASTM C1047, galvanized steel, unless otherwise indicated.
 1. Types: As detailed or required for finished appearance.
 2. Special Shapes: In addition to conventional corner bead and control joints, provide L-bead and LC-bead at exposed panel edges.
 3. Acceptable Manufacturers:
 - a. Same manufacturer as framing materials.

4. Control Joints: One-piece, v-grooved control joint with integral perforated flanges; removable tape to protect v-groove during finishing.
 - a. Applications: Locations specifically noted on Drawings; also located at internal corners, wall locations at re-entrant soffit corners, and ceiling locations at re-entrant soffit corners whether or not specifically noted on Drawings.
5. Reveal Trim: Aluminum extrusions; 1/2 inch wide reveal, 5/8 inch depth, integral perforated flanges.
 - a. Include required intersection, mitered corner, and termination trim accessories.
 - b. Basis of Design Product: 500 Series manufactured by Gordon, Inc.; www.gordonceilings.com.
 - c. Other Acceptable Manufacturers:
 - 1) Fry Reglet Corp.: www.fryreglet.com.
 - 2) MM Systems Corporation: www.mmsystemscorp.com.
 - 3) Pittcon Industries: www.pittconindustries.com.
- E. Joint Materials: ASTM C475/C475M and as recommended by gypsum board manufacturer for project conditions.
 1. Tape: 2 inch (50 mm) wide, coated glass fiber tape for joints and corners at glass mat panels.
 2. Tape: 2 inch (50 mm) wide, creased paper tape for joints and corners, except as otherwise indicated.
 3. Board manufacturer's standard ready-mixed joint compounds low-VOC joint compounds with no detectable amounts of crystalline silica based on NIOSH Method 7500.
 4. Compounds specifically manufactured for topping coats are not permitted for first coat on metal trim and taping.
 5. Ready-mixed vinyl-based joint compound at indicated applications.
 6. Joint Treatment for Cementitious Backer Board: Minimum 2 inch wide open mesh glass fiber tape acceptable to board manufacturer and tile manufacturer.
- F. High Build Drywall Surfer: Vinyl acrylic latex-based coating for spray application, designed to take the place of skim coating and separate paint primer in achieving Level 5 finish.
 1. Products:
 - a. CertainTeed Corporation; Level V Wall and Ceiling Primer/Surfer with M2Tech: www.certainteed.com.
 - b. Hamilton Drywall Products; Prep-Coat Plus.
 - c. USG Corporation; USG Sheetrock Brand Tuff-Hide Primer-Surfer: www.usg.com.
 - d. Approved equal.
- G. Screws for Fastening of Gypsum Panel Products to Steel Members from 0.033 to 0.112 inch (0.84 to 2.84 mm) in Thickness: ASTM C954; steel drill screws, corrosion-resistant.
 1. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.
 2. Type G screws for gypsum board to gypsum board.
 3. Type W screws for wood framing; nails not permitted.
 4. Type S, S-12 or W steel screws used to attach panels to studs or furring channels:
 - a. Single Layer Systems: 1 inch (25 mm) long for 1/2 inch (12.70 mm) and 5/8 inch (15.87 mm) thick panels or 1-1/4 inches (31.75 mm) long for 3/4 inch (19.05 mm) thick panels, spaced 8 inches (203.20 mm) o.c. when panels are applied horizontally, or 8 inch (203.20 mm) o.c. along vertical and bottom edges and 12 inches (305 mm) o.c. in the field when panels are applied vertically.
 - b. Two Layer Systems:
 - 1) First Layer: 1 inch (25 mm) long for 1/2 inch (12.70 mm) and 5/8 inch (15.87 mm) thick panels or 1-1/4 inches (31.75 mm) long for 3/4 inch (19.05 mm) thick panels, spaced 16 inches (406.40 mm) o.c.
 - 2) Second layer: 1-5/8 inches (41.27 mm) long for 1/2 inch (12.70 mm), 5/8 inch (15.87 mm) thick panels or 2-1/4 inch (57.15 mm) long for 5/8 inch (15.87 mm)

thick panels, spaced 16 inches (406.40 mm) o.c. with screws offset 8 inches (203.20 mm) from first layer.

- H. Power-Actuated Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
 - 1. Product Type 1:
 - a. Hilti, Inc.; Hilti Low-Velocity Power-Actuated Fasteners.
 - b. Code Approvals:
 - 1) ICC ESR 1663.
 - 2) LARR 25646.
 - 2. Product Type 2:
 - a. Hilti, Inc.; Hilti Low-Velocity X-U and X-U 15 Universal Power-Actuated Fasteners.
 - b. Code Approvals:
 - 1) ICC ESR 2669.
- I. Touch-Up Primer for Galvanized Surfaces: SSPC Paint 20.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that project conditions are appropriate for work of this Section before commencing work of this Section.
- B. Examine areas and substrates including welded hollow-metal frames and support framing, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
- C. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.
- D. Verify rough-in utilities and blocking are in proper position.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Furnish concrete inserts, steel deck hanger clips, and similar devices to other trades for installation well in advance of time needed for coordination with other work.

3.03 SHAFT WALL INSTALLATION

- A. Shaft Wall Stud Framing: Install in accordance with GA-600 requirements.
 - 1. Fasten runners to structure with short leg to finished side, using appropriate power-driven fasteners at not more than 24 inches (600 mm) on center.
 - 2. Install studs at spacing required to meet performance requirements.
- B. Shaftwall Coreboard: Cut panels to accurate dimension and install sequentially between special friction studs.
 - 1. On walls over sixteen feet high, screw-attach studs to runners top and bottom.
 - 2. Seal perimeter of shaft wall and penetrations with acoustical sealant.
- C. Penetrations: At penetrations in shaft wall, maintain fire-resistance rating of shaft wall assembly by installing supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons, elevator floor indicators, and similar items.
- D. Isolate perimeter of gypsum panels from building structure to prevent cracking of panels, while maintaining continuity of fire-rated construction.

- E. At elevator shafts where shaft system cannot be positioned within 2 inches (50.8 mm) of structural beams, floor edges and similar projections into shaft, provide 5/8 inch (15.87 mm) gypsum board cants to cover tops of projections. Slope not more than 15 degrees from vertical. Set base edge in drywall adhesive and secure top with screws at 24 inches (610 mm) on center maximum.
- F. Seal perimeter of shaftwall work where it abuts other work following requirements of Section 07 8400 - Firestopping for firestopping and fire-resistive joint sealant as applicable. Use exposed acoustic sealant at joints exposed to view on finished side.

3.04 FRAMING INSTALLATION

- A. Framing Systems: Install in accordance with ASTM C754 and manufacturer's instructions.
- B. Building Expansion Joints: Do not bridge building expansion joints with support system. Frame both sides of joints with furring and other support as indicated.
- C. Suspended Ceilings and Soffits:
 - 1. Level ceiling and soffit system to a tolerance of 1/1200.
 - 2. Laterally brace entire suspension system.
 - 3. Install bracing as required at exterior locations to resist wind uplift.
 - 4. Space ceiling framing and furring members 16 inches (400 mm) on center, except as otherwise indicated.
 - 5. Space ceiling framing and furring members at water-resistant gypsum board locations not to exceed 12 inches (300 mm) on center.
- D. Metal Stud Framing: Space studs as permitted by standard, or as specified below:
 - 1. Space studs 16 inches on center, except as otherwise indicated or required by specified tested assemblies, and secure to floor and ceiling runners with screws.
 - 2. Provide supplemental framing matching primary wall framing to support cut edges of gypsum boards not supported by primary vertical wall framing members.
 - 3. Extend partition framing to structure where indicated and to ceiling in other locations.
 - 4. Partitions Terminating at Ceiling: Attach ceiling runner securely to ceiling framing in accordance with details.
 - 5. Partitions Terminating at Structure: Attach top runner to structure, maintain clearance between top of studs and structure, and connect studs to track using specified mechanical devices in accordance with manufacturer's instructions; verify free movement of top of stud connections; do not leave studs unattached to track.
 - 6. Isolate stud system from transfer of structural loading to system, both horizontally and vertically. Provide slip or cushioned type joints to attain lateral support free from axial loading. Install each steel framing and furring member so that fastening surfaces do not vary more than 1/8 inch (3.17 mm) from plane of faces of adjacent framing.
 - 7. At partitions supported by on-grade slabs, provide top slip joint to accommodate 2 inch (51 mm) vertical movement. Provide deflection tracks or firestop tracks at slip joints where specified, or detailed on Drawings.
 - 8. Where walls are indicated to extend to overhead surfaces (ceilings, deck construction, and structural elements), to prevent deflection transfer of structural loads or movements to walls provide either:
 - a. Insert studs into runner tracks with minimum 1/2 inch (12.70 mm) gap between end of stud and inside surface of top and bottom runner. Maintain minimum of 1/2 inch (12.70 mm) engagement between end of stud and end of legs of top and bottom runners.
 - b. Slip joint between walls and structure using top runner nested within 3 inch (76.20 mm) long segment of extended leg ceiling runner positioned at stud spacing and fastened to overhead surface. Do not fasten top runner to extended leg ceiling runner.
 - 9. Brace stud framing rigid which is not clad on both sides with gypsum board. Fasten horizontal stud or 1-1/2 inch (38 mm) wide 22 gage, 0.0299 inch (0.76 mm) galvanized steel straps vertically spaced no more than 36 inches (914 mm) apart with top strap no more than 6 inches from top of wall.

10. Horizontally align openings in stud webs.
 11. Use full length studs vertically positioned between runner tracks.
 12. Minimum Jamb Stud Framing at Door Openings:
 - a. Walls laterally braced by ceiling framing or structure at 9'-0" (2743 mm) above finish floor:
 - 1) Single Doors not Larger than 3'-6" (1066.8 mm) by 9'-0" (2743 mm) and not Weighing more than 275 Pounds: 2 Type 25 studs or 1 Type 20 stud.
 - 2) Paired Doors not Larger than 3'-6" (1066.8 mm) by 9'-0" (2743 mm) per leaf and not Weighing more than 275 Pounds per Leaf: 2 Type 20 studs or 1 Type 18 stud.
 - b. Walls Laterally Braced by Ceiling Framing or Structure at 12'-0" (3658 mm) above Finish Floor:
 - 1) Single Doors not Larger than 3'-6" (1066.8 mm) by 9'-0" (2743 mm) and not Weighing More than 275 Pounds: 2 Type 20 studs or 1 Type 18 stud.
 - 2) Paired doors not larger than 3'-6" (1066.8 mm) by 9'-0" (2743 mm) per leaf and not weighing more than 275 Pounds per leaf: 2 Type 18 studs.
 - c. At welded frames with fixed anchor clips, secure studs to jamb anchors clips with not less than two self tapping screws per clip.
 - d. Provide wall framing above door openings to match wall framing adjoining the opening.
 - e. Provide one additional stud not more than 6 inches (150 mm) from jamb studs.
 - f. At fire-rated doors use minimum thickness of Type 20 studs, unless otherwise indicated.
 - g. Comply with GA-219 for fire-rated doors.
 13. Minimum Sidelight Framing:
 - a. Provide 2 Type 25 studs at each jamb or provide 1 Type 20 stud at each jamb.
 - b. Provide wall framing above and below window and wall openings with wall framing to match wall framing adjoining the opening.
 - c. Provide 1 additional stud not more than 6 inches (150 mm) from jamb studs.
 14. Fabricate corners with a minimum of three studs.
 15. Provide additional studs and framing to support wall intersections, termination of walls, at openings and cut-outs and to support built-in anchorage and attachment devices for other work.
 16. Locate studs no more than 2 inches (50.8 mm) from abutting walls, wall corners and other construction. Start typical wall studs 6 inches (150 mm) either side of stud reinforcing or frames.
 17. Install electrical outlets and similar junction boxes at indicated locations. Provide additional blocking and straps for proper locations; do not mount on "nearest" stud.
 18. Install steel studs so that flanges point in the same direction and so that leading edges or ends of each gypsum board can be attached to open (unsupported) edges of stud flanges first.
- E. Backer Plates:
1. Provide backer plate for securing surface mounted fittings, fixtures, accessories, and furnishings, including, but not limited to handrails, grab bars, toilet walls, towel bars, wall mounted door stops, and similar screw- and bolt-fastened items.
 2. Secure with sufficient quantity of self-tapping sheet metal screws to sustain loads imposed by items attached to backer plates.
- F. Direct Furring:
1. Attach to concrete or masonry with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches (610 mm) o.c.
- G. Openings: Reinforce openings as required for weight of doors or operable panels, using not less than double studs at jambs.
1. Where walls terminate at ceiling plane, extend vertical door jamb studs through suspended ceiling and attach to underside of structure above.

- H. Isolate non-load-bearing partitions located on slabs on grade at intersection with exterior walls and fixed structural abutments. Isolate partition studs from exterior wall or structural abutment framing to allow differential vertical movement.
 - 1. At window sill locations, extend isolated stud joint vertically and in alignment with joint below, to full height of partition.
- I. Standard Wall Furring: Install at concrete walls scheduled to receive gypsum board, not more than 4 inches (100 mm) from floor and ceiling lines and abutting walls. Secure in place on alternate channel flanges at maximum 24 inches (600 mm) on center.
 - 1. Orientation: Vertical.
 - 2. Spacing: As permitted by standard.

3.05 INSTALLING RESILIENT CHANNELS

- A. Position resilient channels at right angles to wood framing, space 24 inches on center and attach to each support with 1-1/4 inch Type S screws driven through holes in channel mounting flange.
- B. Walls:
 - 1. Install channels with mounting flange down.
 - 2. Channel may be inverted at floor to accommodate attachment of base.
 - 3. Locate channels 2 inches (50.8 mm) from floor and within 6 inches (150 mm) of ceiling.
 - 4. Extend channels into corners and attach to corner framing.
 - 5. Position channels 6 inches (150 mm) maximum from wall-ceiling angle.
 - 6. Cantilever channel ends no more than 6 inches (150 mm).
 - 7. Double-Layer System: Attach channel through base layer to framing with 1-5/8 inch (41.27 mm) Type S screws. Splice channel by nesting directly over framing member, screw-attach through both flanges. Reinforce with 3/8 inch (9.53 mm) pan head screws located at both ends of splice.
- C. Resilient Channel Installation at Cabinets: Attach channels to studs at center of top and bottom cabinet hanger brackets. When distance between hangers exceeds 24 inches (610 mm) on center, install additional channel at mid-point between hangers.
 - 1. Place screws attaching cabinets to resilient channels between studs.
- D. Ceilings and Soffits: Apply resilient channels at 16 inches (406.40 mm) on center perpendicular to joists and fastened with 1-5/8 inch (41.27 mm) Type S screws in accordance with Section

3.06 DIRECT HUNG CEILING SUSPENSION SYSTEM INSTALLATION

- A. Attach perimeter wall track or angle where support system meets vertical surfaces.
- B. Space main runners at 48 inches (1200 mm) on center and cross tees at 24 inch (600 mm) on center, except as otherwise indicated.
- C. Install suspension system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.
- D. Hangers: 48 inches (1219.20 mm) o.c.
- E. Carrying Channels (Main Runners): 48 inch (1219.20 mm) o.c.
- F. Furring Channels (Furring Members): 16 inches (406.40 mm) o.c.
- G. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.
- H. Suspend hangers from building structure as follows:
 - 1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.
 - a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.

2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.
 - a. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced installation standards.
3. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
4. Flat Hangers: Secure to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
5. Do not attach hangers to steel roof deck.
6. Do not connect or suspend steel framing from ducts, pipes, or conduit.
7. Fire-Resistance-Rated Assemblies: Wire tie furring channels to supports.
8. Seismic Bracing: Sway-brace suspension systems with hangers used for support.
9. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.
10. Installation Tolerances: Install suspension systems that are level to within 1/8 inch in 12 feet (3 mm in 3.6 m) measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

3.07 ACOUSTIC ACCESSORIES INSTALLATION

- A. Acoustic Insulation: Place tightly within spaces, around cut openings, behind and around electrical and mechanical items within partitions, and tight to items passing through partitions.
- B. Acoustic Insulation: Install in accordance with Section 09 8100 - Acoustic Insulation.
- C. Acoustical Sealant: Install in accordance with Section 079219 - Acoustical Joint Sealants.

3.08 BOARD INSTALLATION

- A. Comply with ASTM C840, GA-216, and manufacturer's instructions. Install to minimize butt end joints, especially in highly visible locations.
 1. Space fasteners in accordance with ASTM C840 and manufacturer's recommendations, unless fastener spacing is otherwise specified on structural Drawings for structural load-bearing walls.
 2. Install interior wall and partition boards horizontally, except where fire or sound rating requires a particular direction; comply with the method stated in the tested assembly data.
 3. Locate exposed end-butt joints as far from center of walls and ceilings as possible, and stagger not less than 24 inches (600 mm) in alternate courses of board.
- B. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.
- C. Single-Layer Non-Rated Applications: Install gypsum board in most economical direction, with ends and edges occurring over firm bearing.
 1. Exception: Tapered edges to receive joint treatment at right angles to framing.
 2. Stagger abutting end joints not less than one framing member in alternate courses of panels.
 3. At stairwells and other high walls, install panels horizontally unless otherwise indicated or required by fire-resistance-rated assembly.
 4. On Z-shaped furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
 5. Fastening Methods: Apply gypsum panels to supports with steel drill screws.

- D. Double-Layer Non-Rated Applications: Use gypsum board for first layer, placed parallel to framing or furring members, with ends and edges occurring over firm bearing. Place second layer perpendicular to framing or furring members. Offset joints of second and third layer from joints of first layer.
 - 1. On Z-shaped furring members, apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.
- E. Fire-Resistance-Rated Construction: Install gypsum board in strict compliance with requirements of assembly listing.
 - 1. Limit annular space between gypsum wall board edges and electrical device boxes to maximum 1/8 inch (3 mm), or as limited by applicable Code.
- F. Cementitious Backing Board Applications: Install over steel framing members where indicated, in accordance with ANSI A108.11 and manufacturer's instructions.
 - 1. Use cementitious tile backer board for wall surfaces in shower and tub areas, high water or humidity exposure areas, and other locations indicated for use behind thin-set tile.
 - 2. Install board with long edge perpendicular or parallel to framing. Hold bottom edge 1/4 inch above floor or fixture lip.
 - 3. Maintain manufacturer's required space between board edges.
- G. Installation on Metal Framing: Use screws for attachment of all gypsum board, except face layer of non-rated double-layer assemblies, which may be installed by means of adhesive lamination.
- H. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
 - 1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. in area.
 - 2. Fit gypsum panels around ducts, pipes, and conduits.
 - 3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4 inch (6.35 mm) to 3/8 inch (9.53 mm) wide joints to install sealant.
- I. Isolate perimeter of non-load-bearing wallboard partitions on slabs on grade at intersection with exterior walls and fixed structural abutments. Provide 1/4 inch (6 mm) space to allow differential vertical movement and trim edges with L-type edge trim. Seal joints with acoustical sealant.
 - 1. At window sill locations, extend gypsum board joint vertically and in alignment with joint below, to full height of partition.
- J. Floating Construction: Where feasible, including where recommended by manufacturer, install gypsum board with floating internal corner construction, unless isolation of the intersecting boards is indicated, or unless control or expansion joints are indicated.
- K. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C 919 and with manufacturer's written instructions for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.
- L. Install sound attenuation blankets before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.
- M. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.

3.09 SOUND ASSEMBLIES

- A. Resilient Channels:
 1. Space at a maximum of 16 inches (406.40 mm) on center.
 2. Locate joints over framing members.
- B. Gypsum Board:
 1. Fasten gypsum board to resilient channels between framing members supporting resilient channels.
 2. Do not use fasteners whose length is longer than depth of resilient channels.
 3. Install gypsum board vertically.
- C. Acoustical Insulation:
 1. Install acoustical insulation in walls where indicated.
 2. Place insulation for full distance of space between studs for full coverage of sound-rated assembly.
 3. Fit insulation tight within spaces, around cut openings, behind and around electrical and mechanical items within or behind walls and tight to items passing through walls.
- D. Acoustical Sealant: Install in accordance with Section 079219 - Acoustical Joint Sealants.
- E. Acoustical Outlet Box Pads: Install in accordance with Section 079219 - Acoustical Joint Sealants.
- F. Intersections with Non-Sound-Rated Assemblies:
 1. Extend sound-rated construction to completely close sound flanking paths through non-sound-rated construction.
 2. Install acoustical sealant for exposed locations at joints between face layers at vertical interior angles of intersecting assemblies.

3.10 APPLYING TILE BACKING PANELS

- A. Cementitious Backer Units: ANSI A108.11, at as indicated on Drawings.
- B. Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.

3.11 INSTALLATION OF TRIM AND ACCESSORIES

- A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.
- B. Control Joints: Place control joints consistent with lines of building spaces as indicated on Drawings; if not specifically indicated, provide control joints as follows:
 1. Spacing: In accordance with GA 234.
 2. Not more than 30 feet (10 meters) apart on walls and ceilings over 50 feet (16 meters) long.
 3. At exterior soffits, not more than 30 feet (10 meters) apart in both directions.
 4. Do not bridge building control and expansion joints with gypsum board.. Utilize details shown in referenced standard.
 5. Terminate gypsum board on each side of joints.
 6. Extend control joints from both corners of door frames to top of wall where doors occur in long runs of wall.
 7. Comply with manufacturer requirements for constructing control and expansion joints in fire-rated assemblies.
 - a. Locate studs on both sides of joints. Attach two layers of gypsum board strips to back of one stud to fill area behind joint; provide continuous fire barrier behind joint without restricting movement.
 8. Locate in ceilings with area exceeding 900 square feet, where framing or furring changes direction, and spaced apart not more than 30 feet (10 m).
 9. Locate in ceilings where wings of "L", "U", and "T" shaped areas are joined.

- 10. Provide mineral fiber acoustical insulation or gypsum panel backing at control joints in fire-rated assemblies to maintain fire rating.
- C. Corner Beads: Install at external corners, using longest practical lengths.
 - 1. Attach with screws.
- D. Edge Trim: Install at locations where gypsum board abuts dissimilar materials.
- E. Fasteners:
 - 1. Attachment Methods:
 - a. Attach board to framing and furring with screws.
 - b. Attach board to board with screws.
 - 2. Except where indicated otherwise or where required for fire rated assemblies, space fasteners in compliance with more restrictive requirements of referenced installation standards or manufacturer's requirements.
 - 3. Attach board to supplementary framing and blocking which provide additional support at openings and cutouts

3.12 JOINT TREATMENT

- A. Paper Faced Gypsum Board: Use paper joint tape, bedded with ready-mixed vinyl-based joint compound and finished with ready-mixed vinyl-based joint compound.
- B. Finish gypsum board in accordance with levels defined in ASTM C840, as follows:
 - 1. Level 5:
 - a. Locations indicated on Drawings.
 - b. Vinyl graphics and other specialty areas.
 - c. Use at areas of severe lighting.
 - d. Embed joints and interior angles in joint compound. Apply 3 coats joint compound over joints, angles, fastener heads, and accessories.
 - e. Joint Compound: Smooth and free of tool marks and ridges.
 - f. Skim Coat: High build gypsum board surfacer.
 - 2. Level 4:
 - a. Walls and ceilings to receive paint finish or wall coverings other than as indicated on Drawings.
 - b. Walls to receive FRP panels.
 - c. Embed joints and interior angles in joint compound. Apply 3 coats joint compound over joints, angles, fastener heads, and accessories.
 - d. Joint Compound: Smooth and free of tool marks and ridges.
 - e. Surface to be coated texture as indicated.
 - 3. Level 3:
 - a. Areas to receive glass-fiber faced tile backing gypsum board used as a tile substrate.
 - b. Use at locations such as storage, service rooms, riser closets, electrical rooms, and equipment rooms.
 - c. Embed joints and interior angles in joint compound. Apply 2 coats joint compound over joints, angles, fastener heads, and accessories.
 - d. Joint Compound: Smooth and free of tool marks and ridges.
 - e. Surface to be coated texture as indicated.
 - 4. Level 2:
 - a. Fire-rated, sound-rated, and smoke-rated assemblies in ceiling plenums and concealed areas.
 - b. Use at concealed areas and construction not indicated to be Levels 3, 4, or 5.
 - c. Embed joints and interior angles in joint compound. Apply one coat joint compound over joints, angles, fastener heads, and accessories.
 - d. Surface: Free of excess joint compound.
 - 5. Level 1: Wall areas above finished ceilings, whether or not accessible in the completed construction.

- a. Embed joints and interior angles in joint compound. Apply 2 coats joint compound over joints, angles, fastener heads, and accessories.
 - b. Surface: Free of excess joint compound.
- C. Tape, fill, and sand exposed joints, edges, and corners to produce smooth surface ready to receive finishes.
- 1. Feather coats of joint compound so that camber is maximum 1/32 inch (0.8 mm).
 - 2. Taping, filling, and sanding is not required at surfaces behind adhesive applied ceramic tile.
- D. High Build Gypsum Board Surfer: Where approved by Architect, at locations indicated to receive Level 5 finish spray apply high build drywall surfer over entire surface after joints have been properly treated; achieve a flat and tool mark-free finish.
- E. Fill and finish joints and corners of cementitious backing board as recommended by manufacturer.

3.13 ADJUSTING

- A. Adjust and align metal framing to properly receive final finishes in accordance with required tolerances.
- B. Correct damages, defects, and leave work ready for decoration. Clean compounds from trim. Visible cracks, nail heads, tool marks, waves, distortions, or other similar defects shall not appear in finished work.

3.14 CLEANING

- A. Clean as recommended by manufacturer. Do not use materials or methods which may damage finish or surrounding construction.
- B. Promptly remove joint compound from surfaces not intended to receive compound.

3.15 PROTECTION

- A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.
- B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
- C. Remove and replace panels that are wet, moisture damaged, and mold damaged.
 - 1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
 - 2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

3.16 TOLERANCES

- A. Maximum Variation of Finished Gypsum Board Surface from True Flatness: 1/8 inch in 10 feet (3 mm in 3 m) in any direction.

END OF SECTION

SECTION 09 2236.23

METAL LATH

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Metal lath for cement plaster.

1.02 SUBMITTALS

- A. Action Submittals:
 1. Product Data: Provide data on furring and lathing components, structural characteristics, material limitations, and finish.
 2. Shop drawings: show locations and installation of control and expansion joints including plans, elevations, sections, details of components, and attachments to other work. Include details for all plaster accessories depicting integration with adjacent membranes and finishes
 3. Samples: Metal Trim
- B. Informational Submittals:
 1. Installer Qualifications
 2. Material Certificates
 3. Sample Warranty

1.03 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide special submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 1. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
 2. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.
 3. A5.406.1, .2 and .3: Materials selected for longevity, reduced maintenance and recyclability.

1.04 QUALITY ASSURANCE

- A. Maintain one copy of each specified installation standard on site throughout the duration of lathing and plastering work.
- B. Installer Qualifications: Company specializing in performing the work of this Section a minimum three years documented experience.
 1. Experience: Company with not less than 10 years experience in performing specified Work similar to scope of this Project, and with a record of successful in-service performance, and sufficient production capability, facilities and personnel, to produce required Work.
 2. Supervision: Installer shall maintain a competent supervisor who is at Project during times specified Work is in progress, and, who is experienced in installing systems similar to type and scope required for Project.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Basis of Design Product:
 1. Structa Wire Corporation; Structa Mega Lath: www.structawire.com.
 2. Approved equal.
 3. Other Acceptable Manufacturers:

- a. Alabama Metal Industries Corporation www.amico-lath.com.
- b. CEMCO; California Expanded Metal Products Co.
- c. ClarkDietrich Building Systems.

2.02 LATH ASSEMBLIES

- A. Provide completed assemblies with the following characteristics:
 1. Maximum Deflection of Vertical Assemblies: 1:360 under lateral point load of 100 lbs (445 N).
 2. Maximum Deflection of Horizontal Assemblies: 1:240 deflection under dead loads and wind uplift.

2.03 LATH MATERIALS

- A. Welded Wire Lath: ASTM C933; 17 gage galvanized by 16 gage; with 0.7 inch (17.8 mm) 1-1/2 inch (38 mm) openings, of weight to suit application and as specified in ASTM C841 or ASTM C1063 for framing spacing.
 1. Applications: Use at vertical wall surfaces.
 2. Basis of Design Manufacturer:
 - a. Structa Wire Corp.; Structa Mega Lath.
- B. Corner Mesh: ASTM C1063; Formed sheet steel, minimum 0.018 inch (0.5 mm) thick, perforated flanges shaped to permit complete embedding in plaster, minimum 2 inch (50 mm) size; same finish as lath.
- C. Strip Mesh: Expanded metal lath, same weight as lath, 2 inch (50 mm) wide by 24 inch (600 mm) long; same finish as lath.
- D. Beads, Screeds, Joint Accessories, and Other Trim: Depth governed by plaster thickness, and maximum possible lengths.
 1. Material: Formed G90/Z275 galvanized sheet steel, expanded metal flanges.
 2. Casing Beads with Weep Holes: Square edges.
 - a. Basis of Design Product:
 - 1) Clark Western; No. 66X Expanded Flange Casing Bead.
 3. Corner Beads: Square corners.
 - a. Basis of Design Product:
 - 1) Clark Western; No. 1A Expanded Corner Bead.
 4. Sill (Weep) Screeds: Bevelled edges; minimum 3-1/2 inch vertical attachment flange.
 - a. Basis of Design Product:
 - 1) Clark Western; No. 36 Foundation Sill Screed.
 5. Head Drip Screeds: Bevelled edges; minimum 3-1/2 inch vertical attachment flange, 45-degree slope allows for water to weep out of the assembly, and 90-degree return provides a 3/4-inch solid metal leg.
 - a. Basis of Design Product:
 - 1) CEMCO; No. 6.
 6. Flashing Screeds: 3-1/2 inch vertical attachment flange, single-piece 45-degree weep screed, for drainage, and a Z flashing for window head protection
 - a. Basis of Design Product:
 - 1) CEMCO; No. 3.
 7. Base (Weep) Screeds: Square edges; minimum 3-1/2 inch vertical attachment flange.
 - a. Basis of Design Product:
 - 1) Clark Western; 3-1/2" J-Weep High Back.
 8. Horizontal Control Joints: Accordion profile with factory-installed protective tape, 2 inch (50 mm) flanges.
 - a. Basis of Design Product:
 - 1) Clark Western; No. 15 and No. 30 (corner) Control Joint.
 - 2) CEMCO; Double "V" Control Joint (#15).

9. Vertical Control Joints: Two-piece, slip joint that finishes butt ends of adjacent panels, 1 inch (25 mm) flanges.
 - a. Joint Width: As indicated on Drawings
 - b. Basis of Design Product:
 - 1) Clark Western; #40 Zinc Two-Piece Expansion Joint.
 - 2) CEMCO; XJ15.
10. Expansion Joints: Two-piece, slip joint that finishes butt ends of adjacent panels, 3 inch (76.2 mm) flanges.
 - a. Joint Width: As indicated on Drawings
 - b. Basis of Design Product:
 - 1) Clark Western; #40 Zinc Two-Piece Expansion Joint.
 - 2) CEMCO; XJ15.
11. Reveal Drip Screeds:
 - a. Material: Aluminum.
 - b. Finish: Factory primed.
 - c. Provide flanges for embedding into plaster system.
 - d. Sizes and locations as indicated on Drawings.
 - e. Provide ventilating type for venting space above soffit.
 - f. Basis of Design Product:
 - 1) Fry Reglet Corporation; DS-875-875.
12. Continuous Insulation Furring Strips: 18 GA Galvanized Steel G60 "L" shaped.
 - a. Basis of Design Product:
 - 1) Brand X Metals, Inc.; Diamond Furr C.I. Lath Attachment System DF-2375: www.brandxmetals.com.

2.04 ACCESSORIES

- A. Anchorage: Tie wire, nails, and other metal supports, of type and size to suit application; to rigidly secure materials in place, galvanized.
- B. Fasteners: ASTM C1002 self-piercing tapping screws; length required to penetrate minimum 3/4 inch into framing or solid backing, or as required by ASTM C1063, whichever is greater length.
- C. Weather Barrier: Specified in Section 07 2500 - Weather Barriers.
- D. Tie Wire: Annealed galvanized steel.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify existing conditions before starting work.
- B. Verify that substrates are ready to receive work and conditions are suitable for application.
- C. Do not begin until unacceptable conditions have been corrected.
- D. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.02 INSTALLATION - GENERAL

- A. Install interior lath and furring for gypsum plaster in accordance with ASTM C841.
- B. Install lath for Portland cement plaster in accordance with ASTM C1063.
 1. Fastener Spacing: Space fasteners 6 inch on center vertically, or as otherwise required by reference standard requirements.
- C. Install lath and furring for fire-rated assemblies in accordance with requirements of assembly as indicated.

3.03 CONTROL JOINTS

- A. Locate joints as indicated on drawings and comply with ASTM C1063.
 - 1. Area of plaster panel not to exceed 144 sq ft (13.4 sq m) for vertical surfaces.
 - 2. Area of plaster panel not to exceed 100 sq ft (9.3 sq m) for horizontal, curved or angled surfaces.
 - 3. Spacing between control joints not to exceed 18 ft (5.5 m) in each direction.
 - 4. Area bounded by control joints not to exceed a length-to-width ratio of 2-1/2 to 1.
- B. Install expansion joints where an expansion joint occurs in base exterior wall.
- C. Install prefabricated joint accessories in accordance with ASTM C1063.
- D. Installing Accessories:
 - 1. Place corner aid at external wall corners; fasten at outer edges of lath only. Wire-tie outside corner - aid to wall lath with wire-toes at 9 in. on center.
 - 2. Embed ends of control joints and expansion joints at ends and intersections with sealant, refer to Section 07 9200 - Joint Sealants.
 - 3. Place casing beads, soffit screeds, window head screed, and foundation sill screeds at terminations of plaster finish, as shown on drawings.
 - a. Butt and align ends.
 - b. Set level.
 - c. Secure rigidly in place.
 - 4. Weather lap trim pieces, unless detailed otherwise
- E. Locate joints as indicated on Drawings.
 - 1. Control Joint Spacing: Maximum 12 feet (4 m) on center.
 - 2. Expansion Joint Spacing: Maximum 30 feet (10 m) on center.
- F. Install control and expansion joints using specified accessories, where indicated.
 - 1. Provide discontinuous lath on either side of control joint and securely fasten lath to solid blocking or framing
 - 2. Cut primary lath continuously along centerline of expansion joints.
 - 3. Wire-tie expanded flanges of accessories to primary lath; screw fasteners not permitted for this purpose.
 - 4. Continue vertical control joints beyond horizontal control joints at intersections

3.04 TRIM ACCESSORY INSTALLATION

- A. Install trim accessories, i.e. weep screeds, casing beads, reveals, drip molds, corner reinforcement and control/expansion joints plumb, level and straight. Intersections and terminations shall be neatly mitered and align with adjoining trims. Set grounds to provide specified plaster thickness.
- B. Install longest length possible. Do not to use pieces shorter than 72 inches (1829 mm) in length.(i.e. a 12'-0" (3658 mm) opening shall have two 72 inch (1829 mm)) pieces.
- C. Attach trim accessories to remain firm and solid during plastering. Attachment should not exceed 24 inches (610 mm) on center.

3.05 LATH INSTALLATION

- A. Apply lath taut, with long dimension perpendicular to supports.
- B. Lap ends of non-metallic lath in accordance with ASTM C1787.
- C. Attach metal lath to concrete using wire loops. Attach anchors to backup surface; space at maximum 24 inches (600 mm) on center.
- D. Continuously reinforce internal angles with corner mesh, except where the metal lath returns 3 inches (75 mm) from corner to form the angle reinforcement; fasten at perimeter edges only.

- E. Place corner bead at external wall corners; fasten at outer edges of lath only with wire ties.
- F. Place base screeds at termination of plaster areas; secure rigidly in place.
- G. Place 4 inch (100 mm) wide strips of lath centered over junctions of dissimilar backing materials, and secure rigidly in place. Provide expansion joint at junctions of dissimilar framing materials
- H. Place lath vertically above each top corner and each side of door frames to 6 inches (150 mm) above ceiling line.
- I. Place casing beads at terminations of plaster finish. Butt and align ends. Secure rigidly in place.
- J. Place additional strip mesh diagonally at corners of lathed openings. Secure rigidly in place.

3.06 TOLERANCES

- A. Maximum Variation from True Lines and Levels: 1/8 inch in 10 feet (3 mm in 3 m).
- B. Maximum Variation from True Position: 1/8 inch (3 mm).

END OF SECTION

**SECTION 09 2400
CEMENT PLASTERING**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Cement plastering.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination: Coordinate components of fire rated assemblies with materials specified for support of plaster in other Sections.
- B. Preinstallation Conference: Conduct conference at Project site.
 - 1. Prior to application of Cement Plaster Work, Contractor, Installer, and other Installers whose work may affect quality of work shall meet at the Project site to coordinate related requirements and plaster work.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Provide data on plaster materials and trim accessories.
 - 2. Shop drawings: Coordinate with Section 09 2236.23 - Metal Lath.
 - 3. Samples:
 - a. Submit 3 samples, 12 by 12 inch (300 by 300 mm) in size illustrating finish color and texture.
 - b. Submit two samples of each type trim accessory.
- B. Informational Submittals:
 - 1. Evaluation Service Reports: Show compliance with specified requirements.
 - 2. Installer Qualifications: Written data for company, principal, personnel, experience, and training required by "Quality Assurance" article.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
 - 2. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.
 - 3. A5.406.1, .2 and .3: Materials selected for longevity, reduced maintenance and recyclability.

1.05 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing the work of this section with minimum three years documented experience.
- B. Copies of Documents at Project Site: Maintain at the project site a copy of each referenced document that prescribes execution requirements.

1.06 MOCK-UP

- A. Construct mock-up of exterior wall, 10 feet (3 m) long by 10 feet (3 m) wide, illustrating surface finish.
 - 1. Locate where directed.

2. Approval of mockups does not constitute approval of deviations from contract document contained in mockup unless Architect specifically approves changes if requested by Architect, make modifications to mockups or provide additional mockups without charge to Owner. Do not proceed with remainder of installation until mockups have been accepted by Architect and Owner
3. Construct over backing using same materials and system as specified and to be used on building under underlayment, lath, base coat, and finish coat. Include 1/2 inch (12.70 mm) channel screed in both horizontal and vertical direction with intersection
4. Mock-up may remain as part of this work.

1.07 FIELD CONDITIONS

- A. Exterior Plaster Work: Do not apply plaster when substrate or ambient air temperature is 40 degrees F (4 degrees C) or lower, or when temperature is expected to drop below 40 degrees F (4 degrees C) within 48 hours of application.
- B. Do not use frozen or previously frozen materials; do not apply cement plaster to frozen surfaces or surfaces with frost present.
 1. Protect installation from freezing minimum 24 hours after initial set.
- C. Do not install cement plaster in direct sunlight for extended periods of time to prevent uneven or premature evaporation.

PART 2 PRODUCTS

2.01 CEMENT PLASTER APPLICATIONS

- A. Lath Plaster Base: Metal lath.
 1. Plaster Type: Factory prepared plaster mix.
 2. Number of Coats: Three, textured as indicated on Drawings.
 - a. First Coat: Apply to a nominal thickness of 3/8 inch (9 mm).
 - b. Second Coat: Apply to a nominal thickness of 3/8 inch (9 mm).
 - c. Leveling Coat: Apply to a nominal thickness of 1/32 to 1/16 inch (0.79 to 1.6 mm).
 - d. Texture: Fine Sand.

2.02 FACTORY PREPARED CEMENT PLASTER

- A. Premixed Plaster for Stucco Scratch and Brown Coats: Factory mixed and packaged, complying with material requirements of ASTM C926.
 1. Acceptable Products:
 - a. Amerimix, an Oldcastle brand; AMX 700 SBF: www.amerimix.com.
 - b. BMI Products; BMI 690 Standard with Fibers: www.bmi-products.com.
 - c. LaHabra Stucco Solutions; Fiber 47 Armour Wall Scratch & Brown Sanded: www.lahabrastucco.com.
 - d. Omega Products; Super Cement Fibered: www.omega-products.com.
- B. Premixed Textured Coating: Polymer modified acrylic coating, integrally colored, and trowel applied to substrates prepared in accordance with manufacturer's written installation instructions.
 1. Finish Texture: Fine sand.

2.03 ACCESSORIES

- A. Lath: As specified in Section 09 2236.23 - Metal Lath.
- B. Beads, Screeds, and Joint Accessories: As specified in Section 09 2236.23 - Metal Lath.
- C. Sealant: As specified in Section 07 9200 - Joint Sealants.
- D. Fiber Reinforcement: Nylon or polypropylene monofilament fibers conforming to ASTM C 1116 Type III (synthetic fiber-reinforced concrete or shotcrete). AR chopped glass fiber strands are not permitted.

1. Fiber Content: Add fiber to base-coat mixes after ingredients have mixed at least two minutes. Comply with fiber manufacturer's written instructions for fiber quantities in mixes, but do not exceed 1 lb of fiber/cu. yd. (0.6 kg of fiber/cu. m) of cementitious materials.

2.04 PLASTER MIXES

- A. Over Metal Lath: Mixed and proportioned in accordance with ASTM C926.
 1. Three-coat application.
- B. Premixed Plaster Materials: Mix in accordance with manufacturer's instructions.
- C. Finish Coat: Premixed.
 1. Add color pigments to finish coat in accordance with manufacturer's instructions.
- D. Mix only as much plaster as can be used prior to initial set.
- E. Add color pigments to finish coat in accordance with manufacturer's instructions.
- F. Mix materials dry, to uniform color and consistency, before adding water.
- G. Protect mixtures from freezing, frost, contamination, and excessive evaporation.
- H. Do not retemper mixes after initial set has occurred.

2.05 MISCELLANEOUS MATERIALS

- A. Water for Mixing and Finishing Plaster: Potable and free of substances capable of affecting plaster set or of damaging plaster, lath, or accessories.
- B. Sealant: As specified in Section 07 9200 - Joint Sealants.
- C. Provide other materials not specifically described but required for a complete and proper installation as selected by the Contractor subject to the approval of the Architect.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify existing conditions are acceptable prior to starting this work.
- B. Verify that weather barrier and air barrier are properly installed.
- C. Verify masonry joints are flush and surfaces are ready to receive work of this section, and that there are no existing bituminous or water repellent coatings on masonry surfaces.
- D. Verify metal lath has been installed in accordance with Section 09 2236.23 - Metal Lath.
 1. Verify lath is flat, secured to substrate, and joint and surface perimeter accessories are properly in place.
- E. Verify mechanical and electrical equipment and services located within areas to receive this work have been properly tested and approved.

3.02 PREPARATION

- A. Protect finished surfaces installed prior to plastering as required to prevent damage. Maintain protection in place until completion of plastering
- B. Dampen masonry surfaces to reduce excessive suction.
- C. Apply dash bond coat of plaster to solid bases and moist cure for at least 24 hours before applying first coat of jobsite mixed plaster.

3.03 MIXING

- A. Mix only as much plaster as can be used prior to initial set.

- B. Mix materials dry, to uniform color and consistency, before adding water.
- C. Protect mixtures from frost or freezing temperatures, contamination, and excessive evaporation.

3.04 APPLICATION

- A. Apply plaster in accordance with manufacturer's written instructions and comply with ASTM C926.
- B. Base Coats - General:
 - 1. Apply base coats to fully embed lath and to specified thickness.
 - 2. Follow guidelines in ASTM C926 and manufacturer's written installation instructions for moist curing base coats and application of subsequent coats.
 - 3. Do not deviate more than plus or minus 1/4 inch (6.35 mm) in 10 feet (3 m) from a true plane in finished plaster surfaces when measured by a 10 foot (3 m) straightedge placed on surface.
 - a. Finish plaster flush with metal frames and other built-in metal items or accessories that act as a plaster ground unless otherwise indicated. Where casing bead does not terminate plaster at metal frame, cut base coat free from metal frame before plaster sets and groove finish coat at junctures with metal.
 - b. Provide plaster surfaces that are ready to receive field-applied finishes indicated.
- C. Three-Coat Application Over Metal Lath:
 - 1. Apply first coat to a nominal thickness of 3/8 inch (9 mm).
 - 2. Apply second coat to a nominal thickness of 3/8 inch (9 mm).
 - 3. Apply reinforcing mesh in leveling coat while still wet; smooth mesh and remove wrinkles and loose ends.
 - 4. Apply leveling coat.
 - 5. Apply finish coat to a nominal thickness of 1/8 inch (3 mm).
- D. Application of Scratch Coat:
 - 1. Apply to uniform thickness indicated to completely embed metal lath.
 - 2. Uniformly score surface approximately 3/8 inch (9.53 mm) deep.
 - 3. Allow to cure 7 days before applying brown coat.
- E. Application of Brown Coat:
 - 1. After scratch coat has cured to be sufficient rigid, apply brown coat to uniform thickness indicated over damp scratch coat with sufficient material and pressure to ensure tight, uniform bond.
 - 2. Rod to true, even plane, filling surface defects with plaster.
 - 3. Uniformly float surface 3/8 inch (9.53 mm) deep.
 - 4. Allow to cure 7 days before applying brown coat.
- F. Finish Coats:
 - 1. Primer and Cementitious Coatings: Machine applied.
 - a. Remove surface contaminants such as dust and dirt without damaging substrate.
 - b. Apply primer in accordance with manufacturer's instructions.
 - c. Apply finish coating in number of coats and to thickness recommended by manufacturer.
- G. Moist Curing:
 - 1. Follow procedures for each coat as recommended by ASTM C926 and PCA and as required based on environmental conditions.
 - 2. Prevent premature dry-out.
 - a. Cure each coat minimum 48 hours;
 - 1) Allow minimum 7 day interval between application of scratch and brown coat.
 - 2) Allow minimum 7 day interval between application of brown and finish coat.
 - 3) Keep scratch and brown coat uniformly moist during curing period by applying fine fog spray of water. Apply fog spray at least twice daily in morning and evening. Exercise care to avoid eroding scratch coat.

- H. Cementitious Finishes: After curing, dampen previous coat prior to applying finish coat.
- I. Acrylic Finishes:
 - 1. Dampen previous coat only if required or recommended by finish coat manufacturer.
 - 2. Air cure only; do not wet cure as recommended by finish coat manufacturer.

3.05 TOLERANCES

- A. Maximum Variation from True Flatness: 1/4 inch in 10 feet (6 mm in 3 m).

3.06 REPAIR

- A. Cut, patch, repair and point-up cement plaster as necessary to accommodate other work. Point-up finish plaster surfaces around items that are built into or penetrate plaster surfaces.
- B. Patching: Remove loose, damaged or defective plaster and replace with plaster of same composition; finish to match surrounding area.

3.07 CLEANING AND PROTECTION

- A. Remove temporary protection and enclosure of other work after plastering is complete. Promptly remove plaster from door frames, windows, and other surfaces not indicated to be plastered. Repair floors, walls, and other surfaces stained, marred, or otherwise damaged during plastering.

END OF SECTION

SECTION 09 3000**TILING****PART 1 GENERAL****1.01 SECTION INCLUDES**

- A. Tile for floor applications.
- B. Tile for wall applications.
- C. Tile for shower receptors.
- D. River rock.
- E. Crack isolation membranes.
- F. Waterproofing membranes.
- G. Self-leveling underlayment over tiling substrates.
- H. Stone thresholds.
- I. Non-ceramic trim.

1.02 DEFINITIONS

- A. Module Size: Actual tile size, with minor facial dimension as measured by ASTM C499, plus joint width indicated.
- B. Facial Dimension: Actual tile size, with minor facial dimension as measured by ASTM C499.
- C. Large Format Tile: Any tile unit that maintains an edge of 15 inches or greater in any dimension.

1.03 ADMINISTRATIVE REQUIREMENTS

- A. Coordination: Coordinate location of tiling movement joints on concrete floor substrates with locations of concrete floor expansion and control joints; align substrate joints and tiling system joints where required by specified reference standards.
- B. Preinstallation Meeting: Convene a preinstallation meeting one week before starting work of this Section; require attendance by all affected installers.
 - 1. Review installation procedures and coordination requirements.
 - 2. Meeting Agenda includes but is not Limited to:
 - a. Acceptance of substrate.
 - b. Surface preparation.
 - c. Tile and installation material compatibility.
 - d. Elastomeric membrane.
 - e. Crack isolation techniques.
 - f. Review requirements in ANSI A108.01 for substrates and for preparation by other trades.

1.04 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Provide manufacturer's data sheets on tile, mortar, grout, and accessories. Include instructions for using grouts and adhesives.
 - 2. Shop Drawings: Indicate tile layout, patterns, color arrangement, perimeter conditions, junctions with dissimilar materials, control and expansion joints, thresholds, ceramic accessories, and setting details.
 - 3. Samples: Submit three 4 inch (101.6 mm) by 4 inch (101.6 mm) samples of each tile type, noting actual tile size.

- a. Include samples of specified accessories per Finish Schedule.
- b. Submit three samples of each grout color per Finish Schedule.
- 4. Samples: Submit manufacturer's color boards consisting of actual tiles showing full range of colors, textures, and patterns available for each type and composition of tile specified.
 - a. Include samples of specified accessories requiring color selection.
 - b. Submit manufacturer's color samples of available grout consisting of actual sections of grout showing full range of colors available for each type of grout specified.
- B. Informational Submittals:
 - 1. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.
 - 2. Master Grade Certificate: Submit for each type of tile, signed by the tile manufacturer and tile installer.
 - 3. Maintenance Data: Include recommended cleaning methods, cleaning materials, and stain removal methods.
- C. Closeout Submittals:
 - 1. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
 - a. Extra Tile: 2 percent of each size, color, and surface finish combination, but not less than 10 square feet of each type.

1.05 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.

1.06 QUALITY ASSURANCE

- A. Maintain one copy of and ANSI A108/A118/A136 and TCNA (HB) on site.
- B. Manufacturer Qualifications: Company specializing in manufacturing the types of products specified in this Section, with minimum 5 years of documented experience.
- C. Installer Qualifications:
 - 1. Company specializing in performing tile installation, with minimum of five years of documented experience.
 - a. Accredited Five-Star member of the National Tile Contractors Association (NTCA) or Trowel of Excellence member of the Tile Contractors' Association of America (TCAA).
- D. Provide materials obtained from only one manufacturer for each type and color of tile, and for each type of mortar, grout, adhesive, and sealant.
- E. Floor Tile Slip Resistance: Comply with ANSI A137.1, Dynamic Coefficient of Friction AcuTest of 0.42 wet as tested with BOT-3000 Universal Walkway Tester.
- F. Certifications:
 - 1. Submit "Master Grade Certificate" for each type of ceramic and quarry tile in accordance with requirements of ANSI A137.1.
 - 2. Submit manufacturer's certifications that mortars, adhesives and grouts are suitable for intended use.

1.07 MOCK-UP

- A. Refer to Section 01 4339 - Mockups and Field Samples, for general requirements for mock-up.
- B. Mock-up: Construct tile mock-up as directed by Architect, incorporating all components specified for the location.
 - 1. Architect to review tile layout prior to installation.

2. Approved mock-up may remain as part of the Work.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.
- B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.
- C. Protect adhesives from freezing or overheating in accordance with manufacturer's instructions.

1.09 FIELD CONDITIONS

- A. Comply with referenced standards and manufacturer's recommendations for protection and maintenance of environmental conditions during and after installation.
- B. Do not install solvent-based products in an unventilated environment.
- C. Maintain ambient and substrate temperature of 50 degrees F (10 degrees C) during installation, and for at least seven days after installation. Maintain higher temperatures for proprietary mortars and grouts when recommended by manufacturer.
- D. Vent temporary heaters to the exterior to prevent damage to tile work due to carbon dioxide accumulation.

PART 2 PRODUCTS

2.01 TILING MATERIALS

- A. Refer to Finish Schedule for selected products and finishes.
- B. Ceramic tile flooring shall be stable, firm, and slip resistant.

2.02 STONE TILE MATERIALS

- A. Refer to Finish Schedule for selected products and finishes.
- B. River Rock: White, smooth rocks, 3/4 inch (19.05 mm) to 1-1/2 inch (38 mm) diameter.

2.03 TRIM AND ACCESSORIES

- A. Trim Shapes:
 1. Base, caps, returns and other trim accessories as required; same characteristics as tile.
 2. If base is cut from full-size tile, bevel top edge and polish to match face.
- B. Metal Trim: Style, configuration, and dimensions as indicated on Finish Schedule, for setting using tile mortar or adhesive.
 1. Finish: Satin natural anodized extruded aluminum, style, configuration, and dimensions as indicated on drawings, for setting using tile mortar or adhesive.
 2. Applications: As indicated on Drawings
- C. Thresholds: 2 inches (51 mm) wide by full width of wall or frame opening; beveled edge on both long edges; without holes, cracks, or open seams.
 1. Thickness: 1/2 inch (12.7 mm).
 2. Material: Marble, honed finish.
 3. Color and Pattern: As indicated on drawings.
 4. Applications:
 - a. At doorways where tile terminates.
- D. Adhesives and sealants shall comply with VOC and chemical component limits of SCAQMD 1168, CAL-Green Table 5.504.4.1 Adhesive VOC Limit, and CAL-Green Table 5.504.4.2 Sealant VOC Limit requirements.

- E. Primers: As recommended by manufacturer of mortar, grout, crack isolation, and sealant materials.
 - 1. Use primers that comply with VOC limits of the current requirements of SCAQMD 1113 and CAL-Green Table 5.504.4.3 for VOC Content Limits for Architectural Coatings.

2.04 SETTING MATERIALS

- A. Setting Material - General:
 - 1. Comply with volatile organic compound (VOC) product requirements specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green.
 - 2. Use only the types of mortar bed materials to set the types of tile for which the mortar is labeled.
- B. Polymer Modified Thinset Dryset Mortar Bond Coat: ANSI A118.4 or ANSI A118.15.
 - 1. Applications: Use this type of bond coat where indicated .
 - a. Acceptable Products:
 - 1) Custom Building Products; MegaFlex Crack Prevention Mortar: www.custombuildingproducts.com.
 - 2) LATICRETE International, Inc.; Laticrete 253 Gold: www.laticrete.com.
 - 3) Mapei Corporation; Kerabond and Keralastic.
 - 4) Prior approved equal.
- C. Latex-Portland Cement Mortar Bond Coat: ANSI A118.4 or ANSI A118.15.
 - 1. Applications: Use this type of bond coat where indicated .
 - 2. Large and Heavy Tile Mortar: For floor and wall applications in new construction, provide high-bond Portland cement mortar for large format tile, medium bed. Provide product that is approved by manufacturer for application thickness up to 3/4 inch (19 mm).
 - a. Basis of Design Product:
 - 1) Custom Building Products; MegaLite RS Ultimate Rapid Setting Crack Prevention Large Format Tile Mortar, with Multi-Surface Bonding Primer: www.custombuildingproducts.com.
 - 2) LATICRETE International, Inc.; LATICRETE 254 Platinum: www.laticrete.com.
 - 3) Mapei Corporation; Grani/Rapid with Ker 318.
 - 4) Prior approved equal.
 - 3. Applications: For wall applications, provide non-sagging, latex Portland cement mortar complying with ANSI A118.4 for mortar of this type.
 - a. For wall applications with large and heavy tile.
 - b. For floor applications with large and heavy tile.
- D. Portland Cement Mortar Thickset Installation Materials: ANSI A108.2.
 - 1. Acceptable Products:
 - a. Custom Building Products; Thick Bedding Mortar with CustomCrete Latex Mortar Admix.
 - b. Laticrete International, Inc.; Laticrete 3701 Mortar Admix with Laticrete 226 Thick Bed Mortar Mix.
 - c. MAPEI Corporation; Planicrete AC.
 - 2. Mortar Sand: ASTM C144, free of deleterious materials, well graded.
 - 3. Setting Bed Sand: ASTM C136/C136M, 100 percent passing No. 4 sieve.
 - 4. Cleavage Membrane: Asphalt felt, ASTM D226/D226M, Type I (No. 15); or polyethylene sheeting, ASTM D4397, 4.0 mils thick.
 - 5. Reinforcing Wire Fabric: Galvanized, welded-wire fabric, 2 by 2 inches by 0.062-inch diameter; comply with ASTM A 185/A 185M and ASTM A820/A820M, except for minimum wire size.
 - 6. Expanded Metal Lath: Diamond-mesh lath complying with ASTM C847.
 - a. Base Metal and Finish for Interior Applications: Uncoated or zinc-coated (galvanized) steel sheet, with uncoated steel sheet painted after fabrication into lath.
 - b. Base Metal and Finish for Exterior Applications: Zinc-coated (galvanized) steel sheet.

- c. Configuration over Studs and Furring: Flat.
- d. Configuration over Solid Surfaces: Self-furring.
- e. Weight: 2.5 lb/sq. yd..

2.05 GROUTS

- A. Stain-Resistant High Performance Grout: ANSI A118.7 polymer modified cement grout.
 - 1. Applications: as indicated on Drawings.
 - 2. Use sanded grout for joints 1/8 inch (3.17 mm) wide and larger; use unsanded grout for joints less than 1/8 inch (3.17 mm) wide.
 - 3. Polymer Type: As recommended by manufacturer in liquid-latex form for addition to prepackaged dry-grout mix.
 - 4. Color(s): As indicated on Finish Schedule.
 - 5. Acceptable Products:
 - a. Custom Building Products; Fusion Pro Single Component Grout: www.custombuildingproducts.com.
 - b. LATICRETE International, Inc; Spectralock: www.laticrete.com.
 - c. Mapei Corporation; Ultracolor Plus.

- B. High Performance Grout: ANSI A118.7 polymer modified cement grout.
 - 1. Applications: Use this type of grout where indicated and where no other type of grout is indicated.
 - 2. Use sanded grout for joints 1/8 inch (3.17 mm) wide and larger; use unsanded grout for joints less than 1/8 inch (3.17 mm) wide.
 - 3. Polymer Type: As recommended by manufacturer in liquid-latex form for addition to prepackaged dry-grout mix.
 - 4. Color(s): As indicated on Finish Schedule.
 - 5. Acceptable Products:
 - a. Custom Building Products; Prism Ultimate Performance Grout: www.custombuildingproducts.com.
 - b. LATICRETE International, Inc; LATICRETE PERMACOLOR Grout.
 - c. Mapei Corporation; Ultracolor Plus.
 - d. Prior approved equal.

2.06 ACCESSORY MATERIALS

- A. Adhesives and Sealants (including grouts): Only use adhesives and sealants (grouts) in the interior of the building that meet or do not exceed the VOC limits of the CURRENT requirements of South Coast Air Quality Management District (SCAQMD) Rule No. 1168 on the interior of the building.
 - 1. Current requirement refers to the date on which the materials are installed in the building.
 - 2. SCAQMD 1168 referenced in Section 01 8114 that was current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.
 - 3. Interior refers to all building construction that is inside of the exterior weatherproofing material.
 - a. Adhesives: Meet or exceed the VOC and chemical component limits of CAL-Green Table 5.504.4.1 Adhesive VOC Limit requirements.
 - b. Sealants: Meet or exceed the VOC and chemical component limits of CAL-Green Table 5.504.4.2 Sealant VOC Limit requirements.

- B. Sealant: As specified in Section 07 9200 - Joint Sealants.
 - 1. Color: Match grout.
 - 2. Ensure sealant is chemically compatible with tile, mortar, and grout.
 - 3. Ensure sealant can physically and chemically withstand environmental conditions normally expected at installation areas.

- C. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.
- D. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.
- E. Crack Prevention Membrane: Specifically designed for bonding to cementitious substrate under thick mortar bed or thin-set tile; complying with ANSI A118.10.
 - 1. Fluid or Trowel Applied Type:
 - a. Material: Synthetic rubber or Acrylic.
 - b. Thickness: 25 mils (0.6 mm), minimum, dry film thickness.
 - c. Basis of Design Product:
 - 1) Custom Building Products; RedGard Crack Prevention and Waterproofing Membrane: www.custombuildingproducts.com.
 - 2) LATICRETE International, Inc; LATICRETE HYDRO BAN: www.laticrete.com.
 - 3) Mapei Corporation; Mapelastic AquaDefense.
 - 4) Prior approved equal.
- F. Waterproofing Membrane: Specifically designed for bonding to cementitious substrate under thick mortar bed or thin-set tile; complying with ANSI A118.10.
 - 1. Fluid or Trowel Applied Type:
 - a. Material: Synthetic rubber or Acrylic.
 - b. Thickness: 25 mils (0.6 mm), minimum, dry film thickness.
 - c. Acceptable Products:
 - 1) Custom Building Products; RedGard Crack Prevention and Waterproofing Membrane: www.custombuildingproducts.com.
 - 2) LATICRETE International, Inc; LATICRETE HYDRO BAN: www.laticrete.com.
 - 3) Mapei Corporation; Mapelastic AquaDefense.
- G. Self-leveling Underlayment: Flowable, pre-formulated, water-mixed latex-Portland cement-based material; self-leveling to provide flat, level surface on tiling substrates.
 - 1. Acceptable Manufacturers:
 - a. Custom Building Products; "LevelQuick RS" Self Leveling Underlayment: www.custombuildingproducts.com.
 - b. LATICRETE International, Inc.; 86 Latilevel Thin Pour: www.laticrete.com.
 - c. Mapei Corporation; Ultraplan 1 Plus: www.mapei.com.
 - d. Substitutions: See Section 01 6000 - Product Requirements.
- H. Backing Board: Specified in Section 09 2116 - Gypsum Board Assemblies.

2.07 MIXING MORTARS AND GROUT

- A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.
- B. Add materials, water, and additives in accurate proportions.
- C. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that subfloor surfaces are smooth and flat within the tolerances specified for that type of work and are ready to receive tile.

- B. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive tile.
- C. Verify that subfloor surfaces are dust free and free of substances that could impair bonding of setting materials to subfloor surfaces.
- D. Cementitious Sub-floor Surfaces: Verify that substrates are dry enough and ready for tile flooring installation by testing for moisture and pH.
 - 1. Test in accordance with Section 09 0561 - Common Work Results for Flooring Preparation.
- E. Verify that required floor-mounted utilities are in correct location.
- F. Do not begin installation until substrates are acceptable for installation. Beginning installation means that the substrate is acceptable.

3.02 PREPARATION

- A. Protect surrounding work from damage.
 - 1. Vacuum clean surfaces and damp clean.
 - 2. Seal substrate surface cracks with filler. Level existing substrate surfaces to acceptable flatness tolerances.
 - 3. Fill cracks, holes, and depressions in concrete substrates for tile floors installed with mortar with trowelable leveling and patching compound specifically recommended by tile-setting material manufacturer.
- B. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped 1/4 inch (6.35 mm) per 12 inches (305 mm) toward drains.
- C. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.
- D. Install crack isolation membrane to comply with ANSI A118.10 and membrane manufacturer's written instructions for full floor coverage.

3.03 WATERPROOFING AND CRACK ISOLATION MEMBRANE INSTALLATION

- A. Install membrane to comply with ANSI A108.10 and manufacturer's written instructions to produce waterproof membrane of uniform thickness that is bonded securely to substrate.
- B. Allow waterproofing to cure and verify by testing that it is watertight before installing tile or setting materials over it.
- C. Flash membrane up adjacent walls and restraining surfaces. Make shower pans watertight, including connection to drain.
- D. Apply waterproofing on wall surfaces in shower areas covered by tile.
- E. Allow membrane to cure prior to setting tile.
- F. Do not allow construction traffic on membrane.

3.04 INSTALLATION - GENERAL

- A. Architect to review tile layout prior to installation.
- B. Comply with TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation" for TCNA installation methods specified in tile installation schedules. Comply with parts of the ANSI A108 series "Specifications for Installation of Ceramic Tile" that are referenced in TCNA installation

methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.

1. For the following installations, follow procedures in the ANSI A108 series of tile installation standards for providing 100 percent mortar coverage:
 - a. Tile floors in wet areas.
 - b. Tile floors consisting of tiles 8 inches (203.20 mm) by 8 inch (203.20 mm) or larger.
 2. Tolerances:
 - a. Lippage: Set top of tiles flush with each other. Exposed face offset between adjacent tiles (lippage); 3/64 inch (1.19 mm) maximum.
 - b. Joint Width: 1/8 inch (3.17 mm), +/- 1/32 inch (0.79 mm), unless noted otherwise.
- C. Blending: For tile exhibiting color or pattern variations within the ranges of accepted submittals, verify that tile has been blended in the packages so that tile units taken from one package show same range in colors or patterns as those taken from other packages. If not blended in the packages, blend tile in the field before installation.
1. Floor System Coverage: Where specified for individual setting methods, install floor tile units with 100 percent mortar coverage by complying with applicable special requirements for back buttering of tile units in referenced ANSI A108 specifications.
 2. Wall System Coverage: Where specified for individual setting methods, install wall tile units with 100 percent mortar coverage by complying with applicable special requirements for back buttering of tile units in referenced ANSI A108 specifications.
 3. Movement Joints: Comply with TCNA EJ171 requirements for locations, spacing, and installation of applicable movement joints, whether or not specifically indicated or detailed on Drawings, and as follows:
 - a. Spacing - Interior: Maximum 24 feet on center in each direction; reduce spacing to maximum 10 feet on center in areas exposed to direct sunlight or moisture.
 - b. Joint Width: Match adjacent grouted joint widths, unless TCNA EJ171 requires a specific joint width based on joint location or joint service conditions.
 - c. Apply sealant joint to junction of tile and dissimilar materials and junction of dissimilar planes, including but not limited to floor to wall joints, corners, and metal trim and non-ceramic accessory items.
 - d. Keep movement joints free of setting adhesive and grout.
 - e. Form internal angles and corners square, not grouted, with sealant joint.
 - f. Form external angles and corners square, not grouted, with sealant joint.
 - g. Apply specified sealant to joints.
- D. Lay tile to pattern indicated. Do not interrupt tile pattern through openings.
- E. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.
- F. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.
- G. Provide manufacturer's standard trim shapes where necessary to eliminate exposed tile edges.
- H. Where accent tile differs in thickness from field tile, vary setting-bed thickness so that tiles are flush.
- I. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.
1. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets so joints between sheets are not apparent in finished work.
 2. Where adjoining tiles on floor, base, walls, or trim are specified or indicated to be same size, align joints.

3. Where tiles are specified or indicated to be whole integer multiples of adjoining tiles on floor, base, walls, or trim, align joints unless otherwise indicated.
- J. Joint Widths: Unless otherwise indicated, install tile with the following joint widths:
 1. Porcelain Mosaic Tile: 1/16 inch (1.58 mm), or less.
 2. Ceramic Mosaic Tile: 1/16 inch.
 3. Glazed Wall Tile: 1/16 inch.
 4. Porcelain Tile: 1/8 inch.
- K. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated. Form joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.
 1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.
- L. Stone Thresholds: Install stone thresholds in same type of setting bed as adjacent floor unless otherwise indicated.
 1. Do not extend crack isolation membrane under thresholds set in dry-set portland cement mortar. Fill joints between such thresholds and adjoining tile set on cleavage membrane with elastomeric sealant.
- M. Cut and fit tile to penetrations through tile, leaving sealant joint space. Form corners and bases neatly. Align floor joints.
- N. Place tile joints uniform in width, subject to variance in tolerance allowed in tile size. Make grout joints without voids, cracks, excess mortar or excess grout, or too little grout.
- O. Install non-ceramic trim in accordance with manufacturer's instructions.
- P. Install thresholds where indicated.
- Q. Sound tile after setting. Replace hollow sounding units.
- R. Keep expansion joints free of adhesive or grout. Apply sealant to joints.
- S. Prior to grouting, allow installation to completely cure; minimum of 48 hours.
- T. Grout tile joints, except where movement joints are indicated or specified. Use standard grout unless otherwise indicated.
- U. At changes in plane and tile-to-tile control joints, use tile sealant instead of grout, with either bond breaker tape or backer rod as appropriate to prevent three-sided bonding.
- V. Allow completed tiling assemblies to cure full 72 hours before allowing heavy foot or equipment traffic on final installations.

3.05 THIN-SET METHOD

- A. Apply mortar with notched trowel using scraping motion to work material into good contact with surface to be covered.
- B. Apply only as much mortar as can be covered within 20 to 30 minutes or while surface is still tacky.
- C. Trowel small quantity of mortar onto back (back-butter) of each tile.
- D. Set tiles in place and rub or beat with small beating block.
- E. Beat or rap tile to ensure proper bond and also to level surface of tile.
- F. Align tile to show uniform joints and allow to set until firm.
- G. Clean excess mortar from surface of tile with wet cloth or sponge while mortar is fresh.

3.06 GROUTING AND POINTING

- A. After tile has set sufficiently, fill joints with grout until flush with surrounding tile.
- B. Point joints full and remove excess grout. Clean tile thoroughly.
- C. Install sealant in vertical wall joints at interior corners.
- D. Install tile with maximum 25 percent variation of specified grout joint width.

3.07 EXPANSION JOINTS

- A. Keep expansion joints free of mortar and grout.
- B. Provide expansion joints directly over changes in material, over control and expansion joints in substrate, at juncture of floors and walls, at other restraining surfaces such as curbs, columns, bases, and wall corners, and where recommended by TCNA EJ171 Expansion Joint requirements.
- C. Install sealant in expansion joints.
- D. Provide sealant material at items penetrating tile work, unless otherwise indicated.
- E. Provide sealants and related materials in accordance with cited ANSI and TCNA requirements.

3.08 ADJUSTING

- A. Sound tile after setting. Replace hollow sounding units.
- B. Remove and replace tile that is damaged or that does not match adjoining tile. Provide new matching units, installed as specified and in a manner to eliminate evidence of replacement.

3.09 CLEANING

- A. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
 - 1. Remove grout residue from tile as soon as possible.
 - 2. Clean grout smears and haze from tile according to tile and grout manufacturer's written instructions but no sooner than 10 days after installation. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.
- B. Leave finished installation clean and free of cracked, chipped, broken, un-bonded, or otherwise defective tile work.

3.10 PROTECTION

- A. Protect installed tile work with masonite or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.
- B. Do not permit traffic over finished floor surface for 7 days after installation.
- C. Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces.

3.11 SCHEDULES

- A. Floor Tile Installation Schedule:
 - 1. Thin Bed Floor Tile System:
 - a. Description: Thin set with crack isolation membrane.

- b. Location: Toilet Rooms on ground floor.
 - c. Tile: Porcelain
 - d. Mortar: Polymer Modified Thinset Dryset Mortar.
 - e. Grout: Stain-resistant high performance grout sanded.
 - f. TCNA system: F-113.
2. Thin Bed Floor Tile System:
- a. Description: Thin set with waterproofing membrane.
 - b. Location: Toilet Rooms on upper floors.
 - c. Mortar: Polymer Modified Thinset Dryset Mortar.
 - d. Grout: Stain-resistant high performance grout sanded.
 - e. TCNA system: F-122 Full, except where partial coverage is indicated.
- B. Wall Tile Installation Schedule:
1. Interior Wall Tile System:
- a. Description: Interior partitions using cementitious tile backing board.
 - b. Location: Toilet Rooms.
 - c. Tile: Porcelain
 - d. Mortar: Polymer Modified Thinset Dryset Mortar.
 - e. Grout: Stain-resistant high performance grout sanded.
 - f. TCNA System: W244C.
- C. Shower Installations:
1. Tile Shower Receptor; thickset mortar on waterproof membrane on concrete slab
- a. Location: Showers.
 - b. Membrane: Fluid.
 - c. Mortar: Polymer Modified Thinset Dryset.
 - d. Grout: Stain-resistant high performance grout sanded.
 - e. TCNA system: B41.
2. Tile Shower Wall; thinset mortar on waterproof membrane over unbonded mortar bed.
- a. Location: Showers.
 - b. Description: Thickset with waterproofing membrane.
 - c. Cleavage membrane.
 - d. Mortar Bed: Portland Cement With Latex Additive; Thick-Set
 - e. Reinforcing: Metal lath.
 - f. Mortar: Polymer Modified Thinset Dryset Mortar.
 - g. Grout: Stain-resistant high performance grout sanded.
 - h. Membrane: Fluid.
 - i. TCNA system: B441.

END OF SECTION

**SECTION 09 5100
ACOUSTICAL CEILINGS**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Suspended metal grid ceiling system.
- B. Acoustical units.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Sequencing: Sequence work to ensure acoustical ceilings are not installed until building is enclosed, sufficient heat is provided, dust generating activities have terminated, and overhead work is completed, tested, and approved.
 - 1. Do not install acoustical units until after interior wet work is dry.

1.03 SUBMITTALS

- A. Action Submittals
 - 1. Shop Drawings: Indicate grid layout and related dimensioning, junctions with other ceiling finishes, and mechanical and electrical items installed in the ceiling.
 - 2. Product Data: Provide data on suspension system components and acoustical units.
 - 3. Samples: Submit three samples 4 by 4 inch (102 by 102 mm) in size illustrating material and finish of acoustical units.
- B. Informational Submittals
 - 1. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide special submittals conforming to Section 01 8113 Sustainable Design Requirements for the following:
- B. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Sealants.

1.05 QUALITY ASSURANCE

- A. System Installer Qualifications: Company specializing in the installation of products specified in this Section with minimum three years documented experience.
- B. Suspension System Manufacturer Qualifications: Company specializing in manufacturing the products specified in this Section with minimum three years documented experience.

1.06 MOCK-UP

- A. Mock-ups: Build mock-ups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Indicate portion of ceiling represented by mock-up on Drawings or draw mock-up as separate element.
 - 2. Build mock-up of typical ceiling area as shown on Drawings.
 - 3. Subject to compliance with requirements, approved mock-ups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.07 MAINTENANCE MATERIAL SUBMITTALS

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
 - 1. Acoustical Ceiling Panels: Full-size panels equal to 5 percent of quantity installed, but not less than a full box.
 - 2. Suspension-System Components: Quantity of each exposed component equal to 5 percent of quantity installed.

1.08 DELIVERY, STORAGE, AND HANDLING

- A. Deliver acoustical panels, suspension-system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.
- C. Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.

1.09 FIELD CONDITIONS

- A. Maintain uniform temperature of minimum 60 degrees F (16 degrees C), and maximum humidity of 20 to 40 percent prior to, during, and after acoustical unit installation.
- B. Pressurized Plenums: Operate ventilation system for not less than 48 hours before beginning acoustical panel ceiling installation.

1.10 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace elastomeric coatings that fail within specified warranty period.
 - 1. Failures include, but are not limited to, the following:
 - a. Acoustical Panels: Manufacturer's defects in material
 - b. Grid System: Rusting and manufacturer's defects
- B. Warranty Period: 10 years from date of Substantial Completion.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Structural Performance Requirements: Design and install systems to comply with code requirements for suspended acoustical ceilings in seismic zones. Include:
 - 1. Use Heavy Duty Grid.
 - 2. Minimum 3/4 inch (19 mm) clearance from grid end to wall.
 - 3. Minimum 2 inch (50 mm) perimeter molding.
 - 4. Grid must be attached on two adjacent walls, no attachment on other two walls.
 - 5. Perimeter T ends tied together at perimeters (Spacer/Stabilizer bar) on tees that are not attached to perimeter molding.
 - 6. Ceiling areas over 1,000 SF must have horizontal restraint wire or rigid bracing.
 - 7. Partition attachment bracing is required to be independent from ceiling splay bracing.
 - 8. Provided seismic separation joint at areas greater than 2500 sq. ft. or full height partitions.
 - 9. Provide rigid bracing at ceiling elevation changes.
 - 10. Interior Suspended Ceilings, Soffits, and Bulkheads: Maintain deflection of not more than L/360 of distance between supports.
 - 11. Perimeter support wires within 8 inches.

- B. Surface-Burning Characteristics: Comply with ASTM E 84, 2009 Edition; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Flame-Spread Index: Comply with ASTM E 1264 for Class A materials.
 - 2. Smoke-Developed Index: 50 or less.
- C. Fire-Resistance Ratings: Comply with ASTM E 119, 2007 Edition; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - 1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.02 ACOUSTICAL UNITS

- A. Refer to Finish Schedule for selected products and finishes.
- B. Acoustical Panels: Mineral fiber with membrane-faced overlay, with the following characteristics:
 - 1. Classification: ASTM E1264 Type IV.
 - a. Form: 2, water felted.
 - b. Pattern: "E" - lightly textured.
 - 2. Size: 24 by 24 inches (610 by 610 mm).
 - 3. Thickness: 1 inch (25 mm).
 - 4. Panel Edge: Tegular.
 - 5. Suspension System: Exposed grid.
 - 6. Basis of Design Product:
 - a. Armstrong World Industries, Inc; Calla: www.armstrongceilings.com.

2.03 SUSPENSION SYSTEMS

- A. Suspension Systems - General: Complying with ASTM C635/C635M; die cut and interlocking components, with splices and perimeter moldings as required.
 - 1. Materials:
 - a. Steel Grid: ASTM A653/A653M, G30 coating, unless otherwise indicated.
 - 2. Comply with regionally-sourced, recycled content, and adhesives and sealants product requirements specified in Section 01 8113 - Sustainable Design Requirements - LEED.
 - 3. Comply with regionally-sourced, recycled content, and adhesives and sealants product requirements.
- B. Exposed Suspension System: Hot-dipped galvanized steel grid with aluminum cap.
 - 1. Application(s): Seismic.
 - 2. Structural Classification: Heavy-duty, when tested in accordance with ASTM C635/C635M.
 - 3. Profile: Tee; 15/16 inch (24 mm) face width.
 - a. Main Beam: 12 foot Heavy Duty No. 7301.
 - b. Cross Runner: 2' Cross Tee No. XL7328.
 - c. Siesmic Wall Clip: Berc-2.
 - 4. Finish: Baked enamel.
 - 5. Color: White.
 - 6. ICC-ES Evaluation Report: ESR-1308.
 - 7. Products:
 - a. Armstrong World Industries, Inc; PRELUDE XL 15/16" Exposed Tee: www.armstrongceilings.com.
- C. Grid Suspension System for Gypsum Board Ceilings: As specified in Section 09 2116 - Gypsum Board Assemblies.

2.04 ACCESSORIES

- A. Fasteners for Face Fastening: Sharp point screw, all in one self-stop fastener.
- B. Attachment Devices: Size for five times the design load indicated in ASTM C 635/C 635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.

1. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing according to ASTM E 488/E 488M or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.
 - a. Type: Cast-in-place or Postinstalled expansion anchors.
 - b. Corrosion Protection: Carbon-steel components zinc plated according to ASTM B 633, Class SC 1 (mild) service condition.
 2. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing according to ASTM E 1190, conducted by a qualified testing and inspecting agency.
- C. Support Channels and Hangers: Galvanized steel; size and type to suit application and ceiling system flatness requirement specified.
- D. Hanger Wire: 12 gauge, 0.08 inch (2 mm) galvanized steel wire.
- E. Wire Hangers, Braces, and Ties: Provide wires as follows:
 1. Zinc-Coated, Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.
 2. Size: Wire diameter sufficient for its stress at three times hanger design load (ASTM C 635/C 635M, Table 1, "Direct Hung") will be less than yield stress of wire, but not less than 12 gage, 0.106 inch (2.69-mm) diameter wire.
- F. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.
- G. Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.
- H. Angle Hangers: Angles with legs not less than 7/8 inch (22 mm) wide; formed with 0.04-inch- (1-mm-) thick, galvanized-steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation; with bolted connections and 5/16-inch- (8-mm-) diameter bolts.
- I. Touch-up Paint: Type and color to match acoustical and grid units.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.
- B. Verify existing conditions before starting work.
- C. Verify that layout of hangers will not interfere with other work.
- D. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.
- E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Install after major above-ceiling work is complete.
- B. Coordinate the location of hangers with other work.
- C. Provide hanger clips during steel deck erection. Provide additional hangers and inserts as required.

3.03 INSTALLATION - GENERAL

- A. General: Install acoustical panel ceilings to comply with ASTM C636/C636M and seismic design requirements indicated, according to manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
 - 1. Fire-Rated Assembly: Install fire-rated ceiling systems according to tested fire-rated design.
- B. Standard for Ceiling Suspension Systems Requiring Seismic Restraint: Comply with ASTM E580/E580M.
- C. CISCA Guidelines for Systems Requiring Seismic Restraint: Comply with CISCA "Guidelines for Seismic Restraint of Direct-Hung Suspended Ceiling Assemblies."

3.04 INSTALLATION - SUSPENSION SYSTEM

- A. Install suspension system in accordance with ASTM C636/C636M, ASTM E580/E580M, and manufacturer's instructions and as supplemented in this Section.
- B. Rigidly secure system, including integral mechanical and electrical components, for maximum deflection of 1:360.
- C. Lay out system to a balanced grid design with edge units no less than 50 percent of acoustical unit size unless noted otherwise on Drawings.
- D. Locate system on room axis according to reflected plan.
- E. Install after major above-ceiling work is complete. Coordinate the location of hangers with other work.
- F. Provide hanger clips during steel deck erection. Provide additional hangers and inserts as required.
- G. Suspension System, Non-Seismic: Hang suspension system independent of walls, columns, ducts, pipes and conduit. Where carrying members are spliced, avoid visible displacement of face plane of adjacent members.
- H. Seismic Suspension System, Seismic Design Categories D, E, F: Hang suspension system with grid ends attached to the perimeter molding on two adjacent walls; on opposite walls, maintain a 3/4 inch (19 mm) clearance between grid ends and wall.
- I. Where ducts or other equipment prevent the regular spacing of hangers, reinforce the nearest affected hangers and related carrying channels to span the extra distance.
- J. Secure wire hangers to ceiling-suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
- K. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.
- L. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
- M. Do not support components on main runners or cross runners if weight causes total dead load to exceed deflection capability.

- N. Support fixture loads using supplementary hangers located within 6 inches (152 mm) of each corner, or support components independently.
 - 1. Support all fixtures weighing greater than 56 lb by at least two supplementary No. 12 gage, 0.109 inch (2.78 mm) hangers if required by applicable building code; hangers may be slack.
- O. Do not eccentrically load system or induce rotation of runners.
- P. Do not attach hangers to steel roof deck. Attach hangers to structural members.
- Q. Space hangers not more than 48 inches (1219.20 mm) o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches (203.20 mm) from ends of each member.
- R. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
- S. Form expansion joints as detailed. Form to accommodate plus or minus 1 inch (25 mm) movement. Maintain visual closure.

3.05 INSTALLATION - ACOUSTICAL UNITS

- A. Install acoustical units in accordance with manufacturer's instructions.
- B. Fit acoustical units in place, free from damaged edges or other defects detrimental to appearance and function.
- C. Lay directional patterned units as indicated on Drawings, unless otherwise indicated or directed.
- D. Fit border trim neatly against abutting surfaces.
- E. Install acoustical units level, in uniform plane, and free from twist, warp, and dents.
- F. Cutting Acoustical Units:
 - 1. Cut to fit irregular grid and perimeter edge trim.
 - 2. Make field cut edges of same profile as factory edges.
- G. Where round obstructions occur, provide preformed closures to match perimeter molding.
- H. Do not support light fixtures, air terminals, or other devices from acoustical ceiling panels or ceiling grid. Provide independent support..

3.06 FIELD QUALITY CONTROL

- A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
 - 1. Compliance of seismic design.
- B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections and prepare test reports.
- C. Perform the following tests and inspections of completed installations of acoustical panel ceiling hangers and anchors and fasteners in successive stages. Do not proceed with installations of acoustical panel ceiling hangers for the next area until test results for previously completed installations show compliance with requirements.
 - 1. Extent of Each Test Area: When installation of ceiling suspension systems on each floor has reached 20 percent completion but no panels have been installed.
 - a. Within each test area, testing agency will select one of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and will test them for 200 lbf (890 N) of tension; it will also select one of every two postinstalled anchors used to attach bracing wires to concrete and will test them for 440 lbf (1957 N) of tension.

- b. When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.
- D. Acoustical panel ceiling hangers and anchors and fasteners will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

3.07 TOLERANCES

- A. Maximum Variation from Flat and Level Surface: 1/8 inch in 10 feet (3 mm in 3 m).
- B. Maximum Variation from Plumb of Grid Members Caused by Eccentric Loads: 2 degrees.

3.08 CLEANING

- A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension-system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION

**SECTION 09 5426.11
LINEAR WOOD CEILINGS**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Manufactured linear wood ceiling system.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Coordination: Coordinate the installation of ceiling system with size, location and installation of fire sprinkler system.
- B. Preinstallation Meeting: Conduct a preinstallation meeting at least one week prior to the start of the work of this Section; require attendance by all affected installers.
 - 1. Convene under general provisions of Section 01 7000 - Execution and Closeout Requirements.
 - 2. Discuss layout, installation procedures, and coordination with adjacent work.

1.03 SUBMITTALS

- A. Product Data: Provide data for ceiling materials and specified accessories.
- B. Shop Drawings: Indicate end joint pattern and termination details.
 - 1. Indicate provisions for expansion and contraction.
- C. Samples: Submit three samples 12 by 12 inch (305 by 305 mm) in size illustrating ceiling veneers, finish, color, and sheen.
- D. Installation Instructions: Indicate standard and special installation procedures.
- E. Maintenance Data: Include maintenance procedures.

1.04 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing work of this Section with minimum three years experience.
- B. Installer Qualifications: Licensee of WI's Certified Compliance Program.
- C. Fabricator Qualifications: Company specializing in fabricating the products specified in this section with minimum five years of documented experience.
 - 1. Company with at least one project in the past 5 years with value of woodwork within 20 percent of cost of woodwork for this Project.
 - 2. Accredited participant in the specified certification program prior to the commencement of fabrication and throughout the duration of the project.
- D. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. Shop is a licensee of WI's Certified Compliance Program.
- E. Quality Certification: Comply with WI (MCP) woodwork association quality certification service/program in accordance with requirements for work specified in this section.
 - 1. Comply with WI (MCP) woodwork association quality certification service/program in accordance with requirements for work specified in this section.
 - 2. Provide labels or certificates indicating that the installed work complies with AWMAC/WI (NAAWS) requirements for grade or grades specified.
 - 3. Provide designated labels on shop drawings as required by certification program.
 - 4. Provide designated labels on installed products as required by certification program.

5. Submit certifications upon completion of installation that verifies this work is in compliance with specified requirements.
6. Arrange and pay for inspections required for certification.
7. Replace, repair, or rework all work for which certification is refused.

F. Fabrication and Installation Standards: Fabricate and install in accordance with North American Architectural Woodwork Standards – 3.0 as listed below.

1. Lumber grades: Section 3.
2. Panel products: Section 4.
3. Standing and running trim: Section 6.
4. Wall Surfacing: Section 8.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Protect work from moisture damage.
- B. Do not deliver wood materials to project site until building is fully enclosed and interior temperature and humidity are in accordance with recommendations of AWMAC/WI (NAAWS) .

1.06 FIELD CONDITIONS

- A. Do not install wood ceiling until wet construction work is complete and ambient air at installation space has moisture content stabilized at maximum relative humidity of between 25 percent and 55 percent.
- B. Provide heat, light, and ventilation prior to installation.
- C. Store materials in area of installation for minimum period of 48 hours prior to installation.
- D. Maintain minimum room temperature of between 50 degrees F (14 degrees C) and 85 degrees F (29 degrees C) for a period of two days prior to delivery of materials to installation space, during installation, and after installation.

PART 2 PRODUCTS

2.01 CEILING SYSTEM

- A. Wood Slat Ceiling:
 1. Composition: Fire-retardant particleboard with face-cut veneers complying with ASTM E84; Flame Spread Index 25 or less, Smoke Developed Index 50 or less.
 2. Ceiling Classification: ASTM E1264; Composite, Fire Class A.
 3. Grille:
 - a. Veneer Species: As indicated on Finish Schedule.
 - b. Base Wood: Poplar.
 4. Thickness: 5/8 inch (15.87 mm).
 5. Depth: 2-1/2 inches.
 6. Blades per Foot: 6
 7. Panel Width: 12 inches (305 mm).
 8. Panel Length: 96 inches (2438.40 mm).
 9. Edges: Square.
 10. Edge Banding and Trim: To match face veneer
 11. Closure panels at sides.
 12. Flame Spread: ASTM E84 HPVA Fire Classification Class C
 13. Dimensional Stability: Standard
- B. Finish: Clear, matte sheen.
- C. Stain: Match Architect's sample.
- D. Attachment System:
 1. Manufacturer's standard clips.

2.02 SUSPENSION SYSTEMS

- A. Suspension Systems: As specified in Section 095100 - Acoustical Ceilings.

2.03 ACCESSORIES

- A. Clips: Manufacturer's standard panel mounting clips and fasteners.
- B. Perimeter Trim: Manufacturer's standard angle and shadow moldings to suit indicated applications.
- C. Acoustical Infill: Manufacturer's standard acoustical backing.
 - 1. Color: Black, with polybag.
- D. Fasteners: Manufacturer's standard self-tapping screws.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, including structural framing and substrates to which wood suspended ceiling attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of wood suspended ceiling.
- B. Verify existing conditions before starting work.
- C. Verify that required above-ceiling systems and components are in correct locations.
- D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Measure each ceiling area and establish layout of wood panels to balance border widths at opposite edges of each ceiling. Comply with layout shown on reflected ceiling plans. Avoid use of less than half width units at borders. Coordinate panel layout with mechanical and electrical fixtures.

3.03 INSTALLATION - GENERAL

- A. General: Install acoustical panel ceilings to comply with ASTM C 636/C 636M and seismic design requirements indicated, according to manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
 - 1. Fire-Rated Assembly: Install fire-rated ceiling systems according to tested fire-rated design.
- B. Standard for Ceiling Suspension Systems Requiring Seismic Restraint: Comply with ASTM E580.
- C. CISCA Guidelines for Systems Requiring Seismic Restraint: Comply with CISCA "Guidelines for Seismic Restraint of Direct-Hung Suspended Ceiling Assemblies."

3.04 INSTALLATION - SUSPENSION SYSTEM

- A. Install suspension system in accordance with ASTM C636/C636M, ASTM E580/E580M, and manufacturer's instructions and as supplemented in Section 095100 - Acoustical Ceilings.

3.05 INSTALLATION - LINEAR WOOD CEILINGS

- A. Install in accordance with manufacturer's instructions and with ASTM C636; CISCA Seismic Guidelines.
- B. Install work in accordance with AWMAC/WI (NAAWS) requirements for grade indicated.

- C. Apply ceiling in patterns indicated on Drawings. Verify alignment as work progresses.
 - 1. End Joint Pattern: Aligned and uniformly spaced to produce modular finished appearance.
- D. Install wood panels with undamaged edges and fit accurately onto suspension system runners. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.
 - 1. Protect lighting fixtures and air ducts to comply with requirements indicated for fire-resistance-rated assembly.
 - 2. HVAC and Light Fixture Suspension: Support electrical and mechanical installations independent of wood suspended ceiling.
- E. Install perimeter trim as indicated on Drawings, and where ceiling terminates.

3.06 TOLERANCES

- A. Maximum Variation from Flat and Level Surface: 1/8 inch in 10 feet (3 mm in 3 m).
- B. Maximum Variation from Plumb of Grid Members Caused by Eccentric Loads: 2 degrees.

3.07 CLEANING

- A. Clean exposed surfaces of linear wood ceilings, including trim and edge moldings after removing strippable, temporary protective covering if any. Comply with manufacturer's written instructions for stripping of temporary protective covering, cleaning, and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage, including dented and bent units.

3.08 PROTECTION

- A. Protect finish until Substantial Completion.

END OF SECTION

**SECTION 09 6513
RESILIENT BASE AND ACCESSORIES**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Resilient wall base.

1.02 SUBMITTALS

- A. Action Submittals:
 1. Product Data: Provide data on specified products, describing physical and performance characteristics; including sizes, patterns and colors available; and installation instructions.
 2. Selection Samples: Submit manufacturer's complete set of color samples for Architect's initial selection.
 3. Verification Samples: Submit three samples, 12 inch (304.8 mm) in size illustrating color and pattern for each resilient flooring product specified.
- B. Closeout Submittals:
 1. Maintenance Data: Include maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning, stripping, and re-waxing.

1.03 MAINTENANCE MATERIALS

- A. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
 1. Furnish not less than 10 linear feet (3 linear m) for every 500 linear feet (150 linear m) or fraction thereof, of each type, color, pattern, and size of resilient product installed.
 2. Clearly identify each package.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green, for the following measures:
 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.

1.05 MOCK-UPS

- A. Mock-ups: Build mock-ups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 1. Coordinate mock-ups in this Section with mock-ups specified in other Sections.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Deliver and store materials in manufacturer's original unopened containers, with brand names and production lot numbers clearly marked.
- B. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F (10 deg C) or more than 90 deg F (32 deg C).

1.07 FIELD CONDITIONS

- A. Maintain air and wall temperature in storage area between 55 degrees F (13 degrees C) and 90 degrees F (72 degrees C), in spaces to receive resilient products during the following time periods:
 1. 72 hours before installation.
 2. During installation.

3. After installation.

B. Install resilient base and accessories after other finishing operations, including flooring and painting have been completed.

1.08 WARRANTY

A. Refer to Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Resilient Base and Accessories: Provide manufacturer's warranty, as follows:

1. Materials: Minimum 5 years from Date of Substantial Completion.
2. Installation: Minimum 5 years from Date of Substantial Completion; warrant entire installation against loss of adhesion to substrates.

PART 2 PRODUCTS

2.01 RESILIENT BASE

A. Refer to Finish Schedule for selected products.

B. Resilient Base Type RB-1, ASTM F1861, Type TS rubber, vulcanized thermoset; top set , and as follows:

1. Critical Radiant Flux (CRF): Minimum 0.45 watt per square centimeter, when tested in accordance with ASTM E648 or NFPA 253.
2. Style:
 - a. Style A, Straight: Carpeted areas.
 - b. Style B, Coved: Other flooring.
3. Height: 4 inch (100 mm).
4. Height: 6 inch (150 mm).
5. Thickness: 0.080 inch (2.0 mm) thick.
6. Finish: Satin.
7. Length: Roll.
8. Color: Color as selected by Owner from manufacturer's standards or as indicated on Finish Schedule.
9. Accessories: Premolded external corners and end stops.
10. Acceptable Manufacturers:
 - a. Burke Flooring: www.burkemercer.com.
 - b. Johnsonite, a Tarkett Company: www.johnsonite.com.
 - c. Roppe Corp.: www.roppe.com.
 - d. Prior approved equal.

2.02 ACCESSORIES

A. Adhesive: Water based type, zero (0) VOC content, spray application, water-resistant type recommended by resilient-product manufacturer for resilient products and substrate conditions indicated.

1. Acceptable Manufacturer: Interlock Industries; Spray-Lock Adhesive: www.spraylock.com.
 - a. Substitutions: See Section 01 6000 - Product Requirements.

B. Use primers that comply the more stringent VOC limits of the current requirements of SCAQMD 1113 and Cal-GREEN Table 5.504.4.3 for VOC Content Limits for Architectural Coatings.

C. Adhesives & Sealants: Only use adhesives and sealants in the interior of the building that meet or do not exceed the VOC limits of the current requirements of South Coast Air Quality Management District (SCAQMD) Rule No. 1168.

1. Adhesives shall meet or exceed the VOC and chemical component limits of CAL-Green Table 5.504.4.1 Adhesive VOC Limit requirements.
2. Current requirement refers to the date on which the materials are installed in the building.

3. SCAQMD 1168 referenced in Section 018114 that was current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.
- D. Moldings and Edge Strips: Homogeneous vinyl or rubber type; tapered or bullnose edge; one inch wide; color selected by Architect.
 1. ReducerStrip Type 1: 1/8 inch to 0 inches, 1-1/2 inches wide.
 - a. Basis of Desifgn Product:
 - 1) Roppe Corporation; #45 Reducer Strip, 1/8".
 2. ReducerStrip Type 2: 5/16 inch to 0 inches, 1-5/16 inches wide.
 - a. Basis of Desifgn Product:
 - 1) Roppe Corporation;#25 Reducer Strip, 5/16"

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that surfaces are flat to tolerances acceptable to flooring manufacturer, free of cracks that might telegraph through flooring, clean, dry, and free of curing compounds, surface hardeners, and other chemicals that might interfere with bonding of flooring to substrate.
- B. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive resilient base.
- C. Cementitious Sub-floor Surfaces: Verify that substrates are dry enough and ready for resilient flooring installation by testing for moisture and pH.
 1. Ensure concrete has cured 60 days minimum.
 2. Test in accordance with Section 09 0561 - Common Work Results for Flooring Preparation.
 3. Obtain instructions if test results are not within limits recommended by resilient flooring manufacturer and adhesive materials manufacturer.
- D. Verify that gypsum board is finished to the floor and that gaps do not exist.

3.02 PREPARATION

- A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.
- B. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.
- C. Do not install resilient products until they are the same temperature as the space where they are to be installed.
 1. At least 48 hours in advance of installation, move resilient products and installation materials into spaces where they will be installed.
- D. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient products.
- E. Clean substrate.

3.03 INSTALLATION - GENERAL

- A. Starting installation constitutes acceptance of sub-floor conditions.
- B. Install in accordance with manufacturer's instructions.
- C. Spread only enough adhesive to permit installation of materials before initial set.
- D. Fit joints tightly.
- E. Set base in place, press with heavy roller to attain full adhesion.

3.04 RESILIENT BASE

- A. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.
- B. Install resilient base in lengths as long as practical without gaps at seams and with tops of adjacent pieces aligned.
 - 1. Pieces less than 10 feet (3 m) long are not permitted. Seams are not permitted between wall corners spaced less than 10 feet (3 m) apart.
- C. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.
- D. Fit joints straight, tight, and vertical.
- E. Install on solid substrate backing.
- F. Bond tight to wall and floor surfaces.
- G. Scribe to door frames and other interruptions.
- H. Do not stretch resilient base during installation.
- I. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.
- J. Preformed Corners: Install preformed corners before installing straight pieces.
- K. Job-Formed Corners:
 - 1. Inside Corners: Use straight pieces of maximum lengths possible and form with returns not less than 3 inches (76.20 mm) in length.
 - a. Miter or Cope corners to minimize open joints.
- L. Fit joints tightly and make vertical. Install in longest lengths possible; maintain minimum dimension of 18 inches (45 mm) between joints.
- M. Align tops of adjacent sections.
- N. Change from cove base to straight base at flooring transition strips.
- O. Install base on solid backing. Bond tightly to wall and floor surfaces.

3.05 CLEANING

- A. Remove excess adhesive from floor, base, and wall surfaces without damage.
- B. Immediately remove excess adhesive from surfaces without damage.
- C. Replace scuffed, scratched, broken, and discolored products.
- D. Re-install loose products.
- E. Clean surfaces in accordance with manufacturer's requirements. Do not use materials and methods which may damage finish and surrounding construction.

3.06 PROTECTION

- A. Protect work from damage from subsequent construction operations so there will be no indication of use and damage at time of acceptance.

END OF SECTION

**SECTION 09 6521
RESILIENT PLANK FLOORING**

PART 1 GENERAL

1.01 SECTION INCLUDES:

- A. Solid vinyl floor plank.

1.02 SUBMITTALS

- A. Action Submittals:
 1. Product Data: For each type of product.
 2. Shop Drawings: For each type of floor plank. Include floor plank layouts, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
 - a. Show details of special patterns.
 3. Samples for Verification: Full-size units of each color and pattern of floor plank required.
 4. Product Schedule: For floor plank. Use same designations indicated on Drawings.
- B. Informational Submittals:
 1. Qualification Data: For Installer.
 2. Maintenance Data: For each type of floor plank to include in maintenance manuals.
- C. Closeout Submittals:
 1. Furnish extra plank, and resilient base in quantity equal to 2 percent of total material furnished but not less than:
 - a. One unopened box of plank for each 50 boxes or fraction thereof installed of resilient plank of each type, pattern and color.

1.03 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green, for the following measures:
 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 2. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
 3. A5.406.1, .2 and .3: Materials selected for longevity, reduced maintenance and recyclability.
 4. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.

1.04 QUALITY ASSURANCE

- A. Source Limitations: Obtain each type, color, and pattern of product specified from one source with resources to provide products of consistent quality in appearance and physical properties without delaying the Work.
- B. Installer Qualifications: A qualified installer who employs workers for this Project who are competent in techniques required by manufacturer for floor plank installation method indicated.
 1. Engage an installer who employs workers for this Project who are trained or certified by floor plank manufacturer for installation techniques required.
- C. Prior to installation, Owner's independent testing laboratories to perform recommended calcium chloride moisture and alkalinity tests on concrete slabs. If required, moisture barrier will be applied prior to flooring installation.

- D. Fire-Test-Response Characteristics: Provide products with the following fire-test-response characteristics as determined by testing identical products per test method indicated below by a testing and inspecting agency acceptable to authorities having jurisdiction.
 - 1. Critical Radiant Flux: 0.45 W/sq. cm or greater when tested per ASTM E 648.
 - 2. Smoke Density: Maximum specific optical density of 450 or less when tested per ASTM E662.
- E. Flooring shall have been manufactured, fabricated, and installed to performance criteria certified by manufacturer without defects, damage, or failure.
- F. Floor Tile Slip Resistance: Comply with ANSI A137.1, 2012 edition Dynamic Coefficient of Friction AcuTest of 0.42 wet as tested with BOT-3000 Universal Walkway Tester.

1.05 MOCK-UPS

- A. Mock-ups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Build mock-ups for floor plank including accessories.
 - a. Size: Minimum 100 sq. ft. (9.3 sq. m) for each type, color, and pattern as directed by Architect.
 - 2. Approval of mock-ups does not constitute approval of deviations from the Contract Documents contained in mock-ups unless Architect specifically approves such deviations in writing.
 - 3. Subject to compliance with requirements, approved mock-ups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Store floor plank and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F (10 deg C) or more than 90 deg F (32 deg C). Store floor planks on flat surfaces.

1.07 FIELD CONDITIONS

- A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F (21 deg C) or more than 95 deg F (35 deg C), in spaces to receive floor plank during the following time periods:
 - 1. 48 hours before installation.
 - 2. During installation.
 - 3. 48 hours after installation.
- B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F (13 deg C) or more than 95 deg F (35 deg C).
- C. Close spaces to traffic during floor plank installation.
- D. Close spaces to traffic for 48 hours after floor plank installation.
- E. Install floor plank after other finishing operations, including painting, have been completed.

1.08 SEQUENCING

- A. Install products after other finishing operations, including painting, have been completed.
- B. Do not install resilient products on top of concrete slabs until they are cured and are sufficiently dry to achieve bond with adhesive as determined by resilient material manufacturer's recommended bond and moisture test.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Fire-Test-Response Characteristics: For resilient plank flooring, as determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.
- B. FloorScore Compliance: Resilient plank flooring shall comply with requirements of FloorScore certification.
- C. Low-Emitting Materials: Flooring system shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volaplanck Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- D. Provide resilient flooring which complies with fire resistance ratings for locations scheduled on Drawings.
 - 1. Critical radiant flux:
 - a. Test method: ASTM E648.
 - b. Value: Not less than 0.22 watts per square centimeter.
 - 2. Flame spread:
 - a. Test method: ASTM E84.
 - b. Index: 25 or less.
 - 3. Flooring, base, and related elements shall not continue to propagate fire.
 - 4. Smoke generated:
 - a. Test method: ASTM E662.
 - b. Index: 450 or less.

2.02 SOLID VINYL FLOOR PLANK

- A. Refer to Finish Schedule for selected products.
- B. Acoustical Underlayment: Provide manufacturer's standard acoustical underlayment.
- C. Vinyl Plank Flooring :
 - 1. Layered vinyl wear layer with print layer on a solid vinyl backing. Protected UV-cured polyurethane finish. ASTM F 1700, "Standard Specification for Solid Vinyl Tile", Class III, Type B - Embossed Surfaces.
 - 2. Size: 6 inches (150 mm) by 36 inches (914 mm).
 - 3. Thickness: 8.0 mm.
 - 4. Wear Layer Thickness: 20 mil (0.5 mm).
 - 5. Installation: Floating click.

2.03 INSTALLATION MATERIALS

- A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by floor plank manufacturer for applications indicated.
- B. Adhesives: Water-resistant type recommended by floor plank and adhesive manufacturers to suit floor plank and substrate conditions indicated.
 - 1. Adhesives shall comply with the following limits for VOC content:
 - a. Resilient plank Adhesives: 50 g/L or less.
 - 2. Use primers that comply the more stringent VOC limits of the current requirements of South Coast Air Quality Management District (SCAQMD) Rule No. 1113 and CAL-Green Table 5.504.4.3 for VOC Content Limits for Architectural Coatings.
 - 3. LEED Requirements - LEED Credit EQc4.1 - Adhesives and Sealants shall meet low VOC content as determined by LEED requirements; VOC content shall not exceed 50 grams/liter.
 - 4. Adhesives & Sealants: Only use adhesives and sealants in the interior of the building that meet or do not exceed the VOC limits of the current requirements of SCAQMD 1168.

- a. Adhesives shall meet or exceed the VOC and chemical component limits of CAL-Green Table 5.504.4.1 Adhesive VOC Limit requirements.
- b. Current requirement refers to the date on which the materials are installed in the building.
- c. SCAQMD 1168 referenced in Section 01 8114 - Sustainable Design Requirements - CAL-Green that was current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
 - 1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor plank.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

- A. Prepare substrates according to floor plank manufacturer's written instructions to ensure adhesion of resilient products.
- B. Cementitious Sub-floor Surfaces: Verify that substrates are dry enough and ready for resilient flooring installation by testing for moisture and pH.
 - 1. Test in accordance with Section 09 0561 - Common Work Results for Flooring Preparation.
 - 2. Obtain instructions if test results are not within limits recommended by resilient flooring manufacturer and adhesive materials manufacturer.
- C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.
- D. Do not install floor planks until they are the same temperature as the space where they are to be installed.
 - 1. At least 48 hours in advance of installation, move resilient floor plank and installation materials into spaces where they will be installed.
- E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient floor plank.

3.03 FLOOR PLANK INSTALLATION - GENERAL

- A. Comply with manufacturer's written instructions for installing floor plank.
- B. Lay out floor planks from center marks established with principal walls, discounting minor offsets, so planks at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half plank at perimeter.
 - 1. Lay planks in pattern indicated.
- C. Match floor planks for color and pattern by selecting planks from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed planks.
 - 1. Lay planks with grain running in one direction.
- D. Scribe, cut, and fit floor planks to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.

- E. Extend floor planks into toe spaces, door reveals, closets, and similar openings. Extend floor planks to center of door openings.
- F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor planks as marked on substrates. Use chalk or other nonpermanent marking device.
- G. Install floor planks on covers for telephone and electrical ducts, building expansion-joint covers, and similar items in finished floor areas. Maintain overall continuity of color and pattern between pieces of plank installed on covers and adjoining planks. Tightly adhere plank edges to substrates that abut covers and to cover perimeters.

3.04 ADHERED FLOOR PLANK INSTALLATION

- A. Installation over gypsum cement underlayment: Seal floor prior to installation of plank floor with gypsum underlayment manufacturer's approved product.
- B. Adhere floor planks to flooring substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.05 CLEANING AND PROTECTION

- A. Comply with manufacturer's written instructions for cleaning and protecting floor plank.
- B. Perform the following operations immediately after completing floor plank installation:
 - 1. Remove adhesive and other blemishes from exposed surfaces.
 - 2. Sweep and vacuum surfaces thoroughly.
 - 3. Damp-mop surfaces to remove marks and soil.
- C. Protect floor plank from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
- D. Joint Sealant: Apply sealant to resilient plank floor perimeter and around columns, at door frames, and at other joints and penetrations.
- E. Cover floor plank until Substantial Completion.

END OF SECTION

**SECTION 09 6623
RESINOUS MATRIX TERRAZZO FLOORING**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Epoxy matrix terrazzo with ground and polished finish.
- B. Divider strips.
- C. Precast epoxy terrazzo thresholds.
- D. Precast epoxy terrazzo stair units.

1.02 ADMINISTRATIVE REQUIREMENTS

- A. Pre-Installation Conference:
 - 1. Attendance:
 - a. Owner's representative.
 - b. Architect.
 - c. Contractor.
 - d. Resin manufacturer's representative.
 - e. Installer performing the pouring, grinding, and polishing.
 - f. Other parties affected by the work of this Section.
 - 2. Agenda:
 - a. Review contract document requirements.
 - b. Review requirements for assessment of sound substrate and subsequent remediation in the case of sub-standard conditions.
 - c. Review requirements for environmental conditions and storage of materials.
 - d. Review terrazzo resin manufacturer's preparation and application instructions including, but not limited to, the following:
 - 1) Procedures for proper substrate preparation.
 - 2) Mix design and matching of approved samples.
 - 3) Schedule and availability of materials, personnel, and equipment.
 - 4) Pour of the epoxy matrix.
 - 5) Protecting terrazzo surfaces until grinding/polishing begins.
 - 6) Details of each step of grinding, honing, and polishing operations.
 - 7) Sealing and protecting terrazzo after polishing is completed.
 - 3. Review conditions or techniques which would prevent the satisfactory application of the terrazzo system.
 - 4. Reports: record discussions, including decisions and agreements reached, and furnish copy of record to each party in attendance.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Provide data for divider strips, control joint strips, expansion joints, and sealer; include printed copy of current NTMA recommendations for type of terrazzo specified.
 - 2. Shop Drawings: Indicate divider strip and control and expansion joint layout, and details of adjacent components. For precast units, detail profile and anchorage requirements.
 - 3. Samples: Submit three samples, 8 inch (203 mm) by 8 inch (203 mm) in size illustrating color, chip size and variation, chip gradation, matrix color, and typical divider strip.
- B. Informational Submittals:
 - 1. Manufacturer's Qualification Statement.
 - 2. Installer's Qualification Statement.

- C. Closeout Submittals:
 - 1. Cleaning and Maintenance Data: Include procedures for stain removal, stripping, and sealing.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 5.504.4.1 Adhesives and sealants.
 - 2. 5.504.4.3 Paints and coatings.
 - 3. A5.405.1: Regional materials, certificates indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material.
 - 4. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.
 - 5. Section A5.405.5: Provide documentation that cement and concrete used are made with recycled content and/or alternative energy.

1.05 QUALITY ASSURANCE

- A. Perform work in accordance with NTMA recommendations as posted at their web site at www.ntma.com.
- B. Installer Qualifications: Company specializing in performing the type of work specified in this Section.
 - 1. Minimum five years of documented experience.
 - 2. Approved by matrix manufacturer.
- C. Prior to installation, testing laboratories to perform moisture vapor emission testing in accordance with Section 09 0561 - Common Work Results for Flooring Preparation. If required, apply moisture barrier prior to flooring installation.
- D. Walkway Auditor: Certified by CPAA or NFSI to test bonded abrasive polished concrete floors for wet dynamic coefficient of friction according to ANSI B101.3.
 - 1. Coefficient of Friction: Achieve following coefficient of friction by field quality control testing in accordance to the following standards:
 - a. ANSI B101.3 Test Method for Measuring Wet DCOF of Common Hard-Surface Floor Materials - Achieve a minimum of 0.42 for level floor surfaces.

1.06 MOCK-UP

- A. Comply with general mock-up requirements specified in Section 01 4000.
- B. Mock-up: Construct mock-up of terrazzo illustrating appearance of finished work in each configuration required. Size mock-up to be not less than 6 feet by 6 feet.
 - 1. Locate where directed.
 - 2. Mock-up may remain as part of the work.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Store terrazzo materials in a dry, secure area.
- B. Maintain minimum temperature of 55 degrees F (13 degrees C).
- C. Keep products away from fire or open flame.

1.08 FIELD CONDITIONS

- A. Do not install terrazzo when temperature is below 50 degrees F (10 degrees C) or above 90 degrees F (32 degrees C).
- B. Maintain temperature within specified range 24 hours before, during, and 72 hours after installation of flooring.
- C. Provide ambient lighting level of 50 ft candles (540 lx), measured at floor surface.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Acceptable Products:
 - 1. Concord Terrazzo Company, Inc.; TERRAZZCO EZpour Epoxy 158: terrazzco.com.
 - 2. Crossfield Products Corp; Dex-O-Tex Spectrum Key Resin Company: www.keyresin.com.
 - 3. Sherwin-Williams Company; General Polymers Brand: www.generalpolymers.com.
 - 4. Terrazzco; TERRAZZCO Epoxy Terrazzo System, a brand of Concord Terrazzo Company, Inc: www.terrazzco.com.
 - 5. Approved equal.

2.02 EPOXY MATRIX TERRAZZO APPLICATIONS

- A. Floors: Locations: Elevator and as indicated on Drawings.
 - 1. Thickness: 3/8 inch (9 mm), nominal.
 - 2. Aggregate Type: Marble chips.
 - 3. Aggregate Size: Match Architect's sample.

2.03 MATERIALS

- A. Epoxy Matrix Terrazzo: Aggregate and matrix mix applied to substrate, troweled flat, and ground smooth.
 - 1. Mix Proportions: As required to achieve appearance specified.
- B. Matrix: Two component resin and epoxy hardener with mineral filler and color pigment, non-volatile, thermo-setting.
 - 1. Physical Properties without Aggregates:
 - a. Hardness: 60 to 85 per ASTM D2240, Shore D.
 - b. Minimum Tensile Strength: 3000 psi (20.7 MPa) per ASTM D638 for a 2 inch (51 mm) specimen made using a "C" die per ASTM D412.
 - c. Minimum Compressive Strength: 10,000 psi (6.9 MPa) per ASTM D695, Specimen B cylinder.
 - d. Chemical Resistance: No deleterious effects by contaminants listed below after seven-day immersion at room temperature per ASTM D1308.
 - e. Distilled water.
 - f. Mineral water.
 - g. Isopropanol.
 - h. Ethanol.
 - i. 0.025 percent detergent solution.
 - j. 5 percent acetic acid.
 - k. 10 percent sodium hydroxide.
 - l. 10 percent hydrochloric acid.
 - 2. Physical Properties with Aggregates: For terrazzo blended according to manufacturer's recommendations with one part epoxy resin with three parts marble aggregate consisting of 60 percent No. 1 chips and 40 percent No. 0 chips that is ground and grouted to a 1/4-inch (6.35-mm) nominal thickness, and cured for 7 days at 75 deg F (24 deg C) plus or minus 2 deg F (1 deg C) and at 50 percent plus or minus 2 percent relative humidity.

- a. Flammability: Self-extinguishing, maximum extent of burning 1/4 inch (6.35 mm) according to ASTM D635.
 - b. Thermal Coefficient of Linear Expansion: 0.0025 inch/inch per deg F (0.0025 mm/mm per 0.5556 deg C) according to ASTM C531.
- C. Aggregates: Comply with NTMA gradation standards for mix indicated and contain no deleterious or foreign matter.
- 1. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C131/C131M.
 - 2. 24-Hour Absorption Rate: Less than 0.75 percent.
 - 3. Dust Content: Less than 1.0 percent by weight.
 - 4. Finishing Grout: Epoxy, color to match terrazzo matrix.
- D. Aggregate: Type as indicated; sized in accordance with NTMA aggregate gradation standards; colors as indicated, uniform in color.
- E. Finishing Grout: Epoxy, color to match terrazzo matrix.
- F. Precast Epoxy Terrazzo Stair Units: Fabricate to sizes and profiles indicated on Drawings.
- 1. Nosing: Contrasting strip at leading edge.
 - 2. Reinforcing: As indicated on Drawings.
 - 3. Setting Material: Latex Portland cement mortar, ANSI A118.4.

2.04 PRECAST EPOXY MATRIX TERRAZZO APPLICATIONS

- A. Stairs - Treads and Risers:
- 1. Thickness: 1-1/2 inch (38 mm), minimum.
 - 2. Color(s): As indicated on Finish Schedule.
 - 3. Aggregate Type and Size: Same as floors.

2.05 ACCESSORIES

- A. Precast Epoxy Terrazzo Thresholds: 2 inches (51 mm) thick; beveled edge on both long edges; without holes, cracks, or open seams.
- 1. Width: As indicated on Drawings.
 - 2. Length: Full width of opening.
 - 3. Provide abrasive strips as shown on Drawings.
 - 4. Color and Pattern: As indicated on Drawings.
 - 5. Applications:
 - a. As indicated on Drawings.
 - 6. Installation: Thickset.
- B. Divider Strips: 1/8 inch (3 mm), 1/4 inch (6 mm), and 1/2 inch (12.7 mm) thick zinc exposed top strip, zinc coated steel concealed bottom strip, with anchoring features.
- C. Control Joint Strips: Separate, double L-type angles, positioned back to back, that match material and color of divider strips and in depth required for topping thickness indicated.
- D. Divider and Control Joint Strip Height: To suit thickness of terrazzo topping, with allowance for grinding,
- E. Strip Adhesive: 100% solids epoxy resin adhesive recommended by manufacturer.
- 1. Use adhesive that has a VOC content of 50g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- F. Abrasive Strips: Three-line abrasive inserts at nosings. Silicon carbide or aluminum oxide, or combination of both, in epoxy-resin binder and set in channel.
- 1. Width: 1/2 inch (12.7 mm).
 - 2. Depth: As required by terrazzo thickness.
 - 3. Length: 4 inches (100 mm) less than stair width.
 - 4. Color: As selected by Architect from full range of industry colors.

- G. Anchoring Devices:
 1. Strips: Provide mechanical anchoring devices or adhesives for strip materials as recommended by manufacturer and as required for secure attachment to substrate.
- H. Patching and Fill Material: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.
- I. Joint Compound: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.
- J. Resinous Matrix Terrazzo Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by sealer manufacturer for use on terrazzo type indicated
- K. Sealer: Colorless, non-yellowing, penetrating liquid type to completely seal matrix surface; not detrimental to terrazzo components.
 1. Solvent Based Sealer Properties: Flashpoint at 80 deg. F or above according to ASTM D 56.
 2. Water Based Sealer Properties: With pH factor between 7 and 10.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that subfloor surfaces are smooth and flat within the tolerances specified for that type of work and are ready to receive terrazzo.
- B. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive terrazzo.
- C. Verify that subfloor surfaces are dust-free and free of substances that could impair bonding of materials to subfloor surfaces.
- D. Verify that wood subfloors have 12 percent maximum moisture content.
- E. Cementitious Subfloor Surfaces: Verify that substrates are ready for terrazzo flooring installation by testing for moisture and alkalinity (pH).
 1. Test in accordance with Section 09 0561 - Common Work Results for Flooring Preparation.
 2. Obtain instructions if test results are not within limits recommended by terrazzo flooring manufacturer.
- F. Cementitious Sub-floor Surfaces: Verify that substrates are dry enough and ready for resilient flooring installation by testing for moisture and pH.
 1. Test in accordance with Section 09 0561.
 2. Obtain instructions if test results are not within limits recommended by resilient flooring manufacturer and adhesive materials manufacturer.
- G. Verify that required floor-mounted utilities are in correct location.

3.02 PREPARATION

- A. Clean substrate of foreign matter.
- B. Prepare concrete subfloor by mechanically abrading surface in accordance with manufacturer's instructions.
- C. Substrate-Crack-Suppression Membrane: Install to isolate and suppress substrate cracks according to manufacturer's written instructions.
 1. Prepare and prefill substrate cracks with membrane material.
 2. Install membrane at substrate cracks in areas to receive terrazzo.
 3. Reinforce membrane with fiberglass scrim.

- D. Protect other work from water and dust generated by grinding operations. Control water and dust to comply with environmental protection regulations.
 1. Erect and maintain temporary enclosures and other suitable methods to limit water damage and dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.
- E. Apply primer in accordance with manufacturer's instructions.

3.03 INSTALLATION

- A. Install divider strips according to pattern approved on shop drawings.
- B. Install divider and control joint strips straight and flat to locations indicated.
 1. Locate divider strips in locations indicated.
 2. Install control-joint strips back to back and directly above concrete-slab control joints in locations indicated.
 3. Install control-joint strips with 1/4-inch (6.4-mm) gap between strips, and install sealant in gap.
 4. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.
 5. Accessory Strips: Install as required to provide a complete installation in locations indicated.
- C. Apply primer to terrazzo substrates according to manufacturer's written instructions.
- D. Place terrazzo mix over substrate to thickness indicated.
- E. Place, rough grind, grout, cure grout, fine grind, and finish terrazzo according to manufacturer's written instructions.
 1. Installed Thickness: 3/8 inch (9.5 mm) nominal.
- F. Install and finish poured-in-place terrazzo stairs at the same time the adjacent terrazzo flooring is installed.
- G. Install and finish poured-in-place terrazzo base at the same time the adjacent terrazzo flooring is installed.
- H. Anchor precast units as indicated on drawings.
- I. Install precast units using specified setting material.

3.04 FINISHING

- A. Finish terrazzo to NTMA requirements.
- B. Produce terrazzo finish surface to match approved mock-up, with 70 percent chip exposed.
- C. Grind terrazzo surfaces with power disc machine; sequence with coarse to fine grit abrasive, using a wet method.
- D. Terrazzo Finishing: Ensure that matrix components and fluids from grinding operations do not stain terrazzo by reacting with divider and control-joint strips.
 1. Rough Grinding: Grind with 24-grit or finer stones or with comparable diamond abrasives. Follow initial grind with 60/80-grit stones or with comparable diamond abrasives.
 2. Grouting: Before grouting, clean terrazzo with water, rinse, and allow to dry. Apply and cure epoxy grout.
 3. According to NTMA, the standard finish on portland cement terrazzo is an 80-grit carborundum polish. 120 grit produces a more highly polished surface and tends to deepen and darken the appearance of aggregates.

4. Fine Grinding/Polishing: Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted. Grind with [80] [120]-grit stones or with comparable diamond abrasives until grout is removed from surface.

- E. Apply grout to fill voids exposed from grinding.
- F. Remove grout coat by grinding, using a fine grit abrasive.
- G. Hand grind vertical and curved surfaces similarly.
- H. Slip Resistance: Unless approved otherwise, measured dynamic coefficient of friction (DCOF) shall be not less than 0.42 (wet) at the time of testing as measured using a Regan Scientific Instruments Bot-3000e Tribometer, in accordance with ANSI B101.3.

3.05 PRECAST TERRAZZO INSTALLATION

- A. Install precast terrazzo threshold and stair units using method recommended in writing by NTMA and manufacturer unless otherwise indicated.
- B. Install precast units using specified setting material.
- C. Do not install units that are chipped, cracked, discolored, or improperly finished.
- D. Seal joints between units with joint compound matching precast terrazzo matrix and joint sealant.

3.06 REPAIR

- A. Cut out and replace terrazzo areas that evidence lack of bond with substrate. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by Architect.

3.07 TOLERANCES

- A. Maximum Variation from Flat Surface: 1/4 inch in 10 feet (6 mm in one m).
- B. Maximum Variation from Level (Except Surfaces Sloping to Drain): 1/8 inch (3 mm).

3.08 FIELD QUALITY CONTROL

- A. Field Testing: Engage a qualified walkway auditor to perform field testing to determine if in-place floor finish complies with specified coefficient of friction.
- B. Slip Resistance Measurements:
 - 1. Take slip resistance measurements prior to Owner possession.
 - 2. Test method shall conform to ansi/nfsi b101.3-2012.
 - 3. Provide a minimum of 2 tests for every 1000sf of polished concrete floor area, with a maximum dimension between tests locations of 30 feet o.c.; provide even distribution of testing throughout.
 - 4. Collect and record slip resistance measurements on floor plan and submit with closeout documents as specified.
 - 5. Within 24 hours of testing, notify the Architect of all non-conforming measurements.

3.09 CLEANING

- A. Scrub and clean terrazzo surfaces with neutral pH cleaner in accordance with manufacturer's instructions. Let dry.
- B. Immediately after terrazzo has dried, apply sealer in accordance with manufacturer's instructions.
- C. Polish surfaces in accordance with manufacturer's instructions.

3.10 PROTECTION

- A. Protect finished terrazzo from damage due to subsequent construction until Date of Substantial Completion.

END OF SECTION

**SECTION 09 6700
FLUID-APPLIED FLOORING**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Fluid-applied flooring and base.

1.02 SUBMITTALS

- A. Action Submittals:
 1. Product Data: Provide data on specified products, describing physical and performance characteristics; sizes, patterns and colors available.
 2. Samples: Submit two samples, 12 by 12 inches (305 by 305 mm) in size illustrating color and pattern for each floor material for each color specified.
- B. Informational Submittals:
 1. Manufacturer's Installation Instructions: Indicate special procedures, perimeter conditions requiring special attention, and application rate for each coat.
 2. Maintenance Data: Include maintenance procedures, recommended maintenance materials, procedures for stain removal, repairing surface, and suggested schedule for cleaning.

1.03 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 - Sustainable Design Requirements - CAL-Green, for the following measures:
 1. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 - a. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.
 2. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.

1.04 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with minimum three years documented experience.
- B. Applicator Qualifications: Company specializing in performing the work of this section.
 1. Approved by manufacturer.
- C. Prior to installation, provide testing laboratories to perform recommended calcium chloride moisture and alkalinity tests on concrete slabs. If required, apply moisture barrier prior to flooring installation.
- D. Walkway Auditor: Certified by CPAA or NFSI to test bonded abrasive polished concrete floors for dynamic and static coefficient of friction according to ANSI B101.1 and B101.3.
- E. Coefficient of Friction: Achieve following coefficient of friction by field quality control testing in accordance to the following standards:
 1. ANSI B101.3 Wet Dynamic Coefficient of Friction - Achieve a minimum of 0.42 for level floor surfaces.

1.05 MOCK-UP

- A. Construct mock-up of fluid applied flooring to serve as basis for evaluation of texture and workmanship.
 1. Number of Mock-Ups to be Prepared: One.
 2. Use same materials and methods for use in the work.
 3. Locate where directed.

- 4. Size and Location: As directed by Architect.
- B. Obtain approval of mock-up by Architect before proceeding with work.
- C. Approved mock-up may not remain as part of the Work.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Store resin materials in a dry, secure area.
- B. Store materials for three days prior to installation in area of installation to achieve temperature stability.

1.07 FIELD CONDITIONS

- A. Maintain minimum temperature in storage area of 55 degrees F (13 degrees C).
- B. Store materials in area of installation for minimum period of 24 hours prior to installation.
- C. Maintain ambient temperature required by manufacturer 72 hours prior to, during, and 24 hours after installation of materials.

PART 2 PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

- A. Performance Requirements: Slip resistance of floor system as measured by the following criteria:
 - 1. Wet Dynamic Coefficient of Friction (DCOF): Provide products with the following value as determined by testing identical products by the DCOF AcuTest Method per ANSI 137.1, 2012 Edition.
 - a. Walkway Surfaces: Minimum 0.42.

2.02 FLUID-APPLIED FLOORING SYSTEMS

- A. Paint Maximum Product Emissions Limits: Top coat and primer interior paints must meet current requirements for VOC (Volatile Organic Compounds) limits of South Coast Air Quality Management District SCAQMD 1113 and CAL-Green Table 5.504.4.3 for VOC Content Limits for Architectural Coatings.
 - 1. CAL-Green Requirements for typical paint coatings:
 - a. Primers, Sealers, and Undercoaters: 100 grams per liter of product minus water.
 - b. Flats: 50 grams per liter of product minus water.
 - c. Non-flats: 100 grams per liter of product minus water.
 - d. Non-flat High Gloss: 150 grams per liter of product minus water.
- B. Fluid-Applied Flooring: Polyurethane, four component resin; with aggregate.
 - 1. System Physical Properties: Provide resinous flooring system with the following minimum physical property requirements when tested according to test methods indicated:
 - a. Total Thickness: 1/4 inch minimum.
 - b. Compressive Strength: 7,700 psi after 7 days per ASTM C 579.
 - c. Tensile Strength: 1,000 psi per ASTM C 307.
 - d. Flexural Strength: 2,400 psi per ASTM C 580.
 - e. Water Absorption: Less than 1 percent per ASTM C 413.
 - f. Impact Resistance: Greater than 160 in. lbs. per ASTM D 2794.
 - g. Flammability: Class 1 per ASTM E-648.
 - h. Hardness: 80 to 84, Shore D per ASTM D 2240.
 - 2. Mortar Coat:
 - a. Thickness: 3/16 inch (5 mm)
 - b. Number of Coats: One.
 - c. Color: As selected by Architect from manufacturer's full range.
 - d. Basis of Design Product:
 - 1) Stonhard, Inc.; Stonclad UT.

3. Top Coat: Two part, UV resistant, urethane.
 - a. Number of Coats: One.
 - b. Color: As selected by Architect from manufacturer's full range.
 - c. Basis of Design Product:
 - 1) Stonhard, Inc.; Stoneseal UT7.
4. Decorative Aggregate: Quartz granules.
 - a. Broadcast to rejection
 - b. Basis of Design Product:
 - 1) Stonhard, Inc. Pigmented Blended aggregate.
5. Basis of Design Product:
 - a. Stonhard, Inc.; Stoneclad UT.

2.03 ACCESSORIES

- A. Repair Materials for Existing Concrete Floors:
 1. Pitching and Leveling: Use four component fast setting urethane grout.
- B. Repair Materials for Existing Concrete Floors:
 1. Minor Patching and Small Cracks: 100 percent solids epoxy and fumed silica.
 2. Major Patching and Large Cracks (1/4 inch (6.35 mm)): 100 percent solids epoxy.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Verify that subfloor surfaces are smooth and flat within the tolerances specified for that type of work and are ready to receive flooring.
- B. Cementitious Sub-floor Surfaces: Verify that substrates are dry enough and ready for resilient flooring installation by testing for moisture and pH.
 1. Ensure concrete has cured 60 days minimum.
 2. Test in accordance with Section 09 0561 - Common Work Results for Flooring Preparation.
 - a. Employ a radio frequency moisture meter to determine that residual uncombined moisture content of concrete slab is less than 5 percent by weight. Conduct ASTM F1869 to further record the Moisture Vapor Emission Rate. Do not apply high performance floor coatings to floor slabs that exceed 5 percent moisture content or 3 pounds per 1,000 square feet per 24 hours unless approved by the material manufacturer.
 3. Obtain instructions if test results are not within limits recommended by resilient flooring manufacturer and adhesive materials manufacturer.

3.02 PREPARATION

- A. Prepare and clean in accordance to flooring manufacturer's instructions for particular substrate conditions involved, and as specified.
 1. Prepare concrete surfaces in accordance with ASTM D4258.
- B. Remove subfloor ridges and bumps. Fill low spots, cracks, joints, holes, and other defects with subfloor filler.
 1. Patch material shall be approved by flooring manufacturer.
- C. Mechanical Surface Preparation:
 1. Mechanically abrade concrete surface in accordance with manufacturer's instructions.
 2. Leave concrete surface with an aggressive texture.
 3. Remove concrete dust.
 4. Conform to ASTM D4259.
 5. Surface profile shall conform to IRCI Guideline 03732 CSP 3, minimum
- D. Crack Repair: For Cracks over 1/16 inch (1.58 mm) wide after surface preparation.

1. Route top of crack to 1/2 inch (12.70 mm) by 1/4 inch (6.35 mm) minimum. Insure walls of crack are clean, dry, and free from contaminates, use grinder blade to clean side walls if required.
2. Prime down into prepared crack and extending out 2 inches (50.8 mm) minimum on both sides of crack.
3. Apply second coat into crack to fill areas that have settled from first application. Apply strip coat 2 inches (50.8 mm) minimum on both sides of crack.
 - a. Thickness: 40 mils (1.0 mm), feather edges.
4. If application is free from sink holes apply fiber reinforced fabric onto surface of strip coat application. If application has sink holes make another application before applying fabric reinforcement.

E. Vacuum clean substrate.

F. Etch concrete floor in accordance with manufacturer's instructions.

3.03 INSTALLATION - FLOORING

A. Apply flooring system in accordance with manufacturer's instructions.

B. Apply flooring system materials to obtain consistent thickness and smooth, uniform appearance and texture.

C. Apply cove base mix to wall surfaces 6 inches high before applying flooring. Round internal and external corners.

D. Basecoat: Apply basecoat 3/16 inch (5 mm) thick.

1. Cure fluid-applied flooring according to manufacturer's written instructions. Prevent contamination during application and curing processes.
2. At substrate expansion and isolation joints, provide joint in fluid-applied flooring to comply with manufacturer's written recommendations.
3. Broadcast desired light texture directly into mortar base.

E. Topcoat: Once basecoat is cured, apply top coat.

F. System total thickness: 1/4 inch (6.35 mm) minimum.

3.04 FIELD QUALITY CONTROL

A. Refer to Section 01 4000 - Quality Requirements, for additional requirements.

B. Field Testing: Engage a qualified walkway auditor to perform field testing to determine if polished concrete floor finish complies with specified static coefficient of friction.

1. ANSI B101.3 for dynamic coefficient of friction.

3.05 ADJUSTING

A. Repair or replace adjacent Work which has been damaged by finishing operations.

3.06 CLEANING

A. Clean-up and remove debris daily.

B. Clean spillage, overspray, or drift from adjacent surfaces; remove immediately in accordance with manufacturer's instructions.

3.07 PROTECTION

A. Prohibit traffic on floor finish for 48 hours after installation.

B. Barricade area to protect flooring until fully cured.

END OF SECTION

**SECTION 09 8100
ACOUSTIC INSULATION**

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Acoustical batt insulation.
- B. Acoustical rigid fiber glass board insulation.
- C. Acoustical duct wrap.

1.02 QUALITY ASSURANCE

- A. Fire Performance Characteristics: Provide insulation materials identical to those whose indicated fire performance characteristics have been determined per the ASTM method below, by UL or other testing and inspecting organizations acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing and inspecting organization.
 - 1. Surface Burning Characteristic: ASTM E84.
 - 2. Fire Resistance Ratings: ASTM E119.
 - 3. Combustion Characteristics: ASTM E136.
- B. Single-Source Responsibility for Acoustical Insulation Products: Obtain each type of acoustical insulation from a single source with resources to provide products of consistent quality in appearance and physical properties without delaying progress of the Work.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Provide data on product characteristics, performance criteria, and product limitations.
- B. Informational Submittals:
 - 1. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.
 - 2. Manufacturer's Installation Instructions: Include information on special environmental conditions required for installation and installation techniques.
 - 3. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

1.04 SUSTAINABILITY SUBMITTALS

- A. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.

1.05 DELIVERY, STORAGE, AND HANDLING

- A. Do not allow insulation materials to become wet, soiled, or covered with ice or snow. Comply with manufacturer's recommendations for handling, storage, and protection during installation.

PART 2 PRODUCTS

2.01 GENERAL

- A. General: Comply with regionally-sourced, recycled content, urea-formaldehyde prohibition, adhesives and sealants, aerosol adhesives, and volatile organic compound (VOC) product requirements specified in Section 018114 - Greenhouses.
 - 1. 25% postconsumer or 50% pre-consumer recycled content.
- B. Acoustic Insulation - General: Use type of acoustical insulation to comply with indicated assembly requirements.

1. Where any specified rated assembly requires the use of proprietary acoustical insulation products, installation methods or procedures, comply with specified rated assembly requirements including requirements associated with assembly options which may be selected by Contractor.

2.02 BATT INSULATION

- A. Fiberglass Acoustic Insulation: ASTM C665, Type I, unfaced, non-combustible as per ASTM E 136.
 1. Inorganic glass fiber material with a minimum density of 0.60 pounds per cubic foot.
 2. Surface Burning Characteristics as per ASTM E 84: Flame Spread of 25; Smoke Developed of 50.
 3. Density: Minimum 2.0 pounds per cubic foot where used in rated floor/ceiling assembly and specified wall assemblies.
 4. Thickness: Full thickness of indicated wall framing, and 3-1/2 inches thick to comply with specified floor/ceiling assembly rating requirements.
 5. Widths: Match stud spacing and be self supporting between the studs.
 - a. For application above ceilings, select batt widths to be supported on ceiling construction over the entire ceiling area.
 6. Do not provide paper or other combustible backing or facing on batts.
 7. Select batt thickness to fill cavity airspace.
 8. Acceptable Products:
 - a. CertainTeed Corporation; CertaPro AcoustaTherm Batt.
 - b. Johns Manville; Sound-Shield Sound Control Batt.
 - c. Owens-Corning; Sound Attenuation Batt Insulation.
 - d. Prior approved equal.
- B. Mineral Fiber Acoustic Insulation: ASTM C612; semi-rigid mineral fiber, unfaced; flame spread index of 0 (zero) when tested in accordance with ASTM E84.
 1. Thickness:
 - a. Full thickness of indicated wall framing.
 - b. 2 inch (50.8 mm) minimum or as indicated on Drawings for mechanical rooms.
 2. Density: Minimum 2.4 pounds per cubic foot where used in specified wall assemblies.
 3. Acceptable Products:
 - a. Roxul, Inc.; Safe'n'Sound: www.roxul.com.
 - b. Prior approved equal.

2.03 ACOUSTICAL DUCT WRAP FOR BREAKOUT NOISE CONTROL

- A. Acoustic Duct/Pipe/Conduit Wrap:
 1. Thickness: 1 inch (25 mm).
 2. Basis of Design Product:
 - a. Sound Seal model B-20 LAG/QFA sound proofing pipe and duct wrap.
 - b. Kinetics Noise Control model KNM-200ALQ/KFA
 - c. Equal products of other manufacturers when approved in advance by the Architect.
 - d. Approved equal.

2.04 ACCESSORIES

- A. Acoustic Sealant: As specified in Section 07 9219 - Acoustical Joint Sealants.
- B. Adhesively Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of specified thickness securely in position with self-locking washer in place.
 1. Plate: Perforated, galvanized carbon-steel sheet, 0.030 inch (0.762 mm) thick by 2 inches (50 mm) square.
 2. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch (2.67 mm) in diameter; length to suit depth of insulation.
 3. Products:
 - a. AGM Industries, Inc; Series T TACTOO Insul-Hangers.

- b. Gemco; Spindle Type.
 - c. Approved equal.
- C. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick galvanized-steel sheet, with beveled edge for increased stiffness, sized as required to hold insulation securely in place, but not less than 1-1/2 inches (38 mm) square.
 - 1. Products:
 - a. AGM Industries, Inc;; SC150.
 - b. Gemco;; S-150.
 - c. Approved equal.
- D. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates without damaging insulation, fasteners, or substrates.
 - 1. Products:
 - a. AGM Industries, Inc; TACTOO Adhesive.
 - b. Gemco; Tuff Bond Hanger Adhesive.
 - c. Approved equal.
- E. Provide other materials, not specifically described but required for a complete and proper installation, as recommended by the Manufacturer, and subject to the approval of the Architect.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
- B. Correct conditions detrimental to timely and proper completion of the Work. Do not proceed until unsatisfactory conditions are corrected.

3.02 PREPARATION

- A. Clean substrates of substances that are harmful to insulation, including removing projections capable of puncturing insulation or vapor retarders, or that interfere with insulation attachment.

3.03 INSTALLATION

- A. Install accordance with manufacturer's recommendations, eliminating gaps, butting joints, tying or attaching fiberglass in place where it is not self supporting.
- B. Extend insulation full thickness to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
- C. At Penetrations:
 - 1. Seal penetration of acoustical partitions by ductwork, cable, conduit or pipes. Cover gaps larger than 1/2 inch (12.70 mm) with gypsum board, lapped 2 inches (50.8 mm) minimum, and screwed before using acoustical sealant. Seal gaps in accordance with Section 079219 - Acoustical Joint Sealants.
 - 2. Cable Trays: Provide conduit sleeves at slab to slab partitions penetrated by cable trays. Flexible duct, pipe and conduit connections should be incorporated between rooms where resiliently isolated floors, walls, or ceilings occur.

3.04 INSTALLATION OF BOARD INSULATION BELOW ROOF/CEILING DECK

- A. Install insulation in accordance manufacturer's written instructions.
- B. Adhere impaling clip in accordance with manufacturer's recommendations.
- C. Impale insulation onto impaling clip. Butt joints tight. Install retaining washer.

3.05 PROTECTION

- A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION

SECTION 09 8414

ACOUSTIC STRETCHED-FABRIC WALL AND CEILING SYSTEMS

PART 1 GENERAL

1.01 SECTION INCLUDES

- A. Acoustic stretched-fabric wall system.

1.02 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: Manufacturer's data sheets on each product to be used, including:
 - a. Preparation instructions and recommendations.
 - b. Storage and handling requirements and recommendations.
 - c. Installation methods.
 - d. Specimen warranty.
 - 2. Shop Drawings: Details indicating typical transitions to other finish surfaces.
 - a. Elevations indicating proposed locations of fabric seams and details indicating typical transitions to other finish surfaces.
 - 3. Selection Samples: Fabric swatches representing manufacturer's full range of available colors, textures, and patterns.
 - 4. Verification Samples:
 - a. For each fabric specified, minimum size 12 inch (305 mm) square, representing actual product in color, texture, and pattern.
 - b. Actual samples of each frame profile to be used, including transitions between dissimilar profiles.
 - c. Acoustic material, minimum size 12 inch (305 mm) square.
 - d. Accessory package.
- B. Informational Submittals:
 - 1. Test Reports: Certified test data from an independent test agency verifying that wall systems meet specified requirements for acoustical and fire performance.
 - 2. Manufacturer's Qualification Statement.
 - 3. Installer's Qualification Statement.
 - 4. Maintenance Contract.
 - 5. Warranty Documentation: Submit manufacturer's warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.
- C. Maintenance Materials: Furnish the following for Owner's use in maintenance of project.
 - 1. Supply an additional 10 (ten) percent of accessories installed for Owner's use in maintenance of project.
 - 2. Supply an additional 5 (five) percent of fabric installed for Owner's use in maintenance of project.

1.03 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide special submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.1 and 5.504.4.1 Adhesives and sealants.
 - 2. A5.405.1 Regional materials. Select building materials or products for permanent installation on the project that have been harvested or manufactured in California or within 500 miles of the project site, meeting the criteria listed in Section A5.405.1.

3. A5.405.4 Recycled content materials, equivalent in performance to virgin materials. Provide cost documentation showing value of recycled content using A5.405.02.
4. A5.406.1, .2 and .3: Materials selected for longevity, reduced maintenance and recyclability.

1.04 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with at least three years of documented experience.
- B. Installer Qualifications: Company specializing in performing work of the type specified and with at least three years of documented experience and approved by manufacturer.

1.05 MOCK-UP

- A. Comply with general mock-up requirements specified in Section 01 4000.
- B. Mock-Up: Provide a mock-up for evaluation of applicable workmanship.
 1. Finish areas as designated by Architect.
 2. Do not proceed with remaining work until workmanship and overall appearance are approved by Architect.
 3. Refinish mock-up area as required to produce acceptable workmanship.
 4. Approved mock-up may remain as part of the completed work.
 5. Construct mock-up of acoustic stretched-fabric wall system at location indicated by Architect.
 - a. Minimum mock-up dimensions; 96 by 96 inches (2440 by 2440 mm).
 - b. Approved mock-up may remain as part of the Work.

1.06 DELIVERY, STORAGE, AND HANDLING

- A. Protect fabric, acoustical backing, and track from excessive moisture in shipment, storage, and handling.
- B. Do not deliver materials to project until wet work such as concrete and plaster has been completed.
- C. Store products in manufacturer's unopened packaging until ready for installation.
- D. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.07 MOCK-UP

- A. Construct mock-up of acoustic stretched-fabric wall system at location indicated by Architect.
 1. Minimum mock-up dimensions; 36 by 36 inches (914 by 914 mm).
 2. Approved mock-up may not remain as part of the Work.

1.08 FIELD CONDITIONS

- A. Do not begin installation until interior conditions have reached temperature and humidity that will be maintained during occupancy.

1.09 WARRANTY

- A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.
- B. Correct defective work for lifetime of installation.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Basis of Design Manufacturer:
 1. FabriTRAK Systems, Inc; FabriTRAK System: www.fabritrak.com.

AE3 Partners

DSA Application No. 01-119166
September 7, 2021

Increment 1
09 8414 - 2

Merritt College
Child Development Center
ACOUSTIC STRETCHED-FABRIC WALL
AND CEILING SYSTEMS

2. Other Acceptable Manufacturers:
 - a. Fabric Wall: www.fabric-wall.com.
 - b. Fabricmate Systems: www.fabricmate.com.
 - c. Novawall Systems, Inc: www.novawall.com.
 - d. Prior approved equal.

2.02 ACOUSTIC STRETCHED-FABRIC SYSTEM

- A. Acoustic Stretched-Fabric Wall System: Field installed, fabric is stretched and set into framework and laid over acoustic material anchored to substrate. Framework consists of continuous perimeter and intermediate mounting frames anchored to substrate, and designed to permit removal and replacement of fabric within framed areas without affecting adjacent areas.
 1. Surface Burning Characteristics: Flame Spread Index of 25, maximum; Smoke Developed Index of 450, maximum; when whole system is tested in accordance with ASTM E84 using mounting specified in ASTM E2573 for stretched systems.
 2. Noise Reduction Coefficient (NRC): 0.80, minimum, when tested in accordance with ASTM C423, Type A mounting per ASTM E795.
 3. Prefabricated, fabric covered and individually framed panels are not permitted.
 4. Install fabric over acoustic material and into framework without use of adhesives, tapes, or fasteners.
 5. Seams in fabric are not permitted; base the frame layout dimensions on fabric at least 72 inch (1.83 m) wide.
- B. Provide materials and systems made of recycled content, at least 90 percent post-consumer or pre-consumer (post-industrial).
- C. Verify that adhesives and sealants used in installation of acoustic stretched-fabric system have acceptable low VOC emission ratings.

2.03 MATERIALS

- A. Refer to Finish Schedule for selected products and finishes.
- B. Frame:
 1. Framing System: Extruded polymer framing system with serrated jaws of sufficient strength to hold fabric in place after repeated applications.
 2. Frame Color: As selected from manufacturer's standard colors.
- C. Acoustic Material:
 1. Provide type of acoustic material in thickness required to achieve Noise Reduction Coefficient (NRC) indicated.
 2. Ensure that thickness of acoustic material fills depth of frame as necessary for application without use of support blocking.
 3. Tackable Multi-Density Fiberglass Board: Consisting of 1/8 inch thick facing sheet of 18 to 22 lbs/cu ft (24.3 kg/cu m) density laminated over compressed fiberglass board, Class A fire rated in accordance with ASTM E84, with square edge in 48 inch by 48 inch (1220 mm by 1220 mm) panels.
 - a. Overall Thickness: 1 inch (25.4 mm).
 - b. Product:
 - 1) FabriTRAK Systems, Inc.; FabriTack.
 4. Overall Thickness: 1 inch (25.4 mm).
 5. Non-Tackable Polyester Fiber Board: Low denier polyester fiber board, Class A fire rated in accordance with ASTM E84.
 - a. Overall Thickness: 1 inch (25 mm).
 - b. Product:
 - 1) FabriTRAK Systems, Inc.; TerraCore Poly.

- D. Fabric: Heavy-duty fire-retardant commercial fabric, as provided by manufacturer of acoustic stretched-fabric system; color, pattern, and texture as selected from system manufacturer's fabric supplier's standard line of fabric.
 - 1. Connect membrane together by factory welds to achieve the appropriate size.
 - 2. Fabric: As indicated on Finish Schedule.
- E. Fasteners: As recommended by manufacturer of acoustic stretched-fabric system in accordance with project requirements.
- F. Adhesives: Only use adhesives that meet or do not exceed the VOC limits of the CURRENT requirements of South Coast Air Quality Management District SCAQMD 1168, CAL-Green Table 5.504.4.1 Adhesive VOC Limit.
 - 1. Current requirement refers to the date on which the materials are installed in the building.
 - 2. A copy of SCAQMD 1168 is referenced in Section 01 8114 - Sustainable Design Requirements - CAL-Green that was current as of the date of this specification. Refer to www.aqmd.gov/rules for the actual current version of the rule that will be applicable at the date of installation during construction.
- G. Adhesives: Low VOC or water-based, and approved by acoustic stretched-fabric system manufacturer.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Begin installation only after substrates have been properly prepared.
- B. Verify that casework, markerboards, door and window jambs, finished ceiling, and other finished items adjacent or abutting the acoustic stretched-fabric system have been properly installed.
- C. When preparation of substrate is the responsibility of another installer, notify Architect of unsatisfactory preparation prior to proceeding with this work.

3.02 PREPARATION

- A. Clean surfaces thoroughly prior to installation of this work.
- B. Prepare substrate surfaces using methods as recommended by the manufacturer for achieving acceptable result as required for this work.
- C. Remove wall plates and other obstacles, and properly prepare substrates to receive frames and acoustic material in accordance with manufacturer's instructions.

3.03 INSTALLATION

- A. Install acoustic stretched-fabric system at locations indicated in accordance with manufacturer's instructions.
- B. Frames: Install perimeter and intermediate frames using appropriate fasteners for prepared substrate, firmly secured to ensure frames do not separate from substrate.
 - 1. For tile or masonry substrates, apply continuous bead of adhesive along base of framing in addition to spacing of conical anchors and/or fasteners at 6 to 8 inches (152 to 203 mm) on center.
 - 2. Follow contours of wall and scribe to adjoining work at borders, penetrations, and imperfections.
 - 3. Install framing around openings and penetrations.
 - 4. Allow for spacing of framework to accommodate insertion of installation tool.

- C. Acoustic Material: Cut and trim acoustic material to fit snugly within perimeter and intermediate framework.
 - 1. Apply adhesive and press acoustic material into place, maintaining constant plane.
- D. Fabric: Stretch fabric over acoustic material, locking edges of fabric into frame's serrated jaws using manufacturer's recommended tool. Maintain fabric weave plumb, level and true, in proper relation to building lines, without ripples, waviness, hourglass, or other deleterious effects.
 - 1. Upon fabric installation, do not employ adhesives or mechanical fasteners of any type, and ensure fabric is free-floating and in contact with acoustic material as necessary.
 - 2. Stapling or gluing of fabric to cores or channel framework is not permitted.
 - 3. Provide tension in fabric sufficient to prevent sagging under anticipated changes in temperature and humidity.

3.04 CLEANING

- A. Clean exposed surfaces of acoustic stretched-fabric system in compliance with manufacturers instructions for cleaning and repair of minor damage to exposed surfaces.

3.05 PROTECTION

- A. Protect installed materials upon completion of this work, using methods that will ensure that the finished work is without damage or deterioration upon Date of Substantial Completion.

ACOUSTIC STRETCHED-FABRIC WALL
AND CEILING SYSTEMS

SECTION 09 9113
EXTERIOR PAINTING

PART 1 GENERAL**1.01 SUMMARY**

- A. Section includes surface preparation and the application of paint systems on exterior substrates.
- B. Surface preparation and field painting of exposed items and surfaces.
 - 1. Surface preparation, priming, and finish coats specified in this Section are in addition to shop priming and surface treatment specified in other Sections.
 - 2. Field finish coating of shop or factory primed and prefinished items. Refer to individual Sections for priming requirements.
 - 3. Finish coatings schedule.
 - 4. Preparation work and coatings specified in this Section are in addition to shop and factory applied finishes and surface treatment specified in other Sections.
 - 5. Paint all other items unless specifically indicated not to be painted.
 - 6. Color schedule.
- C. Paint exposed surfaces, except where these Specifications indicate that the surface or material is not to be painted or is to remain natural. If an item or a surface is not specifically mentioned, paint the item or surface the same as similar adjacent materials or surfaces. If a color of finish is not indicated, Architect will select from standard colors and finishes available.
 - 1. Painting includes field painting of exposed bare and covered pipes and ducts (including color coding), hangers, exposed steel and iron supports, and surfaces of mechanical and electrical equipment that do not have a factory-applied final finish.

1.02 DEFINITIONS

- A. Conform to PDCA Glossary for interpretation of terms used in this Section except as modified below.
- B. Exposed Surfaces: Surfaces of products, assemblies, and components visible from any angle after final installation. Includes internal surfaces visible when operable doors, panels or drawers are open, and surfaces visible behind registers, grilles, or louvers.
- C. Concealed Surfaces: Surfaces permanently hidden from view in finished construction and which are only visible after removal or disassembly of part or all of product or assembly.
- D. Inaccessible Spaces: Spaces not intended for human use.
 - 1. Standard terms used by the coatings industry are defined in ASTM D16.
- E. Gloss Levels according to ASTM D523:
 - 1. Gloss Level 1: Not more than 5 units at 60 degrees and 10 units at 85 degrees.
 - 2. Gloss Level 2: Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees.
 - 3. Gloss Level 3: 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees.
 - 4. Gloss Level 4: 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees.
 - 5. Gloss Level 5: 35 to 70 units at 60 degrees.
 - 6. Gloss Level 6: 70 to 85 units at 60 degrees.
 - 7. Gloss Level 7: More than 85 units at 60 degrees.
- F. System DFT: Dry film thickness of entire coating system unless otherwise noted.

1.03 SUBMITTALS

- A. Action Submittals:
 - 1. Product Data: For each paint system indicated. Include block fillers and primers.

- a. Material List: An inclusive list of required coating materials. Indicate each material and cross-reference specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.
- b. Manufacturer's Information: Manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each coating material.
- 2. Samples for Initial Selection: For each type of topcoat product.
- 3. Submit Samples on rigid backing, 8 inches square.
 - a. Step coats on Samples to show each coat required for system.
 - b. Label each coat of each Sample.
 - c. Label each Sample for location and application area.
- 4. Product List: For each product indicated, include the following:
 - a. Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules.
 - b. VOC content.
- B. Informational Submittals:
 - 1. Certifications specified in Quality Assurance article.
 - 2. Qualification Data: Applicator's qualification data.
 - 3. Manufacturer's instructions.
- C. Maintenance Materials Submittals
 - 1. Furnish two gallons of each type of paint used on the project.

1.04 SUSTAINABILITY SUBMITTALS

- A. LEED Submittals: Provide submittals conforming to Section 01 8113 Sustainable Design Requirements.
- B. CAL-Green documentation and verification data as specified in Section 01 8114 Sustainable Design Requirements - CAL-Green, for the following measures:
 - 1. 4.504.2.2 and 5.504.4.3 Paints and coatings.
 - 2. 4.504.2.3 and 5.504.4.3.1 Aerosol paints and coatings.

1.05 QUALITY ASSURANCE

- A. Field Samples: Apply field samples of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Architect will select one surface to represent surfaces and conditions for application of each paint system specified in Part 3.
 - a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft..
 - b. Other Items: Architect will designate items or areas required.
 - 2. Final approval of color selections will be based on field samples.
 - a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.
 - 3. Approval of field samples does not constitute approval of deviations from the Contract Documents contained in field samples unless Architect specifically approves such deviations in writing.
 - 4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.06 MOCK-UPS

- A. Mock-ups: Apply mock-ups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
 - 1. Architect will select one surface to represent surfaces and conditions for application of each paint system specified in Part 3.
 - a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft. (9 sq. m).

- b. Other Items: Architect will designate items or areas required.
 - 2. Final approval of color selections will be based on mock-ups.
 - a. If preliminary color selections are not approved, apply additional mock-ups of additional colors selected by Architect at no added cost to Owner.
 - 3. Approval of mock-ups does not constitute approval of deviations from the Contract Documents contained in mock-ups unless Architect specifically approves such deviations in writing.
- B. Subject to compliance with requirements, approved mock-ups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label and the following information:
- 1. Add other requirements to suit Project.
 - 2. Product name or title of material.
 - 3. Product description (generic classification or binder type).
 - 4. Manufacturer's stock number and date of manufacture.
 - 5. Contents by volume, for pigment and vehicle constituents.
 - 6. Thinning instructions.
 - 7. Application instructions.
 - 8. Color name and number.
 - 9. VOC content.
- B. Store materials not in use in tightly covered containers in a well-ventilated area at a minimum ambient temperature of 45 deg F (7 deg C). Maintain storage containers in a clean condition, free of foreign materials and residue.
- 1. Protect from freezing. Keep storage area neat and orderly. Remove oily rags and waste daily.

1.08 FIELD CONDITIONS

- A. Environmental Conditions: Comply with more restrictive of following or manufacturer's requirements under which systems can be applied.
- 1. Provide illumination of not less than 80 footcandles measured mid-height at substrate surface during application of coatings.
 - 2. Apply water reducible coatings only when ambient and surface temperatures are between 50 deg F (10 deg C) and 90 deg F (32 deg C).
 - 3. Apply solvent reducible coatings only when ambient and surface temperatures are between 45 deg F (7 deg C) and 90 deg F (32 deg C).
 - 4. Do not apply coatings under any of following conditions:
 - a. When surfaces are damp or wet.
 - b. During rain, fog, or mist.
 - c. When relative humidity is less than 20 percent or exceeds 85 percent.
 - d. When temperature is less than 5 deg F (- 15 deg C) above dew point.
 - e. When dust may be generated before coatings have dried.
 - f. In direct sunlight.
 - g. When wind velocity is above 20 mph.
 - 5. Application of coatings may continue during inclement weather provided work areas and surfaces to be coated are enclosed and specified environmental conditions are maintained.

1.09 WARRANTY

- A. Warrant installation to be free from defects in material and workmanship for 5 years.
- B. Repair or replace defects occurring during warranty period.
- 1. Defects include but are not limited to pinholes, crazing or cracking, loss of adhesion to substrate, deficient thickness, improper materials and workmanship.

PART 2 PRODUCTS

2.01 MANUFACTURERS

- A. Basis of Design Manufacturers:
 - 1. Benjamin Moore & Co .
 - 2. Behr Process Corporation.
 - 3. Dunn-Edwards Corporation.
 - 4. Kelly-Moore Paint Company Inc.
 - 5. PPG Paints.
 - 6. Sherwin-Williams Company (The).
 - 7. Tnemec.
 - 8. Vista Paint.

2.02 PAINT, GENERAL

- A. Material Compatibility:
 - 1. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
 - 2. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.
- B. Material Quality: Provide manufacturer's best-quality paint material of the various coating types specified that are factory formulated and recommended by manufacturer for application indicated. Paint-material containers not displaying manufacturer's product identification will not be acceptable.
- C. Coatings:
 - 1. Ready-mixed, factory tinted, best professional grade produced by manufacturer.
 - 2. Use manufacturer's appropriate base materials to achieve required colors.
 - 3. Fully grind pigments to maintain soft paste consistency in vehicle.
 - 4. Capable of being dispersed into uniform, homogeneous mixture.
 - 5. Possess good flowing and brushing properties.
 - 6. Capable of drying or curing free of streaks or sags, and yielding specified finish.
- D. Low-Emitting Materials: Interior paints and coatings shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
- E. Paint Maximum Product Emissions Limits: Top coat and primer interior paints must meet or not exceed the VOC (Volatile Organic Compounds) limits of the current requirements of Green Seal Standards GS-11 - Paints in the building, and CAL-Green Table 5.504.4.3 for VOC Content Limits for Architectural Coatings.
 - 1. CAL-Green Requirements for typical paint coatings:
 - a. Primers, Sealers, and Undercoaters: 100 grams per liter of product minus water
 - b. Flats: 50 grams per liter of product minus water
 - c. Non-flats: 100 grams per liter of product minus water
 - d. Non-flat High Gloss: 150 grams per liter of product minus water
 - e. Dry-Fog Coatings: 150 g/L.
 - f. Anticorrosive and Antirust Paints Applied to Ferrous Metals: 250 g/L.
 - g. Zinc-Rich Industrial Maintenance Primers: 340 g/L.
 - h. Floor Coatings: 100 g/L.
 - i. Shellacs, Clear: 730 g/L.
 - j. Shellacs, Pigmented: 550 g/L.
- F. Colors: As selected by Architect from manufacturer's full range.

1. 30 percent of surface area will be painted with deep tones.

2.03 PRIMERS/SEALERS

- A. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
 1. Basis of Design Product:
 - a. Cloverdale; ClovaClean
 - b. Krud Kutter; Metal Clean and Etch.
 - c. Great Lakes Laboratories; Clean'n Etch.

- B. Exterior Gypsum Soffit Board Primer: Factory-formulated alkyd- or alkali-resistant acrylic-latex primer for exterior application.
 1. Benjamin Moore and Company: Fresh Start All Purpose Alkyd Primer #204. Applied at a dry film thickness of not less than 1.8 mil.
 2. Behr Premium Plus Int/Ext Multi-Surface Primer 436: Applied at minimum 1.7 mils DFT.
 3. Dunn-Edwards Corporation; UGPR00-1 Ultra-Grip Premium, Ultra-Low VOC, Interior / Exterior Acrylic Multi-Surface Primer: Applied at a dry film thickness of not less than 1.5 mils.
 4. Kelly-Moore; 250 Color Shield Exterior Acrylic Primer. Applied at a dry film thickness of not less than 1.7 mils.
 5. PPG Paints; Seal Grip Acrylic Universal Primer 17-921XI. Applied at a dry film thickness of not less than 1.6 mils.
 6. Sherwin-Williams; PrepRite ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series . Applied at a dry film thickness of not less than 1.4 mils.
 7. Tnemec; Series 180 W.B. Tneme-Crete. Applied at a dry film thickness rate of not less than 4.0 mils.
 8. Vista Paint Corporation: 4600 Uniprime II at a dry film thickness of not less than 2.0 mil.

- C. Exterior Ferrous-Metal Primer: Factory-formulated rust-inhibitive metal primer for exterior application.
 1. Benjamin Moore and Company: Super Spec HP Acrylic Metal Primer #P04. Applied at a dry film thickness of not less than 1.7 mil.
 2. Behr Premium Plus Int/Ext Multi-Surface Primer 436: Applied at minimum 1.7 mils DFT.
 3. Dunn-Edwards Corporation; BRPR00-1 Bloc-Rust Premium, Interior / Exterior, Red Oxide or White, Waterborne Alkyd Rust Preventative Metal Primer: Applied at a dry film thickness of not less than 2.0 mils
 4. Kelly-Moore; 1711 Kel-Guard Alkyd White Rust Inhibitive Primer: Applied at a dry film thickness of not less than 2.0 mils.
 5. PPG Paints; Speedhide Alkyd Metal Primer 6-208. Applied at a dry film thickness of not less than 2.3 mils or Water Based option; Pitt Tech Plus DTM Acrylic Primer 4020 Applied at a dry film thickness of not less than 2.0 mils.
 6. Sherwin-Williams; Kem Kromik Universal Metal Primer B50NZ0006/B50WZ0001/B50AZ0006: Applied at a dry film thickness of not less than 3.2 mils.
 7. Sherwin-Williams; S-W Pro Industrial ProCryl Universal Acrylic Primer, B66 1300 Series. Applied at a dry film thickness of not less than 2.0 mils.
 - 8.
 9. Tnemec; Series 115 Uni-Bond DF. Applied at a dry film thickness rate of not less than 3.0 mils DFT.
 10. Vista Paint Corporation: 4600 Uniprime II at a dry film thickness of not less than 2.0 mil.

- D. Exterior Galvanized Metal Primer: Factory-formulated galvanized metal primer for exterior application.
 1. DeVoe (International): Devflex 4020 DTM Flat Interior / Exterior Waterborne Primer .
 2. Benjamin Moore and Company: Super Spec HP Acrylic Metal Primer #P04. Applied at a dry film thickness of not less than 1.7 mil.
 3. Behr Premium Plus Int/Ext Multi-Surface Primer 436: Applied at minimum 1.7 mils DFT.
 4. Dunn-Edwards Corporation; UGPR00-1 Ultra-Grip Premium, Ultra-Low VOC, Interior / Exterior Acrylic Multi-Surface Primer: Applied at a dry film thickness of not less than 1.5 mils.

5. Kelly-Moore; 1722 Kel-Guard Acrylic Galvanized Iron Primer: Applied at a dry film thickness of not less than 1.8 mils.
 6. Kelly-Moore; 5725 DTM-Acrylic Metal Primer: Applied at a dry film thickness of not less than 1.8 mils.
 7. PPG Paints; Pitt Tech Plus DTM Acrylic Primer 4020 Applied at a dry film thickness of not less than 2.0 mils.
 8. Sherwin-Williams; S-W Pro Industrial ProCryl Universal Acrylic Primer, B66-1300 Series. Applied at a dry film thickness of not less than 2.0 mils.
 9. Tnemec:
 - a. Under Acrylics: Series 115 Uni-Bond DF; Applied at a dry film thickness rate of not less than 3.0 mils.
 - b. Under Urethane: Series L69 H.B. Epoxoline II; Applied at a dry film thickness rate of not less than 3.0 mils.
 10. Vista Paint Corporation: 4600 Uniprime II at a dry film thickness of not less than 2.0 mil.
- E. Exterior Aluminum Primer under Acrylic Finishes: Factory-formulated acrylic-based metal primer for exterior application.
1. Benjamin Moore and Company: Super Spec HP Acrylic Metal Primer #P04. Applied at a dry film thickness of not less than 1.7 mil.
 2. Behr Premium Plus Int/Ext Multi-Surface Primer 436: Applied at minimum 1.7 mils DFT.
 3. Dunn-Edwards Corporation; UGPR00-1 Ultra-Grip Premium, Ultra-Low VOC, Interior / Exterior Acrylic Multi-Surface Primer: Applied at a dry film thickness of not less than 1.5 mils.
 4. Kelly-Moore; 1722 Kel-Guard Acrylic Galvanized Iron Primer: Applied at a dry film thickness of not less than 1.8 mils.
 5. Kelly-Moore; 5725 DTM-Acrylic Metal Primer: Applied at a dry film thickness of not less than 1.8 mils.
 6. PPG Paints; Pitt Tech Plus DTM Acrylic Primer 4020 Applied at a dry film thickness of not less than 2.0 mils.
 7. Sherwin-Williams; S-W Pro Industrial ProCryl Universal Acrylic Primer, B66-13300. Applied at a dry film thickness of not less than 2.0 mils.
 8. Tnemec; Series 115 Uni-Bond DF; Applied at a dry film thickness rate of not less than 3.0 mils.
 9. Vista Paint Corporation: 4600 Uniprime II at a dry film thickness of not less than 2.0 mil.

2.04 WATER-BASED PAINTS

- A. Exterior Flat Acrylic Paint: Factory-formulated flat acrylic-emulsion latex paint for exterior application.
1. Benjamin Moore and Company: Ultra Spec EXT Flat Finish N447. Applied at a dry film thickness of not less than 1.5 mil.
 2. Behr Pro Exterior Flat Paint PR610: Applied at minimum 1.36 mils DFT.
 3. Dunn-Edwards Corporation; SSSL10 Spartashield Exterior, Ultra-Low VOC, 100% Acrylic Exterior Flat Paint: Applied at a dry film thickness of not less than 1.5 mils.
 4. Kelly-Moore; 1205 Color Shield Exterior Flat Acrylic House Paint: Applied at a dry film thickness of not less than 1.9 mils.
 5. PPG Paints; Speedhide Exterior 100% Acrylic Flat Latex 6-610XI Series. Applied at a dry film thickness of not less than 1.5 mils.
 6. Sherwin-Williams; A-100 Exterior Latex Flat A6 Series: Applied at a dry film thickness of not less than 1.3 mils.
 7. Tnemec; Series 180 W.B. Tneme-Crete; Applied at a dry film thickness rate of not less than 4.0 mils.
 8. Vista Paint Corporation: 4600 Uniprime II at a dry film thickness of not less than 2.0 mil.
- B. Exterior Low-Luster Acrylic Paint: Factory-formulated low-sheen (eggshell) acrylic-latex paint for exterior application.
1. Benjamin Moore and Company: Ultra Spec EXT Satin Finish N448. Applied at a dry film thickness of not less than 1.5 mil.

2. Behr Premium Plus Exterior Satin Enamel 9050: Applied at minimum 1.5 mils DFT.
 3. Dunn-Edwards Corporation; SSSL40 Spartashield Exterior, Ultra-Low VOC, 100% Acrylic Low Sheen Paint: Applied at a dry film thickness of not less than 1.5 mils.
 4. Kelly-Moore; 1245 Acry-Velvet Exterior Low Sheen Acrylic Finish: Applied at a dry film thickness of not less than 1.8 mils.
 5. PPG Paints; Speedhide Exterior 100% Acrylic Satin Latex 6-2045XI Series. Applied at a dry film thickness of not less than 1.5 mils.
 6. Sherwin-Williams; A-100 Exterior Latex Satin A82 Series: Applied at a dry film thickness of not less than 1.5 mils.
 7. Tnemec; Series 1029 Enduratone; Applied at a dry film thickness rate of not less than 2.0 mils.
 8. Vista Paint Corporation: 4600 Uniprime II at a dry film thickness of not less than 2.0 mil.
- C. Exterior Semigloss Acrylic Enamel: Factory-formulated semigloss waterborne acrylic-latex enamel for exterior application.
1. Benjamin Moore and Company: Ultra Spec EXT Gloss Finish N449. Applied at a dry film thickness of not less than 1.5 mil.
 2. Behr Premium Plus Exterior Semi-Gloss Enamel 5050: Applied at minimum 1.5 mils DFT.
 3. Dunn-Edwards Corporation; SSSL50 Spartashield Exterior, Ultra-Low, 100% Acrylic Semi-Gloss Paint: Applied at a dry film thickness of not less than 1.5 mils.
 4. Kelly-Moore; 1250 Acry-Lustre Exterior Semi-Gloss Acrylic Finish: Applied at a dry film thickness of not less than 1.6 mils.
 5. PPG Paints; Speedhide Exterior 100% Acrylic Semi-Gloss Latex 6-900XI Series. Applied at a dry film thickness of not less than 1.5 mils.
 6. Sherwin-Williams; A-100 Latex Gloss A8 Series: Applied at a dry film thickness of not less than 1.3 mils.
 7. Tnemec; Series 1029 Enduratone; Applied at a dry film thickness rate of not less than 2.0 mils.
 8. Vista Paint Corporation: 4600 Uniprime II at a dry film thickness of not less than 2.0 mil.
- D. Exterior Full-Gloss Acrylic Enamel for Ferrous and Other Metals: Factory-formulated full-gloss waterborne acrylic-latex enamel for exterior application.
1. Benjamin Moore and Company: Ultra Spec EXT Gloss Finish N449. Applied at a dry film thickness of not less than 1.5 mil.
 2. Behr Premium Plus Int/Ext Hi-Gloss Enamel 2-8050: Apply at minimum 1.5 mils DFT.
 3. Dunn-Edwards Corporation; SSSL60 Spartashield Interior and Exterior, Ultra-Low, 100% Acrylic Gloss Paint: Applied at a dry film thickness of not less than 1.5 mils.
 4. Kelly-Moore; 5780 DTM Acrylic Gloss Enamel: Applied at a dry film thickness of not less than 1.7 mils.
 5. PPG Paints; Pitt Tech DTM Acrylic Gloss 90-374 Series. Applied at a dry film thickness of not less than 2.0 mils.
 6. Sherwin-Williams; S-W Pro Industrial Acrylic Gloss, B66-600 Series. Applied at a dry film thickness of not less than 2.1 mils.
 7. Tnemec; Series 1028 Enduratone; Applied at a dry film thickness rate of not less than 2.0.
 8. Vista Paint Corporation: 4600 Uniprime II at a dry film thickness of not less than 2.0 mil.

2.05 SOURCE QUALITY CONTROL

- A. Testing of Paint Materials: Owner reserves the right to invoke the following procedure:
1. Owner will engage the services of a qualified testing agency to sample paint materials. Contractor will be notified in advance and may be present when samples are taken. If paint materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
 2. Testing agency will perform tests for compliance with product requirements.
 3. Owner may direct Contractor to stop applying paints if test results show materials being used do not comply with product requirements. Contractor shall remove noncomplying paint materials from Project site, pay for testing, and repaint surfaces painted with rejected

materials. Contractor will be required to remove rejected materials from previously painted surfaces if, on repainting with complying materials, the two paints are incompatible.

PART 3 EXECUTION

3.01 EXAMINATION

- A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements for paint application. Comply with procedures specified in PDCA P4.
 - 1. Proceed with paint application only after unsatisfactory conditions have been corrected and surfaces receiving paint are thoroughly dry.
 - 2. Start of painting will be construed as Applicator's acceptance of surfaces and conditions within a particular area.
- B. Coordination of Work: Review other Sections in which primers are provided to ensure compatibility of the total system for various substrates. On request, furnish information on characteristics of finish materials to ensure use of compatible primers.
 - 1. Notify Architect about anticipated problems when using the materials specified over substrates primed by others.
- C. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
 - 1. Gypsum Board: 12 percent.
 - 2. Cement Plaster Substrates: Verify that plaster is fully cured.
 - 3. Exterior Gypsum Board Substrates: Verify that finishing compound is sanded smooth.
- D. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.
- E. Proceed with coating application only after unsatisfactory conditions have been corrected.
 - 1. Application of coating indicates acceptance of surfaces and conditions.

3.02 PREPARATION

- A. Comply with manufacturer's written instructions and recommendations in "MPI Manual" applicable to substrates and paint systems indicated.
- B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
 - 1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection.
- C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
- D. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.
- E. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces to be painted exceeds that permitted in manufacturer's written instructions.
- F. Masonry Substrates: Remove efflorescence and chalk. Do not paint surfaces if moisture content or alkalinity of surfaces or mortar joints exceeds that permitted in manufacturer's written instructions.
- G. Steel Substrates: Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by paint manufacturer.
 - 1. SSPC-SP 2, "Hand Tool Cleaning."
 - 2. SSPC-SP 3, "Power Tool Cleaning."

- 3. SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."
- 4. SSPC-SP 11, "Power Tool Cleaning to Bare Metal."
- H. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.
- I. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.
- J. Aluminum Substrates: Remove loose surface oxidation.
- K. Wood Substrates:
 - 1. Scrape and clean knots. Before applying primer, apply coat of knot sealer recommended in writing by topcoat manufacturer for exterior use in paint system indicated.
 - 2. Sand surfaces that will be exposed to view, and dust off.
 - 3. Prime edges, ends, faces, undersides, and backsides of wood.
 - 4. After priming, fill holes and imperfections in the finish surfaces with putty or plastic wood filler. Sand smooth when dried.
- L. Plastic Trim Fabrication Substrates: Remove dust, dirt, and other foreign material that might impair bond of paints to substrates.

3.03 APPLICATION

- A. Apply paints according to manufacturer's written instructions and recommendations in "MPI Manual."
- B. Use applicators and techniques suited for paint and substrate indicated.
- C. Paint surfaces behind movable items same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed items with prime coat only.
- D. Paint both sides and edges of exterior doors and entire exposed surface of exterior door frames.
- E. Paint entire exposed surface of window frames and sashes.
- F. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
- G. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.
- H. Tint undercoats same color as topcoat, but tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Provide sufficient difference in shade of undercoats to distinguish each separate coat.
- I. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.
- J. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.
- K. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:
- L. Paint the following work where exposed to view:
- M. Equipment, including panelboards .
- N. Uninsulated metal piping.
