Table of Contents and Bidder's Checklist - Sugar Creek Water Treatment Plant & Wellfield Improvements

Bidder's Checklist: The completed Bid Form shall be accompanied by the following completed documents:

_____ **Pre-Bid Substitution, if any proposed substitutes have been pre-approved.**
_____ **Bid Guaranty and, if applicable Contract Bond**
_____ **Contractor's Qualification Statement**
_____ **Contractor's List of Subcontracted Work Categories**
_____ **A list identifying its DBE subcontractors and participation rates as a percentage of the Contract Price, and if the DBE participation goal has not been met, certification of good faith efforts to meet the DBE participation goal.**
_____ **The Project Labor Agreement (PLA) Letter of Assent (See Appendix A).**
_____ **If this project is funded in whole or part by the Ohio Public Works Commission, then certification of agreement and compliance with certain statements and covenants regarding Bidder's subscription to the State's Equal Employment Opportunity Requirements for State-assisted Construction Contracts.**
****Ohio Public Works Commission Funding does not apply to the project. However, Water Supply Revolving Loan Account (WSRLA) administered by the Ohio Water Development Authority (OWDA) does and therefore Appendix C provides guidance concerning the requirements thereof.****
_____ **Manufacturers of Material and Equipment to be Furnished**
_____ **Bid Schedule Proposal Pages and Signature Pages at end of bid packet**

The City of Canton

Legal Notice

Sealed bids will be received by the City of Canton (the "City"), as provided in this notice for the Sugar Creek Water Treatment Plant & Wellfield Improvements Project (the "Project"), Ordinance 11/2022. Contract documents, which include additional details of the Project, are on file and available from the City of Canton's web site (https://cantonohio.gov/448/Purchasing-Procurement).

Bids shall be enclosed in a sealed envelope addressed to the City of Canton, 218 Cleveland Ave. SW, Purchasing Dept/Fourth Floor, Canton, Ohio 44702 and plainly marked on the outside "Sugar Creek Water Treatment Plant & Wellfield Improvements PROJECT BID." Bids will be received on or before 2:00 PM, local time, 6/1/2022 and opened shortly thereafter.

Questions regarding plans and specifications should be addressed in writing to Purchasing Department, at purchasing@cantonohio.gov.

All bids must include a Bid Guaranty, as described in the Instructions to Bidders. Prevailing wage rates apply. All bidders will be required to comply with the City Contract Compliance Program regarding equal employment opportunity. After submission and opening, no bidder may withdraw its bid within 60 days after the opening; the City reserves the right to waive irregularities, reject any or all bids, and conduct necessary investigations to determine bidder responsibility.

This procurement is subject to the EPA policy of encouraging the participation of small business in rural areas (SBRAs).

The successful bidder must comply with all Davis-Bacon Prevailing Wage Rates.

All companies must submit their Federal ID Number.

A Project Labor Agreement (PLA) is required for this project.

The Engineer's Estimate for the base bid is $30,243,000.00. This project is contingent upon the City receiving funding.

The bidder is responsible for monitoring the City's website for any official addenda.

Published in The Repository on Tuesday, April 26 and May 3rd, 2022

INSTRUCTIONS TO BIDDERS

TABLE OF CONTENTS

A. BIDDER'S PLEDGE AND AGREEMENT

1. Each Bidder acknowledges that this is a public project involving public funds and that the Owner expects and requires that each successful Bidder adhere to the highest ethical and performance standards. Each Bidder by submitting a bid pledges and agrees that (a) it will act at all times with absolute integrity and truthfulness in its dealings with the Owner and the Engineer, (b) it will use its best efforts to cooperate with the Owner and the Engineer and all other Contractors on the Project and at all times will act with professionalism and dignity in its dealings with the Owner, Engineer, and other Contractors, (c) it will assign only competent supervisors and workers to the Project, each of whom is fully qualified to perform the tasks that are assigned to him/her, and (d) it has read, understands and will comply with the terms of the Contract Documents.

B. EXAMINATION OF CONTRACT DOCUMENTS AND SITE CONDITIONS AND RELIANCE UPON TECHNICAL DATA

1. Each Bidder shall have a competent person carefully and diligently review each part of the Contract Documents, including the Divisions of the Specifications and parts of the Drawings that are not directly applicable to the Work on which the Bidder is submitting its bid. By submitting its bid, each Bidder represents and agrees, based upon its careful and diligent review of the Contract Documents, that it is not aware of any conflicts, inconsistencies, errors, or omissions in the Contract Documents for which it has not notified the Owner in writing at least ten (10) days prior to the bid opening. If there are any such conflicts, inconsistencies, errors, or omissions in the Contract Documents, the Bidder (i) will provide the labor, equipment, or materials of the better quality or greater quantity of Work and/or (ii) will comply with the more stringent requirements. The Bidder will not be entitled to any Change Order, additional compensation, or additional time on account of such conditions for any conflicts, inconsistencies, errors, or omissions that would have been discovered by such careful and diligent review, unless it has given prior written notice to the Owner.

2. Each Bidder shall have a competent person carefully and diligently inspect and examine the entire site and the surrounding area, including all parts of the site applicable to the Work for which it is submitting its bid, including location, condition, and layout of the site and the location of utilities, and carefully correlate the results of the inspection with the requirements of the Contract Documents. The Bidder's bid shall include all costs attributable to site and surrounding area conditions that would have been discovered by such careful and diligent inspection and examination of the site and the surrounding area, and the Bidder shall not be entitled to any Change Order, additional compensation, or additional time on account of such conditions.

3. The Bidder may rely upon the general accuracy of any technical data identified in the Owner-Contractor Agreement (e.g., any soils exploration reports, soil boring logs, site survey, or abatement reports) in preparing its bid, but such technical data are not part of the Contract Documents. Except for the limited reliance described in the preceding sentence, Bidder may not, if awarded a contract for the Work, rely upon or make any Claim against the Owner or Engineer, or any of their agents or employees, with respect to any of the following:

    a. the completeness of such reports and drawings for Bidder's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences, and procedures of construction to be employed by the successful Bidder and safety precautions and programs incident thereto; or

b. any interpretation by the successful Bidder of or conclusion drawn from any technical data or any such other data, interpretations, opinions, or information. For example, all interpolations and extrapolations of data performed by the Bidder to estimate locations or quantities of subsurface strata are independent factual assumptions, which Owner does not warrant.

4. Each Bidder will be deemed to have actual knowledge of all information provided or discussed at the pre-bid meeting.

C. OWNER & ENGINEER

1. The Owner is:

The City of Canton
218 Cleveland Avenue SW
Canton, OH 44702
Telephone: 330.489.3245
Fax: 330.489.3499

The Owner's Representative is:

Brent Burrier

2. The Design Engineer for the Project is:

Burgess & Niple, Inc.
100 West Erie Street
Painesville, Ohio 44077

D. PROJECT

1. The Project and Work for the Project consists of all labor, materials, equipment, and services necessary for construction of the project identified as **Sugar Creek Water Treatment Plant & Wellfield Improvements Project** ("the Project"), all in accordance with the Drawings and Specifications prepared by the Engineer and/or Owner. The Project must be substantially complete by the Date for Substantial Completion set forth in Section Q below.

2. The Mayor **has** determined that a Project Labor Agreement ("PLA") will advance the City's procurement interest in cost, efficiency, and quality while promoting labor-management stability as well as compliance with applicable legal requirements governing safety and health, equal employment opportunity, labor and employment standards, and other related matters. Any such PLA shall be negotiated by the Mayor of the Owner with the East Central Ohio Building and Construction Trades Council and its affiliated local unions, or said Council's successor. The successful Bidder shall comply with and adhere to all of the provisions of any PLA for the Project.

3. A pre-bid conference will be held at **1:00 PM on May 05, 2022** at **the Sugar Creek Water Treatment Plant (Google address is 9649 Dolphin Street SW, Beach City, OH)**.

E. WORK

1. This Project includes **Site work, roadwork, asphalt, concrete, new buildings, waterwork, HVAC, plumbing, electrical, mechanical, chemical feed systems**, and the like as set forth in the Contract Documents.

2. Alternate No. 1 for this Project is **Additional time for Owner to execute Owner-Contractor Agreement**.

3. Alternate No. 2 for this Project is **Canton NW Water Treatment Plant ATI filtersmart controller system**.

4. Alternate No. 3 for this Project is **Canton NE Water Treatment Plant ATI filtersmart controller system.**

5. Alternate No. 4 for this Project is **18" through 42" PCCP C301 SP-5 finished water distribution main repair kits.**

6. Alternate No. 5 for this Project is **Painting of Filter Pipe Gallery (Room, 108, 108A & 108B), Connected Hallways and Stairwell E & F.**

7. Alternate No. 6 for this Project is **Roof Replacements.**

8. Only one contract will be issued by the Owner for constructing the Project, the General Contract, which will cover all scopes of work necessary to construct the Project.

9. The Contractor awarded the General Contract (General Contractor) will be responsible for the performance and coordination of any and all subcontractors and suppliers either directly or indirectly contracted with the General Contractor.

10. Owner will provide Bidders access to the Project site to conduct such examinations, investigations, explorations, tests, and studies as Bidder deems necessary for submission of a Bid. Bidder shall fill all holes, clean up, and restore the Site to its former condition upon completion of such explorations, investigations, tests, and studies. Bidder shall comply with all applicable laws, regulations and Owner's policies relative to excavation and utility locates. Bidders may contact **Brent Burrier,** The City of Canton, at **brent.burrier@cantonohio.gov** or **330-438-6569** if they have any interest in accessing the Project site, independent of any pre-bid meeting.

F. ESTIMATE OF COST

1. The total estimated construction cost for the Base Bid Work for the Project for which bids are being solicited at this time is **$30,243,000.00.**

   The estimated cost for Alternate 1 - **Additional time for Owner to execute Owner-Contractor Agreement** is: **$180,000.00**.

   The estimated cost for Alternate 2 - **Canton NW Water Treatment Plant ATI filtersmart controller system** is: **$30,000.00**.

   The estimated cost for Alternate 3 - **Canton NE Water Treatment Plant ATI filtersmart controller system** is: **$50,000.00**.

   The estimated cost for Alternate 4 - **18" through 42" PCCP C301 SP-5 finished water distribution main repair kits** is: **$220,000.00**.

   The estimated cost for Alternate 5 - **Painting of Filter Pipe Gallery (Room, 108, 108A & 108B), Connected Hallways and Stairwell E & F** is: **$30,000.00**.

   The estimated cost for Alternate 6 – **Roof Replacements** is: **$450,000.00**.

G. CONTRACT DOCUMENTS

The Contract Documents consist of the documents listed in Section 1 of the Owner-Contractor Agreement.

Bidders may view and download copies of the Contract Documents from The City of Canton Purchasing web site at https://cantonohio.gov/448/Purchasing-Procurement, which is the only authorized source of the Contract Documents. The City of Canton's sourcing tool, Vendor Registry, will maintain the Bidder's list and will provide notice and copies of Addenda as issued. It is the responsibility of any person or organization interested in a hard copy of the Contract Documents to pay all costs associated with printing.

Bidders shall use complete sets of Contract Documents in preparing bids. Neither the Owner nor the Design Engineer assumes any responsibility for errors or misinterpretations resulting from the use of incomplete sets of Contract Documents.

The Owner, in making the Contract Documents available on the above terms, does so only for the purpose of obtaining bids on the Work and does not confer a license or grant for any other use.

H. PREPARATION OF BIDS

1. All bids must be submitted on the "Bid Form" furnished with the Contract Documents.

2. All blank spaces shall be filled in, in ink or typewritten, in words and figures, and in figures only where no space is provided for words, and signed by the Bidder. The wording on the Bid Form shall be used without change, alteration, or addition. Any change in the wording or omission of specified accompanying documents may cause the bid to be rejected. If there is an inconsistency or conflict in the Bid, the lowest amount shall control, whether expressed in numbers or words.

3. Bidders shall note receipt of Addenda on the Bid Form. If the Bidder fails to acknowledge receipt of each Addendum, the Bid shall be deemed non-responsive, unless the Bid amount clearly and unambiguously reflects receipt of the Addendum or the Addendum involves only a matter of form and does not materially affect the price, quantity or quality of the Work to be performed.

4. Each Bidder shall submit **an original** of its bid to the Owner. The Bid Form shall be signed with the name typed or printed below the signature. A Bid shall not be submitted by facsimile transmission or any other electronic means. A Bidder that is a corporation shall sign its bid with the legal name of the corporation followed by the name of the state of incorporation and the legal signature of an officer authorized to bind the corporation to a contract.

5. Each Bid shall be enclosed in a sealed opaque envelope with the Bidder's name and the title of the Project printed in the upper left hand corner and addressed as follows:

   The City of Canton
   ATTN: Purchasing/Bids
   218 Cleveland Avenue SW
   Canton, OH 44702

   Bids must be received at the designated location for the bid opening before 2:00:00 PM, local time, on 6/1/2022.

6. The completed Bid Form shall be accompanied by the following completed documents:

a. Pre-Bid Substitution, if any proposed substitutes have been pre-approved. (See Section K, below.)

b. Bid Guaranty and, if applicable Contract Bond (See Paragraph H.8, below.)

c. Contractor's Qualification Statement (See Paragraph I.4, below.)

d. Contractor's List of Subcontracted Work Categories (See Paragraph I.5, below.)

e. A list identifying its DBE subcontractors and participation rates as a percentage of the Contract Price, and if the DBE participation goal has not been met, certification of good faith efforts to meet the DBE participation goal. (See Section W, below.)

f. The Project Labor Agreement (PLA) Letter of Assent (See Appendix A).

g. If this project is funded in whole or part by the Ohio Public Works Commission, then certification of agreement and compliance with certain statements and covenants regarding Bidder's subscription to the State's Equal Employment Opportunity Requirements for State-assisted Construction Contracts (See Section Y, below.)

7. The Bidder shall take the following precautions in preparing its bid:

a. Sign the bid and check to ensure all blank spaces have been filled in with requested information and that the specified accompanying documents (listed in Paragraph H.6 above) have been included in a sealed opaque envelope addressed as described in Paragraph H.5 above.

b. When the Bid Form provides for quoting either an addition or deduction for an Alternate item, indicate whether the sum named is an addition or deduction. If it is not indicated, it will be conclusively presumed that the amount is a deduction.

c. When the Bid Form provides for quoting a unit price, the Bidder should quote the unit price as set forth in the Contract Documents as described in Paragraph M.1 below.

d. When applicable, make sure that the Bid Guaranty is properly executed and signed by:

1) The Bidder
2) The Surety or Sureties

e. Make sure that the amount of the Bid Guaranty (if the Bid Guaranty is in the form of a certified check, letter of credit, or cashier's check) is for a specific sum in an amount as instructed in Paragraph H.8.a below. If the Bid Guaranty is in the form of the Bid Guaranty and Contract Bond, the amount may be left blank; if an amount is inserted, it must equal the total of the base bid and all add alternates included. If inserted, then the failure to state an amount equal to the total of the base bid and all add alternates shall make the bid non-responsive if the Owner selects alternates not included in the amount.

f. Make sure that the appropriate bid package and scope of work is inserted in the correct space on the Bid Guaranty and Contract Bond Form. Failure to include work covered by the bid submitted may make the bid non-responsive.

8. Bonds and Guarantees

a. Bid Guaranty: Bidder shall furnish a Bid Guaranty, as prescribed in Sections 153.54, 153.57, and 153.571 of the Ohio Revised Code, in the form of either: (1) a bond for the full amount of the bid in the form of the Bid Guaranty and Contract Bond included in the Contract Documents; or (2) a certified check, cashier's check, or irrevocable letter of credit in a form satisfactory to the Owner in an amount equal to 10% of the bid. Bid amount shall be the total of all sums bid, including all add alternatives, but excluding all deduct alternatives. **NOTE: AIA or EJCDC Bid Bond forms are not acceptable.**

b. Contract Bond: The successful Bidder, who, as a Bid Guaranty, submits a certified check, cashier's check, or irrevocable letter of credit in an amount equal to 10% of the bid, shall furnish a Contract Bond in the form included in the Contract Documents in an amount equal to 100% of the Contract Sum. **NOTE: AIA or EJCDC Bond forms are not acceptable.**

c. The bond must be issued by a surety company authorized by the Ohio Department of Insurance to transact business in the State of Ohio and acceptable to the Owner. The bond must be issued by a surety capable of demonstrating a record of competent underwriting, efficient management, adequate reserves, and sound investments. These criteria will be deemed to be met if the surety currently has an A.M. Best Company Policyholders Rating of "A-" or better and has or exceeds the Best Financial Size Category of Class VI. Other sureties may be acceptable to the Owner, in its sole discretion.

d. All bonds shall be signed by an authorized agent of an acceptable surety and by the Bidder.

e. Surety bonds shall be supported by credentials showing the Power of Attorney of the agent, a certificate showing the legal right of the Surety Company to do business in the State of Ohio, and a financial statement of the Surety.

f. The Bid Guaranty, as applicable, shall be in the name of or payable to the order of the Owner.

g. The name and address of the Surety and the name and address of the Surety's Agent must be typed or printed on each bond.

9. Permits

a. Owner has obtained, or will obtain the following permits for the Project, as applicable:

East Central OH Building Authority Building Permit, Ohio EPA Plan Approval, OEPA NPDES Construction Site Stormwater General Permit (NOI)

b. Contractor shall secure and pay for all other permits necessary to complete the Project. Owner shall pay all charges of utility owners for connections for providing permanent service to the Work.

I. METHOD OF AWARD

1. All bids shall remain open for acceptance for sixty (60) days following the day of the bid opening, but the Owner may, in its sole discretion, release any bid and return the Bid Guaranty prior to that date. The Bid Guaranty shall be subject to forfeiture, as provided in the Ohio Revised Code, if a bid is withdrawn during the period when bids are being held.

2. The Owner reserves the right to reject any, part of any, or all bids and to waive any informalities and irregularities. The Bidder expressly acknowledges this right of the Owner to reject any or all bids or to reject any incomplete or irregular bid. Bidders must furnish all information requested on the Bid Form. Failure to do so may result in disqualification of the bid.

3. Determination of the Lowest and Best Bid. Subject to the right of the Owner to reject any or all bids, pursuant to the Codified Ordinances of Canton Chapters 105, 182, and 507, the Owner will award the Contract for the Work to the bidder submitting the lowest and best bid, taking into consideration accepted alternates. In evaluating bids, the Owner will consider the qualifications of the Bidders, whether or not the bids comply with the prescribed requirements, and alternates and unit prices, if requested, on the Bid Form. The Owner may also consider the qualifications and experience of subcontractors and suppliers. The Owner may conduct such investigations as are deemed necessary to establish the qualifications and financial ability of the Bidder and its subcontractors and suppliers. The factors the Owner may consider in determining which bid is the lowest and best include the factors set forth below, including the Additional Criteria. Depending upon the type of work, the Owner, in its discretion, may also consider other essential factors, as the Owner may determine and as are included in the Specifications. The Owner, in its discretion, may consider and give such weight to these criteria as it deems appropriate. The Owner, in its discretion, reserves the right to request additional information and documentation relating to these criteria from Bidders after the bid opening.

   a. Work to be subcontracted. The Bidder must identify all work to be subcontracted. See paragraph I.5 below. All subcontractors are subject to the approval of the Owner based on the criteria set forth in this Section I.

   b. The Bidder's work history. The Bidder should have a record of consistent customer satisfaction and of consistent completion of projects, including projects that are comparable to or larger and more complex than the Owner's Project, on time and in accordance with the applicable Contract Documents, and based upon the Bidder’s claims history. If the Bidder's management operates or has operated another construction company, the Owner may consider the work history of that company in determining whether the Bidder submitted the lowest and best bid.

      The Owner will consider the Bidder's prior experience on other projects of similar scope and/or complexity including prior projects with the Owner and/or Design Professional, including the Bidder's demonstrated ability to complete its work on these projects in accordance with the Contract Documents and on time, and will also consider its ability and capacity to perform a substantial portion of the project with its own forces and its ability to work with the Owner and Engineer as a willing, cooperative, and successful team member. Bringing overstated claims,

an excessive number of claims, acting uncooperatively, and filing lawsuits against project owners and/or their design professionals on prior projects of similar scope and/or complexity will be deemed evidence of a Bidder's inability to work with the Owner and Engineer as a willing, cooperative, and successful team member.

The Bidder authorizes the Owner and its representatives to contact the owners and design professionals (and construction managers, if applicable) on projects on which the Bidder has worked and authorizes and requests such owners and design professionals (and construction managers) to provide the Owner with a candid evaluation of the Bidder's performance. By submitting its bid, the Bidder agrees that if it or any person, directly or indirectly, on its behalf or for its benefit brings an action against any of such owners or design professionals (or construction managers) or the employees of any of them as a result of or related to such candid evaluation, the Bidder will indemnify and hold harmless such owners, design professionals (and construction managers) and the employees of any of them from any claims, whether or not proven, that are part of or are related to such action and from all legal fees and expenses incurred by any of them arising out of or related to such legal action. This obligation is expressly intended for the benefit of such owners, design professionals (and construction managers), and the employees of each of them.

c. The Bidder's prior history regarding timeliness of performance, quality of work, the Bidder's history of filing claims and having claims filed against it, extension requests, fines and penalties imposed and payments thereof, and contract defaults, with explanations.

d. The Bidder's compliance with federal, state, and local laws, rules, and regulations, including but not limited to the Occupational Safety and Health Act, Ohio Prevailing Wage laws, Davis Bacon, and Ohio ethics laws.

e. The Bidder's prior experience with similar work on comparable or more complex projects.

f. The number of years the Bidder has been actively engaged as a contractor in the construction industry.

g. The Bidder's recent experience record in the construction industry, including the original contract price for each construction job undertaken by the bidder, the amount of any change orders or cost overruns on each job, the reasons for the change orders or cost overruns, and the bidder's record for complying with and meeting completion deadlines on construction projects.

h. A public entities' determination, within the previous five years, that the Bidder was not a responsible bidder, the reasons given by the public entity, and the Bidder's explanation thereof.

i. The Bidder's financial ability to complete the Contract successfully and on time without resort to its Surety.

j. Financial responsibility demonstrated by the Bidder and whether Bidder possesses adequate resources and availability of credit, the means and ability to procure insurance and acceptable performance bonds required for the Project and whether any claims have been made against performance bonds secured by the bidder on other construction projects.

k. Any suspension or revocations of any professional license of any director, officer, owner, or managerial employees of the Bidder, to the extent that any work to be performed on this Project is within the field of such licensed profession.

l. The Bidder's equipment and facilities.

m. The size and experience of the Bidder's work force and the Bidder's ability to complete the Contract successfully and on time.

n. The experience and the continuity of the Bidder's work force including the project manager and project superintendent's tenure with the Bidder.

o. The Bidder's participation in a drug-free workplace program acceptable to the Owner, and the Bidder's record for both resolved and unresolved findings of the Auditor of State for recovery as defined in Section 9.24 of the Ohio Revised Code.

p. The Owner's prior experience with the Bidder's surety.

q. The Bidder's interest in the Project as evidenced by its attendance at any pre-bid meetings or conferences for bidders.

r. The adequacy, in numbers and experience, of the Bidders' work force to complete the Contract successfully and on time.

s. The foregoing information with respect to each of the Subcontractors and Suppliers that the Bidder intends to use on the Project.

4. Qualifications Statement. Each Bidder will submit with its bid a completed Contractor Qualifications Statement, which is included with the Contract Documents, and thereafter provide the Owner promptly with such additional information as the Owner may request regarding the Bidder's qualifications. A Bidder shall submit any requested additional information within three (3) business days of the date on the request.

5. List of Subcontracted Work Categories. Each Bidder will submit with its bid a completed list of Subcontracted Work Categories, which is included with the Contract Documents, and thereafter provide the Owner promptly with such additional information as the Owner may request regarding the Bidder's qualifications. A Bidder shall submit any requested information within three (3) business days of the date on the request.

6. Additional Criteria for Determining Lowest and Best Bid. Pursuant to the Codified Ordinances of the City of Canton, Chapter 105, the Owner, in its discretion, may consider any or all of the Additional Criteria below in determining which bid is lowest and best.

a. Any OSHA violations within the previous three years, as well as all notices of OSHA citations filed against the Bidder in the same three year period, together with a description and explanation of remediation or other steps taken regarding such violations and notices of violation.

b. Any violations within the previous five years pertaining to unlawful intimidation or discrimination against any employee by reason of race, creed, color, disability, gender, or national origin, and/or violation of any employee's civil or labor rights or equal employment opportunities.

c. Any litigation in which the Bidder has been named as a defendant or third party defendant in an action involving a claim for personal injury or wrongful death

arising from performance of work related to any project in which it has been engaged within the previous five years. Bidders shall provide copies of pleadings.

d. Allegations of violations of the prevailing wage law and any other state or federal labor law, including, but not limited to, child labor violations, failure to pay wages, or unemployment insurance tax delinquencies or unfair labor practices within the past five years.

e. Violations of the workers compensation law.

f. Any criminal convictions or criminal indictments, involving the Bidder, its officers, directors, owners, and/or managers within the past five years.

g. Any violation within the past five years or pending charges concerning federal, state, or municipal environmental and/or health laws, codes, rules, and/or regulations.

h. Documentation that the Bidder provides health insurance and pension benefits to its employees.

i. Whether the Bidder participates in a bona fide apprenticeship program that is approved by the Ohio State Apprenticeship Council and the United States Department of Labor.

j. Whether the Bidder has adopted and implemented a comprehensive drug and alcohol testing program for its employees.

k. Whether the Bidder's employees are OSHA-10 and/or OSHA-30 certified.

l. The Bidder's commitment to comply with the Owner's Contract Compliance Program regarding equal employment opportunity. Each Bidder shall file contract employment reports with the Owner's contracting agency or as may be directed by the Owner or its representative. Such contract employment reports shall include such information as to the employment practices, policies, programs, and statistics of the Bidder and shall be in such form as the Owner may prescribe.

m. The foregoing information with respect to each of the Subcontractors and Suppliers that the Bidder intends to use on the Project.

7. The failure to submit information that Owner has the right to receive under these Instructions to Bidders on a timely basis may result in the determination that the Bidder has not submitted the lowest and best bid.

8. By submitting its bid, the Bidder agrees that the Owner's determination of which bidder is the lowest and best bidder shall be final and conclusive, and that if the Bidder or any person on its behalf challenges such determination in any legal proceeding, the Bidder will indemnify and hold the Owner and its employees and agents harmless from any claims included or related to such legal proceeding, and from legal fees and expenses incurred by the Owner, its employees, or agents that arise out of or are related to such challenge.

9. After bid opening, within three (3) business days of a request made by the Owner, the apparent low Bidder and any other Bidder so requested by the Owner must submit the following:

For all subcontracts with an estimated value of at least $50,000, a list of all Subcontractors that the Bidder will use to construct the Project, as well as an indication of

whether or not the Bidder has ever worked with a proposed Subcontractor before, including the following information for the three most recent projects on which the Bidder and each Subcontractor have worked together:

i. Project Owner

ii. Project Name

iii. Subcontract Scope

iv. Subcontract Value

v. Owner's contact name and phone number.

If Bidder and a proposed Subcontractor have not worked together on at least three projects in the past five years, Bidder must submit the information set forth above for the three most recent similar projects to the Project that a proposed Subcontractor has worked on.

The above Subcontractor information, as well as the criteria set forth in Paragraph I.3 herein, as it pertains to each Subcontractor may be used in the Owner's determination of the lowest and best bid.

Once a Bidder identifies its proposed Subcontractors as set forth in this Paragraph I.9, the list shall not be changed unless written approval or direction for the change is made by Owner.

10. Additional Post-Bid Submittals

a) Affidavit as to Personal Property Taxes. The successful Bidder shall submit, prior to the time of the entry into the Contract, an affidavit in the form required by Section 5719.042, Ohio Revised Code, regarding the status of the Bidder's personal property taxes. A copy of the affidavit form is included with the Contract Documents.

11. The Owner reserves the right to disqualify bids, before or after opening, upon evidence of collusion with intent to defraud or other illegal practices on the part of the Bidder.

12. Award of Contract. The award of the Contract will only be made pursuant to approval of the City's Board of Control.

J. EXECUTION OF CONTRACT

1. Within the time designated by the Owner after award of the Contract, the successful Bidder shall execute and deliver to the Owner the required number of copies of the Owner-Contractor Agreement, in the form included in the Contract Documents, and all accompanying documents requested, including, but not limited to, a Contract Bond (if applicable), insurance certificates, and a valid Workers' Compensation Certificate. The successful Bidder shall have no property interest or rights under the Owner-Contractor Agreement until the Agreement is executed by the Owner.

K. SUBSTITUTIONS/NON-SPECIFIED PRODUCTS

1. Certain brands of material or apparatus may be specified. Should this be the case, each bid will be based on these brands, which may be referred to in the Contract Documents as Standards. The use of another brand (referred to as a substitution or proposed equal in the Contract Documents, when a bidder or the contractor seeks to have a different brand of material or apparatus than that specified approved by the Owner of use in the

Project) may be requested as provided herein. Substitutions, however, will not be considered in determining the lowest and best bid.

2. The products specified in the Contract Documents establish a standard of required function, dimension, appearance, and quality.

3. Bidders wishing to obtain approval to bid non-specified products shall submit written requests to the Owner a minimum of seven (7) working days before the bid date and hour. To facilitate the submission of requests, a Substitution Form is included in the Contract Documents. The Bidder shall include the name of the material or equipment for which it is to be substituted and a complete description of the proposed substitution, including the name of the proposed manufacturer and/or product and a complete description of the product including the manufacturer's name and model number or system proposed, drawings, product literature, performance and test data, color selections or limitations, and any other information necessary for evaluation. Include a statement including any changes in other materials, equipment, or other work that would be required if the proposed product is incorporated in the work. The burden of proof of the merit of the proposed product is on the proposer. The Owner's decision on approval of a proposed product will be final.

   The following will be cause for rejection of a proposed substitution:

   a. Requests submitted by subcontractors, material suppliers, and individuals other than Bidders;

   b. Requests submitted without adequate documentation;

   c. Requests received after the specified cut-off date;

   d. Requests, which in the sole discretion of the Owner, do not offer a sufficient benefit to the Project.

4. When the Owner approves a product submission before receipt of bids, the approval will be included in an Addendum, and Bidders may include the pricing of this product in their bid. Bidders shall not rely on approvals made in any other manner.

5. In proposing a non-specified product or a substitution, the Bidder represents and warrants that each proposed product will not result in any changes to the Project, including changes to the Work or other contractors, or any decrease in the performance of any equipment or systems to be installed in the Project and agrees to pay any additional costs incurred by the Owner and the Owner's consultants as a result of a non-specified or substitute product that is accepted.

6. If an addendum is issued approving a substitution for a specified Standard, any Bidder proposed to use said substitution must indicate so with its Bid, using the form provided.

7. Following the award of the Contract, there shall be no substitution for specified products, except pursuant to a Change Order. The Owner in its sole discretion may decline to consider a substitution for a Change Order.

8. The Owner reserves the right to value engineer any item within the specifications if it is deemed to be in the best interest of the Owner.

L. ALTERNATES

1. The Owner may request bids on alternates. At the time of awarding the Contract, the Owner will select or reject alternates as it determines is in its best interest. A Bidder's

failure to include on its Bid Form the cost of an alternate selected by the Owner and applicable to the Bidder's work shall render the bid non-responsive and be grounds for the rejection of the bid. Otherwise, the failure to include the cost of an alternate will not be deemed material.

2. The Bidder acknowledges that although there is an estimate for the cost of the Project, the market conditions may and frequently do result in the estimate being different from the sum of the bids received, either higher or lower. The Bidder understands that the Owner may include alternates, which may include deduct alternates as well as add alternates, to give it flexibility to build the Project with the funds available. The Bidder further understands and acknowledges that use of add and deduct alternates is a long held customary practice in the construction industry in the State of Ohio. The Bidder also acknowledges that the Owner will not make a decision about the alternates on which to base the award of contracts until the bids are received, and the Owner can compare its available funds with the base bids and the cost or savings from selecting different alternates. The Bidder understands that the award to the Bidder submitting the lowest and best bid will be based on the base bid plus selected alternates, and may result in an award to a Bidder other than the Bidder that submitted the lowest base bid.

M. UNIT PRICES

1. Where unit prices are requested in the Bid Form the Bidder should quote a unit price. Unless otherwise expressly provided in the Contract Documents, such unit prices shall include all labor, materials, and services necessary for the timely and proper installation of the item for which the unit prices are requested. The unit prices quoted in the bid shall be the basis for any Change Orders entered into under the Owner-Contractor Agreement, unless the Owner determines that the use of such unit prices will cause substantial inequity to either the Contractor or the Owner.

N. ADDENDA

1. All questions should be submitted in writing at least five (5) business days prior to the bid opening. **This is 5/25/2022, 2:00:00 PM.** The Owner reserves the right to issue Addenda changing, altering, or supplementing the Contract Documents prior to the time set for receiving bids. The Owner will issue the Addenda to clarify bidders' questions and/or to change, alter, or supplement the Contract Documents.

2. Any explanation, interpretation, correction, or modification of the Contract Documents will be issued in writing in the form of an Addendum, which shall be the only means considered binding; explanations, interpretations, etc., made by any other means shall NOT be legally binding. All Addenda shall become a part of the Contract Documents.

3. All Addenda will be issued, except as hereafter provided, via the current City bid tool at least seventy-two (72) hours prior to the published time for the opening of bids, excluding Saturdays, Sundays, and legal holidays. If any Addendum is issued within such seventy-two (72) hour period, then the time for opening of bids shall be extended one (1) week with no further advertising of bids required.

4. Copies of each Addendum will be posted via the Owner's current bid tool and it is the responsibility of the bidder or any other interested party to check the bid tool for any updates or addenda. Receipt of Addenda shall be indicated by Bidders in the space provided on the Bid Form. Bidders are responsible for acquiring issued Addenda in time to incorporate them into their bid. Bidders should check the Owner's bid tool prior to the bid opening to verify the number of Addenda issued.

5. Each Bidder shall carefully read and review the Contract Documents and immediately bring to the attention of the Owner any error, omission, inconsistency, or ambiguity therein.

6. If a Bidder fails to indicate receipt of all Addenda through the last Addendum issued by the Owner on its Bid Form, the bid of such Bidder will be deemed to be responsive only if:

   a. The bid received clearly indicates that the Bidder received the Addendum, such as where the Addendum added another item to be bid upon and the Bidder submitted a bid on that item; or

   b. The Addendum involves only a matter of form or is one which has either no effect or has merely a trivial or negligible effect on price, quantity, quality, or delivery of the item bid upon.

O. INTERPRETATION

1. If a Bidder contemplating submitting a bid for the proposed Project is in doubt as to the true meaning of any part of the Contract Documents, it may submit a written request for an interpretation thereof to the Owner at purchasing@cantonohio.gov. Requests received fewer than 5 days prior to bid opening may not be answered. Any interpretation of the proposed documents will be made by Addendum only and will be made available by the City's web tool. The Owner will not be responsible for any other explanation or interpretation of the proposed documents.

2. In interpreting the Contract Documents, words describing materials that have a well-known technical or trade meaning, unless otherwise specifically defined in the Contract Documents, shall be construed in accordance with the well-known meaning recognized by the trade.

3. Bidders are responsible for notifying the Owner in a timely manner of any ambiguities, inconsistencies, errors, or omissions in the Contract Documents. The Bidder shall not, at any time after the execution of the Contract, be compensated for a claim alleging insufficient data, incomplete Contract Documents, or incorrectly assumed conditions regarding the nature or character of the Work, if no request was made by the Bidder prior to the bid opening.

P. STATE SALES AND USE TAXES

1. The Owner is a political subdivision of the State of Ohio and is exempt from taxation under the Ohio Sales Tax and Use Tax Laws. Building materials that the successful Bidder purchases for incorporation into the Project will be exempt from state sales and use taxes if the successful Bidder provides a properly completed Ohio Department of Taxation Construction Contract Exemption Certificate to the vendors or suppliers when the materials are acquired. The Owner will execute properly completed certificates on request.

Q. DATE FOR SUBSTANTIAL COMPLETION/DATE FOR FINAL COMPLETION/LIQUIDATED DAMAGES

1. Dates for Substantial Completion. The Contract Time shall run from the date of the Notice to Proceed or if there is no Notice to Proceed from the Effective Date of the Owner-Contractor Agreement. The Date for Substantial Completion and the Contract Time may be extended only by Change Order. **By submitting its Bid, each Bidder agrees that the period for performing its Work is reasonable.**

a. Date for Overall Project Substantial Completion. The successful Bidder shall have all of its Work on the Project Substantially Complete (as Substantial Completion is defined in the Contract Documents) by the following date as applicable to the Bidder's scope of work.

Date for Substantial Completion (aka Contract Time) expressed as calendar days from Notice to Proceed:

913 calendar days

2. Liquidated Damages.

a. Overall Project Substantial Completion. If the successful Bidder does not have its Work Substantially Complete by its Date for Substantial Completion or Finally Complete within thirty (30) calendar days of achieving Substantial Completion, whichever may be applicable, the successful Bidder shall pay the Owner and the Owner may set off from amounts otherwise due the successful Bidder Liquidated Damages. The daily amounts of Liquidated Damages for Overall Project Substantial Completion are set forth in the tables included in the Owner-Contractor Agreement. The total amount of Liquidated Damages will be calculated based on the total number of calendar days beyond the Date for Substantial Completion that the Bidder's Work is not Substantially Complete or to the extent that its Work is not Finally Complete more than thirty (30) calendar days after the Substantial Completion of its Work, i.e., number of late days times the per diem rate(s) for Liquidated Damages in the tables.

3. The Bidder acknowledges and agrees, by submitting its bid for the Work and entering into a Contract with the Owner, that such amounts of Liquidated Damages represent a reasonable estimate of the actual damages for loss of or interference with the intended use of the Project that the Owner would incur if the Bidder's Work is not Substantially Complete by its Date for Substantial Completion and/or not Finally Complete by thirty (30) days of the Date of Substantial Completion. The Bidder further acknowledges, agrees and understands that it may seek an extension of the Contract Time (and its Date for Substantial Completion) to avoid or reduce Liquidated Damages by properly following the Claim procedures in the Contract Documents.

R. OWNER'S RIGHT TO WAIVE DEFECTS AND IRREGULARITIES

1. The Owner reserves the right to waive any and all irregularities provided that the defects and irregularities do not affect the amount of the bid in any material respect or otherwise give the Bidder a competitive advantage.

S. MODIFICATION/WITHDRAWAL OF BIDS

1. Modification. A Bidder may modify its bid by written communication to the Owner at any time prior to the scheduled closing time for receipt of bids, provided such written communication is received by Owner prior to the bid deadline. The written communication shall not reveal the bid price, but should provide the addition or subtraction or other modification so that the final prices or terms will not be known until the sealed bid is opened. If the Bidder's written instructions with the change in bid reveal the bid amount in any way prior to the bid opening, the bid may be rejected as non-responsive.

2. Withdrawal Prior to Bid Deadline. A Bidder may withdraw its bid at any time for any reason prior to the bid deadline for the opening of bids established in the Legal Notice. The request to withdraw shall be made in writing to and received by the Owner prior to the time of the bid opening.

3. Withdrawal after Bid Deadline.

   a. All bids shall remain valid and open for acceptance for a period of at least 60 days after the bid opening; provided, however, that a Bidder may withdraw its bid from consideration after the bid deadline when all of the following apply:

      (1) the price bid was substantially lower than the other bids;

      (2) the reason for the bid being substantially lower was a clerical mistake, rather than a mistake in judgment, and was due to an unintentional and substantial error in arithmetic or an unintentional omission of a substantial quantity of work, labor, or material;

      (3) the bid was submitted in good faith; and

      (4) the Bidder provides written notice to the Owner within two (2) business days after the bid opening for which the right to withdraw is claimed.

   b. No bid may be withdrawn under this provision if the result would be the awarding of the contract on another bid for the bid package from which the Bidder is withdrawing its bid to the same Bidder.

   c. If a bid is withdrawn under this provision, the Owner may award the Contract to another Bidder determined by the Owner to be the lowest and best bidder or the Owner may reject all bids and advertise for other bids. In the event the Owner advertises for other bids, the withdrawing Bidder shall pay the costs incurred in connection with the rebidding by the Owner, including the cost of printing new Contract Documents, required advertising, and printing and mailing notices to prospective bidders, if the Owner finds that such costs would not have been incurred but for such withdrawal.

T. COMPLIANCE WITH APPLICABLE LAWS - Please find Equal Employment Opportunity Certification requirements and form within Appendix C – Construction Contract Guidance document (form must be submitted with bid).

1. By submitting a bid for Work on the Project, the Bidder acknowledges that it is in compliance with applicable federal, state, and local laws and regulations, including, but not limited to, the following:

   a. Equal Employment Opportunity/Nondiscrimination. The Bidder agrees that if it is awarded a contract that in the hiring of employees for performance of work under the contract or any subcontract, neither it nor any subcontractor, or any person acting on its behalf or its subcontractor's behalf, by reason of race, creed, sex, disability as defined in Section 4112.01 of the Ohio Revised Code, or color, shall discriminate against any citizen of the state in the employment of labor or workers who are qualified and available to perform work to which the employment relates. The Bidder further agrees that neither it nor any subcontractor or any person on its behalf or on behalf of any subcontractor, in any manner, shall discriminate against or intimidate any employees hired for the performance of the work under the contract on account of race, creed, sex, disability as defined in Section 4112.01 of the Ohio Revised Code, or color.

   b. Ethics Laws. The Bidder represents that it is familiar with all applicable ethics law requirements, including without limitation Sections 102.04 and 3517.13 of the Ohio Revised Code, and certifies that it is in compliance with such requirements.

U. FINDINGS FOR RECOVERY - Please find Debarment requirements within Appendix C – Construction Contract Guidance document (form must be submitted with bid).

1. By submitting its bid, each Bidder certifies for reliance of the Owner that it has no unresolved finding for recovery against it issued by the Auditor of the State of Ohio on or after January 1, 2001, except as permitted by Section 9.24 (F) of the Ohio Revised Code.

V. PREVAILING WAGES - Davis Bacon Wages and Requirements apply to this bid/project/contract. Please find requirements within Appendix C – Construction Contract Guidance document.

1. ~~The Project is a "Construction" project as defined in Section 4115.03 of the Ohio Revised Code. If the Project is defined as such as "Construction" project, the successful Bidder and all of its subcontractors, regardless of tier, will strictly comply with its obligation to pay a rate of wages on the Project not less than the rate of wages fixed for this Project under Section 4115.04 of the Ohio Revised Code. Additionally, the successful Bidder will comply with all other provisions of Chapter 4115 of the Ohio Revised Code.~~

W. DBE PARTICIPATION GOALS - Disadvantaged Business Enterprises (DBE) Utilization Requirements apply to this bid/project/contract. Please find requirements within Appendix C – Construction Contract Guidance document.

1. Owner has established the following Disadvantaged Business Enterprise ("DBE") participation goal for the Project as a percentage of the Contract Price:

10%

2. Any Minority Business Enterprise ("MBE") or Woman-Owned Business Enterprise ("WBE") proposed to count towards the DBE participation goal must first be certified at bid time as an MBE or WBE under the Ohio Department of Administrative Services MBE Cross Certification Program (which includes MBEs and WBEs certified by the City of Canton), or certified as a DBE under Ohio's Unified Certification Program administered by the Ohio Department of Transportation.

3. **Documentation of DBE Participation. Each Bidder must submit with its bid a list identifying its DBE subcontractors and participation rates as a percentage of the Contract Price.**

4. **Certification of Good Faith Efforts. If a Bidder has not met the DBE participation goal, it must attach to its bid, a narrative (which may include exhibits) demonstrating the good faith efforts made by the Bidder to secure DBE participation in the Project. Good faith efforts include:**

   - **Conducting outreach and recruiting activities;**
   - **Informing DBEs of the opportunity to participate in the Project at least 30 calendar days before the bid closes;**
   - **Considering subcontracting with a consortium of DBEs; and**
   - **Using the services and assistance of the Small Business Administration and Minority Development Agency of the U.S. Department of Commerce.**

   Owner, in its sole discretion, will be the sole evaluator of whether any particular Bidders' efforts sufficiently demonstrate good faith efforts for securing DBE participation.

5. Challenges to Owner's Discretion. If any Bidder directly challenges, or indirectly challenges through contribution of money or other resources to a third party, Owner's discretion in determining any Bidder's compliance with the DBE goal stated in these Instructions to Bidders, or good faith efforts pertaining to same, that Bidder agrees to indemnify Owner for all claims, costs, losses and damages, including attorney and consultant fees, arising out of such challenge, should there be an adjudication by a court of competent jurisdiction that the Owner did not abuse its discretion in making its determination.

6. Failure to Comply. If a Bidder is awarded a contract for the Project, and later fails to fulfill its stated DBE participation goals, that Bidder agrees to indemnify Owner for all claims, costs, losses and damages, including attorney and consultant fees, arising out of such failure. That Bidder also agrees to cooperate with all reasonable requests to determine actual DBE participation, including but not limited to certifying actual participation and providing documentation in support of same.

X. OTHER LOCAL ORDINANCE REQUIREMENTS

1. Each Bidder, by the act of submitting its bid agrees to withhold all City income taxes due or payable under Chapter 182 of the Codified Ordinances of the City of Canton for wages, salaries, fees, and commissions paid to its employees and further agrees that any of its subcontractors shall be required to agree to withhold any such City income taxes due for services performed under this Agreement. Bidder agrees with the Owner regarding the manner of withholding of City income taxes as provided in Section 718.011(F) of the Ohio Revised Code. Municipal income tax withholding provisions of Section 718.011(B)(1) and 718.011(D) of the Ohio Revised Code shall not apply to qualifying wages paid to employees for work done or services performed or rendered inside the City or on City property. Each Bidder agrees to withhold income tax for the City from employees' qualifying wages earned inside the City or on City property, beginning with the first day of work done or services performed or rendered inside the City.

2. Each Bidder, by the act of submitting its bid agrees that all steel necessary in the construction of the Work performed under the Agreement shall be steel that is produced in the United States unless a specific product which is required is not produced by manufacturers in the United States in which event this prohibition does not apply. **Please find additional information, requirements and an acknowledgement form in Appendix C Construction Contract Guidance.**

3. Each Bidder, by the act of submitting its bid agrees that all materials used in the construction covered by the Agreement shall be purchased in the Canton area except such materials which are unavailable in the Canton area.

4. Chapter 105.12 – Local Bidder Preference.

   a. The Board of Control, in determining the lowest and best bidder in the award of contracts to which this section is applicable, is authorized to award contracts to local bidders as hereinafter defined, whose bid is not more than five percent (5%) higher, subject to a maximum amount of twenty thousand dollars ($20,000.00), than the lowest dollar bid submitted by non-local bidders. The Board of Control's decision in making such an award shall be final.

   b. For purposes of this section, "local bidder" means an individual or business entity which at the time of the award of the contract has a headquarters, division, sales office, sales outlet, manufacturing facility, or similar significant business-related location in Stark County, Ohio.

c. All contract specifications and/or bid documents that are distributed by Canton for the purpose of soliciting bids for goods and/or services shall contain the following notice:

Prospective bidders will take notice that the City of Canton, in determining the lowest and best bidder in the award of this contract, may award a local bidder preference to any qualified bidder pursuant to Section 105.12 of the Codified Ordinances of the City of Canton. The determination of whether a bidder qualifies for the local preference shall be made by Board of Control. The Board's decision shall be final. A copy of Section 105.12 is attached.

d. This section shall be applicable to all contracts for equipment, goods, machinery, materials, supplies, vehicles and/or services, which are purchased, leased and/or constructed at a cost in excess of fifty thousand dollars ($50,000.00) and which require bidding pursuant to Ohio R.C. 735.05 through 735.09 and Ohio R.C. 737.03. (Ord. 115-2018. Passed 5-14-18.)

5. Each Bidder, by the act of submitting its bid agrees as follows during the performance of the Agreement:

a. The Contractor shall not discriminate against any employee or applicant for employment because of race, age, handicap, religion, color, sex, national origin, sexual orientation, or gender identity. The Contractor shall take affirmative action to insure that applicants are employed and that employees are treated during employment without regard to race, religion, color, sex, national origin, military status, sexual orientation, or gender identity. As used herein, the word “treated” shall mean and include without limitation the following: recruited, whether by advertising or other means; compensation, whether in the form of rates or pay or other forms of compensation; selected for training, including apprenticeship; promoted; demoted; upgraded; downgraded; transferred; laid off; and terminated. The Contractor agrees to and shall post in conspicuous places available to employees and applicants for employment notices to be provided by the contracting officers setting forth the provisions of this nondiscrimination clause.

b. The Contractor shall, in all solicitations or advertisements for employees placed by or on behalf of the Contractor, state that all qualified applicants will receive consideration for employment without regard to race, age, handicap, religion, color, sex, national origin, military status, sexual orientation, or gender identity.

c. The Contractor shall send to each labor union or representative of workers, with which he has a collective bargaining agreement or other contract or understanding, a notice advising the labor union or workers’ representative of the Contractor’s commitments under the equal opportunity clause of the Owner; and it shall post copies of the notice in conspicuous places available to employees and applicants for employment.

d. The Contractor shall submit in writing to the Owner its affirmative action plan, and each subcontractor and supplier of equipment or supplies shall submit to the Contractor its affirmative action plan. The responsibility for securing these affirmative action plans falls upon the Contractor and shall be on file at the office of the Contractor. The Contractor shall furnish all information and reports required by the Owner or its representative pursuant to the Contract Documents, and shall permit access to its books, records, and accounts by the contracting agency of the Owner and by the Executive Secretary of the Owner for purposes of investigation to ascertain compliance with the program.

e. The Contractor shall take such action with respect to any subcontractor as the Owner may direct as a means of enforcing the provisions of this equal opportunity clause, including penalties and sanctions for noncompliance; provided, however, that in the event the Contractor becomes involved in or is threatened with litigation as is necessary to protect the interests of the Owner and to effectuate the Owner's equal opportunity program and, in the case of contracts receiving Federal assistance, the Contractor or the Owner may request the United States to enter into such litigation to protect the interests of the United States.

f. The Contractor shall file and shall cause its subcontractors, if any, to file compliance reports with the Owner in the form and to the extent prescribed by the Owner or its representative. Compliance reports filed at such times as directed shall contain information as to the employment practices, policies, programs, and statistics of the Contractor and its subcontractors.

g. The Contractor shall include the provisions of this equal employment opportunity clause in every subcontract or purchase order, so that such provisions will be binding upon each subcontractor or vendor.

h. Refusal by the Contractor or subcontractor to comply with any portion of this program as herein stated and described will subject the offending party to any or all of the following penalties:

(1) Withholding of all future payments under the involved public contract to the Contractor in violation, until it is determined that the Contractor or subcontractor is in compliance with the provisions of the Agreement.

(2) Refusal of all future bids for any public contract with the Owner or any of its departments or divisions, until such time as the Contractor or subcontractor demonstrates that it has established and shall carry out the policies of the program as herein outlined.

(3) Cancellation of the public contract and declaration of forfeiture of the performance bond.

(4) In cases is which there is substantial or material violation or the threat of substantial or material violation of the compliance procedure or as may be provided by contract, appropriate proceedings may be brought to enforce these provisions, including enjoining within applicable laws of contractors, subcontractors, or other organizations, individuals, or groups who prevent, directly or indirectly, or seek to prevent, directly or indirectly, compliance with the policy as herein outlined.

2. A Project Labor Agreement (PLA) has been required for this project (See Appendix A if applicable). Prevailing Wages are required for this Project (See Appendix B).

Y. OHIO PUBLIC WORKS COMMISSION FUNDING

1. **No** When this line is checked by the Owner, e.g. with an "X" or other mark, the Project is being funded in whole or part by the Ohio Public Works Commission ("OPWC"), and the requirements of the OPWC, attached to these Instructions to Bidders, apply.

2. The OPWC requirements include that the Bidder include with its bid certification of agreement and compliance with certain statements and covenants regarding its subscription to the State's Equal Employment Opportunity Requirements for State-assisted Construction Contracts.

END OF INSTRUCTIONS TO BIDDERS

OWNER-CONTRACTOR AGREEMENT

[Where Engineer is a Third Party Hired by Owner and Engineer Has Construction Administration Duties]

Owner:
The City of Canton
218 Cleveland Avenue SW
Canton, OH 44702
Telephone: 330.489.3283

Contract: ____
Ordinance: 11/2022
Alternates: ____

Contractor:
____
____
____, ____ 0
Telephone: ____
Fax: ____

Project: Sugar Creek Water Treatment Plant & Wellfield Improvements

This document is an agreement between the Owner and the Contractor for the Work described in the Contract Documents related to the Contract identified above for the Project defined above and is effective as of the date the Agreement is signed by the Owner (the "Effective Date").

The Owner and the Contractor agree as set forth in the following sections:

1. CONTRACT DOCUMENTS. The Contract Documents consist of the following documents:

A. Legal Notice;
B. Instructions to Bidders;
C. Bid Form;
D. Owner-Contractor Agreement;
E. General Conditions of the Contract for Construction (EJCDC C-700), as modified;
F. Supplementary Conditions (when applicable);
G. Drawings;
H. Specifications;
I. Project Labor Agreement (if applicable)
J. Addenda issued;
K. Contractor's Personal Property Tax Affidavit (O.R.C. 5719.042);
L. Statement of Claim Form; and
M. Modifications issued after the execution of the contract, including:
   i. A Change Order;
   ii. A Work Change Directive; or,
   iii. A written order for a minor change of the Work issued by the Owner or Engineer in accordance with the General Conditions.

N. **X** When this line is checked by the Owner, e.g. with an "X" or other mark, the State of Ohio Department of Transportation, Construction and Material Specifications, effective as of January 1, 2019, will be a Contract Document, but only as modified by the document titled *ODOT Manual Supplement*, prepared by Owner.
O. Project Labor Agreement (if applicable)

1.1 Notwithstanding anything in the Contract Documents to the contrary, in the event of any inconsistency, the provisions of this Agreement shall control over any other Contract Document, proposal, document, or other attachment. In the event inconsistencies, conflicts, or ambiguities between or among the Contract Documents

are discovered after execution of the Agreement, Contractor shall provide the better quality or greater quantity of Work or comply with the more stringent requirements.

Note: **Non-Contract Documents**. The following are the reports and tests of subsurface conditions at or contiguous to the Site, if any, that the Engineer has used in preparing the Contract Documents. These are not Contract Documents. Geotechnical data is not a warranty of subsurface conditions and is not to be relied upon as a complete representation of all possible soil conditions. It is possible that there may be other reports, and/or tests of subsurface conditions at or contiguous to the Site not prepared by or on behalf of Owner. The Owner makes no representation about such reports and/or tests, assuming they exist. Additional information, if needed by Contractor for geotechnical data or site survey, shall be obtained by the Contractor at no additional cost to Owner. The General Conditions, as modified, contain additional terms related to these reports and tests.

Contractor may rely upon the general accuracy of the "technical data" contained in such reports and drawings listed below, and except for such reliance on "technical data," Contractor shall not rely upon or make any claim against Owner or Engineer with respect to: (1) the completeness of such reports and drawings for Contractor's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences, and procedures of construction to be employed by Contractor, and safety precautions and programs incident thereto; or (2) other data, interpretations, opinions, and information contained in such reports or shown or indicated in such drawings; or (3) any Contractor interpretation of or conclusion drawn from any "technical data" or any such other data, interpretations, opinions, or information. For example, all interpolations and extrapolations of data performed by Contractor to estimate locations or quantities of subsurface strata are independent factual assumptions which Owner does not warrant. (Not applicable, if none are listed).

____

Note: **Non-Contract Documents**. The following are those reports and drawings related to any Hazardous Conditions at the Site, if any. These are not Contract Documents. The General Conditions, as modified, contain additional terms related to these reports and drawings. (None if none are listed).

____

2. ENGINEER RELATIONSHIP. The Contract Documents shall not be construed to create a contractual relationship of any kind between the Engineer and the Contractor or any Subcontractor or Material Supplier to the Project. The Engineer, however, shall be entitled to performance of the obligations of the Contractor intended for its benefit and to enforcement of such obligations, but nothing contained herein shall be deemed to give the Contractor or any third party any claim or right of action against the Engineer that does not otherwise exist without regard to this Contract. The Contractor and its Subcontractors shall not be deemed to be beneficiaries of any of the acts or services of the Engineer that are performed for the sole benefit of the Owner. The Contractor shall forward all communications to the Owner through the Engineer and hereby acknowledges and agrees that any instructions, reviews, advice, approvals, orders, or directives that are rendered to it by the Engineer are specifically authorized and directed by the Owner to the Contractor through the Engineer acting on behalf of the Owner.

Engineer will be performing construction administration duties as identified in the General Conditions, including, but not limited to: reviewing Applications for Payment, Change Proposals, Claims, and Shop Drawings; measuring Work quantities; and issuing Work Change Directives.

2.1 The Engineer is:
Burgess & Niple, Inc.
100 West Erie Street
Painesville, Ohio 44077

3. TIME FOR COMPLETION AND PROJECT COORDINATION.

3.1 DATE OF COMMENCEMENT. The date of commencement of the Work shall be the date identified in the Notice to Proceed issued by the Owner, or by the Owner through the Engineer, to the Contractor, or if there is no Notice to Proceed, the Effective Date of this Agreement.

3.2 DATE OF SUBSTANTIAL COMPLETION. The Project and Work for the Project consists of all labor, materials, equipment, and services necessary for construction of the Project, all in accordance with the Drawings and Specifications prepared by the Owner or Engineer. The Contractor shall achieve Substantial Completion of its Work on the Project, as defined in the General Conditions, within **913 calendar days** of the Date of Commencement ("Date of Substantial Completion"). Substantial Completion is the time at which the Work has progressed to the point where the Work is sufficiently complete, in accordance with the Contract Documents, so that the Work can be utilized for the purposes for which it is intended.

3.2.1 DATE OF FINAL COMPLETION. The Contractor shall achieve Final Completion of its Work on the Project, as defined in the General Conditions, within **30 calendar days** of the Date of Substantial Completion ("Date of Final Completion"). Final Completion shall mean that the Work is complete in accordance with the Contract Documents and the Contractor has submitted to the Owner or Engineer all documents required to be submitted to the Owner or Engineer for final payment.

3.2.2 UTILITIES AND OPERATIONS. Contractor shall not interrupt utilities to facilities or existing operations without prior written notice and approval by Owner.

3.2.3 SHUTDOWN DATES. Due to events scheduled by the Owner and/or other Owner considerations, Contractor will not be able to perform Work on the Project on the following dates (there are no shutdown dates if none are listed): ____

Contractor's Construction Schedule for performing the Work shall account for Contractor not being able to perform Work on these dates and the contractual dates for Substantial Completion and Final Completion will not be changed due to Contractor not being able to perform Work on these dates.

3.3 CONSTRUCTION SCHEDULE. The Construction Schedule shall be developed by the Contractor as provided in the Contract Documents.

3.4 LIQUIDATED DAMAGES. If the Contractor does not have its Work on the Project Substantially Complete by the specified Date for Substantial Completion or Finally Complete by the Date of Final Completion, the Contractor shall pay the Owner (and the Owner may set off from sums coming due the Contractor) Liquidated Damages in the per diem amounts as set forth in the following tables, whichever may be applicable. "Contract Amount" of the Work will be determined by totaling the cost of all line items of Work.

LIQUIDATED DAMAGES – DATE FOR SUBSTANTIAL COMPLETION OF OVERALL PROJECT

Original Contract Amount	Dollars Per Day
$1.00 to $500,000.00	$ 750.00
$500,000.01 to $2,000,000.00	$ 1,000.00
$2,000,000.01 to $10,000,000.00	$ 1,300.00
$10,000,000.01 to $50,000,000.00	$ 2,000.00
$50,000,000.01 and greater	$ 2,500.00

LIQUIDATED DAMAGES – FINAL COMPLETION

Original Contract Amount	Dollars Per Day
$1.00 to $500,000.00	$ 200.00
$500,000.01 to $2,000,000.00	$ 250.00
$2,000,000.01 to $10,000,000.00	$ 325.00
$10,000,000.01 to $50,000,000.00	$ 500.00
$50,000,000.01 and greater	$ 625.00

LIQUIDATED DAMAGES FOR SUBSTANTIAL COMPLETION FOR ANY INTERIM MILESTONE SCOPE WILL BE $1,000 PER DAY FOR EACH DAY OF UNEXCUSED DELAY BEYOND THE MILESTONE.

The Contractor acknowledges that such amounts of Liquidated Damages represent a reasonable estimate of the actual damages for loss of or interference with the intended use of the Project that the Owner would incur if the Contractor's Work is not Substantially Complete by its Date for Substantial Completion or Finally Complete by the required date for Final Completion.

4. CONTRACT SUM (also called Contract Price). The Contract Sum to be paid by the Owner to the Contractor, as provided herein, for the satisfactory performance and completion of the Work and all of the duties, obligations, and responsibilities of the Contractor under this Agreement and the other Contract Documents is , subject to adjustment as set forth in the Contract Documents. The Contract Sum includes Allowances, Accepted Alternates, and all federal, state, county, municipal, and other taxes imposed by law, including but not limited to any sales, use, commercial activity, and personal property taxes payable by or levied against the Contractor on account of the Work or the materials incorporated into the Work. The Contractor will pay any such taxes. The Contract Sum includes the following:

4.1 Base Bid Amount: **$0.00** (Lump Sum Bid); and

4.2 Accepted Alternates, included in the Contract Sum:

Alternate No.	Description	Amount
1	Additional time for Owner to execute Owner-Contractor Agreement	
2	Canton NW Water Treatment Plant ATI filtersmart controller system	
3	Canton NE Water Treatment Plant ATI filtersmart controller system	
4	18" through 42" PCCP C301 SP-5 finished water distribution main repair kits	
5	Painting of Filter Pipe Gallery (Room, 108, 108A & 108B), Connected Hallways and Stairwell E & F	
6	Roof Replacements	

4.3 Allowances included in the Contract Sum:

Allowance Description	Amount
Allowance #1: Concrete crack repairs and patching	____

Allowance #2: Sanitary sewer to septic tank pipe repair(s)	
Allowance #3: Landscaping	
Allowance #4: Plant signage	
Allowance #5: Laboratory equipment and office furniture	
Allowance #6: Vacant	
Allowance #7: Lagoon residual solids removal, hauling and disposal to an approved landfill	
Allowance #8: Pump service company (Wellfield)	
Allowance #9: Pump service company (High Service Pumps)	
Allowance #10: Additional process piping and valves	
Allowance #11: Additional building demolition and renovation	
Allowance #12: Additional demolition and renovation for general, HVAC, and plumbing	
Allowance #13: Additional demolition and renovation for electrical, instrumentation and control	
Allowance #14: Additional SCADA programming	
Allowance #15: Electric power company	
Allowance #16: Network hardware	

4.4 If after Substantial Completion of its Work, the Contractor fails to submit its final payment application with all the documents required to be submitted with such application within ninety (90) days after written notice to do so from the Owner and without prejudice to any other rights and remedies the Owner may have available to it, the balance of the Contract Sum shall become the Owner's sole and exclusive property, and the Contractor shall have no further interest in or right to such balance.

5. RETAINAGE. Retainage applicable to the Contract by Ohio Revised Code Sections 153.12, .13, and .14 will be withheld as defined in the Modified General Conditions. The Contractor agrees that the financial institution selected by the Owner for deposit of retained funds is acceptable to the Contractor and will sign any documents requested related to said account.

6. GENERAL.

6.1 MODIFICATION. No modification or waiver of any of the terms of this Agreement or of any other Contract Documents will be effective against a party unless set forth in writing and signed by or on behalf of a party. In the case of the Owner, the person executing the modification or waiver must have express authority to execute the Modification on behalf of the Owner pursuant to a resolution that is duly adopted by the Owner. Under no circumstances will forbearance, including the failure or repeated failure to insist upon compliance with the terms of the Contract Documents, constitute the waiver or modification of any such terms. The parties acknowledge that no person has authority to modify this Agreement or the other Contract Documents or to waive any of its or their terms, except as expressly provided in this section.

6.2 ASSIGNMENT. The Contractor may not assign this Agreement without the written consent of the Owner, which the Owner may withhold in its sole discretion.

6.3 LAW AND JURISDICTION. All questions regarding the validity, intention, or meaning of this Agreement or any modifications of it relating to the rights and obligation of the parties will be construed and resolved under the laws of the State of Ohio. Any suit, which may be brought to enforce any provision of this Agreement or any remedy with respect hereto, shall be brought in the Common Pleas Court of the county in which the Project is located and each party hereby expressly consents to the exclusive jurisdiction of such court to the exclusion of any other court, including any U.S. District Court or any other federal court.

6.4 CONSTRUCTION. The parties acknowledge that each party has reviewed this Agreement and the other Contract Documents and entered into this Agreement as a free and voluntary act. Accordingly, the normal rule of construction to the effect that any ambiguities are to be resolved against the drafting party will not be employed in the interpretation of this Agreement, the other Contract Documents, or any amendments or exhibits to it or them.

6.5 APPROVALS. Except as expressly provided herein, the approvals and determinations of the Owner and Engineer will be subject to the sole discretion of the respective party and be valid and binding on the Contractor, provided only that they be made in good faith, i.e., honestly. If the Contractor challenges any such approval or determination, the Contractor has the burden of proving that it was not made in good faith by clear and convincing evidence.

6.6 PARTIAL INVALIDITY. If any term or provision of this Agreement is found to be illegal, unenforceable, or in violation of any laws, statutes, ordinances, or regulations of any public authority having jurisdiction, then, notwithstanding such term or provision, this Agreement will remain in full force and effect and such term will be deemed stricken; provided this Agreement will be interpreted, when possible, so as to reflect the intentions of the parties as indicated by any such stricken term or provision.

6.7 COMPLIANCE WITH LAWS AND REGULATIONS. The Contractor, at its expense, will comply with all applicable federal, state, and local laws, rules, and regulations applicable to the Work, including but not limited to Chapter 4115 of the Ohio Revised Code and Sections 153.59 and 153.60 of the Ohio Revised Code, which prohibit discrimination in the hiring and treatment of employees, with respect to which the Contractor agrees to comply and to require its subcontractors to comply.

6.7.1 NON-DISCRIMINATION. Contractor agrees:

.1 That in the hiring of employees for the performance of Work under this Agreement or in any subcontract, neither the Contractor, subcontractor, or any person acting on behalf of either of them, shall by reason of race, creed, sex, disability as defined in Section 4112.01 of the Ohio Revised Code, or color discriminate against any citizen of the state in the employment of labor or workers who are qualified and available to perform the Work to which the employment relates.

.2 That neither the Contractor, subcontractor, nor any person acting on behalf of either of them shall, in any manner, discriminate against or intimidate any employee hired for the performance of Work under this Agreement on account of race, creed, sex, disability as defined in Section 4112.01 of the Ohio Revised Code, or color.

.3 That there shall be deducted from the amount payable to the Contractor by the Owner under this Agreement a forfeiture of twenty-five dollars ($25.00) as required by Ohio Revised Code Section 153.60 for each person who is discriminated against or intimidated in violation of this Agreement.

.4 That this Agreement may be canceled or terminated by the Owner and all money to become due hereunder may be forfeited for a second or subsequent violation of the terms of this section of this Agreement.

6.7.2 PREVAILING WAGE RATES. The Contractor and its subcontractors, regardless of tier, shall strictly comply with their obligation, if any, to pay their employees working on the Project site at the applicable prevailing wage rates for the type of work, including any changes thereto, pursuant to Ohio Revised Code Chapter 4115 or Davis Bacon rates and requirements.

6.7.3 **ETHICS.** By signing and entering into this agreement with the Owner, the Contractor represents that it is familiar with all applicable ethics law requirements, including without limitation Sections 102.04 and 3517.13 of the Ohio Revised Code, and certifies that it is in compliance with such requirements. The Contractor understands that failure to comply with the ethics laws is, in itself, grounds for termination of this contract and may result in the loss of other contracts with the Owner.

6.8 **JOB MEETINGS.** The Contractor or one of its representatives with authority to bind the Contractor will attend all job meetings. The Owner anticipates that job meetings will be scheduled on a weekly basis during construction or as needed. The Contractor will ensure that its Subcontractors also hold regular job meetings at which safety issues and job matters are discussed as these relate to the Work being performed. Job meetings include, but are not limited to, pre-construction meetings, weekly job meetings, weekly safety tool box meetings, and monthly safety meetings.

6.9 **PROPERTY TAX AFFIDAVIT.** The Contractor's affidavit given under Section 5719.024, Ohio Revised Code, is incorporated herein.

6.10 **WARRANTIES.** Notwithstanding anything to the contrary in the Contract Documents, including the Project Manual and Specifications, no warranties by Contractor shall be limited to any time shorter than the statute of limitations for written contracts in Ohio.

6.11 **CONTRACTOR ATTESTATIONS.**

.1 Contractor attests that it has not scaled these contract documents to determine quantities for bids, as Contractor has field verified and taken its own dimensions to determine the quantities for its bid.

.2 Contractor agrees that all the scales noted on the drawings are correct; so as to give it an "intent" of what is to be bid. Contractor has not relied on any other dimensions than what are noted in text and dimension lines.

.3 Contractor has thoroughly read the Contract Documents and has asked any and all questions it has on the intent of the scope of work, or supposed errors and omissions contained in these drawings, during the bid process and prior to signing this Agreement.

.4 Contractor will not be asserting a claim for additional time or money associated with the three issues listed above.

.5 Contractor believes it has accurately interpreted the Contract Documents and has asked for clarification and received satisfactory response for all items not thoroughly addressed or appeared to be conflicting in the Contract Documents and has found all stipulations and requirements contained in this Agreement are as stated in the bid specifications and are enforceable according to Ohio Law, including but not limited to the Owner's right of offset, and the Owner's right to assess liquidated damages for work not completed according to the milestones listed on the project schedule contained in the Contract Documents.

6.12 **ENTIRE AGREEMENT.** This Agreement and the other Contract Documents constitute the entire agreement among the parties with respect to their subject matter and will supersede all prior and contemporaneous, oral or written, agreements, negotiations, communications, representations, and understandings with respect to such subject matter, and no person is justified in relying on such agreements, negotiations, communications, representations, or understandings.

IN WITNESS WHEREOF, the parties have caused this Agreement to be executed by their properly authorized representatives and agree that this Agreement is effective as of the date first set forth above.

CERTIFICATE
(Section 5705.41, R.C.)

The undersigned, fiscal officer of the Owner, certifies that the moneys required to pay that part of the Contract Sum coming due during the current fiscal year, under the Agreement to which this Certificate is attached have been lawfully appropriated for such purpose and are in the appropriate account of the Owner, or in the process of collection to the credit of the appropriate account or fund, free from any previous encumbrances. Moneys due in excess of the Contract Sum shall require an additional and separate Fiscal Officer's Certificate.

BID GUARANTY AND CONTRACT BOND

(O.R.C. § 153.571)

KNOW ALL PERSONS BY THESE PRESENTS, that we, the undersigned _____ _____ ("Contractor") as principal and _____ _____ as surety are hereby held and firmly bound unto the **City of Canton** as obligee in the penal sum of the dollar amount of the bid submitted by the principal to the obligee on _____ _____, 20__, to undertake the construction of the **Sugar Creek Water Treatment Plant & Wellfield Improvements Project** ("Project"). The penal sum referred to herein shall be the dollar amount of the principal's bid to the obligee, incorporating any additive or deductive Alternates made by the principal on the date referred to above to the obligee, which are accepted by the obligee. In no case shall the penal sum exceed the amount of _____ Dollars ($_____ _____). (If the foregoing blank is not filled in, the penal sum will be the full amount of the principal's bid, including add Alternates. Alternatively, if the blank is filled in the amount stated must not be less than the full amount of the bid including add Alternates, in dollars and cents. A percentage is not acceptable.) For the payment of the penal sum well and truly to be made, we hereby jointly and severally bind ourselves, our heirs, executors, administrators, successors, and assigns.

Signed this _____ day of _____, 20__.

THE CONDITION OF THE ABOVE OBLIGATION IS SUCH that whereas the above named principal has submitted a bid for work on the Project.

Now, therefore, if the obligee accepts the bid of the principal and the principal fails to enter into a proper contract in accordance with the bid, plans, details, specifications, and bills of material; and in the event the principal pays to the obligee the difference not to exceed ten percent (10%) of the penalty hereof between the amount specified in the bid and such larger amount for which the obligee may in good faith contract with the next lowest bidder to perform the work covered by the bid; or in the event the obligee does not award the contract to the next lowest bidder and resubmits the project for bidding, the principal pays to the obligee the difference not-to-exceed ten percent (10%) of the penalty hereof between the amount specified in the bid, or the costs, in connection with the resubmission, of printing new contract documents, required advertising, and printing and mailing notices to prospective bidders, whichever is less, then this obligation shall be null and void, otherwise to remain in full force and effect; if the obligee accepts the bid of the principal and the principal within ten (10) days after the awarding of the contract enters into a proper contract in accordance with the bid, plans, details, specifications, and bills of material, which said contract is made a part of this bond the same as though set forth herein.

Now also, if the said principal shall well and faithfully do and perform the things agreed by said principal to be done and performed according to the terms of said contract; and shall pay all lawful claims of subcontractors, materialmen, and laborers, for labor performed and materials furnished in the carrying forward, performing, or completing of said contract; we agreeing and assenting that this undertaking shall be for the benefit of any materialman or laborer having a just claim, as well as for the obligee herein; then this obligation shall be void; otherwise the same shall remain in full force and effect; and surety shall indemnify the obligee against all damage suffered by failure of the principal to perform the contract according to its provisions and in accordance with the plans, details, specifications, and bills of material therefor and to pay all lawful claims of subcontractors, materialmen, and laborers for labor performed or material furnished in carrying forward, performing, or completing the contract and surety further agrees and assents that this undertaking is for the benefit of any subcontractor, materialman, or laborer having a just claim, as well as for the obligee; it being expressly understood and agreed that the liability of the surety for any and all claims hereunder shall in no event exceed the penal amount of this obligation as herein stated.

The said surety hereby stipulates and agrees that no modifications, omissions, or additions in or to the terms of the said contract or in or to the plans or specifications therefore shall in any wise affect the

obligations of said surety on its bond, and does hereby waive notice of any such modifications, omissions or additions to the terms of the contract or to the work or to the specifications.

NOTE: The Contract Bond form that follows is to be used ONLY by a bidder that is awarded a contract and submits a form of bid guaranty other than the combined Bid Guaranty and Contract Bond with its bid. If a bidder submits a combined Bid Guaranty and Contract Bond, then the bid guaranty becomes the contract bond when the contract is awarded.

AIA and EJCDC Bid Bond or Payment and Performance Bond forms are not acceptable for this Project.

The City of Canton

CONTRACT BOND
(O.R.C. § 153.57)

KNOW ALL PERSONS BY THESE PRESENTS, that we, the undersigned ("Contractor"), as principal, and _____, as surety, are hereby held and firmly bound unto the **City of Canton** ("Owner") as oblige, in the penal sum of _____ _____ Dollars ($_____ _____), for the payment of which well and truly to be made, we hereby jointly and severally bind ourselves, our heirs, executors, administrators, successors, and assigns.

THE CONDITION OF THE ABOVE OBLIGATION IS SUCH that whereas, the above-named principal did on the _____ day of _____, 20__, enter into a contract with the Owner for construction of the **Sugar Creek Water Treatment Plant & Wellfield Improvements Project** ("Project"), which said contract is made a part of this bond the same as though set forth herein:

Now, if the said Contractor shall well and faithfully do and perform the things agreed by the Contractor to be done and performed according to the terms of said contract; and shall pay all lawful claims of subcontractors, materialmen, and laborers, for labor performed and materials furnished in the carrying forward, performing, or completing of said contract; we agreeing and assenting that this undertaking shall be for the benefit of any materialman or laborer having a just claim, as well as for the obligee herein; then this obligation shall be void; otherwise the same shall remain in full force and effect; it being expressly understood and agreed that the liability of the surety for any and all claims hereunder shall in no event exceed the penal amount of this obligation as herein stated.

The said surety hereby stipulates and agrees that no modifications, omissions, or additions in or to the terms of the said contract or in or to the plans or specifications therefore shall in any wise affect the obligations of said surety on its bond, and does hereby waive notice of any such modifications, omissions or additions to the terms of the contract or to the work or to the specifications.

SCOPE OF BIDS

CITY OF CANTON WATER DEPARTMENT

SUGAR CREEK WTP & WELLFIELD IMPROVEMENTS

It is understood and agreed that the Contractor has, by careful examination, understands the nature and location of the work; the conformation of the ground; the character, quality, and quantity of the materials to be encountered; the character or equipment and facilities needed preliminary to and during the prosecution of the work; the general and local conditions; local, state, and federal regulations; and all other matters which can, in any way, affect the nature of work specified under this Contract.

All known structures, pipelines, and utilities have been indicated in their approximate locations on the plans, and any material variation in size and location of structures and pipe shall not be cause for extra payment.

Major deviations or modifications during construction, from that shown on, or the true intent of, the plans and specifications requiring more or less labor and materials shall only be authorized by Change Order as approved by the Owner.

The Contractor shall verify the rating and horsepower of the equipment proposed to be furnished and shall provide for any necessary electrical changes to accommodate the equipment furnished at no additional cost to the Owner.

If construction procedures and equipment being utilized by the Contractor prove to be inadequate in the performance of the Contract, the procedures and equipment shall be modified or alternative equipment shall be furnished and used at no additional cost to the Owner.

No separate payment will be made for any item that is not specifically set forth in the Bid, and all costs therefore shall be included in the prices named in the Bid for the various Items of Work. Payment for each respective item shall include such general costs for submittals, samples, tools, coordination, machinery, and appliances necessary to complete the work as specified and in Contract Documents within the timeline specified.

The price Bid shall include, but not limited to, the following:

1) All incidental works specified and or shown on the drawings not included in other bid items. This includes but is not limited to project management, dewatering, construction sequencing, temporary facilitates, pre-construction video, shop drawings, operation and maintenance manuals, documentation, and final close out documents.
2) All tools, equipment, supplies, manufactured articles, labor, operations, and incidentals, supervision, layout and surveying, insurance, overhead [including field overhead (aka General Conditions costs) and home office overhead], applicable taxes, fees, and profit to complete the work as set forth in the Contract Documents.
3) Work also includes all costs of permits and cost of compliance with regulations of public agencies having jurisdiction, including Safety and Health Requirements of the State of Ohio and the Occupational Safety and Health Administration of the U.S. Department of Labor (OSHA).
4) All field staking and surveying necessary for construction shall be established by the Contractor to confirm the locations of all topographic features and underground utilities prior to construction activities.
5) All assistance required by the Owner to verify compliance with the Contract Documents, including measuring of quantities as specified herein.
6) All demolition debris removal, testing required by the Contractor, coordination with testing company hired separately by the Owner for Special Inspections, and other items as required by the Contract Documents.

All BIDDERS must Bid Items specified herein, and award of the Contract will be based on the Bidder's Qualifications as reviewed and approved by the Owner. The work type within this Contract is detailed below and provided for reference. Bidders shall refer to Contract Documents for the full scope and nature of the work to ensure the Bid Price provided for each item is fully inclusive. Contract Drawings shall govern if any discrepancy exists between the Contract Drawings and this document.

1) BID ITEM NO. 1: BONDING
   a) **Description.** The lump sum bid for this item shall include all bonding.
   b) **Payment.** Payment for Bonding will be made at the monthly rate of 1/30 of the lump sum price for bonding.

2) BID ITEM NO. 2: MOBILIZATION AND DEMOBILIZATION
   a) **Description.** The lump sum bid for this item shall include all necessary labor, tools, equipment, materials, and activities including but not limited to mobilizing, demobilizing, construction staging temporary facilities and utilities required during construction, and all other related work and expenses whether specifically mentioned or not, required for the completion of the bid items in accordance with the Contract Documents.
   b) **Payment.** Payment for mobilization will be made at the rate of 2/3 of the lump sump price bid for this item, to be paid under Contractor's first payment application, with the remaining 1/3 to be paid for demobilization with Contractor's final payment application.

3) BID ITEM NO. 3: WATER TREATMENT PLANT PROCESS, PLUMBING, HVAC, ELECTRICAL, AND INSTRUMENTATION & CONTROL IMPROVEMENTS THAT EXCLUDES ITEM 1, ITEM 2 AND ITEMS 4 THRU 41
   a) **Description.** The lump sum bid for this item shall include furnishing of all materials, labor, tools, and equipment necessary to perform all general civil/sitework, demolition, cleaning, structural, architectural, process, painting, plumbing work, mechanical, HVAC, electrical, instrumentation and control work complete and ready for operation in accordance with the Contract Documents. Removal of the existing underground storage tank (UST) will be accomplished by an UST Removal Contractor as detailed in Specification Section 33 56 13.
      i) Site Work. Is defined under this Bid Item to include all site work within the fence limits around the Water Treatment Plant and access drive. Refer to Contract Drawings for additional work not specifically mentioned herein.
         (1) Demolition and disposal of all concrete sidewalks, concrete pavement, concrete foundations, asphalt driveways, asphalt parking lots, and any other impervious area that requires removal. Installation of new impervious surfaces shall be handled by other Bid Items listed herein.
         (2) Full depth replacement of the access drive and parking lot that includes storm piping, storm headwalls, new signage, bollards, parking lot striping, bumper blocks, and concrete curbs as shown on Contract Documents.
         (3) Above ground fuel tank, fuel tank pad with foundation, fill station, all new piping, and coordination with the contractor separately hired by the Owner to perform removal of the existing storage tank.
         (4) Precast vault structures with access as shown on the Contract Documents.
         (5) Yard work shall include, but not limited to, excavation, removal of excess material, trenching, trench boxes, temporary earth retention systems, backfill, dust control and noise control. Additionally, work shall include the following.
            (a) Raw Water and Aerated Water piping, valving, fittings, and restrained joints for piping between 16-inches and 42-inches in diameter.
            (b) Storm and Sanitary piping and fittings up to 8-inches in diameter.
            (c) Roof drain piping, fittings, and splash block installation to direct away from the washwater lagoons.
            (d) Plant water piping, fittings, valving, and hydrants.
            (e) Installation of frost slabs, yard steps, French drains, and manholes.
            (f) Modification to existing manholes and vaults that includes removal of existing piping and valves and installation of new.

(g) Miscellaneous piping, pipe abandonment, pipe restraint, and pipe encasement.

(h) Stormwater pollution prevention plan (SWPPP), temporary gravel, and site restoration.

(6) Demolition shall include, but not limited to, removal and proper disposal of existing asphalt pavement, concrete pavement, concrete curb, concrete sidewalk, an underground storage tank, existing fencing and gates, gate operators, curb, pipe removal, and pipe abandonment as shown on the Contract Drawings.

(7) Restoration shall include removal and replacement of signage, grading and seeding as shown on the Contract Drawings. Landscaping only will be covered by a separate allowance.

ii) Electrical and Instrumentation & Control. Work shall include all the electrical work, all power wiring, HVAC and plumbing conduit and wiring, instrumentation and controls, conduit and wiring, motor and equipment connections, transformers, electric service, and all else required to complete the electrical work specified in Division 26 and Division 40 Instrumentation, Section 40 90 00 through Section 40 95 33.06, in accordance with the Contract.

(1) The bid price shall include all excavation and backfill for electrical conduits, cutting and patching existing concrete, inserts in the concrete, pull boxes, manholes, demolition, and testing of electrical equipment installed under this Contract, supplying temporary utilities as required for proper execution of this Contract.

iii) HVAC. Work shall include all the HVAC systems for the various structures as shown on the drawings, specified herein, or implied, complete and operational. The work shall include all heating and air conditioning units, unit heaters, duct work, duct insulation, pipe and fittings, grilles, diffusers, louvers, shutters, fans, controls, tie-ins, gas connection at each unit, cutting and patching of existing structures, demolishing, and all else necessary for a complete and operable system.

iv) Washwater Reservoir. Work shall include, but not limited to, removal of existing piping and valving and installation of new, connection to the backwash system of each filter, and additional piping to drain the reservoir through the filter-to-waste pump. Refer to Contract Drawings for additional work not specifically mentioned herein.

v) Maintenance Garage. Removal and replacement of the overhead door, replacement of HVAC equipment and appurtenances, and new oil separator connected to the floor drain. Refer to Contract Drawings for additional work not specifically mentioned herein.

vi) West Aerator Building. Work shall include, but not limited to replacement of the existing roof and concrete planks, removal and cleaning of the existing screens and framing, replacement of the aerator distribution trays and supports, removal and installation of piping, replacement of existing valves, rerouting of roof drains, removal of the existing chlorine feed point and interior piping, replacement of HVAC equipment and appurtenances, new wall hydrants, refurbishment of the existing masonry that includes pressure washing, new valve actuators (e.g., floor stands, extended bonnets, and motor actuated), new concrete floor topping, replacement of landings, and replacement of stairs. Refer to Contract Drawings for additional work not specifically mentioned herein.

vii) East Aerator Building. Work shall include, but not limited to removal and cleaning of the existing screens and framing, replacement of the aerator distribution trays and supports, removal and installation of piping, replacement of existing valves, rerouting of roof drains, replacement of HVAC equipment and appurtenances, new wall hydrants, refurbishment of the existing masonry that includes pressure washing, and new valve

actuators (e.g., floor stands, extended bonnets, and motor actuated). Refer to Contract Drawings for additional work not specifically mentioned herein.

viii) Main Building. Work shall include, but not limited to the following. Refer to Contract Drawings for additional work not specifically mentioned herein.

(1) Removal of the curtain wall system and masonry knee wall on the outside face of the building and removal of the glazed tile partition abutting the High Service Pump Station Room inside.

(2) Removal of the existing spiral staircase and installation of a new elevator and sump pump.

(3) Removal and replacement of existing doors, windows, skylights, bathroom plumbing and fixtures, handrails, roof access hatches, and staircases.

(4) Removal and replacement of the existing surface water, plant water, emergency eyewash and showers, backflow preventors, pressure reducing valves, cold and hot water piping, hot water heater, and wall hydrants.

(5) Rerouting existing roof drains to the storm sewer and installation of new floor drains and trench drains.

(6) Modifications to the existing walls that includes inspection, mortar & joint repair, pressure washing, demolition, core drilling, and construction of new.

(7) Installation of new piping, and valves within the clearwell and modification to construct the three (3) clearwell chambers and two (2) chlorine contact tanks.

(8) Replacement of the existing fluoride day tank, tote scale, all interior piping and appurtenances, and three (3) new peristaltic metering pumps.

(9) Installation of new analyzers for both chlorine and fluoride as shown on the contract drawings with new diffusers and new surface water connections as shown on the Contract Drawings.

(10) Replacement of the existing chlorinators, distribution panels, and all interior piping and appurtenances. The chlorine cylinder storage room and chlorinator room shall include chlorine gas analyzers that are interlocked with the room exhaust fan.

(11) For the high service pumps, removal of one (1) existing motor and replacement with a variable frequency drive (VFD) and three (3) existing synchronous motors to be cleaned, reconditioned, and bearings replaced.

(12) For the filters, removal and replacement of the existing media, replacement of underdrains or refurbishment of underdrains via jetting, cleaning of the existing troughs, adjustment of the existing weirs, and new air supply piping and supports.

(13) Removal of two (2) existing washwater pumps and replacement with one (1) washwater pump that is interconnected with the surface wash, backwash to each filter, and the washwater reservoir.

(14) Replacement of the filter-to-waste pump, piping, and valving that will discharge to the washwater lagoons.

(15) Removal of existing valving, fittings, and piping and replacement and installation with new as shown in the Contract Drawings. Valving shall include, but not limited to, floor stands, extended bonnets, and motor actuated valves.

(16) Cleaning of the designated lagoon used during construction after completion of the project. The drained and dewatered residual solids in the lagoons are removed to an approved landfill as described in Bid Item No. 27.

(17) Installation of two (2) new positive displacement blowers with piping, valves, fittings, and other appurtenances to each filter cell.

(18) Installation, wiring, and connection to SCADA of twelve (12) ATI Filter Smart Controller Systems Backwash Analyzer to each of the filters.

(19) Replacement of all HVAC equipment that includes, but not limited to, louvers, unit heaters, ductwork, air transfer system, and exhaust fans. Work to also include the removal of the hot water baseboard heaters.

(20) Installation of vaults for surge relief, raw water meter vaults, and other vaults shown on the Contract Drawings that includes, but not limited to, access manholes, excavation, temporary earth retention system, backfill, blocking, joint material, joint restraints valving, and spare wrenches.

ix) Tank & Channel Cleaning: This item shall include pressure washing of the ceiling, floors, and walls and removal of the residual solids from WTP structures as required to perform the work. This item shall also include dewatering of the tank and/or to the top of the sediment layer. Tank cleaning shall be as specified in Section 02 61 20 Tank and Channel Cleaning. Work related to this item shall include, but not be limited to, labor, tools, and equipment necessary to remove remaining sediment, loadout (via roll-off boxes, tanker trucks, or dump trucks), and unload residual solids from cleaning operations as directed into the lagoon selected by the Owner.

x) Start up, commissioning, final acceptance, operational demonstration, and all other related work and expenses whether specifically mentioned or not, required for the completion of the Water Treatment Plant in accordance with the Contract Documents.

b) **Measurement.** The successful Bidder will be required to furnish a breakdown of the lump sum bid as required for estimating purposes.

c) **Payment.** Payment will be made at the unit price bid for this bid item.

4) BID ITEM NO. 4: WELLFIELD WELL PUMPS, PROCESS, PLUMBING, HVAC, ELECTRICAL, AND INSTRUMENTATION & CONTROL IMPROVEMENTS THAT EXCLUDES ITEMS 1 THRU 3 AND ITEMS 5 THRU 41

a) **Description.** Include all well pump, process, plumbing, HVAC, electrical, and instrumentation and control work from the Well Pump casing pipe to the connection tee to both the New Raw Water Main described under Bid Item 4 and Existing Raw Water Main Described under Bid Item 5. Refer to Contract Drawings for additional work not specifically mentioned herein. Work includes, but not limited to, the following:

i) Removal of existing gravel driveways as called out on Contract Drawings.

ii) Refurbishment of existing well pumps and motors.

iii) Removal of the existing 12-inch steel pump discharge, fittings, and appurtenances to the existing raw water main.

iv) Demolition and/or abandonment of existing concrete valve vaults and piping that includes backfill as specified.

v) Installation of new pipe, fittings, flow meters, valves, and thrust blocks as shown on the Contract Drawings.

vi) Installation of well support systems for the well pump and motor.

vii) Installation of foundation and new well buildings including metal siding, roof panels, doors, hardware, and louvers.

viii) Electrical and Instrumentation & Control. Work shall include all the electrical work, all power wiring, HVAC and plumbing conduit and wiring, instrumentation and controls, conduit and wiring, motor and equipment connections, transformers, electric service, and all else required to complete the electrical work specified in Division 26 and Division 40 Instrumentation, Section 40 90 00 through Section 40 95 33.06, in accordance with the Contract.

(1) The bid price shall include all excavation and backfill for electrical conduits, cutting and patching existing concrete, inserts in the concrete, pull boxes, manholes, demolition, and testing of electrical equipment installed under this

Contract, supplying temporary utilities as required for proper execution of this Contract.

ix) HVAC. Work shall include all the HVAC systems for the various structures as shown on the drawings, specified herein, or implied, complete and operational. The work shall include all heating and air conditioning units, unit heaters, duct work, duct insulation, pipe and fittings, grilles, diffusers, louvers, shutters, fans, controls, tie-ins, gas connection at each unit, cutting and patching of existing structures, demolishing, and all else necessary for a complete and operable system.

b) **Measurement.** The successful Bidder will be required to furnish a breakdown of the lump sum bid as required for estimating purposes.

c) **Payment.** Payment will be made at the unit price bid for this bid item.

5) BID ITEM NO. 5: WELLFIELD NEW RAW WATER TRANSMISSION MAIN THAT EXCLUDES ITEMS 1 THRU 4 AND ITEMS 6 THRU 41

a) **Description.** Include all work associated with the New Raw Water Transmission Main that concludes at the Water Treatment Plant fence line. All proposed work located within the Sugar Creek WTP fence limits shall be included in Bid Item 2. Refer to Contract Drawings for additional work not specifically mentioned herein. Work includes, but not limited to, the following:

i) This item shall include, but not limited to, all necessary labor, vehicles, materials, equipment, mobilization, power, notifications, coordination, excavation and backfill, trenching, temporary earth retention system, trench boxes, preparation of trench bottom, noise control, dust and odor control, daily cleanup, utility pole support, utility relocation or support, utility protection, sign removal and replacement, and SWPPP, bypass pumping as required, and all other related items and expenses.

ii) Preconstruction work shall include utility verification, locating and staking of proposed water main alignment, clearing, tree protection, grubbing, replacement or protection of landscaping, and stump removal as required to complete the work.

iii) Installation of new pipe, fittings, valves, manholes, restrained joints, and thrust blocks.

iv) Jack and bore work under U.S. State Route 21 that includes, but not limited to, a launching pit, receiving pit, spacers, steel casing, and other items detailed in Contract Documents.

v) Placement and compaction of fill to remove the low point in grade between Wellfield No. 2 and Wellfield No. 3 above the proposed alignment.

b) **Measurement.** The successful Bidder will be required to furnish a breakdown of the lump sum bid as required for estimating purposes.

c) **Payment.** Payment will be made at the unit price bid for this bid item.

6) BID ITEM NO. 6: WELLFIELD EXISTING RAW WATER TRANSMISSION MAIN, CLEANING, AND SOLIDS DISPOSAL THAT EXCLUDES ITEMS 1 THRU 5 AND ITEMS 7 THRU 41

a) **Description.** Include all work associated with the Existing Raw Water Main that concludes at the Water Treatment Plant fence line. All proposed work located within the Sugar Creek WTP fence limits shall be included in Bid Item 3. Refer to Contract Drawings for additional work not specifically mentioned herein. Work includes, but not limited to, the following:

i) This item shall include, but not limited to, all necessary labor, vehicles, materials, equipment, mobilization, power, notifications, coordination, excavation and backfill, trenching, temporary earth retention system, trench boxes, preparation of trench bottom, noise control, dust and odor control, daily cleanup, utility pole support, utility relocation or support, utility protection, sign removal and replacement, and SWPPP as

shown on the Drawings, bypass pumping if required, and all other related items and expenses.

ii) Inspection of the existing precast cylinder concrete pipe (PCCP) with a closed-circuit television (CCTV) and submit a draft report to Owner for review of findings, recommendations, and proposed cleaning methodology to remove scale and sediment. Once the draft is reviewed and approved by the Owner, Contractor shall finalize and complete cleaning of the pipeline. Base bids shall assume 4-inches of scale and sediment around the circumference of the existing PCCP raw water main and proper disposal to the designated lagoon.

iii) Removal of existing PCCP from the raw water main and installation of proposed doghouse manholes with new piping that connects to existing.

iv) Installation of tapping sleeves to install the new well pump 12-inch discharge piping to the existing raw water main.

v) Installation of new pipe, fittings, valves, and thrust blocks as shown on the Contract Drawings.

b) **Measurement.** The successful BIDDER shall be required to furnish a breakdown of the lump sum bid as required for bidding purposes.

c) **Payment.** Payment will be made at the unit price bid for this bid item.

7) BID ITEM NO. 7: DECHLORINATION FACILITY COMPLETE THAT EXCLUDES ITEMS 1 THRU ITEM 6 AND ITEMS 8 THRU 41

a) **Description.** Include all work associated with the new Dechlorination Facility that will be is located near the existing lagoons. The lump sum bid for this item shall include furnishing of all materials, labor, tools, and equipment necessary to perform all general civil/sitework, demolition, cleaning, structural, architectural, process, painting, plumbing work, mechanical, HVAC, electrical, instrumentation and control work complete and ready for operation in accordance with the Contract Documents.

b) **Measurement.** The successful BIDDER shall be required to furnish a breakdown of the lump sum bid as required for bidding purposes.

c) **Payment.** Payment will be made at the unit price bid for this bid item.

8) BID ITEM NO. 8: ADDITIONAL REINFORCED CONCRETE WORK

a) **Description.** This unit price stipulated for this item shall include furnishing and placing of all additional reinforced concrete necessary above what is shown on the Contract Drawings. The unit price shall include furnishing, forming, and placing the reinforced concrete when directed by the Engineer.

b) **Measurement.** Actual ODOT 613 LSM material in place and accepted by the Owner.

c) **Payment.** Will be made on a cubic yard basis on the quantity determined in the field from the measurements specified above.

9) BID ITEM NO. 9: ADDITIONAL RAW WATER 12-INCH PIPING BETWEEN WELL BUILDING AND TEE CONNECTION ON RAW WATER MAINS

a) **Description.** This item includes any additional 12-inch pipe required to be installed between the proposed Well Building and the tee connection between the two (2) raw water mains which will be based on the location of the existing PCCP raw water main joint. Work shall include, but not limited to, to the following:

i) All necessary labor, vehicles, materials, equipment, mobilization, power, notifications, coordination, excavation and backfill, trenching, temporary earth retention system, trench boxes, preparation of trench bottom, noise control, dust and odor control, daily

cleanup, utility pole support, utility relocation or support, utility protection, bypass pumping as required, and all other related items and expenses.

ii) Installation of new pipe, fittings, valves, manholes, restrained joints, and thrust blocks as shown on the Contract Drawings.

b) **Measurement.** Actual amount of excess pipe required to complete the interconnect between the two (2) raw water mains based on the location of the existing PCCP joint location that is not accounted for in Contract Drawings.

c) **Payment.** Will be made in linear feet of additional pipe installed in the field and as authorized by the Owner.

10) BID ITEM NO. 10: ADDITIONAL EXCAVATION AND HAULING

a) **Description.** This item includes any additional excavation and hauling of material to a designated on-site location over and above what is shown on the Contract Drawings or included in other bid items. Work shall include, but not limited to, to the following:

i) All necessary labor, vehicles, materials, equipment, mobilization, power, notifications, coordination, excavation and backfill, trenching, temporary earth retention system, trench boxes, preparation of trench bottom, noise control, dust and odor control, daily cleanup, utility pole support, utility relocation or support, utility protection, and all other related items and expenses.

b) **Measurement.** Actual amount of additional cubic yards of excavation measured by the Contractor and approved/verified by the Owner/Engineer.

c) **Payment.** Will be made on a cubic yard basis on the quantity determined in the field from the measurements specified above. Unauthorized excavation below grade or beyond what is specified shall be at the cost of the Contractor at no additional cost to the Owner.

11) BID ITEM NO. 11: ADDITIONAL COMPACTED FOUNDATION

a) **Description.** The unit price stipulated for this item shall include the furnishing and placing of all compacted granular material necessary to backfill the trench under pavements and driveways over and above what is shown on the Contract Drawings; disposal of excavated material, subgrade preparation and protection; and the furnishing, placing, and compaction of fill material when directed by the Engineer.

b) **Measurement.** Will be made on a cubic yard basis based on the actual compacted foundation material in place, completed, and accepted within the limits authorized by the Engineer.

c) **Payment.** Will be made on a cubic yard basis on the quantity determined in the field from the measurements specified above. Unauthorized excavation below grade or beyond what is specified shall be at the cost of the Contractor at no additional cost to the Owner.

12) BID ITEM NO. 12: ADDITIONAL GRANULAR BACKFILL ODOT 304

a) **Description.** This unit price stipulated for this item shall include furnishing and placing of all granular backfill necessary to backfill the trench under pavements and driveways over and above what is shown on the Contract Drawings; disposal of excavated material, subgrade preparation and protection; and the furnishing, placing, and placing granular backfill when directed by the Engineer.

b) **Measurement.** Actual ODOT 304 limestone base material in place, compacted, and accepted within the limits authorized by the Owner.

c) **Payment.** Will be made on a cubic yard basis on the quantity determined in the field from the measurements specified above. Unauthorized excavation below grade or beyond what is specified shall be at the cost of the Contractor at no additional cost to the Owner.

13) BID ITEM NO. 13: ADDITIONAL STRUCTURAL BACKFILL ODOT 703.11

a) **Description.** This unit price stipulated for this item shall include furnishing and placing of all structural backfill necessary to backfill the trench under pavements and driveways over and above what is shown on the Contract Drawings; disposal of excavated material, subgrade preparation and protection; and the furnishing, placing, and placing structural backfill when directed by the Engineer.

b) **Measurement.** Actual ODOT 703.11 material in place, compacted, and accepted the Owner.

c) **Payment.** Will be made on a cubic yard basis on the quantity determined in the field from the measurements specified above. Unauthorized excavation below grade or beyond what is specified shall be at the cost of the Contractor at no additional cost to the Owner.

14) BID ITEM NO. 14: ADDITIONAL BEDDING AND BACKFILL ODOT 603

a) **Description.** This unit price stipulated for this item shall include furnishing and placing of all bedding and backfill necessary to backfill the trench under pavements and driveways if field conditions require use of this material; disposal of excavated material, subgrade preparation and protection; and the furnishing, placing, and placing bedding and backfill when directed by the Engineer.

b) **Measurement.** Actual ODOT 603 material in place, compacted, and accepted and authorized by the Owner.

c) **Payment.** Will be made on a cubic yard basis on the quantity determined in the field from the measurements specified above. Unauthorized excavation below grade or beyond what is specified shall be at the cost of the Contractor at no additional cost to the Owner.

15) BID ITEM NO. 15: ADDITIONAL LSM BEDDING AND BACKFILL ODOT 613

a) **Description.** This unit price stipulated for this item shall include furnishing and placing of all LSM backfill necessary to backfill the trench under pavements and driveways if field conditions require use of this material; disposal of excavated material, subgrade preparation and protection; and the furnishing and placing LSM backfill when directed by the Engineer.

b) **Measurement.** Actual ODOT 613 LSM material in place and accepted by the Owner.

c) **Payment.** Will be made on a cubic yard basis on the quantity determined in the field from the measurements specified above. Unauthorized excavation below grade or beyond what is specified shall be at the cost of the Contractor at no additional cost to the Owner.

16) BID ITEM NO. 16: PAVEMENT, ASPHALT

a) **Description.** This item shall include fine grading of the subgrade, final compaction, furnishing, spreading, and compacting the aggregate base material; furnishing and applying the prime coat; furnishing, installing, and compacting the asphaltic surface material; and all other items required to complete the driveways and parking areas asphalt surface installation in accordance with the Contract Documents. Demolition and disposal of existing asphalt pavement shall be included in Bid Item 3 for work within the WTP and Access Drive Area and Bid Item 4 if otherwise.

b) **Measurement.** Actual amount of asphalt surface placed and accepted.

c) **Payment.** Will be made on a square yard basis on the quantity determined in the field from the measurements specified above. Unauthorized construction of the driveway widths beyond those established by the Owner will not be eligible for payment and shall be at the expense of the Contractor.

17) BID ITEM NO. 17: CONCRETE SIDEWALK

a) **Description.** This item shall include excavation; furnishing, placing, and compacting the aggregate base; furnishing, forming, finishing, and curing the concrete; and all other items required to construct the concrete sidewalks in accordance with the Contract Documents or as

directed by the Owner. Demolition and disposal of existing concrete shall be included in Bid Item 3 for work within the WTP and Access Drive Area and Bid Item 4 if otherwise.

b) **Measurement.** Actual amount of sidewalk placed and accepted by the Owner.

c) **Payment.** Will be made on a square foot basis on the quantity determined in the filed from the measurements specified above. Unauthorized construction of walkway widths beyond those established by the Owner will not be eligible for payment and shall be at the expense of the Contractor.

18) BID ITEM NO. 18: NEW CHAIN LINK FENCE AND ENTRANCE GATE AT WTP

a) **Description.** This item shall include clearing and fine grading as necessary; furnishing and installing all fencing materials, barbed wire, gates, hardware, posts, gate actuators, and anchor concrete; and all other items required to complete the chain link fence installation at the WTP in accordance with the Contract Documents. Chain link fence and gates required at wellfield in accordance with the Contract Documents shall be included in Item 4.

b) **Measurement.** Actual amount of fence constructed and accepted

c) **Payment.** Will be made on a lineal foot basis on the quantity determined in the field from the measurements specified above through the gates for chain link fence.

19) BID ITEM NO. 19: REMOVE AND REINSTALL EXISTING CHAIN LINK FENCE

a) **Description.** This item shall include the removal and reinstallation of the chain link fence, barbed wire, gates, gate operators, hardware, posts, anchor concrete, and all other related items. Fencing and appurtenances shall also be disposed of properly as called out on Contract Drawings.

b) **Measurement.** Actual amount of existing fence removed, reinstalled and accepted.

c) **Payment.** Will be made on a lineal foot basis on the quantity determined in the field from the measurements specified above through the gates for chain link fence.

20) BID ITEM NO. 20: ADDITIONAL REMOVAL AND REPAIR OF EXISTING CONCRETE

a) **Description.** The unit price stipulated for this item shall include labor, tools and equipment necessary to patch or repair existing concrete surfaces, as specified in Section 03 01 73 “Concrete Repair” over and above what is shown on the Contract Drawings.

b) **Measurement.** Actual number of square feet of concrete patching or repair performed assuming a nominal 4-inch partial depth removal/repair of the existing concrete surface, complete as authorized by the Owner.

c) **Payment.** Will be made on a square foot basis on the quantity determined in the field from the measurements specified above.

21) BID ITEM NO. 21: ALLOWANCE 1 - CONCRETE CRACK REPAIRS AND PATCHING

a) **Description.** This item shall include payment for work involving repair and patching existing concrete that is not accounted for on Contract Drawings.

b) **Measurement.** All work shall be authorized by the Owner in advance of the work. Any unspent money shall be deducted from the total contract.

c) **Payment.** This item is over and above what is described in the Contract Documents and must be based on written proposals approved by the Owner. The allowance shall be adjusted by Change Order if the final cost is more than the allowance. Any unspent money shall be deducted from the total contract.

22) BID ITEM NO. 22: ALLOWANCE 2 - SANITARY SEWER TO SEPTIC TANK PIPE REPAIR(S)

a) **Description.** This item shall include a lump sum allowance as specified on the Bid Form for payment for additional sanitary sewer not accounted for on Contract Drawings.

b) **Measurement.** All work shall be authorized in advance and any unspent money shall be deducted from the total contract.

c) **Payment.** This item is over and above what is described in the Contract Documents and must be based on written proposals approved by the Owner.

d) **Measurement.** All work shall be authorized by the Owner in advance of the work

e) **Payment.** This item is over and above what is described in the Contract Documents and must be based on written proposals approved by the Owner. The allowance shall be adjusted by Change Order if the final cost is more than the allowance. Any unspent money shall be deducted from the total contract.

23) BID ITEM NO. 23: ALLOWANCE 3 - LANDSCAPING

a) **Description.** This item shall include a lump sum allowance as specified on the Bid Form for payment for additional landscaping that is not included in the Contract Documents and requested by the Owner.

b) **Measurement.** All work shall be authorized in advance of the work.

Payment. This item is over and above what is described in the Contract Documents and must be based on written proposals approved by the Owner. The allowance shall be adjusted by Change Order if the final cost is more than the allowance. Any unspent money shall be deducted from the total contract.

24) BID ITEM NO. 24: ALLOWANCE 4 - PLANT SIGNAGE

a) **Description.** This item shall include a lump sum allowance as specified on the Bid Form to cover payment of the project plaque, exterior signage at the main entrance and on the new elevator shaft, additional signage for room names, equipment signage, and signage for OSHA compliance that is not included in the Contracted Documents and requested by the Owner. The masonry wall at the plant entrance shall be included in Bid Item No. 3.

b) **Measurement.** All work shall be authorized in advance of the work.

Payment. This item must be based on written proposals approved by the Owner. The allowance shall be adjusted by Change Order if the final cost is more than the allowance. Any unspent money shall be deducted from the total contract.

25) BID ITEM NO. 25: ALLOWANCE 5 - LABORATORY EQUIPMENT AND OFFICE FURNITURE

a) **Description.** This item shall include a lump sum allowance as specified on the Bid Form to cover the payment of all materials, labor, and equipment necessary to furnish laboratory furniture, office computer desks, chairs, file cabinets, as shown on the drawings, and as chosen by the Owner.

b) **Measurement.** All work shall be authorized by the Owner in advance of the work.

c) **Payment.** Contractor to provide a unit price for labor on the Bid Form to procure and deliver to job site freight on board (F.O.B.), unload, store, assemble, and install the equipment. The bid allowance for material shall be adjusted by Change Order if the final cost is more than the allowance. Any unspent money shall be deducted from the total contract.

26) BID ITEM NO. 26: ALLOWANCE 7 - LAGOON RESIDUAL SOLIDS REMOVAL, HAULING, AND DISPOSAL TO AN APPROVED LANDFILL

a) **Description.** Removal of the drained and dewatered residual solids in the lagoons that includes, but not limited to, labor, tools, and equipment necessary to remove, deliver, weigh-in, and unload residual solids from cleaning operations as directed to an approved landfill after completion of the project. The residual solids removed shall be required to meet the sampling requirements of the approved landfill. Only the final cleaning of the designated lagoon used during construction shall be included in Bid Item No. 3.

b) **Measurement.** All work shall be authorized by the Owner and Engineer in advance of the work.
c) **Payment.** This item must be based on written proposals approved by the Owner. The allowance shall be adjusted by Change Order if the final cost is more than the allowance. Any unspent money shall be deducted from the total contract.

27) BID ITEM NO. 27: ALLOWANCE 8 - PUMP SERVICE COMPANY (Wellfield)
a) **Description.** This item shall include a lump sum allowance as specified on the Bid for payment to Ohio Drilling Company to rehabilitate the ten (10) Wellfield Pumps as detailed in Specification 43 21 14.01 and Appendix IV.
b) **Measurement.** All work shall be authorized by the Owner in advance of the work.
c) **Payment.** This item must be based on written proposals approved by the Owner. The allowance shall be adjusted by Change Order if the final cost is more than the allowance. Any unspent money shall be deducted from the total contract.

28) BID ITEM NO. 28: ALLOWANCE 9 - PUMP SERVICE COMPANY (High Service Pumps)
a) **Description.** This item shall include a lump sum allowance as specified on the Bid for payment to Ohio Drilling Company to rehabilitate the five (5) High Service Pumps as detailed in Specification 43 21 14.02 and Appendix IV.
b) **Measurement.** All work shall be authorized by the Owner in advance of the work.
Payment. This item must be based on written proposals approved by the Owner. The allowance shall be adjusted by Change Order if the final cost is more than the allowance. Any unspent money shall be deducted from the total contract.

29) BID ITEM NO. 29: ALLOWANCE 10 – ADDITIONAL PROCESS PIPING AND VALVES
a) **Description.** This item shall include a lump sum allowance as specified on the Bid Form for payment as required due to additional process piping and repair or replacement of existing valves based on actual field conditions.
b) **Measurement.** All work shall be authorized by the Owner in advance of the work.
Payment. This item is over and above what is described in the Contract Documents and must be based on written proposals approved by the Owner. The allowance shall be adjusted by Change Order if the final cost is more than the allowance. Any unspent money shall be deducted from the total contract.

30) BID ITEM NO. 30: ALLOWANCE 11 - ADDITIONAL BUILDING DEMOLITION AND RENOVATION
a) **Description.** This item shall include a lump sum allowance as specified on the Bid Form for payment as required due to changes in conditions or revisions based on actual field conditions or alternative equipment furnished by the Contractor.
b) **Measurement.** All work shall be authorized by the Owner in advance of the work.
Payment. This item is over and above what is described in the Contract Documents and must be based on written proposals approved by the Owner. The allowance shall be adjusted by Change Order if the final cost is more than the allowance. Any unspent money shall be deducted from the total contract.

31) BID ITEM NO. 31: ALLOWANCE 12 - ADDITIONAL DEMOLITION AND RENOVATION FOR GENERAL, HVAC, AND PLUMBING
a) **Description.** This item shall include a lump sum allowance as specified on the Bid Form for payment as required due to changes in conditions or revisions based on actual field conditions or alternative equipment furnished by the Contractor.
b) **Measurement.** All work shall be authorized by the Owner in advance of the work.
c) **Payment.** This item is over and above what is described in the Contract Documents and must be based on written proposals approved by the Owner. The allowance shall be adjusted by

Change Order if the final cost is more than the allowance. Any unspent money shall be deducted from the total contract.

32) BID ITEM NO. 32: ALLOWANCE 13 - ADDITIONAL DEMOLITION AND RENOVATION FOR ELECTRICAL, INSTRUMENTATION AND CONTROL

a) **Description.** This item shall include a lump sum allowance as specified on the Bid Form for payment as required due to changes in conditions or revisions based on actual field conditions or alternative equipment furnished by the Contractor.

b) **Measurement.** All work shall be authorized by the Owner in advance of the work.

c) **Payment.** This item is over and above what is described in the Contract Documents and must be based on written proposals approved by the Owner. The allowance shall be adjusted by Change Order if the final cost is more than the allowance. Any unspent money shall be deducted from the total contract.

33) BID ITEM NO. 33: ALLOWANCE 14- ADDITIONAL SCADA PROGRAMMING

a) **Description.** This item shall include a lump sum allowance as specified on the Bid Form for payment for additional programming as requested by the Owner within the Process Control Systems over and above what is shown on the Contract Drawings.

b) **Measurement.** All work shall be authorized by the Owner in advance of the work.

c) **Payment.** This item is over and above what is described in the Contract Documents and must be based on written proposals approved by the Owner. The allowance shall be adjusted by Change Order if the final cost is more than the allowance. Any unspent money shall be deducted from the total contract.

34) BID ITEM NO. 34: ALLOWANCE 15 - ELECTRIC POWER COMPANY

a) **Description.** This item shall include a lump sum allowance as specified on the Bid Form for payment of charges due to the Electrical Power Company related to the installation and coordination of new electrical service to the Wastewater Treatment Plant by the electrical company. This item shall also include an allowance for payment of additional work approved and performed over and above what is specified in the Contract Documents, shown on the Drawings, or actual field conditions encountered.

b) **Measurement.** All work shall be authorized by the Owner in advance of the work.

c) **Payment.** This item is over and above what is described in the Contract Documents and must be based on written proposals approved by the Owner. The allowance shall be adjusted by Change Order if the final cost is more or less than the allowance. Any unspent money shall be deducted from the total contract.

35) BID ITEM NO. 35: ALLOWANCE 16 - NETWORK HARDWARE

a) **Description.** This item shall include an allowance as specified on the Bid Form for payment of network hardware that may be requested by the Owner.

b) **Measurement.** All work shall be authorized by the Owner in advance of the work.

c) **Payment.** This item is over and above what is described in the Contract Documents and must be based on written proposals approved by the Owner. The allowance shall be adjusted by Change Order if the final cost is more than the allowance. Any unspent money shall be deducted from the total contract.

36) BID ITEM NO. 36: ALTERNATE 1 – ADDITIONAL TIME FOR OWNER TO EXECUTE OWNER-CONTRACTOR AGREEMENT

a) **Description.** Due to funding requests and required funding approvals, the Owner does not anticipate an award within 60 days of the bid opening. The unit price bid for this item shall include the sum of all of the Bidder's direct and indirect costs and reasonable overhead

attributable to delay, for each day beyond sixty days after bid opening that Owner fails to execute the Owner-Contractor Agreement based upon Bidder's bid provided in response to this Invitation to Bid.

b) **Measurement.** Actual number of days beyond sixty days after bid opening that Owner fails to execute the Owner-Contractor Agreement.

c) **Payment.** Payment will be made at the unit price bid for this bid item.

37) BID ITEM NO. 37: ALTERNATE 2 - CANTON NW WTP ATI FILTERSMART CONTROLLER SYSTEM

a) **Description.** The unit price stipulated for this item shall include the procurement of materials, installation, wiring, and connection to SCADA of four (4) ATI Filter Smart Controller Systems Backwash Analyzer to each of the filters.

b) **Measurement.** All work shall be authorized by the Owner in advance of the work.

c) **Payment.** Payment will be made at the unit price bid for this bid item.

38) BID ITEM NO. 38: ALTERNATE 3 - CANTON NE WTP ATI FILTERSMART CONTROLLER SYSTEM

a) **Description.** The unit price stipulated for this item shall include the procurement of materials, installation, wiring, and connection to SCADA of eight (8) ATI Filter Smart Controller Systems Backwash Analyzer to each of the filters. Refer to Specification Section

b) **Measurement.** All work shall be authorized by the Owner in advance of the work.

c) **Payment.** Payment will be made at the unit price bid for this bid item.

39) BID ITEM NO. 39: ALTERNATE 4 - 18-INCH THROUGH 42-INCH PCCP C301 SP-5 FINISHED WATER DISTRIBUTION MAIN REPAIR KITS

a) **Description.** Furnish, coordinate delivery, and acceptance of shipment for Finished Water Distribution Main Repair Kits to be stored at a location selected by the Owner. This location may not be at the Sugar Creek WTP. Finished Water Distribution Main Repair Kits with white epoxy for future distribution main breaks that includes a set of repair bands, tapping saddle with blind flange, closure piece 8-feet in length with double spigot adapters and short pipe segment, and one lay length of pipe segment that is 16-feet in length for the following pipe sizes:

i) 18-inch SP-5 Class 100
ii) 20-inch SP-5 Class 100
iii) 24-inch SP-5 Class 100
iv) 30-inch SP-5 Class 100
v) 42-inch SP-5 Class 175

b) **Measurement.** All work shall be authorized by the Owner in advance of the work.

c) **Payment.** Payment will be made at the unit price bid for this bid item.

40) BID ITEM NO. 40: ALTERNATE 5 – PAINTING OF FILTER PIPE GALLERY (ROOM 108, 108A, & 108B), CONNECTED HALLWAYS, AND STAIRWELL E & F.

a) **Description.** Surface preparation, painting, and finishing of exposed interior surfaces. Surface preparation, priming, and finish coats as specified in Section 09 90 00 for the Filter Gallery (Room 108, 108A, & 108B), hallways between Filter #5 and #6 with Filters #1 through #4, and the entirety of Stairwell E & F.

b) **Measurement.** All work shall be authorized by the Owner in advance of the work.

c) **Payment.** Payment will be made at the unit price bid for this bid item.

BID ITEM NO. 41: ALTERNATE 6 – ROOF REPLACEMENTS

a) **Description.** This item shall include all necessary labor, vehicles, materials, equipment, mobilization, power, notifications, coordination, and all other related work, fees, items and

expenses, whether specifically or not, required for completing the roof replacements for the following buildings:

i) Filter #5 and #6 Addition: 2,900 SF
ii) Maintenance Garage: 1,500 SF
iii) Chlorine Building: 1,640 SF
iv) Fluoride Building: 680 SF
v) Generator Building: 580 SF
vi) East Aerator: 1,840 SF

The work included consists of removal and replacement of the membrane roofs for the building defined above. The existing roof shall be removed to the existing deck. The Contractor shall coordinate all flashing around existing and new roof penetrations, existing or new hatches, and any new or existing roof top units. Existing roof top units shall be disconnected and removed as required to install new roofing and the units shall be reinstalled. The new roof shall be a singly ply membrane roof complete with new tapered insulation per current Ohio Building Code, flashing, fasteners, and fascia and shall be furnished and installed in compliance with Division 07. The Contractor shall coordinate with the roof system manufacturer to ensure all conditions of the newly installed roofing meets warranty requirements. The roof replacement shall meet current Ohio Building Code, IBC 2015, IEBC 2015 and all regulatory requirements referenced in Division 07. The roofs shall be designed/installed to provide positive draining to existing drains per approved shop drawings. All roofing transitions shall be in accordance with manufacturer's standard details or the NRCA Roofing Manual. The new roof shall be installed on the existing roof deck; any deck repair will be approved and paid for under a separate allowance item. Railing systems as required per Pipe and Tube Railings Section 05 52 13 shall be included in the base bid. The cost of this item shall include the credit to the Owner for the patching or flashing shown on the plans to be included in the base bid that would be non-performed if this alternate is selected. If accepted, the Contractor shall provide a breakdown of the lump sum price for the credits used for this bid item.

b) **Measurement.** All work shall be authorized by the Owner in advance of the work.
c) **Payment.** Payment will be made at the unit price bid for this bid item.

BID FORM

1.01 BID SUBMITTED BY:

_____
(Contractor)

Date bid submitted: _____

1.02 DELIVER TO:

The City of Canton
ATTN: **Purchasing/Bids**
218 Cleveland Avenue SW
Canton, OH 44702

1.03 Having carefully reviewed the Instructions to Bidders, Drawings, Specifications and other Contract Documents for the Project titled **Sugar Creek Water Treatment Plant & Wellfield Improvements Project** including having also received, read, and taken into account the following Addenda:

Addendum No.	Dated
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____

and likewise having inspected the site and the conditions affecting and governing the Project, the undersigned hereby proposes to furnish all materials and to perform all labor, as specified and described in the said Specifications and/or as shown on the said Drawings for all Work necessary to complete the Project on a timely basis and in accordance with the Contract Documents regardless of whether expressly provided for in such Specifications and Drawings.

1.04 Before completing the Bid Form, the undersigned represents that it has carefully reviewed the Legal Notice to Bidders, Instructions to Bidders, this Bid Form, Form of Bid Guaranty and Contract Bond, Contractor's Affidavit (O.R.C. 5719.042), Owner-Contractor Agreement, General Conditions of the Contract (EJCDC C-700) (as modified for the Project), Drawings, Project Specifications, and other Contract Documents. Failure to comply with provisions of the Contract Documents may be cause for disqualification of the bid.

1.05 BONDS AND CONTRACT: If the undersigned is notified of bid acceptance, it agrees to furnish required bonds as indicated in the Instructions to Bidders.

1.06 COMPLETION OF WORK: In submitting a bid, the undersigned agrees to execute the Owner-Contractor Agreement in the form included in the Contract Documents and to complete its Work as required by the Contract Documents.

NOTE A: The wording of the Bid Form shall be used throughout, without change, alteration, or addition. Any change may cause it to be rejected.

NOTE B: Bidder is cautioned to bid only on the Brands or Standards specified.

NOTE C: If there is an inconsistency or conflict in the Bid amount, the lowest amount shall control, whether expressed in numbers or words.

2.01 BID:

Include the cost of all labor and material for the contract listed below. Bidder is to fill in all blanks related to the Bid Package for which a bid is being submitted. If no bid is submitted for an item, leave the item blank or insert "NO BID" in the blank. For alternate items, indicate whether the amount stated is in addition to or a deduction from the base bid amount (if there is no indication whether the amount for an alternate is an addition or a deduction, the amount shall be a deduction).

2.02 Bidder will complete the Work in accordance with the Contract Documents for the prices set forth in the attached Bid Schedule.

3.01 INSTRUCTIONS FOR SIGNING

A. The person signing for a sole proprietorship must be the sole proprietor or his authorized representative. The name of the sole proprietor must be shown below.

B. The person signing for a partnership must be a partner or his authorized representative.

C. The person signing for a corporation must be the president, vice president or other authorized representative; or he must show authority, by affidavit, to bind the corporation.

D. The person signing for some other legal entity must show his authority, by affidavit, to bind the legal entity.

4.01 BIDDER CERTIFICATIONS. The Bidder hereby acknowledges that the following representations in this bid are material and not mere recitals:

1. **The Bidder acknowledges that this is a public project involving public funds, and that the Owner expects and requires that each successful Bidder adhere to the highest ethical and performance standards. The Bidder by submitting its bid pledges and agrees that (a) it will act at all times with absolute integrity and truthfulness in its dealings with the Owner and the Design Professional, (b) it will use its best efforts to cooperate with the Owner and the Design Professional and all other Contractors on the Project and at all times will act with professionalism and dignity in its dealings with the Owner, Design Professional and other Contractors, (c) it will assign only competent supervisors and workers to the Project, each of whom is fully qualified to perform the tasks that are assigned to him/her, and (d) it has read, understands and will comply with the terms of the Contract Documents.**

2. The Bidder represents that it has had a competent person carefully and diligently review each part of the Contract Documents, including any Divisions of the Specifications and parts of the Drawings that are not directly applicable to the Work on which the Bidder is submitting its bid. By submitting its bid, each Bidder represents and agrees, based upon its careful and diligent review of the Contract Documents, that it is not aware of any conflicts, inconsistencies, errors or omissions in the Contract Documents for which it has not notified the Owner in writing at least ten (10) days prior to the bid opening. If there are any such conflicts, inconsistencies, errors or omissions in the Contract Documents, the Bidder (i) will provide the labor, equipment or materials of the better quality or greater quantity of Work; and/or (ii) will comply with the more stringent requirements. The Bidder will not be entitled to any additional compensation for any

conflicts, inconsistencies, errors or omissions that would have been discovered by such careful and diligent review, unless it has given such prior written notice to Owner.

3. The Bidder represents that it has had a competent person carefully and diligently inspect and examine the entire site for the Project and the surrounding area, including all parts of the site applicable to the Work for which it is submitting its bid, and carefully correlate the results of the inspection with the requirements of the Contract Documents. The Bidder agrees that its bid shall include all costs attributable to site and surrounding area conditions that would have been discovered by such careful and diligent inspection and examination of the site and the surrounding area, and the Bidder shall not be entitled to any Change Order, additional compensation, or additional time on account of conditions that could have been discovered by such an investigation.

4. The Bidder represents, understands and agrees that a) the Claim procedures in the General Conditions as modified for the Project are material terms of the Contract Documents, b) if it has a Claim, it will have its personnel provide complete and accurate information to complete and submit the Statement of Claim form on a timely basis, c) the proper completion and timely submission of a Statement of Claim form is a condition precedent to any change in the Contract Sum or the Contract Time(s), and d) the proper and timely submission of the Statement of Claim form provides the Owner with necessary information so that the Owner may investigate the Claim and mitigate its damages.

5. The Bidder represents that the bid contains the name of every person interested therein and is based upon the Standards specified by the Contract Documents.

6. The Bidder and each person signing on behalf of the Bidder certifies, and in the case of a bid by joint venture, each member thereof certifies as to such member's entity, under penalty of perjury, that to the best of the undersigned's knowledge and belief: (a) the Base Bid, any Unit Prices and any Alternate bid in the bid have been arrived at independently without collusion, consultation, communication or agreement, or for the purpose of restricting competition as to any matter relating to such Base Bid, Unit Prices or Alternate bid with any other Bidder; (b) unless otherwise required by law, the Base Bid, any Unit Prices and any Alternate bid in the bid have not been knowingly disclosed by the Bidder and will not knowingly be disclosed by the Bidder prior to the bid opening, directly or indirectly, to any other Bidder who would have any interest in the Base Bid, Unit Prices or Alternate bid; (c) no attempt has been made or will be made by the Bidder to induce any other Person to submit or not to submit a bid for the purpose of restricting competition; and (d) the statements made in this Bid Form are true and correct.

7. The Bidder will execute the form of Owner/Contractor Agreement in the form included with the Contract Documents, if a Contract is awarded on the basis of this bid, and if the Bidder does not execute the Contract Form for any reason, other than as authorized by law, the Bidder and the Bidder's Surety are liable to the Owner.

8. The Bidder certifies that the upon the award of a Contract, the Contractor will ensure that all of the Contractor's employees, while working on the Project site, will not purchase, transfer, use or possess illegal drugs or alcohol or abuse prescription drugs in any way.

9. The Bidder agrees to furnish any information requested by the Owner's authorized representative to evaluate that the Bidder has submitted the lowest and best bid and that the bid is responsive to the specifications.

10. The Bidder certifies that it has no unresolved findings for recovery issued by the Auditor of State.

11. The Bidder certifies that it is aware of and in compliance with the requirements of Ohio Revised Code Section 3517.13 regarding campaign contributions.

END OF SECTION

MANUFACTURERS OF MATERIAL AND EQUIPMENT TO BE FURNISHED

City of Canton, Ohio
Water Department
Sugarcreek Water Treatment Plant
& Wellfield Improvements

Specific equipment has been used in preparing the CONTRACT DOCUMENTS, establishing a minimum quality that is acceptable. The BIDDER must prepare its Base BID on equipment manufacturers listed below. The manufactures listed below is not a complete list of all equipment needed for the project; the BIDDER is responsible for reviewing the CONTRACT DOCUMENTS for all equipment required for a complete project. For Base BID equipment items that have only one manufacturer listed, that manufacturer's equipment shall be included in the Base BID. For Base BID equipment items that have more than one manufacturer listed, the BIDDER is required to indicate by an "X" in the spaces ( ) provided, the equipment proposed to be furnished as part of the Base BID. One "X" and one "X" only shall be entered for each separate Base BID category of material or equipment.

In addition to the BIDDERS selecting a BASE BID equipment item, BIDDERS may quote on alternative equipment by listing it under "Alternate Bid Equipment" for each separate category of material or equipment identified as a Base BID item. The BIDDER shall indicate its alternates by inserting the manufacturer's name in the space provided and inserting the dollar amount (in figures) in the column labeled "Deduct From Base BID." The BIDDER shall indicate the dollar amount for each alternate listed and shall include all money required to incorporate the alternate into the PROJECT.

The BID will be reviewed based on the Base BID equipment submitted. Alternative equipment will be reviewed after the BID is submitted as part of the submittal review process. The OWNER reserves the right to accept or reject any of the alternates proposed and if so, the BIDDER shall then supply equipment from one of the Base BID manufacturers identified on the list (in writing, and prior to the project is awarded and contract executed).

Each BIDDER is required to follow these directions. Any bidding form that is submitted not in compliance with these directions may be rejected by the OWNER and that BID not considered in determining award.

BIDDERS must complete all items.

☐ Corporation

☐ Partnership

☐ Individual

☐ Joint Venture

☐ Other

NAME OF PROJECT: Sugar Creek Water Treatment Plant & Wellfield Improvements Project

1. ORGANIZATION

1.1 How many years has your organization been in business as a Contractor in the construction industry?

1.2 How many years has your organization been in business under its present business name?

1.2.1 Under what other or former names has your organization operated?

1.3 If your organization is a corporation, answer the following:

1.3.1 Date of incorporation:

1.3.2 State of incorporation:

1.3.3 President's name:

1.3.4 Vice President's name(s):

1.3.5 Secretary's name:

1.3.6 Treasurer's name:

1.4 If your organization is a partnership, answer the following:

1.4.1 Date of organization:

1.4.2 Type of partnership (if applicable):

1.4.3 Name(s) of general partner(s):

1.5 If your organization is individually owned, answer the following:

1.5.1 Date of organization:

1.5.2 Name of owner:

1.6 If the form of your organization is other than those listed above, describe it and name the principals:

2. LICENSING

2.1. List jurisdictions and trade categories in which your organization is legally qualified to do business, and indicate registration or license numbers, if applicable.

2.2. List jurisdictions in which your organization's partnership or trade name is filed.

2.3. List any suspension or revocations of any professional license of any director, officer, owner, or managerial employees of the Contractor, to the extent that any work to be performed on this Project is within the field of such licensed profession.

3. EXPERIENCE

3.1. List the categories of work that your organization normally performs with its own forces.

3.2. Claims and Lawsuits (If the answer to any of the questions below is yes, please attach details.)

3.2.1. Has your organization ever failed to complete any work?

3.2.2. Has your organization ever failed to complete any work by the substantial completion date, final completion date, or in a timely manner?

3.2.3. Within the last five (5) years has your organization or any of its officers prosecuted any Claims, had any Claims prosecuted against it or them, or been involved in or is currently involved in any mediation or arbitration proceedings or lawsuits related to any construction project, or has any judgments or awards outstanding against it or them? Has your organization had any extension requests, fines and penalties imposed, or contract defaults? If the answer is yes, please attach the details for each Claim, including the names and telephone numbers of the persons who are parties, the amount of the Claim, the type of Claim and the basis for the Claim, and the outcome.

Note: As used in this document "Claim" means a Claim initiated under the Contract Documents for a project or relating to the Work for a project, including Claims made against performance bonds secured by the Contractor on other construction projects.

3.3. Has your organization ever failed to comply with federal, state, and local laws, rules, and regulations, including but not limited to the Occupational Safety and Health Act, the Ohio Prevailing Wage laws, and Ohio ethics laws? If the answer is yes, please attach details and reason(s) for each instance and the outcome including any fines or penalties imposed.

3.4. Within the last five years, has any officer or principal of your organization ever been an officer or principal of another organization when it failed to complete a construction contract? If the answer is yes, please attach details for each instance, including the names and telephone numbers of the persons who are parties to the contract, and the reason(s) the contract was not completed.

3.5. On a separate sheet, list construction projects your organization has in progress with an original Contract Sum of more than $10,000,000, giving the name of project, owner and its telephone number, design professional and its telephone number, contract amount, percent complete and scheduled completion date.

3.5.1. State total amount of work in progress and under contract:

3.6. Provide the following information for each contract your organization has had during the last five (5) years, including current contracts, where the Contract Sum is fifty percent (50%) or more of the bid amount for this Project, including add alternates. Include details regarding timeliness of performance and quality of work. List the original contract price for each project, the amount of any change orders or cost overruns on each, the reasons for the change orders or cost overruns, and your organization's record for complying with and meeting completion deadlines on construction projects. If there are more than ten (10) of these contracts, only provide information on the most recent ten (10) contracts, including current contracts.

Project And Work	Contract Sum	Owner's Representative & Telephone Number	Engineer's Or Architect's Representative Name & Telephone Number	Additional Comments

3.7. Provide the following information for each project your organization has had during the last five (5) years, which your organization believes is of comparable or greater size and complexity than the Owner's project. Include details regarding how such projects demonstrate your organization's ability and capacity to perform a substantial portion of the Project with its own work force. If there are more than five (5) of these projects, only provide information on the most recent five (5) projects, including current projects.

Project And Work	Contract Sum	Owner's Representative & Telephone Number	Engineer's Or Architect's Representative Name & Telephone Number	Additional Comments

3.7.1. State average annual amount of construction work your organization has performed during the last five years.

3.7.2. If any of the following members of your organization's management -- president, chairman of the board, or any director -- operates or has operated another construction company during the last five (5) years, identify the member of management and the name of the construction company.

3.7.3. If your organization is operating under a trade name registration with the Secretary of State for the State of Ohio, identify the entity for which the trade name is registered. If none, state "none."

3.7.4. If your organization is a division or wholly-owned subsidiary of another entity or has another relationship with another entity, identify the entity of which it is a division or wholly-owned subsidiary or with which it has another relationship and also identify the nature of the relationship. If none, state "not applicable."

3.8. On a separate sheet, list the construction education, training, construction experience, and tenure with your organization for each person who will fill a management role on the Project, including without limitation the Project Executive, Project Engineer, Project Manager, and Project Superintendent. For each person listed, include with the other information the last three projects on which the person worked and the name and telephone number of the Design Professional and the Owner.

3.9. Describe the size and experience of your organization's work force and your equipment and facilities, in relation to your organization's ability to complete the Project successfully and on time.

4. REFERENCES

4.1. Trade References:

4.2. Bank References:

4.3. Surety:

4.3.1. Name of bonding company:

4.3.2. Name and address of agent:

5. FINANCING

5.1 Financial Statement **(May be required, but only post-bid. Not a requirement to provide with bid.)**

5.1.1 Attach a financial statement, preferably audited, including your organization's latest balance sheet and income statement showing the following items:

Current Assets (e.g., cash, joint venture accounts, accounts receivable, notes receivable, accrued income, deposits, materials inventory and prepaid expenses);

Net Fixed Assets;

Other Assets;

Current Liabilities (e.g., accounts payable, notes payable, accrued expenses, provision for income taxes, advances, accrued salaries and accrued payroll taxes); and

Other Liabilities (e.g., capital, capital stock, authorized and outstanding shares par values, earned surplus and retained earnings).

5.1.2 Name and address of firm preparing attached financial statement, and date thereof.

5.1.3 Is the attached financial statement for the identical organization named on page one?

5.1.4 If not, explain the relationship and financial responsibility of the organization whose financial statement is provided (e.g., parent-subsidiary).

5.2 Will the organization whose financial statement is attached act as guarantor of the contract for construction?

5.3 Attach additional documentation or explanations demonstrating your organization's financial responsibility, adequate resources and availability of credit, its means and ability to procure insurance and acceptable performance bonds required for the Project.

6. Does your organization participate in a drug-free workplace program? Provide your organization's record for both resolved and unresolved findings of the Auditor of the State of Ohio for recovery as defined in Section 9.24 of the Ohio Revised Code.

7. List any projects within the previous five years where a public entity determined that your organization was not a responsible bidder, including the name of the public entity, the reasons given by the public entity, and an explanation thereof.

8. Additional Criteria. Pursuant to the Codified Ordinance of the City of Canton, Chapter 105, the Owner, in its discretion, reserves the right to request additional information and documentation relating to the foregoing and related to any of the criteria listed in Paragraph I.6 of the Instructions to Bidders from Bidders after the bid opening. The Owner may consider such information and documentation in determining which bid is lowest and best. The Owner, in its discretion, may consider and give such weight to any and all criteria as it deems appropriate.

[left intentionally blank]

Certification. The undersigned certifies for the reliance of the Owner that after diligent investigation, to the best of the undersigned's belief, the information provided with this Contractor's Qualification Statement is true, accurate and not misleading.

ODOT MANUAL SUPPLEMENT

This Supplement shall apply where and to the extent that the State of Ohio Department of Transportation Construction and Material Specifications, in the current version as of January 1, 2019, is expressly incorporated into the Contract Documents via the Owner-Contractor Agreement, or when designated as a Contract Document in the list of Contract Documents in the Owner-Contractor Agreement, or is referenced anywhere else in the Contract Documents as one of the Contract Documents.

1. **Regardless of any terms to the contrary in Division 100 or elsewhere, any directions or orders of the Engineer that will result in an adjustment of the Contract Price or the Contract Time shall require the prior written approval of the Owner. It is expressly understood and agreed that the Engineer does not have authority to authorize changes or modifications in the Contract Price or Contract Time.**

2. The Contractor's obligations under this ODOT Supplement are in addition to and not in limitation of its other obligations under the Contract Documents.

3. Delays. Regardless of the terms in this ODOT Supplement, including Item 109.05, all time adjustments shall be subject to a) filing a Change Proposal and / or Claim in accordance with Articles 11 and 12 of the Modified Standard General Conditions **of the Contract for Construction (EJCDC C-700, 2013 edition) ("Modified Standard General Conditions"), b)** substantiating the Contractor's entitlement to a time adjustment in accordance with the Modified Standard General Conditions and c) Item 109.05. The Contractor will be entitled to additional compensation for delays but only for those delays described in the Modified Standard General Conditions. As part of the Claims process and as a condition precedent to receiving any additional compensation, the Contractor shall prepare a cost analysis as allowed by Item 109.05.D substantiating its entitlement to additional compensation.

4. Division 100, General Provisions. The following Division 100 General Provisions of the State of Ohio Department of Transportation, Construction Specifications Manual in the current version as of January 31, 2019, are incorporated in this ODOT Supplement, subject to any changes or limitations herein.

a. **Item 101.01**, General.

b. Item 101.02, Abbreviations, provided that references to DCA, DDD, DET, DGE shall mean the Owner.

c. Item 101.03, Definitions, provided where terms that are defined in the other Contract Documents, the definition in the other Contract Documents shall control, and further provided that the following definitions are deleted, modified and/or added:

i. Claims is deleted

ii. Contract Bond is deleted.

iii. Contract Documents is deleted.

iv. Contract Price is deleted.

v. Contract Time is deleted.

vi. Contractor is deleted.

vii. Department shall mean the Owner.

viii. Director shall mean the Owner's representative.

ix. Disputes is deleted.

x. Engineer is deleted.

xi. Extra Work Contract is deleted.

xii. Final Acceptance shall mean Final Completion as defined in the Owner Contractor Agreement.

xiii. Final Inspector shall mean the Owner.

xiv. Laboratory is deleted.

xv. Prebid Question is deleted.

xvi. Proposal Guaranty is deleted.

xvii. Questionnaire is deleted.

xviii. Shop Drawings is deleted.

xix. Signatures on Contract Documents is deleted.

xx. State or state shall mean the Owner.

xxi. Subcontractor is deleted.

xxii. Work is deleted.

d. **Item 101.04, Interpretations.**

e. Item 103.03, Cancellation of Award.

f. Item 104.02.D.2, Significant Changes in the Character of the Work (including Tables 104.02-1 and 104.02-2 following this Item), provided that all references to Item 108 and 109.12 are deleted and that all time adjustments shall be subject to filing a Change Proposal and / or Claim in accordance with the Modified Standard General Conditions and substantiating the entitlement to an extension of time as provided in the Modified Standard General Conditions (EJCDC Document C-700, 2013 edition) (“Modified Standard General Conditions”).

g. Item 104.03, Rights in and Use of Materials Found on the Work.

h. Item 104.04, Cleaning Up.

i. Item 105.02, Plans and Working Drawings, provided that the review of submittals may be by the Owner or the Engineer in the Owner’s discretion.

j. Item 105.06, Superintendent.

k. Item 105.10, Inspection of Work.

l. Item 105.11, Removal of Defective and Unauthorized Work.

m. Item 105.12, Load Restrictions.

n. Item 105.13, Haul Roads, provided that the second paragraph in this Item is deleted. The Contractor shall be responsible for any damage to the roads referred to in the second paragraph.

o. Item 105.14, Maintenance During Construction, except substitute “Final Completion” for “Final Inspector accepts the work under 109.12” and delete the remainder of the first sentence. Additionally, delete the second to last sentence in this Item.

p. Item 105.15, Failure to Maintain Roadway or Structure.

q. Item 105.16, Borrow and Waste Areas.

r. Item 105.17, Construction and Demolition Debris.

s. Item 106.01, Source of Supply and Quality Requirements.

t. Item 106.02, Samples, Tests and Cited Specifications, provided that this Item will be optional at the discretion of the Owner. If the Owner elects to proceed under this Item, a) the Contractor

without additional cost will provide material samples as required by the Owner, and b) the Owner may conduct such tests as it determines proper.

u. **Item 106.03, Small Quantities and Materials for Temporary Application.**

v. Item **106.04, Plant Sampling and Testing Plan.**

w. **Item 106.05, Storage of Materials.**

x. **Item 106.06, Handling Materials.**

y. **Item 106.07, Unacceptable Materials, except substitute the word "unacceptance" in the third sentence with the word "unacceptable."**

z. Item 106.08, **Department-Furnished Material.**

aa. **Item 106.09, Steel and Iron Products Made in the United States.**

bb. **Item 107.01, Laws to be Observed.**

cc. **Item 107.02, Permits, Licenses, and Taxes.**

dd. **Item 107.03, Patented Devices, Materials, and Processes.**

ee. **Item 107.05, Federal-Aid Provisions.**

ff. **Item 107.06, Sanitary Provisions.**

gg. **Item 107.07, Public Convenience and Safety.**

hh. **Item 107.08, Bridges Over Navigable Waters.**

ii. Item **107.09, Use of Explosives, provided that both bringing explosives onto the site and any use of explosives shall require the prior written approval of the Owner.**

jj. Item **107.10, Protection and Restoration of Property, provided that the Contractor shall remain responsible for** all damage and injury to property until the Project is Finally Complete, and all references to Items 109.11 and 109.12 are deleted.

kk. Item **107.11, Contractor's Use of the Project Right-of-Way or Other Department-Owned Property, provided the reference to Item 109.12 is deleted.**

ll. Item **107.12, Responsibility for Damage Claims and Liability Insurance, provided that all notices and certificates shall be delivered to the Owner's representative and, if there is no Owner's representative, to the Engineer. Reference to the "**State of Ohio, Department of Transportation" shall mean the Owner.

mm. Item **107.13, Reporting, Investigating, and Resolving Motorist Damage Claims, provided that this item is modified to read, "**When a motorist reports damage to its vehicle either verbally or in writing to the Contractor, the Contractor shall within 3 days make and file a written report to the Owner and the Engineer and also file a report with its insurance carrier".

nn. Item **107.14** Opening **Sections of Project to Traffic, provided that the reference to Item 108.06 is deleted.**

oo. Item **107.15, Contractor's Responsibility for Work, provided that reference to "**Final Inspection according to 109.12.A" shall mean "Final Completion." and all references to Item 108 are deleted.

pp. Item **107.17, Furnishing Right-of-Way.**

qq. Item **107.19, Environmental Protection, provided that the Owner makes no representation as to having acquired any permits unless expressly provided in the Contract Documents. The Contractor will comply with any permits obtained by the Owner.**

rr. Item **107.20, Civil Rights.**

ss. Item **107.21, Prompt Payment.**

tt. **with information or reports on DBE participation unless the Contract Documents otherwise require such reports or information. Additionally, unless otherwise provided in the Contract Documents, the 50% self-contracting requirement in the first sentence is waived.**

uu. Item **108.04, Limitation of Operations.**

vv. Item **108.05, Character of Workers, Methods, and Equipment.**

ww. Item **108.10, Payroll Records.**

xx. Item 109.01, Measurement of Quantities, provided that this item will apply only where payment is to be based on the measurement of quantities.

yy. Item 109.02, Measurement Units.

zz. Item 109.03, Scope of Payment.

aaa. Item **108.01, Subletting of the Contract, provided that the Contractor need not provide the Owner** (Reserved.)

bbb. Item 109.05, Extra Work as modified in this Supplement, provided that a) the references to Items 105.07, 105.10 and 108 are deleted, b) all negotiated prices shall require the Owner's written approval, c) the Owner must approve in writing any directions or orders by the Engineer to proceed with force account work, d) in Item 109.05.B.2 the reference to Department shall mean the Ohio Department of Transportation, e) the compensation provided in 109.05.B through 109.05.D constitutes payment in full for all the items referred to in Items 109.05.C.1-10, except for any additional compensation for delays, f) the mark-ups provided in Items 109.05.D.2.b and 109.05.D.2.d are deleted, and g) Item 109.05.D.2.f regarding home office overhead is deleted. The Contractor's entitlement to home office overhead, if any, shall be subject to current Ohio law.

ccc. **109.06, Directed Acceleration.**

ddd. **(Reserved.)**

eee. **109.08, Unrecoverable Costs.**

5. Divisions 200 through 700. Divisions 200 through 700 of the State of Ohio Department of Transportation, Construction Specifications Manual in the current version as of January 31, 2019 are incorporated in this ODOT Supplement.

a. All references to Division 100 Items in Divisions 200 through 700 shall be to the Division 100 Items as modified in this Supplement.

b. Where Division 100 Items are referred to in Divisions 200 through 700 but are not included in this Supplement, the deleted references will be governed by this Paragraph 5.

c. In Item 203.04, the reference to Item 108.06 shall be governed by Paragraph 3, Delays, in this Supplement.

d. In Item 514.24, the reference to Item 109.10 shall be governed by the payment provisions in the Modified Standard General Conditions.

e. In Item 624.04, the reference to item 109.09 shall be governed by the payment provisions in the Modified Standard General Conditions, i.e., the Owner will process and make payments in accordance with the provisions in the Modified Standard General Conditions. In this regard, the basis for payment of mobilization costs will be as provided in Item 624.04.

f. General to Divisions 200 through 700. The basis for payment provided in the Basis for Payment items in these Divisions shall be the basis for payment to the Contractor when applicable.

END OF ODOT SUPPLEMENT

City of Canton Codified Ordinances

Bidders shall take notice that they are to comply with the Codified Ordinances of the City of Canton, including but not limited to, the following:

1. **Chapter 105.02 – Public Paving Time Restrictions.**
   All City public paving contracts shall include a provision for liquidated damages in order to provide the City reasonable compensation for actual damages due to a failure to ensure that asphalt paving take place on the City's road surfaces from May 1st to October 1st; and/or during optimal climatic conditions that are conducive to the best mix compacting and long term durability of the pavement, according to the highest and best practices of the asphalt paving industry.
   (Ord. 270-2014. Passed 12-29-14.)

2. **Chapter 105.03 – U.S. Steel Usage Required; Exception.**
   All City contracts shall stipulate or provide that all steel necessary in the construction of any work performed under such contracts shall be steel that is produced in the United States unless a specific product which is required is not produced by manufacturers in the United States in which event this prohibition does not apply. This section shall apply to only contracts awarded by the Board of Control of the City.
   (Ord. 224-77. Passed 6-27-77.)

3. **Chapter 105.05 – Materials to be Purchased Locally.**
   In all future contracts for the construction of buildings, structures, or other improvements under the Capital Improvement Budget, the following clause shall be printed or typewritten on each contract:
   It is the desire of the City of Canton that all materials used in the construction covered by this contract shall be purchased in the Canton area except such materials which are unavailable in the Canton area.
   (Res. 49-77. Passed 2-7-77.)

4. **Chapter 105.06 – Minority Contract Provision.**
   a. All contracts with the City shall include the following clause:
   The bidder agrees to expend at least $_____of the Contract in the event the contract is awarded to such bidder for minority/women's business enterprises. For purposes of this pledge, the term "minority/women's business enterprise" means a bona fide business established as a sole proprietorship, partnership or corporation owned, operated and controlled by one or more minority persons or women who have at least fifty-one percent (51%) ownership. "Minority" includes African Americans, Asian/Pacific Islanders, Hispanic/Latino Americans and Native American Indians. The minority or woman must have operational and managerial control, interest in capital, and earnings commensurate with the percentage of ownership. Minority/women's business enterprises may be employed as construction contractors, subcontractors, vendors or suppliers.
   (Ord.185-2011. Passed 10-31-11.)

5. **Chapter 105.12 – Local Bidder Preference.**
   a. The Board of Control, in determining the lowest and best bidder in the award of contracts to which this section is applicable, is authorized to award contracts to local bidders as hereinafter defined, whose bid is not more than five percent (5%) higher, subject to a maximum amount of twenty thousand dollars ($20,000.00), than the lowest dollar bid submitted by non-local bidders. The Board of Control's decision in making such an award shall be final.

b. For purposes of this section, "local bidder" means an individual or business entity which at the time of the award of the contract has a headquarters, division, sales office, sales outlet, manufacturing facility, or similar significant business-related location in Stark County, Ohio.

c. All contract specifications and/or bid documents that are distributed by Canton for the purpose of soliciting bids for goods and/or services shall contain the following notice:

Prospective bidders will take notice that the City of Canton, in determining the lowest and best bidder in the award of this contract, may award a local bidder preference to any qualified bidder pursuant to Section 105.12 of the Codified Ordinances of the City of Canton. The determination of whether a bidder qualifies for the local preference shall be made by Board of Control. The Board's decision shall be final. A copy of Section 105.12 is attached.

d. This section shall be applicable to all contracts for equipment, goods, machinery, materials, supplies, vehicles and/or services, which are purchased, leased and/or constructed at a cost in excess of fifty thousand dollars ($50,000.00) and which require bidding pursuant to Ohio R.C. 735.05 through 735.09 and Ohio R.C. 737.03.

(Ord. 115-2018. Passed 5-14-18.)

6. Chapter 105.15 – City Income Tax

a. No person, partnership, corporation or unincorporated association may be awarded a contract with the City under Sections 105.09 or 105.10, unless the bidder is paid in full or is current and not otherwise delinquent in the payment of City income taxes, including any obligation to pay taxes withheld from employees under Section 182.05 and any payment on net profits under Section 182.06.

b. Falsification of any information related to or any post-contractual violation of the requirement to pay City income taxes set forth in subsection (a) shall constitute cause for the rescission of the balance of the contract at the City's discretion.

c. No partnership, corporation or unincorporated association which has as one of its partners, shareholders or owners a person who is a twenty percent (20%) or greater equity owner in such partnership, corporation or unincorporated association and who is delinquent in the payment of City income taxes as set forth in subsection (a), may be awarded a contract with the City under Sections 105.09 or 105.10.

d. A person who is a twenty percent (20%) or greater equity owner in any partnership, corporation or unincorporated association which is delinquent in the payment of City income taxes as set forth in subsection (a) may not be awarded a contract with the City under Sections 105.09 or 105.10.

e. A contract awarded under Sections 105.09 or 105.10 for a public improvement project, services other than personal or professional services, and personal or professional services shall not be binding or valid unless such contract contains the following provisions:

Said _____ hereby further agrees to withhold all City income taxes due or payable under Chapter 182 of the Codified Ordinances for wages, salaries, fees and commissions paid to its employees and further agrees that any of its subcontractors shall be required to agree to withhold any such City income taxes due for services performed under this contract. Furthermore, any person, firm or agency that has

a contract or agreement with the City shall be subject to City income tax whether a resident or nonresident in the City, and whether the work being done is in the City or out of the City. In addition to the tax withheld for employees, the net profits on the contract shall be subject to City income tax.
(Ord. 238-2015. Passed 11-30-15.)

7. Chapter 182.30 – Contract Provisions

a. No contract on behalf of the City under Sections 105.09 or 105.10 of the Codified Ordinances of Canton for a public improvement project, services other than personal or professional services, and personal or professional services shall be binding or valid unless such contract contains the following provisions:

Said _____ hereby further agrees to withhold all City income taxes due or payable under Chapter 182 of the Codified Ordinances for wages, salaries, fees and commissions paid to its employees and further agrees that any of its subcontractors shall be required to agree to withhold any such City income taxes due for services performed under this contract. Furthermore, any person, firm or agency that has a contract or agreement with the City shall be subject to City income tax whether a resident or nonresident in the City, and whether the work being done is in the City or out of the City. In addition to the tax withheld for employees, the net profits on the contract shall be subject to City income tax.

b. By entering into contract with the City of Canton _____ agrees with the City regarding the manner of withholding of City income taxes as provided in Section 718.011(F) of the Ohio Revised Code.
   i. Municipal income tax withholding provisions of Sections 718.011(B)(1) and 718.011(D) ORC shall not apply to qualifying wages paid to employees for work done or services performed or rendered inside the City or on City property.
   ii. _____ agrees to withhold income tax for the City from employees' qualifying wages earned inside the City or on City property, beginning with the first day of work done or services performed or rendered inside the City.

(Ord. 238-2015. Passed 11-30-15.)

8. Chapter 507.03 – Equal Employment Opportunity Clause.

b. During the performance of this contract, the contractor agrees as follows:
   1. The contractor shall not discriminate against any employee or applicant for employment because of race, age, handicap, religion, color, sex, national origin, sexual orientation or gender identity. The contractor shall take affirmative action to insure that applicants are employed and that employees are treated during employment without regard to race, religion, color, sex, national origin, military status, sexual orientation or gender identity. As used herein, the word "treated" shall mean and include without limitation the following: recruited, whether by advertising or other means; compensation, whether in the form of rates or pay or other forms of compensation; selected for training, including apprenticeship; promoted; demoted; upgraded; downgraded; transferred; laid off; and terminated. The contractor agrees to and shall post in conspicuous places available to employees and applicants for employment notices to be provided by the contracting officers setting forth the provisions of this nondiscrimination clause.
   2. The contractor shall, in all solicitations or advertisements for employees placed by or on behalf of the contractor, state that all qualified applicants will receive consideration for employment without regard to race, age, handicap, religion, color, sex, national origin, military status, sexual orientation or gender identity.

(Ord. 153-2012. Passed 9-24-12.)

3. The contractor shall send to each labor union or representative of workers, with which he has a collective bargaining agreement or other contract or understanding, a notice advising the labor union or workers' representative of the contractor's commitments under the equal opportunity clause of the City; and he shall post copies of the notice in conspicuous places available to employees and applicants for employment.
4. The contractor shall submit in writing to the City his affirmative action plan, and each subcontractor and supplier of equipment or supplies shall submit to the general contractor his affirmative action plan. The responsibility for securing these affirmative action plans falls upon the general contractor and shall be on file at the office of the general contractor. The contractor shall furnish all information and reports required by the City or its representative pursuant to this chapter, and shall permit access to his books, records, and accounts by the contracting agency and by the Executive Secretary for purposes of investigation to ascertain compliance with the program.
5. The contractor shall take such action with respect to any subcontractor as the City may direct as a means of enforcing the provisions of this equal opportunity clause, including penalties and sanctions for noncompliance; provided, however, that in the event the contractor becomes involved in or is threatened with litigation as the result of such direction by the City, the City will enter into such litigation as is necessary to protect the interests of the City and to effectuate the City's equal opportunity program and, in the case of contracts receiving Federal assistance, the contractor or the City may request the United States to enter into such litigation to protect the interests of the United States.
6. The contractor shall file and shall cause his subcontractors, if any, to file compliance reports with the City in the form and to the extent prescribed by the City or its representative. Compliance reports filed at such times as directed shall contain information as to the employment practices, policies, programs and statistics of the contractor and his subcontractors.
7. The contractor shall include the provisions of this equal employment opportunity clause in every subcontract or purchase order, so that such provisions will be binding upon each subcontractor or vendor.
8. Refusal by the contractor or subcontractor to comply with any portion of this program as herein stated and described will subject the offending party to any or all of the following penalties:
    A. Withholding of all future payments under the involved public contract to the contractor in violation, until it is determined that the contractor or subcontractor is in compliance with the provisions of this contract.
    B. Refusal of all future bids for any public contract with the City or any of its departments or divisions, until such time as the contractor of subcontractor demonstrates that he has established and shall carry out the policies of the program as herein outlined.
    C. Cancellation of the public contract and declaration of forfeiture of the performance bond.
    D. In cases in which there is substantial or material violation or the threat of substantial or material violation of the compliance procedure or as may be provided by contract, appropriate proceedings may be brought to enforce these provisions, including the enjoining within applicable laws of contractors, subcontractors or other organizations, individuals or groups who prevent, directly or indirectly, or seek to prevent, directly or indirectly, compliance with the policy as herein outlined.

(Ord. 179-74. Passed 6-17-74.)

STATEMENT OF CLAIM FORM

Claim No. ___ for Contractor

1. Name of Contractor: _____

2. Date written claim given:_____.

3. Contractor's representative to contact regarding the claim:

   Name:_____ Title: _____
   Telephone No. _____ (office) FAX No. _____

   E-mail: _____

4. General description of claim:

---

5. Contract Documents. If the claim is based upon any part or provision in the Contract Documents, including but not limited to pages in the Drawings and/or paragraphs in the Specifications, Owner-Contractor Agreement, General Conditions or Supplementary General Conditions, state upon which parts or provisions the claim is based:

---

6. Delay claims:

   6.1 Date delay commenced: _____
   6.2 Duration of the delay: _____
   6.3 Apparent cause of the delay and part of critical path affected:

   6.4 Impact of the delay and recommendations for minimizing such impact:

---

7. Additional compensation. Set forth in detail all additional compensation to which the Contractor believes it is entitled with respect to this claim:

---

8. Instructions for Completing the Statement of Claim Form ("Instructions"). The Instructions are incorporated in this Form.

9. Truth of Claim. By submitting this claim, the Contractor and its representative certify that after conscientious and thorough review and to the best of his or her knowledge and belief a) the Contractor has complied fully with the Instructions, b) the information in this State of Claim is accurate, c) the Contractor is entitled to recover the compensation in paragraph 7, and d) the Contractor has not knowingly presented a false or fraudulent claim. The Contractor by its authorized representative must acknowledge this Statement of Claim before a notary public.

Notary Public

WHEN COMPLETED, FORWARD A COPY OF THIS NOTICE AND STATEMENT OF CLAIM FORM TO THE OWNER AND ENGINEER.

INSTRUCTIONS FOR COMPLETING THE STATEMENT OF CLAIM FORM

1. Completing the Statement of Claim Form ("Claim Form") is a material term of the Contract. The Claim Form tells the Owner and Design Professional that the Contractor is making a Claim and that they need to act promptly to mitigate the effects of the occurrence giving rise to the Claim. The Claim Form also provides them with information so that they can mitigate such effects. The Contractor acknowledges that constructive knowledge of the conditions giving rise to the Claim through job meetings, correspondence, site observations, etc. is inadequate notice, because knowledge of these conditions does not tell the Owner and Engineer that the Contractor will be making a Claim and most often is incomplete.

2. If the space provided in the Claim Form is insufficient, the Contractor, as necessary to provide complete and detailed information, must attach pages to the Claim Form with the required information.

3. Paragraph 4. The Contractor must state what it wants, *i.e.*, time and/or compensation, and the reason why it is entitled to time and/or compensation.

4. Paragraph 5. The Contractor must identify the exact provisions of the Contract Documents it is relying on in making its Claim. For example, if the Claim is for a change in the scope of the Contractor's Work, the Contractor must identify the specific provisions of the Specifications, and the Plan sheets and details that provide the basis for the scope change.

5. Paragraph 6. This paragraph applies to delay claims, including delays that the Contractor believes result in constructive acceleration. The Contractor must identify the cause of the delay, party or parties responsible, and what the party did or did not do that caused the delay, *i.e.*, specific work activities. The Contractor acknowledges that general statements are not sufficient, and do not provide the Owner with sufficient information to exercise the remedies available to the Owner or to mitigate the effects of the delay.

   For example, if the Contractor claims a slow response time on submittals caused a delay, the Contractor must identify the specific submittals, all relevant dates, and then show on the applicable schedule, by circling or highlighting, the activities immediately affected by the delays. Also for example, if the Contractor claims it was delayed by another Contractor, the Contractor must identify the delaying Contractor, specifically what the delaying Contractor did or did not do that caused the delay, and then show the applicable schedule, by circling or highlighting, the activities immediately affected by the delays. Further by example, if the Contractor seeks an extension of time for unusually severe weather, the Contractor must submit comparative weather data along with a record of the actual weather at the job site and job site conditions.

6. Paragraph 6.4. Time is of the essence under the Contract Documents. If there is a delay, it is important to know what can be done to minimize the impact of the delay. It therefore is important that the Contractor provide specific recommendations on how to do so.

7. Paragraph 7. The Contractor must provide a specific and detailed breakdown of the additional compensation it seeks to recover. For future compensation, the Contractor shall provide its best estimate of such compensation.

8. Paragraph 8 and Acknowledgment. By submitting this Claim, the Contractor and its representative certify that after conscientious and thorough review and to the best of his or her knowledge and belief a) the Contractor has complied fully with the Instructions, b) the information in this Claim Form is accurate, c) the Contractor is entitled to recover the compensation in paragraph 7, and d) the

Contractor has not knowingly presented a false or fraudulent claim. The Contractor by its authorized representative must acknowledge this Statement of Claim before a notary public.

CONTRACTOR'S FINAL WAIVER & RELEASE AFFIDAVIT
("AFFIDAVIT")

Project: **Sugar Creek Water Treatment Plant & Wellfield Improvements**

In consideration for payment received from the City of Canton (the "City") in the amount requested in Contractor's Final Application for Payment to the City, the receipt of which is hereby acknowledged, the undersigned Contractor hereby waives and releases any rights it has or may have to any and all types of claims relating to the Project, including without limitation claims of payment, Mechanic's Lien, stop notice, equitable lien, labor and material bond, breach of contract or unjust enrichment, or any other claim against the City, for any labor, materials, or equipment the undersigned may have delivered or provided to the Project, except for any Claims the undersigned has made by properly and timely submitting a Statement of Claim form. The undersigned further certifies that this Affidavit covers claims by all contractors, subcontractors, and suppliers who may have provided any labor, material, or equipment to the Project through the undersigned or at the undersigned's request. The undersigned acknowledges that all such contractors, subcontractors, sub-subcontractors and suppliers have signed an affidavit in the form of this Affidavit releasing any and all claims against the City, except for any Claims the undersigned has made by properly and timely submitting a written statement of its Claim. The undersigned hereby represents and warrants that it has paid any and all welfare, pension, vacation or other contributions required to be paid on account of the employment by the undersigned of any laborers on the Project.

This Affidavit is for the benefit of, and may be relied upon by the City. The undersigned hereby agrees to indemnify, defend and hold harmless each of the foregoing, the Project, work of improvement, and real property from any and all claims, or liens that are or should have been released in accordance with this Affidavit.

CITY OF CANTON

Sugar Creek Water Treatment Plant & Wellfield Improvements Project

PRE-BID SUBSTITUTION FORM

1. Note. Certain brands of material or apparatus are specified. Each bid will be based on these brands, which may be referred to in the Contract Documents as Standards. The use of another brand (referred to as a substitution or proposed equal in the Contract Documents, when a bidder or the contractor seeks to have a different brand of material or apparatus than that specified approved by the Owner for use in the Project) may be requested as provided in the Instructions to Bidders. Substitutions, however, unless approved and issued in an Addendum, will not be considered in determining which bidder to award the contract to.

2. The detailed procedures for submitting substitutions are set forth in Paragraph K of the Instructions to Bidders.

PROJECT LABOR AGREEMENT

FOR THE

SUGAR CREEK WATER TREATMENT PLANT & WELLFIELD IMPROVEMENTS PROJECT

ENTERED INTO BETWEEN

CITY OF CANTON

AND

EAST CENTRAL OHIO BUILDING AND CONSTRUCTION TRADES COUNCIL AFL-CIO

AND

SIGNATORY LOCAL UNIONS

Effective _____

CONTENTS

ARTICLE I

INTENT AND DURATION

Section 1. Intent And Duration. This Project Labor Agreement (the "Agreement" or "PLA") is entered into between the City of Canton (collectively the "Owner"); the East Central Ohio Building and Construction Trades Council, AFL-CIO ("ECOB & CTC" or "Council"); and the Signatory Unions (the "Unions"), and applies exclusively to the construction work within the scope of this Agreement to be performed on the Sugar Creek Water Treatment Plant and Wellfield Improvements Project (the "Project"). The purpose of this Agreement is to promote efficiency and cost-savings in the construction and refurbishment that is a part of the Project and to provide for the peaceful settlement of any and all labor disputes and grievances without strikes or lockouts, thereby promoting the public interest in assuring the timely and economical completion of the Project. This Agreement shall expire and be of no further force or effect upon the completion of the Project.

Upon execution of this Agreement by all parties, all construction, remodeling and renovation work covered by this Agreement on the Project shall be contracted exclusively to Contractors, of whatever tier, who agree to execute and be bound by the terms of this Agreement. The Unions agree that Contractors may execute the Agreement, or the Letter of Assent attached as Appendix I, for purposes of performing such work. The Owner (or its permitted designee) shall monitor compliance with this Agreement by all contractors and subcontractors. For purposes of the Agreement, the term "Contractor" shall be deemed to include all construction contractors and subcontractors of whatever tier engaged in on-site construction and renovation work on the Project. The Owner, the Unions and all signatory Contractors agree to abide by the terms and conditions contained in the Agreement. This Agreement represents the complete understanding of all parties, and no Contractor is or will be required to sign any other agreement with a signatory union as a condition of performing work coming within the scope of this Agreement. No practice, understanding or agreement between a Contractor and a Union, which conflicts with any provisions in this Agreement, will be binding on any other party unless endorsed in writing by the Owner.

Section 2. Limitation Of Agreement To Project. The Unions agree that this Agreement will be made available to, and will fully apply to, any successful bidder for

work on the Project, without regard to whether that successful bidder performs work at other sites on either a union or a non-union basis, and without regard to whether employees of such bidder are or are not members of any union. The Unions further agree that this Agreement applies only to this Project. Nothing in this agreement is intended to, or shall, interfere with, or negate, any existing contractual relationship or collective bargaining agreement between the Union and any contractor or subcontractor that may execute this Agreement.

ARTICLE II

PURPOSE

Section 1. Purpose. The Project Cost is fairly estimated to be $30.6 million dollars. The Project will require the construction of a new service and treatment building at the site of each of the existing ten (10) wells in the Wellfield. Also, approximately 3,900 linear feet of new 36" raw water transmission pipeline will be installed in the Wellfield and must be interconnected with the existing transmission lines. In addition, the existing water treatment plant and equipment will be upgraded and renovated. This renovation and upgrade work will be done to existing aerators, filters, filter backwash systems, high service pumps, clear wells, all mechanical systems within the facility and all electrical and chemical feed systems within the facility. This is a major construction project that must be bid in early 2022 and commenced in the Spring of 2022. This Agreement covering this Project is necessary to secure and preserve the health and safety of Canton and Stark County residents and to protect the integrity of the City's water treatment and distribution system. The parties to this Agreement understand and acknowledge that the Project is critical to the economic development of the City of Canton and to advancing the goals appearing in the City's Comprehensive Plan.

Section 2. Time Is Of The Essence. The parties to this Agreement understand and agree that time is of the essence for this Project. The parties understand and agree that timely completion of the Project will require the use of substantial numbers of employees from construction and supporting crafts possessing skills and qualifications that are essential to the Project. The Unions pledge that they have members who are competent, skilled, and qualified to perform the required construction work. The parties also understand that on-budget completion of the

Project is most critical; it is therefore essential that construction work on the Project be done in an efficient, economical manner with optimum productivity and with no delays. In recognition of those special needs of the Project, the Unions signatory hereto and their members agree not to initiate, authorize, sanction, participate in or condone, or permit their members to engage in any strike, sympathy strike, jurisdictional strike, recognitional strike, slowdown, sabotage, work to rule, sickout, sit down, picketing of any type (including informational picketing), handbilling, boycott, interruption of work or any disruptive activity that interferes with or interrupts in any way work on the Project or other operations of the City of Canton or its Water Department. Contractors agree not to engage in any lockouts.

ARTICLE III

BENEFITS OF THE AGREEMENT

Section 1. Benefits Of The Agreement. This Agreement is intended to foster the achievement of a timely and on-budget completion of the Project by, among other things:

(a) reducing and/or eliminating the tension and potential disagreements that might otherwise exist between Union and non-union workers on the Project;

(b) avoiding the costly delays of strikes, sympathy strikes, jurisdictional strikes, slowdowns, walkouts, picketing, handbilling and any other disruptions or interference with work, and promoting labor harmony and peace for the duration of the Project;

(c) standardizing terms and conditions governing the employment of labor on the Project;

(d) permitting flexibility in work scheduling and shift hours and times;

(e) achieving negotiated adjustments as to work rules and staffing requirements from those which otherwise might obtain;

(f) providing comprehensive and standardized mechanisms for the settlement of work disputes;

(g) ensuring a reliable source of skilled and experienced labor; and

(h) furthering public policy objectives, to the extent lawful, as to improved employment opportunities for minorities, women and the economically disadvantaged in the construction industry. Mindful of the economic

condition and unemployment rate in Stark County, the Owner anticipates and expects that all construction workers and employees on this Project will be residents of Stark County. In view of the very technical and specialized work that is inherent in the construction industry, all parties acknowledge that this expectation by the Owner is a goal, not a mandate. To this end, all Contractors working under this Agreement pledge that they will make a good-faith effort to reach this goal expressed by the Owner.

ARTICLE IV

SCOPE OF AGREEMENT

Section 1. The Work. This Agreement is specifically defined and limited to onsite construction and renovation work required to construct the Project.

Section 2. Exclusions From Scope. Items specifically excluded from the scope of this Agreement, even if performed in connection with the Project, include the following:

(a) Work of non-manual employees, including but not limited to, superintendents, supervisors, staff engineers, inspectors, quality control and quality assurance personnel, timekeepers, mail carriers, clerks, office workers, including messengers, guards, safety personnel, emergency medical and first aid technicians, and other professional, engineering, administrative, supervisory and management employees.

(b) Equipment and machinery owned or controlled and operated by the Owner.

(c) All off-site manufacture, fabrication or handling of materials, equipment or machinery (except at dedicated lay-down or storage areas and except as provided in Article IV, Section 9), and all deliveries of any type to and from the Project site (except on-site pouring of concrete).

(d) All employees of the Owner, the Construction Supervisor, design team or any environmental, engineering or other consultant when such employees do not perform labor coming within the scope of this Agreement.

(e) Any work performed on or near or leading to or onto the site of work on the Project and undertaken by state, county, city or other governmental

bodies, or their contractors; or by public utilities or their contractors.

(f) Off-site maintenance of leased equipment and on-site supervision of all such maintenance work.

(g) Work by employees of a manufacturer or vendor necessary to maintain such manufacturer's or vendor's warranty or guarantee, or work performed by supervisors or technicians employed by the manufacturer or vendor to oversee the testing of equipment once installed to insure that the equipment is fully operational.

(h) Laboratory work for specialty testing or inspections not ordinarily done by the signatory local unions.

(i) All work done by employees of any State agency, authority or entity or employees of any municipality or other public employer.

(j) This Agreement does not apply to work covered under a collective bargaining agreement between a contractor and a local union in the outside line branch of the International Brotherhood of Electrical Workers, including, but not limited to, construction of electrical transmission and distribution lines (including above-ground and below-ground lines), catenary and trolley facilities, switch yards, and substations.

The Unions agree that there shall be no interference with or disruption of work, of those contractors, employers, and employees exempted from coverage of this Agreement by subparagraph (a) through (i) above.

Section 3. Contract Award and Consent to Agreement.

(a) The Owner, and/or Contractors, as appropriate, have the absolute right to award contracts or subcontracts on the Project notwithstanding the existence or nonexistence of any agreements between such Contractor and any Union party provided only that such Contractor is willing, ready and able to execute and comply with this Agreement or a Letter of Assent thereto, should such Contractor be awarded work covered by this Agreement.

(b) All subcontractors of a Contractor, of whatever tier, who have been awarded contracts of work covered by this Agreement, on or after the

effective date of this Agreement, shall also be required to accept and to be bound by the terms and conditions of this Agreement, and shall evidence their acceptance by the execution of this Agreement or a Letter of Assent thereto, prior to the commencement of work. A copy of this Agreement or Letter of Assent executed by each Contractor shall be immediately provided to the Union upon execution.

Section 4. Stand-Alone Agreement. This Agreement is a stand-alone Agreement. While this Agreement expressly does not incorporate any local area collective bargaining agreements, such local area collective bargaining agreements may be referenced for the limited purposes as hereinafter set forth in this Agreement. However, to the extent, if any, that any provisions of this Agreement conflict with any provision of a local area collective bargaining agreement, the provisions of this Agreement shall control, except for all work performed under the NTL Articles of Agreement, the National Stack/Chimney Agreement, the National Cooling Tower Agreement, all instrument calibration work and loop checking shall be performed under the terms of the UA/IBEW Joint National Agreement for Instrument and Control Systems Technicians, and the National Agreement of the International Union of Elevator Constructors, with the exception of Articles VII, VIII and X of this Agreement, which shall apply to such work.

Section 5. Craft Jurisdiction. This Agreement shall recognize the traditional craft jurisdictions of the signatory unions. Any and all jurisdictional disputes shall be settled in accordance with Article VIII below. While this Agreement is a stand-alone Agreement, the Agreement will utilize the local area collective bargaining agreements of signatory locals, not state-wide agreements or other special project agreements, as a reference to define the signatory local unions' craft jurisdiction.

Section 6. Subcontracting. The Owner agrees that neither it nor any of its contractors or subcontractors will subcontract any work covered by this Agreement to be done on the Project except to a person, firm or corporation who is or agrees to become party to this Agreement. Any contractor or subcontractor working on the Project shall, as a condition to working on said Project, become signatory to and perform all work under the terms of this Agreement. Contractors who are signatory to local are collective bargaining agreements shall be bound by the terms of their

respective local collective bargaining agreements on subcontracting to the extent such terms are consistent with Article IV, Section 2 of this Agreement. Disputes concerning compliance with such local subcontracting provisions for this Project shall be subject to all of the dispute resolution provisions of this Agreement.

Section 7. Liability. It is understood that the liability of the Contractor and the liability of the separate Unions under this Agreement shall be several and not joint. The Unions agree that this Agreement does not have the effect of creating any joint employer status between or among the Owner, Construction Supervisor and/or any Contractor, and neither the Owner nor Construction Supervisor shall assume any liabilities of the Contractors.

Section 8. Abatement of Agreement. As areas of covered work on the Project are accepted by the Owner, this Agreement shall have no further force or effect on such areas except where the Contractor is directed by the Owner to engage in repairs or punch list modifications.

Section 9. Miscellaneous. Notwithstanding any other provision of this Agreement, this Agreement applies and is limited to the recognized and accepted historical definition of demolition and new construction work under the direction of and performed by the contractor(s), of whatever tier, who have contracts awarded for such work on the project. Such work shall include site preparation work and dedicated off-site work except for the contractors and subcontractors specifically excluded in this Article II. Any off-site prefabrication of any building materials, systems and/or components traditionally performed on site shall be performed by the appropriate craft signatory to this Agreement and approved by the owner.

ARTICLE V

LABOR/MANAGEMENT COOPERATION

JOINT ADMINISTRATIVE COMMITTEE

Section 1. The parties to this Agreement shall establish a Project Joint Administrative Committee ("Committee"). This Committee will be a two-person committee comprised of one member each appointed by the Owner (or its designee) and the Unions, with an alternate appointee Union member available to replace the regular appointee when a problem or grievance concerns the regular appointee's Union. Each member of the Committee shall designate an alternate who shall serve in the absence of

the member for any purpose contemplated by this Agreement.

Section 2. The Committee shall meet at least quarterly, or more often if special circumstances warrant, to discuss the administration of the Agreement, the progress of the Project, labor/management problems that may arise, and any other relevant matters. Any need for interpretation which might arise from the application of the terms and conditions of the Agreement shall be referred directly to the Committee for resolution.

ARTICLE VI

UNION RECOGNITION AND EMPLOYMENT

Section 1. Pre-Hire Recognition. Each Contractor and subcontractor recognizes the Unions as the sole and exclusive bargaining representatives of all craft and trade employees within their respective jurisdictions working on the Project under the Agreement.

Section 2. Contractor's Right of Selection. Each Contractor shall have the right to determine the competency of all employees, the number of employees required and shall have the sole responsibility for selecting employees to be laid off. To the extent any training or vendor education is required to fill any position, said training shall be undertaken at no cost or expense to Owner.

Section 3. Union Referral. For local Unions having a job referral system, each Contractor agrees to comply with such system, and the referral system shall be used exclusively by such Contractor, except as modified by this Article. Such job referral system will be operated in a non-discriminatory manner and in full compliance with Federal, state, and local laws and regulations requiring equal employment opportunities and nondiscrimination, and referrals shall not be affected in any way by the rules, regulations, bylaws, constitutional provisions or any other aspects or obligations of union membership, policies or requirements. The Union shall indemnify and hold each Contractor harmless with respect to any claim arising out of how the Union operates and administers its referral system. All hiring procedures, including related practices affecting apprenticeship and training, will be operated so as to facilitate the ability of the contractors to meet any and all equal employment opportunity/affirmative action obligations. The Contractor may reject any referral and request another, different referral; provided, however, the Contractor shall furnish,

upon request from the Union, a written explanation for the rejection.

Section 4. Lack of Job Referral System. In the event that a signatory Local Union does not have a job referral system as set forth in Section 3 above, the Contractor shall give the Union a forty-eight (48) hour opportunity to refer applicants. The Contractor shall notify the Union of employees hired from any source other than referral by the Union.

Section 5. Unavailability of Union Referrals. In the event that local Unions are unable to fill any requisitions for qualified employees within forty-eight hours (48) after such requisition is made by the Contractor (Saturdays, Sundays, and Holidays excepted), the Contractor may employ applicants from any other available source. The Contractor shall inform the Union of the name, address and telephone number of any applicants hired from other sources and refer the applicant for the Local Union for dispatch to the Project.

Section 6. Union Best Efforts. The Local Unions will exert their utmost efforts to recruit sufficient numbers of skilled craft workers to fulfill the manpower requirements of each Contractor, including calls to local unions in other geographic areas when its referral lists have been exhausted. The parties to this Agreement support the development of increased numbers of skilled construction workers from the residents of the area of the Project. Toward that end, the Unions agree to encourage the referral and utilization, to the extent permitted by law and the hiring hall procedures, of qualified residents as journeymen, apprentices and trainees on the Project.

ARTICLE VII

GRIEVANCE ARBITRATION PROCEDURE

Section 1. This Agreement is intended to provide close cooperation between management and labor. Each of the Unions will assign a representative to this Project for the purpose of completing the construction of the Project economically, efficiently, continuously, and without interruptions, delays, or work stoppages.

Section 2. The Contractors, Unions, and the employees, collectively and individually, realize the importance to all parties to maintain continuous and uninterrupted performance of the work of the Project, and agree to resolve disputes in accordance with the grievance-arbitration provisions set forth in this Article.

Section 3. Any question or dispute arising out of and during the term of this

Agreement (other than trade jurisdictional disputes) shall be considered a grievance and subject to resolution under the following procedures:

Step 1. (a) When any employee subject to the provisions of this Agreement feels he or she is aggrieved by a violation of this Agreement, he or she, through his or her local union business representative or job steward, shall, within five (5) working days after the occurrence of the violation, give notice to the work-site representative of the involved Contractor stating the provision(s) alleged to have been violated. The business representative of the local union or the job steward and the work-site representative of the involved Contractor shall meet and endeavor to adjust the matter within three (3) working days after timely notice has been given. The representative of the Contractor shall keep the meeting minutes and shall respond to the Union representative in writing at the conclusion of the meeting but not later than twenty-four (24) hours thereafter. If they fail to resolve the matter within the prescribed period, the Local Union may, within forty-eight (48) hours thereafter, pursue Step 2 of the Grievance Procedure, provided the grievance is reduced to writing, setting forth the relevant information concerning the alleged grievance, including a short description hereof, the date on which the grievance occurred, and the provisions of the Agreement alleged to have been violated.

(a) Should the Local Union(s) or the Project Contractor or any Contractor have a dispute with the other party and if, after conferring, a settlement is not reached within three (3) working days, the dispute may be reduced to writing and proceed to Step 2 in the same manner as outlined herein for the adjustment of an employee complaint.

Step 2. The International Union Representative and the involved Contractor shall meet within seven (7) working days of the referral of a dispute to this second step to arrive at a

satisfactory settlement thereof. Meeting minutes shall be kept by the Contractor. If the parties fail to reach an agreement, the dispute may be appealed by the Union, in writing, in accordance with the provisions of Step 3.

Step 3. (a) If the grievance has been submitted but not adjusted under Step 2, either party may request in writing, within seven (7) calendar days thereafter, that the grievance be submitted to an Arbitrator mutually agreed upon by them. The Contractor and the involved Union shall attempt mutually to select an arbitrator, but if they are unable to do so, they shall request the Federal Mediation and Conciliation Services (FMCS) to provide them with a list of arbitrators from which the Arbitrator shall be selected. The rules of FMCS shall govern the conduct of the arbitration hearing. The decision of the Arbitrator shall be final and binding on all parties. The fee and expenses of such Arbitration shall be borne equally be the Contractor and the involved Local Union(s).

Section 4. Failure of the grieving party to adhere to the time limits established herein shall render the grievance null and void. Failure of the Contractor to adhere to the time limits established herein shall result in the grievance being sustained. The time limits established herein may be extended only by written consent of the parties involved at the particular step where the extension is agreed upon. The Arbitrator shall have the authority to make decisions only on issues presented to him or her, and he or she shall not have authority to change, amend, add to or detract from any of the provisions of this Agreement.

Section 5. The Owner shall be notified of all actions at Steps 2 and 3 and shall, upon their request, be permitted to participate in all proceedings at these steps.

ARTICLE VIII

JURISDICTIONAL DISPUTES

Section 1. The assignment of work will be the responsibility of the Contractor performing the work involved and such work assignments will be in accordance with decisions issued under the Plan for the Settlement of Jurisdictional Disputes in the

Construction Industry (the "Plan"), or any successor Plan, adopted by the National Building and Construction Trades Department.

Section 2. All jurisdictional disputes on this Project, between or among Building and Construction Trades Unions and employers, parties to this Agreement, shall be settled and adjusted according to the present Plan established by the Building and Construction Trades Department or any other plan or method of procedure that may be adopted in the future by the Building and Construction Trades Department. Decisions rendered shall be final, binding and conclusive on the Contractors and Unions parties to this Agreement.

Section 3. All jurisdictional disputes shall be resolved without the occurrence of any strike, work stoppage, or slow-down of any nature, and the Contractor's assignment shall be adhered to until the dispute is resolved. Individuals violating this section shall be subject to immediate discharge.

Section 4. Each Contractor will conduct a pre-job conference with the appropriate Council prior to commencing work. The Owner will be advised in advance of all such conferences and may participate if they wish.

ARTICLE IX
MANAGEMENT'S RIGHTS

Section 1. Exclusive Owner - Workforce. Except as otherwise provided in this Agreement, the Owner (or its designee) and the Contractors retain the authority to manage their operations and workforces.

Section 2. Materials, Design, Machinery, Equipment. There shall be no limitation or restriction by a signatory Union upon a Contractor's choice of materials or design, nor, regardless of source or location, upon the full use and utilization of equipment, machinery packaging, pre-cast, pre-fabricated, pre-finish, or pre-assembled materials, tools or other labor saving devices. The on-site installation or application of all items shall be performed by the craft having jurisdiction of such work; provided, however, that installation of specialty items may be performed by employees employed under this Agreement who may be directed by other personnel in a supervisory role, in circumstances requiring special knowledge of the particular items.

Section 3. New Technology, Equipment. The use of new technology, equipment, machinery, tools and/or labor saving devices and methods of performing

work may be initiated by any Contractor from time to time during the Project. The Union agrees that it will not in any way restrict the implementation of such new devices or work methods.

Section 4. Disputes. If there is any disagreement between any Contractor and the Union concerning the manner or implementation of such device or method of work, the implementation shall proceed as directed by the Contractor, and the Union shall have the right to grieve and/or arbitrate the dispute as set forth in Article VII of this Agreement.

ARTICLE X

WORK STOPPAGES

Section 1. No Strikes or Work Disruptions. There shall be no strike, sympathy strike, jurisdictional strike, recognitional strike, slowdown, sabotage, work to rule, sickout, sit down, picketing of any type (including informational picketing), handbilling, boycott, interruption of work or any disruptive activity that interferes with or interrupts in any way work on the Project. The applicable local union shall not sanction, aid or abet, encourage or continue any work stoppage, strike, picketing or other disruptive activity which violates this Article and shall undertake all reasonable means to prevent or to terminate any such activity. No employee shall engage in activity which violates this Article. Any employee who participates in or encourages any activity which violates this Article shall be subject to disciplinary action, including discharge, and if justifiably discharged for the above reasons, shall not be eligible for rehire on the same project for a period of not less than ninety (90) days. Further, if the Local Union is unable to provide qualified replacements for those employees who are in violation of this Article by the beginning of the next shift, the Employer is free to hire from any source.

Section 2. Union Responsibilities. The Local Union shall not be liable for acts of employees for which it has no responsibility. The principal officers of the Local Union will immediately instruct, order and use their best efforts to cause the members of the Local Union they represent to cease any violations of this Article. If it complies with this obligation, the Local Union shall not be responsible for unauthorized acts of employees it represents.

ARTICLE XI

WAGES AND BENEFITS

Section 1. Wages. All employees covered by this Agreement shall be classified in accordance with work performed and paid 100% of the wages and 100% of the fringe benefits as established in the respective Union's Local Area Collective Bargaining Agreement and any subsequent modifications thereto. The Contractor, upon request, shall provide the Unions and Owner with substantiation that wages and benefits are being paid on the Project. The Unions shall provide the Owner, and any Contractor or subcontractor that is party to this Agreement, with wage, fringe benefit and dues reporting forms.

Section 2. Payment of Benefits/Contributions. Each Contractor will also pay all required contributions in the amounts required by Section 1 of this Article to the established employee benefit funds that accrue to the direct benefit of the employees (such as pension and annuity, health and welfare, vacation, apprenticeship, training funds). With respect to contributions required in this Section to Employer-Union jointly trusted funds, the Contractor adopts and agrees to be bound by the written terms of the legally established trust agreement specifying the detailed basis on which payments are to be made into, and benefits paid out of, such Trust Funds. The Contractor authorizes the parties to such Trust Funds to appoint Trustees and successor Trustees to administer the Trust Funds and hereby ratifies and accepts the Trustees so appointed as if made by Contractor.

Section 3. Non-Affiliated Labor Organizations. The Contractor shall deduct from each employee's wages all uniform dues and working assessments the employee has voluntarily authorized in writing as set forth in the Employee's Local Collective Bargaining Agreement. If a labor organization is not affiliated with the Council, and supplies its members or referrals for work on the Project, such labor organization shall pay to the Council the dues and assessments it would owe the Council if affiliated, for all periods during which the labor organization has members or referrals working on the Project. Any disputes under this paragraph shall be resolved exclusively between the labor organization and the Council by using the grievance procedure appearing in Article VII, as provided herein. All grievances shall be reduced to writing within thirty (30) days of the date on which the aggrieved party

discovered the dispute. The grievance shall be initiated at Article VII, Section 3, Step 3.

ARTICLE XII
LOCAL UNION NEGOTIATIONS DURING
THE PENDENCY OF THE AGREEMENT

Section 1. All parties to this Agreement understand and acknowledge that some crafts who will be working on the Project are covered by local collective bargaining agreements that will expire prior to the projected completion of the Project. All parties understand and agree that irrespective of whether such local collective bargaining agreement negotiations are successful or unsuccessful, there shall be no strike, sympathy strike, jurisdictional strike, recognitional strike, slowdown, sabotage, work to rule, sickout, sit down, picketing of any type (including informational picketing), handbilling, boycott, interruption of work or any disruptive activity that interferes with or interrupts in any way work on the Project by any Union involved in such local negotiations, or by any of its members, nor shall there be any lockout by a Contractor on the Project affecting such union or its members during the course of such negotiations. Irrespective of the status of any such local collective bargaining agreement negotiations, the affected Union and all of its members will observe and fully comply with the provisions of this Agreement. Should any Local Union fail or refuse to provide and/or refer qualified employees for work on the Project during an economic strike, any affected Contractor shall be permitted to utilize the procedures appearing in Article VI, Section 5 of this Agreement.

Section 2. Wage/Benefit Increases. Should a craft covered by this Agreement negotiate an increase in wages or an increase in benefits with any Contractor to become effective during the term of the Project, those wage and/or benefit increases shall be paid by the affected Contractor, as of the effective date of those increases, to those employees in that craft performing work covered by this Agreement.

ARTICLE XIII
HOURS OF WORK, OVERTIME, SHIFTS AND HOLIDAY

Section 1. Work Day and Work Week. Except as provided in Section 4, the first shift shall consist of eight (8) or ten (10) hours per day between the hours of 6:00 a.m. and 5:30 p.m., plus one-half (1/2) hour unpaid for lunch, approximately mid-way

through the shift. Forty (40) hours per week shall constitute a regular week's work, whether consisting of five (5) eight (8) eight hours days, or four (4) ten (10) hour days. The work week will start on Monday and conclude on Sunday. A uniform starting time will be established for all crafts on each project or segment of the work. Nothing herein shall be construed as guaranteeing any employee eight (8) or ten (10) hours per day or forty (40) hours per week. The Union(s) shall be informed of the work starting time set by the contractor at the pre job conference which may be changed thereafter upon three (3) days' notice to the Union(s) and the employees. A second shift, if used, shall consist of eight hours between 3:00 p.m. and 1:00 a.m.; a third shift, if used, shall begin between 10:00 p.m. and 1:00 a.m. For purposes of Section 3, the third shift shall be considered as part of the prior day's work.

Section 2. Starting Times. Employees shall be at their place of work at the starting time and shall remain at their place of work (as designated by the Contractor) performing their assigned functions until quitting time, which is defined as the scheduled end of the shift. The parties reaffirm their policy of a fair day's work for a fair day's wage. There shall be no pay for time not worked unless the employee is otherwise engaged at the direction of the Contractor.

Section 3. Overtime. Overtime shall be defined as all hours worked in excess of forty (40) hours in a work week or, for 8 hour shifts, in excess of eight (8) hours per day; or for 10 (ten) hour shifts for work in excess of 10 hours per day; such work and work performed on Saturdays shall be paid at one and one-half times the straight time rate of pay. However, in scheduled four (4) day/ten hour shift work weeks, Friday may be scheduled as a "makeup" day at straight time to make up for a day lost (Monday through Thursday) due to inclement weather. In addition, if a "make-up" day is scheduled, all employees directed to work on such day will be guaranteed a minimum of four (4) hours work or pay. In any week in which employees on the Project are scheduled on four/ten hour shifts, an employee whose first day of work on the Project begins on Wednesday or later day of the schedule shall be paid, during the first week of his employment only, time-and-one-half for all hours worked in excess of eight in a day or each day he works during said week. Work on Sundays and holidays shall be at double time. There shall be no restriction on any contractor's scheduling of overtime or the non-discriminatory designation of employees who will work. The

contractor shall have the right to schedule work so as to minimize overtime. There shall be no pyramiding of overtime pay under any circumstances.

Section 4. Shifts.

(a) Shift work may be performed at the option of the Contractor(s) upon three (3) days' prior notice to the Union and shall continue for a period of not less than five (5) working days. Saturdays and Sundays, if worked, may be used for establishing the five (5) day minimum work shift. If two shifts are worked, each shall consist of eight (8) hours of continuous work exclusive of a one--half (½) hour non-paid lunch period. Any third shift shall consist of seven (7) hours of continuous work exclusive of one-half (½) hour non-paid lunch period for eight (8) hours pay. A premium of $.25 per hour shall be paid for work on the second shift and $.50 per hour for work on the third shift.

(b) The Contractor may establish a work week of four (4) consecutive ten (10) hour work days (exclusive of one-half (½) hour unpaid lunch, approximately midway through the shift) between Monday through Thursday.

Section 5. Minimum Pay. An employee who reports for work at the regular starting time and for whom no work is provided shall receive pay equivalent to two (2) hours at the applicable hourly rate, provided the employee at the employer's discretion remains available for work. Any employee who reports for work and for whom work is provided shall be paid for actual time worked but not less than two (2) hours. It will not be a violation of this agreement when the employer considers it necessary to shut down to avoid the possible loss of human life, because of an emergency situation that could endanger the life and safety of an employee. In such cases, employees will be compensated only for the actual time worked. In the case of a situation described above where the employer requests employees to remain available for work, the employees will be compensation for such time. If a project is shut down because of weather, employees, who report for work, shall be paid actual time worked but not less than two (2) hours. Procedures for prior notification of work cancellation shall be determined at the pre-job conference. The provisions of this section are not applicable where the employee voluntarily quits or lays off.

Section 6. Holidays. Holidays shall be New Year's Day, Good Friday, Memorial Day, Independence Day, Labor Day, Veteran's Day, Thanksgiving Day, the

Day after Thanksgiving Day, and Christmas Day. A holiday falling on Saturday shall be observed on the preceding Friday. A holiday falling on Sunday shall be observed on the following Monday.

Section 7. Meal Period. The Contractor will schedule a meal period of not more than one-half hour duration at the work location at approximately the mid-point of the scheduled work shift (4 hours in a five day work week, 5 hours in a four-day work week), consistent with Section 1; provided, however, that the Contractor may, for efficiency of the operation, establish a schedule which coordinates the meal periods of two or more crafts. If an employee is required to work through his meal period, he shall be compensated for the time worked at the applicable overtime rate and the employee shall, when work permits, eat his lunch "on the fly".

Section 8. No Organized Work Breaks. There will be one (1) break during the first four (4) hours of a shift which shall be taken at the employee's work station. Individual nonalcoholic beverage containers will be permitted at the employee's work station.

Section 9. Helmets to Hardhats.

(a) The Employers and the Unions recognize a desire to facilitate the entry into the building and construction trades of veterans who are interested in careers in the building and construction industry. The Employers and Unions agree to utilize the services of the Center for Military Recruitment, Assessment and Veterans Employment (hereinafter "Center") and the Center's "Helmets to Hardhats" program to serve as a resource for preliminary orientation, assessment of construction aptitude, referral to apprenticeship programs or hiring halls, counseling and mentoring, support network, employment opportunities and other needs as identified by the parties.

(b) The Unions and Employers agree to coordinate with the Center to create and maintain an integrated database of veterans interested in working on this Project and of apprenticeship and employment opportunities for this Project. To the extent permitted by law, the Unions will give credit to such veterans for bona fide, provable past experience.

ARTICLE XIV

APPRENTICES

Section 1. Need For. The parties recognize the need to maintain continuing support of programs designed to develop adequate numbers of competent workers in the construction industry. The Contractor(s) will, accordingly, employ apprentices in their respective crafts to perform work on the Project in accordance with Section 2 below.

Section 2. Ratios. The Union agrees to cooperate with the Contractor in furnishing qualified apprentices as requested and if available. Apprentices shall perform the work of their craft in accordance with the ratios and terms in their local area collective bargaining agreements. To the extent requested by Owner, the Contractor(s) may use the maximum number of apprentices permitted by local collective bargaining agreements.

ARTICLE XV

DRUG AND ALCOHOL POLICY

Section 1. Drug and Alcohol Policy. All parties understand and agree that a drug and alcohol policy, approved by the Council, will be in force for all work performed under the Agreement. The drug and alcohol policy will prohibit the use, sale, transfer, purchase and/or possession of a controlled substance, alcohol and/or firearms while on the Project's premises and will require testing of employees. The drug and alcohol policy, attached hereto as Appendix 2, is incorporated into and made part of this Agreement and is implemented for all Contractors and employees working on the Project.

ARTICLE XVI

NON-DISCRIMINATION

Section 1. Policy. It is the continuing policy of the Owner, the Contractors and the Unions that the provisions of this Agreement shall be applied without discrimination because of age, race, sex, color, religion, creed, national origin, sexual orientation or any other basis prohibited by applicable law.

ARTICLE XVII

SOLE AND COMPLETE AGREEMENT

Section 1. The parties agree that this Agreement constitutes the sole and complete agreement between them governing the rates of pay and working conditions

of the construction employees working on the Project. This Agreement settles all demands and issues on the matters subject to collective bargaining and shall not be modified or supplemented in any way except by written agreement executed by the Owner and all parties.

ARTICLE XVIII

SEPARABILITY AND SAVINGS CLAUSE

Section 1. Intent of Parties. If any article or section of this Agreement shall be held invalid by law or by a tribunal of competent jurisdiction, or if compliance with or enforcement of any article should be restrained pending a final determination as to its validity, the remainder of this Agreement shall not be affected and shall remain in full force and effect. In the event that any article or section is held invalid, the parties hereto shall, upon the request of the Unions, enter into collective bargaining negotiations for the purpose of arriving at a mutually satisfactory replacement for such article during the period of invalidity or restraint. If the Owner and the Council cannot agree on a mutually satisfactory replacement, either party shall be permitted to submit its demand to formal interest arbitration under the Rules of Federal Mediation and Conciliation Service.

Section 2. Force of Agreement. The parties recognize the right of the Owner to withdraw, at its absolute discretion, the utilization of this Agreement as part of any bid specification should a court of competent jurisdiction issue any order which could result, temporarily or permanently, in a delay of the bidding, awarding, and/or construction work on the Project. Notwithstanding such an action by the Owner, or such court order, the parties agree that the Agreement shall remain in full force and effect on the Project, to the maximum extent legally possible. It is hereby agreed that this Agreement covers all of the signatory local unions listed below.

Section 3. Delegation. The Owner, in its sole and absolute discretion has the right to delegate its duties hereunder to a representative and/or designee who may be either an employee of Owner or a third party with whom Owner has contracted for contractor services.

APPENDIX 2

EMPLOYEE DRUG AND ALCOHOL TESTING POLICY

SPECIFICATIONS

The Owner is committed to providing a safe workplace for the workers assigned the Project, promoting high standards of employment health, and fostering productivity that satisfies its quality expectations. Consistent with the intent and spirit of this commitment, the Owner and ECOB & CTC have established a substance abuse testing specification for the Project with the goal of maintaining a work environment that is free from the effects of the use of illegal drugs and alcohol. The Owner will implement the terms of this policy.

This specification is not intended as a substitute for the Contractors' complete written substance abuse policy. Normally, such policies include other important features, including, but not limited to, an employee education and awareness Program, a supervisor training program and an employee assistance program.

The policy for this Project requires that any construction employee entering the project site will comply with the substance abuse testing requirements as outlined in this section. The Owner reserves the right to amend this specification upon written notice to the Contractor and the Unions on the Project. The parties to this agreement shall recognize the Drug Free Work Site Program as implemented through participating Unions and/or Contractors as administered by the contractor, or for contractors who are not signatory to agreements with signatory unions belonging to ECOB & CTC, and their core employees, an equivalent program that meets the specifications, contractual requirements, and testing requirements as set forth in this Appendix 1.

CONTRACTUAL REQUIREMENTS

All Contractors must have and enforce a written Substance Abuse Program incorporating the testing requirements, term, and conditions set forth in this specification. This specification is applicable to all employees, current and prospective, in order to be eligible to perform work at the Project. The Contractors must comply with the specification. Supplies, vendors, and visitors are subject to confirmation of their abstinence from the possession or use of substances indicated in this specification. A copy of each contractor's substance abuse program must be

submitted to the Owner for approval prior to commencement of any work on the Project site.

The substance abuse program must apply to all employees working on the Project and subcontractors' of any of tier working on the Project site. This includes workers, new hires, replacement workers, and supervisory personnel. No employee or prospective employee of a Contractor shall be permitted to work on the Project site unless such employee has submitted to testing by this specification and unless the results of such testing are negative as hereinafter defined. The Contractor must provide the Owner with a Monthly Summary Report of the Substance Abuse Program compliance.

All Contractors must train their respective employees in methods that will allow them to recognize substance abusers. Supervisory Employees of the Owner or its subcontractor shall be trained to take action, and to confront a substance abuser in a manner consistent with generally accepted safety-training procedures.

The cost of implementing the Substance Abuse program shall be borne by each respective Contractor affected by this specification.

Suppliers, vendors, and visitors must become signatory to the terms of this specification and their abstinence from substance abuse, and their continued avoidance of violations of the specification at the project site. Furthermore, in the event of an incident and/or accident occurrences involving suppliers, vendors, and/or visitors, the same agrees to submit to the substance abuse testing when requested. Refusal to comply would be grounds to have the supplier, vendor, or visitor permanently barred from the Project site by regulators.

TESTING REQUIREMENTS

The Project requires:

- Post-offer/Pre-engagement drug and alcohol testing.
- Testing for reasonable suspicion of illegal drug use or alcohol use.
- Post accident and post incident drug and alcohol testing upon reasonable suspicion.
- Drug testing following discovery of illegal or unauthorized drugs or paraphernalia as creating reasonable suspicion.

All Prime Contractors must perform post-offer/pre-engagement, and post

accident/incident testing upon reasonable suspicion, as follows:

a. All drug testing must be conducted by a National Institute of Drug Abuse (NIDA) certified laboratory with test results interpreted by a licensed medical review officer (MRO).
b. The initial screen tests for alcohol shall be performed by using either a saliva test or breathalyzer test comparable to the type used by state or local law enforcement officials. Furthermore, alcohol confirmatory tests shall be performed by using either blood alcohol test or a Breathalyzer test comparable to the type used by state or local law enforcement officials.
c. Evidence of the negative test results of individual employees required by this specification shall be furnished to the Owner prior to the commencement of work by the individual employee and promptly after performance of any subsequent testing required by this specification. Acceptable negative test result format.
    - A certificate signed by the testing laboratory, setting forth the nature and results of performed; or
    - An identification card signed by the respective Prime Contractor and issued to the individual employee, setting forth as reported on a certificate issued by the testing laboratory. The name of the testing laboratory shall also appear on the identification card; provided the affected employee authorizes the issuance of such identification card.

COMPLIANCE PROCEDURE

The Owner reserves the right to audit any substance abuse program required by this specification to verify compliance results within twenty-four (24) hours of notification of the intent to audit. The Owner shall have free right of access to all relevant records of the Prime Contractor and their subcontractors and supplies for this purpose, provided such record disclosures are within the scope of the States guidelines pertaining to confidentiality of employee records.

The Contractor's pre-engagement employees who receive a positive test result shall immediately leave the Project Site. Transportation of employees receiving the positive test result is the direct responsibility of the employing Prime Contractor, including employees of its subcontractors. Furthermore, pre-engagement employees

receiving a positive test shall not be permitted to return to the Project Site earlier than 90 days from the date of the positive test. At this time the employee may begin the process outlined by this specification again.

DEFINITIONS/ CONFIDENTIALITY/RULES- DISCIPLINARY ACTIONS- GRIEVANCE PROCEDURES

1. DEFINITIONS:

(a) Company Premises - the term "Company Premises" as used in this policy includes all property, facilities, land, building, structures, automobiles, trucks and other vehicles owned, leased or used by the Contractor on the Project. Construction job sites for which the Contractor has responsibility are included.

(b) Prohibited Items & Substances - Prohibited substances include illegal drugs (including controlled substances, look alike drugs and designer drugs, alcoholic beverages, and drug paraphernalia in the possession of or being used by an employee on the job.

(c) Employee - Individuals, who perform work for the Contractor, including, but not limited to management, supervision, engineering, craft workers and clerical personnel.

(d) Accident - Any event resulting in injury to a person or property to which an employee, or contractor/contractor's employee, contributed as a direct or indirect cause.

(e) Incident - An event which has all the attributes of an accident, except that no harm was caused to person or property.

(f) Reasonable Cause - Reasonable cause shall be defined as tardiness, excessive absenteeism, and erratic behavior such as noticeable imbalance, incoherence, and disorientation.

2. CONFIDENTIALITY

(a) All parties to this policy and program have only the interests of employees in mind; therefore, encourage any employee with a substance abuse problem to come forward and voluntarily accept our assistance in dealing with the illness. An employee assistance program will provide guidance and direction for you during your recovery period. If you volunteer for help, the Contractor

will make every reasonable effort to return you to work upon your recovery. The Contractor will also take action to assure that your illness is handled in a confidential manner.

(b) All actions taken under this policy and program will be confidential and disclosed only to those with a "need to know."

(c) When a test is required, the specimen will be identified with a code number, not by name, to insure confidentiality of the donor. Each specimen container will be properly label and made tamper proof. The donor must witness this procedure.

(d) Unless an initial positive result is confirmed as positive, it shall be deemed negative and reported by the laboratory as such.

(e) The handling and transportation of each specimen will be properly documented through the strict chain of custody procedures.

3. RULES - all employees must report to work in a physical condition that will enable them to perform their jobs in a safe and efficient manner. Employees shall not:

(a) Use, possess, dispense or receive prohibited substances on or at the Project job site; or

(b) Report to work at or on the Project with any measurable amount of prohibited substances in their system.

4. DISCIPLINE - When the Contractor has reasonable cause to believe an employee is under the influence of a prohibited substance, for reasons of safety, the employee may be suspended until test results are available. If no test results are received after three (3) working days, the employee, if available, shall return to work with back pay. If the test results prove negative, the employee shall be reinstated with back pay. In all other cases:

(a) Applicants testing positive for drug use will not be hired.

(b) Employees who have not voluntarily come forward, and who test positive for a drug use, will be terminated.

(c) Employees who refuse to cooperate with testing procedures will be terminated.

(d) Employees found in possession of drugs or drug paraphernalia will be terminated.

(e) Employees found under the influence of alcohol while on duty, or while operating a company vehicle, will be subject to termination.

5. PRESCRIPTION DRUGS - Employees using a prescribed medication which, in their physician's opinion, may impair the performance of their duties, either mental or motor functions, must immediately inform the supervisor of such prescription drug use if instructed by their physician to do so. For the safety of all employees, the Contractor will consult with you and your physician to determine if a reassignment of duties is necessary. The Contractor will attempt to accommodate your needs by making an appropriate reassignment. However, if a reassignment is not possible, you will be placed on temporary medical leave until released as fit for duty by the prescribing physician.

Appendix B

Prevailing Wage Requirements and Rates

Overview

This project will utilize **Davis Bacon** prevailing wage rates. All contractors and subcontractors are required to comply with all Prevailing Wage Requirements in the Ohio Revised Code. These requirements are outlined below and sample documents are contained in the following pages and will be utilized to comply with these requirements. **Please note that the City of Canton will withhold payroll and/or retainage for a pay application or for the project in total until all prevailing wage issues are resolved.**

Payroll Dates Form

Must be submitted to the Prevailing Wage Coordinator (PWC) on or before the date your company starts work under the contract. It is to be completed with the **actual payroll dates** and not a day of the week. This requirement applies to all contractors/subcontractors.

Letter of Authorization for Payroll Signature

The person signing the certified payrolls must be an Owner or Corporate Officer of the company, or an Authorization letter must be completed and sent to the Prevailing Wage Coordinator. The document sent **must be** the **original signed notarized document**. If the person signing the payroll changes during the course of the project then a new Letter of Authorization for payroll signature must be submitted.

Fringe Benefits Form

Please complete and return along with the payroll dates form and letter of authorization for payroll signature form.

Notification to Employee Form

If your company is a **non-union company** you **must provide a completed Notification form to each employee working on this site and provide the PWC a copy** (wage and fringe benefit amounts on Notification must match amounts listed on payrolls), the form must have the Prevailing Wage Coordinator information, if you are a **union company** you need to send the PWC **a copy of the contract/agreement your company has with the local Trade Union(s)**.

Certified Payroll

The **first certified payroll** must be sent to the Prevailing Wage Coordinator **within two weeks of 1st pay period on the job**, payrolls must be sent **weekly** to the Prevailing Wage Coordinator. If paying fringe benefits in "cash," include the payment of fringes in the base rate of pay. If paying fringe benefits into bona fide "plans, funds, or programs," list the amounts paid into each plan/program on the certified payroll. If the payroll form you use does not have sections for fringe benefits, you must provide the information in the remarks section on the payroll or as an attachment to the certified payroll. Any payroll form/document the contractor uses must provide all of the required information as listed on the WH 347 payroll form. (**You must provide the original signed documents to the Prevailing Wage Coordinator before you will receive your final payment**.)

Affidavit of Compliance
When each contractor/subcontractor has completed their work on the job site they're required to submit a Final Affidavit of Compliance before the primary contractor receives their final payment and any retainer. Must send Prevailing Wage Coordinator original signed document.

Apprentices
Any/all apprentices working on this project must be registered with the State of Ohio Apprenticeship Council or the U.S. Department of Labor, Employment and Training Administration, Bureau of Apprentiship and Training (BAT), apprentices on site cannot exceed ratios of apprentices/trainees to journeymen specified in the approved program. Contractors/subs must provide the Prevailing Wage Coordinator a copy of the Apprenticeship Agreement from the program for each apprentice on the project with the first payroll on which they appear. You must provide the apprentice level/year, i.e. 1, 2, 3, etc. and/or percent of Journeyman's pay rate, i.e. 50%, 55%, etc. on the certified payrolls.

Subcontractors
If any subcontractors will be used during this project then a list of subcontractors including their name, address, and phone number must be provided to the Prevailing Wage Coordinator. The Prime contractor is responsible for all forms to be furnished to subcontractors, **along with wage rates** or any other modification vital to the project.

Prevailing Wage Rates
Attached are the State of Ohio **Davis Bacon** wage rates that will apply to this project. All applicable prevailing wage rates must be posted on the job site for the duration of the project.

PAYROLL DATES

PREVAILING WAGE LAW

Instructions to the Contractor: Please read the following and provide the required information noted on this form. This document must be submitted to the Prevailing Wage Coordinator for the Public Authority on or before your company starts any work under a contract for a public improvement. This requirement is also applicable to your subcontractors. Please make a copy of this document available to them. The prevailing wage laws states that contractors are responsible for the actions of their subcontractors.

While completion of Form WH-347 is optional, it is mandatory for covered contractors and subcontractors performing work on Federally financed or assisted construction contracts to respond to the information collection contained in 29 C.F.R. §§ 3.3, 5.5(a). The Copeland Act (40 U.S.C. § 3145) contractors and subcontractors performing work on Federally financed or assisted construction contracts to "furnish weekly a statement with respect to the wages paid each employee during the preceding week." U.S. Department of Labor (DOL) regulations at 29 C.F.R. § 5.5(a)(3)(ii) require contractors to submit weekly a copy of all payrolls to the Federal agency contracting for or financing the construction project, accompanied by a signed "Statement of Compliance" indicating that the payrolls are correct and complete and that each laborer or mechanic has been paid not less than the proper Davis-Bacon prevailing wage rate for the work performed. DOL and federal contracting agencies receiving this information review the information to determine that employees have received legally required wages and fringe benefits.

Public Burden Statement

We estimate that is will take an average of 55 minutes to complete this collection, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. If you have any comments regarding these estimates or any other aspect of this collection, including suggestions for reducing this burden, send them to the Administrator, Wage and Hour Division, U.S. Department of Labor, Room S3502, 200 Constitution Avenue, N.W. Washington, D.C. 20210

(over)

Date _____

I, _____ _____
(Name of Signatory Party) (Title)

do hereby state:

(1) That I pay or supervise the payment of the persons employed by

_____ on the
(Contractor or Subcontractor)

_____, that during the payroll period commencing on the
(Building or Work)

_____ day of _____, _____, and ending the _____ day of _____, _____,

all persons employed on said project have been paid the full weekly wages earned, that no rebates have been or will be made either directly or indirectly to or on behalf of said

_____ from the full
(Contractor or Subcontractor)

weekly wages earned by any person and that no deductions have been made either directly or indirectly from the full wages earned by any person, other than permissible deductions as defined in Regulations, Part 3 (29 C.F.R. Subtitle A), issued by the Secretary of Labor under the Copeland Act, as amended (48 Stat. 948, 63 Start. 108, 72 Stat. 967, 76 Stat. 357, 40 U.S.C. § 3145), and described below:

_____

_____

_____

_____

(2) That any payrolls otherwise under this contract required to be submitted for the above period are correct and complete; that the wage rates for laborers or mechanics contained therein are not less than the applicable wage rates contained in any wage determination incorporated into the contract; that the classifications set forth therein for each laborer or mechanic conform with the work he performed.

(3) That any apprentices employed in the above period are duly registered in a bona fide apprenticeship program registered with a State apprenticeship agency recognized by the Bureau of Apprenticeship and Training, United States Department of Labor, or if no such recognized agency exists in a State, are registered with the Bureau of Apprenticeship and Training, United States Department of Labor.

(4) That

(a) WHERE FRINGE BENEFITS ARE PAID TO APPROVED PLANS, FUNDS, OR PROGRAMS

☐ – In addition to the basic hourly wage rates paid to each laborer or mechanic listed in the above referenced payroll, payments of fringe benefits as listed in the contract have been or will be made to appropriate programs for the benefit of such employees, except as noted in section 4(c) below.

(b) WHERE FRINGE BENEFITS ARE PAID IN CASH

☐ – Each laborer or mechanic listed in the above referenced payroll has been paid, as indicated on the payroll, an amount not less than the sum of the applicable basic hourly wage rate plus the amount of the required fringe benefits as listed in the contract, except as noted in section 4(c) below.

(c) EXCEPTIONS

EXCEPTION (CRAFT)	EXPLANATION

REMARKS

NAME AND TITLE	SIGNATURE

THE WILLFUL FALSIFICATION OF ANY OF THE ABOVE STATEMENTS MAY SUBJECT THE CONTRACTOR OR SUBCONTRACTOR TO CIVIL OR CRIMINAL PROSECUTION. SEE SECTION 1001 OF TITLE 18 AND SECTION 231 OF TITLE 31 OF THE UNITED STATES CODE.

Affidavit of Compliance

PREVAILING WAGES

I,_____

(Name of Person Signing Affidavit / Title)

do hereby certify that the wages paid to all employees of

_____

(Company Name)

for all hours worked on the

_____

(Project Name and Location)

project, during the period from _____to_____ are in

(Project Dates)

compliance with prevailing wage requirements of the contract between

_____and the City of Canton, Ohio.

I further certify that no rebates or deductions have or will be made, directly or indirectly, from any wages paid in connection with this project, other than those provided by law.

_____

(Signature of Officer or Agent)

Sworn to and subscribed in my presence this _____ day of _____, 20_____.

_____

(Notary Public)

The above affidavit must be executed and sworn to by the officer or agent of the contractor or subcontractor who supervises the payment of employees. This affidavit must be submitted before the surety is released or the final payment due under the terms of the contract is made.

Instructions For Completing Payroll Form, WH-347

- WH-347 (PDF)
  OMB Control No. 1235-0008, Expires 07/31/2024.

General: Form WH-347has been made available for the convenience of contractors and subcontractors required by their Federal or Federally-aided construction-type contracts and subcontracts to submit weekly payrolls. Properly filled out, this form will satisfy the requirements of Regulations, Parts 3 and 5 (29 C.F.R., Subtitle A), as to payrolls submitted in connection with contracts subject to the Davis-Bacon and related Acts.

While completion of Form WH-347 is optional, it is mandatory for covered contractors and subcontractors performing work on Federally financed or assisted construction contracts to respond to the information collection contained in 29 C.F.R. §§ 3.3, 5.5(a). The Copeland Act (40 U.S.C. § 3145) requires contractors and subcontractors performing work on Federally financed or assisted construction contracts to "furnish weekly a statement with respect to the wages paid each employee during the preceding week." U.S. Department of Labor (DOL) Regulations at 29 C.F.R. § 5.5(a)(3)(ii) require contractors to submit weekly a copy of all payrolls to the Federal agency contracting for or financing the construction project, accompanied by a signed "Statement of Compliance" indicating that the payrolls are correct and complete and that each laborer or mechanic has been paid not less than the proper Davis-Bacon prevailing wage rate for the work performed. DOL and federal contracting agencies receiving this information review the information to determine that employees have received legally required wages and fringe benefits.

Under the Davis-Bacon and related Acts, the contractor is required to pay not less than prevailing wage, including fringe benefits, as predetermined by the Department of Labor. The contractor's obligation to pay fringe benefits may be met either by payment of the fringe benefits to bona fide benefit plans, funds or programs or by making payments to the covered workers (laborers and mechanics) as cash in lieu of fringe benefits.

This payroll provides for the contractor to show on the face of the payroll all monies to each worker, whether as basic rates or as cash in lieu of fringe benefits, and provides for the contractor's representation in the statement of compliance on the payroll (as shown on page 2) that he/she is paying for fringe benefits required by the contract and not paid as cash in lieu of fringe benefits. Detailed instructions concerning the preparation of the payroll follow:

Contractor or Subcontractor: Fill in your firm's name and check appropriate box.

Address: Fill in your firm's address.

Payroll No.: Beginning with the number "1", list the payroll number for the submission.

For Week Ending: List the workweek ending date.

Project and Location: Self-explanatory.

Project or Contract No.: Self-explanatory.

Column 1 - Name and Individual Identifying Number of Worker: Enter each worker's full name and an individual identifying number (e.g., last four digits of worker's social security number) on each weekly payroll submitted.

Column 2 - No. of Withholding Exemptions: This column is merely inserted for the employer's convenience and is not a requirement of Regulations, Part 3 and 5.

Column 3 - Work Classifications: List classification descriptive of work actually performed by each laborer or mechanic. Consult classification and minimum wage schedule set forth in contract specifications. If additional classifications are deemed necessary, see Contracting Officer or Agency representative. An individual may be shown as having worked in more than one classification provided an accurate breakdown or hours worked in each classification is maintained and shown on the submitted payroll by use of separate entries.

Column 4 - Hours worked: List the day and date and straight time and overtime hours worked in the applicable boxes. On all contracts subject to the Contract Work Hours Standard Act, enter hours worked in excess of 40 hours a week as "overtime".

Column 5 - Total: Self-explanatory

Column 6 - Rate of Pay (Including Fringe Benefits): In the "straight time" box for each worker, list the actual hourly rate paid for straight time worked, plus cash paid in lieu of fringe benefits paid. When recording the straight time hourly rate, any cash paid in lieu of fringe benefits may be shown separately from the basic rate. For example, "$12.25/.40" would reflect a $12.25 base hourly rate plus $0.40 for fringe benefits. This is of assistance in correctly computing overtime. See "Fringe Benefits" below. When overtime is worked, show the overtime hourly rate paid plus any cash in lieu of fringe benefits paid in the "overtime" box for each worker; otherwise, you may skip this box. See "Fringe Benefits" below. Payment of not less than time and one-half the basic or regular rate paid is required for overtime under the Contract Work Hours Standard Act of 1962 if the prime contract exceeds $100,000. In addition to paying no less than the predetermined rate for the classification which an individual works, the contractor must pay amounts predetermined as fringe benefits in the wage decision made part of the contract to approved fringe benefit plans, funds or programs or shall pay as cash in lieu of fringe benefits. See "FRINGE BENEFITS" below.

Column 7 - Gross Amount Earned: Enter gross amount earned on this project. If part of a worker's weekly wage was earned on projects other than the project described on this payroll, enter in column 7 first the amount earned on the Federal or Federally assisted project and then the gross amount earned during the week on all projects, thus "$163.00/$420.00" would reflect the earnings of a worker who earned $163.00 on a Federally assisted construction project during a week in which $420.00 was earned on all work.

Column 8 - Deductions: Five columns are provided for showing deductions made. If more than five deduction are involved, use the first four columns and show the balance deductions under "Other" column; show actual total under "Total Deductions" column; and in the attachment to the payroll describe the deduction(s) contained in the "Other" column. All deductions must be in accordance with the provisions of the Copeland Act Regulations, 29 C.F.R., Part 3. If an individual worked on other jobs in addition to this project, show actual deductions from his/her weekly gross wage, and indicate that deductions are based on his gross wages.

Column 9 - Net Wages Paid for Week: Self-explanatory.

Totals - Space has been left at the bottom of the columns so that totals may be shown if the contractor so desires.

Statement Required by Regulations, Parts 3 and 5: While the "statement of compliance" need not be notarized, the statement (on page 2 of the payroll form) is subject to the penalties provided by 18 U.S.C. § 1001, namely, a fine, possible imprisonment of not more than 5 years, or both. Accordingly, the party signing this statement should have knowledge of the facts represented as true.

Items 1and 2: Space has been provided between items (1) and (2) of the statement for describing any deductions made. If all deductions made are adequately described in the "Deductions" column above, state "*See* Deductions column in this payroll." *See* "FRINGE BENEFITS" below for instructions concerning filling out paragraph 4 of the statement.

Item 4 FRINGE BENEFITS - Contractors who pay all required fringe benefits: If paying all fringe benefits to approved plans, funds, or programs in amounts not less than were determined in the applicable wage decision of the Secretary of Labor, show the basic cash hourly rate and overtime rate paid to each worker on the face of the payroll and check paragraph 4(a) of the statement on page 2 of the WH-347 payroll form to indicate the payment. Note any exceptions in section 4(c).

Contractors who pay no fringe benefits: If not paying all fringe benefits to approved plans, funds, or programs in amounts of at least those that were determined in the applicable wage decision of the Secretary of Labor, pay any remaining fringe benefit amount to each laborer and mechanic and insert in the "straight time" of the "Rate of Pay" column of the payroll an amount not less than the predetermined rate for each classification plus the amount of fringe benefits determined for each classification in the application wage decision. Inasmuch as it is not necessary to pay time and a half on cash paid in lieu of fringe benefits, the overtime rate shall be not less than the sum of the basic predetermined rate, plus the half time premium on basic or regular rate, plus the required cash in lieu of fringe benefits at the straight time rate. In addition, check paragraph 4(b) of the statement on page 2 the payroll form to indicate the payment of fringe benefits in cash directly to the workers. Note any exceptions in section 4(c).

Use of Section 4(c), Exceptions

Any contractor who is making payment to approved plans, funds, or programs in amounts less than the wage determination requires is obliged to pay the deficiency directly to the covered worker as cash in lieu of fringe benefits. Enter any exceptions to section 4(a) or 4(b) in section 4(c). Enter in the Exception column the craft, and enter in the Explanation column the hourly amount paid each worker as cash in lieu of fringe benefits and the hourly amount paid to plans, funds, or programs as fringe benefits. The contractor must pay an amount not less than the predetermined rate plus cash in lieu of fringe benefits as shown in section 4(c) to each such individual for all hours worked (unless otherwise provided by applicable wage determination) on the Federal or Federally assisted project. Enter the rate paid and amount of cash paid in lieu of fringe benefits per hour in column 6 on the payroll. See paragraph on "Contractors who pay no fringe benefits" for computation of overtime rate.

Public Burden Statement: We estimate that it will take an average of 55 minutes to complete this collection of information, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. If you have any comments regarding these estimates or any other aspect of this collection of information, including suggestions for reducing this burden, send them to the Administrator, Wage and Hour Division, U.S. Department of Labor, Room S3502, 200 Constitution Avenue, N.W.,Washington, D.C. 20210.

Note: In order to view, fill out, and print PDF forms, you need Adobe® Acrobat® Reader® version 5 or later, which you may download for free at www.adobe.com/products/acrobat/readstep2.html.

A. APPLICABILITY

The Project or Program to which the construction work covered by this Contract pertains is being assisted by the United States of America, and the following Federal Labor Standards Provisions are included in this Contract pursuant to the provisions applicable to such Federal assistance.

(1) MINIMUM WAGES

(i) All laborers and mechanics employed or working upon the site of the work will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR Part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment, computed at rates not less than those contained in the wage determination of the Secretary of Labor (which is attached hereto and made a part hereof), regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics. Contributions made or costs reasonably anticipated for bona fide fringe benefits under Section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of 29 CFR 5.5(a)(1)(iv); also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs, which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period.

Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in 29 CFR 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: Provided, that the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under 29 CFR 5.5(a)(1)(ii) and the Davis-Bacon poster (WH1321)) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place, where it can be easily seen by the workers.

(ii) Additional Classifications.

(A) Any class of laborers or mechanics which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. HUD shall approve an additional classification and wage rate and fringe benefits therefor only when the following criteria have been met:

(1) The work to be performed by the classification requested is not performed by a classification in the wage determination;

(2) The classification is utilized in the area by the construction industry; and

(3) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

(B) If the contractor, the laborers and mechanics to be employed in the classification (if known), or their representatives, and HUD or its designee agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), a report of the action taken shall be sent by HUD or its designee to the Administrator of the Wage and Hour Division ("Administrator"), Employment Standards Administration, U.S. Department of Labor, Washington, D.C. 20210. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise HUD or its designee or will notify HUD or its designee within the 30-day period that additional time is necessary. (Approved by the Office of Management and Budget ("OMB") under OMB control number 1235-0023.)

(C) In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, or HUD or its designee do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), HUD or its designee shall refer the questions, including the views of all interested parties and the recommendation of HUD or its designee, to the Administrator for determination. The Administrator, or an authorized representative, will issue a determination within 30 days of receipt and so advise HUD or its designee or will notify HUD or its designee within the 30-day period that additional time is necessary. (Approved by the Office of Management and Budget under OMB Control Number 1235-0023.)

(D) The wage rate (including fringe benefits, where appropriate) determined pursuant to subparagraphs (1)(ii)(B) or (C) of this paragraph, shall be paid to all workers performing work in the classification under this Contract from the first day on which work is performed in the classification.

(iii) Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

(iv) If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, Provided, that the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program. (Approved by the Office of Management and Budget under OMB Control Number 1235-0023.)

(2) Withholding. HUD or its designee shall, upon its own action or upon written request of an authorized representative of the U.S. Department of Labor, withhold or cause to be withheld from the contractor under this contract or any other Federal contract with the same prime contractor, or any other Federally-assisted contract subject to Davis-Bacon prevailing wage requirements which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees and helpers, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee or helper, employed or working on the site of the work, all or part of the wages required by the contract, HUD or its designee may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased. HUD or its designee may, after written notice to the contractor, disburse such amounts withheld for and on account of the contractor or subcontractor to the respective employees to whom they are due. The Department of Labor shall make such disbursements in the case of direct Davis-Bacon Act contracts.

(3) Payrolls and basic records.

(i) Maintaining Payroll Records. Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker, his or her correct classification(s), hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in Section 1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made, and actual wages paid.

Whenever the Secretary of Labor has found, under 29 CFR 5.5(a)(1)(iv), that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in Section 1(b)(2)(B) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits.

Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs. (Approved by the Office of Management and Budget under OMB Control Numbers 1235-0023 and 1215-0018)

(ii) Certified Payroll Reports.

(A) The contractor shall submit weekly, for each week in which any contract work is performed, a copy of all payrolls to HUD or its designee if the agency is a party to the contract, but if the agency is not such a party, the contractor will submit the payrolls to the applicant sponsor, or owner, as the case may be, for transmission to HUD or its designee. The payrolls submitted shall set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i), except that full social security numbers and home addresses shall not be included on weekly transmittals. Instead, the payrolls only need to include an individually identifying number for each employee (e.g., the last four digits of the employee's social security number). The required weekly payroll information may be submitted in any form desired. Optional Form WH-347 is available for this purpose from the Wage and Hour Division Web site at **https://www.dol.gov/agencies/whd/forms** or its successor site. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors.

Contractors and subcontractors shall maintain the full social security number and current address of each covered worker, and shall provide them upon request to HUD or its designee if the agency is a party to the contract, but if the agency is not such a party, the contractor will submit the payrolls to the applicant sponsor, or owner, as the case may be, for transmission to HUD or its designee, the contractor, or the Wage and Hour Division of the U.S. Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. It is not a violation of this subparagraph for a prime contractor to require a subcontractor to provide addresses and social security numbers to the prime contractor for its own records, without weekly submission to HUD or its designee. (Approved by the Office of Management and Budget under OMB Control Number 1235-0008.)

(B) Each payroll submitted shall be accompanied by a "Statement of Compliance," signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

(1) That the payroll for the payroll period contains the information required to be provided under 29 CFR 5.5(a)(3)(ii), the appropriate information is being maintained under 29 CFR 5.5(a)(3)(i), and that such information is correct and complete;

(2) That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in 29 CFR Part 3;

(3) That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of work performed, as specified in the applicable wage determination incorporated into the contract; and

(C) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by subparagraph (a)(3)(ii)(b).

(D) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under Section 1001 of Title 18 and Section 3729 of Title 31 of the United States Code.

(iii) The contractor or subcontractor shall make the records required under subparagraph (a)(3)(i) available for inspection, copying, or transcription by authorized representatives of HUD or its designee or the U.S. Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, HUD or its designee may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

(4) Apprentices and Trainees.

(i) Apprentices. Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship Training, Employer and Labor Services, or with a State Apprenticeship Agency recognized by the Office, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency (where appropriate), to be eligible for probationary employment as an apprentice.

The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the contractor's or subcontractor's registered program shall be observed.

Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program.

If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringe benefits shall be paid in accordance with that determination. In the event the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency recognized by the Office, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(ii) Trainees. Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed, unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the work actually performed.

In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(iii) Equal employment opportunity. The utilization of apprentices, trainees, and journeymen under 29 CFR Part 5 shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR Part 30.

(5) Compliance with Copeland Act requirements. The contractor shall comply with the requirements of 29 CFR Part 3, which are incorporated by reference in this Contract.

(6) Subcontracts. The contractor or subcontractor will insert in any subcontracts the clauses contained in subparagraphs (1) through (11) in this paragraph (a) and such other clauses as HUD or its designee may, by appropriate instructions, require, and a copy of the applicable prevailing wage decision, and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in this paragraph.

(7) Contract termination; debarment. A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.

(8) Compliance with Davis-Bacon and Related Act Requirements. All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR Parts 1, 3, and 5 are herein incorporated by reference in this Contract.

(9) Disputes concerning labor standards. Disputes arising out of the labor standards provisions of this Contract shall not be subject to the general disputes clause of this Contract. Such disputes shall be resolved in accordance with the procedures of the U.S. Department of Labor set forth in 29 CFR Parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and HUD or its designee, the U.S. Department of Labor, or the employees or their representatives.

(10) Certification of Eligibility.

(i) By entering into this Contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of Section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1) or to be awarded HUD contracts or participate in HUD programs pursuant to 24 CFR Part 24.

(ii) No part of this Contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of Section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1) or to be awarded HUD contracts or participate in HUD programs pursuant to 24 CFR Part 24.

(iii) Anyone who knowingly makes, presents, or submits a false, fictitious, or fraudulent statement, representation or certification is subject to criminal, civil and/or administrative sanctions, including fines, penalties, and imprisonment (e.g., 18 U.S.C. §§ 287, 1001, 1010, 1012; 31 U.S.C. §§ 3729, 3802.

(11) **Complaints, Proceedings, or Testimony by Employees.** No laborer or mechanic, to whom the wage, salary, or other labor standards provisions of this Contract are applicable, shall be discharged or in any other manner discriminated against by the contractor or any subcontractor because such employee has filed any complaint or instituted or caused to be instituted any proceeding or has testified or is about to testify in any proceeding under or relating to the labor standards applicable under this Contract to his employer.

B. CONTRACT WORK HOURS AND SAFETY STANDARDS ACT

The provisions of this paragraph (b) are applicable where the amount of the prime contract exceeds **$100,000**. As used in this paragraph, the terms "laborers" and "mechanics" include watchmen and guards.

(1) **Overtime requirements.** No contractor or subcontractor contracting for any part of the contract work, which may require or involve the employment of laborers or mechanics, shall require or permit any such laborer or mechanic in any workweek in which the individual is employed on such work to work in excess of 40 hours in such workweek, unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of 40 hours in such workweek.

(2) **Violation; liability for unpaid wages; liquidated damages.** In the event of any violation of the clause set forth in subparagraph B(1) of this paragraph, the contractor, and any subcontractor responsible therefor, shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory) for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in subparagraph B(1) of this paragraph, in the sum of **$27** for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of 40 hours without payment of the overtime wages required by the clause set forth in subparagraph B(1) of this paragraph. In accordance with the Federal Civil Penalties Inflation Adjustment Act of 1990 (28 U.S.C. § 2461 Note), the Department of Labor adjusts this civil monetary penalty for inflation no later than January 15 each year.

(3) **Withholding for unpaid wages and liquidated damages.** HUD or its designee shall, upon its own action or upon written request of an authorized representative of the U.S. Department of Labor, withhold or cause to be withheld from any moneys payable on account of work performed by the contractor or subcontractor under any such contract, or any other Federal contract with the same prime contract, or any other Federally-assisted contract subject to the Contract Work Hours and Safety Standards Act which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages, as provided in the clause set forth in subparagraph B(2) of this paragraph.

(4) **Subcontracts.** The contractor or subcontractor shall insert in any subcontracts the clauses set forth in subparagraph B(1) through (4) of this paragraph and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in subparagraphs B(1) through (4) of this paragraph.

C. HEALTH AND SAFETY

The provisions of this paragraph (c) are applicable where the amount of the prime contract exceeds **$100,000**.

(1) No laborer or mechanic shall be required to work in surroundings or under working conditions which are unsanitary, hazardous, or dangerous to his or her health and safety, as determined under construction safety and health standards promulgated by the Secretary of Labor by regulation.

(2) The contractor shall comply with all regulations issued by the Secretary of Labor pursuant to 29 CFR Part 1926 and failure to comply may result in imposition of sanctions pursuant to the Contract Work Hours and Safety Standards Act, (Public Law 91-54, 83 Stat 96), 40 U.S.C. § 3701 et seq.

(3) The contractor shall include the provisions of this paragraph in every subcontract, so that such provisions will be binding on each subcontractor. The contractor shall take such action with respect to any subcontractor as the Secretary of Housing and Urban Development or the Secretary of Labor shall direct as a means of enforcing such provisions.

"General Decision Number: OH20220001 04/08/2022

Superseded General Decision Number: OH20210001

State: Ohio

Construction Types: Heavy and Highway

Counties: Ohio Statewide.

Heavy and Highway Construction Projects

Note: Contracts subject to the Davis-Bacon Act are generally required to pay at least the applicable minimum wage rate required under Executive Order 14026 or Executive Order 13658. Please note that these Executive Orders apply to covered contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but do not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(2)-(60).

If the contract is entered into on or after January 30, 2022, or the contract is renewed or extended (e.g., an option is exercised) on or after January 30, 2022:	. Executive Order 14026 generally applies to the contract. . The contractor must pay all covered workers at least $15.00 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in 2022.
If the contract was awarded on or between January 1, 2015 and January 29, 2022, and the contract is not renewed or extended on or after January 30, 2022:	. Executive Order 13658 generally applies to the contract. . The contractor must pay all covered workers at least $11.25 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on that contract in 2022.

The applicable Executive Order minimum wage rate will be adjusted annually. If this contract is covered by one of the

Executive Orders and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must still submit a conformance request.

Additional information on contractor requirements and worker protections under the Executive Orders is available at https://www.dol.gov/agencies/whd/government-contracts.

==========

** Workers in this classification may be entitled to a higher minimum wage under Executive Order 14026 ($15.00) or 13658 ($11.25). Please see the Note at the top of the wage determination for more information.

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at https://www.dol.gov/agencies/whd/government-contracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of ""identifiers"" that indicate whether the particular rate is a union rate (current union negotiated rate for local),

a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the ""SU"" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union

average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour National Office because National Office has responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.

Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

==========

END OF GENERAL DECISIO"

Table of Contents

Davis Bacon Requirements

Wage Rate Requirements

As used in these provisions "subrecipient" means the City of Canton.

(a) The following applies to any contract in excess of $2,000 which is entered into for the actual construction, alteration and/or repair, including painting and decorating, of a public building or public work, or building or work financed in whole or in part from Federal funds or in accordance with guarantees of a Federal agency or financed from funds obtained by pledge of any contract of a Federal agency to make a loan, grant or annual contribution (except where a different meaning is expressly indicated), and which is subject to the labor standards provisions of any of the acts listed in § 5.1.

(1) Minimum wages.

(i) All laborers and mechanics employed or working upon the site of the work will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics.

Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of paragraph (a)(1)(iv) of this section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in § 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: Provided, that the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under paragraph (a)(1)(ii) of this section) and the Davis-Bacon poster (WH-1321) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can be easily seen by the workers.

Subrecipients may obtain wage determinations from the U.S. Department of Labor's web site, www.wdol.gov.

(ii)(A) The subrecipient(s), on behalf of EPA, shall require that any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The EPA award official shall approve an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:

(1) The work to be performed by the classification requested is not performed by a classification in the wage determination; and

(2) The classification is utilized in the area by the construction industry; and

(3) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to

the wage rates contained in the wage determination.

(B) If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the subrecipient(s) agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the subrecipient(s) to the State award official. The State award official will transmit the report, to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, DC 20210. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise the State award official or will notify the State award official within the 30-day period that additional time is necessary.

(C) In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, and the and the subrecipient(s) do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the award official shall refer the questions, including the views of all interested parties and the recommendation of the State award official, to the Administrator for determination. The Administrator, or an authorized representative, will issue a determination within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(D) The wage rate (including fringe benefits where appropriate) determined pursuant to paragraphs (a)(1)(ii)(B) or (C) of this section, shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.

(iii) Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

(iv) If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, Provided, That the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.

(2) Withholding. The subrecipient(s), shall upon written request of the EPA Award Official or an authorized representative of the Department of Labor, withhold or cause to be withheld from the contractor under this contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of the work, all or part of the wages required by the contract, the (Agency) may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

(3) Payrolls and basic records.

(i) Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions

or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in section 1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in section 1(b)(2)(B) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs.

(ii)(A) The contractor shall submit weekly, for each week in which any contract work is performed, a copy of all payrolls to the subrecipient, that is, the entity that receives the subgrant or loan from the State capitalization grant recipient. Such documentation shall be available on request of the State recipient or EPA. As to each payroll copy received, the subrecipient shall provide written confirmation in a form satisfactory to the State indicating whether or not the project is in compliance with the requirements of 29 CFR 5.5(a)(1) based on the most recent payroll copies for the specified week. The payrolls shall set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i), except that full social security numbers and home addresses shall not be included on the weekly payrolls. Instead the payrolls shall only need to include an individually identifying number for each employee (e.g., the last four digits of the employee's social security number). The required weekly payroll information may be submitted in any form desired. Optional Form WH-347 is available for this purpose from the Wage and Hour Division Web site at http://www.dol.gov/esa/whd/forms/wh347instr.htm or its successor site. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors. Contractors and subcontractors shall maintain the full social security number and current address of each covered worker, and shall provide them upon request to the subrecipient(s) for transmission to the State or EPA if requested by EPA, the State, the contractor, or the Wage and Hour Division of the Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. It is not a violation of this section for a prime contractor to require a subcontractor to provide addresses and social security numbers to the prime contractor for its own records, without weekly submission to the subrecipient(s).

(B) Each payroll submitted shall be accompanied by a "Statement of Compliance," signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

(1) That the payroll for the payroll period contains the information required to be provided under § 5.5 (a)(3)(ii) of Regulations, 29 CFR part 5, the appropriate information is being maintained under § 5.5 (a)(3)(i) of Regulations, 29 CFR part 5, and that such information is correct and complete;

(2) That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations, 29 CFR part 3;

(3) That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of work performed, as specified in the applicable wage determination incorporated into the contract.

(C) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by paragraph (a)(3)(ii)(B) of this section.

(D) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under section 1001 of title 18 and section 231 of title 31 of the United States Code.

(iii) The contractor or subcontractor shall make the records required under paragraph (a)(3)(i) of this section available for inspection, copying, or transcription by authorized representatives of the State, EPA or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, the Federal agency or State may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

(4) Apprentices and trainees --

(i) Apprentices. Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship Training, Employer and Labor Services, or with a State Apprenticeship Agency recognized by the Office, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship Training, Employer and Labor Services or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the contractor's or subcontractor's registered program shall be observed. Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination. In the event the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency recognized by the Office, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(ii) Trainees. Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall

be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(iii) Equal employment opportunity. The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR part 30.

(5) Compliance with Copeland Act requirements. The contractor shall comply with the requirements of 29 CFR part 3, which are incorporated by reference in this contract.

(6) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses contained in 29 CFR 5.5(a)(1) through (10) and such other clauses as the EPA determines may by appropriate, and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR 5.5.

(7) Contract termination: debarment. A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.

(8) Compliance with Davis-Bacon and Related Act requirements. All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR parts 1, 3, and 5 are herein incorporated by reference in this contract.

(9) Disputes concerning labor standards. Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and subrecipient(s), State, EPA, the U.S. Department of Labor, or the employees or their representatives.

(10) Certification of eligibility.

(i) By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(ii) No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(iii) The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001.

Contract Provision For Contracts In Excess Of $100,000 And Subject To The Overtime Provisions Of The Contract Work Hours And Safety Standards Act

The following language must be included in full in any contract in an amount in excess of $100,000 and subject to the overtime provisions of the Contract Work Hours and Safety Standards Act. These provisions are to be included in addition to the provisions for contracts in excess of $2,000. As used in these paragraphs, the terms laborers and mechanics include watchmen and guards.

(b) Contract Work Hours and Safety Standards Act. The following applies to any contract in an amount in excess of $100,000 and subject to the overtime provisions of the Contract Work Hours and Safety Standards Act. As used in these paragraphs, the terms laborers and mechanics include watchmen and guards.

(1) Overtime requirements. No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such work to work in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such workweek.

(2) Violation; liability for unpaid wages; liquidated damages. In the event of any violation of the clause set forth in paragraph (b)(1) of this section the contractor and any subcontractor responsible therefore shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in paragraph (a)(1) of this section, in the sum of $10 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in paragraph (b)(1) of this section.

(3) Withholding for unpaid wages and liquidated damages. The subrecipient, upon written request of the EPA Award Official or an authorized representative of the Department of Labor, shall withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in paragraph (b)(2) of this section.

(4) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses set forth in paragraph (b)(1) through (4) of this section and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in paragraphs (b)(1) through (4) of this section.

Contract Provision For Contracts In Excess Of $100,000 Subject ONLY To The Contract Work Hours And Safety Standards Act

In addition to the provisions for contracts in excess of $2,000, for any contract subject only to the Contract Work Hours and Safety Standards Act and not to any of the other statutes cited in 29 CFR 5.1, you must insert clauses requiring:

(c) The following applies to any contract subject only to the Contract Work Hours and Safety

Standards Act and not to any of the other statutes cited in 29 CFR 5.1.

The contractor or subcontractor shall maintain payrolls and basic payroll records during the course of the work and shall preserve them for a period of three years from the completion of the contract for all laborers and mechanics, including guards and watchmen, working on the contract. Such records shall contain the name and address of each such employee, social security number, correct classifications, hourly rates of wages paid, daily and weekly number of hours worked, deductions made, and actual wages paid.

The records shall be maintained under this paragraph shall be made available by the contractor or subcontractor for inspection, copying, or transcription by authorized representatives of the Ohio EPA, EPA and the Department of Labor, and the contractor or subcontractor will permit such representatives to interview employees during working hours on the job.

Disadvantaged Business Enterprises (DBE) Utilization

(Required Contract Provision)

USEPA has a program to encourage the participation of disadvantaged businesses in the construction activities funded by the Clean Water and Drinking Water SRF's. "DBE" is an all inclusive term that includes Minority Business Enterprises (MBE), Women Business Enterprises (WBE), Small Business Enterprises (SBE), Small Business in Rural Areas (SBRA), HUBZone Small Business, Labor Surplus Area Firms (LSAF), and other entities defined as socially and/or economically disadvantaged. While the WPCLF and WSRLA strongly encourage participation by all disadvantaged groups, specific participation goals are negotiated with USEPA only for Minority Business Enterprises and Women's Business Enterprises.

Goals

As a condition of receiving capitalization grants from U.S. EPA for the Water Pollution Control Loan Fund (WPCLF) and the Water Supply Revolving Loan Account (WSRLA), the Ohio EPA negotiates "fair share" Disadvantaged Business Enterprises (DBE) objectives with U.S. EPA. The current negotiated goals for construction related activities are 1.3% of all contracts to MBEs and 1.0% of all contracts to WBEs.

DBE Certification

Under the DBE program, qualified DBE's are those that have been certified as an MBE or WBE. Certifications can be obtained from a federal agency such as the Small Business Administration or the Department of Transportation or by an approved State agency. The Unified Certification Program (UCP) administered by the Ohio Department of Transportation (ODOT) can provide the necessary DBE certifications. Information on the UCP can be found at www.ohioucp.org as well as the ODOT website www.dot.state.oh.us/divisions/equalopportunity/pages/dbe.aspx. Applications for certification by EPA can be found on EPA's Small Business Programs website at www.epa.gov/osbp under the Disadvantaged Business Enterprise Program link. Any questions regarding EPA's certification process should be directed to Teree Henderson of EPA at 202-566-2222.

DBE Qualifications

To qualify for MBE certification, businesses must be 51 percent owned and controlled by a U.S. citizen and Ohio resident belonging to an African American, Native American, Hispanic, or Asian American ethnic group. In addition, the business must be in operation for at least one year prior to submitting an application. For DBE status, a business must be at least 51 percent owned by a socially and economically disadvantaged person who participates in the daily operations of the business. This person must be a woman or of African-American, Hispanic, Native American, Asian American ethnicity.

Program Requirements

To comply with DBE program requirements the WPCLF/WSRLA loan recipient must do the following:

1. Create and maintain a bidder's list (see description below)

2. Include contract conditions applicable to the DBE program in all procurement contracts entered into by the Borrower for all WPCLF and WSRLA projects. These conditions are listed below.
3. Follow, document, and maintain documentation of good faith efforts on the part of prime contractors to ensure that Disadvantaged Business Enterprises (DBEs) have the opportunity to participate in the project.
4. Review the Form 6100-3 and 6100-4 submittals provided by bidders on the project for completeness and obtain any additional information necessary to verify the certification status of all proposed subcontractors.
5. Obtain documentation of the good faith efforts of the prime contractor if the prime contractor does not meet the MBE or WBE goal.
6. Obtain a written confirmation from any prime contractor states that they will not meet the MBE and WBE goals because they will not be entering into any agreements for goods or services with any company, firm, joint venture, or individual.
7. Submit the following to the Ohio EPA/DEFA as part of the bid package upon which the WPCLF/WSRLA loan amount is determined:
   - Form 6100-3 from each subcontractor
   - Form 6100-4 from each prime contractor
   - a copy of the Good Faith Efforts documentation from any prime contractors that will not meet the MBE and WBE goals,
   - if any of the prime contractors will not meet the MBE and WBE goals because they will not be entering into any agreements for goods or services with any company, firm, joint venture, or individual, a copy of the written confirmation from that prime contractor
8. Report MBE/WBE accomplishments on Form 5700-52A annually (within 15 days after October 1st).

NOTE: It is up to the WPCLF/WSRLA loan recipient whether or not to require completion and submission of Forms 6100-3 and 6100-4 from all bidders with the bid proposal or to accept completion and submission from the successful bidder(s) only at some time after bids are received. Regardless of whether the forms are completed and submitted with the bids or at some later time once the successful bidders are identified, completed forms are to be submitted to Ohio EPA with the bid package.

To comply with DBE program requirements all prime contractors must do the following:

1. Follow, document, and maintain documentation of their good faith efforts.
2. Complete and submit **Form 6100-4 DBE Subcontractor Utilization Summary** as part of the bid proposal package to the loan recipient.
3. Have its Disadvantaged Business Enterprise subcontractors complete **Form 6100-3 DBE Subcontractor Proposed Performance Form** and submit those as part of the bid proposal package to the loan recipient.
4. Provide **Form 6100-2 DBE Subcontractor Actual Participation Form** to all of its Disadvantaged Business Enterprise subcontractors for completion at the end of the work.
5. During construction, provide the data necessary so that the loan recipient can report MBE/WBE accomplishments on Form 5700-52A annually (within 15 days after October 1st).

Bidders List

The Borrower must create, maintain, and use a bidders list for purposes of soliciting both MBE/WBEs and non-MBE/WBEs during procurement of construction, equipment, supplies, and services. This list shall include:

1. Entity's name with point of contact;
2. Entity's mailing address, telephone number, and e-mail address;
3. The procurement on which the entity bid or quoted, and when; and
4. Entity's status as an MBE/WBE or non-MBE/WBE.

Borrowers that receive less than $250,000 or less in any one fiscal year can be exempt from maintaining a Bidders List.

The Bidders List shall be maintained until the project period has expired and the Borrower is no longer receiving EPA funding. The Bidders List must include all firms that bid on the prime contracts, or bid or gave a quote on subcontracts, including both MBE/WBEs and non-MBE/WBEs.

Required Contract Conditions

The DBE Specification language and instructions to the bidders and Forms 6100-2, 6100-3 and 6100-4 must be included in the contract documents and referenced in the Instructions to Bidders, informing bidders that the forms must be completed and submitted with their bid for all WPCLF and WSRLA projects:

1. The prime contractor must pay its subcontractor for satisfactory performance no more than 30 days from the prime contractor's receipt of payment from the owner.
2. The prime contractor must notify the owner in writing prior to the termination of any Disadvantage Business Enterprise subcontractor for convenience by the prime contractor.
3. If a Disadvantage Business Enterprise contractor fails to complete work under the subcontract for any reason, the prime contractor must employ the six Good Faith Efforts (listed below) if soliciting a replacement contractor.
4. The prime contractor must employ the six Good Faith Efforts even if the prime contractor has achieved its fair share objectives.
5. An owner must ensure that each procurement contract it awards contains the following terms and conditions:

   The contractor shall not discriminate on the basis of race, color, national origin or sex in the performance of this contract. The contractor shall carry out applicable requirements of 40 CFR Part 33 in the award and administration of contracts awarded under EPA financial assistance agreements. Failure by the contractor to carry out these requirements is a material breach of this contract which may result in the termination of this contract or other legally available remedies.

Good Faith Efforts

Borrowers and their prime contractors must follow, document, and maintain documentation of their good faith efforts as listed below to ensure that Disadvantaged Business Enterprises (DBEs) have the opportunity to participate in the project by increasing DBE awareness of procurement efforts and outreach.

1. Ensure DBEs are made aware of contracting opportunities to the fullest extent practicable through outreach and recruitment activities; including DBEs on solicitation lists and soliciting them whenever they are potential sources.
2. Make information on forthcoming opportunities available to DBEs and arrange time frames for contracts and establish delivery schedules, where the requirements permit, in a way that encourages and facilitates participation by DBEs in the competitive process. This includes, whenever possible, posting solicitation for bids or proposals for a minimum of 30 calendar days before the bid or proposal closing date.
3. Consider in the contracting process whether firms competing for large contracts could be subcontracted with DBEs. This will include dividing total requirements when economically feasible into smaller tasks or quantities to permit participation by DBEs in the competitive process.
4. Encourage contracting with a consortium of DBEs when a contract is too large for one of these firms to handle individually.
5. Use the services and assistance of the Small Business Administration and the Minority Business Development Agency of the U.S. Department of Commerce.
6. If the prime contractor awards subcontracts, require the prime contractor to take the steps in numbers 1 through 5 above.

DBE Forms

Form 6100-3 – Each prime contractor must have its DBE subcontractors complete **Form 6100-3 DBE Subcontractor Proposed Performance Form**. This form gives the DBE subcontractor the opportunity to report the scope and cost of the subcontract and it should be forwarded to the Prime Contractor along with the DBE's quote. Each subcontractor completes one Form 6100-3. The Borrower must submit all Form 6100-3 forms to the Ohio EPA/DEFA as part of the bid package upon which the WPCLF/WSRLA loan amount is determined.

Form 6100-4 – Each prime contractor must complete and submit **Form 6100-4 DBE Subcontractor Utilization Summary** as part of the prime contractor's bid proposal package to the Borrower. This form summarizes the Prime Contractor's intended use of identified DBE(s) and the estimated dollar amount of each subcontract. Only one Form 6100-4 form is required from each Prime Contractor. The Borrower must submit this form to the Ohio EPA/DEFA as part of the bid package upon which the WPCLF/WSRLA loan amount is determined.

Form 6100-2 - The prime contractor must provide **Form 6100-2 DBE Subcontractor Actual Participation Form** to all of its Disadvantaged Business Enterprise subcontractors.

This form gives the DBE subcontractor the opportunity to describe the work the DBE received from the Prime Contractor, how much the DBE was paid and any other concerns the DBE might have. Disadvantaged Business Enterprise subcontractors must send completed Form 6100-2 directly to the Region 5 DBE Coordinator:

Adrianne M. Callahan, Region 5 MBE/WBE Coordinator
USEPA, Acquisition and Assistance Branch
77 West Jackson Boulevard (MC-10J)
Chicago, IL 60604

This form is completed after the work by the subcontractor is done, and is NOT submitted with the bid package to Ohio EPA.

Reporting During Construction – Form 5700-52A

The purpose of MBE/WBE reporting is to monitor the grant recipient's accomplishments in utilizing MBEs and WBEs; and adherence to the good faith efforts (i.e., outreach to MBEs, WBEs, and other DBEs); and progress in achieving MBE and WBE Goals. During the progress of the construction project, the loan recipient must complete & submit Form 5700-52A annually (**within 15 days after October 1st**). If there were no MBEs or WBEs utilized, or no procurement expenditures of any kind were made during the reporting period, a "negative report" is still required.

Reports are to be sent to:

Becky McKinney Ohio EPA – DEFA
P.O. Box 1049
Columbus, OH 43216-1049
E-mail address: Rebecca.McKinney@epa.ohio.gov
Phone: (614) 644-3636
Fax: (614) 644-3687

Disadvantaged Business Enterprise (DBE) Program
DBE Subcontractor Performance Form

This form is intended to capture the DBE[1] subcontractor's[2] description of work to be performed and the price of the work submitted to the prime contractor. An EPA Financial Assistance Agreement Recipient must require its prime contractor to have its DBE subcontractors complete this form and include all completed forms in the prime contractors bid or proposal package.

Recipient	Sub-Recipient and/or SRF Loan Recipient	Prime	Minority	Women				

Type of product or service codes:

1 = Construction 2 = Supplies 3 = Services 4 = Equipment

Note: Refer to Terms and conditions of your Assistance Agreement to determine the frequency of reporting. Recipients are required to submit MBE/WBE reports to EPA beginning with the Federal fiscal year quarter the recipients receive the award, continuing until the project is completed.

Instructions:

A. General Instructions:

MBE/WBE utilization is based on 40 CFR Part 33. EPA Form 5700-52A must be completed by recipients of Federal grants, cooperative agreements, or other Federal financial assistance which involve procurement of supplies, equipment, construction or services to accomplish Federal assistance programs.

Recipients are required to report 30 days after the end of each federal fiscal quarter, semiannually, or annually, per the terms and conditions of the financial assistance agreement.

	Quarterly Reporting Due Date	Semiannual Reporting Due Date	Annual Reporting Due Date
Agreements awarded prior to May 27, 2008	January 30, April 30, July 30, October 30	N/A	October 30
Agreements awarded on or after May 27, 2008	N/A	April 30, October 30	October 30

MBE/WBE program requirements, including reporting, are material terms and conditions of the financial assistance agreement.

B. Definitions:

Procurement is the acquisition through contract, order, purchase, lease or barter of supplies, equipment, construction or services needed to accomplish Federal assistance programs.

A ***contract*** is a written agreement between an EPA recipient and another party (also considered "prime contracts") and any lower tier agreement (also considered "subcontracts") for equipment, services, supplies, or construction necessary to complete the project. This definition excludes written agreements with another public agency. This definition includes personal and professional services, agreements with consultants, and purchase orders.

A ***minority business enterprise*** **(MBE)** is a business concern that is (1) at least 51 percent owned by one or more minority individuals, or, in the case of a publicly owned business, at least 51 percent of the stock is owned by one or more minority individuals; and (2) whose daily business operations are managed and directed by one or more of the minority owners. In order to qualify and participate as an MBE prime or subcontractor for EPA recipients under EPA's DBE Program, an entity must be properly certified as required by 40 CFR Part 33, Subpart B.

U.S. citizenship is required. Recipients shall presume that minority individuals include Black Americans, Hispanic Americans, Native Americans, Asian Pacific Americans, or other groups whose members are found to be disadvantaged by the Small Business Act or by the Secretary of Commerce under section 5 of Executive order 11625. The reporting contact at EPA can provide additional information.

A ***woman business enterprise*** **(WBE)** is a business concern that is, (1) at least 51 percent owned by one or more women, or, in the case of a publicly owned business, at least 51 percent of the stock is owned by one or more women and (2) whose daily business operations are managed and directed by one or more of the women owners. In order to qualify and participate as a WBE prime or subcontractor for EPA recipients under EPA's DBE Program, an entity must be properly certified as required by 40 CFR Part 33, Subpart B.

Business firms which are 51 percent owned by minorities or women, but are in fact managed and operated by non-minority individuals do not qualify for meeting MBE/WBE procurement goals. U.S. Citizenship is required.

Good Faith Efforts

A recipient is required to make the following good faith efforts whenever procuring construction, equipment, services, and supplies under an EPA financial assistance agreement. These good faith efforts for utilizing MBEs and WBEs must be documented. Such documentation is subject to EPA review upon request:

1. Include of MBEs/WBEs on solicitation lists.
2. Assure that MBEs/WBEs are solicited once they are identified.
3. Divide total requirements into smaller tasks to permit maximum MBE/WBE participation, where feasible.
4. Establish delivery schedules which will encourage MBE/WBE participation, where feasible.
5. Encourage use of the services of the U.S. Department of Commerce's Minority Business Development Agency (MBDA) and the U.S. Small Business Administration to identify MBEs/WBEs.

6. Require that each party to a subgrant, subagreement, or contract award take the good faith efforts outlined here.

C. Instructions for Part I:

1a. Specify Federal fiscal year this report covers. The Federal fiscal year runs from October 1st through September 30th (**e.g. November 29, 2010 falls within Federal fiscal year 2011**)

1b. Check applicable reporting box, quarterly, semiannually, or annually. Also indicate if this is the last report for the project.

1c. Indicate if this is a revision to a previous year, half-year, or quarter, and provide a brief description of the revision you are making.

2a-c. Please refer to your financial assistance agreement for the mailing address of the EPA financial assistance office for your agreement.

The "EPA DBE Reporting Contact" is the DBE Coordinator for the EPA Region from which your financial assistance agreement was originated. For a list of DBE Coordinators please refer to the EPA OSBP website at www.epa.gov/osbp. Click on "Regional Contacts" for the name of your coordinator.

3a-c. Identify the agency, state authority, university or other organization which is the recipient of the Federal financial assistance and the person to contact concerning this report.

4a. Provide the Assistance Agreement number assigned by EPA. A separate report must be submitted for each Assistance Agreement.

***For SRF recipients**: In box 4a list numbers for ALL OPEN Assistance Agreements being reported on this form. Please note that although the New DBE Rule (which took effect May 27, 2008) revised the reporting frequency requirements from quarterly to semiannually, that change only applies to agreements awarded AFTER the New DBE Rule took effect. Therefore, SRF recipients may either continue to report activity for all Agreements on one form on a quarterly basis until the last award that was made prior to the New DBE Rule has been closed out; OR, the recipient may split the submission of SRF reports into quarterly reports for Agreements awarded prior the New DBE Rule, and semiannually for the awards made after the New DBE Rule.

4b. Refer back to Assistance Agreement document for this information.

5a. Provide the total amount of the Assistance Agreement which includes Federal funds plus recipient matching funds and funds from other sources.

***For SRF recipients only**: SRF recipients will not enter an amount in 5a. Please leave 5a blank.

5b. Self-explanatory.

5c. Provide the total dollar amount of **ALL** procurements awarded this reporting period by the recipient, sub-recipients, and SRF loan recipients, **including** MBE/WBE expenditures. For example: Actual dollars for procurement from the procuring office; actual contracts let from the contracts office; actual goods, services, supplies, etc., from other sources including the central purchasing/ procurement centers).

***NOTE**: To prevent double counting on line 5C, if any amount on 5E is for a subcontract and the prime contract has already been included on Line 5C in a prior reporting period, then report the amount going to MBE or WBE subcontractor on line 5E, but exclude the amount from Line 5C. To include the amount on 5C again would result in double counting because the prime contract, which includes the subcontract, would have already been reported.

5d. State whether or not sub-awards and/or subcontracts have been issued under the assistance agreement by indicating "yes" or "no".

5e. Where requested, also provide the total dollar amount of all MBE/WBE procurement awarded during this reporting period by the recipient, sub-recipients, SRF loan recipients, and prime contractors in the categories of construction, equipment, services and supplies. These amounts include Federal funds plus recipient matching funds and funds from other sources.

***For SRF recipients only**: In 5c please enter the total procurement amount for the quarter, or semiannual period, under all of your SRF Assistance Agreements. The figure reported in this section is **not** directly tied to an individual Assistance Agreement identification number. **(SRF state recipients report state procurements in this section)**

6. If there were no MBE/WBE accomplishments this reporting period, please briefly explain what

specific steps you are taking to achieve the MBE/WBE requirements specified in the terms and conditions of the Assistance Agreement.

7. Name and title of official administrator or designated reporting official.

8. Signature, month, day, and year report submitted.

D. Instructions for Part II:

For each MBE/WBE procurement made under this assistance agreement during the reporting period, provide the following information:

1. Check whether this procurement was made by the recipient, sub-recipient/SRF loan recipient, or the prime contractor.

2. Check either the MBE or WBE column. If a firm is both an MBE and WBE, the recipient may choose to count the entire procurement towards EITHER its MBE or WBE accomplishments. The recipient may also divide the total amount of the procurement (using any ratio it so chooses) and count those divided amounts toward its MBE and WBE accomplishments. If the recipient chooses to divide the procurement amount and count portions toward its MBE and WBE accomplishments, please state the appropriate amounts under the MBE and WBE columns on the form. **The combined MBE and WBE amounts for that MBE/WBE contractor must not exceed the "Value of the Procurement" reported in column #3**

3. Dollar value of procurement.

4. Date of procurement, shown as month, day, year. Date of procurement is defined as the date the contract or procurement was awarded, **not** the date the contractor received payment under the awarded contract or procurement, unless payment occurred on the date of award. **(Where direct purchasing is the procurement method, the date of procurement is the date the purchase was made)**

5. Using codes at the bottom of the form, identify type of product or service acquired through this procurement (e.g., enter 1 if construction, 2 if supplies, etc).

6. Name, address, and telephone number of MBE/WBE firm.

**This data is requested to comply with provisions mandated by: statute or regulations and 33); OMB Circulars; or added by EPA to ensure sound and effective assistance management. Accurate, complete data are required to obtain funding, while no pledge of confidentiality is provided.

The public reporting and recording burden for this collection of information is estimated to average l hour per response annually. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclosure or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

Send comments on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including through the use of automated collection techniques to the Director, OPPE Regulatory Information Division, U.S. Environmental Protection Agency (2136), 1200 Pennsylvania Avenue, NW, Washington, D.C. 20460. Include the OMB Control number in any correspondence. Do not send the completed form to this address.

Certification Regarding Debarment, Suspension, and Other Responsibility Matters INSTRUCTIONS

Under Executive Order 12549 an individual or organization debarred or excluded from participation in Federal assistance or benefit programs may not receive any assistance award under a Federal program or a subagreement thereunder for $25,000 or more.

Accordingly, each prospective recipient of an EPA grant, loan, or cooperative agreement and any contract or subagreement participant thereunder must complete the attached certification provide an explanation why they cannot. For further details, see the regulation 40 CFR 32.510, Participants' responsibilities.

Go to www.epls.gov to access the Excluded Parties List System (EPLS). The EPLS includes information regarding entities debarred, suspended, proposed for debarment, excluded or disqualified under the nonprocurement common rule, or otherwise declared ineligible from receiving Federal contracts, certain subcontracts, and certain Federal assistance and benefits. This information may include names, addresses, DUNS numbers, Social Security Numbers, Employer Identification Numbers or other Taxpayer Identification Numbers, if available and deemed appropriate and permissible to publish by the agency taking the action.

Where To Submit

The prospective EPA grant, loan, or cooperative agreement recipient must return the signed certification or explanation with its application to Ohio EPA.

A prospective prime contractor must submit a complete certification or explanation to the individual or organization awarding the contract.

Each prospective subcontractor must submit a complete certification or explanation to the prime contractor for the project.

Applicants may reproduce these materials as needed and provide them to their prospective prime contractor, who, in turn, may reproduce and provide them to prospective subcontractors.

Additional copies / assistance may be requested from:

Ohio EPA
Division of Environmental and Financial Assistance
P.O. Box 1049
Columbus, Ohio 43216-1049
(614) 644-2798
www.epa.state.oh.us/defa/

Certification Regarding Debarment, Suspension, and Other Responsibility Matters

The prospective participant certifies to the best of its knowledge and belief that it and its principals:

(a) Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Federal department or agency;

(b) Have not within a three year period preceding this proposal been convicted of or had a civil judgement rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State, or local) transaction or contract under a public transaction; violation of Federal of State antitrust statues or commission if embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, or receiving stolen property;

(c) Are not presently indicted for or otherwise criminally or civilly charged by a government entity (Federal, State or local) with commission of any of the offenses enumerated in paragraph (b) of this certification;

(d) Have not within a three year period preceding this application / proposal had one or more public transactions (Federal, State, or local) terminated for cause or default; and

(e) Will not utilize a subcontractor or supplier who is unable to certify (a) through (d) above.

I understand that a false statement on this certification may be grounds for rejection of this proposal or termination of the award. In addition, under 18 USC Sec. 1001, a false statement may result in a fine of up to $10,000 or imprisonment for up to 5 years, or both.

Contractor Equal Employment Opportunity Certification

During the performance of this contract, the undersigned agrees as follows:

1. The undersigned will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin. The undersigned will take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, color, religion or national origin. Such action shall include, but not be limited to the following: Employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The undersigned agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided setting forth the provisions of this equal opportunity (federally assisted construction) clause.

2. The undersigned will, in all solicitations or advertisements for employees placed by or on behalf of the undersigned, state the all qualified applicants will receive consideration for employment without regard to race, color, religion, sex or national origin.

3. The undersigned will send to each labor union or representative of workers, with which he has a collective bargaining agreement or other contract or understanding, a notice to be provided advising the said labor union or workers' representative of the undersigned's commitment under this section, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

4. The undersigned will comply with all provisions of Executive Order No. 11246 of September 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.

5. The undersigned will furnish all information and reports required by Executive Order No. 11246 of September 24, 1965, and by the rules, regulations, and relevant orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records and accounts by the administering agency of the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.

6. In the event of the undersigned's non-compliance with the equal opportunity (federally assisted construction) clause of this contract of with any of the said rules, regulations, or orders, this contract may be canceled, terminated or suspended in whole or in part, and the undersigned may be declared ineligible for further Government contracts of federally assisted construction contracts in accordance with procedures authorized in Executive Order No. 11246 of September 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order No 11246 of September 24, 1965, or by rules, regulations, or order of the Secretary of Labor, or as provided by law.

7. The undersigned will include this equal opportunity (federally assisted construction) clause in every subcontract or purchase order unless exempted by the rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order No 11246 of September 24, 1965, so that such provision will be binding upon each subcontract or vender. The undersigned will take such action with respect to any subcontract or purchase order as the administering agency may direct as a means of enforcing such provisions, including sanctions for non compliance: Provided, however, that in the event a contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor, as a result of such direction by the administering agency the undersigned may request the United States to enter into such litigation to protect the interest of the United States.

AMERICAN IRON AND STEEL ACKNOWLEDGEMENT

The Contractor acknowledges to and for the benefit of the City of _____ ("Purchaser") and the State of Ohio (the "State") that it understands the goods and services under this Agreement are being funded with monies made available by the Clean Water State Revolving Fund and/or Drinking Water State Revolving Fund that have statutory requirements commonly known as "American Iron and Steel;" that requires all of the iron and steel products used in the project to be produced in the United States ("American Iron and Steel Requirement") including iron and steel products provided by the Contactor pursuant to this Agreement. The Contractor hereby represents and warrants to and for the benefit of the Purchaser and the State that (a) the Contractor has reviewed and understands the American Iron and Steel Requirement, (b) all of the iron and steel products used in the project will be and/or have been produced in the United States in a manner that complies with the American Iron and Steel Requirement, unless a waiver of the requirement is approved, and (c) the Contractor will provide any further verified information, certification or assurance of compliance with this paragraph, or information necessary to support a waiver of the American Iron and Steel Requirement, as may be requested by the Purchaser or the State. Notwithstanding any other provision of this Agreement, any failure to comply with this paragraph by the Contractor shall permit the Purchaser or State to recover as damages against the Contractor any loss, expense, or cost (including without limitation attorney's fees) incurred by the Purchaser or State resulting from any such failure (including without limitation any impairment or loss of funding, whether in whole or in part, from the State or any damages owed to the State by the Purchaser). While the Contractor has no direct contractual privity with the State, as a lender to the Purchaser for the funding of its project, the Purchaser and the Contractor agree that the State is a third-party beneficiary and neither this paragraph (nor any other provision of this Agreement necessary to give this paragraph force or effect) shall be amended or waived without the prior written consent of the State.

☐ Check here if the WPCLF or WSRLA applicant will be requesting an individual waiver for non-American made iron and steel products. Please note that the waiver box does not need to be marked for nationwide waivers.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

MAR 20 2014

OFFICE OF WATER

MEMORANDUM

SUBJECT: Implementation of American Iron and Steel provisions of P.L. 113-76, Consolidated Appropriations Act, 2014

FROM: Andrew D. Sawyers, Director
Office of Wastewater Management (4201M)

Peter C. Grevatt, Director
Office of Ground Water and Drinking Water (4601M)

TO: Water Management Division Directors
Regions I - X

P.L. 113-76, Consolidated Appropriations Act, 2014 (Act), includes an "American Iron and Steel (AIS)" requirement in section 436 that requires Clean Water State Revolving Loan Fund (CWSRF) and Drinking Water State Revolving Loan Fund (DWSRF) assistance recipients to use iron and steel products that are produced in the United States for projects for the construction, alteration, maintenance, or repair of a public water system or treatment works if the project is funded through an assistance agreement executed beginning January 17, 2014 (enactment of the Act), through the end of Federal Fiscal Year 2014.

Section 436 also sets forth certain circumstances under which EPA may waive the AIS requirement. Furthermore, the Act specifically exempts projects where engineering plans and specifications were approved by a State agency prior to January 17, 2014.

The approach described below explains how EPA will implement the AIS requirement. The first section is in the form of questions and answers that address the types of projects that must comply with the AIS requirement, the types of products covered by the AIS requirement, and compliance. The second section is a step-by-step process for requesting waivers and the circumstances under which waivers may be granted.

Implementation

The Act states:

Sec. 436. (a)(1) None of the funds made available by a State water pollution control revolving fund as authorized by title VI of the Federal Water Pollution Control Act (33 U.S.C. 1381 et seq.) or made available by a drinking water treatment revolving loan fund as authorized by section 1452 of the Safe Drinking Water Act (42 U.S.C. 300j–12) shall be used for a project for the construction, alteration, maintenance, or repair of a public water system or treatment works unless all of the iron and steel products used in the project are produced in the United States.

(2) In this section, the term ‘‘iron and steel products’’ means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials.

(b) Subsection (a) shall not apply in any case or category of cases in which the Administrator of the Environmental Protection Agency (in this section referred to as the ‘‘Administrator’’) finds that—

(1) applying subsection (a) would be inconsistent with the public interest;

(2) iron and steel products are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality; or

(3) inclusion of iron and steel products produced in the United States will increase the cost of the overall project by more than 25 percent.

(c) If the Administrator receives a request for a waiver under this section, the Administrator shall make available to the public on an informal basis a copy of the request and information available to the Administrator concerning the request, and shall allow for informal public input on the request for at least 15 days prior to making a finding based on the request. The Administrator shall make the request and accompanying information available by electronic means, including on the official public Internet Web site of the Environmental Protection Agency.

(d) This section shall be applied in a manner consistent with United States obligations under international agreements.

(e) The Administrator may retain up to 0.25 percent of the funds appropriated in this Act for the Clean and Drinking Water State Revolving Funds for carrying out

the provisions described in subsection (a)(1) for management and oversight of the requirements of this section.

(f) This section does not apply with respect to a project if a State agency approves the engineering plans and specifications for the project, in that agency's capacity to approve such plans and specifications prior to a project requesting bids, prior to the date of the enactment of this Act.

The following questions and answers provide guidance for implementing and complying with the AIS requirements:

Project Coverage

1) What classes of projects are covered by the AIS requirement?

All treatment works projects funded by a CWSRF assistance agreement, and all public water system projects funded by a DWSRF assistance agreement, from the date of enactment through the end of Federal Fiscal Year 2014, are covered. The AIS requirements apply to the entirety of the project, no matter when construction begins or ends. Additionally, the AIS requirements apply to all parts of the project, no matter the source of funding.

2) Does the AIS requirement apply to nonpoint source projects or national estuary projects?

No. Congress did not include an AIS requirement for nonpoint source and national estuary projects unless the project can also be classified as a 'treatment works' as defined by section 212 of the Clean Water Act.

3) Are any projects for the construction, alteration, maintenance, or repair of a public water system or treatment works excluded from the AIS requirement?

Any project, whether a treatment works project or a public water system project, for which engineering plans and specifications were approved by the responsible state agency prior to January 17, 2014, is excluded from the AIS requirements.

4) What if the project does not have approved engineering plans and specifications but has signed an assistance agreement with a CWSRF or DWSRF program prior to January 17, 2014?

The AIS requirements do not apply to any project for which an assistance agreement was signed prior to January 17, 2014.

5) What if the project does not have approved engineering plans and specifications, but bids were advertised prior to January 17, 2014 and an assistance agreement was signed after January 17, 2014?

If the project does not require approved engineering plans and specifications, the bid advertisement date will count in lieu of the approval date for purposes of the exemption in section 436(f).

6) What if the assistance agreement that was signed prior to January 17, 2014, only funded a part of the overall project, where the remainder of the project will be funded later with another SRF loan?

If the original assistance agreement funded any construction of the project, the date of the original assistance agreement counts for purposes of the exemption. If the original assistance agreement was only for planning and design, the date of that assistance agreement will count for purposes of the exemption only if there is a written commitment or expectation on the part of the assistance recipient to fund the remainder of the project with SRF funds.

7) What if the assistance agreement that was signed prior to January 17, 2014, funded the first phase of a multi-phase project, where the remaining phases will be funded by SRF assistance in the future?

In such a case, the phases of the project will be considered a single project if all construction necessary to complete the building or work, regardless of the number of contracts or assistance agreements involved, are closely related in purpose, time and place. However, there are many situations in which major construction activities are clearly undertaken in phases that are distinct in purpose, time, or place. In the case of distinct phases, projects with engineering plans and specifications approval or assistance agreements signed prior to January 17, 2014 would be excluded from AIS requirements while those approved/signed on January 17, 2014, or later would be covered by the AIS requirements.

8) What if a project has split funding from a non-SRF source?

Many States intend to fund projects with "split" funding, from the SRF program and from State or other programs. Based on the Act language in section 436, which requires that American iron and steel products be used in any project for the construction, alteration, maintenance, or repair of a public water system or treatment works receiving SRF funding between and including January 17, 2014 and September 30, 2014, any project that is funded in whole or in part with such funds must comply with the AIS requirement. A "project" consists of all construction necessary to complete the building or work regardless of the number of contracts or assistance agreements involved so long as all contracts and assistance agreements awarded are closely related in purpose, time and place. This precludes the intentional splitting of SRF projects into separate and smaller contracts or assistance agreements to avoid AIS coverage on some portion of a larger

project, particularly where the activities are integrally and proximately related to the whole. However, there are many situations in which major construction activities are clearly undertaken in separate phases that are distinct in purpose, time, or place, in which case, separate contracts or assistance agreement for SRF and State or other funding would carry separate requirements.

9) What about refinancing?

If a project began construction, financed from a non-SRF source, prior to January 17, 2014, but is refinanced through an SRF assistance agreement executed on or after January 17, 2014 and prior to October 1, 2014, AIS requirements will apply to all construction that occurs on or after January 17, 2014, through completion of construction, unless, as is likely, engineering plans and specifications were approved by a responsible state agency prior to January 17, 2014. There is no retroactive application of the AIS requirements where a refinancing occurs for a project that has completed construction prior to January 17, 2014.

10) Do the AIS requirements apply to any other EPA programs, besides the SRF program, such as the Tribal Set-aside grants or grants to the Territories and DC?

No, the AIS requirement only applies to funds made available by a State water pollution control revolving fund as authorized by title VI of the Federal Water Pollution Control Act (33 U.S.C. 1381 et seq.) or made available by a drinking water treatment revolving loan fund as authorized by section 1452 of the Safe Drinking Water Act (42 U.S.C. 300j–12)

Covered Iron and Steel Products

11) What is an iron or steel product?

For purposes of the CWSRF and DWSRF projects that must comply with the AIS requirement, an iron or steel product is one of the following made primarily of iron or steel that is permanently incorporated into the public water system or treatment works:

Lined or unlined pipes or fittings;
Manhole Covers;
Municipal Castings (defined in more detail below);
Hydrants;
Tanks;
Flanges;
Pipe clamps and restraints;
Valves;
Structural steel (defined in more detail below);
Reinforced precast concrete; and
Construction materials (defined in more detail below).

12) What does the term 'primarily iron or steel' mean?

'Primarily iron or steel' places constraints on the list of products above. For one of the listed products to be considered subject to the AIS requirements, it must be made of greater than 50% iron or steel, measured by cost. The cost should be based on the material costs.

13) Can you provide an example of how to perform a cost determination?

For example, the iron portion of a fire hydrant would likely be the bonnet, body and shoe, and the cost then would include the pouring and casting to create those components. The other material costs would include non-iron and steel internal workings of the fire hydrant (i.e., stem, coupling, valve, seals, etc). However, the assembly of the internal workings into the hydrant body would not be included in this cost calculation. If one of the listed products is not made primarily of iron or steel, United States (US) provenance is not required. An exception to this definition is reinforced precast concrete, which is addressed in a later question.

14) If a product is composed of more than 50% iron or steel, but is not listed in the above list of items, must the item be produced in the US? Alternatively, must the iron or steel in such a product be produced in the US?

The answer to both question is no. Only items on the above list must be produced in the US. Additionally, the iron or steel in a non-listed item can be sourced from outside the US.

15) What is the definition of steel?

Steel means an alloy that includes at least 50 percent iron, between .02 and 2 percent carbon, and may include other elements. Metallic elements such as chromium, nickel, molybdenum, manganese, and silicon may be added during the melting of steel for the purpose of enhancing properties such as corrosion resistance, hardness, or strength. The definition of steel covers carbon steel, alloy steel, stainless steel, tool steel and other specialty steels.

16) What does 'produced in the United States' mean?

Production in the United States of the iron or steel products used in the project requires that all manufacturing processes, including application of coatings, must take place in the United States, with the exception of metallurgical processes involving refinement of steel additives. All manufacturing processes includes processes such as melting, refining, forming, rolling, drawing, finishing, fabricating and coating. Further, if a domestic iron and steel product is taken out of the US for any part of the manufacturing process, it becomes foreign source material. However, raw materials such as iron ore, limestone and iron and steel scrap are not covered by the AIS requirement, and the

material(s), if any, being applied as a coating are similarly not covered. Non-iron or steel components of an iron and steel product may come from non-US sources. For example, for products such as valves and hydrants, the individual non-iron and steel components do not have to be of domestic origin.

17) Are the raw materials used in the production of iron or steel required to come from US sources?

No. Raw materials, such as iron ore, limestone, scrap iron, and scrap steel, can come from non-US sources.

18) If an above listed item is primarily made of iron or steel, but is only at the construction site temporarily, must such an item be produced in the US?

No. Only the above listed products made primarily of iron or steel, permanently incorporated into the project must be produced in the US. For example trench boxes, scaffolding or equipment, which are removed from the project site upon completion of the project, are not required to be made of U.S. Iron or Steel.

19) What is the definition of 'municipal castings'?

Municipal castings are cast iron or steel infrastructure products that are melted and cast. They typically provide access, protection, or housing for components incorporated into utility owned drinking water, storm water, wastewater, and surface infrastructure. They are typically made of grey or ductile iron, or steel. Examples of municipal castings are:

Access Hatches;
Ballast Screen;
Benches (Iron or Steel);
Bollards;
Cast Bases;
Cast Iron Hinged Hatches, Square and Rectangular;
Cast Iron Riser Rings;
Catch Basin Inlet;
Cleanout/Monument Boxes;
Construction Covers and Frames;
Curb and Corner Guards;
Curb Openings;
Detectable Warning Plates;
Downspout Shoes (Boot, Inlet);
Drainage Grates, Frames and Curb Inlets;
Inlets;
Junction Boxes;
Lampposts;
Manhole Covers, Rings and Frames, Risers;

Meter Boxes;
Service Boxes;
Steel Hinged Hatches, Square and Rectangular;
Steel Riser Rings;
Trash receptacles;
Tree Grates;
Tree Guards;
Trench Grates; and
Valve Boxes, Covers and Risers.

20) What is 'structural steel'?

Structural steel is rolled flanged shapes, having at least one dimension of their cross-section three inches or greater, which are used in the construction of bridges, buildings, ships, railroad rolling stock, and for numerous other constructional purposes. Such shapes are designated as wide-flange shapes, standard I-beams, channels, angles, tees and zees. Other shapes include H-piles, sheet piling, tie plates, cross ties, and those for other special purposes.

21) What is a 'construction material' for purposes of the AIS requirement?

Construction materials are those articles, materials, or supplies made primarily of iron and steel, that are permanently incorporated into the project, not including mechanical and/or electrical components, equipment and systems. Some of these products may overlap with what is also considered "structural steel". This includes, but is not limited to, the following products: wire rod, bar, angles, concrete reinforcing bar, wire, wire cloth, wire rope and cables, tubing, framing, joists, trusses, fasteners (i.e., nuts and bolts), welding rods, decking, grating, railings, stairs, access ramps, fire escapes, ladders, wall panels, dome structures, roofing, ductwork, surface drains, cable hanging systems, manhole steps, fencing and fence tubing, guardrails, doors, and stationary screens.

22) What is not considered a 'construction material' for purposes of the AIS requirement?

Mechanical and electrical components, equipment and systems are not considered construction materials. Mechanical equipment is typically that which has motorized parts and/or is powered by a motor. Electrical equipment is typically any machine powered by electricity and includes components that are part of the electrical distribution system.

The following examples (including their appurtenances necessary for their intended use and operation) are NOT considered construction materials: pumps, motors, gear reducers, drives (including variable frequency drives (VFDs)), electric/pneumatic/manual accessories used to operate valves (such as electric valve actuators), mixers, gates, motorized screens (such as traveling screens), blowers/aeration equipment, compressors, meters, sensors, controls and switches, supervisory control and

data acquisition (SCADA), membrane bioreactor systems, membrane filtration systems, filters, clarifiers and clarifier mechanisms, rakes, grinders, disinfection systems, presses (including belt presses), conveyors, cranes, HVAC (excluding ductwork), water heaters, heat exchangers, generators, cabinetry and housings (such as electrical boxes/enclosures), lighting fixtures, electrical conduit, emergency life systems, metal office furniture, shelving, laboratory equipment, analytical instrumentation, and dewatering equipment.

23) If the iron or steel is produced in the US, may other steps in the manufacturing process take place outside of the US, such as assembly?

No. Production in the US of the iron or steel used in a listed product requires that all manufacturing processes must take place in the United States, except metallurgical processes involving refinement of steel additives.

24) What processes must occur in the US to be compliant with the AIS requirement for reinforced precast concrete?

While reinforced precast concrete may not be at least 50% iron or steel, in this particular case, the reinforcing bar and wire must be produced in the US and meet the same standards as for any other iron or steel product. Additionally, the casting of the concrete product must take place in the US. The cement and other raw materials used in concrete production are not required to be of domestic origin.

If the reinforced concrete is cast at the construction site, the reinforcing bar and wire are considered to be a construction material and must be produced in the US.

Compliance

25) How should an assistance recipient document compliance with the AIS requirement?

In order to ensure compliance with the AIS requirement, specific AIS contract language must be included in each contract, starting with the assistance agreement, all the way down to the purchase agreements. Sample language for assistance agreements and contracts can be found in Appendix 3 and 4.

EPA recommends the use of a step certification process, similar to one used by the Federal Highway Administration. The step certification process is a method to ensure that producers adhere to the AIS requirement and assistance recipients can verify that products comply with the AIS requirement. The process also establishes accountability and better enables States to take enforcement actions against violators.

Step certification creates a paper trail which documents the location of the manufacturing process involved with the production of steel and iron materials. A step certification is a process under which each handler (supplier, fabricator, manufacturer,

processor, etc) of the iron and steel products certifies that their step in the process was domestically performed. Each time a step in the manufacturing process takes place, the manufacturer delivers its work along with a certification of its origin. A certification can be quite simple. Typically, it includes the name of the manufacturer, the location of the manufacturing facility where the product or process took place (not its headquarters), a description of the product or item being delivered, and a signature by a manufacturer's responsible party. Attached, as Appendix 5, are sample certifications. These certifications should be collected and maintained by assistance recipients.

Alternatively, the final manufacturer that delivers the iron or steel product to the worksite, vendor, or contractor, may provide a certification asserting that all manufacturing processes occurred in the US. While this type of certification may be acceptable, it may not provide the same degree of assurance. Additional documentation may be needed if the certification is lacking important information. Step certification is the best practice.

26) How should a State ensure assistance recipients are complying with the AIS requirement?

In order to ensure compliance with the AIS requirement, States SRF programs must include specific AIS contract language in the assistance agreement. Sample language for assistance agreements can be found in Appendix 3.

States should also, as a best practice, conduct site visits of projects during construction and review documentation demonstrating proof of compliance which the assistance recipient has gathered.

27) What happens if a State or EPA finds a non-compliant iron and/or steel product permanently incorporated in the project?

If a potentially non-compliant product is identified, the State should notify the assistance recipient of the apparent unauthorized use of the non-domestic component, including a proposed corrective action, and should be given the opportunity to reply. If unauthorized use is confirmed, the State can take one or more of the following actions: request a waiver where appropriate; require the removal of the non-domestic item; or withhold payment for all or part of the project. Only EPA can issue waivers to authorize the use of a non-domestic item. EPA may use remedies available to it under the Clean Water Act, the Safe Drinking Water Act, and 40 CFR part 31 grant regulations, in the event of a violation of a grant term and condition.

It is recommended that the State work collaboratively with EPA to determine the appropriate corrective action, especially in cases where the State is the one who identifies the item in noncompliance or there is a disagreement with the assistance recipient.

If fraud, waste, abuse, or any violation of the law is suspected, the Office of Inspector General (OIG) should be contacted immediately. The OIG can be reached at 1-

888-546-8740 or OIG_Hotline@epa.gov. More information can be found at this website: http://www.epa.gov/oig/hotline.htm.

28) How do international trade agreements affect the implementation of the AIS requirements?

The AIS provision applies in a manner consistent with United States obligations under international agreements. Typically, these obligations only apply to direct procurement by the entities that are signatories to such agreements. In general, SRF assistance recipients are not signatories to such agreements, so these agreements have no impact on this AIS provision. In the few instances where such an agreement applies to a municipality, that municipality is under the obligation to determine its applicability and requirements and document the actions taken to comply for the State.

Waiver Process

The statute permits EPA to issue waivers for a case or category of cases where EPA finds (1) that applying these requirements would be inconsistent with the public interest; (2) iron and steel products are not produced in the US in sufficient and reasonably available quantities and of a satisfactory quality; or (3) inclusion of iron and steel products produced in the US will increase the cost of the overall project by more than 25 percent.

In order to implement the AIS requirements, EPA has developed an approach to allow for effective and efficient implementation of the waiver process to allow projects to proceed in a timely manner. The framework described below will allow States, on behalf of the assistance recipients, to apply for waivers of the AIS requirement directly to EPA Headquarters. Only waiver requests received from states will be considered. Pursuant to the Act, EPA has the responsibility to make findings as to the issuance of waivers to the AIS requirements.

Definitions

The following terms are critical to the interpretation and implementation of the AIS requirements and apply to the process described in this memorandum:

Reasonably Available Quantity: The quantity of iron or steel products is available or will be available at the time needed and place needed, and in the proper form or specification as specified in the project plans and design.

Satisfactory Quality: The quality of iron or steel products, as specified in the project plans and designs.

Assistance Recipient: A borrower or grantee that receives funding from a State CWSRF or DWSRF program.

Step-By-Step Waiver Process

Application by Assistance Recipient

Each local entity that receives SRF water infrastructure financial assistance is required by section 436 of the Act to use American made iron and steel products in the construction of its project. However, the recipient may request a waiver. Until a waiver is granted by EPA, the AIS requirement stands, except as noted above with respect to municipalities covered by international agreements.

The waiver process begins with the SRF assistance recipient. In order to fulfill the AIS requirement, the assistance recipient must in good faith design the project (where applicable) and solicit bids for construction with American made iron and steel products. It is essential that the assistance recipient include the AIS terms in any request for proposals or solicitations for bids, and in all contracts (see Appendix 3 for sample construction contract language). The assistance recipient may receive a waiver at any point before, during, or after the bid process, if one or more of three conditions is met:

1. Applying the American Iron and Steel requirements of the Act would be inconsistent with the public interest;
2. Iron and steel products are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality; or
3. Inclusion of iron and steel products produced in the United States will increase the cost of the overall project by more than 25 percent.

Proper and sufficient documentation must be provided by the assistance recipient. A checklist detailing the types of information required for a waiver to be processed is attached as Appendix 1.

Additionally, it is strongly encouraged that assistance recipients hold pre-bid conferences with potential bidders. A pre-bid conference can help to identify iron and steel products needed to complete the project as described in the plans and specifications that may not be available from domestic sources. It may also identify the need to seek a waiver prior to bid, and can help inform the recipient on compliance options.

In order to apply for a project waiver, the assistance recipient should email the request in the form of a Word document (.doc) to the State SRF program. It is strongly recommended that the State designate a single person for all AIS communications. The State SRF designee will review the application for the waiver and determine whether the necessary information has been included. Once the waiver application is complete, the State designee will forward the application to either of two email addresses. For CWSRF waiver requests, please send the application to: cwsrfwaiver@epa.gov. For DWSRF waiver requests, please send the application to: dwsrfwaiver@epa.gov.

Evaluation by EPA

After receiving an application for waiver of the AIS requirements, EPA Headquarters will publish the request on its website for 15 days and receive informal comment. EPA Headquarters will then use the checklist in Appendix 2 to determine whether the application properly and adequately documents and justifies the statutory basis cited for the waiver – that it is quantitatively and qualitatively sufficient – and to determine whether or not to grant the waiver.

In the event that EPA finds that adequate documentation and justification has been submitted, the Administrator may grant a waiver to the assistance recipient. EPA will notify the State designee that a waiver request has been approved or denied as soon as such a decision has been made. Granting such a waiver is a three-step process:

1. Posting – After receiving an application for a waiver, EPA is required to publish the application and all material submitted with the application on EPA's website for 15 days. During that period, the public will have the opportunity to review the request and provide informal comment to EPA. The website can be found at: http://water.epa.gov/grants_funding/aisrequirement.cfm

2. Evaluation – After receiving an application for waiver of the AIS requirements, EPA Headquarters will use the checklist in Appendix 2 to determine whether the application properly and adequately documents and justifies the statutory basis cited for the waiver – that it is quantitatively and qualitatively sufficient – and to determine whether or not to grant the waiver.

3. Signature of waiver approval by the Administrator or another agency official with delegated authority – As soon as the waiver is signed and dated, EPA will notify the State SRF program, and post the signed waiver on our website. The assistance recipient should keep a copy of the signed waiver in its project files.

Public Interest Waivers

EPA has the authority to issue public interest waivers. Evaluation of a public interest waiver request may be more complicated than that of other waiver requests so they may take more time than other waiver requests for a decision to be made. An example of a public interest waiver that might be issued could be for a community that has standardized on a particular type or manufacturer of a valve because of its performance to meet their specifications. Switching to an alternative valve may require staff to be trained on the new equipment and additional spare parts would need to be purchased and stocked, existing valves may need to be unnecessarily replaced, and portions of the system may need to be redesigned. Therefore, requiring the community to install an alternative valve would be inconsistent with public interest.

EPA also has the authority to issue a public interest waiver that covers categories of products that might apply to all projects.

EPA reserves the right to issue national waivers that may apply to particular classes of assistance recipients, particular classes of projects, or particular categories of iron or steel products. EPA may develop national or (US geographic) regional categorical waivers through the identification of similar circumstances in the detailed justifications presented to EPA in a waiver request or requests. EPA may issue a national waiver based on policy decisions regarding the public's interest or a determination that a particular item is not produced domestically in reasonably available quantities or of a sufficient quality. In such cases, EPA may determine it is necessary to issue a national waiver.

If you have any questions concerning the contents of this memorandum, you may contact us, or have your staff contact Jordan Dorfman, Attorney-Advisor, State Revolving Fund Branch, Municipal Support Division, at dorfman.jordan@epa.gov or (202) 564-0614 or Kiri Anderer, Environmental Engineer, Infrastructure Branch, Drinking Water Protection Division, at anderer.kirsten@epa.gov or (202) 564-3134.

Attachments

Appendix 1: Information Checklist for Waiver Request

The purpose of this checklist is to help ensure that all appropriate and necessary information is submitted to EPA. EPA recommends that States review this checklist carefully and provide all appropriate information to EPA. This checklist is for informational purposes only and does not need to be included as part of a waiver application.

Items	✓	Notes
General • Waiver request includes the following information: — Description of the foreign and domestic construction materials — Unit of measure — Quantity — Price — Time of delivery or availability — Location of the construction project — Name and address of the proposed supplier — A detailed justification for the use of foreign construction materials • Waiver request was submitted according to the instructions in the memorandum • Assistance recipient made a good faith effort to solicit bids for domestic iron and steel products, as demonstrated by language in requests for proposals, contracts, and communications with the prime contractor		
Cost Waiver Requests • Waiver request includes the following information: — Comparison of overall cost of project with domestic iron and steel products to overall cost of project with foreign iron and steel products — Relevant excerpts from the bid documents used by the contractors to complete the comparison — Supporting documentation indicating that the contractor made a reasonable survey of the market, such as a description of the process for identifying suppliers and a list of contacted suppliers		
Availability Waiver Requests • Waiver request includes the following supporting documentation necessary to demonstrate the availability, quantity, and/or quality of the materials for which the waiver is requested: — Supplier information or pricing information from a reasonable number of domestic suppliers indicating availability/delivery date for construction materials — Documentation of the assistance recipient's efforts to find available domestic sources, such as a description of the process for identifying suppliers and a list of contacted suppliers. — Project schedule — Relevant excerpts from project plans, specifications, and permits indicating the required quantity and quality of construction materials • Waiver request includes a statement from the prime contractor and/or supplier confirming the non-availability of the domestic construction materials for which the waiver is sought • Has the State received other waiver requests for the materials described in this waiver request, for comparable projects?		

Appendix 2: HQ Review Checklist for Waiver Request

Instructions: To be completed by EPA. Review all waiver requests using the questions in the checklist, and mark the appropriate box as Yes, No or N/A. Marks that fall inside the shaded boxes may be grounds for denying the waiver. If none of your review markings fall into a shaded box, the waiver is eligible for approval if it indicates that one or more of the following conditions applies to the domestic product for which the waiver is sought:

1. The iron and/or steel products are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality.
2. The inclusion of iron and/or steel products produced in the United States will increase the cost of the overall project by more than 25 percent.

Review Items	Yes	No	N/A	Comments
Cost Waiver Requests • Does the waiver request include the following information? — Comparison of overall cost of project with domestic iron and steel products to overall cost of project with foreign iron and steel products — Relevant excerpts from the bid documents used by the contractors to complete the comparison — A sufficient number of bid documents or pricing information from domestic sources to constitute a reasonable survey of the market • Does the Total Domestic Project exceed the Total Foreign Project Cost by more than 25%?				
Availability Waiver Requests • Does the waiver request include supporting documentation sufficient to show the availability, quantity, and/or quality of the iron and/or steel product for which the waiver is requested? — Supplier information or other documentation indicating availability/delivery date for materials — Project schedule — Relevant excerpts from project plans, specifications, and permits indicating the required quantity and quality of materials • Does supporting documentation provide sufficient evidence that the contractors made a reasonable effort to locate domestic suppliers of materials, such as a description of the process for identifying suppliers and a list of contacted suppliers? • Based on the materials delivery/availability date indicated in the supporting documentation, will the materials be unavailable when they are needed according to the project schedule? (By item, list schedule date and domestic delivery quote date or other relevant information) • Is EPA aware of any other evidence indicating the non-availability of the materials for which the waiver is requested? Examples include: — Multiple waiver requests for the materials described in this waiver request, for comparable projects in the same State — Multiple waiver requests for the materials described in this waiver request, for comparable projects in other States — Correspondence with construction trade associations indicating the non-availability of the materials • Are the available domestic materials indicated in the bid documents of inadequate quality compared those required by the project plans, specifications, and/or permits?				

Appendix 3: Example Loan Agreement Language

ALL ASSISTANCE AGREEMENT MUST HAVE A CLAUSE REQUIRING COMPLIANCE WITH THE AIS REQUIREMENT. THIS IS AN EXAMPLE OF WHAT COULD BE INCLUDED IN SRF ASSISTANCE AGREEMENTS. EPA MAKES NO CLAIMS REGARDING THE LEGALITY OF THIS CLAUSE WITH RESPECT TO STATE LAW:

Comply with all federal requirements applicable to the Loan (including those imposed by the 2014 Appropriations Act and related SRF Policy Guidelines) which the Participant understands includes, among other, requirements that all of the iron and steel products used in the Project are to be produced in the United States ("American Iron and Steel Requirement") unless (i) the Participant has requested and obtained a waiver from the Agency pertaining to the Project or (ii) the Finance Authority has otherwise advised the Participant in writing that the American Iron and Steel Requirement is not applicable to the Project.

Comply with all record keeping and reporting requirements under the Clean Water Act/Safe Drinking Water Act, including any reports required by a Federal agency or the Finance Authority such as performance indicators of program deliverables, information on costs and project progress. The Participant understands that (i) each contract and subcontract related to the Project is subject to audit by appropriate federal and state entities and (ii) failure to comply with the Clean Water Act/Safe Drinking Water Act and this Agreement may be a default hereunder that results in a repayment of the Loan in advance of the maturity of the Bonds and/or other remedial actions.

Appendix 4: Sample Construction Contract Language

ALL CONTRACTS MUST HAVE A CLAUSE REQUIRING COMPLIANCE WITH THE AIS REQUIREMENT. THIS IS AN EXAMPLE OF WHAT COULD BE INCLUDED IN ALL CONTRACTS IN PROJECTS THAT USE SRF FUNDS. EPA MAKES NO CLAIMS REGARDING THE LEGALITY OF THIS CLAUSE WITH RESPECT TO STATE OR LOCAL LAW:

The Contractor acknowledges to and for the benefit of the City of ("Purchaser") and the (the "State") that it understands the goods and services under this Agreement are being funded with monies made available by the Clean Water State Revolving Fund and/or Drinking Water State Revolving Fund that have statutory requirements commonly known as "American Iron and Steel;" that requires all of the iron and steel products used in the project to be produced in the United States ("American Iron and Steel Requirement") including iron and steel products provided by the Contactor pursuant to this Agreement. The Contractor hereby represents and warrants to and for the benefit of the Purchaser and the State that (a) the Contractor has reviewed and understands the American Iron and Steel Requirement, (b) all of the iron and steel products used in the project will be and/or have been produced in the United States in a manner that complies with the American Iron and Steel Requirement, unless a waiver of the requirement is approved, and (c) the Contractor will provide any further verified information, certification or assurance of compliance with this paragraph, or information necessary to support a waiver of the American Iron and Steel Requirement, as may be requested by the Purchaser or the State. Notwithstanding any other provision of this Agreement, any failure to comply with this paragraph by the Contractor shall permit the Purchaser or State to recover as damages against the Contractor any loss, expense, or cost (including without limitation attorney's fees) incurred by the Purchaser or State resulting from any such failure (including without limitation any impairment or loss of funding, whether in whole or in part, from the State or any damages owed to the State by the Purchaser). While the Contractor has no direct contractual privity with the State, as a lender to the Purchaser for the funding of its project, the Purchaser and the Contractor agree that the State is a third-party beneficiary and neither this paragraph (nor any other provision of this Agreement necessary to give this paragraph force or effect) shall be amended or waived without the prior written consent of the State.

Appendix 5: Sample Certifications

The following information is provided as a sample letter of **step** certification for AIS compliance. Documentation must be provided on company letterhead.

Date

Company Name

Company Address

City, State Zip

Subject: American Iron and Steel Step Certification for Project (XXXXXXXXXX)

I, (company representative), certify that the (melting, bending, coating, galvanizing, cutting, etc.) process for (manufacturing or fabricating) the following products and/or materials shipped or provided for the subject project is in full compliance with the American Iron and Steel requirement as mandated in EPA's State Revolving Fund Programs.

Item, Products and/or Materials:

1. Xxxx
2. Xxxx
3. Xxxx

Such process took place at the following location:

_____

If any of the above compliance statements change while providing material to this project we will immediately notify the prime contractor and the engineer.

Signed by company representative

The following information is provided as a sample letter of certification for AIS compliance. Documentation must be provided on company letterhead.

Date

Company Name

Company Address

City, State Zip

Subject: American Iron and Steel Certification for Project (XXXXXXXXXX)

I, (company representative), certify that the following products and/or materials shipped/provided to the subject project are in full compliance with the American Iron and Steel requirement as mandated in EPA's State Revolving Fund Programs.

Item, Products and/or Materials:

1. Xxxx
2. Xxxx
3. Xxxx

Such process took place at the following location:

_____

If any of the above compliance statements change while providing material to this project we will immediately notify the prime contractor and the engineer.

American Iron & Steel (AIS) Requirement of the Consolidated Appropriations Act of 2014 (Public Law 113-76)

Q&A Part 2

PRODUCT QUESTIONS

1. **Q: Do all fasteners qualify for de minimis exemption?**

   A: No. There is no broad exemption for fasteners from the American Iron and Steel (AIS) requirements. Significant fasteners used in SRF projects are not subject to the de minimis waiver for projects and must comply with the AIS requirements. Significant fasteners include fasteners produced to industry standards (e.g., ASTM standards) and/or project specifications, special ordered or those of high value. When bulk purchase of unknown-origin fasteners that are of incidental use and small value are used on a project, they may fall under the national de minimis waiver for projects. The list of potential items could be varied, such as big-box/hardware-store-variety screws, nails, and staples. The key characteristics of the items that may qualify for the de minimis waiver would be items that are incidental to the project purpose (such as drywall screws) and not significant in value or purpose (such as common nails or brads). See the following: http://water.epa.gov/grants_funding/upload/Deminimis-Waiver-04-15-14.pdf.

   EPA also clarifies that minor components of two listed products – valves and hydrants -- may not need to meet the AIS requirements if the minor components compromise a very small quantity of minor, low-cost fasteners that are of unknown origin. See EPA's questions and answers on the subject at the following: http://water.epa.gov/grants_funding/upload/AIS-QandA-Part-1-Valves-and-Hydrants-final.pdf.

2. **Q: Does PCCP pipe have to be domestically produced?**

   A: Yes. Pre-stressed concrete cylinder pipe (PCCP) or other similar concrete cylinder pipes would be comparable to pre-cast concrete which is specifically listed in the Consolidated Appropriations Act of 2014 as a product subject to the AIS requirement.

3. **Q: If the iron or steel is made from recycled metals will the vendor/supplier have to provide a certification document certifying that the recycled metals are domestically produced?**

   A: No. Recycled source materials used in the production of iron and steel products do not have to come from the U.S. Iron or steel scrap, for instance, are considered raw materials that may come from anywhere. While certification is not required for the raw material, EPA does recommend that additional final processing of iron and steel be certified to have occurred in the U.S.

4. **Q: Do tanks used for filtration systems, if delivered to the construction site separately and then filled with filtration media onsite, have to be domestically produced?**

A: No. Tanks that are specifically designed to be filters, or as parts of a filtration system, do not have to be domestically produced because these parts are no longer simply tanks, even if the filter media has not been installed and will be installed at the project site, as is customary to do for shipping purposes. These parts have only one purpose which is to be housing for filters and cannot be used in another fashion.

5. **Q: Can a recipient use non-domestic flanged pipe?**

   A: No. While the Consolidated Appropriations Act of 2014 does not specifically mention flanged pipe, since it does mention both pipe and flanges, both products would need to be domestically produced. Therefore, flanged pipe would also need to be domestically produced.

6. **Q: Can a recipient use non-domestic couplings, expansion joints, and other similar pipe connectors?**

   A: No. These products would be considered specialty fittings, due to their additional functionality, but still categorized under the larger "fitting" categorization. Fittings are defined as a material that joins pipes together or connects to a pipe (AWWA, The Drinking Water Dictionary, 2000). Therefore, these products must comply with the AIS requirements and be produced domestically.

7. **Q: Can a recipient use non-domestic service saddles and tapping sleeves?**

   A: No. These products are necessary for pipe repair, to tap a water main, or to install a service or house connection. Therefore, they are included under the larger "pipe restraint" category which is a specifically identified product subject to the domestic preference in the Consolidated Appropriations Act of 2014.

8. **Q: The AIS guidance does not appear to cover reused items (i.e., existing pipe fittings, used storage tanks, reusing existing valves). How should reused items be addressed?**

   A: The AIS guidance does not address reuse of items. Reuse of items that would otherwise be covered by AIS is acceptable provided that the item(s) was originally purchased prior to January 17, 2014, the reused item(s) is not substantially altered from original form/function, and any restoration work that may be required does not include the replacement or addition of foreign iron or steel replacement parts. EPA recommends keeping a log of these reused items by including them on the assistance recipient's de minimis list, and stating therein that these items are reused products. The donation of new items (such as a manufacturer waiving cost for certain delivered items because of concerns regarding the origin of a new product) is not, however, considered reuse.

9. **Q: What does "time needed" mean in the AIS guidance, in reference to the definition of "Reasonably Available Quantity"?**

A: For considering whether a product would meet reasonably available quantity, "time needed" is based on the construction schedule. If the item is delayed and there is substantial impact on the overall construction schedule, this would not be according to the "time needed."

10. **Q: If a product is not specifically included on the list of AIS covered products, must it comply with AIS?**

    A: Possibly. The AIS requirements include a list of specifically covered products, one of which is construction materials, a broad category of potential products. For construction materials, EPA's AIS guidance includes a set of example items that it considers construction materials composed primarily of iron and steel and covered by the Act. This example list in the guidance is not an all-inclusive list of potential construction materials. However, the guidance also includes a list of items that EPA specifically does not consider construction materials, generally those of electrical or complex-mechanical nature. If a product is similar to the ones in the non-construction material list (and it is also not specifically listed by the Act), it is not a construction material. For all other items specifically included in the Act, coverage is generally self-evident.

11. **Q: If a listed iron and steel product is used as a part for an assembled product that is non-domestic, do the AIS requirements apply?**

    A: AIS requirements only apply to the final product as delivered to the work site and incorporated into the project. Other assemblies, such as a pumping assembly or a reverse osmosis package plant, are distinct products not listed and do not need to be made in the U.S. or composed of all U.S. parts. Therefore, for the case of a non-covered product used in a larger non-domestic assembly, the components, even if specifically listed in the Consolidated Appropriations Act, do not have to be domestically produced.

12. **Q: Is cast iron excluded from the AIS requirements?**

    A: No. Cast iron products that fall under the definition of iron and steel products must comply with the AIS requirements.

13. **Q: The guidance states that "construction materials" do not include mechanical equipment, but then identifies ductwork as a construction material. Please clarify.**

    A: Ductwork is not mechanical equipment, therefore it is considered a "construction material" and must comply with the AIS requirements.

14. **Q: Do "meters" mentioned in EPA's guidance as non-construction materials include both flow meters and water meters?**

    A: Yes. "Meters" includes any type of meter, including: flow meters, wholesale meters, and water meters/service connections.

15. **Q: Must coiled steel be domestic?**

    A: Yes. Coiled steel is an intermediate product used in the production of steel pipe and must come from a U.S. source or subject to a waiver in order to comply with the AIS requirements.

16. **Q: Are pig iron, direct reduced iron (DRI), and ingot considered raw materials?**

    A: No. These are considered intermediate products used in the production of iron or steel and must come from a U.S. source or subject to a waiver in order to comply with the AIS requirements.

17. **Q: Can assistance recipients rely on a marking that reads, "Made in the USA," as evidence that all processes took place in the U.S.?**

    A: No. This designation is not consistent with our requirements that all manufacturing processes of iron and steel products must take place in the U.S.

18. **Q: When determining what constitutes a product made "primarily" of iron or steel, who makes this determination?**

    A: The manufacturer will show if its product qualifies as primarily made of iron or steel. The recipient should expect the manufacturer to provide documentation/ certification that its product is AIS compliant.

19. **Q: Do aerators need to be produced domestically in order to comply with AIS?**

    A: No. Aerators, similar to pumps, are mechanical equipment that do not need to meet the AIS requirements. "Blowers/aeration equipment, compressors" are listed in EPA's guidance as non-construction materials.

20. **Q: Are Sluice and Slide Gates considered valves?**

    A: No. Valves are products that are generally encased / enclosed with a body, bonnet, and stem. Examples include enclosed butterfly, ball, globe, piston, check, wedge, and gate valves. Furthermore, "gates" (meaning sluice, slide or weir gates) are listed in EPA's guidance as non-construction materials.

AIS PROCESS QUESTIONS

21. **Q: Will notices of waiver applications be published in the federal register?**

    A: No. Applications for waivers will be published on EPA's website (http://water.epa.gov/grants_funding/aisrequirement.cfm**).** EPA will provide 15 days for open public comment, as noted on the website.

22. Q: Will states be collecting the step certification paper trail, as presented in the AIS guidance?

A. No. Assistance recipients must maintain documentation of compliance with AIS. EPA recommends use of the step certification process. This process is a best practice and traces all manufacturing of iron and steel products to the U.S. If the process is used, the state does not have to collect the documentation. The documents must be kept by the assistance recipient and reviewed by the state during project reviews.

23. Q: Why is it considered a best practice for states to conduct site visits, when it is the assistance recipient's responsibility to meet the AIS requirements?

A: It is both the assistance recipient's and the state's responsibility to ensure compliance with the AIS requirements. The state is the recipient of a federal grant and must comply with all grant conditions, including a condition requiring that the AIS requirements be adhered to. Therefore, it is recommended that states conduct site visits of projects during construction and review documentation demonstrating the assistance recipient's proof of compliance.

24. Q: Please further define the state's role in the waiver process.

A: The state's role in the waiver process is to review any waiver requests submitted to the state in order to ensure that all necessary information has been provided by the assistance recipient prior to forwarding the request to EPA. If a state finds the request lacking, the state should work with the assistance recipient to help obtain complete information.

25. Q: How much time does EPA have to evaluate the waiver during the evaluation step?

A: At a minimum, EPA is required to provide 15 days for open public comment. There is no specific deadline or time limit for EPA to review waiver requests. Each waiver request will come with its own specific details and circumstances and may require a different amount of time for review and analysis. For example, public interest waivers in general may take longer to review than availability waivers which are typically more straightforward. However, EPA understands that construction may be delayed while waiting for a waiver and will make every effort to review and issue decisions on waiver requests in a timely manner.

PROJECT QUESTIONS

26. Q: What if a project is funded by another funding entity (i.e., United States Department of Agriculture – Rural Development) where AIS is not required and begins construction after January 17, 2014 but then applies to the SRF to refinance the project? Are they ineligible?

A: The project is not ineligible. AIS requirements will apply to any construction that occurs after the assistance agreement is signed, through the end of construction. If construction is complete, there is no retroactive application of the AIS requirements.

27. **Q: If the assistance recipient can demonstrate through market research that the AIS requirement will exceed the 25 percent cost threshold, is the entire project exempt from the AIS requirement?**

    A: If the waiver application shows that the inclusion of American iron and steel products causes the entire cost of the project to increase by more the 25 percent, a waiver may be granted for the entirety of the project.

28. **Q: Can the recipient use non-SRF funds to pay for the non-compliant item.**

    A: No. It is not an acceptable to use non-SRF funds to pay for a non-compliant item. The Consolidated Appropriations Act of 2014 requires that all iron and steel products, no matter the source of funding, must be made in the U.S. if SRF funds are used in the project.

29. **Q: What constitutes "satisfactory quality" as defined in the AIS guidance, in reference to the availability waiver process.**

    A: "Satisfactory quality" means the product meets the project design specifications. A waiver may be granted if a recipient determines that the project plans and design would be compromised because there are no American made products available that meet the project design specifications.

30. **Q: The guidance states that the AIS requirement applies to any project "funded in whole or in part" by an SRF. Where is this in the Act?**

    A: The Act states that, "None of the funds made available by a … [State SRF program] … shall be used for a project for the construction, alteration, maintenance, or repair of a public water system or treatment works unless all of the iron and steel products used in the project are produced in the United States." This sentence clearly states that no SRF program may use its funds for a project unless all of the iron and steel products used in the project are made in the U.S. This is true even if only $1 of SRF funding is used in the project.

31. **Q: There is always an expectation on the part of an assistance recipient that the construction phase of a planning and/or design only loan will be funded through the SRF. If the original planning and/or design only loan was executed prior to a January 17, 2014, does this mean the entire project will be exempt from the AIS requirement?**

    A: If the original loan includes construction, and was executed prior to January 17, 2014, then the AIS provision does not apply to the project. If the original loan was only for planning and/or design, then a written commitment or documented "expectation" is needed to show exemption from the

requirements. Appearance on a priority list in an Intended Use Plan along with written reasonable assurance from the state that the recipient will receive SRF funding for project construction could provide sufficient evidence of "expectation of funding".

32. **Q: What if there has been a change order or redesign requiring new plans and specifications to be approved and they were approved after January 17, 2014: does the project now have to comply with AIS?**

    A: In most cases, no. Change orders are typically small enough changes that the original plan and specification date will still hold true. For example, if a pipe alignment has to be changed for a block or two due to unforeseen conditions, but new plans and specifications had to be submitted for this section of the project, then that could be considered a minor change. However, if there has been a major redesign, perhaps the whole project had to be redesigned starting from scratch, then the new plans and specification approval date would apply.

33. **Q: What if the bids on a project with plans and specifications approved before January 17, 2014 but the loan is signed after January 17, 2014 come in low, and there is significant funding remaining in the loan agreement, so the community designs a second project with the remaining funds: does that project have to comply with the AIS requirements?**

    A: If the second project is closely related in purpose, place and time to the first project, then the second project would be exempt from the AIS requirements. It is the assistance recipient's responsibility (with state oversight) to show that a project is closely related, or not, in purpose, place and time.

34. **Q: What if the assistance agreement was signed after January 17, 2014, state approval of plans for the first phase of the project was in place prior to January 17, 2014, but state approval of the plans for the second phase of the project was received after January 17, 2014?**

    A: In such a case, the AIS provision would not apply to the first phase of the project. If the second phase of the project is considered the same project as the first phase, due to its close relation in purpose, place and time, the entire project may be exempt. It is the assistance recipient's responsibility (with state oversight) to show that phases of a project is closely related, or not, in purpose, place and time.

35. **Q: Do products purchased through procurement-only contracts have to be comply with AIS?**

    A: Yes. For projects funded by SRF, the products procured under any form of contract must comply with AIS. A procurement-only contract generally involves the bulk purchase of common items (such as pipe, concrete, and/or pumps) of independent timing from a set of planned projects. If products which are purchased through a procurement-only contract are being installed under another contract, the procurement-only contract would probably not be considered a separate project in purpose, place and time; and therefore, would have to comply with the AIS requirements.

March 2015

American Iron & Steel Requirement for the Clean Water and Drinking Water State Revolving Funds

Q&A Part 3

*For CWSRF and DWSRF: On **January 17, 2014**, Public Law 113-76, the "Consolidated Appropriations Act, 2014," was enacted and included an American Iron and Steel requirement for the Clean Water and Drinking Water State Revolving Fund programs through the end of fiscal year 2014. Since then, the AIS requirement has continued for both programs, but through different statutes, with a few changes as described in the questions and answers provided below.*

*For CWSRF: On **June 10, 2014**, the Water Resources Reform and Development Act amended the Clean Water Act to include permanent requirements for the use of AIS products in CWSRF assistance agreements. Section 608 of the CWA now contains requirements for AIS that repeat those of the Consolidated Appropriations Act, 2014. All CWSRF assistance agreements must comply with Section 608 of the CWA for implementation of the permanent AIS requirement.*

*For DWSRF: On **December 16, 2014**, the President signed Public Law 113- 235, the "Consolidated and Further Continuing Appropriations Act, 2015," which provides fiscal year 2015 full-year appropriations through September 30, 2015. This law continues the requirement for the use of AIS products in DWSRF assistance agreements through September 30, 2015.*

CWSRF PROGRAM

1. **Q: The Water Resources Reform and Development Act amended the Clean Water Act to include permanent requirements for the use of AIS for CWSRF funded assistance agreements. Does the CWA include an exemption for plans and specifications approved prior to the enactment of the legislation similar to the exemption included in the Consolidated Appropriations Act (CAA) 2014?**

   A: Yes. The WRRDA amendment to the CWA, which included AIS requirements, included a similar exemption as the CAA 2014. For any CWSRF assistance agreement signed on or after October 1, 2014, if the plans and specifications were approved prior to June 10, 2014 (the enactment of WRRDA), then the project is exempt from AIS requirements. For assistance agreements signed prior to October 1, 2014, the previous dates in the CAA 2014 apply (see March 20, 2014, AIS guidance document).

   If a project does not require approved engineering plans and specifications, the bid advertisement date will count in lieu of the plans and specifications approval date for purposes of this exemption in Section 608 (f).

   The following table summarizes AIS exemptions based on the plans and specifications approval date for CWSRF funded projects.

CWSRF AIS Project Exemption Based on Plans and Specifications Approval Date		
Assistance Agreement Signed:	Exempt from AIS if Plans and Specifications Were Approved Before:	Basis for Exemption:
1/17/2014 through 9/30/2014	4/15/2014	• Consolidated Appropriations Act 2014 • National waiver signed 4/15/2014*
On or after 10/1/2014	6/10/2014	• Clean Water Act Section 608

** To be covered by the national waiver, the plans and specifications had to be submitted to the state prior to 1/17/2014*

2. Q: Does the AIS requirement apply to refinanced CWSRF projects?

A: Yes, in some cases. If a project began construction, financed from a non-CWSRF source prior to June 10, 2014, but is refinanced through a CWSRF assistance agreement executed on or after October 1, 2014, AIS requirements will apply to all construction that occurs on or after June 10, 2014, through completion of construction, unless engineering plans and specifications were approved by the responsible state agency prior to June 10, 2014. For CWSRF projects funded on or after October 1, 2014, there is no retroactive application of the AIS requirements where a refinancing occurs for a project that has completed construction prior to June 10, 2014.

DWSRF PROGRAM

3. Q: The Consolidated and Further Continuing Appropriations Act 2015 continues the AIS requirements for DWSRF funded assistance agreements. Does the Act include an exemption for plans and specifications approved prior to the enactment of the legislation, similar to the exemption included in the Consolidated Appropriations Act (CAA) 2014?

A: Yes. The Consolidated and Further Continuing Appropriations Act 2015 includes a similar exemption as the CAA 2014. For any assistance agreement signed on or after December 16, 2014 (the enactment of the Act), if the plans and specifications were approved prior to December 16, 2014, then the project is exempt from the AIS requirements. For assistance agreements signed prior to December 16, 2014, the previous dates in the CAA 2014 apply (see March 20, 2014 AIS guidance document).

If a project does not require approved engineering plans and specifications, the bid advertisement date will count in lieu of the plans and specifications approval date for purposes of the exemption in Section 424(f).

4. Q: Do DWSRF assistance agreements signed during the time period between September 30, 2014, and December 16, 2014, still have to comply with the AIS requirements?

A: Yes. The Continuing Appropriations Resolution 2015 was signed on September 19, 2014, which extended funding for the DWSRF with the same conditions that were made applicable by the language in the Fiscal Year 2014 appropriations, including the requirement for the use of American Iron and Steel products in projects receiving financial assistance from the DWSRF. Therefore, all assistance agreements starting October 1, 2014, through the enactment of the Consolidated and Further Continuing Appropriations Act 2015 (signed December 16, 2014), must include the AIS requirements. However, if the plans and specifications for any of these projects were approved prior to April 15, 2014 (the date the national waiver was signed), then the project is exempt from the AIS requirements.

The following table summarizes AIS exemptions based on the plans and specifications approval date for DWSRF funded projects.

DWSRF AIS Project Exemption Based on Plans and Specifications Approval Date		
Assistance Agreement Signed:	Exempt from AIS if Plans and Specifications Were Approved Before:	Basis for Exemption:
1/17/2014 through 9/30/2014	4/15/2014	• Consolidated Appropriations Act 2014 • National waiver signed 4/15/2014*
10/1/2014 through 12/15/2014	4/15/2014	• Continuing Appropriations Resolution 2015 (continued CAA 2014 requirements)** • National waiver signed 4/15/2014*
12/16/2014 through 9/30/2015	12/16/2014	• Consolidated and Further Continuing Appropriations Act 2015

** To be covered by the national waiver, the plans and specifications had to be submitted to the state prior to 1/17/2014*

*** Following the first continuing resolution, there were two additional CRs to fill the gap between 12/11/2014 and 12/16/2014*

5. Q: Does the AIS requirement apply to refinanced DWSRF projects?

A: Yes, in some cases. If a project began construction, financed from a non-DWSRF source prior to December 16, 2014, but is refinanced through a DWSRF assistance agreement executed on or after December 16, 2014, AIS requirements will apply to all construction that occurs on or after December 16, 2014, through completion of construction, unless engineering plans and

specifications were approved by the responsible state agency prior to December 16, 2014. For DWSRF projects funded on or after December 16, 2014, there is no retroactive application of the AIS requirements where a refinancing occurs for a project that has completed construction prior to December 16, 2014.

BOTH CWSRF AND DWSRF PROGRAMS

6. **Q: If a coating is applied to the external surface of a domestic iron or steel component, and the application takes place outside of the United States, would the product be compliant under the AIS requirements?**

   A: Yes. The product would still be considered a compliant product under AIS requirements. Any coating processes that are applied to the external surface of iron and steel components that would otherwise be AIS compliant would not disqualify the product from meeting the AIS requirements regardless of where the coating processes occur, provided that final assembly of the product occurs in the United States.

   The exemption above only applies to coatings on the *external surface* of iron and steel components. It does not apply to coatings or linings on internal surfaces of iron and steel products, such as the lining of lined pipes. All manufacturing processes for lined pipes, including the application of pipe lining, must occur in the United States for the product to be compliant with AIS requirements.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

DECISION MEMORANDUM

OFFICE OF WA rm

SUBJECT: De Minimis Waiver of Section 436 of P.L. 113-76, Consolidated Appropriations Act (CAA), 2014

FROM: Nancy K. Stoner
Acting Assistant Administrator

The EPA is hereby granting a nationwide waiver pursuant to the "American Iron and Steel (AIS)" requirements of P.L. 113-76, Consolidated Appropriations Act, 2014 (Act), section 436 under the authority of Section 436(b)(**1)** (public interest waiver) for de minimis incidental components of eligible water infrastructure projects. This action permits the use of products when they occur in de minimis incidental components of such projects funded by the Act that may otherwise be prohibited under section 436(a). Funds used for such de minimis incidental components cumulatively may comprise no more than a total of 5 percent of the total cost of the materials used in and incorporated into a project; the cost of an individual item may not exceed **1** percent of the total cost of the materials used in and incorporated into a project.

P.L. 1 13-76, Consolidated Appropriations Act, 2014 (Act), includes an "American Iron and Steel" (AIS) requirement in section 436 that requires Clean Water State Revolving Loan Fund (CWSRF) and Drinking Water State Revolving Loan Fund (DWSRF) assistance recipients to use specific domestic iron and steel products that are produced in the United States if the project is funded through an assistance agreement executed beginning January 17, 2014 (enactment of the Act), through the end of Fiscal Year 2014, unless the agency determines it necessary to waive this requirement based on findings set forth in Section 436(b). The Act states, "[the requirements] shall not apply in any case or category of cases in which the Administrator of the Environmental Protection Agency ...finds that- (1) applying subsection (a) would be inconsistent with the public interest" 436(b**)(1**).

In implementing section 436 of the Act, the EPA must ensure that the section's requirements are applied consistent with congressional intent in adopting this section and in the broader context of the purposes, objectives, and other provisions applicable to projects funded under the SRF. Water infrastructure projects typically contain a relatively small number of high-cost components incorporated into the project. In bid solicitations for a project, these high-cost components are generally described in detail via project specific technical specifications. For these major components, utility owners and their contractors are generally familiar with the conditions of availability, the potential alternatives for each detailed specification, the approximate cost, and the country of manufacture of the available components.

Every water infrastructure project also involves the use of thousands of miscellaneous, generally low-cost components that are essential for, but incidental to, the construction and are incorporated into the physical structure of the project. For many of these incidental components, the country of manufacture and the availability of alternatives is not always readily or reasonably identifiable prior to procurement in the normal course of business; for other incidental components, the country of manufacture may be known but the miscellaneous character in conjunction with the low cost, individually and (in total) as typically procured in bulk, mark them as properly incidental. Examples of incidental components could include small washers, screws, fasteners (i.e., nuts and bolts), miscellaneous wire, comer bead, ancillary tube, etc. Examples of items that are clearly not incidental include significant process fittings (i.e., tees, elbows, flanges, and brackets), distribution system fittings and valves, force main valves, pipes for sewer collection and/or water distribution, treatment and storage tanks, large structural support structures, etc.

The EPA undertook multiple inquiries to identify the approximate scope of de minimis incidental components within water infrastructure projects during the implementation of the American Reinvestment and Recovery Act (ARRA) and its requirements (Buy American provisions, specifically). The inquiries and research conducted in 2009 applies suitably for the case today. In 2009, the EPA consulted informally with many major associations representing equipment manufacturers and suppliers, construction contractors, consulting engineers, and water and wastewater utilities, and performed targeted interviews with several well-established water infrastructure contractors and firms who work in a variety of project sizes, and regional and demographic settings to ask the following questions:

- What percentage of total project costs were consumables or incidental costs?

- What percentage of materials costs were consumables or incidental costs?

- Did these percentages vary by type of project (drinking water vs. wastewater treatment plant vs. pipe)?

The responses were consistent across the variety of settings and project types, and indicated that the percentage of total costs for drinking water or wastewater infrastructure projects represented by these incidental components is generally not in excess of 5 percent of the total cost of the materials used in and incorporated into a project. In drafting this waiver, the EPA has considered the de minimis proportion of project costs generally represented by each individual type of these incidental components within the many types of such components comprising those percentages, the fact that these types of incidental components are obtained by contractors in many different ways from many different sources, and the disproportionate cost and delay that would be imposed on projects if the EPA did not issue this waiver.

Assistance recipients who wish to use this waiver should in consultation with their contractors determine the items to be covered by this waiver and must retain relevant documentation (i.e., invoices) as to those items in their project files.

If you have any questions concerning the contents of this memorandum, please contact Timothy Connor, Chemical Engineer, Municipal Support Division, at connor.timothy@epa.gov or (202) 566-1059 or Kirsten Anderer, Environmental Engineer, Drinking Water Protection Division, at anderer.kirsten@epa.gov or (202) 564-3134.

Acting Assista t Administrator

Ohio Water Pollution Control Loan Fund

Use of American Iron and Steel - De Minimis Final Utilization and Certification Form

The Consolidated Appropriations Act of 2014 (P.L. 113-76) Section 436 requires the use of American & Steel in SRF-funded projects. Under the authority of Section 436(b)(1), the EPA has issued a public interest waiver for De Minimis incidental components. The assistance recipient wishing to use this waiver should consult with their contractor(s) to maintain an itemized list of components covered under De Minimis. At the conclusion of the project, this form must be completed and retained in the assistance recipient's project files and a copy provided to DEFA. Please print clearly or type.

Project Name:_____ Loan Agrmt #: _____

NOTE: The De Minimis waiver is only applicable to the cost of materials for the entire project. Do not include other project costs (labor, installation costs, etc.) in the "Total Cost of Materials". The cost of a material must include delivery to the site and any applicable tax. Must have sufficient documentation to support all costs included in this calculation.

Funds used for de minimis incidental components cumulatively may comprise no more than a total of 5 percent of the total cost of the materials used in and incorporated into a project; the cost of an individual item may not exceed 1 percent of the total cost of the materials used in and incorporated into a project.

Total Cost of Materials: _____ 5% Limit: _____ 1% limit: _____

Manufacturer & Component Description	Part/Model #	Quantity (if applicable)	Cost per Unit (if applicable)	Component's Total Cost	How is Cost Documented?*

Use additional sheets as necessary **Total De Minimis Cost of Components:**

If approaching the 5% or 1% limits, contact DEFA immediately

* Documentation must demonstrate confirmation of the components' actual costs (invoice, etc.).

Violating Facilities:

The Contractor agrees to comply with all applicable standards, orders or requirements under Section 306 of the Clean Air Act, 42 USC 1857 (h), Section 508 of the Clean Water Act, 33 USC 1368, Executive Order 11738, and EPA regulations, 40 CFR Part 32, which prohibits the use under non-exempt Federal contracts, grants, or loans of facilities included on the EPA List of Violating Facilities.

Requirement For Utilization Of Small Businesses In Rural Areas (SBRA)

This procurement is subject to the EPA policy of encouraging the participation of small businesses in rural areas. It is EPA policy that recipients of EPA financial assistance awards utilize the services of small businesses in rural areas (SBRAs), to the maximum extent practicable. The objective is to assure that such small business entities are afforded the maximum practicable opportunity to participate as subcontractors, suppliers and otherwise in EPA-awarded financial assistance programs. This policy applies to all contracts and subcontracts for supplies, construction, and services under EPA grants or cooperative agreements. Small purchases are also subject to this policy.

Supplemental Insurance Provisions

The Contractor shall, at their expense, furnish and maintain insurance in the form and amounts specified in subparagraphs 1 through 7 inclusive, of this section. Policies shall be with acceptable insurance companies authorized to do business in the State of Ohio.

The Contractor shall not commence Work nor shall he permit any of his Sub-contractors to commence Work until the insurance policies specified hereinafter, or otherwise required, have been submitted to, and approved by the Owner. Such insurance policies shall be kept in force until the Contractor receives final payment.

Insurance shall be endorsed so that it cannot be changed or canceled in less than ten (10) days after receipt by the Contractor and the Owner of written notice of such proposed action from the Insurer.

The insurance specified in Subparagraphs 1, 2, 3 and 4 shall be written under the comprehensive general form of liability insurance contracts.

The Contractor shall furnish three (3) certificates or, whenever specifically requested by the Owner, three (3) certified copies of the insurance policies themselves and a receipt evidencing full payment of the premiums.

In addition to the insurance described hereinafter, the Contractor shall secure and maintain such other insurance as may be designated elsewhere in the Contract document.

If the Contractor is required to repair or perform Work after the completion of the Work involved under this Contract or obtain new policies in accordance with the requirements in this section.

1. *Builders Risk*: In addition to such fire and other physical damage insurance as the Contractor elects to carry for his own protection, he shall also secure and maintain in the name of the Owner, the government agency sponsoring the Project, Subcontractors, the Consulting Engineer and any other parties having an interest in the Project, as named insured as their interest may appear; a builders' risk policy for fire, extended coverage, vandalism and malicious mischief in the amount of one hundred (100) percent of the value of the complete parts of the Project and Materials in storage, except that such coverage shall not be required in connection with sewer, water main or paving construction. Pump or lift station construction shall not be considered sewer or water main construction for purposes of this paragraph.

2. *Workers Compensation*: The Contractor shall provide Workers Compensation Insurance for all employees engaged in Work who may come within the protection of the workers compensation law, and, where applicable, employer's General Liability Insurances for employees not so protected and shall require all Subcontractors to provide corresponding insurance.

The Contractor shall indemnify the Owner and the Consulting Engineer against any and all liabilities, cost and expenses due to accidents or other occurrences covered by the workers compensation law.

3. *Contractor's Motor Vehicle Bodily Injury and Property Damage Liability Insurance*: Insurance to cover liability arising from the use and operation of motor vehicles in connection with the performance of the Contract (as customarily defined in liability insurance policies), whether they be owned, hired or non-owned by the Contractor, as follows:

a. Bodily Injury Liability: $500,000 for each person; limit of $1,000,000 for each occurrence.

b. Property Damage Liability: $500,000 for each occurrence.

4. *Contractor's Public Liability and Property Damage Liability Insurance*: Contractor's Public Liability Insurance providing a limit of not less than $500,000 for all damages arising out of bodily injuries, including accidental death to one person, and a total limit of $1,000,000 for all damages arising out of bodily injuries, including accidental death, to two or more persons in any one occurrence. Contractor's Property Damage Liability Insurance providing for a limit on not less than $500,000 for all damages to or destruction of property.

Coverage under this policy shall include, to the limits indicated above, the collapse or damage to any structure, building or its contents, public or private utility, or pavement during construction and for two (2) years thereafter.

Whenever Work under the Contract is to be done in the vicinity of existing underground utilities or structures, coverage under the policy shall also include, to the limits indicated, all damages to said underground utilities or structures during construction and for a period of two (2) years thereafter. Whenever Work under the Contract is to be done by blasting, coverage under the policy shall also include, to the limits indicated above, all damages of any kind whatsoever caused by blasting.

5. *Contractor's Protective Public Liability and Property Damage Liability Insurance*: Contractor's Protective Public Liability and Property Damage Liability Insurance for operations performed by Subcontractors providing for coverage and limits corresponding to those described in subparagraph 4.

6. *Owner's Protective Public Liability and Property Damage Liability Insurance*: Regular Owner's Protective Public Liability and Property Damage Liability Insurance for operations performed by the Contractor or any Sub-contractor providing for coverage and limits corresponding to those described in subparagraph 4.

This policy shall be written in the name of the Owner as a separate policy from those specified elsewhere herein.

7. *Railroad Protective Liability Insurance*: In any of the Work under this Contract is on railroad R/W, the Contractor shall at its sole cost and expense, procure and provide, for and in behalf of each railroad company. Protective Liability Insurance (AARAASHO form) with minimum limits per occurrence of not less than $2,000,000 for bodily injury, death and/or property damage, subject to an aggregate limit of $6,000,000 per annum. The policy shall name each railroad company as the insured and be issued to the Contractor. Each railroad company shall be provided with a copy of each policy of insurance prior to commencement of any work.

Materials Testing

Testing Services

1. Contractor shall appoint, employ, and pay for specified services of an independent firm to perform testing.

2. The independent firm will perform tests and other services specified in individual specification sections and as required by the Architect/Engineer.

3. Testing and source quality control may occur on or off the project site. Perform offsite testing as required by the Architect/Engineer or the Owner.

4. Reports will be submitted by the independent firm to the Architect/Engineer and Contractor, indicating observations and results of tests and indicating compliance or non-compliance with Contract Documents.

5. Cooperate with independent firm; furnish samples of materials, design mix, equipment, tools, storage, safe access, and assistance by incidental labor as requested.

a. Notify Architect/Engineer and independent firm 24 hours prior to expected time for operations requiring services.

b. Make arrangements with independent firm and pay for additional samples and tests required for Contractor's use.

6. Testing does not relieve Contractor to perform Work to contract requirements.

7. Re-testing required because of non-conformance to specified requirements shall be performed by the same independent firm on instructions by the Architect/Engineer. Payment for re-testing will be charged to the Contractor by deducting testing charges from the Contract Sum/Price.

Continuous Treatment Provisions

Continuous Treatment (wastewater projects)

Federal regulations prohibit by-passing of any sewage during construction operations. The Contractor will be responsible for providing any required temporary pumping facilities piping, etc., necessary to complete the project without any plant by-passing and continuous treatment must be provided at the same level during construction as existed prior to construction.

Unless otherwise previously or subsequently specified, the Contractor shall procure and pay for all permits, licenses, and approvals necessary for the execution of his Contract.

The Contractor shall comply with all laws, ordinances, rules, orders, and regulations relating to the performance of the work required to complete their Contract.

The following example language is a sample of what might be appropriate for construction work occurring at an existing drinking water treatment plant. The language actually incorporated into the contract documents must be adjusted to meet the specifics of the construction project.

Continuous Treatment (drinking water projects)

The Contractor will be responsible for obtaining approval from Ohio EPA for use of temporary pumping facilities, piping and other items in order to complete the project without any plant by-passing. Continuous treatment must be provided at the same level during construction as existed prior to construction.

Unless otherwise previously or subsequently specified, the Contractor shall procure and pay for all permits, licenses, and approvals necessary for the execution of his Contract.

The Contractor shall comply with all laws, ordinances, rules, orders, and regulations relating to the performance of the work required to complete their Contract.

CHANGE ORDER INSTRUCTIONS:

All Change Orders for this work, regardless of costs and whether Water Pollution Control Loan Fund (WPCLF) or Water Supply Revolving Loan Account (WSRLA) funding will be used to finance the changes, must be submitted to Ohio EPA for review.

Changes Requiring Prior Approval

Any change which substantially modifies the Project Facilities as specified in the Ohio EPA approved Facilities Plan and Final Permit to Install or Final Plan Approval (when applicable) or alters the direct or indirect impact of the Project Facilities upon the environment must be incorporated into a Change Order. One copy of the Change Order prior to execution is to be submitted to Ohio EPA for review and prior approval of the acceptability of the change. "Prior to execution" means before the Change Order is signed by the Owner.

Ohio EPA will review the Change Order and inform the Owner of the technical, environmental and operational acceptability of the change, and give the Owner permission to proceed with the proposed work.

All Other Changes

Change Orders not requiring prior approval as described above must be submitted to Ohio EPA within one (1) month of the time at which they are approved by the Owner. Change Orders for WPCLF projects should be submitted to the Division of Environmental and Financial Assistance (DEFA) while Change Orders for WSRLA projects should be submitted to the Division of Drinking and Ground Water (DDAGW) in central office.

Change Order Approval Process

After the Change Order is executed, one (1) copy of the Change Order, including the supporting documentation, is to be sent to Ohio EPA for final review. The WPCLF/WSRLA Change Order forms must have original signatures.

Communities have the option to submit hard copies of the project Change Orders via mail to Ohio EPA or to send PDF Change Order forms and supporting documentation electronically. With either hard copy or electronic submittals, the WPCLF Change Orders should be submitted to DEFA and WSRLA Change Orders should be submitted to DDAGW - Central Office.

The dedicated e-mail address for the electronic submittal of WPCLF Change Orders is EPAWPCLFCO@epa.ohio.gov.

The dedicated e-mail address for the electronic submittal of WSRLA Change Orders is EPAWSRLACO@epa.ohio.gov.

After the Change Order is accepted and eligible costs determined, Ohio EPA will issue a letter informing the Owner and authorizing OWDA to disburse funds from Project Contingency for the work. The OEPA letter will be sent electronically. OWDA will return a PDF of the WPCLF/WSRLA Change Order form which will be signed by all parties including Ohio EPA and OWDA.

Please notify Ohio EPA if the community prefers a hard copy of change order approval documentation and then Ohio EPA and OWDA will send hard copies of approval documentation through the mail.

Payments for Change Order Work

The Owner is precluded from submitting to the OWDA payment requests for Eligible Project Costs associated with the Change Orders until such time as the Ohio EPA's approval of the Change Orders has been obtained.

Local Protest Procedure

Protests

A protest based upon an alleged violation of the procurement requirement may be filed against the OWNER's procurement action by a party with an adversely affected direct financial interest. The protest shall be filed with the Mayor. The OWNER shall determine the protest. The OWNER may request additional information or a hearing in order to resolve the protest.

A protest shall be filed as early as possible during the procurement process, but must be received by the OWNER no later than one week after the basis of the protest is known or should have been known, whichever is earlier. If the protest is mailed, the protester bears the risk of non-delivery within the required time period.

A protest must clearly present the procurement requirement being protested, the facts which support the protest, and any other information necessary to support the protest.

Payment Methods

1. At least ten (10) days before each progress payment falls due (but not more often than once a month), the Contractor will submit to the Engineer a partial payment estimated filled out and signed by the Contractor covering the work performed during the period covered by the partial payment estimate and supported by such data as the Engineer may reasonably require. If payment is requested on the basis of materials and equipment not incorporated in the Work but delivered and suitable stored at or near the site, the partial payment estimate shall also be accompanied by such supporting data, satisfactory to the Owner as will establish the Owner's title to the material and equipment and protect his interest therein, including applicable insurance. The Engineer will, with ten (10) days after receipt of each partial payment estimate, either indicate in writing his approval of payment and present the partial payment estimate to the Owner, or return the partial payment estimate to the Contractor indicating in writing his reason for refusing to approve payment.

   In the latter case, the Contractor may make the necessary corrections and resubmit the partial payment estimate. The Owner will, within 30 days of presentation to him of an approved partial payment estimate, pay Contractor for labor performed and material incorporated in the Work, at the rate of 92 percent of the amount of the estimate as approved by the Engineer until 50 percent of the Work is completed. All labor performed and material incorporated in the Work after the job is 50 percent of completed shall be paid for at the rate of 100 percent of the amount of additional labor and material furnished and approved and the amount labor and material furnished and approved the amount previously retained shall be deposited in an escrow account. The funds in the escrow account with accumulated interest are to be paid the Contractor at the same time and in the same manner as specified for payment of the of the retained amount in Section 5.

   Payment for material and equipment delivered and not incorporated shall be based on the scheduled of quantities and cost submitted. Any money due from Owner shall, on the day that it is due, be paid to Contractor, or deposited in an escrow account, whichever is applicable, with one or mare banks or building and loan associations in the state selected by mutual agreement between the Contractor and the Owner. The agreement shall contain the following provisions:

   A. The money shall be deposited in a savings account or the escrow agent shall property invest the entire escrow principal in obligations selected by the escrow agent, as stipulated in the agreement.

   B. The escrow agent shall hold the escrow principal and income until receipt of notice from the Owner and the Contractor, of until receipt of an arbitration order specifying the amount of escrow principal to be released and the person to whom it is to be released. Upon receipt of the notice or order, the agent shall properly pay such amount of principal and the portion of amount of the escrow income to the person indicated.

   C. The escrow agent shall be compensated for its services as agreed to by the Owner and the Contractor from the income from the escrow account.

2. The request for payment may also include an allowance for the cost of such major material and equipment which are suitably stored either at the site or the near the site.

Technical Specifications

Supplemental Specification 01-00

PROJECT DOCUMENTATION AND SUBMITTAL REQUIREMENTS
FOR
ALL PUBLIC WORK PROJECTS AND SUBDIVISION DEVELOPMENTS

September, 2000
* Revised May, 2017

Project Submittals: The following listed items are the full responsibility of the Contractor. These items become part of the administrative duties imposed upon this Contract. The Contractor shall be responsible for submitting all detail items prior to the contract Notice of Commencement, or as directed by the City's Project Manager. A typewritten letter shall accompany all items, on Company letterhead; clearly describe each item submitted. If Contractor elects to fax any documentation due to expediency, the Contractor will be responsible for submitting hard copy for project documentation. The City will reject any information not clearly legible.

The City will not pay directly for the performance of the work listed. This work is a subsidiary obligation of the Contractor.

1. Preconstruction Video
2. Statements of Final Compliance

1. **Preconstruction Video:** Prior to actual construction, the Contractor shall take video recording of the entire length and width of the work site.
   a) The Contractor shall notify the Engineering Department prior to scheduling the video recording of the site. A representative of the Engineering Department shall be present when the recording this video.
   b) The video and audio recordings shall be on DVD or pre-approved alternative for replay. Contractor must submit alternative medium to the Engineer and approval received prior to scheduling.
   c) The video portion shall have continuous time and date incorporated into it, locations and person(s) doing the work.
   d) Audio comments during the recording must address each item in the field of view as it may pertain to the project construction. The recording technician will need to become familiar with the project plans to know what subject matter is pertinent. Further, contractor must incorporate a post recording review and audio comments into the recording.
   e) Submitted copies of all recordings are the property of the Engineer. Contractor must submit the recording and be accepted in full by the Engineering Department prior to the start of construction.

2. **Statements of Final Compliance:** The Contractor shall submit to the City the following documentation, in addition to the Project's General Conditions. All submittals shall be completed and approved prior to the release of the final retainer.

a) Certificates of Substantial and Final Completion. Contractor shall submit in writing, the date on which work is substantially completed and upon Final Completion. Any deviation from the stated contract completion date to what is being submitted shall be explained further by the Contractor. The City, at their discretion, will further review this subject, as needed.

b) Final Waiver of Lien
Contractor shall furnish a written report indicating the resolution of any and all property damage claims filed with Contractor by any party during the contract period. The information shall include the name of claimant; date filed with Contractor; name of Insurance Company and/or Adjustor handling the claim; how the claim was resolved; if claim was not resolved for the full amount, a statement indicating the reason for such action. If there were no damage claims filed with the Contractor, then this shall be so stated in the report.

SECTION 01 00 00

GENERAL REQUIREMENTS

PART 1 -GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Description.** The Contractor shall provide the labor, tools, equipment, and materials necessary to complete the work as specified herein.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work in compliance with current applicable requirements of governing agencies having jurisdiction.

B. **Testing Laboratory.** The Owner shall engage with a testing laboratory to perform inspection and tests when required. The Contractor is responsible for scheduling and coordinating with the Owner's testing laboratory.

1.4 SUBMITTALS

A. **General.** Furnish samples, manufacturer's product data, test reports, and material certifications as required for materials and mix design when required.

B. **Notification**. The Contractor shall give the Engineer and the Owner 72 hours notice (excluding Saturdays, Sundays, and legal holidays) as to when the actual construction is to begin so that all affected parties may be notified.

1.5 JOB CONDITIONS

A. **Confine operations to areas** within Contract limits indicated. Portions of the site beyond areas in which construction operations are indicated are not to be disturbed. Limit use of the premises to construction activities in areas indicated.

B. **Keep driveways and entrances clear** and available to the property Owner at all times. Do not use these areas for parking or storage of materials. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on-site.

C. **Burial of Waste Materials**. Waste materials shall not be buried within the project site.

1.6 DELIVERY, STORAGE, AND HANDLING (Not used)

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS (Not applicable)

PART 3 EXECUTION

3.1 CONSTRUCTION COORDINATION

A. The Contractor will coordinate the construction scheduling and construction activities with the Engineer and the Owner.

3.2 CONSTRUCTION SCHEDULING

A. The Contractor will be required to submit to the Engineer, in writing, his proposed construction sequences for the project. No construction shall commence until review of the Contractor's proposal by the Engineer. Approval will be given for proposed sequences only and shall not cause the Engineer or Owner to accept any responsibility for the actual work in progress. Coordinate with requirements in Section 01 11 00 and 01 14 00.

3.3 PERMITS

A. It shall be the Contractor's responsibility to pay for and obtain all permits, including any necessary building, plumbing, and excavating permits. All permit costs and fees including construction deposits shall be borne by each Contractor.

3.4 SAFETY

A. Safety requirements shall be in accordance with the General Conditions and the Occupational Safety and Health Act of 1970, U.S. Department of Labor. The Contractor is required to provide additional provisions for the safety of children in areas of work. These provisions require that the work area shall be fenced; and open excavations, open manholes or similar hazards shall not be left unattended. Excavations shall be secured at night and all equipment and supplies moved to a secured area.

3.5 ACCESS TO FACILITIES

A. The Contractor shall minimize the amount of ground area required for its equipment. The Contractor shall not obstruct access to buildings, obstruct normal operations, and shall maintain traffic at all times.

3.6 PROTECTION OF FACILITIES

A. The Contractor shall exercise extreme caution within and adjacent to its work areas so as not to damage existing facilities. The Contractor shall assume all responsibility for the protection of any existing facility to remain in service. Any facilities that are damaged due to the Contractor's operations shall be repaired or replaced by the Contractor to original condition at no expense to the Owner.

3.7 PROTECTION OF TREES

A. Special attention shall be given to the trees which exist in the proximity of the proposed construction. The Contractor shall provide the labor, tools, equipment, and materials necessary to protect the integrity of each tree from damage during the performance of the contracted work. Any trees that are damaged because of the Contractor's operations shall be repaired or replaced at no expense to the Owner by the Contractor and to the satisfaction of the Engineer and the Owner.

3.8 NOISE, DUST, AND ODOR CONTROL

A. The Contractor's construction activities shall be conducted to minimize all unnecessary noise, dust, and odors. The use of oil or other materials which may cause tracking shall not be permitted.

3.9 UTILITIES

A. **Temporary Lighting and Construction Power**. The Contractor shall make arrangements with the electric power company to receive temporary lighting and

construction power system at the construction site. Such system shall meet all requirements of the NEC, or any other state and local codes for temporary construction services. The temporary construction power system shall be a separately metered service derived from the utility and until final acceptance shall be paid for by the Contractor. The permanent power shall be installed prior to start-up, and final acceptance of all improvements. The Contractor shall be responsible to install and remove any temporary power required during construction.

B. **Water**. The Contractor shall make its own arrangements to have water at the construction site for any required use. All costs for having water at the construction site shall be paid by the Contractor.

C. **Sanitary Facilities**. Suitable facilities for the use of all persons employed on the construction site shall be provided, maintained, and paid for by each Contractor. The sanitary conveniences shall be properly screened from public observation. The Contractor shall obey and enforce such other sanitary regulations and orders and shall take such precautions against infectious diseases as may be deemed necessary by the Engineer and/or the Owner.

D. **Internet and Cell Service**. The Contractor shall make its own arrangements to have adequate internet and cell service for staff and subcontractors until completion of the Contract.

E. **Fuel**. The Contractor shall make its own arrangements to have fuel at the construction site for any required use. All costs for having fuel at the construction site shall be paid by the Contractor.

3.10 CLEAN-UP

A. All debris rubble, unusable materials and items not salvaged shall become the property of the Contractor and shall be removed from the site.

3.11 SITE REPAIR

A. The Contractor shall be responsible for restoring to its previous condition all site areas damaged during construction.

3.12 PRESERVATION OF PROPERTY CORNERS AND SURVEY MARKERS

A. The Contractor shall preserve all cornerstones, iron pins, monuments, or any other type of land monument. He shall have all land monuments in the proximity of the work referenced. He shall replace destroyed or damaged monuments and shall furnish a certification by a registered surveyor that the monuments have been restored.

SECTION 01 11 00

SUMMARY OF WORK

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General**. The Contractor shall provide all labor, materials, tools, and equipment necessary to construct the project in accordance with the plans and as specified herein. The Contractor shall be responsible for the scheduling and coordination to provide a complete project for the Owner. The Contractor shall provide the overall general coordination and a complete project schedule that includes coordination with Subcontractors. Please review specification Section 01 14 00, Work Restrictions for additional information and requirements.

B. **Summary of Work.** The Contract can be summarized as follows:

1. Wellfield general construction includes civil and structural construction plus other activities traditionally recognized as general construction. It also includes administrative and coordination responsibilities. Work includes but is not limited to:

   a. General requirements including submittals; temporary construction facilities and utilities, unless specifically identified to be supplied by others; staging area as shown on the plans; testing and disinfection; start-up and commissioning; and project coordination with subcontractors and scheduling.

   b. Site work including demolition, cutting, and patching; clearing and grubbing; site dewatering; excavation support systems; compacted backfill and compacted granular backfill; site excavation, backfill, and embankment; compacted foundation; erosion control during construction; protection of existing vegetation; driveways; parking areas; sidewalks; underground piping, valves, fittings, appurtenances, and connections to existing; site irrigation; and landscaping.

   c. Cast-in-place concrete, precast concrete, and grouting.

   d. Modifications to ten existing well pumps, inner and outer casing pipes, removal of valve vaults and piping, and cutting down the heights of the casing pipes, and providing new plates for mounting the pumps to the lowered casing pipe, and constructing new pump discharge piping and valves at the location shown on the drawing, providing a metal building and foundations to house motor controls, piping, valves, instruments and controls, and reconnecting each to the existing and new raw water transmission mains. Wells #8, #9 and #10 include installation of

new x-bracing casing support systems with concrete foundations as show on the plans.

e. Maintenance of Traffic.

f. Installation of a new raw water transmission main, valves, and appurtenances which is generally parallel to the existing raw water transmission main. Refer to the Scope of Bids document for additional details of responsibilities for the General Contractor, Pump Service Company, and Electrical Contractor. The quote from the Pump Service Company is provided as Appendix IV.

g. Installation of combination air valves, access valves, air vacuum relief valves, chambers, and other appurtenances, where shown on the drawings.

h. Site safety.

i. Layout and surveying.

j. Demolition as described in the Contract documents.

2. Water Treatment Plant Construction includes architectural, civil, mechanical, and structural construction plus other activities traditionally recognized as general construction. It also includes administrative and coordination responsibilities. Work includes but is not limited to:

a. General requirements including submittals; temporary construction facilities and utilities, unless specifically identified to be supplied by others; staging area as shown on the plans; construction facilities for the Engineer; project plaque; testing, adjusting, balancing, and disinfection; start-up and commissioning; and project coordination.

b. Site work including demolition, cutting, and patching; clearing and grubbing; site dewatering; excavation support systems; compacted backfill and compacted granular backfill; site excavation, backfill, and embankment; compacted foundation; erosion control during construction; protection of existing vegetation; driveways; parking areas; sidewalks; underground piping, valves, fittings, appurtenances, and connections (outside storm, sanitary, water and gas piping to 5 feet from buildings); site irrigation; chain link fence; and landscaping.

c. The work in the plant shall include :

1. Both the East and West Aerator Building improvements including, but not limited to, new piping, valves, roof hatches, ladders, plumbing, heating, instrumentation, controls, and electrical work. Rehabilitation work at both buildings includes, but not limited to, aerator trays, concrete repairs, masonry repairs, and refurbishment of existing screens and framing. The West Aerator Building requires replacement of the existing roof with new precast roof deck.

2. Pipe Gallery improvements including influent header, backwash supply, new piping, valve replacement, new air scour mains, Filter-to-Waste pump, plumbing, dehumidification, heating and ventilation, plumbing, I&C, and electrical work.

3. Refurbish twelve (12) filters including media removal, underdrain cleaning, installation of air scour system, new windows and doors in Filter Gallery, handrails, access hatches and ladders, painting, ventilation and heating instrumentation, controls, and electrical work.

4. High Service Pumps discharge piping and valves will be replaced for all pumps. Pumps #2 - #5 will have new pump heads and rebuilt. Motors on Pumps #3 through #5 will be cleaned, refurbished, and reinstalled with new motor bases. Install new motor and variable frequency drive (VFD) on Pump #2. A new magnetic flow meter will be installed on the finished water header to meter plant flows. A surge relief blowoff valve on the finished water header will be added to minimize water hammer in the transmission main on loss of power. Refer to the Scope of Bids for description of the responsibilities for the General Contractor, Pump Service Company, and Electrical Contractor. The quote from the Pump Service Company is provided as Appendix IV.

5. The three (3) clearwells will be modified to improve operational flexibility to be able to isolate any one of the clearwells. New Chlorine Contract Tanks will be constructed by installing new concrete partition walls. A FRP baffle system will be installed in the clearwells and Chlorine Contact Tanks to improve flow patterns and mixing in the tanks.

6. The existing Clearwells, Chlorine Contact Tank, and the High Service Pump Clearwells will be cleaned and the sediment removed prior to being returned to service. The Backwash Makeup Reservoir will be cleaned and inspected. A new drain will be installed.

7. All storm drainage will be separated and re-directed to a local stormwater drainage channel.

8. Building renovations include aintenance Garage, Fluoride, and Chlorine Handling Buildings. Remodeling the lobby including a new LULA elevator and second floor offices, lab, control room, and restrooms. The glass block window wall and lobby will be replaced with a curtainwall system. A new restroom will be added to the first floor.

9. The existing chlorinators and solution distributors will be replaced, and new piping installed to two new Chlorine Contract Tanks.

10. The existing 2,500-gallon underground fuel oil tank will be removed and a new 3,000-gallon above ground tank installed.

11. A new Dechlorination Building will house chemical system to feed sodium bisulfite to the backwash lagoon effluent.

d. Cast-in-place concrete, precast concrete, and grouting.

e. Masonry and glass unit masonry.

f. Miscellaneous metals; structural steel; and FRP items.

g. Rough Carpentry.

h. Roofing and flashing; caulking. See Appendix II, "Lead and Asbestos Survey Reports." The Contractor responsible for demolition, renovation, and disposal of roofing and flashing material must adhere to all EPA regulations and OSHA, 29 CFR 1926.1101.

i. Aluminum doors and frames; windows; floor doors; overhead aluminum coiling doors; unit skylights, and finish hardware.

j. Finishes; concrete waterproofing; painting, and special coating.

k. Signs, fire equipment, and other specialties.

l. Division 41, Material Processing and Handling Equipment.

m. Division 43, Process Gas and Liquid Handling, Purification and Storage Equipment.

n. Division 44, Pollution and Waste Control Equipment.

o. Division 46, Water and Wastewater Treatment Equipment

p. Process piping, fittings, accessories, valves, and gates; mechanical pipe seals and wall castings for piping.

q. Installation of instrumentation equipment supplied under the Electrical Contract as specified in Division 40, Process integration, which is to be installed directly in any plant piping or mounted to or inside structures.

r. Site safety..

s. Layout and surveying for General Contract work.

t. Demolition as described in the Contract documents..

u. Lead and asbestos abatement removal and disposal as required by Contract Documents. Refer to the Lead and Asbestos Survey Results provided in Appendix II.

v. The Contactor shall clean all tanks and channels that include both aeration buildings, clearwells, high service pump chambers, chlorination channel, any tanks scheduled for new work or renovation as detailed in Contract Documents. The Owner will drain the tank. Solids in the tank bottom may be removed by the

Contractor and disposed of off- site at an approved location. The Contractor shall submit a plan for cleaning the tanks to the Owner for approval before cleaning work begins.

3. Plumbing work includes but is not limited to:

   a. All piping and plumbing under Division 22; supports and anchors; mechanical identification; mechanical insulation; water plumbing system; drainage and vent system; plumbing fixtures; fire protection; plumbing pumps; and Plumbing control wiring between Plumbing equipment and controls.

   b. Site safety for Plumbing work.

   c. Layout and surveying for Plumbing work.

4. HVAC work includes but is not limited to:

   a. All HVAC under Division 23; supports and anchors; mechanical identification; mechanical insulation; breechings, vents, and stacks; indirect fired units; self-contained air conditioners; dehumidification units; power ventilators; metal ductwork; ductwork accessories; air outlets and inlets; and HVAC control wiring between HVAC equipment and controls.

   b. Site safety for HVAC Contract work.

   c. Layout and surveying for HVAC Contract work.

5. Electrical work includes electric power distribution, MCCs, VFDs, Panels, Local PLC panels, power, control, lighting, instrumentation, controls, SCADA hardware and software, CCTV security systems, telecommunication systems and includes but is not limited to:

   a. General requirements including submittals; temporary construction facilities for electrical work; testing; start-up and commissioning; temporary electrical power; and project coordination.

   b. Electrical site work including demolition, cutting, and patching; site dewatering for Electrical work; excavation support systems for Electrical work; compacted backfill and compacted granular backfill for Electrical work; and site excavation, backfill, and embankment for Electrical work.

   c. Cast-in-place concrete, precast concrete, and grouting for Electrical work including equipment pads, reinforcing steel, and anchor bolts.

   d. Division 26 electrical, including ductbanks, conduit, wiring, fiber optic cabling, including boxes, devices, supports, and hangers.

   e. Instrumentation equipment as specified in Division 40, Process Integration, Section 40 90 00 through Section 40 95 33.06, including installation.

   f. HVAC control wiring between HVAC systems and Instrumentation systems.

g. Plumbing control wiring between Plumbing systems and Instrumentation systems.

h. Site safety for Electrical work.

i. Layout and surveying for Electrical work.

j. Power connections to terminate wiring to equipment furnished.

k. Telecommunications systems including telephone distribution systems and fiber-optic cable.

l. SCADA system and CCTV security system, including all hardware software, servers, conduit, wiring, and communications systems.

m. Demolition of electrical items as described in the Contract documents.

C. QUALITY ASSURANCE

1. **Codes and Standards**. Perform all work in compliance with current applicable requirements of governing agencies having jurisdiction.

2. **Special Inspections During Construction.** The Owner will engage a third party testing agency for special inspections during construction, which requires certification by the state for quality conformance. The Contractor is responsible for scheduling and coordinating all testing services which are defined on Sheet SD-10.

3. **Additional Testing.** The Contractor is responsible for the scheduling, coordination, and payment of all additional testing explained in the Contract documents. This includes but is not limited to disinfection testing, leakage testing, pressure testing, startup of equipment, televising, arc flash report etc.

1.3 PERMITS

A. **Ohio EPA**. A Water Supply Data Sheet and associated documentation has been approved by the Ohio EPA Division of Drinking Water. A copy of the Approved Documents are available to the Contractor.

1. The Notice of Intent (NOI) Permit has been completed and purchased prior to receiving bids. The Contractor will be designated as a co-permittee by the Owner through the OEPA online eBusiness Center Portal.

B. **Building Department.** Plan approval has been received from East Central Ohio Building Authority. Contractor shall post approved drawing on the job site with manufacturer's installation instructions and product information, and shall be available for use by the inspector in accordance with OBC 107.7. All inspections will be subject to the East Central Ohio Building Authority where applicable. The Contractor shall contact the appropriate inspector to schedule the inspections at least one day prior to the required inspection. Each missed, incomplete or non-compliant inspection may be charged a re-inspection fee of $150. The Contractor is responsible for all associated fees.

1. Building and mechanical inspections: Bob Thompson (330) 401-8528

2. Electrical Inspections: Tom Stephens (330) 418-8318

3. Plumbing, Elevator and Medical Gas inspections are conducted by Ohio Department of Commerce DIC (800) 822-3208.

1.4 SUBMITTALS

A. **Submittal Requirements**. See other Division 1 sections for required administrative submittals and for procedures necessary for transmittal of submittals.

1.5 JOB CONDITIONS

A. **Contractor shall maintain** continuous treatment of water, with the exception of scheduled outages where they are approved and coordinated with the Owner/Engineer. Contractor shall follow provisions in Section 01 14 01 Work Restrictions, and no outage shall be permitted that is not submitted for review and approved by the Owner and Engineer at least 72 hours in advance.

B. **Confine operations to areas** within Contract limits indicated. Portions of the site beyond areas in which construction operations are indicated are not to be disturbed. Limit use of the premises to construction activities in areas indicated. Work shall be confined to public rights-of-way and easements.

C. **Keep driveways and entrances clear** and available to the property Owner at all times. Do not use these areas for parking or storage of materials. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on-site.

D. **Burial of Waste Materials**. Waste materials shall not be buried within the project site.

E. **Security**. The Contractor shall be responsible for site security.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Material.** Material delivery and storage locations shall be coordinated with the Owner. Storage and handling of materials and equipment shall be per manufacturer's requirements.

1.7 SPECIAL WARRANTY

A. **Warranty Requirements.** Provide as specified.

1.8

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.1 REQUIREMENTS

A. **Coordination.** A detailed schedule shall be submitted and reviewed prior to the start of construction.

B. **National Sanitation Foundation (NSF) 61.** All materials in contact with water shall meet NSF Standard 61, as required by Ohio Administrative Code (AC) Rule 3745-83-01(D).

C. **Equipment Selection and Shop Drawing Submittal.** Submit shop drawings and manufacturer's data sheets for all equipment, materials, tests, samples, and O&M manuals in a timely process. Equipment selection for selected items shall be

made at time of bid per the Manufacturers of Materials and Equipment to be Furnished Section submitted with the bid documents.

D. Clean-up.

1. Refer to Section 01 74 23 for additional requirements.
2. All construction debris and construction related materials shall be removed from the site by the Contractor.
3. All temporary power, water, bypass pumps, piping, fencing, and bulkheads shall be removed when construction is complete.
4. All trailers, tool boxes, and equipment shall be removed from the site when construction is complete to allow final grading paving, grading, planting, and seeding to be completed.
5. Collection, storing, hauling, and disposing of spoil, silt, and waste materials from excavation or any other construction activity as required by Contract Documents and in compliance with all applicable rules and regulations.

E. Walk down and Punch List.

1. Conduct walk down of all work areas with Engineer, and compile punch list of repairs and corrections of defects.
2. Substantial Completion within 28 months of Notice to Proceed.
3. Complete installation of all piping and leak test all piping
4. Make final terminations to equipment and panels. Calibrate all instrumentation and control systems and panels.
5. Commence automatic operations of equipment in all areas.
6. Conduct performance tests of all equipment to demonstrate.
7. Complete training on all equipment, including electrical system, instrumentation, Local/Remote operation of process I&Cs, and SCADA system operation.
8. Commence with making final corrections and adjustments included on punch list provide.
9. Provide all O&M manuals, redline drawings, spare part inventory list, and warranty information.

F. Final Acceptance within 30 months of Notice to Proceed.

1. Complete all repairs included on Punch List.
2. Complete submission of all project closeout documentation.

END OF SECTION

SECTION 01 14 00

WORK RESTRICTIONS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work.** The Contractor shall provide the labor, materials, tools, and equipment necessary, temporary or permanent, required to construct the project and improvements in accordance with the drawings and specifications, including the work restrictions specified herein. Work shall be scheduled, sequenced, and performed in a manner which minimizes disruption to the public and to the operation and maintenance of the City's existing facilities and pipelines.

1.3 QUALITY ASSURANCE (Not used)

1.4 SUBMITTALS

A. **Written Notice**. Prior to any cut-in, the Contractor shall submit written notice to the Engineer/Architect 72 hours in advance, requesting consent to proceed with cutting, including:

1. Identification of project.
2. Description of affected work and work areas of the facility.
3. Effect on other work and on structural integrity and safety of the project.
4. Description of the proposed work including:
    a. Scope of connection.
    b. Contractor and trades to execute work.
    c. Products proposed to be used.
    d. Extent of refinishing.
    e. Schedule of operations including required downtime for any of the Owner's facilities, starting time, duration, and completion.
5. Signed Notice. Each written notice must be signed by the Owner and Engineer/Architect prior to the start of work.
6. Utilities. All utility companies whose equipment and facilities are directly involved with the proposed work shall be notified prior to the start of work. The Contractor shall coordinate all his work with the utility companies.
7. Notification. Advise the plant operating personnel and the Owner when connection has been completed and normal operations can resume.
8. Shutdown Time. Contractor should allow for a minimum of 7-day window (float time) per shutdown when assembling connection schedule. Owner will use this window only to maintain or ensure continuous plant operation during critical operating conditions. If the

scope of the connection requires the shutdown of all or part of the facility, the Contractor shall work continuously around the clock to complete the connection and return the facility to normal operations.

B. **Construction Schedule.** The Contractor shall prepare and submit to the Engineer for approval in writing proposed schedule and overall sequence of construction and schedule for this project. No work shall occur until approval is provided by the Owner and Engineer.

C. **Construction Staging Area.** The Contractor shall prepare and submit to the Engineer a site plan showing the proposed construction staging area. No work shall occur until approval is provided by the Owner and Engineer.

1. The Contractor shall construct and maintain a construction staging area within the project site. Area developed and maintained shall be suitable in size to meet the needs of all Contractors involved with the project. Construction staging area shall be returned to original condition by the Contractor following the completion of the project unless noted otherwise by the Owner/Engineer. Returning areas to original condition shall include removal of all roadway materials, disking of soil, regrading, and seeding.

1.5 JOB CONDITIONS

A. **General Requirements**. It is imperative that existing facilities remain functional during this construction to the extent that the present facilities will not be reduced. Facilities to remain functional include the wellfield, water treatment equipment and processes, administration building, and related facilities.

1. **Occupancy.** Buildings shall maintain certificate of occupancy throughout construction.

2. **Staff Relocation.** Relocation of staff as a result of construction shall be aided by the Contractor as directed by the Owner.

B. **Shutdowns.** Work shall be scheduled to minimize shutdown of the water treatment plant. It is anticipated that the water plant and wells will be shut down for short durations during of the improvements. Scheduling of the shutdown and subsequent re-commissioning of the facilities shall be approved by the owner and the Engineer. Refer to the Submittals section for additional details.

1. Intermittent short term plant shutdowns will be considered on a case-by-case basis depending on the plant and City water treatment demands.

C. **Coordination**

1. Construction activities shall be coordinated with and scheduled to minimize interference with the normal operation of the water treatment plant facilities at Sugar Creek WTP as well as the Owner other two (2) water treatment plants.

2. The Contractor shall be responsible for coordinating and scheduling the activities of their subcontractors and utility work forces with the Owner. The following list of interconnections and sequencing requiring special coordination is provided for the Contractor's convenience. This list should not be considered complete and any omissions of interconnections or sequencing from this list shall not relieve the Contractor of his responsibility.

a. The Contractor and subcontractor shall coordinate installation of materials and equipment to not interfere with other construction activities.
b. The Contractor and subcontractor shall locate and install materials in location of concrete before the concrete is poured as shown in an approved shop drawing.
c. No extra compensation will be allowed to cover the cost of removing piping, conduit, ducts, etc., or equipment due to a lack of coordination or communication between the Contractor and their Subcontractors.
d. The Contractor shall be responsible for coordinating and scheduling all construction activity and to coordinate this work with the Owner.

D. **Specific Requirements**

1. The Contractor shall meet with the Engineer and Owner to determine which systems or facilities must be maintained in operation. Coordination is required to determine possible hours services can be interrupted.

2. The Owner shall have the authority to stop or prohibit any work which would interfere with or jeopardize the continuous and reliable operation of their system.

3. The Contractor shall make requests to the Owner 48-hours in advance for permission to work outside normal weekday business hours and on Saturdays and Sundays.

4. Contractor shall review and adhere to Owner's standards and regulations for work restrictions, including, but not limited to allowable workdays, hours, noise, dust, and daily clean-up.

5. The Contractor shall be responsible to maintain water quality and treatment during construction required by governing agencies and as detailed in the Contract Documents.

1.6 DELIVERY, STORAGE, AND HANDLING (Not used)

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS

2.1 GENERAL

A. The Contractor shall prepare and provide the Owner and Engineer the following products:

B. **Projected Construction Schedule.** The Contractor shall prepare a projected construction schedule in the form of a horizontal bar chart.

C. **Revised Construction Schedule.** A revised construction schedule incorporating any changes resulting from the schedule review.

D. **Updated Construction Schedule.** Updated projected construction schedule as the work progresses.

E. **Written Sequence of Construction.** An overall written sequence of construction.

F. **Proposed Methods of Construction.** The proposed methods of construction including equipment, storage of material, and disposal of excess material.

PART 3 EXECUTION

3.1 EXAMINATION

A. **Site Verification.** The Contractor shall confirm and verify all requirements, conditions, dimensions, and time intervals prior to beginning actual construction in any given area and that the conditions have not changed since preparation, submission, and approval of the sequence of construction. If, in the Contractor's judgment, the proposed work is incompatible or incomplete, the Contractor shall notify the Owner and Engineer prior to commencing the work.

3.2 PREPARATION

A. **Safety.** All required or appropriate safety measures, methods, devices, or equipment shall be available and in place prior to beginning any construction.

B. **Permits.** All required permits and approvals shall be on-site at the time of beginning construction.

3.3 REQUIREMENTS

A. **Sequences and Interferences.** Since alterations, additions, and tie-ins are included in this work that potentially could interfere with the existing facilityfunction, the Contractor shall take any and all steps necessary to avoid this interference. The Contractor shall, in general, complete as much noninterfering work as possible before making tie-ins or switchovers. For example, when new components are to be added, they shall be installed and be made operational prior to removal of the existing components from service. This may require the Contractor to install and maintain temporary parallel components until service is restored. Such components may include installation and operation of temporary facilities as required to meet the system functions described herein. The Contractor shall be responsible to maintain water quality and treatment during construction as detailed in the Contract Documents. When avoidance of interference is impractical by the aforementioned methods, the Contractor shall take the following additional steps:

1. The Contractor shall schedule his work to minimize the time interval and/or frequency that any critical facility or component is out of service.
2. The Contractor shall coordinate all labor, materials, and equipment to be on the site at the start of a shutdown.
3. The Contractor shall work continuously (24 hours per day, 7 days per week) until service is restored.
4. The Contractor shall schedule his work to correspond with minimum demands on any system or facilities. This may include weekend or evening work.
5. The Contractor shall coordinate with and notify the Owner in writing 72 hours in advance of a shutdown so that the Owner can make the necessary preparations.

B. **Existing Units**. Operation of all existing valves, gates, and equipment required to complete the work shown in the Contract Documents shall be done by plant operating personnel.

C. **Tank & Channel Cleaning**. This work shall be performed by the Contractor under the supervision of the Owner. All liquid wastes shall be reprocessed back to the Backwash Lagoons and disposed off-site at an approved location.

D. **Disposal of Waste Excavation Material**. This work shall include the transport, delivery, and grading of excavated material from the wellfield and water treatment plant as required. Refer to the Scope of Bids document for additional details.

1. The Contractor shall have an OEPA approved disposal site available to receive the estimated remaining volume of waste excavation material. The City and the OEPA will review and approve of the Contractor's Disposal Site prior to the placement of any material.

2. Excess material that will be used for backfilling or regrading can be temporally stored at the WTP in the areas designated for stockpiling backfill material as approved by the Owner. All excess material shall be removed when construction is complete and restored to finish grade and seeded per Contract Drawings.

3.4 DEMONSTRATION

A. **Records and Responsibility.** The Contractor shall maintain all approved schedules, sequences of construction, copies of communications of all coordination, and other information as required at the construction site. A single point of coordination shall be designated in one responsible individual by the Contractor with the Owner and Engineer. .

3.5 DETAILED ACTIVITY – SUGGESTED SEQUENCE OF CONSTRUCTION

A. **General work.**

1. Provide project management including construction schedule, schedule of values, and list of submittals. Request for Information (RFIs) and submittals of all materials and equipment to be incorporated into the new work. Any changes in field conditions that affect schedule or cost, or scope must be submitted by the Contactor in writing and approved by the Owner prior to proceeding with work.

2. Mobilization/Construction Trailer Area

a. Submit a detailed work plan and schedule for review and approval prior to start of construction

b. Perform preconstruction audio-video recording of roadways, drives, walks, and structures, prior to start of any construction and submit for review by Engineer and Owner.

c. Provide temporary fence as required to secure construction, storage, and parking areas.

d. Furnish and install temporary sediment and erosion control measures.

e. Field verify locations for existing utilities in proximity to the new work, and verify location, depth, and type of connection needed for all tie-ins to existing mains.

3. Stormwater Pollution Prevention Plan (SWPP)

a. Furnish and install temporary sediment and erosion control as shown on Contract Drawings.

b. The preliminary plan, as shown on Contract Drawings, has been submitted for review to Tuscarawas Soils Agency for review, and their comments have been included in the plans. Contractor shall notify the Tuscarawas Soils Agency prior to the start of construction and at the completion of construction.

c. Maintain SWPP control measures until work in an area is complete. Any cleaning, maintenance, and repairs shall be maintained throughout the construction of the proposed improvements.

d. SWPP control measures shall be removed at completion of work and the site restored as required per Contract Documents.

B. **Wellfield work**. All tasks listed below are for the convenience of the Contractor(s) and shall include all necessary general and site work to the point of final acceptance by the Owner. The Contractor shall utilize a Pump Service Company to assist with removal of the Well #1- #10 pumps and motor, modify the well and pump casing as shown on the plans, and reinstall the pump and motor at each well. The General Contractor shall be responsible for all site work, regrading, paving, structural work, concrete foundations, new well building, piping, valves, and controls. The Electrical Contractor shall be responsible for the furnishing and installing the new 5 KV buried ductbank, disconnecting and reinstalling power to the motor, any temporary power to the maintain well operation until the 5 KV ductback is fully operational, and removal of the existing poles and overhead power lines once the new 5KV switchgear is operational. On a typical day, one (1) small well (Wells #1 through #7) and one (1) large well (Wells #8 through #10) are in operation. The owner typically rotates which small well is operating and which large well is in operation. There are no designated standby wells and wells are rotated based on which was called to start last.

1. Well #1 – (Typical for Wells #2 through #6)

a. Close existing gate valve between Wells #2 and #3 on the existing 24” raw water transmission main to isolate Wells # 1 and #2 prior to construction.

1. Wells # 3 through #6 will require closure of the valve located upstream the Well #7 connection which will shutdown Wells #1 through #6 through the existing Raw Water Forcemain. This shutdown shall be coordinated with the Owner as described herein.

b. Start construction of the New 24” Raw Water Transmission Main from Well #1 to the connection point just east of Well #6.

c. Construct the new electrical ductbank to the west of the existing Wells #1 to #6. Maintain electrical 4,160-volt power to Well Pumps #3- #10 at all times while work on Wells #1 and #2 are completed.

d. Remove Well Pump #1 motor and properly store in dry place during construction of new well.

e. Shut 12” isolation valve at existing raw water transmission main.

f. Terminate existing service at existing power pole, and if required, provide for temporary relocation of existing electrical service, transformer, motor controls, and SCADA panels to provide temporary service to well pump after construction of new well building is complete until the new 5-KV service is . operational. Remove power pole, transformer, support platform, and pump control panel when new 5-KV underground service is operational.

g. Remove Well Pump #1 head and pump column from well and store on site. Cut off the flanged outlet on the pump column for the existing pump discharge, and weld on steel closure plate.

h. Demolish the existing pump discharging piping, valves, and meter in the existing concrete valve vault. Demolish the existing concrete vault including roof, walls, and base slab and haul debris offsite.

i. Excavate and rough grade site for construction of new well building. Excess excavation shall be stored on-site at lagoon area or as directed by Owner. Final stockpile areas shall be graded and seeded.

j. Cut the existing steel outer 42” well casing and remove a section of the casing pipe to lower the pump to the elevations shown on the drawings. Furnish and weld on a new base plate for attaching the pump head. Furnish and install a new pump head adapter plate and bolt to the new outer casing base plate. Rotate pump discharge as shown on plans and re-install pump and motor.

k. Re-install the Well Pump #1 at the location shown on the drawings,

l. Furnish and install the new discharge pipe including the New 12” tee and riser pipe the extends above the floor of the well building.

m. Furnish the concrete foundation for the new well building as shown on the drawings.

n. Construct the new well building for Well Pump #1 on the concrete foundation including metal siding, roof panels, doors, hardware, and louvers.

o. Install the new discharge piping from the pump to the 12” riser pipe in the well building including pipe supports, valves, check valve, and air release valves, miscellaneous piping and accessories.

p. Complete installation of electrical power, lights, instrumentation and controls in new well building. Make temporary power connection from existing 4,160-volt service to new transformer in well building if new 5 KV service is not operational. Complete all HVAC and plumbing mechanical work as show on drawings.

q. Once the well casing, pump modifications, new piping, meters, and controls are installed to allow water to be pumped to the existing raw water main, temporary power shall be provided using the existing overhead 5 KV service. The Electrical Contractor shall relocate and reinstall the existing service mast, transformer, motor starter, and SCADA panel fed from existing overhead electrical service work until the new 5 KV service is fully operational. Once the new 5KV underground service is operational, the existing overhead service and temporary relocated panels can be removed.

r. Install the new 12" discharge pipe, fittings, and 16" butterfly valve in the new Raw Water Transmission Main. Install new pipe saddle, tap the existing PCCP pipe, and connect 16" valve and fittings to tie the new pump discharge valves, and make the connection

s. Complete final grading and construct new concrete pad at well pump and new gravel drives, sidewalks, and parking. Complete fine grading and seeding of disturbed areas.

2. Well #7

a. Cut the 12" discharge pipe from Well #7 to the south at the location shown on the plans. Perform same work as described for Wells #1 though #6 and connect to existing 12" discharge line at point shown in drawings downstream of new well building.

b. Coordinate construction of relocated tie-in to existing raw water transmission main to allow Well#7 to be connected below interconnection of the 30" and 36" mains feeding the East and West Aerator Buildings.

3. Well #8 – (Typical for Wells #8, #9, and #10)

a. Close 12" valve in existing valve vault for Well #8 to isolate well until new connection to existing 12" discharge pipe can be made downstream of new well building. This is also typical for Wells #9 and Well #10.

b. Always maintain electrical 4,160-volt power to well pumps #8-#10 while work on Wells #8 and #10 are completed. Terminate existing service at main pole for future temporary service to pump after construction of new well building is complete.

c. Construction of the new ductbank shall be completed from the Electrical Room at the Main WTP and Well #10, and the new ductback serving Wells #1 through #6 and #7 tied in as shown on the plans.

d. Remove, existing steel service platform, transformer, pump control panel and SCADA panel located on steel pump service platform and store on-site if needed to provide temporary power from the existing overhead 5 KV service so that the well can be put back in service if needed before the new 5kv service is operational.

e. Furnish and install improvements to well casing, well casing support system, pump modification. Demo existing piping in valve vault, backfill vault, construct new concrete well building foundations and erect new well building as shown on plans. Install new piping, meters, and controls from pump to the well building, and connect new discharge pipe to the existing raw water main so well can be put back in service. Once the new 5KV underground service is operational, the existing overhead service and temporary relocated panels can be removed.

f. Remove Pump No. #8 motor and store on site.

g. Demolish the existing pump discharging piping, valves, and meter in the existing concrete valve vault. Remove only the top slab, and place select backfill in tamped layers to the top of the existing structure.

h. Strip topsoil from site for well and place suitable backfill from various pipe and ductbank excavations to bring the site up to the rough grade to the limits shown on the plans.

i. Cut the existing steel outer 42” casing and remove a section of the casing pipe to the elevation shown on the plans. Furnish and install new base plate welded to the outer casing pipe to attach the pump head. Furnish and install a new pump head adapter plate and bolt to the new outer casing base plate.

j. Excavate and install four concrete pedestals to support new steel framing for well casing support system as shown on the plans. Fabricate and install new “X-shaped” pattern well casing support system that is welded to the 42” outer casing pipe and supported by the concrete caissons.

k. Re-install the Pump #8 motor using existing foundation plate onto the modified well casing as shown on the drawings.

l. Furnish and install the new discharge pipe including the new 12” tee and riser pipe the extends above the floor of the well building and terminate with new 12” valve.

m. Construct the concrete foundation for the new well building as shown on the drawings.

n. Construct the new well building for Pump #8 on the concrete foundation including metal siding, roof panels, doors, hardware, and louvers.

o. Install the new discharge piping from the pump to the 12” Riser pipe in the well building including pipe supports, valves, check

valve, and air release valves, miscellaneous piping and accessories.

p. Close the 30” main valves to isolate Wells #8 - #10 at the 36” raw water main to connect the new 12” discharge piing from the new well building to the existing 12” discharge pipe for each well.

q. Connect the new 12” blowoff piping from the cross fitting on the well pump discharge header to the existing drainpipe after the drainpipe has be cleaned and inspected.

r. Complete installation of electrical power, lights, instrumentation, and controls in new well building. Make temporary power connection from existing 4,160-volt service to new transformer in well building is the new 5 KV buried service is not operational.

s. Complete all HVAC and plumbing mechanical work as show on drawings.

t. Cut existing 12” discharge pipe and make connection to new 12” discharge from well building. Complete final grading and construct new concrete pad at well pump, gravel drives, and fencing. Complete fine grading and seeding of disturbed areas.

u. Once the well casing modifications are complete and the well pump, new piping, valves, meters, and controls are installed and operational, the Contractor shall relocate and reinstall the existing service mast, transformer, motor starter, and SCADA panel pole fed from existing overhead electrical service work until the new 5 KV service is fully operational. At this time the existing overhead service and temporary relocated panels can be removed.

4. Well #10

a. The existing Well #10 has an existing casing support X-bracing system already installed. Remove the existing bracing and make modifications to well casing as shown on the plans.

b. The four existing concrete caissons shall be extended above the proposed grade at Well #10 to the elevations shown on the plans.

c. Re-install the existing X-bracing system as shown on the plans

d. Repeat steps “a through u” described above for Well #8.

5. New Raw Water Transmission Main

a. Extend the existing 36” raw water transmission main from Well #1 to Well #6 but do not tie in until Wells #1-#6 are operational. There are two 36” valves that shall be installed on the crossover connections near Well #6 and the West Aerator. Dig exploratory potholes locate existing piping and valves and identify type of fittings on existing valves.

b. Crossover near Well #6: Schedule WTP outage work on existing 30” PCCP raw water to cut crossover pipe and install the 30”

valves on existing raw water main and crossover. Remove one pipe length of the existing 30” PCCP pipe and install new 30” valve on the crossover pipe and restrain valve. Remove the 30” valve on the east side of the existing raw water main and install new makeup piping. Relocate the new 30” isolation valve for Wells #1 -#6 before the 12” connection from Well #7 and reconnect from well #7. Wells #1 through #7 can now be connected to the new 36” raw water main from Wells #1 through #6 to the existing 36” to stub just east of crossover.

c. Remove the 36” x 30” tee on the crossover, 36” stub pipe to west, 30” crossover pipe, Wells #8-#10 30” isolation valve, and the existing 36” valve on main just east of crossover on new main to aerator. Install new 30” valves on crossover, 30” isolation valve for Wells #8-10, and the 36” stub to east. This allows from Wells #1 - #6, and #7-#10 to be discharged through the existing main to both the East and West Aerators.

d. Crossover near West Aerator: Schedule outage to install new 30” valve in crossover pipe and replace existing 36” isolation valves on both existing and new mains near West Aerator. Remove a section of pipe and install a new 30” valve in the crossover. Remove the 30” valve and install a pipe makeup in place of the existing 30” valve on new raw water main just west of crossover. The new crossover valve can be used to facilitate directing flows to either East or West Aerator when needed to shut down an aerator for renovations

e. Install the new flow control valves, valves, piping, and mag meters in existing valve and meter vaults as shown on the drawings that feed the West Aerators during the outage to install the new valves at the crossover near the West Aerator. The valve and meter will be replaced in the East Aerator when it is taken out of service for repairs.

f. New Raw Water Transmission Main serving Wells #1 - #6: Furnish and install new raw water transmission main complete to serve Wells #1 to #6 by open cut; tested, disinfected, and ready for service.

g. Furnish and install DIP fittings, joint restraints, and accessories in accordance with the drawings and specifications.

h. Furnish and install service connections in accordance with drawings and specifications.

i. Furnish and place all trench granular backfill material to backfill the trench in accordance with drawings and specifications.

j. Perform leakage test and successfully disinfect water main before placing new main in service.

k. Excess excavation shall be stored on-site at lagoon area or as directed by Owner. Final stockpile areas shall be graded and seeded.

6. Existing Raw Water Transmission Main Cleaning

   a. The Contractor shall submit a work plan for cleaning the existing raw water transmission mains, including the main serving Wells #1 through #6, Well #7, Wells #8 through #10, and the 30” and the existing 36” raw transmission mains from the wellfield up to the West Aerator. The plan shall identify wells being taken out of service, location for removal of sections of pipe to facilitate cleaning, cleaning methods, inspection, disposal of sediment removed from pipe, pipe replacement and/or repair details, and location and installation of inspection manways.

   b. The cleaning of the section of pipe from Well #3 through #6 shall require the new raw water transmission main serving Wells #1 to #6 to be operational before cleaning can proceed.

   c. Cleaning the raw water main from Wells #10 to the crossover at the main will require Wells #8 through #10 to be out of service during the cleaning operation. This will require well #1 through #7 to be fully operational to provide 10 MGD treatment capacity at the plant.

   d. Once the new 30” valve has been installed in the crossover piping near Well #6, the existing 30” raw water main can be taken out of service for cleaning. Piping shall be removed for cleaning and replaced as shown on plans. Flow to the plant shall limited to using only the full capacity of West Aerator. Work on the East Aerator should be scheduled to be completed when the cleaning of the 30” raw water main is ongoing.

   e. Cleaning and inspections of the 36” raw water transmission main will require the 30” crossover and 30” and 36” isolation valves at the West Aerator to be operational. Flow from the 30” main will be split between the East and one-half of the West Aerator. One half of the West Aerator may be taken out of service for construction new modifications. When cleaning and inspection is complete, the piping will be repaired, and new cleanouts installed.

   f. Once all the cleaning is complete, each section of pipe that was removed will installed with the necessary valves, cleanouts, air blowoff valves, and vaults installed at the locations shown on the drawings.

   g. Furnish and install DIP fittings, joint restraints, and accessories in accordance with the drawings and specifications.

      Furnish and install service connections in accordance with drawings and specifications.

   h. Furnish and place all trench granular backfill material to backfill the trench in accordance with drawings and specifications.

   i. Perform leakage test and successfully disinfect water main before placing new main in service.

C. Site Work for Wellfield

1. Remove existing fences prior to construction. Protect overhead power lines, power poles, and equipment during construction. Remove all construction debris, tools, trailers, workboxes, and equipment before completing site work.

2. Schedule work in accordance with Work Plan. Excess excavation shall be stored on site, used as fill for pump pads at Wells #8 through #10, or stored onsite adjacent to the lagoons or at locations as directed by the Owner.

3. Prepare site to rough grade, including establishing subgrade elevations, finish grades for paving and drainage at each well site.

4. Furnish and install sewers, water mains, drains, manholes, vaults, and appurtenance to the grades shown on the plans.

5. Provide concrete pads, sidewalks and equipment supports at each will at the locations shown on the drawing.

6. Final grade, install topsoil, and seed grassy areas at the locations shown on the plans and in accordance with the specification. Maintain sprinkling and erosion control measures until first mowing after grass covers seeded areas.

7. Furnish and install chain link fences and gates at the location shown on the plans.

8. The Wellfield service road begins at the edge of the paved parking area and extends down the fill past the Backwash Lagoons and then turns and heads west, crossing State Route 212, (Dolphin Road) and ends at Well #1. The existing gravel road has ruts and sink holes that shall be repaired, and will be regraded, and 3” of stone aggregate applied to resurface the roadway. Regrade the existing gravel drive in the wellfield from the main access gate at the WTP parking lot, past the entrance to the lagoon and into the north-south and east-west roadways that provide access to Wells #1 through #7. And Wells #8 through #10 as shown on the plans. and provide new granular backfill. Proof-roll the road surface as described in the specifications and repair any soft areas with granular backfill that is properly compacted before installing new 3” gravel roadway surface. Maintain dust control on roadway in the well field during construction.

9. Road crossings that are due to installation of the new discharge water mains from Wells #1 through #6 will be excavation and backfill up to grade as part of the scope of work to install the new water main.

10. Any concrete demolition, excavation, and backfill necessary to prepare the lower the pump casing pipes, relocated pump discharge piping, construct the well building, paving, walks, and gravel drives and parking areas at each well are not included in the scope of work for wellfield service road improvements, but are included in the scope of work to construct the proposed Well #1 through #10 improvements.

11. Parking areas and drives for each of the ten well sites from the edge of the service road to the well will be part of the scope of work for the modifications to each of the wells.

12. Construction of the new raw water transmission main will include the road crossing using a jacked and bored casing pipe jacked under the main road and is included in the scope of work to install the new raw water transmission main.

13. The installation of the electrical conduits will be through a bored and jack casing pipe to carry the PVC ductbank as shown on the plans and is included in the scope of work for that item.

14. Any site excavation, pipe removal, pipe replacement, pipe cleaning, sediment removal/hauling/disposal, concrete trust blocking, backfill, final grading and seeding are included in the scope of work for the cleaning and modifications to the existing raw water main, and not included in the scope of work for site work in the wellfield.

D. Sugar Creek Water Treatment Plant work. All tasks listed below are for the convenience of the Contractor(s) and shall include all necessary general, site, electrical, plumbing, and HVAC work to the point of final acceptance by the Owner.

1. West Aerator Building

a. The existing West Aerator has a single piping gallery that houses valves to feed the aerators and a valve to bypass the aerator completely and send flows to the filters. To maintain plant treatment operations, the Contractor shall keep one-half of the aerator in service and maintain the ability to treat flows up to 5 MGD during removal of the second half.

1. Remove and dispose offsite existing fascia, remove existing built-up roofing, and precast concrete planks and install new concrete planks, insulation, and roofing.

2. Install new roof drains, flashing, fascia, and new roof hatch as shown plans.

3. Remove, acid clean, and reinstall existing perimeter fence surrounding the second floor as shown on the plans.

4. Remove existing piping and valves as shown on the plans.

5. Remove, acid-clean, sand blast, and re-install existing aluminum tray support frames as shown on the plans.

6. Saw cut existing curb and install new dowels and rebar to anchor base plates of reconditioned tray frame columns.

7. Furnish and install new support angles to support new aluminum trays with bolted connections for attachment to existing tray support frames. Supports shall be reused and reinstalled with intermediate aluminum members and trays.

8. Furnish and install new aluminum aerator trays with perforated aluminum plates for the four levels of trays in each unit as shown on plans.

9. Install new raw water influent valves in the clearwell with new extension stems and floorstands.

10. Core drill openings for new floor drains and install drainage piping to connect to backwash water sewer system. Provide concrete topping to drain walkways surrounding tray support curbs as shown on the drawings.

11. Drain clearwell, remove and dispose of sediment, pressure-jet clean walls, floor, and ceiling. Inspect for cracks and spalled concrete. Notify Owner if defects are found and use allowances to make concrete repairs if authorized by Owner.

12. Replace valves and piping as shown on plans.

13. Cleaning and seal existing exterior and interior second floor masonry walls.

14. Clean aluminum handrails, and repair damaged pipe railing as noted on plans.

15. Install new insulated window panels in Aerator Building,

16. Install aluminum ladder, steel framing for new roof hatch, and aluminum roof hatch.

17. Coordinate work with other contractors for Plumbing, HVAC, Electrical, Instrumentation and Controls. When work on first half of the West Aerator is complete, repeat Steps 1 through 16 as described above.

18. Coordinate work with scheduled outages to construct new work, cleaning, and modifications to existing raw water transmission mains from well field, meter, and valve replacements.

19. Contractor to schedule work to refurbished only one of the three units at a time and maintain two units of either the West Aerator or East Aerator in service while work on an Aerator unit is being completed. Schedule extended outages to make critical interconnects and replace and piping and valves, while maintaining flows of 10 MGD to the plant with one aerator and pre-chlorinating the aerator bypass flow if needed.

2. East Aerator Building

   a. The existing East Aerator can be taken out of service provided the existing full capacity of the existing West Aerator is available.

      1. If renovations are not complete, delay taking East Aerator out of service until full treatment capacity of West Aerator has been restored and is fully operational.

   b. The East Aerator piping and valves are located in the yard, and there is no separate pipe gallery. All yard valves associated with East Aerator are being replaced, including the by-pass valve that allows raw water to bypass the East Aerator completely and send flows to the filters. In order to maintain plant treatment operations, the Contractor shall keep the West Aerator in full service and maintain the ability to treat flows up to 10 MGD during renovation and repairs of the East Aerator.

   c. Coordinate work with other contractors for Plumbing, HVAC, Electrical, Instrumentation and Controls. When work on first half of the West Aerator is complete, repeat Steps 3 through 16 as described above for the West Aerator Building.

      1. The roof of the East Aerator will not be replaced. The work in Steps 1 and 2 called for on the West Aerator will not be required, but a new opening will be cut into roof and a roof hatch with new flashing will be installed. A new ladder and steel framing will be provided as shown on the Contract Drawings.

   d. Coordinate work with scheduled outages to construct new work, cleaning, and modifications to existing raw water transmission mains from well field, meter, and valve replacements.

   e. Contractor to schedule work to maintain refurbished half of West Aerator and East Aerator in service while second half of west Aerator is complete.

3. Filter Piping Gallery - Piping and Valve Replacements

   a. Filter #1 through #4 were installed as part of the original 1959 construction of the original plant, and Filters #5 and #6 were added in 1995 to expand the plant to its current configuration. The existing lower level of the pipe gallery is situated between Filters #3 and # 5 on the north side, and Filter #2 and #6 on the south side of the pipe gallery. Water that has been aerated supplied Filters #1 through #4 through a 30” pipe and turn up into the influent flume adjacent to Filter #4. A venturi meter and flow control valve will be removed and replace as shown on the plans.

   b. Flow from the East Aerator enters the Filter Gallery through a 36” pipe that connects to the main header to Filters #5 and #6, and ties into the flume box where it is combined with flow from the West Aerator. Four 36-ich transfer pipes are located between

the clearwells under the pipe gallery with floor doors provided to access the four transfer pipes.

c. Each of the six (6) filters is feed from a common influent/washwater flume that is used to maintain constant head on the six filters by modulated the effluent valves to maintain a variable flow through each filter while operating under varying headloss conditions.

d. Each filter is divided into two filter cells “A and B” that utilize the same influent and backwash gullet flume along the long wall between each filter cell. 30” of anthracite media and 12” of gravel are supported on a clay tile underdrain system. Each filter cell will be refurbished by removing all the media, removing section s of underdrain to pressure-jet clean the underdrains, reaming drain holes to remove scale build-up in the underdrains, and then re-installing new underdrain blocks and new media in each filter. A new air scour backwash system will be installed to replace the existing two (2) surface sweep mechanisms and piping in each filter cell. Both filter cells must be removed from service when removing and replacing influent, effluent, backwash, and drain valves for the filter.

e. Influent flow from the West Aerator enters the pipe gallery from the south and flows into a junction chamber. Flow from the East Aerator is split to serve filter #5 and #6 and/or discharges into the flume that receives flow from the West Aerator.

f. Both 36” influent butterfly valves located on the first-floor entry and exit from the influent flume will be replaced with new 36” valve and operator and floorstands.

g. The 20” washwater from the Makeup Reservoir enters the pipe gallery from the south. The piping will be modified and new valves and a 20” magnetic flow meter installed. The Makeup Reservoir will continue to be used for backwashing filters until the new backwash pump is installed and operational, at which time it will revert to being a secondary backwash system.

h. A new 6” drain line will be installed on the washwater main to allow the Makeup Reservoir to be drained to the Backwash Chamber next to the first-floor flume so that the reservoir can be drained in the future.

i. The existing 36” influent pipe turns up and discharges into the Influent Flume. An existing 20” connection that was blind flanged will be used to connect to a new 24” bypass pipe that will be run through the main pipe gallery and discharge into the influent flume between Filters #1, #2, and #4. The existing wall of the influent flume will be cut to install a wall casting. The top slab of the influent flume will be cut to install two Stop logs in the floor of the main floor Filter Gallery. The tile floor will be cut and repaired, and a new aluminum coverplate installed flush with the tile floor. Two 24” valves will be installed at both ends of the bypass pipe.

j. The existing 3” surface wash water header that runs along the ceiling on both sides of the pipe gallery will be converted to NPW header for the pipe gallery. The valves and surface wash fittings will be removed up to the wall of each filter.

k. The Filter-to-Waste (F-T-W) piping and valves on each filter cell will be removed, and the new F-T-W pipe drains to the backwash header will be removed and a new F-T-W Pump and piping system will be provided as described below.

l. Removal and replacement of filter control valves for the six influent/effluent flumes and the effluent, air scour, and backwash water for each of 12 filter cells will need to be coordinated with the plant. Since the valves cannot be replaced without taking out all four Filter l#1-#4 or #5 and #6.

1. Six (6) 24” raw water influent valves feed the center flume between the two filter cells. Each of six filter will be removed and replaced with new valves and operators.

2. Six (6) 24” washwater effluent valves that drain the center filter flume for each of six filter will be removed and replaced with new valves and operators.

3. Twelve (12) 3” surface washwater valves will be removed and a blind flange installed on the wall casting.

4. Twelve (12) 10” effluent valves control the flow of filtered water that maintain a constant head on the filter while in filtering, will be removed and replace with new valves and motor operators. The 12 existing motor operators are 208 Volt, 3 Phase and will removed and be turned over to the City. The existing piping will be removed, and new piping and fittings installed in the effluent pipe that direct filtered water to the clearwells.

5. Twelve (12) existing 10” flow tubes will be removed and a new 10” magnetic flow meter will be installed,

6. Twelve (12) existing motor operated Filter-To-Waste valves will be removed, and a new valve and motor operator will be installed.

7. Twelve (12) Filter Head Loss strainer assemblies will be removed and replaced, and new piping and a new differential pressure transmitter will be installed.

m. Two (2) new 8” stainless steel air headers for the air scour system will be installed along each side of the filter gallery below the ceiling and extend from the Air Sour Blowers in the Mechanical Room to the east end of the pipe gallery at filter #5 and #6.

1. Twelve (12) new 4” butterfly valves with motor operators shall be used to supply air to the filter scour system.

n. A new dehumidification system will be provided for the filter pipe gallery. Two fiberglass ducts shall be provided by the HVAC contractor and run through the filter piping gallery. The Contractor will coordinate the ductwork installation with the proposed piping improvement planned for the filter pipe gallery.

o. Two (2) existing sump pumps in the filter pipe gallery will be removed and replaced.

p. Piping in the filter piping gallery shall be cleaned, painted, and wrapped with new piping insulation wrapping at the locations shown on the plans.

q. The existing steel catwalk and handrail shall be cleaned and painted.

r. Contractor shall coordinate outages with other outages for the well field and aerator improvements to minimize downtime.

4. Filter-To-Waste (F-T-W) Pump and Piping

a. In Filter Room for 5A, cut in a new opening in the concrete floor and install a new aluminum floor door to provide access for removal of the F-T-W pump.

b. Furnish and install a new constant speed F-T-W pump as shown on the drawings. The pump flow shall be metered by a magnetic flow meter and modulated using a flow control valve. Provide interconnecting piping, valves, and accessories to transfer water immediately following backwashing both filter cells to the Influent Overflow Chamber located by Filter Room #4 that discharges to the 24” Backwash Effluent Pipe that flows to the Backwash Lagoons for treatment.

c. Remove the existing F-T-W piping and valves, and install the new piping as shown on the plans. Twelve new Filter-To-Waste valves and motor operator will be installed.

d. Install new 6” F-T-W suction header that drains the filters to “ripen” the filter after each backwash cycle is complete and provide a new piping header to interconnect the 12 filter cells to a new F-T-W pump installed in the pipe gallery between filter #3 and #5. An auxiliary backup to the F-T-W Pump will be provided in the Filter Pipe Gallery off the F-T-W header at Filter #6 and equipped with a motor operated valve. Both the F-T-W pump discharge and the auxiliary backup shall be provided with 18” air gap as shown on the plans.

e. Flow from the pump shall be regulated by a new 6” flow control diaphragm valve and metered by a 6” magnetic flow meter before being discharged into the backwash flume that drains to the Filter Backwash Lagoons. The pump discharge is equipped with isolation valves and check valve.

f. Filter ripening shall be implemented using the SCADA system to control time allotted to flush the filter, and the totalized flow and flow rate after each backwash of a filter cell is complete.

5. Filter Renovation and Air Scour System

   a. The Contractor will provide a work plan to the Owner on the method and schedule for renovating the filters including filter media removal, disposal, filter underdrain removal/cleaning, filter box cleaning/inspection/repairs, new filter underdrain installation, air scour header installation, filter media replacement, media cleansing/backwashing, upgrading filter controls.

   b. Filters can be rehabilitated before valves in filter gallery are removed and replaced. Plant production shall remain at 10.7 MGD at Average Daily Flow (ADF) during filter rehab with five (5) remaining filters in reservice.

   c. Remove existing handrail to provide access to filter cell.

   d. Remove existing surface sweep assemblies and piping headers and drops in each filter cell.

   e. Remove media using vacuum method to remove anthracite media and gravel. Provide means for disposal offsite. At an approved landfill facility.

   f. Clean interior walls and launders within each filter box with high pressure jet cleaning system. Owner/Engineer shall inspect walls to determine if cracks or spalled concrete requires repairs using monies from allowance to seal leaks and restore concrete.

   g. Remove one row of filter underdrain block spanning the top of effluent collection trough that drains filter blocks. Coordinate all work with manufacturer of new filter underdrain blocks.

   h. Use high pressure jet cleaning system to clean the interior walls of each chamber in each filter blocks and flush and sediment back into the trough. The filter cell effluent valve shall be closed. Any flow shall be pumped into the center washwater flume and allowed to flow to the backwash lagoon. Coordinate this step with City to control diversion to specific lagoon of their choice.

   i. Each filter block underdrain tile consists of orifices (holes) cast in clay block, including orifices in interior of block. Clean scale buildup from orifice holes of existing clay block filter underdrain with wire-tool reamer. Wash down the filter floor to flush solids from filter cells. Owner/Engineer to inspect block to confirm holes are clean before proceeding with next step.

   j. Install new filter underdrain block per manufacturer' s recommendations. Install new anchors epoxy grouted into concrete floor and install manufacturer's recommended cement grout mixture between blocks to lock blocks into place. After prescribed time for curing per grout manufacturers' recommendation, proceed with next step.

   k. Use proper equipment per manufacturers' recommendations to install filter gravel and anthracite media to the proper depths, Measure and confirm media thickness after rinsing media per

sequence outlined in the specifications. All backwash water shall be routed to the existing backwash lagoons.

6. Air Scour System

   a. Remove acid- proof clay tile. Relocate electrical panels and reroute plumbing as needed to maintain sanitary and potable water services to building during construction.

   b. Brace and install columns and structural supports to carry weight of second floor currently supported by load-bearing masonry wall of the existing walls Battery Room to where new Air Scour Blowers will be installed.

   c. Install concrete equipment pads for blowers.

   d. Cut openings in roof of Mechanical Room, and flash new air intake vents. Install filters on each air intake pipe.

   e. Install piping, valves, expansion joints, coupling, pressure relief valves, gauges, and controls for each blower as shown in piping schematic shown on the drawings.

   f. Furnish and install 8” diameter Schedule 10 stainless steel air headers on each side of piping gallery with 4” motor operated butterfly valves to control air supplied to air scour piping manifold.

   g. Furnish and install four (4) air drop assemblies with differs and lower to sit atop gravel bed.

   h. Re-program SCADA system to utilize a combinations air and water backwash sequence, including provisions for opening and closing influent, effluent, drain valves, air scour control valves for each filter cell.

   i. Install new ATI or equal backwash water turbidity and bed expansion monitors in each filter cell and provide controllers that input turbidity and bed expansion versus time. Provide adjustable controls for starting air scour system on low air flow, and increase using VFD to provide maximum allowable air supply during backwash sequence. Stop blowers after preset time and start backwash pump and backwash and sequence for each cell. When both cells are backwashed, open Filter-to-Waste motor operated valve and F-T-W Pumps to operate for prescribed during selected in SCADA. Record F-T-W- flow rate and volume in SCADA. After filter is ripened, re-direct filter effluent to clearwell and close F-T-W valve.

7. Backwash Pump and Piping

   a. Remove existing plant water and Makeup Reservoir supply pumps in high service pump room.

   b. Cut concrete floor in High Service Pump Room install new Backwash Vertical Turbine Pump that draws backwash water from the High Service Clearwell No. 2 and is programmed in SCADA to be the primary method used to backwash a dirty

filter. SCADA will use a run time interval between backwashes, or a high headloss occurrence to alarm and notify the operator that a filter requires backwashing.

c. On the Backwash Pump discharge, install a new 20" backwash header will be equipped with check valve, magnetic flowmeter and modulating butterfly valve to control backwash rates supplied during each step of the backwash sequence. A 20" butterfly valve shall be provided at the end of the new backwash supply header where is connects to the west end of the existing backwash header in the pipe gallery. Each filter cell will be provided with a new motor backwash supply valve on the existing header. All piping will be painted and insulated to minimize corrosion and condensation in the pipe tunnel.

d. The SCADA system will be modified to select Primary Backwash System using new Backwash Pump, or the Secondary System using the existing Makeup Reservoir. A filter backwash sequence shall be provided that allows the operator to change backwash rates and durations from a SCADA display screen.

8. Cleaning and Inspection of Backwash Water Storage Reservoir

a. The existing Makeup Reservoir will be drained, pressure washed, and sediment in the tank removed and taken to the sludge lagoons for on-site dewatering. A new manually operated drain valve with box shall be provided to drain the reservoir and backwash water fill/feed line to the Backwash Water Drain line that flows to the lagoons.

b. The existing pipe, fittings, and venturi meter and modulating butterfly valve will be removed, and a new 16" magnetic flowmeter and modulating butterfly flow control valve shall be installed. The Backwash Reservoir shall be maintained as a backup secondary system if the Primary Backwash Pump is out of service.

c. Filter control panels for the six filters will be modified to provide selector switches on the filter consoles and to select which backwash system will be used either locally or from SCADA.

d. Backwash water currently drains through a 24" drain to the Backwash Water Treatment lagoons for solids removal.

e. The new Dechlorination Facilities will be provided to remove residual chlorine in the settled lagoon effluent prior to discharge into the local receiving stream.

9. Clearwell Cleaning, Inspection, Baffles, Gates, and Valves

a. The existing clearwells store filter water form the six filters. Currently, there are three clearwells: North Clearwell #1, and South Clearwell #2 that a common center Clearwell #3 that is located under Filters #5 and #6. In 1995, flow from Filter #1 and #3 were redirected and combined with Filter #5 , then flowed through 36" diameter transfer pipes into the Center Bay to the existing chlorine contact tank before flowing into the High

Service PS Clearwells #1 and #2. Additional chlorine could be added to maintain the required chlorine residual in the Finished Water supply.

b. Under this Contractor, the Contactor will construct two (2) new 15’ high concrete divider walls in Clearwells #1 and #2 to form the two new North and South Chlorine Contracts. The center bay between Clearwells #1 and #2 will be carry the combined flow of all six filters.

c. New openings will be cut into the existing clearwell wall to all flow to be redirected through new openings that will be equipped with new sluice gates into the two new Chlorine Contact Tanks constructed at the ends of Clearwells #1 and #2.

d. New 30” diameter bypass pipes with isolation butterfly valves will be constructed at the west end of the existing Clearwells #1 and #2 so that the flow center bay can be taken out of service to be cleaned.

e. New floor access hatches will be installed to provide access to the Clearwell #1 and #2 and the two new Chlorine Contact Tanks. Chlorine will be added to the entry into each tank and used to maintain the required chlorine residual in the finished water.

f. The existing Chlorine Contact Tank will be designated as the new Fluoridation Mix Tank where fluoride will be added at the entry points from the two new Chlorine Contact Tanks.

g. Diver reports included in Appendices, shows small amounts ¼” to ½” of silt that has accumulated in the bottoms of all the clearwells. As each chamber it drained to the backwash lagoons. The walls, ceilings will be pressure cleaned and inspected by the Engineer. Residual bottom sediment will be removed and tank and take to the backwash lagoons for dewatering prior to disposal. The floor will then be pressure washed pressure-jet cleaned and inspected for cracks and spalled concrete. An allowance is provided to make any repairs deemed necessary by the Engineer and/or Owner,

h. New baffle walls will be installed in Clearwells #1 and #2, and the North and South Chlorine Contact Tanks as shown on the drawings. Columns will be erected to span from floor to ceiling to allow the corrosion-resist and metal or FRP panels to be slide in between the column supports.

i. The Contractor will remove two of the existing access chambers located on the exterior walls of the Clearwells #1 and #2 of the at the west end of the clearwells #1 and #2 of the original plant. A new opening will be cut into the exterior wall of the two clearwells and a new access chamber constructed to allow entry into the clearwells for cleaning and inspection. New FPR access ladders with safety gates will be provided as shown on the drawings.

j. New level transmitters will be provided to monitor and control levels in the tanks. New Chlorine Residual Analyzers will be provided in the Chlorine Contact Tanks and Finished Water header leaving the plant to control and maintain proper chlorine residuals.

10. High Service Pumps

a. The surge valves. Butterfly isolation valves, piping and couplings will be removed by the Contractor from each of the existing High Service Pumps #1 through #5.

b. HS Pump #1 pump head and motor stand have already been replaced and the motor has been refurbished. Remove, clean, refurbish and provide new bearings to High service Pumps #2 through #5. The Contractor shall retain the services of an approved Pump Service Company to remove the motor and pumps and provide all services to have remove the existing pump head and install new pump heads/motor stands on each pump.

c. Power to the large 4,160-volt motors on HS Pumps #3, #4 and #5 will be disconnected by the Electrical Contractor. An approved Pump Service Company will remove the motor and load it on a truck to be delivered to the Motor Rebuilder for cleaning, inspection, and refurbishing with new controls, and returned to the plant and reinstalled on the pump reassembled.

d. The Pump Service Company shall remove the existing pump heads and install a new Schedule 80 steel pump discharge head and motor stand for each pump and reinstall the pumps.

e. The existing 4KV motor on Pump No. 2 will be removed by the Pump Service Company and a new 480-volt motor shall be procured by the Electrical Contractor. The Pump Service Company will be responsible for reinstalling the pump and new motor. This motor will be powered by a new 480-volt Variable Frequency Drive provided in the power distribution equipment provided by the Electrical Contractor. The Electrical Contractor shall provide all conduit and wiring shown on the drawings to repower the motor and controls. Refer to the Scope of Bid document for additional details.

11. Plant Finish Water Metering Chamber

a. The existing piping, fittings, venturi mete, shutoff valve and pipe connectors installed in the Finished Water Metering Chamber located in front of the main plant on the 42” transmission main, will be removed, and replaced with a new fittings, magnetic flow meter. butterfly valve, and connectors.

b. New lighting in the vault will be provided. Signals from the mag flow meter will be tied into the SCADA system.

12. Fluoride Room Improvements

a. New door hardware will be installed on existing man doors, but the door frame and door will be reused.

b. A new masonry wall will be constructed to create an operator room. An aluminum mandoor with stair landing, steps, and handrail will be provided otthe lower level.

c. A new hydrofluoric acid day tanks with cover will be provided and the piping from the storage tanks reconnected. New suction lines from the day tank will connect to three fluoride feed pumps located in the new Operator Room of the Fluoride Building. New fluoride feed lines will be installed to feed fluoride into each effluent stream after the two (2) Chlorine Contact Tanks that flow into to the Fluoridation Mix Chamber Clearwell.

d. New water lines with reduced pressure backflow preventers will be provided and new potable water piping and valves provided to supply dilution water supply lines equipped with backflow preventers will be installed on each injection line that the diluted fluoride solution.

e. One indoor eyewash and safety shower station in the Fluoride Storage Room, and one outdoor eyewash and safety shower station will be provided at the truck filling station.

f. A new 6” drain line will be provided from the Containment Sump of the Fluoride Building to the existing Pump-Out Sump adjacent to the Fluoride truck fill station. A diverter valve will be used during filling to send spills from truck filling operations into the Pump-Out Sump. During normal operations storm water that drains from the fill station pad will be diverted to a new storm sewer that carries stormwater to the local receiving stream.

g. New heating and ventilation systems will be provided to improve ventilation of the rooms in case of gas leaks as required to meet safety standards. Existing Chlorine gas detectors are provided and wired to the SCADA system.

h. New structural supports will be installed to support the weight of the larger roof-mounted exhaust fans and makeup air units.

i. New electrical panels, lights, and controls will be provided in the Cylinder Storage and Chlorinator Room.

13. Chlorine Building Improvements

a. New door hardware will be installed on existing man doors, but the door frame and door will be reused.

b. The two (2) existing 500 LB/Day chlorinators will be removed and replaced with new units. New chlorine gas piping will be installed from the chorine cylinders weigh scales in the Storage Room to the Chlorinator Room. New chlorine solution lines will be provided from the Chlorinators to six new distributors, and the solution feed lines replaces as show on the drawing between the distributor and the discharge points for Filter Pre-

Chlorination, Chlorine Contact Tanks, Finished Water and Aerators.

c. New water lines with reduced pressure backflow preventers will be provided and new potable water piping and valves provided to supply dilution water to the Chlorinators. A new outdoor eyewash and safety shower will be provided at the rear exit door of the building.

d. New heating and ventilation systems will be provided to improve ventilation of the rooms in case of gas leaks as required to meet safety standards. Existing Chlorine gas detectors are provided and wired to the SCADA system.

e. New structural supports will be installed to support the weight of the larger roof-mounted exhaust fans and makeup air units.

f. New electrical panels, lights, and controls will be provided in the Cylinder Storage and Chlorinator Room.

g. The roof drains will be re-routed to new storm sewers in the area, so they no longer discharge to the Backwash Lagoons.

14. Maintenance Garage

a. The existing gutter and downspouts will be replaced

b. New door hardware will be installed on existing man doors, but the door frame and door will be reused. Two new aluminum overhead coiling doors will be installed to replace the existing sectional doors.

c. The abandoned radio tower next to the Maintenance Garage will be removed.

d. A new concrete Oil/Water Separator will be provided to serve floor drains in the building, and the discharge routed to the new sewer to the sanitary sewer. Runoff from the roof drains will be routed to new splash blocks that drain to the new storm sewer being constructed to separate stormwater from the backwash lagoons.

e. Paving in the area will be replaced after construction of new underground improvements are complete.

f. The heating and ventilation systems will be replaced.

g. New electrical panels, lighting, and controls will be provided/

15. Backwash Water Lagoons

a. Three concrete-lined Backwash Holding Tanks are provided to hold backwash water to allow sediment to settle out prior to being discharged into the local receiving stream.

b. The City uses two (2) lagoons to treat backwash water and will be maintained in operation throughout the construction period.

c. No modifications to the existing influent/effluent sewers, grading, concrete junction chambers, concrete basins, overflow

structures are planned or included in the scope of work under this contract.

d. The third lagoon can be used by the Contractor to store and dewater scale removed from cleaning operations from scale removal from the existing raw water mains, solids removed from clearwells, and media and silt residue from cleaning the filter underdrains.

e. The Contractor shall remove all sediment form the three backwash lagoons as needed during construction of the wellfield and plant improvements, and all three lagoons will have sludge solids removed and the concrete lined basins pressure washed, and all wastewater and dewatered solids or slurries will be hauled offsite to an approved landfill once all construction work is complete as part of the work of this contract.

16. Sitework – New Roadway, Paving, Storm Sewers, and Yard Piping

a. Remove existing fences prior to construction. Protect overhead power lines, power poles, and equipment during construction. Remove all construction debris, tools, trailers, workboxes, and equipment before completing site work.

b. Schedule work in accordance with Work Plan. Excess excavation shall be stored on site, used as fill for pump pads at Wells #8 through #10, or stored onsite adjacent to the lagoons or at locations as directed by the Owner.

c. Prepare site to rough grade, including establishing subgrade elevations, finish grades for paving and drainage at each well site.

d. Furnish and install sewers, water mains, drains, manholes, vaults, and appurtenance to the grades shown on the plans.

e. Provide concrete pads, sidewalks and equipment supports at each will at the locations shown on the drawing.

f. Final grade, install topsoil, and seed grassy areas at the locations shown on the plans and in accordance with the specification. Maintain sprinkling and erosion control measures until first mowing after grass covers seeded areas.

g. Furnish and install chain link fences and gates at the location shown on the plans.

17. Surge Relief at WTP to Makeup Reservoir

a. An existing 16” pipe that was used to fill the Makeup Reservoir was abandoned in the 1996 expansion. A new 16” valve will be installed on the tee at the 42” header, and the line cut to install a new surge relief valve in a precast concrete vault to be situated along the wall of the Filter Building.

b. New piping, fittings, and valves will be provided to route the pipe along the East side of the filter Building and to connect to

the existing 20” backwash supply line from the Makeup Water Reservoir using 16” tapping sleeve and valve.

c. Once the Makeup Reservoir becomes a secondary system to backwash the filters, the line will no longer be used, and will be valved off in the pipe gallery so that it can be used as an emergency surge relief in the event of a power failures or other emergency condition. Water be contained in the Makeup Water Reservoir for re-use or drained back to the lagoons for treatment.

18. New Aboveground Fuel Tank

a. The City has contracted Burgess & Niple to remove and dispose of the existing 2,500 steel fuel tank located to the west of the Generator Building will be removed in accordance with OEPA tank removal rules and regulations.

b. B&N will retain the services of a licensed tank removal company to take furnish all labor, materials, tools, and equipment for the excavation, removal of existing steel tank and buried fuel lines conduit, disposal of contaminated materials if found, backfilling and final grading of the site. B&N will be responsible for coordination of the tank removal subcontractor with the Contractor. B&N shall review and approve the tank removal and closure plan, including scheduling the work, observation of work, soils and groundwater sampling and testing, and submitting final closure plan to OEPA for approval.

c. Contractor shall furnish and install a new aboveground fuel tank at the locations shown on the plans, including excavation, concrete foundation, backfill, tank installation, fencing, pipe bollards and new buried fuel lines piping.

d. Electrical Contractor shall furnish and install all instrumentation and controls, including conduit and wiring for power and control.

19. First Floor - Lobby and Entrance and LULA Elevator

a. Hand wash and clean the existing wall mosaic tiles, structural glazed tile walls, and grout. Protect the existing wall mosaic after cleaning until building construction is complete.

b. Install drilled shafts to support concrete grade beams and foundation for the new LULA elevator shalt.

c. Construct new CMU walls and insulated wall treatment for the new elevator shaft, including structural beams to form new addition to lobby to provide 1st floor access to LULA elevator. and floor Install new lintel beams and wall

d. Install new steel roof deck at the top of the elevator shaft.

e. Remove existing window system for existing front lobby entrance, including existing structural beams and columns that are no longer required. Furnish and install new columns and beams required to support new window system and roof deck as shown on the plans. Field verify all dimension for new window

curtain wall system and coordinate size and location of new and existing structural components with curtain wall system supplier.

f. Furnish and install new walls exterior building insulation system, roof insulation, flashing, and single-ply roofing, nailers, and facia as shown on the plans.

g. Construct new wall partitions t locations shown on the drawings.

h. Provide new suspended ceiling in Rooms 200, 203, 202, and rear halls Rooms 206 and 211. Coordinate locations of HVAC registers and lighting with HVAC and electrical subcontractors.

i. Fill the existing terrazzo-lined fountain basins with light-weight concrete fill and install new terrazzo floor to match color and patter of existing floor.

j. Construct new CMU walls, door for the Elevator Machine Room 101 located in the Filter Pipe Gallery Annex, and stairs and railings as shown on Contract Documents. Furnish and install new LULA elevator in shaft, final elevator interior and door trim, hardware, and new hydraulic unit in elevator machine room. Coordinate ventilation and electrical work with elevator installation.

k. Remove and replace existing mandoor and frame to first floor Filter Pipe Gallery Annex including door hardware

20. First Floor – Filter Pipe Gallery Annex Room 101, Restroom 107, Mechanical Room / Battery Room 106, Maintenance, Electrical, Generator Rooms, High Service Pump Room

a. Filter Pipe Gallery Annex Room 101:

1. Cut concrete floors and provide three (3) new floor door openings into existing clearwells at locations shown on drawings. Coordinate with scheduled outages required to perform filter and clearwell renovation work.

2. Coordinate maintaining the supply of potable water to existing plant operations during removal of existing piping in Annex along west wall, including migrating plant water piping, service water, makeup reservoir fill line, and backwash water, and surface wash water piping and valves, and pressure regulator stations and backflow preventors.

3. Relocate chlorine solution and fluoride solution lines to two (2) new and one (1) existing Chlorine Contact Tanks.

b. Electrical Room 103

1. Coordinate sequence of construction for wellfield and work on the High Service Pump with the installation of 5 KV transformers, switchgear, MCCs, power panels and migration of existing equipment and controls to new electrical systems with the electrical contractor.

2. Remove and replace exterior doors, overhead sectional doors, and door to Generator Room 120 in accordance with door schedule on plans and the hardware specifications as shown on plans and as specified.

3. Furnish and install new structural support systems to be installed under the rooftop HVAC unit. Field verify locations and dimensions of columns and beams with HVAC submittal drawings prior to fabrication.

4. Install a new lintel beam and aluminum overhead coiling door 103D.

5. Cut new roof opening at location shown on the plans and install roof access hatch, aluminum ladder, and repair roofing and install flashing

c. Storage Room 104

1. Remove and replace existing windows, doors and hardware as shown on plans and as specified.

2. Furnish and install new structural support systems to be installed under the rooftop HVAC unit. Field verify locations and dimensions of columns and beams with HVAC submittal drawings prior to fabrication.

3. Cut new roof opening at location shown on the plans and install roof access hatch, aluminum ladder, and repair roofing and install flashing.

4. Coordinate locations of new electrical conduit with Electrical Contractor with roof openings, piping, and HVAC unit supports.

5. Remove and replace broken concrete floor slab using allowance for concrete repairs in areas designated by the Owner/Engineer.

d. Mechanical Room 106 / Battery Room 106:

1. Coordinate the temporary relocation of the existing battery charger and UPS equipment to a temporary weatherized enclosure along the south wall of the Mechanical Room. The Electrical Contractor shall extend conduit and wiring as needed to reconnect emergency power to operate the cone check valves at each of the 5 High Service Pumps.

2. Demolish the South and East walls of the Battery Room and remove the clay tile floor tile in the entire floor.

3. Coordinate support and/or relocation of existing process piping, plumbing, and electrical conduits with the demolition work.

4. Coordinate removal of HVAC unit, boiler, boiler chemical treatment equipment, and dehumidifier unit. Located in existing room.

5. Furnish and install new air scour blowers, piping valves, and controls at the locations shown on the drawings.

6. Cut new opening in floor for access into Clearwell No. 2 after electrical panels have been relocated.

7. Reroute chlorine solution piping and plant water piping that runs along the east wall of the Mechanical Room, to install new electrical panels at location shown on plans.

e. Janitor Closer Room 106 and Rest Room 107:

1. Construct temporary Rest Room 107 for use wile second floor Toilet and Locker Rooms are being remodeled. Construct new wall, and coordinate with Plumbing, HVAC, and electrical contractor to provide temporary fixtures and services. Complete final installation after second floor toilet facilities are complete and ready for use.

2. Complete work on Janitor Closet Room 106 and Rest Room 107 after new 2nd floor toilet facilities are operational.

f. Filter Operating Pipe Gallery Room 108

1. Pressure clean all concrete walls and floors in the pipe gallery.

2. Remove and replace the door at the bottom of the stairwell with a new aluminum door and hardware per Door Schedule and hardware specifications.

3. Pressure clean and paint the handrail, floor grating, and supports at elevation 968.75 that runs the length of the filter pipe gallery.

4. Modifications and new piping and valves are described under other sections, and work shall be performed during scheduled outages where required.

5. Coordinate the removal and rerouting of the existing roof drains that tie into the existing backwash drainpipe in the filter piping gallery. Roof drains shall be removed and reconnected to the new storm sewer by the Plumbing subcontractor.

g. Hallway 109

1. Coordinate removal of mop sink and installation of new water heaters with plumbing subcontractor.

2. Repaint existing doors and frames in hallway, and replace all hardware as shown on plans and hardware specifications.

3. Paint all surfaces as listed in Finish Schedule.

4. Coordinate installation of new ductwork and cutting new opening in HSPS South wall of HS Pump Room 102 with HVAC contractor.

5. Remove and replace broken/sunken concrete floor slab using allowance for concrete repairs in areas designated by the Owner/Engineer.

6. Coordinate installation of 5 KV electrical transformers and pullboxes with electrical contractor.

7. Clean structural glazed tile and grout per plans.

8. Paint all surfaces as listed in Finish Schedule

21. General Architectural

a. Clean all structural glazed tile and grout per plans.

b. Paint all surfaces as listed in Finish Schedule.

c. Clean existing floors, walls, and ceilings when demolition work is complete.

d. Aluminum doors and frames will remain where designated in the door schedule, but the door hardware will be removed and replace as noted on the door schedule. Interior steel doors will be painted, and new hardware provided. Where new aluminum, steel, or wood doors are listed in the door schedule, the existing doors and frames will be replaced, and new hardware installed as listed door schedule and the hardware specifications at the location shown on plans and as specified.

e. All windows will be replaced to match existing openings in accordance as shown on the architectural elevations or shown sections and details. Contractor shall verify all field dimensions of existing openings and coordinate with window manufacturer/installer.

22. Second Floor – Lobby Room 201, Control Room 202, Halls Room 206 and 211, Operator Break Room 203

a. Relocate SCADA system servers and workstation to temporary area Control Room 104 to be designated as Main Control Room before starting demolition work on second floor.

b. Cut in opening in north wall of control room from new LULA elevator to send floor and install elevator trim and hardware.

c. Remove windows, doors, wall panels, and ceiling as shown on the plans. Maintain east and west access to Second Floor Filter Gallery during construction using front and rear stairs to access second floor. Provide plastic curtains to contain dust from migration into filter cells that remain in use during construction.

d. Hand wash and clean the existing wall mosaic tiles, structural glazed tile walls, and grout. Protect the existing wall mosaic after cleaning until building construction is complete.

e. Install drilled shafts to support concrete grade beams and foundation for the new LULA elevator shalt.

f. Construct new CMU walls and insulated wall treatment for the new elevator shaft, including structural beams to form new addition to lobby to provide first floor access to LULA elevator. and floor Install new lintel beams and wall

g. Install new steel roof deck at the top of the elevator shaft.

h. Remove existing window system for existing front lobby entrance, including existing structural beams and columns that are no longer required. Furnish and install new columns and beams required to support new window system and roof deck as shown on the plans. Field verify all dimension for new window curtain wall system and coordinate size and location of new and existing structural components with curtain wall system supplier.

i. Furnish and install new walls exterior building insulation system, roof insulation, flashing, and single-ply roofing, nailers, and facia as shown on the plans.

j. Construct new wall partitions at locations shown on the drawings.

k. Provide new suspended ceiling in Rooms 200, 203, 202, and rear halls Rooms 206 and 211. Coordinate locations of HVAC registers and lighting with HVAC and electrical subcontractors.

l. Fill the existing terrazzo-lined fountain basins with light-weight concrete fill and install new terrazzo floor to match color and pattern of existing floor.

m. Provide new CMU wall and door to Elevator Machine Room 101A in Filter Gallery Annex. Furnish and install new LULA elevator in shaft, final elevator interior and door trim, hardware, and new hydraulic unit in elevator machine room. Coordinate ventilation and electrical work with elevator installation.

n. Remove and replace existing mandoor to first floor Filter.

o. Install structural support systems for HVAC equipment on roof.

p. Install new walls partitions, windows and doors in Control Room, Laboratory, and Operator Break Room on the second floor. Provide fire-rated wall panels and window systems for second floor partitions.

q. Remove existing concrete fill in Control Room, and provide new terrazzo floor in Control Room to match existing floor color and pattern.

r. Coordinate all structural and architectural work with electrical, HVAC, and plumbing subcontractors.

23. Second Floor - Laboratory

a. Remove windows, doors, wall panels, and ceiling as shown on the plans. Provide plastic curtains to contain dust to work area.

b. Remove base cabinet and install new corner cabinet and base and wall cabinets as shown on the plans.

c. Remove and reinstall wall cabinets at a lower elevation above the existing sink base cabinets.

d. Install structural support systems for HVAC equipment on roof.

e. Install new walls partitions, windows and doors in lab.

f. Patch existing terrazzo floor to match existing floor color and pattern.

g. Coordinate all structural and architectural work with electrical, HVAC, and plumbing subcontractors.

24. Second Floor – Restrooms and Locker Rooms – Rooms 209 and 209A

a. Coordinate all demolition and new structural and architectural work with electrical, HVAC, and plumbing subcontractors.

b. Patch or repair all areas after demolition is complete. All existing and new drywall, CMU walls, and door frames shall be painted in accordance with Finish Schedule per Section 09 90 00. Painting

c. Women's Locker Room 209

1. Demolish existing, toilet partitions, fixtures, doors, floor tile and ceiling systems as shown on plans. Coordinate work with M/E/P subcontractors.

2. Demolish existing wall into entrance and cut new opening through pipe chase into new Women's Locker Room 210 as shown on plans.

3. Furnish and install new ceramic floor, metal studs, gypsum board, close off existing door in Room 210 to hall, and install new suspended ceiling tile system.

4. Clean the existing structural glazed tile block, and chemically clean cement tile grout.

25. Second Floor – Filter Main Operating Gallery and Filter Rooms

a. The Contractor will remove the existing single pane glass that look into the filter rooms. New anodized aluminum frames with thermopane windows will be provided. The door windows currently are thermopane, and only door hardware will be replaced as list in door schedule.

b. The existing skylights in the old and new filter rooms are slightly different in size, but all will be removed. The steel bar screen on the existing filters will be removed. Ten (10) new skylights with dual plastic plexiglass will be provided. Safety cages will be provided with each skylight. Any corroded steel framing will be removed, and recoated. New curbs and flashing will be installed as needed to install the new skylights and repair the existing single ply roofing.

c. Remove and replace existing aluminum windows in exterior masonry wall with new units with aluminum frames and thermopane windows. Provide vented windows with screens as shown on the drawings.

d. Remove and replace existing insulated Kal-Wal windows with new units to match existing windows. Provide aluminum frames with insulated plastic Kal-Wal to match existing openings.

e. Cut existing precast concrete roof deck for new openings in roof. Furnish and install all structural steel framework frame opening, support roof loads, carry the weight of precast roof planks, and support HVAC equipment. Install beams at locations shown on drawing to carry loads to walls or foundations on first floor.

f. Provide new roof hatches, plumbing vents, and equipment curbs for ductwork, Cut and repair existing single ply membrane and insulation at new openings. Install any necessary insulation board to provide proper drainage around new units.

g. Provide architectural safety handrail systems with weighted bases to meet OSHA codes for areas where edge protection is needed to access and service equipment located along the edges of roofs.

h. Remove and replace existing glass block windows with new aluminum frames with insulated plastic Kal-Wal to match existing openings.

26. Water Treatment Plant – Building Exterior

a. Pressure jet clean the exterior of the masonry building and seal brick after new windows are installed.

b. Repair or replace any defective sealant, expansion joints, or exposed, corroded metal.

c. Sand blast the underside of the roof deck overhang to remove existing paint and expose concrete underside of precast roof planks.

d. Remove and reinstall existing stainless steel letters to be flush with masonry walls at the location shown on plans.

e. Install new plastic water drop logo insignia on front of new Elevator shaft as shown on plans.

f. Pressure wash concrete canopy at front of building. Install new roofing and flashing.

g. Install aluminum ladder at location shown on plans to access upper roof deck.

27. Site Work at Main Water Treatment Plant -

a. The Contractor shall furnish all labor, materials, tools, and equipment to construct site improvements for the water treatment plant. The proposed work may require short outages to make connections that shall be approved by the Owner in advance of the work, and shall be consolidated when possible other planned outages in the plant or wellfield to minimize downtime. The

scope of work for the proposed site improvements includes the following listed under this section.

b. Remove existing masonry wall and planter at the entrance to the plant at Dolphin Road. Construct new reinforced concrete footers and masonry walls as shown on plans. Provide new and install new flush mounted letters and water drop logo on wall. Provide power receptable using existing electrical feed. Install new solar power unit with photocell to power new LCD spotlight to illuminate sign.

c. Install silt fence to protect against soil erosion within work area. Regrade area along both sides of road to provide positive drainage away from road to existing drainage course or proposes swale. Install new perforated drain tile to collect groundwater and discharge into existing drainage course. Install new concrete headwall at storm drain at location shown on plans.

d. Remove existing gravel drive wearing surface and excavate to install new granular base course and asphalt pavement to extend from Dolphin Street to parking area of water plant. Regrade lawn areas adjacent to pavement to provide positive drainage away from edge of pavement to new drainage swale as shown on plans.

e. Construct new motor operated gate at end of drive and connect existing fentoce new gate.

f. Excavate for new roadway to extend from front entry gate around the the east side of the Filter Building to connect into the existing drive at the Fluoride Building behind the main plant. Remove existing fence and construct new drainage swale along east side of Filter Building.

g. Install new granular base and asphalt pavement for new drive around filter building. Install pipe bollards to protect building and stairs on east side of filter building.

h. Remove radio antennae mast at Maintenance Building.

i. Remove underground water storage tank in grassy area to the left of front lobby, and abandon existing lawn sprinkler piping that interferes with new construction.

j. Furnish and install new storm drain from Filter Building to connect to existing Junction Chamber at southeast corner of West Aerator building. Storm sewer will extend to intercept downspout on Filter Bldg., flow from pavement at Fluoride fill station, yard drains, and pavement area at to the west of Chlorine Building and Maintenance Garage. Provide manholes and frames with lids at locations shown on plans. Connect downspouts and area drains as shown on plans. Provide splashblocks were not connection is provided. Regrade new pavement and grassed areas to provide positive drainage for stormwater runoff.

k. Locate existing 16” DIP water fill line to Makeup Reservoir and provide excavation and backfill to install new 16” water blowoff line that connects to existing 16” Makeup Reservoir Backwash supply line at rear of plant. Furnish and install new precast concrete valve vault with isolation valves for automatic surge relief valve. Install new pressure transmitter on new 6” drain line

for makeup Reservoir, and connect to Backwash Effluent in pipe gallery.

l. Construct new 8” sanitary sewer between Mechanical Room and existing septic tank.

m. Cut existing pavement and excavate for installation of new 12” storm sewer to extend from two inlet basins at Chlorination Building to headwall in hillside west of septic tank field.

n. Install new valves on yard piping at the locations shown on the plans including influent and effluent lines of the East and West Aerators.

o. Install new magnetic flow meter and valve in existing concrete vault to west of the West Aerator Building.

p. Install new magnetic flow meter and valve in existing concrete vault to south of the East Aerator Building.

q. Connect floor drains of the East and West Aerators to the Backwash Effluent line to the Lagoons.

r. Excavate and remove existing 2,000-gallon buried steel fuel storage tank and buried fuel line. Provide approved tank remediation firm to provide oversight, coordination, testing, and closure report that meet OEPA guidelines. Backfill site when testing is complete and shown to be in full compliance with OEPA requirements.

s. Remove existing pavement in front parking area and place new granular base and wearing surface as locations shown on plans. Install new curb in circular grassy area in front of main lobby. Regrade areas adjacent to pavement properly drain and reseed.

t. Remove and reinstall fence deemed in good condition. Install new fence to replace damaged fence or provide additional fence and gates as shown on plans or needed.

u. Furnish and install new reinforced concrete base slab and footers for new 3,000-gallon concrete fuel storage tank with double wall containment system, controls, piping, pumps, and valves. Run underground piping to connect to existing fuel day tank in Generator Building. Provide power and control wiring for level controls and alarms and integrate signals with SCADA system. Provide pipe bollards and new fence to enclose above ground fuel tank.

v. Remove existing pavement on west side of High Service Pump Room and Generator Building. Provide fill to regrade area to slope drive up to the new overhead coiling door installed in the west wall of the High Service Pump Room. Excavate and regrade to provide new granular base and surface wearing coarse for new asphalt pavement connecting the front and rear parking areas of the plant.

w. Provide new 1-1/2”chlorine solution lines along the front and rear sides of the West Aerator Buidling use for pre-chlorination, including excavation, material, installation, and backfill, and testing.

x. Install new 2” NPW lines at the front and back of the West Aerator Building and reconnect to existing water lines. ,

including excavation, material, installation, and backfill, and testing.

y. Furnish and install new magnetic flow meter on 42" finished water header in valve vault located in front parking lot paved area.

28. Dechlorination Facility- A new building shall be constructed to hold four (4) 330-gallon totes and two chemical feed pumps for metering chemical into the main outfall sewer of the three lagoons upstream of the headwall at the stream where the samples are collected. Chemical tubing shall be used to carry the Sodium Bisulfite solution to the effluent Manhole No. 11 through a 3" carrier pipe and tubing to the point of application where it is injected into the effluent stream where the chlorine residual is reduced.

a. A new Dechlorination Building will be constructed under this contract as an early action time

b. Clear the site to brush, strip, and store topsoil. Remove the existing fence as shown on plans and install temporary fencing around construction area.

c. Excavate for the new foundations and construct reinforced concrete footers including formwork, rebars, wire ties, water stops, expansion joints, and construction joints as show on plans. Furnish and install water lines from curb stop into building (City to provide pipe tap and extend new water line to a curb stop), electrical conduit and process piping through wall sleeves of footer and stub up through floor slab. Install insulation board along footers and backfill excavation.

d. Compact subgrade to form floor slab. Install plastic moisture barrier and insulation board under floor slab. Construct reinforced concrete footers, floor slab, and curbs including rebar, control and expansion joints. Coat the floor in accordance with 09 90 00 – Painting with chemically resistant coating suitable for intended use.

e. Provide all labor, materials, equipment, and tools to erect the new 384 square foot insulated metal building including structural columns, purlins, girts, steel framing. Pre-finished metal siding and standing seam roof, ridge beam, vent, insulation batts, interior metal liner plates for walls and ceiling, insulated metal overhead door, mandoor, wall louvers and vent openings.

f. Install chemical pumps and piping as shown on plans. Excavate and install new 3" diameter carrier pipe from building to MH #11. Pull tubing through carrier pipe and install discharge piping in manhole. Connect tubing to rigid PVC piping and valves fed from two wall-mounted chemical pumps. Install and provide suction tubing from pumps to totes with sodium bisulfite chemical. The City will provide four chemical totes with 250 gallons of chemical in each tote delivered to the jobsite. Each tote is equipped with a 2" ball valve facing the front of the tank within the molded base of the tank for connection to chemical

suction line to pump. Test all piping for leaks and correct any defects.

g. Excavate for new drain manhole adjacent to building, and backfill excavation when manhole is installed. Furnish and install new precast concrete drain manhole including flat top cover with embedded aluminum single leaf floor door and manhole steps. Install watertight seals for drainpipe that passes through the wall. Coat the interior of the drain manhole and floor of building with chemically resistant epoxy coating suitable for intended use. Perform water leak test on the drain manhole and piping in accordance with the specifications and repair any defective or leaking joints.

h. The City will provide the pipe tap and 1" service up to terminate at a curb stop and box. The Contractor shall extend the water line into the building; and furnish and install cold and hot water lines, pipe insulation, valves, and accessories as shown on plans. Install eyewash including backflow preventer, hot water tank, eyewash, piping, valves, and accessories.

i. Furnish and install new electric unit heater and thermostat. Cut openings in walls of metal building to install louvers and exhaust fans and provide labor and materials to mount ventilation equipment.

j. Furnish and install new electrical wiring to feed new Dechlorination Building from a new circuit breaker installed in the existing power panel in the Aerator Building. Provide all excavation and backfill to install underground electrical cables and ductbank. Install electrical panels and transformers in Dechlorination Building. Furnish and install all conduit and wiring to install new chemical pumps, unit heater, exhaust fan, interior and exterior lighting at the locations shown on the plans. Provide electrical boxes, switches, devices, conduit, wiring, hangers and supports to install new lighting and receptacles at locations shown on plans.

k. Remove all construction debris, trailers, and equipment from the construction site. Restore the site to proposed grade elevations, and install concrete drive apron, sidewalk, and gravel drives. Install new fence as shown on plans. Fine grade, topsoil and seed all disturbed areas.

l. When work is completed, the Contractor shall remove all SWPPP materials and grade all disturbed areas of new work, fix or replace any damaged asphalt pavement, to establish proper elevations at the building, roadway, and surrounding areas that drain to the existing 30" storm sewer, electrical ductbanks, material laydown areas, construction trailer parking areas, and any areas disturbed during construction of the Dechlorination Building. After final grade is established, spread topsoil and seed all disturbed areas. Dispose off-site, all waste concrete and asphalt material removed from demolished roadways.

E. HVAC work. All tasks listed below are for the convenience of the Contractor(s) and shall include all necessary general, site, electrical, plumbing, and HVAC work to the point of final acceptance by the Owner.

1. Wellfield Mechanical Work.
2. Aerators Mechanical Work.
3. High Service Pump Room Mechanical Work.
4. Fluoride Room Mechanical Work.
5. Chlorine Building Mechanical Work.
6. Maintenance Garage Mechanical Work.
7. Second Floor Filter Galleries, Laboratory, Control Room, and Operator Area Mechanical Work.
8. First Floor Mechanical Work.
9. Dehumidification Unit and Ductwork for Piping Gallery.

F. Plumbing work. All tasks listed below are for the convenience of the Contractor and shall include all necessary general, site, electrical, plumbing, and HVAC work to the point of final acceptance by the Owner.

1. Aerators Plumbing Work.
2. Fluoride Room Plumbing Work.
3. Maintenance Garage Plumbing Work.
4. Above Ground Fuel Tank Plumbing Work.
5. Second Floor Restroom and Locker Rooms Plumbing Work.
6. First Floor Plumbing Work including a new Restroom.

G. Electrical and I&C work. All tasks listed below are for the convenience of the Contractor and shall include all necessary general, site, electrical, plumbing, and HVAC work to the point of final acceptance by the Owner.

1. Submit a detailed work plan and schedule and reviewed prior to start of construction.
2. Contractor shall perform work while maintaining operation of the wellfield pumps during construction. The suggested sequence for Phased Construction of Wellfield Improvements is below

    a. Temporary power to Wellfield Pumps #1 through #10 may be required until new 5 KV underground power distribution equipment is operational. Until then, wells shall be powered from existing overhead 5 KV line using existing transformers, motor control panel, and SCADA panel for pump controls.

    b. Phase 2 work during renovation of second floor of the plant will require relocation of SCADA Control Room to temporary room constructed on first floor. Network communications equipment, servers, workstations, and printers will be relocated prior to demolition of existing SCADA control room.

3. Electrical work includes electric power distribution, MCCs, VFDs, Panels, Local PLC panels, power, control, lighting, instrumentation, controls, SCADA hardware and software, CCTV security systems, telecommunication systems. In general, the following will need to be sequenced by the Contractor to keep the plant operational. Temporary power and relocation of the SCADA Control Room are required to be coordinated and paid for by the Contractor as part of the Contract.

   a. Electrical Service – 4160V Distribution System Upgrade.

   b. Electrical Service – 460V Distribution System Upgrade and Pump Motors.

   c. Electrical Services for Main Plant lighting, receptacle, conduit, and wiring.

   d. Electrical Services for HVAC.

   e. Electrical Services for new and existing equipment.

   f. Electrical Service – Wellfield Metering and Instrumentation Upgrades.

   g. Electrical Service – WTP Metering and Instrumentation Upgrades.

   h. SCADA System Hardware – Sugar Creek WTP.

   i. SCADA System Software – Sugar Creek WTP.

   j. SCADA System Upgrade – Wellfield.

   k. CCTV security systems.

   l. Electrical Services for Dechlorination Facility.

SECTION 01 31 19.01

PROJECT MEETINGS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General**. Provide the labor and materials necessary to attend and participate in project meetings in accordance with the plans and specifications.

B. **Conferences and Meetings**. This section specifies administrative and procedural requirements for project meetings including but not limited to:

1. Preconstruction conference.

2. Progress meetings facilitated by the Engineer.

1.3 QUALITY ASSURANCE (Not used)

1.4 SUBMITTALS (Not used)

1.5 JOB CONDITIONS (Not used)

1.6 DELIVERY, STORAGE, AND HANDLING (Not used)

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS (Not applicable)

PART 3 EXECUTION

3.1 PRECONSTRUCTION CONFERENCE

A. **Schedule**. The Engineer/Architect will schedule and conduct a preconstruction conference and organizational meeting at the project site or other convenient location after execution of the agreement and prior to commencement of construction activities. No work shall commence prior to the meeting.

B. **Attendees**. The Owner, Engineer/Architect and their consultants, the Contractor and their superintendents, major subcontractors, manufacturers, suppliers, and other concerned parties shall each be represented at the conference by persons familiar with and authorized to conclude matters relating to the work.

C. **Agenda**. Discuss items of significance that could affect progress including such topics as:

1. Tentative construction schedule.

2. Critical work sequencing.

3. Designation of responsible personnel.

4. Procedures for processing field decisions and Change Orders.

5. Procedures for processing Applications for Payment.

6. Distribution of Contract Documents.

7. Submittal of shop drawings, product data, and samples.
8. Preparation of record documents.
9. Use of the premises.
10. Office, work, and storage areas.
11. Equipment deliveries and priorities.
12. Site safety.
13. Security.
14. Housekeeping.
15. Working hours.
16. Others as appropriate.

D. **Minutes**. Within 7 days of the preconstruction conference, the Engineer/Architect will distribute minutes to all attendees.

3.2 PROGRESS MEETINGS

A. **Schedule**. The Engineer will conduct progress meetings at the project site every two weeks.

B. **Attendees**. In addition to representatives of the Owner, Engineer, and Contractor, each subcontractor, supplier, or other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings by persons familiar with the project and authorized to conclude matters relating to progress.

C. **Agenda**. Review and correct or approve minutes of the previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to the current status of the project.

1. Contractor's Construction Schedule.
    a. Review progress since the last meeting.
    b. Determine where each activity is in relation to the Contractor's Construction Schedule, whether on time or ahead of or behind schedule.
    c. Determine how construction behind schedule will be expedited.
    d. Secure commitments from parties involved to do so.
    e. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the contract time.
2. Review the present and future needs of each entity present, including such items as:
    a. Interface requirements.
    b. Completion times.
    c. Preferred sequences.
    d. Delivery schedule.

e. Off-site fabrication problems.

f. Access issues.

g. Site utilization.

h. Temporary facilities and services.

i. Hours of work.

j. Hazards and risks.

k. Housekeeping.

l. Quality and work standards.

m. Change Orders.

n. Documentation of information for payment requests.

D. **Schedule Updating**. The General Construction Contractor shall revise the construction schedule after each progress meeting where revisions to the schedule have been made or recognized and submit the revised schedule within 3 days of each progress meeting for distribution with the minutes.

E. **Minutes**. Within 7 days of the progress meeting, the Engineer will distribute minutes on a SharePoint site.

END OF SECTION

SECTION 01 32 16

CPM SCHEDULES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. The Contractor shall perform the work necessary to provide the Critical Path Method (CPM) schedules for all work in accordance with the drawings and as specified herein.

B. **Requirements.** This section specifies administrative and procedural requirements for the CPM of scheduling and reporting progress of the work.

1. Refer to General Conditions and the Agreement for definitions and specific dates of Contract Time.

1.3 QUALITY ASSURANCE

A. **Consultant.** The Contractor shall retain a Consultant to provide CPM scheduling services, including planning, evaluating, and reporting.

1. The Consultant shall be a recognized specialist, expert in the CPM of scheduling and reporting, and acceptable to the Engineer/Architect.

2. The Consultant shall have computer facilities available with sufficient capacity to process detailed network diagrams within 48 hours of a request.

B. **In-House Option.** The requirement to retain a Consultant may be waived if the Contractor can demonstrate to the Engineer/Architect's satisfaction that:

1. The Contractor has the computer equipment required to produce CPM network diagrams.

2. The Contractor employs skilled personnel who are experienced in CPM scheduling and reporting techniques.

C. **Program.** Use a computer software program for network analysis that has been developed specifically to manage CPM construction schedules and is acceptable to the Engineer/Architect.

D. **Standards.** Comply with procedures contained in "The Use of CPM in Construction - A Manual for General Contractors and the Construction Industry," published by The Associated General Contractors of America.

1.4 SUBMITTALS

A. **Preliminary Network Diagram.** Within 15 calendar days after the date of the Notice to Proceed, submit a preliminary network diagram outlining activities for the first 90 days of construction. Include a skeleton diagram for the remainder of the work with the preliminary diagram.

1. Include each significant construction activity. Coordinate each activity in the network with other activities. Schedule each construction activity in proper sequence.

2. Indicate completion of the work in advance of the date established for Substantial Completion.

B. **Schedule of Values.** With the submittal of the preliminary network diagram, include a schedule of values and a preliminary monthly cash requirement prediction based on all indicated activities.

C. **Tabulation of Submittals.** With the submittal of the preliminary network diagram, include a tabulation by expired date of submittals required during the construction. List those required to maintain orderly progress of the work, and those required early because of long lead time for manufacture or fabrication. Contractor shall allow 2 weeks' time for Engineer/Architect's first review and 2 weeks' time for Engineer/Architect's second review.

D. **Distribution.** Distribute the preliminary network diagram to all parties that need to know about construction activities that are scheduled during the first 3 months, including the Engineer/Architect and Owner.

1.5 JOB CONDITIONS (Not Used)

1.6 DELIVERY, STORAGE, AND HANDLING (Not Used)

1.7 SPECIAL WARRANTY (Not Used)

1.8 DEFINITIONS

A. **Critical Path Method**. CPM is a construction scheduling technique using network analysis diagrams to plan and organize construction activities in an orderly manner along the critical path.

B. **Network.** A network diagram is a graphic representation showing the relationship of activities and events in the correct sequences required to complete the project within the Contract Time.

C. **Activity.** An activity is any single identifiable step in the project. It depends upon and cannot begin until completion of all preceding activities.

1. Critical activities are activities with no (zero) float time and are, therefore, operations that determine the critical path and control project completion.

D. **Event.** An event is the starting or ending point of an activity and occurs only when all preceding activities have been completed.

E. **Float Time**. The amount of time available for a given activity in excess of its estimated duration. It represents the amount of leeway available in scheduling an activity. All float time belongs to the Owner.

1. Free float is the amount of time an activity can be delayed without adversely affecting the early start of the following activity.

2. Total float is the amount of time an activity can be delayed without adversely affecting overall time for project completion.

PART 2 PRODUCTS

2.1 CPM SCHEDULE

A. **General.** Prepare a CPM schedule in accordance with Part 3 of this section. The CPM schedule shall include a complete listing of all abbreviations and symbols utilized within the CPM schedule.

PART 3 EXECUTION

3.1 CPM SCHEDULE

A. **General.** Prepare a CPM Construction Schedule using the network analysis diagram system known as the Critical Path Method (CPM) following procedures outlined in "The Use of CPM in Construction - A Manual for General Contractors and the Construction Industry," as published by The Associated General Contractors of America.

1. Follow the steps necessary to complete development of the network diagram in sufficient time so that the CPM schedule can be submitted and accepted for use no later than 60 calendar days after the date of the Notice to Proceed.

2. Conduct educational workshops to train and inform key project personnel, including subcontractors' personnel, in proper methods of providing data and using CPM schedule information.

3. Establish procedures for monitoring and updating the CPM schedule and for reporting progress; coordinate procedures with progress meeting and payment request dates. Use "one working day" as the unit of time.

B. **CPM Schedule Preparation.** Prepare a listing of all activities involved in the project; include every activity having a bearing on the time required to complete the work. Provide the best data available for generation of the network diagram and CPM schedule.

1. Indicate the estimated time duration, sequence requirements, and relationship of each activity in relation to other activities.

2. Indicate estimated times for the following activities to be performed:

a. Preparation and processing of submittals.

b. Temporary construction services and facilities.

c. Purchase of materials.

d. Delivery.

e. Fabrication.

f. Installation.

g. Start-ups.

h. Operational demonstration.

i. Training.

j. Progress meetings.

k. Preconstruction conference.

C. **Processing.** Enter prepared data on the processing system. Process data to produce output data or a computer drawn time scaled network based on calendar days. Draw network by hand if the equipment is unable to do so. Revise data, reorganize activity sequences, and reproduce as often as necessary to produce the best possible CPM construction schedule within the limitations of Contract Time.

D. **Format.** Display the full network on a single sheet of stable transparency, or other reproducible media, of sufficient width to show data clearly for the entire construction period.

1. Mark the critical path. Locate the critical path near the center of the network; locate paths with the most float near the edges.
2. Subnetworks on separate sheets are permissible for activities clearly off the critical path.

E. **Initial Issue.** Prepare the initial issue of the CPM Schedule network diagram from a listing of straight "early start total float" sort. Identify critical activities. Prepare tabulated reports to show the following:

1. Contractor or subcontractor and work or activity.
2. Principal events of that activity.
3. Early and late start dates.
4. Early and late finish dates.
5. Activity duration in working days.
6. Total float or slack.
7. Average size of work force.
8. Dollar value of activity (coordinated with Schedule of Values).
9. Value Summaries. Prepare two cumulative value listings, sorted by finish dates.
    a. In first listing, tabulate the following:
        1. Activity number.
        2. Early finish date.
        3. Dollar value.
        4. Cumulative dollar value.
    b. In the second listing, tabulate the following:
        1. Activity number.
        2. Late finish date.
        3. Dollar value.
        4. Cumulative value.
    c. In subsequent issues of both listings, substitute actual finish dates for activities completed as of date of listing.
    d. Prepare listing for ease of comparison with payment requests; coordinate timing with Progress Meetings.

e. In both value summary listings, tabulate "actual percent complete" and "cumulative value completed" with total at bottom.

f. Submit value summary printouts following each regularly scheduled progress meeting.

F. **Submittal and Distribution.** Submit the initial issue of the tabulations and network for acceptance. When authorized, distribute copies to the Engineer/Architect (three copies), Owner, principal subcontractors and suppliers or fabricators, and others identified by the Contractor with a need-to-know schedule responsibility.

1. Post copies in the project meeting rooms and temporary field office.

2. When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the work and are no longer involved in performance of construction activities.

3. Submit copies of each computer produced report (listing) in duplicate to Engineer/Architect.

G. **Schedule Updating.** Revise the schedule immediately after each meeting or other activity where revisions have been recognized or made. Issue the updated schedule concurrently with the report of each project meeting.

END OF SECTION

SECTION 01 32 33

CONSTRUCTION PHOTOGRAPHS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. Provide the labor, tools, equipment, and materials necessary to furnish the construction photographs in accordance with the plans and specifications.

1.3 QUALITY ASSURANCE

A. **Qualified Photographer**. Engage a commercial photographer to take photographs during construction. Photographer shall be a firm or an individual of established reputation who has been regularly engaged as a professional photographer for not less than 3 years.

B. **Associated Services.** Cooperate with the photographer's work. Provide reasonable auxiliary services as requested, including access and use of temporary facilities including temporary lighting.

1.4 SUBMITTALS.

A. Submit all submittals in accordance with the Division 1 Submittal Requirements and the requirements within this specification section.

B. Submittal Package No. 1 – Monthly Photos

1. For the preconstruction photos and monthly photos, submit three (3) USB 3.0 Flash Drives containing the photographs taken for that month. Electronic photographs files shall be in JPEG (.jpg) format.

2. At the completion of the project, submit all photography taken of the project on three (3) separate USB 3.0 Flash Drives of sufficient size to contain the complete electronic submittal.

1.5 JOB CONDITIONS (Not used)

1.6 DELIVERY, STORAGE, AND HANDLING (Not used)

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS

2.1 IDENTIFICATION.

A. Label each photograph on the front in the bottom margin with project name and date the photograph was taken with the following information.

1. Name of the project.

2. Name and address of the photographer.

3. Name of the Engineer/Architect.

4. Name of the Contractor.

5. Date the photograph was taken.

6. Description of vantage point, in terms of location, direction (by compass point), and elevation or story of construction.

PART 3 EXECUTION

3.1 EXECUTION

A. Preconstruction Photos: A minimum of two-hundred (200) preconstruction photos shall be taken of the jobsite prior to construction activities.

B. Monthly Progress Photos: A minimum of fifty (50) photos shall be taken each month for the duration of the project. Photos shall be taken to document the construction progress for the project duration and identify the location of the work as specified herein.

3.2 ADDITIONAL PHOTOGRAPHS.

A. From time to time the Engineer/Architect may issue requests for additional photographs, in addition to periodic photographs specified. Additional photographs will be paid for by Change Order and are not included in the Contract Sum or an Allowance.

1. **The Engineer/Architect** will give the photographer 3 days' notice, where feasible.

2. **In emergency situations**, the photographer shall take additional photographs within 24 hours of the Engineer/Architect's request.

3. **Circumstances that could require** additional photographs include, but are not limited to:

a. Substantial completion of a major phase or component of work.

b. Owner's request for special publicity photographs.

c. Special events planned at project site.

d. Immediate follow-up when on-site events result in construction damage or losses.

e. Photographs to be taken at fabrication locations away from project site; these are not subject to unit prices or unit cost allowances.

f. Extra record photographs at time of final acceptance

END OF SECTION

SECTION 01 32 34

PRECONSTRUCTION AUDIOVISUAL RECORDING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. Provide the labor, tools, equipment, and materials necessary to furnish the audiovisual recording of the entire project site on an external drive.

1.3 QUALITY ASSURANCE

A. In addition to the requirements listed herein, the Contractor shall also comply to the requirements for preconstruction video as detailed in Supplemental Specification 01-00. for additional requirements for the Preconstruction Video.

1.4 SUBMITTALS

A. Submit all submittals in accordance with the Division 1 Submittal Requirements and the requirements within this specification section.

B. Submittal Package No. 1 – Sample Video

1. At the start of the recording, submit a video of a portion of this project on an external drive. No taping shall occur before the sample video is approved.

C. Submittal Package No. 2 – Video Files and Logs

1. Video Log. Provide a log that accurately catalogs the contents of each video in an acceptable manner. Information in the video logs shall include the following:

a. Street name, easement, or address.

b. Sheet number or numbers relative to the line entry of a particular area of coverage.

c. Real-time code indexing for each segment of the project. Real-time code indexing will indicate hours, minutes, and seconds to cross reference with playback equipment to locate specific points of interest on the project.

d. Direction of travel for each specific segment.

e. Viewing side for each specific segment.

f. Starting point for each specific segment.

g. Ending point for each specific segment.

h. Project information (project title, Owner, date, location).

2. Video Files. Label all video files and external drives with project information in an acceptable manner. Cross reference the information on

the labels with the video logs. Information on labels shall include the following:

a. Project title.

b. Location of project.

c. Month and year of coverage.

d. External drives must be marked as sets (Engineer set, Owner set, Contractor set).

e. Quick reference list of the contents of the video(s).

1.5 JOB CONDITIONS

A. **Recording**. Record each area and submit video before mobilization begins. All recording shall be witnessed unless waived in writing.

B. **Visual Inspection**. Prior to recording, investigate all areas visually with notation made of features not readily visible by recording methods. This would include, but not be limited to, culverts (size, type, condition) and manholes that may be partially buried. Record all measurements made during the inspection.

1.6 DELIVERY, STORAGE, AND HANDLING (Not used)

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS

2.1 EQUIPMENT

A. **Camera/Camcorder**. The camera/camcorder shall have the following features:

1. Color.

2. High-resolution, digital recording.

3. 1/4-inch, 1/3-inch, or 1/2-inch charged coupled device imaging systems.

4. Optical Stabilization. No electronic stabilization.

5. 20X minimum optical magnification.

6. NTSC 525 lines resolution/60 fields/30 frames per second.

7. Minimum illumination capabilities of at least 3 lux.

B. **Wheeled Vehicles**. Clearly mark vehicles used for recording purposes with company's name and telephone number. Vehicles shall incorporate signs, flaggers, and lights as needed for safety purposes.

PART 3 EXECUTION

3.1 VIDEO INFORMATION

A. **Audio**. Begin each video with an audio tract that includes the current date, project name, municipality, and general location, i.e., name of the street or property owner; location of cross county line; viewing side; and direction of progress. Note the engineering stationing (where required) on the audio track. Identify houses and buildings audibly by an address when available.

B. **Date and Time**. Display the month, day, year, hours, minutes, seconds, and location on all video recording.

C. **Stationing/Positioning**. Stationing must be continuous and accurate and reflect the stationing within the field of view. The stationing must coincide with stationing on project plans and utilize standard engineering notation (10+00). Global positioning system (GPS) may be used with or in place of engineering stationing. Differential GPSs are to be used where available, with updates one per second at 5-meter or less spherical accuracy. Standard GPS accuracy is as dictated by United Sates Department of Defense mandate. GPS display will be at 1-meter-longitude and 1-meter-latitude increments (4032 N 639) (08216 W 401).

3.2 COVERAGE

A. **General**. Recording shall include, but not be limited to:

1. Existing pavement.
2. Driveways.
3. Sidewalks.
4. Curbs.
5. Ditches (drainage patterns are of particular concern).
6. Streets (including condition of paving for full width).
7. Landscaping.
8. Shrubs.
9. Trees.
10. Culverts.
11. Catch basins.
12. Headwalls.
13. Fences.
14. Visible utilities.
15. All buildings (interior and exterior) located within the zone of influence of construction. Of particular concern are existing faults, fractures, defects, or other imperfections.

B. **Streets**. Record streets and street areas for the full width of the zone of influence of construction, including both sides of the street. The term "street" shall be understood to mean street, highway, avenue, boulevard, road, alley, lane, driveway, parking lot, etc., and all adjacent areas within the possible zone of influence of construction.

C. **Easements**. Record easements for the full width of the permanent and temporary easements and all other adjacent areas lying within the zone of influence of construction. Easement means all areas not in streets that require record coverage. Include in this coverage any areas that are intended to be used for construction access, storage, or waste disposal.

3.3 RECORDING CONDITIONS

A. **Visibility**. Record during times of good visibility. Do not record outside during the following conditions unless otherwise authorized:

1. Darkness.

2. During periods of visible precipitation.

3. When the ground area is covered with snow, leaves, or debris.

B. **Lighting**. In order to produce the proper detail and perspective, use adequate auxiliary lighting to fill in shadow areas, utility poles, road signs, and other such objects, as well as other conditions requiring artificial illumination.

C. **Rate of Speed**. Do not exceed an average rate of speed of 50 feet per minute during recording. Panning rates and zoom-in/zoom-out rates shall not exceed 10 percent over a 3-second interval.

D. **Distance**. When conventional wheeled vehicles are used for recording, the minimum distance from the camera lens to the ground shall be 8 feet.

END OF SECTION

SECTION 01 33 00

SUBMITTALS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Provide all labor and materials necessary to furnish the following submittals as required by each individual section of the specifications.

1. Shop drawings.
2. Product data.
3. Samples/mock-ups.
4. Operation and Maintenance (O&M) manuals.
5. Personnel qualifications.
6. Training documents.
7. Source quality control documents.
8. Material field test reports.
9. Start-up documents.
10. Operational demonstration documents.
11. Product/material certifications.
12. Special warranties.
13. Project record documents.
14. Others (as specified in the individual technical specifications).

1.3 QUALITY ASSURANCE (Not used)

1.4 SUBMITTALS

A. **General**. Submit all submittals in accordance with the requirements within this specification section.

B. Submittal Package No. 1 – Submittal Schedule

1. Submit a submittal schedule of Submittals.

a. This schedule shall include all submittals that are required to be used on the project, and the date of submittal to the Engineer/Architect.

b. Include in schedule a milestone for notification of the Engineer/Architect prior to field-verifying operation and maintenance manuals.

c. Submittals requiring multiple submissions shall include multiple listings on the documents.

d. The Engineer/Architect will review the list and make any necessary comments.

e. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals and related activities that require sequential activity.

f. Coordinate transmittal of different types of submittals for related elements of the work so processing will not be delayed by the need to review submittals concurrently.

g. Allow time in schedule for all submittals to go through the General Contractor for coordination purposes before they are forwarded to the Engineer/Architect.

h. Processing. Allow sufficient review time so that installation will not be delayed as a result of the time required to process submittals, including time for resubmittals, depending upon the complexity of the submittal.

1. Allow 4 weeks for processing each submittal.

2. No extension of the Contract Time will be authorized because of failure to transmit submittals to the Engineer/Architect sufficiently in advance of the work to permit processing.

1.5 JOB CONDITIONS (Not used)

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Store and protect large samples and mock-ups** until the Project is completed, then properly dispose of off-site.

B. **Maintain and make available** to the Engineer/Architect, at the job site, a complete file of all approved submittals as part of the project record documents.

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS

2.1 SUBMITTAL TRANSMITTAL

A. **Transmit each submittal** from the Contractor to Engineer/Architect using a transmittal form provided by the Engineer. The submittal shall be uploaded to a designated folder on a SharePoint site provided by the Engineer. The transmittal form shall include the following.

1. Relevant information and requests for data.

2. Deviations from Contract Document requirements, including minor variations and limitations.

3. The specification section number.

4. Other pertinent information to identify the items being submitted.

2.2 GENERAL REQUIREMENTS FOR SUBMITTALS

A. Originals

1. The Contractor, the subcontractors, or suppliers shall generate submittal information.

2. No reproductions of partial (or complete) versions of the plans, sections, details, schematics, specification pages, etc., from the Contract Documents are acceptable.

B. **Complete Submittals**. Clearly describe the equipment to be furnished with complete and detailed submittal information.

C. **Identification**. Properly identify all submittal-related documents and arrange in a logical order to best present the information. Provide an index that includes the following on every submittal.

1. Manufacturer's name and address.

2. Submittal date and revision number, if applicable.

3. Contract identification and specification section.

4. Drawing scale and orientation.

5. Submittal page number or sequence of pages.

6. Drawing number.

D. Verification

1. Where existing conditions or structures exist, field-verify dimensions, elevations, clearances, etc.

2. The submittal shall not be accepted for review until such verified data is clearly indicated.

E. Legends

1. All submittal diagrams, drawings, schematics, etc., shall include complete keys, legends or similar explanation as to the graphics, and symbols and abbreviations used.

2. In general, all graphics, symbols, abbreviations, and equipment nomenclature used for a submittal shall duplicate those used on the Contract Drawings.

F. **Approvals**. Provide the following on each submittal.

1. A space approximately 4" x 5" on to record the Contractor's review and approval markings and the action taken. These shall include the Contractor's:

a. Approval stamp.

b. Signature.

c. Date of approval.

d. Deviations from the Contract Documents.

2. An equal area beside the Contractor's review and approval markings for the Engineer/Architect's review stamp.

G. **One Section per Submittal**. Each submittal shall pertain to only one specification section.

H. All submittal information shall be:

1. Neatly arranged.
2. Legible.
3. Not distorted or faded.
4. English.
5. In United States standard units.
6. Typed.

I. **All letters, certifications, and similar documents** shall be submitted in their entirety. Single pages of multiple-page letters, or letters with deleted passages will not be acceptable for submittal purposes.

J. **Generic letters, test reports**, material certifications, or similar documents which do not specifically address the requirements of the Contract Documents for the actual materials being furnished will not be acceptable.

K. **Mark all submittals** to clearly indicate the full extent of the equipment to be furnished.

1. Indicate all options to be provided, materials of construction, dimensions, and other information pertinent to the submittal.
2. Options, materials, and dimensions which do not pertain to the materials or equipment to be furnished shall be neatly marked out so as to avoid confusion and doubt during review, delivery, and installation.

L. Resubmittals must clearly identify all changes and revisions.

1. The drawing shall be marked "revised" with the revision date indicated.
2. Each resubmittal shall reference the previous submittal by the Engineer/Architect's log number.

M. Definition of “By Others"

1. All submittals are reviewed as if prepared by the General Contractor.
2. The term "By Others" is appropriate to indicate supply by the Owner.
3. Where a subcontractor or supplier uses the term "By Others" to indicate work by the General Contractor or another subcontractor or supplier, the General Contractor shall change "By Others" to indicate the actual source.

N. **Deviations from Contract**. Highlight, encircle, or otherwise indicate deviations from the Contract Documents in all submittals.

2.3 SPECIFIC SUBMITTAL-TYPE REQUIREMENTS

A. **Shop Drawings**. The following paragraphs detail the general requirements for shop drawings and specific requirements for specific types of shop drawings.

1. General Requirements

a. A shop drawing is a detailed representation of the work to be performed to demonstrate compliance with the Contract Drawings including:

1. Material and equipment layout.
2. Fabrication drawings.
3. System and electrical schematic diagrams.
4. Equipment and material schedules.
5. Installation details.

b. Submit newly prepared information, drawn to accurate scale.

c. Standard information prepared without specific reference to the project is not considered shop drawings.

2. Equipment/Material Layout Drawings.

a. Include:

1. Plot plans.
2. Plant site maps.
3. Equipment location plans.
4. Equipment and material layout plans and sectional views.
5. Connection detail drawings.
6. Similar drawings showing the incorporation of materials and equipment into the work.
7. The physical layout to scale, including elevations, plant grid coordinates, dimensions to new/existing structures, and other items of the work.
8. Dimensions.
9. Labeling.
10. Notes.
11. Legends.
12. Bills of materials.
13. All other information required to graphically describe the proposed work.

3. System Schematics and Diagrams.

a. These include schematic representations of systems and equipment in a manner which shows the relative relationship of the components within the system and interconnections or interfaces with other systems or equipment.

b. These systems shall be shown on the most appropriate type and format of schematic diagram.

c. Diagrams shall identify all equipment and other components.

d. Indications shall be provided of system features such as flow directions, flow ranges, component sizes, capacities, settings, interlocks, component identification, and component or subsystem function.

e. Various types of systems for which schematic diagrams shall be required include:

1. Process Piping Systems.
2. Plumbing and Utility Piping Systems.
3. Heating and Air Conditioning Systems.
4. Ventilating Systems.
5. Pneumatic Systems.
6. Hydraulic Systems.
7. Conveying Systems.
8. Process and Chemical Feed Equipment Systems.
9. Electrical Distribution Systems.
10. Control Systems.
11. Alarm Systems.
12. Communication Systems.

f. In some instances, it may be appropriate to combine multiple types of system schematics onto a single drawing. In general, this practice would be appropriate for simple, self-contained systems and the adjacent subsystems and when required to clearly show system functionality.

B. **Product Data**. Product data is submittal information that fully describes the item to be incorporated into the work. Product data shall include when applicable:

1. Manufacturer name.
2. Catalog cut-sheets.
3. General descriptive bulletins/brochures/specifications.
4. Materials of construction data and parts list.
5. Finish/treatment data.
6. Equipment/material weight/loading data.
7. Power/utility requirements.
8. Engineering design data, calculations, and system analyses.
9. Digital system documentation.
10. Any deviations from the contract documents.
11. Material Certifications. These include signed certificates or declarations by the Contractor, supplier, manufacturer, testing laboratory, or recognized certification agency which document that materials and

product composition, or construction comply with specified requirements and stated reference standards.

12. Manufacturer's printed recommendations.

13. Compliance with recognized trade association and testing agency standards.

14. Application of testing agency labels and seals.

15. Notation of dimensions verified by field measurement.

16. Notation of coordination requirements.

17. Specific response to detailed specification requirements.

18. Maximum operating pressure and temperature ratings.

19. Other information specifically called for under the sections of Divisions 1 through 46 shall be included in this category.

C. Samples or Mock-Ups

1. Samples. Samples are portions of, or complete units of the precise article proposed to be furnished.

2. Color and Pattern Charts. When the precise color and pattern are not specifically prescribed in the Contract Documents, or when the Contract Documents require that a product be furnished in a color or pattern directed by the Owner or Owner's Representative, submit accurate color charts and pattern charts of the available ranges for review and selection.

3. Mock-Ups. Build mock-ups with full-size products to match the scale of the proposed construction to demonstrate compliance with specified requirements and construction standards.

D. O&M Manuals

1. General.

a. A complete Electronic Submittal shall be provided and shall be bookmarked by section.

b. Bind each copy in an appropriately sized three-ring notebook a cover designating the name of equipment, maintenance, and specification section number.

c. Bind operation and maintenance instructions for each specification section in a separate notebook.

2. Required Information. Include the following information to provide a description of the incorporation of the equipment into the work and with functional data to evaluate equipment operation.

a. Operation Sequence Descriptions. These shall:

1. Include complete, detailed written descriptions of the operating sequence of all control systems and operations in all modes.

2. Be specifically prepared for this work.

3. Be fully referenced to control diagrams and system components.

4. Include start-up and shut-down procedures and operations under manual, automatic, and emergency (alarm) conditions and any alternate operating modes.

5. Include operation of switches, lights, timers, relays, contacts, valves, motors, and equipment components.

6. Describe interlock functions including system safety functions.

b. Software/Programming Documentation.

1. Reference this documentation to the Operating Sequence Descriptions and include flow charts, program source codes listings, and documentation ladder diagrams with detailed descriptions for each rung of the software provided.

2. Provide information to instruct and to familiarize the operator with the system programming to enable a step-by-step evaluation of the program.

3. Provide notations, remarks, and labeling on the program source code listing to indicate the program operation and function.

4. Provide any additional narrative description of the program operation to fully describe the system parameters and functionality in a clear and logical manner.

c. Manufacturer's Instructions. Include:

1. Installation, routine preventive maintenance, troubleshooting, and lubrication instructions.

2. Procedures for moving, supporting, and anchoring of equipment, including tolerances for settings and adjustment.

3. Storage requirements to protect products prior to installation and during periods of prolonged shutdown.

4. Storage requirements of extra materials.

d. Parts List. Include assembly, exploded-view illustrations, or sectional drawings with all parts identified. Also include descriptions, quantity (per assembly) required, and original equipment manufacturer's part numbers.

e. Supplier Data. Provide addresses, telephone numbers, and names of contact persons for equipment manufacturer and manufacturer's representative. Include both regional (local) and home offices.

f. Warranties and Guarantees. Include copies of the approved draft warranties in the initial operation and maintenance manual

submittal. Following substantial completion, provide copies of the executed final warranties for insertion into the final operation and maintenance manuals.

g. Approved Submittals. Provide a complete list (including submittal numbers) of all approved submittals pertaining to the operation and maintenance instructions.

h. Copies of all materials shipped with the equipment.

i. Copies of all approved submittals including control wiring diagrams.

E. Personnel Qualifications

1. General. These qualification statements and information pertain to personnel and entities employed in the prosecution of the work.

2. Specific Information. Provide the following information regarding the proposed personnel or entity.

a. Education/training.

b. Company employment history.

c. Professional experience.

d. References.

e. Certifications or licenses.

f. Stated qualifications shall be pertinent to the specific task for which qualifications are requested.

F. Training Documents

1. Instructors' Qualifications. See paragraph 2.3 E.

2. Proposed schedule for the training sessions.

3. Lesson Plan. Lesson plans shall:

a. Be O&M manual-based.

b. Cover all components of each system regardless of source of supply or manufacturer.

c. Detail the instructional objective statement on the goal(s) intended to be achieved by the end of the training session.

d. Indicate the category of training (operation, maintenance, and electrical instrumentation); describe the session including length and type (classroom or field) and the instructor.

4. One copy of all instructional material to be used during training.

5. A sign-in sheet containing the signature of each attendee, training topic, and date after the training is completed.

G. Source Quality Control Documents

1. Inspection.

a. Inspection data includes inspection procedures and results of factory inspections of products, equipment, or systems.

b. Within this type of submittal information are factory witness test procedures, schedules and reports, and similar data.

2. Testing.

a. Test data is the information leading to or resulting from tests performed on materials, equipment, or systems at the manufacturer's facilities or in testing laboratories.

b. This also includes data on testing equipment.

c. Examples of test data include all information, test arrangement, drawings, illustrations, diagrams, curve plots, graphs, and other data which substantiates or establishes a material or product characteristic, quality, or other trait as a result of test required by the Contract Documents.

H. Material Field Test Reports

1. Report Data. Written reports of each inspection, test, or similar service shall include, but not be limited to:

a. Date of issue.

b. Project title and number.

c. Name, address, and telephone number of testing agency.

d. Dates and locations of samples and tests or inspections.

e. Names of individuals making the inspection or test.

f. Designation of the work and test method.

g. Identification of product and specification section.

h. Complete inspection or test data.

i. Test results and interpretations of test results.

j. Ambient conditions at the time of sample taking and testing.

k. Comments or professional opinion as to whether inspected or tested work complies with Contract Document requirements.

l. Name and signature of laboratory inspector.

m. Recommendations on testing.

2. Example reports covered by this paragraph include compaction tests and concrete, leakage, and disinfection tests.

I. Start-Up Documents

a. Start-Up Request. Start-up requests shall include the following:

b. Qualifications of Manufacturer's Representative. See paragraph 2.3 E.

c. Field Test Procedures.

1. List of materials and equipment necessary for testing.

2. Calibration. Certification of calibration of all test instruments used.

3. Test Form Report. Copy of testing results report form.

d. Proposed start-up schedule including all field testing.

2. Manufacturer's Representative's Reports.

a. Each manufacturer's representative shall prepare a report on every site visit for each system or item of equipment inspected, adjusted, started up, or worked on.

b. If a manufacturer's representative visits the site for equipment specified in several specification sections, a separate report shall be filed for each specification section.

c. The report shall state:

1. The purpose of the visit.

2. The representative's observations and conclusions.

3. Recommendations for further visits or action.

4. A tabulation or log of the settings of all adjustable components.

a) Initial settings shall be recorded and submitted on the first visit.

b) During subsequent visits, the manufacturer's representative shall add the current or adjusted setting to the tabulation or log.

5. Include manufacturer's certification that equipment being tested has been inspected with regard to conformance to the plans, specifications, and shop drawings and that it has been tested and is ready for operational demonstration.

6. All test reports for all required field testing.

J. Operational Demonstration Documents

a. Operational Demonstration Request. Include the following:

b. Name, address, and telephone number of all representatives during the operational demonstration.

c. Sample operational demonstration log for Engineer/Architect review.

2. Operational Demonstration Log.

a. An operational demonstration log is a continuous chronological record of operational status of the system and equipment.

b. Include all changes in status or system parameters, adjustments, and results of tests.

c. Make entries, noting the date and time, at the occurrence of each event.

d. Use acceptable operational demonstration log forms.

K. Special Warranties

1. There are two general types of warranties covered by this specification.
    a. Manufacturer's Express Warranties.
        1. These are formal statements of certifications by manufacturers which warrant to the Owner that products and equipment are free from defects in material and workmanship.
        2. These are standard warranties issued with products and equipment which supplement the Contractor's warranty and may also extend coverage past the expiration of the Contractor's warranty.
        3. Include with the manufacturer's warranty data shall be a notification of the availability of an extension to the standard warranty including terms.
    b. Special Express Warranties.
        1. The form, format, and conditions of special warranties are described in the various specification sections of the Contract Documents.
        2. These are formal warranties above and beyond the Contractor's warranty and manufacturer's standard warranties.
        3. These warranties may be based on performance, power consumption, maintenance projects, or other operating parameters.
        4. Extended warranties, service contracts, and performance bonds are also included under this category.
2. Term or Period. Unless otherwise established by individual sections in Divisions 2 through 46, all Contractor express warranties shall extend for 1 calendar year from the date of substantial completion of the project or acceptance date of the product or portion of work thereof, whichever is the later date.
3. Content of Warranty. The warranty shall contain, as applicable:
    a. Effective starting date of the warranty period.
    b. Statement of the terms and conditions of the warranty, if any.

L. Project Record Documents

1. Contractor shall maintain in a safe place at the Site **one record copy** of all Drawings, Specifications, Addenda, Approved Shop Drawings, Change Orders, Work Orders, and written interpretations and clarifications in good order and annotated to show changes made during construction. These record documents together with all approved Samples and all approved Shop Drawings will be available to Engineer for reference. Upon completion of the Work, these record documents, Samples, and Shop Drawings shall be delivered to Engineer for Owner.
2. Record Contract Drawings. Legibly mark contract drawings to record actual construction including:

a. Depths of various elements of foundation in relation to data.

b. Horizontal and vertical location of underground utilities and appurtenances referenced to permanent surface improvements.

c. Location of internal utilities and appurtenances concealed in construction referenced to visible and accessible features of structure.

d. Field changes of dimension and detail.

e. Changes made by change order or work order.

M. Extra Materials/Spare Parts

1. Coat or package extra materials to prevent corrosion or deterioration during long-term indoor storage.

2. Clearly label all packaging with:

a. Part name.

b. Part number.

c. Associated equipment name and number.

d. Manufacturer's name and address.

e. The required storage environment for the materials.

N. **Other**. These include special tools/repair parts list, photographs, videos, certificates, construction schedules, drawings, reports, meeting minutes, data, and information required by the Contract Documents which do not logically fall into the submittal types defined above.

PART 3 EXECUTION

3.1 SUBMITTAL PREPARATION AND TRANSMITTAL

A. Coordination

1. Coordinate preparation and processing of submittals with performance of construction activities.

2. Transmit each submittal sufficiently in advance of performance of related construction activities to avoid delay and in accordance with the submittal schedule.

3. The General Contractor is responsible for resolving any disputes between Subcontractors over submittals.

B. Verification

1. Verify the correctness and completeness of all submittals prior to forwarding same for review.

2. All submittals shall comply with the Contract Documents.

C. **Package each submittal** appropriately for transmittal and handling including a transmittal form.

D. **The General Contractor shall submit** the minimum number of submittals as listed in paragraph 3.3 of this specification.

E. **Submittals received from sources** other than the General Contractor will be returned without action.

F. **Subcontractors shall submit** all submittals through the General Contractor.

3.2 ENGINEER/ARCHITECT'S REVIEW AND ACTION

A. General

1. Except for submittals for record, information, or similar purposes where action and return is not required or requested, the Engineer/Architect will review each submittal, mark to indicate action taken, and return promptly.

2. Cost to review any submittal more than twice will be deducted from Contractor's monthly estimates and final payments.

3. The Engineer/Architect reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

B. **Action Stamp**. The Engineer/Architect will stamp each submittal with a uniform, self-explanatory action stamp. The stamp will be appropriately marked, as follows, to indicate action taken.

1. Final Unrestricted Release. Where submittals are marked "Approved," that part of the work covered by the submittal may proceed provided it complies with requirements of the Contract Documents; final acceptance will depend upon that compliance.

2. Final-but-Restricted Release. When submittals are marked "Approved as Noted," that part of the work covered by the submittal may proceed provided it complies with notations or corrections on the submittal and requirements of the Contract Documents; final acceptance will depend on that compliance. If the submittal is marked as requiring additional information, the submittal will not be closed until the requested information is submitted and acknowledged.

3. Returned for Resubmittal.

a. When submittal is marked "Not Approved" and/or "Revise and Resubmit," do not proceed with that part of the work covered by the submittal, including purchasing, fabrication, delivery, or other activity.

b. Revise or prepare a new submittal in accordance with the notations; resubmit without delay. Repeat if necessary, to obtain a different action mark.

c. Do not permit submittals marked "Not Approved" and/or "Revise and Resubmit" to be used at the project site or elsewhere where work is in progress.

3.3 MINIMUM NUMBER OF SUBMITTALS AND DISTRIBUTION

A. **Electronic and Hard Copy Submittals**. The Contractor shall provide all submittals in electronic format for review and approval. All electronic files shall be bookmarked as applicable. The Engineer will make available a SharePoint site where the Contractor can submit documents electronically for review and approval. The Contractor shall provide hard copies of approved documents for the Owner/Engineer. After a submittal has been approved, the Contractor shall provide the following minimum number of submittals **in addition to the electronic file** that shall be uploaded to the SharePoint site:

Submittal	**Minimum No. of Hard Copies**
Approved Shop Drawings	1 (Stored on-site once approved)
Product Data	0
Samples/Mock-Ups	1
O&M Manuals	1
Personnel Qualifications	1
Training Documents	2
Source Quality Control Documents	2
Material Field Test Reports	2
Start-Up Documents	2
Operational Demonstration Documents	2
Special Warranties	1
Project Record Documents	1
Extra Materials	1
Others	0

3.4 SPECIFIC SUBMITTAL-TYPE EXECUTION REQUIREMENTS

A. O&M Manuals

1. Submittal Procedure. Submit one initial copy of the O&M manual for review that is bookmarked by section. After approval of the initial copy, submit the remainder of the revised manuals.

2. Verification. Verify the accuracy of the initial O&M manual by visual and physical inspection of the installed equipment during start-up.

   a. Perform field verification in the presence of the Owner or Owner's Representative.

   b. Physically trace and document as required all wiring and piping.

   c. Visually inspect equipment and components and compare configurations and nameplate information to O&M manual.

   d. Make any changes, additions, or deletions to the O&M manual identified during field verification.

e. In the event changes are made to the equipment following field verification, submit a final supplement of the revisions of the O&M manuals before approval.

B. Sample Panels

1. Construct any required sample panels on-site.

2. Construct sample panels only after the individual samples and components used in the sample panel have been approved.

3. If a sample panel does not conform to the Contract requirements, construct additional ones until conformance is achieved.

C. **Samples for Tests**. Furnish samples of material as may be required for examination and test. Take all samples of materials for tests according to standard methods or as provided in the Contract Documents.

END OF SECTION

SECTION 01 35 26

HEALTH AND SAFETY PROVISIONS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract apply to this section.

1.2 DESCRIPTION OF WORK

A. **General.** The Contractor shall provide the labor, tools, equipment, and materials necessary to protect all persons on or near the premises from unreasonable risks of injury that arise during or as a result of this work in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Codes**. Perform all work in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with the plans and as specified herein.

B. Standards

1. Manual of Accident Prevention in Construction published by Associated General Contractors of America.

2. Occupational Safety & Health Administration's (OSHA's) confined-space entry procedures.

3. Applicable state or federal occupational health and safety standards.

4. Other reasonable safety rules and practices established.

1.4 SUBMITTALS (Not Used)

1.5 JOB CONDITIONS (Not Used)

1.6 DELIVERY, STORAGE, AND HANDLING (Not Used)

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.1 SAFETY COORDINATOR

A. Contractor shall provide a person who, in addition to their other construction duties, will act as the safety coordinator for the work of this contract including but not limited to health and safety considerations associated with the work. The safety coordinator shall have experience in safety and health aspects of construction work, shall work on improving the safety and health of people involved in, and in the proximity of, the work of this Contract, and be on the job site during all normal work hours. The safety coordinator shall cooperate with the site Lead Safety Coordinator if one is designated by the Owner's Representative.

3.2 SAFETY PROGRAM

A. Contractor's safety coordinator shall establish a safety program for the job site, the safety program shall include:

B. **A list of general and specific** safety guidelines for each trade.

C. **A training program for instructing each worker** to recognize and avoid unsafe conditions and to apply good safety and health practices.

D. A system for ensuring that machinery and equipment are operated only by qualified people.

E. **A system for tagging and removing** unsafe machinery, equipment, tools, and goods.

F. **A system for investigating each injury** and reporting its cause and the steps taken to prevent recurrence to the Owner.

G. **A system for implementing use** of personal protective equipment, as necessary.

3.3 SAFETY PROGRAM REVIEW

A. Contractor shall review the safety program with the Owner's Representative before commencement of any activity on the job site.

3.4 CONFINED SPACE ENTRY

A. Anyone entering storage tanks or similarly confined areas shall comply with OSHA's Confined Space Entry Regulations.

END OF SECTION

SECTION 01 50 00

TEMPORARY CONSTRUCTION SERVICES AND FACILITIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General**. Provide the labor, tools, equipment, and material necessary to furnish, install, and maintain the temporary construction services and facilities in accordance with these plans and specifications. Temporary construction services and facilities include the following.

1. Temporary utilities required include, but are not limited to:
    a. Water service and distribution.
    b. Temporary electric power and light.
    c. Internet and cell service
    d. Storm and sanitary sewer.
2. Temporary construction and support facilities required include, but are not limited to:
    a. Gravel for walkways and temporary parking.
    b. Temporary heat.
    c. Field offices and storage sheds.
    d. Temporary roads and paving.
    e. Sanitary facilities, including drinking water.
    f. Temporary enclosures.
    g. Temporary project identification signs and bulletin boards.
    h. Waste disposal services.
    i. Construction aids and miscellaneous services and facilities.
    j. Dewatering facilities and drains.
    k. Rodent and pest control.
3. Security and protection facilities required include, but are not limited to:
    a. Temporary fire protection.
    b. Barricades, warning signs, lights.
    c. Enclosure fencing for the work area.
    d. Environmental protection.

1.3 QUALITY ASSURANCE

A. **Regulations**. Comply with industry standards and with applicable laws and regulations of authorities having jurisdiction, including but not limited to:

1. Building code requirements.
2. Health and safety regulations.
3. Utility company regulations.
4. Police, fire department, and rescue squad rules.
5. Environmental protection regulations.

B. **Standards**. Comply with National Fire Protection Association (NFPA) Code 241, "Building Construction and Demolition Operations"; American National Standards Institute (ANSI) A10 Series standards for "Safety Requirements for Construction and Demolition"; and National Electrical Contractors Association (NECA) Electrical Design Library "Temporary Electrical Facilities."

1. Refer to "Guidelines for Bid Conditions for Temporary Job Utilities and Services" prepared jointly by Associate General Contractors of America (AGC) and Adhesive and Sealant Council, Inc. (ASC) for industry recommendations.
2. Electrical Service. Comply with National Electrical Manufacturers Association (NEMA), National Electrical Contractors Association (NECA), and Underwriters' Laboratories, Inc. (UL) standards and regulations for temporary electric service. Install service in compliance with National Electric Code (NEC) (NFPA 70).

C. **Inspections**. Arrange for authorities having jurisdiction to inspect and test each temporary utility before use. Obtain required certifications and permits and keep on file for Owner review.

1.4 SUBMITTALS (Not used)

1.5 JOB CONDITIONS

A. Conditions of Use

1. Keep temporary services and facilities clean and neat in appearance.
2. Operate in a safe and efficient manner.
3. Take necessary fire-prevention measures.
4. Do not overload facilities.
5. Do not allow hazardous, nuisance, or unsanitary conditions to develop or persist on the site.
6. Do not permit facilities to interfere with progress.
7. The installer of each permanent service or facility shall assume responsibility for its operation, maintenance, and protection during its use as a construction service or facility prior to the Owner's acceptance, regardless of previously assigned responsibilities.
8. At the earliest feasible time, when acceptable to Owner, change over from use of the temporary service to use of the permanent service.

1.6 DELIVERY, STORAGE, AND HANDLING (Not used)

1.7 SPECIAL WARRANTY (Not used)

1.8 DIVISION OF RESPONSIBILITIES

A. General

1. The General Contractor is assigned specific responsibilities for certain temporary services and facilities used by other subcontractors and other entities at the site.

2. The General Contractor is responsible for providing temporary services and facilities that are:

a. Not normal construction activities of other Prime Contractors.

b. Not specifically assigned otherwise in the Contract Documents.

c. Listed as a responsibility for another Prime Contractor that does not exist on this project.

B. The General Contractor is responsible for:

1. Installation, operation, maintenance, and removal of each temporary service or facility usually considered as its own normal construction activity.

2. Plug-in electric power cords and extension cords, and supplementary plug-in task lighting and special lighting necessary exclusively for its own activities.

3. Its own field office, complete with necessary furniture, utilities, internet service, cell service, computer, and printer.

4. Access to record documents as described in Section 01 33 00 – Submittals.

5. Its own storage and fabrication sheds.

6. Temporary heat, ventilation, humidity control, and enclosure of the building where these utilities are necessary for its construction activity, but where these utilities have not yet been installed.

7. Special or unusual hoisting requirements, including hoisting loads in excess of 2 tons, hoisting material or equipment into spaces below grade, and hoisting requirements outside the building enclosure.

8. Collection and disposal of its own hazardous, dangerous, unsanitary, or other harmful waste material.

9. Secure lockup of its own tools, materials and equipment.

10. Construction aids and miscellaneous services and facilities necessary exclusively for its own construction activities.

11. Temporary internet and cell services.

12. Temporary roads and paving.

13. Temporary toilets, including disposable supplies.

14. Temporary wash facilities, including disposable supplies.

15. Containerized bottled water type drinking water units.
16. Temporary enclosure of the building.
17. Project identification and temporary signs.
18. General collection and disposal of wastes.
19. Barricades, warning signs, and lights.
20. Enclosure fence.
21. Security enclosure and lockup.
22. Environmental protection.
23. Temporary water service.
24. Temporary heat.
25. Temporary heat, upon enclosure of the building.
26. Temporary ventilation, upon enclosure of the building.
27. Temporary electric power service and distribution.
28. Temporary lighting.
29. Connections for illuminated signs.

1.9 USE CHARGES

A. **General**. The Contractor will be responsible for usage charges for temporary utilities. These utilizes include water service, electric power service, internet service , cell service, and electric for temporary heat.

B. **Other entities using temporary services** and facilities include, but are not limited to:

1. Subcontractors.
2. The Owner's work forces.
3. Occupants of the project.
4. The Engineer/Architect.
5. Testing agencies.
6. Personnel of government agencies.

PART 2 PRODUCTS

2.1 MATERIALS

A. **General**. Provide new or acceptable previously used materials. Provide materials suitable for the use intended.

B. **Open Mesh Fencing**. Provide 11-gauge, galvanized 2-inch, chain-link fabric fencing 6 feet high with galvanized barbed wire top strand and galvanized steel pipe posts, 1-1/2-inch inside diameter (I.D.) for line posts, and 2-1/2-inch I.D. for corner posts.

2.2 EQUIPMENT

A. **General**. Provide new or acceptable previously used equipment. Provide equipment suitable for the use intended.

B. Fire Extinguishers

1. Provide hand-carried, portable, UL-rated, Class A fire extinguishers for temporary offices and similar spaces.

2. In other locations provide hand-carried, portable, class "ABC" dry-chemical extinguishers, or a combination of extinguishers of NFPA recommended types for the exposures.

3. Comply with NFPA 10 and 241 for classification, extinguishing agent, and size required by location and class of fire exposure.

PART 3 EXECUTION

3.1 INSTALLATION

A. **Use qualified personnel** for installation of temporary facilities.

B. **Location**. Coordinate location with Owner and Engineer/Architect. Locate facilities where they serve the project adequately and result in minimum interference with performance of construction activities. Relocate facilities as required.

C. **Provide each facility ready for use** when needed to avoid delay. Maintain and modify as required. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

3.2 TEMPORARY UTILITY INSTALLATION

A. **General**. Engage the appropriate local utility company to install temporary service or connect to existing service per Section 01 00 00 General Requirements Part 3.9 Utilities. Where the company provides only part of the service, provide the remainder with matching, compatible materials and equipment; comply with the company's recommendations.

1. Arrange with the company and existing users for a time when service can be interrupted, where necessary, to make connections for temporary services.

2. Provide adequate capacity at each stage of construction. Prior to temporary utility availability, provide trucked-in services.

3. Obtain easements to bring temporary utilities to the site, where the Owner's easements cannot be used for that purpose.

B. **Water Service**. Install water service and distribution piping of sizes and pressures adequate for construction until permanent water service is in use. Disinfect temporary water piping prior to use.

C. Temporary Electric Power Service

1. Provide weatherproof, grounded electric power service and distribution system of sufficient size, capacity, and power characteristics during construction.

2. Include meters, transformers, overload protected disconnects, automatic ground fault interrupters, and main distribution switch gear.

3. Power Distribution System. Install wiring overhead, and raise vertically where least exposed to damage. Where permitted, wiring circuits not

exceeding 125-Vac 20-ampere rating and lighting circuits may be nonmetallic sheathed cable where overhead and exposed for surveillance.

D. Temporary Lighting

1. Whenever an overhead floor or roof deck has been installed, install temporary lighting with local switching.

2. Install and operate temporary lighting that will fulfill security and protection requirements, without operating the entire lighting system, and will provide adequate illumination for construction operations and traffic conditions.

E. Temporary Internet and Cell Service

1. Provide temporary internet and cell service for all personnel engaged in construction activities, throughout the construction period.

2. Install telephone on a separate line for each temporary office and first aid station.

3. At each telephone, post a list of important telephone numbers.

F. Sewers and Drainage.

1. If sewers are available, provide temporary connections to remove influent that can be discharged lawfully.

2. If sewers are not available or cannot be used, provide drainage ditches, dry wells, stabilization ponds, and similar facilities.

3. If neither sewers nor drainage facilities can be lawfully used for discharge of effluent, provide containers to remove and dispose of effluent off the site in a lawful manner.

4. Filter out excessive amounts of soil, construction debris, chemicals, oils, and similar contaminants that might clog sewers or pollute waterways before discharge.

5. Connect temporary sewers to the municipal system as directed by the sewer department officials.

6. Maintain temporary sewers and drainage facilities in a clean, sanitary condition. Following heavy use, restore normal conditions promptly.

G. **Provide earthen embankments and similar barriers** in and around excavations and subgrade construction, sufficient to prevent flooding by runoff of storm water from heavy rains.

3.3 TEMPORARY CONSTRUCTION AND SUPPORT FACILITIES INSTALLATION

A. Temporary Heat

1. Provide temporary heat required by construction activities, for curing or drying of completed installations, or protection of installed construction from adverse effects of low temperatures or high humidity.

2. Select safe equipment that will not have a harmful effect on completed installations or elements being installed.

3. Coordinate ventilation requirements to produce the ambient condition required and minimize consumption of energy.

4. Provide properly vented self-contained electric or fuel oil heaters with individual space thermostatic control.

5. Do not use gasoline-burning space heaters, or open-burning or salamander-type heating units.

B. Field Offices

1. Provide an insulated, weathertight, heated, or air-conditioned temporary office of sufficient size to accommodate required office personnel at the project site.

2. The General Contractor shall provide, either as a part of its field office or as a separate facility, a room of not less than 240 square feet (sf) for project meetings.

3. Furnish the room with a conference table, eight folding chairs, and a tackboard.

4. Keep the office clean and orderly.

C. **Storage and Fabrication Sheds**. Install storage and fabrication sheds, sized, furnished, and equipped to accommodate materials and equipment including temporary utility service. Sheds may be open shelters or fully enclosed spaces within the building or elsewhere on the site.

D. **Sanitary facilities include** temporary toilets, wash facilities, and drinking water fixtures.

1. Comply with regulations and health codes for the type, number, location, operation, and maintenance of fixtures and facilities.

2. Install where facilities will best serve the project's needs.

3. Provide toilet tissue, paper towels, paper cups, and similar disposable materials for each facility. Provide covered waste containers for used material.

4. Install wash facilities supplied with potable water at convenient locations for personnel involved in handling materials that require wash-up for a healthy and sanitary condition. Dispose of drainage properly. Supply cleaning compounds appropriate for each condition.

5. Provide bottled-water-type drinking water units.

6. Provide self-contained single-occupant toilet units of the chemical, aerated recirculation, or combustion type, properly vented and fully enclosed with a glass-fiber-reinforced polyester shell or similar nonabsorbent material.

E. **Temporary Enclosures**. Provide temporary enclosure for protection of construction in progress and completed, from exposure, foul weather, other construction operations, and similar activities.

1. Where heat is needed and the permanent building enclosure is not complete, provide temporary enclosures where there is no other provision for containment of heat. Coordinate enclosure with ventilating and material drying or curing requirements to avoid dangerous conditions and effects.

2. Install tarpaulins securely, with fire-treated wood framing and other materials. Close openings of 25 square feet or less with plywood or similar materials.

3. Close openings through floor or roof decks and horizontal surfaces with load bearing wood framed construction.

F. Project Identification and Temporary Signs

1. Project Identification Signs. See Section 01 58 13, "Project Sign," for additional requirements.

2. Temporary Signs. Prepare signs to provide directional information to construction personnel and visitors.

3. Support on posts or framing of preservative-treated wood or steel.

4. Do not permit installation of unauthorized signs.

G. **Temporary Site Lighting**. Install exterior yard and sign lights so that signs are visible when work is being performed.

H. **Collection and Disposal of Waste**. See Section 01 74 23, "Cleaning."

I. Stairs

1. Until permanent stairs are available, provide temporary stairs where ladders are not adequate.

2. Cover finished permanent stairs with a protective covering of plywood or similar material so finishes will be undamaged at the time of acceptance.

J. Rodent and Pest Control

1. Before deep foundation work has been completed, retain a local exterminator or pest control company to recommend practices to minimize attraction and harboring of rodents, roaches, and other pests.

2. Employ this service to perform extermination and control procedures at regular intervals so the project will be relatively free of pests and their residues at Substantial Completion.

3. Perform control operations in a lawful manner using environmentally safe materials.

3.4 SECURITY AND PROTECTION FACILITIES INSTALLATION

A. **General**. Except for use of permanent fire protection as soon as available, do not change over from use of temporary security and protection facilities to permanent facilities until Substantial Completion, or longer as requested.

B. Temporary Fire Protection

1. Until fire protection needs are supplied by permanent facilities, install and maintain temporary fire protection facilities of the types needed to protect against reasonably predictable and controllable fire losses.

2. Comply with NFPA 10, "Standard for Portable Fire Extinguishers," and NFPA 241, "Standard for Safeguarding Construction, Alterations and Demolition Operations."

3. Locate fire extinguishers where convenient and effective for their intended purpose, but not less than one extinguisher on each floor at or near each usable stairwell.

4. Store combustible materials in containers in fire safe locations.

5. Maintain unobstructed access to fire extinguishers, fire hydrants, temporary fire protection facilities, stairways, and other access routes for fighting fires.

6. Prohibit smoking in hazardous fire exposure areas.

7. Provide supervision of welding operations, combustion type temporary heating units, and similar sources of fire ignition.

C. **Permanent Fire Protection**. At the earliest feasible date in each area of the project, complete installation of the permanent fire protection facility, including connected services, and place into operation and use. Instruct key personnel on use of facilities.

D. Barricades, Warning Signs, and Lights

1. Comply with standards and code requirements for erection of structurally adequate barricades.

2. Paint with appropriate colors, graphics, and warning signs to warn personnel and the public of the hazard.

3. Where needed, provide lighting including flashing lights.

E. Enclosure Fence

1. When excavation begins, install an enclosure fence with lockable entrance gates.

2. Locate where indicated, or enclose the portion determined sufficient to accommodate construction operations.

3. Install in a manner that will prevent people and animals from easily entering the site, except by the entrance gates.

4. Provide open-mesh, chain-link fencing with posts set in a compacted mixture of gravel and earth.

F. Security Enclosure and Lockup

1. Install substantial temporary enclosure of partially completed areas of construction.

2. Provide locking entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security.

3. Storage of Valuable Material. Where materials and equipment must be stored and are of value or attractive for theft, provide a secure lockup. Enforce discipline in connection with the installation and release of material to minimize the opportunity for theft and vandalism.

G. Environmental Protection

1. Provide protection, operate temporary facilities, and conduct construction in ways and by methods that comply with environmental regulations, and minimize the possibility that air, waterways, and subsoil

might be contaminated or polluted, or that other undesirable effects might result.

2. Avoid use of tools and equipment which produce harmful noise.

3. Restrict use of noisemaking tools and equipment to hours that will minimize complaints from persons or firms near the site.

3.5 OPERATION, TERMINATION AND REMOVAL

A. **Supervision**. Enforce strict discipline in use of temporary facilities. Limit availability of temporary facilities to essential and intended uses to minimize waste and abuse.

B. Maintenance

1. Maintain facilities in good operating condition until removal.

2. Protect from damage by freezing temperatures and similar elements.

3. Maintain operation of temporary construction services and facilities on a 24-hour-day basis where required to achieve indicated results and to avoid possibility of damage.

4. Prevent water filled piping from freezing. Maintain markers for underground lines.

5. Protect from damage during excavation operations.

C. Termination and Removal

1. Unless requested that it be maintained longer, remove each temporary facility when the need has ended, or when replaced by authorized use of a permanent facility, or no later than Substantial Completion.

2. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with the temporary facility.

3. Repair damaged work, clean exposed surfaces, and replace work which cannot be satisfactorily repaired.

4. Materials and facilities that constitute temporary facilities are property of each Prime Contractor. The Owner reserves the right to take possession of project identification signs.

5. Temporary Pavement.

a. Remove temporary paving that is not intended for or acceptable for integration into permanent paving.

b. Where the area is intended for landscape development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil in the area.

c. Remove materials contaminated with road oil, asphalt and other petrochemical compounds and other substances which might impair growth of plant materials or lawns.

d. Repair or replace street paving, curbs, and sidewalks at the temporary entrances, as required by the governing authority.

6. At Substantial Completion, clean and renovate permanent facilities that have been used during the construction period, including but not limited to:

   a. Replace air filters and clean inside of ductwork and housings.

   b. Replace significantly worn parts and parts that have been subject to unusual operating conditions.

   c. Replace lamps that are burned out or noticeably dimmed by substantial hours of use.

END OF SECTION

SECTION 01 52 13

FIELD OFFICE

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. Provide the labor, tools, equipment, and materials necessary to furnish and maintain field office facilities in accordance with the drawings and specifications.

1.3 QUALITY ASSURANCE (Not used)

1.4 SUBMITTALS (Not used)

1.5 JOB CONDITIONS (Not used)

1.6 DELIVERY, STORAGE, AND HANDLING (Not used)

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS

2.1 FIELD OFFICE

A. **Description**. The General Contractor shall provide a furnished field office for the exclusive use of the Engineer/Architect as specified herein.

B. **Location**. Position the field office in an acceptable location.

C. **Size**. The field office shall contain a minimum of 24 feet x10 feet of floor space.

D. **Utilities**. Provide lighting, heating, air conditioning, and an independent telephone.

E. **Equipment**. Provide and maintain the following furnishings and equipment.

1. One 3" x 5" drafting table and stool.
2. Two office desks and chairs.
3. One plan rack.
4. One storage closet, suitable for surveying equipment and testing equipment.
5. Two four drawer legal size file cabinet.
6. Ten folding chairs and one 8’ folding table.
7. One broom, and two wastebasket.
8. One Hewett-Packard Office Jet Color Ink Printer All-In –One printer with USB connection to PC, 8-1/2” x 14” printing capability or approved substitute of equal specifications. Printer shall be provided, with one installed and one spare set of ink cartridges.

9. Internet access for file transfer (ftp), web browsing, and email must be supplied via an independent DSL phone line (or comparable high speed connection, with all installation of service, router, 4 port switch, and 10' Ethernet cables, operation fees assumed by General Contractor, including monthly service for period that the field office is being used.

10. Compact refrigerator (mini-fridge); 3.2 cubic feet minimum.

11. Microwave over with minimum of 1.3 cubic feet and 1,000 watt minimum.

12. One (1) boot scraper shall be equipped at each entrance location to the field office.

F. **Security**. Provide security measures against fire, theft, and other damages.

G. **Safety Items**. Provide the following items for the exclusive use of the Engineer/Architect.

1. First aid kit meeting Occupational Safety and Health Administration (OSHA) requirements.

2. List of emergency numbers placed permanently adjacent to the telephone which shall include fire department, life squad, police, Ohio Environmental Protection Agency (EPA), and OSHA.

PART 3 EXECUTION

3.1 INSTALLATION

A. Furnish the field office for occupancy within 30 days of Notice to Proceed but no later than start of construction.

3.2 CLEANING AND MAINTENANCE

A. **Cleaning**. Arrange for weekly cleaning of the field office.

B. **Maintenance**. Maintain the field office in proper working order throughout the construction.

3.3 REMOVAL

A. The facilities shall remain available throughout the duration of the project. Remove these facilities from the site within 30 days of notification.

END OF SECTION

SECTION 01 55 27

INTERFERENCE WITH TRAFFIC

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General.** The Contractor shall provide the labor, tools, equipment, and materials necessary to maintain traffic in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work in the maintenance of traffic in compliance with applicable requirements of governing agencies having jurisdiction.

B. **Maintenance of Traffic**. The maintenance of traffic shall be in accordance with the Manual of Uniform Traffic Control Devices.

1.4 SUBMITTALS (Not Used)

1.5 JOB CONDITIONS

A. **Owner Requirements**. If proper maintenance of traffic facilities and proper provision for traffic control are not being provided and the safety of the public is thus endangered, the Owner may take the necessary steps to place them in proper condition and the cost of such services will be deducted from any payment which may be due or become due the Contractor.

1.6 DELIVERY, STORAGE, AND HANDLING (Not Used)

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.1 DESCRIPTION

A. The Contractor shall furnish, erect, maintain, and remove lights, signs, barricades, temporary guardrails, other traffic control devices, and furnish watchmen and flagmen as may be necessary to maintain safe traffic conditions.

3.2 MAINTAINING TRAFFIC

A. **Traffic Diversion**. Whenever it is necessary to divert traffic from its normal channel into another channel, such diversion shall be clearly marked by cones, drums, barricades, or temporary guardrail. If the markers are left in place at night, suitable lights shall be provided and maintained.

B. **One-Way Traffic**. Whenever one-way traffic is established, at least two flagmen shall be used.

3.3 CLOSED TO TRAFFIC

A. **Street Closing**. The Contractor may close the street to through traffic for minimum periods of time with proper notice to local occupants of all premises, police and fire protection authorities, and other public authorities as applicable. The Contractor shall so schedule his work that this time is a minimum and shall, whenever possible, make suitable provision for access by local residents, school buses, and mail delivery vehicles. The Contractor shall provide access for police, fire, and emergency vehicles at all times. Fire hydrants and other public utility valves shall be accessible at all times.

B. **Detours**. When it is required that the street or road be closed to traffic, the Contractor shall furnish, erect, maintain, and remove barricades, suitable and sufficient red lights, and other lights or reflecting material at the limits of the project, where side streets intersect, and at other points of public access to the project. The Contractor shall furnish, erect, and maintain advance warning signs and barricades on side streets at the first street intersection beyond the one closed by construction indicating "Street Closed, One Block Ahead." The Contractor shall furnish, erect, maintain, and remove detour marking signs on temporary routes.

END OF SECTION

SECTION 01 57 13

SEDIMENT AND EROSION CONTROL

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to work in this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Provide all labor, tools, equipment, and materials necessary to furnish and maintain the soil erosion controls where shown, where shown on the Contractor's Storm Water Pollution Prevention Plan (SWP3), where directed, and as specified herein.

B. **SWP3 Preparation**. Prepare an SWP3 for this project, obtain necessary permits, provide dust control, and terminate coverage under the permits, if necessary, upon completion of the work.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work required in the control of erosion during construction in compliance with the following standards as referenced herein:

1. ODOT – Ohio Department of Transportation. Construction and Material Specifications (most recent edition).

2. ODNR – Ohio Department of Natural Resources. "Rainwater and Land Development Ohio's Standards for Stormwater Management Land Development and Urban Stream Protection" (Rainwater and Land Development) current edition.

3. Ohio EPA – Ohio Environmental Protection Agency.

a. National Pollutant Discharge Elimination System (NPDES) Permit No. OHC000002, "Authorization for Storm Water Discharges Associated with Construction Activity Under the National Pollutant Discharge Elimination System" (General NPDES Permit).

B. **Conflicts**. In the event of a conflict between these requirements and pollution control laws, rules, or regulations of other federal, state, or local agencies, the more restrictive laws, rules, regulations, or standards shall apply.

1.4 SUBMITTALS

A. **General**. Submit all submittals in accordance with the Division 1 Submittal Requirements and the requirements within this specification section.

B. Submittal Package No. 1 – SWP3 and Notice of Intent (NOI) Form (as needed)

1. Submit the Contractor's SWP3 including associated drawings and details of sediment and erosion control measures that will be employed during the project.

1.5 JOB CONDITIONS

A. Construction Sites Less than 1 Acre

B. SWP3. Develop and implement an SWP3 for the control of sediment and erosion at this project site throughout construction. At a minimum the SWP3 shall include the following:

C. Site drawing showing the limits of all earth-disturbing activities, location of proposed temporary access roads or stockpiles, and location of all proposed sediment and erosion control features (i.e., silt fencing, sediment basins, temporary seeding, etc.). Include details for installation and material specifications for each erosion control feature.

D. Written description of the proposed sediment and erosion control measures that will be employed, including a schedule for installation and removal of temporary controls as they are related to actual site construction. Also include information regarding site soils, any permanent or temporary seeding, an inspection and maintenance schedule, and all measures that will be employed by any subcontractors.

E. **Sediment and Erosion Control Shown on the Plans**. The sediment and erosion control measures shown on the plans, if any, are considered to be the minimum level of control required. Prepare the final SWP3 and use, if appropriate, alternate methods and locations of sediment and erosion control to meet the site requirements provided they are approved.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **General**. Handle all sediment and erosion control materials in accordance with the manufacturer's recommendations.

B. **Storage**. Store all seeds for temporary seeding in a safe, dry location protected from weather conditions that may affect the seed viability.

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS

2.1 GENERAL

A. The SWP3 shall incorporate some or all of the following equipment and materials for sediment and erosion control measures, as appropriate. Alternative materials and methods as presented in ODOT Item 832 or ODNR's Rainwater and Land Development manual may be considered.

B. **Sediment Barriers**. Sediment barriers are temporary measures using woven wire or other approved material attached to posts with filter cloth of burlap and plastic filter fabric to intercept, detain, and control sediment and erosion from leaving the construction site.

1. Filter Fabric/Silt Fence. Synthetic filter fabric shall be a pervious sheet of propylene, nylon, polyester, or ethylene yarn. Fabric shall be ODOT Item 712.09, Type C or equal.

2. Wire Fencing. Wire fence reinforcement for silt fences at storm drain inlets shall be a minimum of 42 inches in height and a minimum of 14 gauge, and shall have a maximum mesh spacing of 6 inches.

3. Silt Fence Posts. Posts for silt fences shall be either 2-inch-by-2-inch hardwood or equivalent steel with a minimum length of 32 inches. Steel posts shall have projections for fastening wire to them.

4. Storm Drain Inlet Protection Framing. Stakes and framing for yard, drainage ditch, or parking lot inlet protection shall be 2-inch-by-4-inch wood (preferred) or equivalent metal with a minimum length of 3 feet for the stakes/posts.

C. **Matting**. Matting shall be agricultural straw or coconut fiber within photodegradable netting, jute, excelsior, or approved equal synthetic material as specified in ODOT Items 671 and 712.11.

D. **Temporary Seeding and Mulching**. Temporary seeding and mulching are measures consisting of seeding, mulching, fertilizing, and matting used to reduce erosion. All cut-and-fill slopes including borrow pits shall be seeded and/or mulched where and when necessary to eliminate erosion.

1. Materials. Mulch.

a. Straw. Straw mulch shall be unrotted small-grain straw, free of sticks or other foreign material.

b. Wood Cellulose Fiber. Wood cellulose fiber mulch shall be dyed green and not inhibit seed germination.

2. Fertilizer. Fertilizer shall contain 12 percent total nitrogen, 12 percent available phosphoric acid, and 12 percent water-soluble potash. The name of plant nutrients, weight, and quarantined percentages shall be marked on the sealed containers.

E. **Sediment Structures**. Sediment basins, dams, and dikes are prepared storage areas to trap and store sediment from construction areas and to protect properties and stream channels below the construction areas from siltation.

F. **Rock Channel Protection**. Aggregate for the rock channel protection, dams, erosion control, or other uses indicated on the drawings, shall be provided in accordance with ODOT Item 601. Gradation/type shall be as noted on the drawings.

PART 3 EXECUTION

3.1 GENERAL

A. **Examination**. Inspect the existing and proposed site drainage patterns in order that the most efficient methods of erosion control may be selected through the duration of construction.

B. **Fill material and equipment storage** is prohibited within 200 feet of the stream bank, in the floodplain, in wooded areas, or in other environmentally sensitive areas. Dispose of surplus excavated materials off-site.

C. **Maintenance**. Be responsible for ongoing inspection and maintenance of the sediment and control features. At a minimum, complete an inspection log at least every 7 calendar days and within 7 days of each rainfall event. Repair/replace damaged features.

D. **Dust Control**. Minimize dust generation, including wetting down unpaved areas during the construction activities.

3.2 PREPARATION

A. General

1. Limit the surface area of erodible earth material exposed by the clearing and grubbing, excavation, borrow, and fill operations and provide immediate permanent or temporary control measures to prevent contamination of adjacent streams or other water courses, lakes, ponds, or other areas of water impoundment.

2. Such work will involve the construction of temporary ditch checks, filters, benches, dikes, dams, sediment basins, and slope drains, and use of temporary mulches, mats, seeding, or other control devices or methods necessary to control erosion and sedimentation.

3. Prepare and submit an SWPPP in advance of the work.

4. Limit the area of excavation, borrow, and embankment operations in progress commensurate with capability.

5. Deliver sediment and erosion control materials at appropriate times so that the project is not delayed.

6. Do not commence with any earth-disturbing activity until the appropriate sediment and erosion control features are in place.

B. **Sediment and Erosion Control Devices**. Minimization of denuded areas and the length of time that any area is denuded is the primary method of sediment and erosion control at any site. Adequate scheduling and the use of permanent and temporary seeding or mulching as described in paragraph 3.3 can accomplish this.

1. Areas that are to be denuded shall have structural control measures in place prior to exposure of the soil and such measures shall remain until the area is established and permanent measures are in place. In the case of silt fencing, which may require the rough grading to be completed prior to installation, it shall be installed as soon as practical. Structural measures shall include at a minimum:

a. Sediment basins for all drainage areas greater than 5 acres.

2. Aggregate construction entrances at all points of construction traffic egress from the site onto pavement.

3. Silt fencing at all areas of sheet flow.

4. Inlet protection at all storm water inlets.

5. Matting at all slopes greater than 3:1 and drainage swales/ditches.

6. Sediment traps or basins at all drainage areas that can not be adequately protected with silt fencing as determined by the Contractor developing the SWPPP.

7. Silt fencing around soil stockpiles or cover them with tarps.

3.3 EROSION CONTROL

A. Permanent Erosion Control

1. Incorporate all permanent erosion control features into the project at the earliest practicable time.

2. Perform the permanent seeding and mulching and other specified slope protection work in stages, as soon as substantial areas of exposed slopes can be made available.

3. Establish final grades and application of fertilizer, seed, and mulch.

4. Maintain sediment barriers until grass has grown.

B. Temporary Erosion Control

1. Provide temporary seeding and mulching as delineated in the SWP3, as directed, as specified in the general NPDES permit, and for all denuded areas that are to remain dormant for more than 21 days.

2. Apply temporary erosion control within 7 days after final or temporary grade has been reached that will remain dormant for more than 21 days.

3. For areas within 50 feet of a stream, apply temporary erosion control within 2 days after the most recent disturbance of an area that will remain dormant for more than 21 days.

4. Install temporary erosion control measures including seeding and mulching immediately if seasonal limitations make permanent control measures unrealistic.

5. Temporary seed shall be of the type specified in ODNR's Rainwater and Land Development manual for the time of year that it is applied. Temporary seeding shall also include application of 12-12-12 fertilizer at the rate of 6 pounds per 1,000 square feet and mulching in accordance with ODNR's Rainwater and Land Development manual.

3.4 SEDIMENT BARRIERS

A. **Filter Barriers (FB)**. Construct the FBs using synthetic filter fabric. They are designed for sediment removal and erosion control of low or moderate channelized flows not exceeding 1 cubic foot per second (cfs).

1. The height of an FB shall be between 15 inches and 18 inches.

2. Purchase filter fabric in a continuous roll and avoid the use of joints by cutting to the length of the barrier.

3. Space the stakes a maximum of 3 feet apart at the barrier location and drive them securely into the ground (minimum of 8 inches).

4. Excavate a trench approximately 4 inches wide and 4 inches deep along the line of stakes and upslope from the barrier.

5. Staple the filter material to the wooden stakes, and extend 8 inches of the fabric into the trench. Use heavy-duty wire staples at least 1/2 inch long. Do not staple filter material to trees.

6. Backfill the trench and compact the soil over the filter material.

7. Install straw bales on the downstream side of all filter barriers. Install bales in a single row and securely anchor them with a minimum of two stakes per bale.

8. If an FB is to be constructed across a ditch line or swale, the barrier shall be of sufficient length to eliminate end flow, and the plan configuration shall resemble an arc or horseshoe with the ends oriented upslope.

9. Remove FB when they have served their useful purpose, but not before the upslope area has been permanently stabilized.

B. **Silt Fence (SF)**. SF is designed for situations in which only sheet or overland flows are expected, and the following drainage area limits are applied.

Silt Fence Maximum Drainage Area (Based on Slope of Drainage Area)	
Slope	Maximum Drainage Area (Acres) to 100 Linear Feet of Silt Fence
0-2% (<50:1)	0.5
2%-20%	0.25
>20%	0.125

1. SF details are included on the plans or within ODNR's Rainwater and Land Development manual.
2. Locate the silt fence at the flattest area available and follow a level contour of the land so that flows are dissipated into uniform sheet flow.
3. The height of an SF shall not exceed 36 inches (higher fences may impound volumes of water sufficient to cause failure of the structure).
4. Purchase the filter fabric in a continuous roll cut to the length of the barrier to avoid the use of joints. When joints are necessary, splice filter cloth together only at a support post, with a minimum 6-inch overlap, and securely seal.
5. Drive posts securely into the ground (minimum of 12 inches).
6. Excavate a trench approximately 4 inches wide and 4 inches deep along the line of posts and upslope from the barrier.
7. Staple or wire the filter fabric to the fence, and extend 8 inches of the fabric into the trench. The fabric shall not extend more than 36 inches above the original ground surface. Do not staple filter fabric to trees.
8. Backfill the trench and compact the soil over the filter fabric.
9. Remove SF when they have served their useful purpose, but not before the upslope area has been permanently stabilized.

C. Maintenance

1. Inspect SF and FB a minimum of every 7 days and immediately after each rainfall or at least daily during prolonged rainfall. Make any required repairs immediately.
2. Should the fabric on an SF or FB decompose or become ineffective prior to the end of the expected useable life and the barrier is still necessary, replace the fabric promptly.
3. Remove sediment deposits after each storm event. They must be removed when deposits reach approximately one-half the height of the barrier.

4. Dress any sediment deposits remaining in place after the SF or FB is no longer required to conform with the existing grade, and prepare and seed them.

3.5 MATTING

A. **General**. Matting details are included in ODNR's Rainwater and Land Development manual. Provide matting:

1. On all final slopes 3:1 or greater.
2. Along the bottom of all drainage ditches until permanent seeding has grown and is established.
3. In areas where establishing vegetation is difficult.
4. Where mulch is difficult to hold in place due to wind or water.
5. Where water velocities exceed 3.5 feet per second.

B. **Securing**. Secure matting in accordance with the manufacturer's instructions or with No. 11 gauge, or heavier, sod staples that are a minimum of 6 inches in length.

C. Erosion Stops

1. Erosion stops are narrow trenches (6 to 12 inches deep) across the full channel section to prevent undermining and gullies from forming below the matting.
2. Provide them at a maximum spacing of 50 feet apart (more frequently if recommended by the matting supplier) in areas of high erosion potential and at the leading edge of a matting roll.
3. High erosion potential is in rocky areas that prevent soil-to-matting contact, erosive soils, and steep slopes.
4. Place the leading edge or piece of matting (for intermediate stops) within the narrow trench and secure it in place before backfilling the trench.

3.6 STORM DRAIN INLET PROTECTION (IP)

A. General

1. Provide temporary sediment control around all storm inlets until the tributary drainage area is permanently stabilized.
2. This shall consist of an inlet sediment filter of silt fencing as specified and detailed herein.
3. Utilize storm drain IP at all storm drain inlets in addition to matting and sediment barriers previously discussed.

B. **Yard, Drainage Ditch, or Parking Lot Inlet Protection**. Details are included in ODNR's Rainwater and Land Development manual.

1. Filter Fabric.
    a. Excavate earth to a minimum depth of 18 inches around inlet.
    b. Construct wood framing with a minimum burial depth of 8 inches at each corner of the inlet.

c. Filter fabric shall include a wire mesh backing for structural support.

d. Place backfill in 6-inch compacted lifts.

e. Install a compacted earth check dam in the ditch line below the inlet if runoff bypassing the inlet will not flow to a sediment pond.

2. Drop Inlet Sediment Protection. Inlets may utilize an excavated drop inlet consisting of a 1- to 2-foot-deep excavation around the inlet to serve as a sediment trap.

a. Expanded trap volume shall be in accordance with the requirements for sediment traps contained in this specification.

b. Install 1-inch-diameter weep holes in the side of the inlet near the bottom of the excavated areas. Provide a gravel filter around weep holes. Weep holes shall be grouted before filling excavated area.

c. Remove accumulated sediment when it has reached 40 percent of the trap depth.

C. **Curb Inlet Protection**. Details are included in ODNR's Rainwater and Land Development manual.

1. Frame. Construct a wooden frame that is anchored to the soil located behind the curb.

2. Screen. Form a geotextile fabric screen with wire mesh backing to the concrete gutter and against the face of the curb. Extend the screen 2 feet beyond the inlet throat on either end and fasten to the frame.

3. Stone. Place 2-inch stone over the screen to prevent water from entering the inlet under or around the geotextile fabric.

3.7 SEDIMENT TRAPS

A. Provide temporary sediment traps for sediment control for drainage areas totaling less than 5 acres when SF would be inadequate or inappropriate. Traps have a simple outlet structure stabilized with geotextile and riprap. Sediment trap details are included in ODNR's Rainwater and Land Development manual.

B. Design

1. Volume. Sediment trap shall include a minimum water volume of 67 cubic yards (cy) per acre of contributing drainage area plus sediment storage of 1,000 cubic feet (cf) per disturbed area of contributing area. Provide a larger water volume if required by the general NPDES permit.

2. Side Slopes. Maximum side slopes of 3:1.

3. Depth. 1.5 feet above outlet crest. Utilize a maximum height of 5 feet.

4. Dimensions. Maximize sediment removal efficiencies by maximizing surface areas and providing a minimum length-to-width ratio of 2:1.

5. Outlet. Provide either a piped discharge with outlet riser or an overflow spillway that is properly sized to ensure safe release of all storm water. Locate outlets, as much as practical, on the opposite side of the storm

water entrance in order to avoid short-circuiting and maximize the sediment removal efficiency.

6. Channel Protection. Protect outlet spillways from erosion through use of a filter fabric and rock channel protection (ODOT Type C or D).

C. **Maintenance**. Maintain sediment level below the minimum water volume.

3.8 SEDIMENT BASINS AND DAMS

A. Sediment basins are sediment traps required for drainage areas greater than 5 acres. Sediment basins are larger than sediment traps and include dams that are regulated by the ODNR, Division of Water. Sediment basin details are included in ODNR's Rainwater and Land Development manual.

B. Design

1. Volume. Minimum water volume of 67 cy per acre of contributing area plus sediment storage volume of 1,000 cf per disturbed acre of contributing area.

2. Depth. Optimum depth of 3 feet, maximum of 5 feet.

3. Dimensions. Minimum length-to-width ratio of 2:1.

4. Side Slopes. Maximum of 3:1.

5. Outlet. Include both a primary and emergency spillway. Size the primary to pass a 10-year, 24-hour storm with the maximum water level at the crest of the emergency spillway. Emergency spillway shall pass the 100-year, 24-hour storm.

6. Reference. See ODNR's Rainwater and Land Development Manual for additional sizing and design criteria.

C. **Permitting**. If the sediment basin is such that it qualifies as a dam regulated by ODNR, obtain the appropriate permits and approvals from ODNR prior to construction of the dam. Submit a copy of this permit/approval prior to commencement of construction.

D. **Maintenance**. Remove deposited sediment when 40 percent of the initial volume has been filled with silt.

3.9 ROCK CHANNEL PROTECTION

A. Provide rock channel protection at all storm outlets in accordance with ODOT Item 601.

3.10 TOP SOIL STOCKPILE

A. Provide temporary drainage diversion of runoff around the topsoil stockpile to control soil erosion. Provide silt fencing around stockpiles or cover stockpiles with tarps to prevent erosion for sediment control.

3.11 STREAM BANK WORK

A. Special attention must be given at stream bank work locations to prevent erosion into the stream. Provide SF or drainage ditches with sediment traps at such locations. Hold to a minimum the entire disturbed area around any stream bank work. Designate trees and vegetation to be removed; clearly mark and protect those to be preserved. Following construction, promptly vegetate all sites other than roadways.

3.12 STREAM CROSSINGS AND WORK WITHIN THE STREAM

A. General

1. Avoid stream crossings and work within a stream when possible.

2. However, for certain work it may be necessary to work within the stream channel or develop a temporary crossing.

3. Keep to a minimum the time that is required to perform this work or that any temporary crossing is maintained, and remove any crossing as soon as possible.

4. Construct the culverts, bridges, and other structures of nonerodible material and size appropriately.

5. Be responsible for obtaining all local, state, or U.S. Army of Corps of Engineers (USACE) approvals or permits necessary prior to commencement of constructing the stream-crossing measure.

6. To reduce erosion and siltation impacts, perform construction in water courses only during periods of dry weather and low-flow conditions.

3.13 CONSTRUCTION ENTRANCES/EXITS

A. Install a stabilized pad of aggregate over geotextile fabric at all locations where construction vehicles leave construction areas onto surfaces where runoff is not checked by sediment controls, and at all points of egress to paved roads.

B. Design

1. Bedding. Provide a geotextile fabric bedding at the base of the construction entrance.

2. Stone. Place 2-inch stone in a layer 6 inches thick over the fabric bedding.

3. Dimensions. Entrance/exit pad shall be a minimum of 10 feet wide by 50 feet long.

C. **Maintenance**. Apply additional stone as necessary to replenish the entrance/exit. Remove sediment from paved roads immediately through sweeping, scraping, or other appropriate measure.

3.14 DEWATERING

A. General

1. Give special attention to dewatering activities to minimize release of silt-laden water into the stream.

2. The discharges shall be free of sediment and released into only storm sewers, stream channels, or other stabilized drainage sources and not onto exposed soils or any other site where flows could cause further erosion.

3.15 ADDITIONAL MEASURES

A. Select the sediment and erosion control measures utilized for a site based on the proposed construction activities, existing and proposed contours, site drainage system, and other site requirements or restrictions. Additional or alternative erosion and sediment control measures may be utilized with approval. Such measures include those specified in ODNR's Rainwater and Land Development manual.

END OF SECTION

Notice of Intent (NOI) For Coverage Under Ohio Environmental Protection Agency General Permit

(Read accompanying instructions carefully before completing this form)

Submission of this NOI constitutes notice that the party identified in Section I of this form intends to be authorized to discharge into state surface waters under Ohio EPA's NPDES general permit program. Becoming a permittee obligates a discharger to comply with the terms and conditions of the permit. Complete all required information as indicated by the instructions. Forms transmitted by fax will not be accepted. A check for the proper amount must accompany this form and be made payable to "Treasurer, State of Ohio." (See the fee table in Attachment D of the NOI instructions for the appropriate processing fee)

Notice of Termination (NOT) of Coverage Under Ohio Environmental Protection Agency General Permit

(Read accompanying instructions carefully before completing this form)

Submission of this NOT constitutes notice that the party identified in Section II of this form is no longer authorized to discharge into state waters under the NPDES general permit program. NOTE: All necessary information must be provided on this form. Do not use correction fluid on this form. Forms transmitted by fax will not be accepted. There is no fee associated with submitting this form.

I. Permit Information:

NPDES general permit number: OH _____ Facility General Permit Number: _____

II. Owner/Applicant Information/Mailing Address:

Company Name: _____

IV. Reason for Termination:

_____ Transfer of Ownership _____ Cease to Discharge _____ Facility Closed _____ Project Completed

_____ Obtained Individual Permit

Standard Certification:

I certify under penalty of law that all discharges authorized by the NPDES general permit have been eliminated or that I am no longer the operator of the facility. I understand that by submitting this NOT, I am no longer authorized to discharge under this general permit and that discharging pollutants to waters of the state without a NPDES permit is unlawful under ORC 6111.

Name (typed): _____

Signature: _____ Date: _____

Industrial Storm Water and Coal Mining Activity Certification Only:

I certify under penalty of law that all discharges associated with the identified facility that are authorized by the above referenced NPDES general permit have been eliminated, that I am no longer the operator of the facility, or in the case of a coal mine that the SMCRA bond has been released by ODNR-Division of Reclamation. I understand that, by submitting this NOT, I am no longer authorized to discharge storm water associated with industrial activity under this general permit, and that all discharging pollutants in storm water associated with industrial activity to waters of the state is unlawful under ORC 6111 where the discharge is not authorized by a NPDES permit.

Name (typed): _____

Signature: _____ Date: _____

Storm Water Construction Activity Certification Only:

I certify under penalty of law that all elements of the storm water pollution prevention plan have been completed, the disturbed soil at the identified facility have been finally stabilized and temporary erosion and sediment control measures have been removed or will be removed at an appropriate time, or that all storm water discharges associated with construction activity from the identified facility that are authorized by the above referenced NPDES general permit have otherwise been eliminated. I understand that, by submitting this NOT, I am no longer authorized to discharge storm water associated with construction activity by the general permit, and that discharging pollutants in storm water associated with construction activity to waters of the state is unlawful under ORC 6111 where the discharge is not authorized by a NPDES permit.

SECTION 01 58 13

PROJECT SIGN

PART 1 -GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. Provide the labor, tools, equipment, and materials necessary to provide a project sign in accordance with the drawings and specifications.

B. Work shall include removal and replacement of all signs in areas where work is required per Contract Documents.

1.3 QUALITY ASSURANCE (Not used)

1.4 SUBMITTALS

A. Submit all submittals in accordance with the Division 1 Submittal Requirements and the requirements within this specification section.

B. General

1. Submit all submittals in accordance with the Division 1 Submittal Requirements and the requirements within this specification section.

C. Submittal Package No. 1 – Project Sign Shop Drawing

1. Provide a shop drawing, for approval, outlining the construction details of the sign and lettering that will be placed on the sign.

1.5 **JOB CONDITIONS**. Erect project sign within 2 weeks of the beginning of construction. Maintain signage until final completion of the project unless otherwise directed.

1.6 DELIVERY, STORAGE, AND HANDLING (Not used)

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS

2.1 MATERIALS

A. **Sign**. Construct the sign of the following materials:

1. Sign face shall be 3/4-inch exterior plywood.

2. The posts shall be 4" x 4" treated lumber.

3. The paint shall be exterior acrylic. The back and front of the sign shall have three coats of white paint on which lettering shall be painted in black.

a. The principal sign (4' x 8') shall have the name of the project; the Owner of the project; Project Cost; Engineer; and General Contractor.

PART 3 EXECUTION

3.1 EXAMINATION

A. **Site Verification**. Verify that no existing utilities or proposed improvements interfere with the designated sign location.

B. **Local Traffic**. Coordinate location and height of the sign with the agency responsible for highway or street safety if the sign is in an area where an obstruction to the line of sight is possible.

3.2 PREPARATION

A. **Orientation**. Orientation will be such that the sign is easily viewed by the traffic arriving to the site.

B. **Location**. Place the sign at the location designated.

3.3 INSTALLATION

A. Set the two posts at least 3 feet into the ground and fill the hole with concrete or brace with 2" x 4" material.

3.4 FIELD QUALITY CONTROL

A. Routinely trim grass and weeds from around the sign and within the line of sight of those reading the sign.

3.5 DEMOLITION

A. **Remove the sign**, sign posts, and any concrete used to secure the sign posts from the site.

B. **Fill the post holes** and seed over them.

END OF SECTION

SECTION 01 60 00

MATERIALS AND EQUIPMENT

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. Transport and handle materials and equipment in accordance with the manufacturer's recommendations and requirements of Contract Documents. Make all arrangements for transportation, delivery, storage, and handling of equipment and materials required for prosecution and completion of the work.

1.3 QUALITY ASSURANCE (Not used)

1.4 SUBMITTALS (Not used)

1.5 JOB CONDITIONS (Not used)

1.6 DELIVERY, STORAGE, AND HANDLING

A. Delivery

1. Deliver shipments of materials and equipment to the site only during regular working hours.

2. Shipments shall be addressed and consigned to the proper party giving name of Contract, street number, and city.

3. Shipments shall not be delivered to the Owner or Owner's Representative, except as otherwise directed.

4. Transportation shall be in accordance with Part 3 of this section.

B. Storage and Handling

1. Store, handle, and protect materials in accordance with the manufacturer's recommendations and the requirements of Part 3 of this section.

2. Maintain equipment in an undeteriorated and fully serviceable condition and as specified in Part 3 of this section.

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.1 TRANSPORTATION

A. **General**. Arrange deliveries of products in accordance with the construction schedule and in ample time to facilitate inspection prior to installation.

B. Coordination

1. Coordinate deliveries to avoid conflict with work and conditions at site and to accommodate the following:

a. Work of other contractors.

b. Limitations of storage space.

c. Availability of equipment and personnel for handling products.

d. Owner's use of premises.

2. Do not have products delivered to project site until related shop drawings have been approved.

3. Do not have products delivered to site until required storage facilities have been provided.

4. Have products delivered to site in manufacturer's original, unopened, labeled containers. Keep Engineer/Architect informed of delivery of all equipment to be incorporated in the work.

C. **Inspection**. Immediately upon delivery, inspect shipment to ensure that:

1. Product complies with requirements of Contract Documents and reviewed submittals.

2. Quantities are correct.

3. Containers and packages are intact and labels are legible.

4. Products are properly protected and undamaged.

5. Damaged products are rejected and removed from the site.

3.2 HANDLING

A. Methods

1. Provide equipment and personnel necessary to handle products without soiling or damaging products or packaging.

2. Lift heavy components only at designated lifting points.

3. Handle materials and equipment at all times in a safe manner and as recommended by manufacturer or supplier so that no damage will occur to them.

4. Do not drop, roll, or skid products off delivery vehicles. Hand carry or use suitable materials handling equipment.

5. Keep interiors completely free of dirt and foreign matter.

3.3 STORAGE AND PROTECTION

A. General

1. Make all arrangements and provisions necessary for the storage of materials and equipment.

2. Place all excavated materials, construction equipment, and materials and equipment to be incorporated into the work so as not to damage anything.

3. Keep materials and equipment neatly and compactly stored in locations that will cause a minimum of inconvenience to other contractors, public travel, adjoining owners, tenants, and occupants.

4. Arrange storage in a manner to provide easy access for inspection.

B. Storage Areas

1. Areas available on the construction site for storage of material and equipment shall be as shown or otherwise approved.

2. Store materials and equipment which are to become the property of the Owner in a way to facilitate their inspection and ensure preservation of the quality and fitness of the work, including proper protection against damage by freezing and moisture.

3. Lawns or other private property shall not be used for storage purposes without written permission of the Owner in control of such premises.

4. Restore all storage areas to their original condition.

C. Storage Methods

1. Do not open manufacturer's containers until the time of installation unless recommended by the manufacturer or otherwise specified.

2. Do not store products in the structures being constructed unless approved in writing.

3. The following types of materials may be stored out-of-doors and on wood blocking so there is no contact with the ground.

   a. Masonry units.

   b. Reinforcing steel.

   c. Structural steel.

   d. Piping.

   e. Precast concrete items.

   f. Castings.

   g. Handrailing.

4. The following types of materials may be stored out-of-doors if covered with material impervious to water and sunlight. Store materials on wood blocking and tie down covers with rope and slope to prevent accumulation of water on covers.

   a. Construction lumber.

   b. Wood for formwork.

   c. Fiberglass and plastic materials which are not ultraviolet (UV) protected.

5. Store all products not listed above in buildings or trailers which have a concrete or wooden floor, a roof, and fully closed walls on all sides.

6. Provide heated storage space for materials that would be damaged by freezing.

7. Protect mechanical and electrical equipment from contamination by dust, dirt, and moisture.

8. Maintain humidity at levels recommended by manufacturers for electrical and electronic equipment.

D. Inspection

1. Regularly inspect stored products to ensure that:

a. State of storage facilities is adequate to provide required conditions.

b. Required environmental conditions are maintained on continuous basis.

c. Products exposed to elements are not adversely affected.

2. Be fully responsible for loss or damage to stored materials and equipment.

3.4 MAINTENANCE

A. **Maintenance Log**. Prepare a maintenance log for all equipment.

1. This log shall include a list of required maintenance services and inspections, as provided by the manufacturer.

2. The log shall include checklists for the periodic services and inspections required.

3. Initial and date the checklist upon completion of the individual servicing or inspection.

4. Locate the maintenance log in the field office and have it available for review until it is submitted for record purposes upon completion of the work and the start of the warranty period.

B. Preparation

1. Before removing an item from storage, review the installation location. Protection and services at the installed location must meet the equipment storage requirements.

2. Before moving equipment to the installed location, have materials available for temporary shelter or services required to establish the proper storage environment.

C. Performance of Maintenance

1. Perform all storage and preventive maintenance and inspections required by the manufacturer at the specified intervals from the time of delivery until completion of the work.

2. When notified by the Owner or Owner's Representative of a maintenance deficiency, perform corrective maintenance. Corrective maintenance will be performed per the manufacturer.

3. Reestablish storage maintenance in the event an item or equipment is removed from service.

END OF SECTION

SECTION 01 73 29

CUTTING AND PATCHING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and other Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General**. Provide the labor, tools, equipment, and materials necessary to construct the project in accordance with these plans and specifications.

B. **This section specifies administrative** and procedural requirements for cutting and patching.

C. **Refer to other sections** for specific requirements and limitations applicable to cutting and patching individual parts of the work.

1. Requirements of this section apply to mechanical and electrical installations. Refer to Divisions 22, 23, and 26 for other requirements and limitations applicable to cutting and patching mechanical and electrical installations.

D. **Demolition of selected portions** of the building for alterations is included in section "Selective Demolition."

1.3 QUALITY ASSURANCE

A. **Requirements for Structural Work**. Do not cut and patch structural elements in a manner that would reduce their load-carrying capacity or load deflection ratio.

1. Obtain approval of the cutting and patching proposal before cutting and patching the following structural elements:

a. Foundation construction.

b. Bearing and retaining walls.

c. Structural concrete.

d. Structural steel.

e. Lintels.

f. Timber and primary wood framing.

g. Structural decking.

h. Stair systems.

i. Miscellaneous structural metals.

j. Exterior curtain wall construction.

k. Equipment supports.

l. Piping, ductwork, vessels and equipment.

m. Structural systems of special construction in Division 13.

B. **Operational and Safety Limitations**. Do not cut and patch operating elements or safety-related components in a manner that would result in reducing their capacity to perform as intended, or result in increased maintenance or decreased operational life or safety.

1. Obtain approval of the cutting and patching proposal before cutting and patching the following operating elements or safety-related systems:

a. Shoring, bracing, and sheeting.

b. Primary operational systems and equipment.

c. Air or smoke barriers.

d. Water, moisture, or vapor barriers.

e. Membranes and flashings.

f. Fire protection systems.

g. Noise and vibration control elements and systems.

h. Control systems.

i. Communication systems.

j. Conveying systems.

k. Electrical wiring systems.

l. Special construction specified by Division 13 sections.

C. **Visual Requirements**. Do not cut and patch construction exposed on the exterior or in occupied spaces, in a manner that would, in the Engineer/Architect's opinion, reduce the building's aesthetic qualities or result in visual evidence of cutting and patching. Remove and replace work cut and patched in a visually unsatisfactory manner.

1. If possible retain the original installer or fabricator to cut and patch the following categories of exposed work, or if it is not possible to engage the original installer or fabricator, engage another recognized experienced and specialized firm.

a. Processed concrete finishes.

b. Stonework and stone masonry.

c. Ornamental metal.

d. Matched veneer woodwork.

e. Preformed metal panels.

f. Window wall system.

g. Stucco and ornamental plaster.

h. Acoustical ceilings.

i. Terrazzo.

j. Finished wood flooring.

k. Fluid applied flooring.

l. Carpeting.

m. Aggregate wall coating.

n. Wall covering.

o. Swimming pool finishes.

p. Heating, ventilating, and air conditioning (HVAC) enclosures, cabinets, or covers.

1.4 SUBMITTALS

A. **General**. Submit all submittals in accordance with the Division 1 Submittal Requirements and the requirements within this specification section.

B. Submittal Package No. 1 – Cutting and Patching Proposal

1. Where approval of procedures for cutting and patching is required before proceeding, submit a proposal describing procedures well in advance of the time cutting and patching will be performed and request approval to proceed. Include the following information, as applicable, in the proposal.

a. Describe the extent of cutting and patching required and how it is to be performed; indicate why it cannot be avoided.

b. Describe anticipated results in terms of changes to existing construction; include changes to structural elements and operating components as well as changes in the building's appearance and other significant visual elements.

c. List products to be used and firms or entities that will perform work.

d. Indicate dates when cutting and patching are to be performed.

e. List utilities that will be disturbed or affected, including those that will be relocated and those that will be temporarily out of service. Indicate how long service will be disrupted.

2. Approval to proceed with cutting and patching does not waive the right to later require complete removal and replacement of a part of the work found to be unsatisfactory.

1.5 JOB CONDITIONS (Not used)

1.6 DELIVERY, STORAGE, AND HANDLING (Not used)

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS

2.1 MATERIALS

A. Use materials that are identical to existing materials. If identical materials are not available or cannot be used where exposed surfaces are involved, use materials that match existing adjacent surfaces to the fullest extent possible with regard to visual effect. Use materials whose installed performance will equal or surpass that of existing materials.

PART 3 EXECUTION

3.1 INSPECTION

A. Before cutting existing surfaces, examine surfaces to be cut and patched and conditions under which cutting and patching are to be performed. Take corrective action before proceeding if unsafe or unsatisfactory conditions are encountered.

3.2 PREPARATION

A. **Temporary Support**. Provide temporary support of work to be cut.

B. **Protection**. Protect existing construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of the project that might be exposed during cutting and patching operations.

C. **Avoid interference** with use of adjoining areas or interruption of free passage to adjoining areas.

D. **Take all precautions necessary** to avoid cutting existing pipe, conduit, or ductwork serving the building but scheduled to be removed or relocated until provisions have been made to bypass them.

3.3 PERFORMANCE

A. General

1. Employ skilled workmen to perform cutting and patching.
2. Proceed with cutting and patching at the earliest feasible time and complete without delay.
3. Cut existing construction to provide for installation of other components or performance of other construction activities and the subsequent fitting and patching required to restore surfaces to their original condition.

B. **Cutting**. Cut existing construction using methods least likely to damage elements to be retained or adjoining construction. Where possible review proposed procedures with the original installer; comply with the original installer's recommendations.

1. In general where cutting is required, use hand or small power tools designed for sawing or grinding, not hammering and chopping. Cut holes and slots neatly to size required with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
2. To avoid marring existing finished surfaces, cut or drill from the exposed or finished side into concealed surfaces.
3. Cut through concrete and masonry using a cutting machine such as a carborundum saw or diamond core drill.
4. Comply with requirements of applicable sections of Division 31 where cutting and patching requires excavating and backfilling.
5. Bypass utility services such as pipe or conduit, before cutting, where services are shown or required to be removed, relocated, or abandoned. Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal the remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after bypassing and cutting.

C. **Patching**. Patch with durable seams that are as invisible as possible. Comply with specified tolerances.

1. Where feasible, inspect and test patched areas to demonstrate integrity of the installation.
2. Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.
3. Where removal of walls or partitions extends one finished area into another, patch and repair floor and wall surfaces in the new space to provide an even surface of uniform color and appearance.
4. Remove existing floor and wall coverings and replace with new materials if necessary to achieve uniform color and appearance.
5. Where patching occurs in a smooth painted surface, extend final paint coat over entire unbroken containing the patch, after the patched area has received primer and second coat.
6. Patch, repair, or rehang existing ceilings as necessary to provide an even plane surface of uniform appearance.

3.4 CLEANING

A. Thoroughly clean areas and spaces where cutting and patching are performed or used as access. Remove completely paint, mortar, oils, putty, and items of similar nature. Thoroughly clean piping, conduit, and similar features before painting or other finishing is applied. Restore damaged pipe covering to its original condition.

END OF SECTION

SECTION 01 74 23

CLEANING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Throughout the construction period, maintain all areas of existing buildings and site constructed or affected by the work of the Contract in a standard of cleanliness as described in this section. This shall include progress cleaning, as condition precedent to Substantial Completion, upon completion of the Work, and as required by the General Conditions, this specification, and elsewhere in the Contract Documents.

1. All floors, base, ceilings, and walls shall be cleaned as required by product supplier prior to completing the work detailed on the Room Finish Schedule provided on Sheet A-17. If the supplier does not recommend specific cleaning agents or methods, use cleaning agents and methods that are not hazardous to health and safety of the personnel and will not damage exposed surfaces.

B. **Related Work Described Elsewhere**. In addition to standards described in this section, comply with all requirements for cleaning up as described in various other sections of these specifications.

1.3 QUALITY ASSURANCE

A. **Inspection**. Conduct daily inspections, and more often if necessary, to verify that requirements of cleanliness are being met.

B. **Codes and Standards**. In addition to the standards described in this section, comply with all pertinent requirements of governmental agencies having jurisdiction and comply with Occupational Safety and Health Administration (OSHA) Housekeeping Standards, Subpart C, Section 1926.25.

1.4 SUBMITTALS (Not used)

1.5 JOB CONDITIONS (Not used)

1.6 DELIVERY, STORAGE, AND HANDLING (Not used)

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS

2.1 MATERIALS AND EQUIPMENT

A. Provide all required personnel, equipment, and materials needed to maintain the specified standard of cleanliness.

2.2 COMPATIBILITY

A. Use only the cleaning materials and equipment which are compatible with the surface being cleaned, as recommended by the manufacturer of the material.

PART 3 EXECUTION

3.1 EXAMINATION

A. General

1. Retain all stored items in an orderly arrangement allowing maximum access, not impeding drainage or traffic (vehicle and foot), and providing the required protection of materials.
2. Do not allow the accumulation of scrap, debris, waste material, and other items not required for construction of the work.
3. At least twice each month, and more often if necessary, completely remove all scrap, debris, and waste material from the job site.
4. Comply with OSHA Section 1926-252 of Subpart H of Part 1926, Disposal of Waste Materials.
5. Provide adequate storage for all items awaiting removal from job site, observing all requirements for fire protection and protection of the environment.
6. Do not bury waste materials within the project site.
7. Comply with NFPA 241 for removing combustible waste materials and debris.
8. Do not hold non-combustible materials at the Site more than three (3) days if the ambient air temperature is expected to rise above 80 DEGF. When ambient air temperature is less than 80 DEGF, dispose of non-combustible materials within seven (7) days of their generation.
9. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately.
10. Clean areas where the Work is in progress to maintain an extent of cleanliness necessary for proper execution of the Work and safety of personnel.
11. Remove waste material and rubbish from excavations before backfill and do not burn or bury waste materials at the site.
12. Clean completed construction as frequently as necessary throughout the construction period. This shall include both existing and new equipment, walls, ceilings, and floors.

B. Site

1. Daily, and more often if necessary, inspect the site and pick up all scrap, debris, and waste material.
2. Weekly, and more often if necessary, inspect all arrangements of materials stored on the site; restack, tidy, or otherwise service all arrangements to meet the requirements herein.
3. Maintain the site in a neat and orderly condition at all times and comply with OSHA Housekeeping Standards, Subpart C, Section 1926.25.
4. Keep outdoor dust generating areas wetted down or otherwise control dust emissions.

C. Structures

1. Weekly, and more often if necessary, inspect the structures, pick up all scrap, debris, and waste material.

2. Weekly, and more often if necessary, sweep all interior spaces clean. Interpret "Clean" (for the purpose of this subparagraph) as meaning free from dust and other material capable of being removed by use of reasonable effort and hand-held broom, except that vacuum cleaning shall also be employed if dust accumulates on surfaces above floor.

3. As required preparatory to installation of succeeding materials, clean the structures or pertinent portions thereof to the degree of cleanliness recommended by the manufacturer of the succeeding material, using all equipment and materials required to achieve the required cleanliness.

4. Following the installation of finish floor materials, clean finish floor daily (and more often if necessary) while work is being performed in the space. Interpret "clean" (for the purpose of this subparagraph) as meaning free from all foreign material which may be damaging to the finish floor material.

5. Remove waste material and debris from concealed spaces and vaults before enclosing the space.

3.2 FINAL CLEANING

A. **Definition**. Except as otherwise specifically provided, interpret "clean" (for the purpose of this paragraph) as meaning the level of cleanliness generally provided by skilled cleaners using commercial-quality building maintenance materials.

B. **General**. Prior to completion of the work, remove from the job site all tools, surplus and testing materials, equipment, scrap, debris, temporary protection, and waste. Conduct final cleaning as described in herein.

1. Clean installed surfaces (floors, walls, ceiling, equipment, piping, etc) according to written instructions of the manufacturer or fabricator of installed materials and equipment, using only cleaning agents and methods specifically recommended by material or equipment supplier. This is applicable to all existing and proposed surfaces.

a. If the supplier does not recommend specific cleaning agents or methods, use cleaning agents and methods that are not hazardous to health and safety of the personnel and will not damage exposed surfaces.

C. **Site**. Unless otherwise directed, broom-clean all paved areas on the site and all public paved areas directly adjacent to the site. Completely remove all resultant debris.

D. Structures

1. Exterior.

a. Visually inspect all exterior surfaces and remove all traces of soil, waste material, smudges, and other foreign matter.

b. Remove all traces of splashed materials from adjacent surfaces.

c. If necessary to achieve a uniform degree of exterior cleanliness, hose and brush down the exterior of the structure.

d. In the event of stubborn stains not removable with water, lightly sandblast to remove the stain.

2. Interior.

a. Visually inspect all interior surfaces and remove all traces of soil, waste material, smudges, and other foreign matter.

b. Remove all traces of splashed materials from adjacent surfaces.

c. Remove all paint droppings, spots, stains, and dirt from finished surfaces.

d. Sweep, vacuum, and hand-dust all areas, including concealed surfaces and overhead spaces, to remove all dust.

3. Glass. Clean all glass inside and outside.

4. Polished surfaces. To all surfaces requiring the routine application of buffed polish, apply the polish recommended by the manufacturer of the material being polished.

END OF SECTION

SECTION 01 75 00

FACILITY START-UP

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work.** The Contractor shall provide the labor, tools, equipment, and materials necessary to complete the general requirements for facility start-up and operation of subsystems, systems, and equipment. Start up, test, and operate the completed work including systems and equipment until substantial completion is achieved and the completed work including systems and equipment is accepted by the Owner. Contractor shall cooperate and coordinate with the Owner or Owner's Representative in the operation, maintenance, and adjustment of the work.

1.3 QUALITY ASSURANCE (Not Used)

1.4 SUBMITTALS

A. **Qualifications of Manufacturer's Representative**. Resumes of manufacturer's representatives stating qualifications and experience of individuals proposed for performing facility start-up shall be submitted to the Engineer/Architect for review at least 2 weeks prior to the scheduled date for facility start-up. The Owner and/or Engineer/Architect shall have the right to reject the use of an individual for facility start-up.

B. Manufacturer's Representative Reports

1. The manufacturer's representative shall prepare a daily report on each site visit for each system or item of equipment inspected, adjusted, started up, or worked on. If a manufacturer's representative visits the site for equipment specified in several specification sections, a separate report shall be filed for each specification section.

2. The report shall state the purpose of the visit, the representative's observations and conclusions, and recommendations for further visits or action. The manufacturer's representative shall maintain a log of the settings of all adjustable components. Initial settings shall be recorded and submitted on the first visit. During subsequent visits, the manufacturer's representative shall add the current or adjusted setting to the log.

3. The reports shall be submitted within 48 hours of the visit.

1.5 JOB CONDITIONS

A. **Facility Start-Up**. The series of activities necessary to bring a component, system, or unit process from installation to operational demonstration. Facility start-up includes but is not limited to field testing, dry testing, wet testing,

performance testing, manufacturer's checkout, and start-up, ready for operational demonstrations. Requirements for testing, adjusting, and balancing are provided in Section 01 75 16. Requirements for operational demonstrations are provided in Section 01 79 00.

B. **Start-Up**. Narrowly defined as placing a component, system, or unit process on-line.

C. **Operational Demonstration**. An activity performed by the Contractor wherein the Contractor operates and maintains a fully functional component, system, or unit process for a period of time after facility start-up and stable operation have been achieved in conformance with Section 01 79 00.

D. **Field Testing**. Testing performed on-site by the Contractor to satisfy requirements of the manufacturer and Contract Documents and in conformance with Section 01 75 16.

E. **Manufacturer's Checkout**. Field inspection, testing, adjustments, and sign-off by the manufacturer's representative, indicating that the component, system, or unit process meets the manufacturer's requirements.

1.6 DELIVERY, STORAGE, AND HANDLING (Not Used)

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.1 EXAMINATION AND VERIFICATION OF CONDITIONS

A. **Prior Inspections**. The Contractor shall inspect systems and equipment prior to each start-up and verify their readiness for start-up. Conditions hazardous to equipment or personnel shall be corrected by the Contractor prior to start-up of equipment.

1. Start-up operations shall not proceed using temporary power or temporary instrumentation and control wiring unless approved by the Engineer/Architect. All electrical and control connections shall be permanent and complete, and all such electrical components and equipment fully functional.

2. Use of repair parts during start-up operations shall not be permitted, except in such situations where the actual on-site verification of such repair parts' operability is specified.

3.2 PREPARATION

A. **Test Equipment**. Prior to start-up of equipment or systems, all necessary test equipment shall be in place and operable.

B. **Manufacturer at Site**. Manufacturer's representative(s) shall be present for the initial start-up of systems or equipment.

C. **Permission and Notification**. The Contractor shall request permission to start up equipment, including electrical gear, and notify the Engineer/Architect of the start-up.

1. The start-up request shall be submitted a minimum of 72 hours before the scheduled start-up. Requests shall be made during normal working hours.

2. Approval of the request is based solely on impact on plant operations. Approval does not relieve the Contractor of any responsibility for plant and personnel safety.

D. **Installation Checks**. Normal installation checks, such as for rotation, are not considered start-ups and do not require start-up notification. All electrical apparatus which is energized shall be clearly marked.

3.3 CONDUCT OF START-UP

A. Start-Up

1. All initial start-ups of equipment or systems so designated in the specifications shall be performed under the technical direction of the manufacturer's representative.

2. Any lack of readiness of associated systems or failure of a system or equipment previously started prior to the date of final acceptance of the project shall require additional start-up service by the manufacturer to be performed.

3. The Contractor shall repair, replace, or modify any equipment or system which fails to perform as specified in the individual sections of Divisions 2 through 46.

B. **Available Knowledgeable Contractor Personnel**. When Owner personnel are operating systems or equipment, the Contractor shall make available, at all times, persons knowledgeable about the systems or equipment to direct the Owner personnel in its operation.

C. **Adjustments and Corrections**. The Contractor shall make all adjustments and corrections necessary to achieve normal, stable operation of systems.

D. **Failures and Corrections**. Any failures of equipment or systems operated under the direction of the Contractor shall be considered deficiencies and shall be corrected.

E. **Plant Operations and Processes**. During the facility start-up and at other times, the work will be on-line and an integral part of the plant operations and process. The Owner maintains control of treatment plant operations and processes at all times. Therefore:

1. The Contractor shall not commence, resume, terminate, or suspend the operations without the permission of the Owner and only in a sequence and manner suitable to the Owner.

2. The operation of the work shall be in strict accordance with the operational orders of the Owner.

3. The Contractor shall immediately, on a 24-hour-per-day, 7-day-per-week basis, adjust or repair any malfunction in the work which in the opinion of the Owner jeopardizes or may jeopardize the proper operation of the plant.

4. The Contractor shall not start up, shut down, adjust, or otherwise alter the operation of any component, system, or unit process without the permission of the Owner except in the case of an emergency.

END OF SECTION

SECTION 01 75 16

TESTING, ADJUSTING, AND BALANCING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. This section includes general requirements for the conduct of testing, adjusting, and balancing. Testing, adjusting, and balancing shall be performed in accordance with recognized industry standards and as specified in individual sections of Divisions 2 through 46 of the specifications.

1.3 QUALITY ASSURANCE (Not Used)

1.4 SUBMITTALS

A. **General**. Test reports shall be submitted within 48 hours of the completion, suspension, or termination of the test unless otherwise approved. Test reports shall fully describe the test and results as well as settings of all adjustable components.

1.5 JOB CONDITIONS

A. **General**. The requirements of this section are in addition to those specified by regulatory agencies. Except as specifically prohibited or modified by regulatory requirements, comply fully with all requirements of this section.

1.6 DELIVERY, STORAGE, AND HANDLING (Not Used)

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 MATERIALS AND EQUIPMENT

A. **General**. The Contractor shall supply all materials and equipment used in testing, adjusting, and balancing.

B. **Materials and Equipment**. Materials and equipment used shall be of good quality and suitable for the intended service. The use of miscellaneous items found at the job site is not acceptable.

C. **Range or Capacity**. Select range or capacity of test equipment to provide meaningful test results. Select pressure or differential pressure gauges so that test pressure is 50 percent to 75 percent of maximum gauge reading.

2.2 FABRICATION

A. **Temporary Equipment**. The Contractor shall fabricate, as necessary, any temporary equipment used in testing.

2.3 SOURCE QUALITY CONTROL

A. **Instrument Calibrations**. All instruments shall be calibrated to recognized standards by the instrument manufacturer or a qualified independent calibration

laboratory. Retain instrument calibration data at the Contractor's site office for Owner or Owner's Representative's review.

2.4 TESTING DEFINITIONS

A. **Dry Testing**. Dry testing is performed by the Contractor without introducing either process material or other test material into the component, system, or unit process.

B. **Wet Testing**. Wet testing is performed by the Contractor utilizing test material in the component, system, or unit process. Process tankage shall be filled with test material to operating level.

C. **Performance Testing**. Performance testing is performed by the Contractor to demonstrate system performance in accordance with specification requirements.

PART 3 EXECUTION

3.1 EXAMINATION AND VERIFICATION OF CONDITIONS

A. **Examination**. Review the design and installation of the system or equipment to ensure that the proposed test will not result in a hazard to personnel or equipment.

B. **Verification**. Verify that the equipment, component, or system is completely and correctly installed before beginning tests.

3.2 PREPARATION

A. **Prior Preparation**. Design, fabricate, and install test equipment before commencing the test.

B. **Notification**. Notify and obtain approval of the Engineer/Architect prior to each test.

3.3 TESTING, ADJUSTING, AND BALANCING

A. Dry Testing

1. All equipment and systems shall be tested, adjusted, aligned, lubricated, and balanced in accordance with the manufacturer's instructions prior to testing.

2. Test individual components prior to testing the system of which they are a part.

B. Wet Testing

1. After dry testing, wet test all equipment and systems for a minimum of 72 hours under the design operating conditions utilizing a test material similar to or the same as the process material.

2. All costs, including materials and equipment, for delivery of the test material shall be at the Contractor's expense. Test each component or item of equipment to demonstrate compliance with the design criteria and operating range specified.

3. Suspend or secure all tests in the event that test failures or hazardous conditions occur. Make repairs, replacements, or adjustments and restart test in its entirety.

4. The Contractor shall dispose of the test material at no additional cost to the Owner.

5. The Contractor shall clean all equipment systems and structures upon conclusion of testing at no additional cost to the Owner.

6. Comply with any performance testing requirements specified.

3.4 FIELD QUALITY CONTROL

A. **Presence of Engineer/Architect**. The Engineer/Architect or other Owner's Representative must be present during all wet testing; otherwise, the testing shall be repeated.

B. **Failure**. Tests shall be repeated if results of testing fail to meet test criteria, whether the failure is identified in the field at the time of testing or through test report review.

END OF SECTION

This page intentionally left blank.

SECTION 01 78 23

MAINTENANCE AND OPERATING INSTRUCTIONS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. The Contractor shall prepare and furnish Maintenance and Operating Instructions for installation, maintenance, and operation of all equipment and associated subsystems and systems as specifically required in Divisions 2 through 46.

1.3 QUALITY ASSURANCE (Not Used)

1.4 SUBMITTALS

A. **General**. The Contractor shall initially submit one copy of the maintenance and operating instructions for review. After approval of the review copy, six copies of the revised instructions shall then be submitted. Each copy shall be bound in an appropriately sized three ring notebook with a cover designating the name of equipment, maintenance, and specification section number. Maintenance and operating instructions for each specification section shall be bound in a separate notebook. Six copies of any revisions shall be submitted for insertion in the notebooks.

1.5 JOB CONDITIONS (Not Used)

1.6 DELIVERY, STORAGE, AND HANDLING (Not Used)

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 GENERAL REQUIREMENTS

A. Maintenance and Operating Instructions shall include all of the following:

B. **Manufacturer's Data**. Include general descriptive bulletins, brochures, or catalog sheets used to describe the equipment.

C. **Operating Instructions/Operating Sequence Descriptions**. These shall be complete, detailed written descriptions of the operating sequence of all control systems and operations in all modes. The descriptions shall be specifically prepared for this work and shall be fully referenced to control diagrams and system components. The descriptions shall include start-up and shutdown operations under manual, system safety functions.

D. **Manufacturer's Instructions**. This shall include instructions for storage, installation, routine preventive maintenance, and lubrication. This data shall include instructions that describe the proper procedures for moving, supporting, and anchoring of equipment, including tolerances for settings and adjustment. Also included shall be the storage requirements and procedures to protect

products prior to installation, and once installed, prior to start-up/periods of prolonged shutdown, and proper storage of repair parts.

E. **Parts List**. Include assembly, exploded view illustrations, or sectional drawings with all parts identified. Part listings shall include descriptions, quantity (per assembly) required, and original equipment manufacturer's part numbers.

F. **Supplier Data**. Provide addresses, telephone numbers, and names of contact persons for the equipment manufacturer and manufacturer's representative. Include both regional (local) and home offices.

G. **Warranties and Guarantees**. Include terms and conditions of the warranty. Include the manufacturer's express warranty and any special express warranties as specified in individual sections of Divisions 2 through 46 of the Project Manual in addition to the general warranty. Draft warranties shall be submitted with the shop drawing submittals. Final warranties will become effective on the date of substantial completion applicable to the named equipment. Copies of the approved draft warranties are to be included in the initial Maintenance and Operating Instructions submittal. Following substantial completion, copies of the executed final warranties shall be provided for insertion into the final Maintenance and Operating Instructions.

H. **Approved Submittals**. Provide a complete list (including submittal numbers) of all approved submittals pertaining to the Maintenance and Operating Instructions.

I. **Copies** of all materials shipped with the equipment.

J. **Copies** of all approval submittals including control wiring diagrams.

2.2 DEPOT LEVEL INSTRUCTIONS

A. Individual sections of Divisions 2 through 46 of the Project Manual require that Depot Level information be submitted as part of the initial Maintenance and Operating Instructions. Depot level instructions are detailed instructions that would be used by the manufacturer's factory, repair depot, or authorized service center to repair or rebuild an item of equipment or a component, part, or subassembly of an item of equipment deemed by the manufacturer as "not user serviceable." These instructions will be used for both ordinary and major maintenance, and enable the Owner to overhaul or repair equipment in the event parts become unavailable. The following is a list of depot level instructions that are specifically required by individual sections:

B. **Detailed Parts Lists**. In addition to original equipment manufacturer's parts numbers, provide complete part descriptions, sizes, and materials of construction types and/or grades using appropriate industry standard designation codes. Provide universal part numbers for applicable items such as bearings, seals, and gaskets.

C. **Repair Data**. Include instructions for assembly, disassembly, rebuilding, and repair of the equipment or component.

D. **Manufacturing Data**. Scale drawings and supplementary information with complete dimensions, tolerances, finishes, features, materials, and treatments required for procurement of materials and manufacture of the part(s) or equipment.

E. **Electrical Diagrams**. Schematic diagrams, wiring diagrams, point-to-point wiring diagrams, and logic flow diagrams.

F. **Mechanical Diagrams**. Schematic diagrams of pneumatic, hydraulic, and other mechanical systems and piping.

G. **Troubleshooting Data**. Include procedures, forms, or checklists, outlines, and diagnostic aids and information.

H. **Test Data**. Include procedures, readings, and settings for testing and calibration.

I. **Repair Parts and Maintenance Materials**. List replacement parts, special tools, and consumable materials used in cleaning, maintenance, and repair.

J. **Software/Programming Documentation**. This documentation shall be referenced to the Operating Sequence Descriptions and shall include flow charts, program source code listings, and documentation ladder diagrams with detailed descriptions for each rung for the software provided. Information shall be provided to instruct and to familiarize the operator and shall be reviewed with the system programming to enable a step-by-step evaluation of the program. Notations, remarks, and labeling shall be provided on the program source code listing to indicate the program operation and function. Any additional narrative description of the program operation shall be provided to fully describe the system parameters and functionality in a clear and logical manner.

2.3 OTHER INSTRUCTIONS

A. Submit additional information as required by individual sections of Divisions 2 through 46 of the specifications.

PART 3 EXECUTION

3.1 VERIFICATION

A. **General**. The Contractor shall verify the accuracy of Maintenance and Operation Instructions by visual and physical inspection of the installed equipment. The Contractor shall:

1. Perform field verification in the presence of the Owner or Owner's Representative.
2. Notify Engineers 1 week before the scheduled field verification. The Engineer/Architect may require changes in the field verification schedule.
3. Physically trace and document as required all wiring and piping.
4. Visually inspect equipment and components and compare configurations and nameplate information to Maintenance and Operating Instructions.
5. Submit any changes, additions, or deletions to the Maintenance and Operating Instructions identified during field verification.
6. In the event changes are made to the equipment following field verification, the Contractor shall submit a final supplement of approved revisions of the Maintenance and Operating Instructions.

3.2 SHIPPED INSTRUCTIONS

A. Within 2 weeks of equipment delivery, submit copies of maintenance, operation, and installation instructions shipped with the equipment.

END OF SECTION

This page intentionally left blank.

SECTION 01 78 40

PROJECT RECORD DOCUMENTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and General provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. The Contractor shall provide the labor, tools, equipment, and materials necessary to maintain and provide the Owner with Project Record Documents.

1.3 QUALITY ASSURANCE (Not used.)

1.4 SUBMITTALS

A. **Project Record Documents**. The Contractor shall submit project record documents, as follows:

1. The Contractor shall submit one set of the Contract Drawings with each sheet labeled "Project Record" and updated as specified.

2. The Contractor shall submit one copy of other contract documents with the cover labeled "Project Record" and updated as specified.

3. The Contractor shall submit one copy of each Record Shop Drawing with each sheet labeled "Project Record" and updated as specified.

4. These requirements for Record Project Documents are in addition to the requirements for the Maintenance and Operating Instructions.

1.5 JOB CONDITIONS (Not used.)

1.6 DELIVERY, STORAGE, AND HANDLING (Not used.)

1.7 SPECIAL WARRANTY (Not used.)

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.1 EXAMINATION AND VERIFICATION

A. **Maintenance of Documents**. Maintain in Contractor's field office in clean, dry, legible condition the following: contract drawings, specifications, conforming shop drawings, contract modifications, other modifications of contract, test records, survey data, and all other documents pertinent to Contractor's work.

B. **Files**. Provide files and racks for proper storage and easy access. File in accordance with filing format acceptable to Engineer/Architect.

C. **Availability**. Make documents available at all times for inspection by Engineer/Architect.

D. **Purpose**. Project Record Documents shall not be used for any other purpose and shall not be removed without Engineer/Architect's approval.

3.2 INSTALLATION

A. **Recording Procedure**. Do not permanently conceal any work until required information has been recorded and Engineer/Architect has been given sufficient time to inspect all work.

B. **Update as Construction Proceeds**. Keep all Project Record Documents updated to record construction as actually built and to document all approved changes to the documents. This update information shall include but is not necessarily limited to the following:

1. Contract Drawings. Legibly mark to record actual construction including:

   a. Depths of various elements of foundation in relation to datum.

   b. Horizontal and vertical location of underground utilities and appurtenances referenced to permanent surface improvements.

   c. Location of internal utilities and appurtenances concealed in construction referenced to visible and accessible features of structure.

   d. Field changes of dimension and detail.

   e. Changes made by Change Order or Work Order.

2. Specifications. Legibly mark up each section to record

   a. Manufacturer, trade name, catalog number, and supplier of each product and item of equipment actually incorporated into the work.

   b. Changes made by Change Order or Work Order.

3. Submittals. Prepare and submit one copy of all submittals for the work performed under this Contract. These submittals shall be updated as outlined above. Submittals shall be in legal files with the specification section and title marked on the tab.

END OF SECTION

SECTION 01 79 00

START-UP, DEMONSTRATION, AND TRAINING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. This section includes general requirements for start-up, training, and operational demonstration as required by the specifications.

1.3 QUALITY ASSURANCE

A. Provide all instruments required for testing. Calibrate all test instruments to within appropriate test standards as established by American Society for Testing and Materials (ASTM) or the governing technical standard. Retain calibration data at the Contractor's site office for Owner or Owner's Representative's review.

1.4 SUBMITTALS (Not used)

1.5 JOB CONDITIONS (Not used)

1.6 DELIVERY, STORAGE, AND HANDLING (Not used)

1.7 SPECIAL WARRANTY (Not used)

1.8 DEFINITIONS

A. **Operational Demonstration**. Equipment installed by the Contractor, which has passed functional testing as per manufacturer certification, shall be continuously operated by the Owner (while the Contractor maintains and if necessary adjusts the fully-functional components). The minimum operational demonstration period shall be a period of 7 continuous calendar days for new equipment installed in each primary settling tank and each new sludge pump, and one day for each final settling tank.

B. **Field Testing**. Testing performed on-site by the Contractor to satisfy requirements of the manufacturer and Contract Documents.

1. Dry Testing. Dry testing is performed by the Contractor without introducing either process material or other test material into the component, system, or unit process.

2. Wet Testing. Wet testing is performed by the Contractor utilizing test material in the component, system, or unit process. Process tankage shall be filled with test material to operating level.

3. Performance Testing. Performance testing is performed by the Contractor to demonstrate system performance in accordance with specification requirements.

C. **Start-Up**. An activity performed by the manufacturer's representative with the Contractor immediately after equipment or system is completed to verify the installation.

1. Check the installation for conformance with the plans and specifications.
2. Check the installation for conformance with the shop drawings and manufacturer's data.
3. Verify quantities and data with the operation and maintenance (O&M) manuals.
4. Verify that equipment is ready for operation.
5. Place component, system, or unit process on-line.
6. Perform all required field testing.
7. Prepare and submit a manufacturer's representative's report including certification, recommendations, and conclusions.

D. **Training**. To educate Owner's personnel to become qualified and proficient in the operation, maintenance, and repair of the complete system. Training shall include:

1. Classroom instruction.
2. In-plant, on-site demonstration.
3. Equipment demonstration.
4. Actual hands-on operation by the Owner's staff.
5. All training sessions shall be recorded for the Owner to own for their files.

E. **Adjusting**. To install or change setting, parameters, calibrations, flows, processes, etc., so that the equipment or system operates in a logical or more efficient state.

F. **Balancing**. To make equipment or subsystems operate in harmony or equilibrium by adjusting, altering, or modifying parts of the system.

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.1 START-UP EXECUTION

A. Start-Up Preparation

1. Prior to beginning a start-up, inspect the systems and equipment to verify their readiness to begin with the manufacturer's representative.
2. Correct hazardous conditions to equipment or personnel prior to start-up of equipment.
3. Do not proceed with start-up operations using temporary power or temporary instrumentation and control wiring unless approved. All electrical and control connections shall be permanent and complete, and all such electrical components and equipment fully functional.
4. Design, fabricate, and install all necessary testing and monitoring equipment before commencing the test.

a. Quality. Use materials and equipment of good quality and suitable for the intended service. The use of miscellaneous items found at the job site is not acceptable.

b. Maximum Gauge Readings. Select capacity or range of test equipment to provide meaningful test results. Select pressure or differential pressure gauges so that test pressure is 50 percent to 75 percent of maximum gauge reading.

c. Temporary Equipment. Fabricate, as necessary, any temporary equipment used in testing. This equipment shall remain the property of the Contractor who will remove it from the site upon substantial completion.

5. Manufacturer's representative(s) shall be present for the initial start-up of all systems or equipment.

6. Request permission to start up equipment, including electrical gear, and notify the Engineer/Architect of the start-up.

a. Submit the start-up request a minimum of 72 hours before the scheduled start-up. Make requests in writing during normal working hours.

b. Start-up request shall be in accordance with Section 01 33 00, "Submittals."

c. The Owner and/or Engineer/Architect shall have the right to reject the use of an individual for facility start-up.

d. Approval of the request is based solely on impact on plant operations. Approval does not relieve the Contractor of any responsibility for plant and personnel safety.

e. Coordinate the start-up of each piece of equipment with the Owner and the Engineer/Architect so that operation does not interfere with the normal operation of the facility.

7. Normal installation checks, such as for rotation, are not considered start-ups and do not require start-up notification. Clearly mark all electrical apparatus which is energized.

B. Conduct of Start-Up

1. Equipment Adjustments. Make all adjustments, corrections, and calibrations to set points, process parameters, etc., necessary to achieve normal, stable operation of systems.

2. Equipment Failure. Consider any failures of equipment or systems as deficiencies and correct them. Stop testing and the start-up until all deficiencies have been corrected.

3. System Failure.

a. When there appears to be a system failure and the system is composed of separate but functionally codependent individual pieces of equipment and check-out of each piece of equipment by its respective manufacturer's representative verifies that the equipment is functioning properly, then the Contractor's remains responsible for overall system operation.

b. Verify compatibility of equipment during the submittal process to minimize overall system operating problems.

c. Reconfigure, repair, modify, or replace parts or all the equipment in order to provide a system that shall perform as specified at no additional cost to the Owner.

4. Dry Testing.

a. Test, adjust, align, lubricate, and balance all equipment and systems in accordance with the manufacturer's instructions prior to testing.

b. Test individual components prior to testing the system of which they are a part.

5. Wet Testing.

a. After dry testing, wet test all equipment and systems for a minimum of 72 hours under the design operating conditions utilizing a test material similar to or same as the process material.

b. All costs, including materials and equipment, for delivery of the test material shall be at the Contractor's expense. Test each component or item of equipment to demonstrate compliance with the design criteria and operating range specified.

c. Suspend or secure all tests in the event that test failures or hazardous conditions occur. Make repairs, replacements, or adjustments and restart test in its entirety.

d. Dispose of the test material at no additional cost to the Owner.

e. Clean all equipment systems and structures upon conclusion of testing at no additional cost to the Owner.

f. Comply with any performance testing requirements specified.

6. Retesting. Repeat tests if results fail to meet test criteria, whether the failure is identified during field testing or through reviewing the test report later.

7. Performance Testing. Verify operating ranges, capacities, low and high limits, efficiencies, temperatures, speeds, pressures, sequences, etc., of each piece of equipment being tested. Check monitors, indicators, alarms, and fail-safe devices.

8. Do not use repair parts during start-up operations unless approved.

9. Furnish all lubrication and operating fluids per the manufacturer's instructions.

10. Field-verify initial copy of O&M manual according to Section 01 33 00, "Submittals."

C. **Start-Up Conclusion**. Submit manufacturer's representative's report within 48 hours of conclusion of each start-up. Report shall be in accordance with Section 01 33 00, "Submittals."

3.2 OPERATIONAL DEMONSTRATION EXECUTION

A. **Operational Demonstration Preparation**. Prior to the operational demonstration beginning:

1. Complete start-up procedures including submitting all reports for all parts of the work designated for the operational demonstration.

2. Complete all required construction activities, including any activities by any entity that would interrupt the normal operations of the demonstration.

3. Ensure that adequate parts and supplies for routine maintenance and replacement are on hand to support system operation through the demonstration period.

4. Deliver all repair parts to the Owner.

5. Submit an operational demonstration request according to Section 01 33 00, "Submittals," 48 hours prior to start of operational demonstration.

B. Conduct of Operational Demonstration

1. During the operational demonstration and at other times, the work will be on-line and an integral part of the plant operations and process. The Owner maintains control of plant operations and processes at all times. Therefore:

   a. Do not commence, resume, modify, terminate, or suspend the operations without the permission of the Owner and only in a sequence and manner suitable to the Owner except in the case of an emergency.

   b. The operation of the work shall be in strict accordance with the operational orders of the Owner.

   c. Adjust or repair immediately, on a 24-hour-per-day, 7-day-per-week basis, any malfunction in the work which in the opinion of the Owner jeopardizes or may jeopardize the proper operation of the total facility.

2. Perform operational demonstrations of the entire work. With approval, individual systems may be independently demonstrated as long as their complete range of operation and performance can be shown without the rest of the facility.

3. Update. Keep the log on-site during the operational demonstration and updated on a regular basis. The log shall be available for review by the Owner or Owner's Representative at all times during the operational demonstration.

4. Maintenance. Perform all required maintenance and servicing during the operational demonstration at the specified intervals and as necessary. Note all maintenance and servicing in the operational demonstration log.

5. Time.

   a. The operational demonstration shall last for a period of 30 consecutive days.

   b. All equipment and systems shall remain totally operational during this period.

   c. Upon successful completion of the operational demonstration, the work is considered to be ready for its intended use, and the

Contractor may make recommendation for substantial completion.

d. Outages.

1) Note all outages of equipment, system(s), or the plant in the operational demonstration log.

2) Plant power outages such as power failure, process failure or existing equipment, and planned outages of existing systems for cleaning, maintenance, or repair are considered a part of normal plant operation and will not invalidate the operational demonstration.

3) Be responsible for the safe and orderly shutdown and restart of equipment as necessary in the event of an outage.

4) Do not include outage time in the demonstration time period.

e. Do not count activities such as filling, draining, purging, heating or cooling to temperature, stabilizing, adjusting, testing, or other start-up activity time as operational demonstration time.

f. Failed Operational Demonstration.

1) If, during the operational demonstration, any part of the work fails to fully conform to the requirements of the Contract Documents, consider the operational demonstration to have failed, and the work not to be substantially complete.

2) Upon failure of the operational demonstration, promptly remedy any defects in the work and promptly reschedule and restart the complete operational demonstration time period. No operational demonstration time will be considered to have accrued to any part of the work by reason of a failed operational demonstration.

g. Suspension of Operational Demonstration.

1) During the operational demonstration, the Owner may require or permit the operational demonstration to be suspended upon the written request of the Contractor to correct or adjust the work, when in the judgement of the Owner or Owner's Representative such required correction or adjustment is insufficient to deem the operational demonstration to have failed.

2) If an operational demonstration is suspended for any reason except failure, operational demonstration time shall accrue to the work from the time of the beginning of the operational demonstration to the time of the suspension. No operational demonstration time shall accrue during the period of suspension.

3) If an operational demonstration is suspended at the request of the Contractor, continue operation and maintenance of the work without additional charges to the Owner, according to all provisions of this section of the specifications, and to the extent required by the Owner.

6. O&M Manuals. Start-up and operation of the system and all associated equipment shall be in accordance with the O&M manuals. If deviations from the manuals are necessary, note these in the operational demonstration log, and subsequently submit as revisions to the O&M manuals.

7. Personnel and Consumables.

a. Have sufficient personnel available during the entire demonstration to ensure proper maintenance, adjusting, troubleshooting, and any and all repairs to equipment, controls, etc., to maintain and keep the entire facility operating continuously for 30 consecutive days (720 hours).

b. The Owner will remain in control of the facility processes and provide the manpower to operate the facility.

c. The Owner will furnish all consumable supplies and power required for the 30 day complete facility operational demonstration.

d. Contractor's Supervision. When Owner personnel are operating systems or equipment under supervision of the Contractor during operational demonstration, make available, at all times, persons knowledgeable about the systems or equipment to direct the Owner personnel in its operation.

1) To the extent possible, operate all equipment or individual components throughout their range during this period.

C. Operational Demonstration Completion

1. Within 2 weeks of the termination or completion of the operational demonstration, submit for approval:

a. Any changes to O&M Instructions.

b. The completed operational demonstration logs according to Section 01 33 00, "Submittals."

2. The Owner will not assume full responsibility for operation and maintenance of the system and equipment until successful completion of the operational demonstration and all conditions for substantial completion have been satisfied and both the Contractor and Owner have accepted the Certificate of Substantial Completion.

3.3 TRAINING EXECUTION

A. **Training Preparation**. Coordinate and verify to ensure that, prior to the scheduled training time(s):

1. The equipment is ready for operation and has completed its start-up.
2. That all associated construction required to operate the equipment in all normal and anticipated operating modes is complete.
3. That the equipment area is safe, well lit, and unobstructed, so that all training class attendees may access, hear, view, and participate in the training.
4. That the equipment area is free of construction activities that could present a hazard to training class participants.
5. That adequate training materials, as required, are on hand for use during the training session.
6. Any representatives of interfacing Prime Contractors, subcontractors or equipment suppliers needed to perform supporting operations allowing demonstration of equipment operation, have been notified and will be available.
7. Schedule training sessions through Owner and the Engineer/Architect. Cooperate with the Owner in scheduling all required training sessions.
8. Verify that the training materials are compatible with this equipment. Provide other audio/visual equipment and training aids as needed.
9. The approved O&M manuals shall be available and frequent reference shall be made to the equipment O&M manuals.
10. The instructor's qualifications, the training schedule, the lesson plan, and any instructional materials have been submitted and approved before training begins. Submittals shall be in accordance with Section 01 33 00, "Submittals."
11. Training schedules should be submitted far enough in advance that the Owner can adjust work schedules so that all participants are available for the training sessions.

B. Conduct of Training

1. Provide at least one copy of instructional materials used for training at the time of the first training session for each attendee.
2. Before the training is complete, have all training session attendees sign an attendance sheet.
3. Discuss all items of the approved lesson plan in the classroom or the field, in complete and sufficient detail to allow the Owner's operating personnel to knowledgeably operate and maintain the equipment in accordance with manufacturer's recommended procedures and safety considerations during all anticipated operational and maintenance situations.
4. Address safety concerns and features intended to enhance safety.
5. Address tasks required to maintain the warranty.
6. The Owner reserves the right to record the training session for the future use in training employees.

7. Address all questions and comments as they are raised by the training session participants to the maximum extent practicable. If questions or comments cannot be addressed during the training session, additional materials and/or training may be required.

8. O&M material and instructional material shall not conflict.

C. **Training Conclusion**. Within 2 weeks of the training being completed:

1. Correct, revise, and update the O&M manuals as necessary to agree with training.

2. Submit completed sign-in sheet in accordance with Section 01 33 00, "Submittals."

SECTION 01 86 01

BASIC MECHANICAL REQUIREMENTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this and the other sections of Divisions 22 and 23.

B. **Related Sections.** The following sections contain requirements that relate to this section:

1. Sections 23 09 00 and 23 09 93, "Instrumentation and Controls" and "Sequence of Operation," for controls and interlocks.

1.2 DESCRIPTION OF WORK

A. **General.** The Contractor shall provide the labor, tools, equipment, and materials necessary to construct the project in accordance with the plans and as specified herein.

1. Controls, interlocks, and their wiring systems are work of Division 23.

B. **This section includes general administrative** and procedural requirements for mechanical installations. The following administrative and procedural requirements are included in this section to expand the requirements specified in Division 1:

1. Submittals.
2. Coordination drawings.
3. Record documents.
4. Maintenance manuals.
5. Rough-ins.
6. Mechanical installations.
7. Cutting and patching.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

1.4 SUBMITTALS

A. **Transmittals**. Furnish manufacturer's product data. Furnish test reports and material certifications where required by the sections in Divisions 22 and 23.

B. **Follow the procedures specified** in Division 1 section "Submittals."

C. **Quantity.** Increase, by the quantity listed below, the number of mechanical related shop drawings, product data, and samples submitted, to allow for required distribution.

1. Shop Drawings - Initial Submittal. One additional blue or black line prints.

2. Shop Drawings - Final Submittal. One additional blue or black line prints.

3. Product Data. One additional copy of each item.

4. Samples. One addition as set.

D. **Additional Copies.** Additional copies may be required by individual sections of these specifications.

1.5 JOB CONDITIONS (Not Used)

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery.** Deliver products to the project properly identified with names, model numbers, types, grades, compliance labels, and other information needed for identification.

1.7 SPECIAL WARRANTY (Not Used)

1.8 COORDINATION DRAWINGS

A. **Coordination drawings** are required for the following buildings:

1. Collection Maintenance

2. Laboratory

3. Secondary Operations

B. **General.** Prepare coordination drawings in accordance with Section 01 33 00 "Submittals," to a scale of 3/8"=1'-0" or larger; detailing major elements, components, and systems of mechanical equipment and materials in relationship with other systems, installations, and building components. Indicate locations where space is limited for installation and access and where sequencing and coordination of installations are of importance to the efficient flow of the work, including (but not necessarily limited to) the following:

1. Indicate the proposed locations of piping, ductwork, equipment, and materials. Include the following:

a. Clearances for installing and maintaining insulation.

b. Clearances for servicing and maintaining equipment, including tube removal, filter removal, and space for equipment disassembly required for periodic maintenance.

c. Equipment connections and support details.

d. Exterior wall and foundation penetrations.

e. Fire rated wall and floor penetrations.

f. Sizes and location of required concrete pads and bases.

g. Valve stem movement.

2. Indicate scheduling, sequencing, movement, and positioning of large equipment into the building during construction.

3. Prepare floor plans, elevations, and details to indicate penetrations in floors, walls, and ceilings and their relationship to other penetrations and installations.

4. Prepare reflected ceiling plans to coordinate and integrate installations, air outlets and inlets, light fixtures, communication systems components, sprinklers, and other ceiling mounted items.

1.9 RECORD DOCUMENTS

A. **General.** Prepare record documents in accordance with the requirements in Section 01 78 40, "Project Record Documents." In addition to the requirements specified in Division 1, indicate the following installed conditions:

1. Ductwork mains and branches, size and location, for both exterior and interior; locations of dampers and other control devices; filters, boxes, and terminal units requiring periodic maintenance or repair.

2. Mains and branches of piping systems, with valves and control devices located and numbered, concealed unions located, and with items requiring maintenance located (i.e., traps, strainers, expansion compensators, tanks, etc.). Valve location diagrams, complete with valve tag chart. Refer to Section 22 05 53, "Mechanical Identification." Indicate actual inverts and horizontal locations of underground piping.

3. Equipment locations (exposed and concealed), dimensioned from prominent building lines.

4. Approved substitutions, contract modifications, and actual equipment and materials installed.

5. Contract modifications, actual equipment and materials installed.

B. **Invert Elevations.** Engage the services of a Land Surveyor or Professional Engineer registered in the state in which the project is located to record the locations and invert elevations of underground installations.

1.10 MAINTENANCE MANUALS

A. **General.** Prepare maintenance manuals in accordance with Section 01 78 00, "Project Closeout." In addition to the requirements specified in Division 1, include the following information for equipment items:

1. Description of function, normal operating characteristics and limitations, performance curves, engineering data and tests, and complete nomenclature and commercial numbers of replacement parts.

2. Manufacturer's printed operating procedures to include start-up, break-in, and routine and normal operating instructions; regulation, control, stopping, shutdown, and emergency instructions; and summer and winter operating instructions. Clearly mark applicable portions of manufacturer's literature and cross out all information not pertinent to products provided.

3. Maintenance procedures for routine preventative maintenance and troubleshooting; disassembly, repair, and reassembly; aligning and adjusting instructions.

4. Servicing instructions and lubrication charts and schedules.

5. Provide tabbed sections for each item of equipment and a table of contents for each tabbed section.

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.1 EXAMINATION

A. **Rough-in Measurements.** Verify final locations for rough-ins with field measurements and with the requirements of the actual equipment to be connected.

B. **Location of Requirements.** Refer to equipment specifications in Divisions 2 through 16 for rough-in requirements.

3.2 PREPARATION

A. **General**. Sequence, coordinate, and integrate the various elements of mechanical systems, materials, and equipment. Comply with the following requirements:

1. Coordinate mechanical systems, equipment, and materials installation with other building components.

2. Verify all dimensions by field measurements.

3. Arrange for chases, slots, and openings in other building components during progress of construction, to allow for mechanical installations.

4. Coordinate the installation of supporting devices and sleeves to be set in poured-in-place concrete and other structural components, as they are constructed.

5. Sequence, coordinate, and integrate installations of mechanical materials and equipment for efficient flow of the work. Give particular attention to large equipment requiring positioning prior to closing in the building.

6. Where mounting heights are not detailed or dimensioned, install systems, materials, and equipment to provide the maximum headroom possible.

7. Coordinate connection of mechanical systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies. Provide required connection for each service.

3.3 ERECTION/INSTALLATION/APPLICATION

A. **General.** Install systems, materials, and equipment to conform with approved submittal data, including coordination drawings, to greatest extent possible. Conform to arrangements indicated by the Contract Documents, recognizing that portions of the work are shown only in diagrammatic form. Where coordination requirements conflict with individual system requirements, refer conflict to the Engineer/Architect.

B. **Orientation**. Install systems, materials, and equipment level and plumb, parallel and perpendicular to other building systems and components, where installed exposed in finished spaces.

C. **Location**. Install mechanical equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. As much as practical, connect equipment for ease of disconnecting, with minimum of interference with other installations. Extend grease fittings to an accessible location.

D. **Access Panels**. Install access panel or doors where units are concealed behind finished surfaces. Access panels and doors are specified in Section 01 86 03, "Basic Mechanical Materials and Methods."

E. **Conflicts**. Install systems, materials, and equipment giving right-of-way priority to systems required to be installed at a specified slope.

F. Cutting and Patching

1. General. Perform cutting and patching in accordance with Section 01 73 29, "Cutting and Patching." In addition to the requirements specified in Division 1, the following requirements apply:

a. Protection of Installed Work. During cutting and patching operations, protect adjacent installations.

2. Examples. Perform cutting, fitting, and patching of mechanical equipment and materials required to:

a. Uncover work to provide for installation of ill timed work.

b. Remove and replace defective work.

c. Remove and replace work not conforming to requirements of the Contract Documents.

d. Remove samples of installed work as specified for testing.

e. Install equipment and materials in existing structures.

f. Upon written instructions from the Engineer/Architect, uncover and restore work to provide for Engineer/Architect observation of concealed work.

3. Removal of Existing Work. Cut, remove and legally dispose of selected mechanical equipment, components, and materials as indicated, including but not limited to removal of mechanical piping, heating units, plumbing fixtures and trim, and other mechanical items made obsolete by the new work.

3.4 PROTECTION

A. **Protect Remaining Work.** Protect the structure, furnishings, finishes, and adjacent materials not indicated or scheduled to be removed.

B. **Dust Protection.** Provide and maintain temporary partitions or dust barriers adequate to prevent the spread of dust and dirt to adjacent areas.

1. Patch existing finished surfaces and building components using new materials matching existing materials and experienced installers. Installers' qualifications refer to the materials and methods required for the surface and building components being patched.

2. Patch finished surfaces and building components using new materials specified for the original installation and experienced installers. Installers' qualifications refer to the materials and methods required for the surface and building components being patched.

END OF SECTION

SECTION 01 89 19

LEAKAGE TEST AND DISINFECTION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. Provide the labor, tools, equipment, and materials necessary to perform the leakage tests and disinfection of pipes, equipment, and tanks in accordance with the drawings and the specifications.

1.3 QUALITY ASSURANCE

A. Materials and workmanship shall be in accordance with the following standards as referenced herein:

1. **AWWA**. American Water Works Association.
2. **ASTM**. American Society for Testing and Materials.
3. **ACI**. American Concrete Institute.

1.4 SUBMITTALS

A. **Test Reports**. Submit test results of all testing included in this section including, but not limited to, the following:

1. Pressure tests.
2. Tests for efficacy of disinfection.

1.5 JOB CONDITIONS. (Not used)

1.6 DELIVERY, STORAGE, AND HANDLING (Not used)

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine conditions under which the pipe section, facility, or part of a facility is to be tested or disinfected and verify that conditions are satisfactory and ready for the test to proceed.

3.2 PREPARATION

A. **Protection**. Protect adjacent equipment, materials, piping, and valving against drainage from testing and/or disinfection.

B. **Notification**. Notify the Engineer at least 24 hours prior to any testing and/or disinfecting. Notify the Owner at least 48 hours prior to any disinfecting. Notify the Engineer immediately of all unsatisfactory or nonconforming conditions.

C. **Responsibility**. Beginning the test means acceptance of all the existing surfaces and conditions.

3.3 PRESSURE MAIN AND PROCESS PIPING LEAKAGE TESTING

A. **Description**. Provide the leakage tests as directed and as specified herein. Furnish gauges for the tests with the most recent gauge calibration test report available for review on-site.

B. **Test Section**. No test section shall be longer than 500 feet without approval.

C. **Leakage Allowances** (unless noted otherwise)

1. Pressure Mains. The maximum leakage allowance for all pressure mains shall be 10.49 gallons per inch diameter per mile of pipe per 24 hours.

2. Process Piping Including Air Piping. No leakage is acceptable.

D. **Test Procedure**

1. Slowly fill each pressure main or process piping section with water to the specified test pressure in a satisfactory manner.

2. Before applying the specified test pressure, expel all air from the pipe.

3. Maintain the test water pressure for at least 2 hours.

4. Determine leakage by measuring the quantity of water added to the main to maintain the specified test pressure.

5. Unless noted otherwise, minimum test water pressure shall be the greater of 1.5 times the working pressure or the following:

a. Mains or process piping carrying water – 150 pounds per square inch (psi).

b. Force mains – 100 psi.

c. Other pressure mains – 100 psi.

E. **Air Piping Test Procedure**

1. Backfill the section of air main to be tested prior to testing.

2. Test each valved section of air main with air at the specified test pressure by means of a compressor connected to the main in a satisfactory manner.

3. Bring the air pressure to 150 percent of the system's blower(s) shutoff head (but in no case greater than the pressure rating of the pipe) unless otherwise noted and maintain for at least 2 hours.

4. Determine leakage by comparison of initial and final pressure gauge readings.

3.4 DISINFECTION

A. **General**

1. Thoroughly clean, flush, and disinfect pipes, tanks, and equipment designed to carry water for domestic consumption before acceptance by the Owner.

2. Engineer will confirm that the item to be disinfected is thoroughly

cleaned and flushed prior to disinfection.

3. Disinfection shall be done by the addition of suitable amounts of chlorine in the form of liquid chlorine or high test hypochlorite of lime.

4. The application shall be as approved by the Owner and in accordance with the appropriate AWWA standard listed below.

    a. Water mains are under AWWA C651.

    b. Water storage tanks are under AWWA C652.

    c. Water treatment plants are under AWWA C653.

5. Perform tests for efficacy of disinfection, and repeat disinfection and tests as needed at no cost to the Owner.

6. Dispose of heavily chlorinated water in accordance with AWWA C651 and AWWA C651 Appendix II, and not to a sanitary sewer or the environment unless dechlorinated sufficiently to not interfere with treatment of sanitary sewage or the environment.

3.5 SANITARY SEWER LEAKAGE TESTING

A. **Test Section**. A sanitary sewer test section shall be from the inlet end of the downstream manhole to the outlet end of the upstream manhole, including all laterals in the sewer.

B. **Leakage Allowance** (unless noted otherwise). The maximum leakage allowance for all sanitary sewers shall be 100 gallons per inch diameter per mile of pipe per 24 hours.

C. **Test Procedure**. Use either an infiltration water test, exfiltration water test, or a low-pressure air test for gravity sewers after backfilling is completed.

1. Infiltration.

    a. The infiltration test may be selected when the height of the groundwater table is 2 feet or more above the top of the pipe barrel, including house services, at the highest point of the section.

    b. Measure the amount of infiltration by means of a weir located in the downstream manhole, and the amount shall not exceed the allowable leakage.

    c. Securely seal the inlet end of the upstream manhole.

    d. Maintain the test head for a period of not less than 24 hours before the weir measurement is made.

2. Exfiltration.

    a. When the exfiltration test is selected, close the inlet ends of the upstream and downstream manholes with a watertight bulkhead.

    b. Fill the sewer along with the upstream manhole with water until the elevation of the water in the upstream manhole is 2 feet higher than the top of the pipe barrel, including house services, in the section being tested, or 2 feet above the existing

groundwater in the trench, whichever is the higher elevation.

c. Fill and maintain the entire length of section to be tested full of water for a period of approximately 24 hours prior to the start of the test.

d. If the water level in the upper manhole has dropped during this 24 hour period, raise the level to the test elevation mark prior to measurement of leakage.

e. Determine the exfiltration by measuring the amount of water required to maintain the above stated water elevation for a period of 2 hours from the start of the test.

f. The allowable leakage is based on a maximum difference in elevation of 8 feet between the level of water at the upper manhole and the invert of the pipe being tested in the lower manhole.

g. If the difference in elevation exceeds 8 feet, increase the allowable leakage 5 percent for each 1 foot in excess of 8 feet.

3. Low-Pressure Air Test. Testing shall meet the requirements of the following standards.

Pipe Material	Testing Standard
Concrete Pipe (24” & under)	ASTM C 924
Concrete Pipe (over 24”)	ASTM C 1103
Clay Pipe	ASTM C 828
Plastic Pipe	ASTM F 1417
All Others	ASTM F 1417

D. **Manhole and Precast Wet Wells Leakage Testing**

1. Vacuum-test all sanitary manholes for leaks, instead of the water testing specified above.

2. The vacuum test method shall be in accordance with ASTM C 1244, except as specified otherwise herein.

3. Furnish all equipment and labor required, including necessary piping/hoses, pneumatic plugs, test vacuum equipment (vacuum pump and vacuum plate/head), vacuum gauge, and second timer. The vacuum gauge shall have a maximum range of 0 to 30 inches of mercury (Hg) and the vacuum gauge figure intervals shall be in 1/2-inch increments.

4. Perform the vacuum test witnessed by the Engineer.

5. Remove all pneumatic plugs after the test.

3.6 STORAGE TANK LEAKAGE TESTING

A. Demonstrate water tightness of all liquid- bearing tanks in accordance with ACI 350.1, "Tightness Testing of Environmental Engineering Concrete Structures."

3.7 FIELD QUALITY CONTROL

A. **Field Tests**

1. Provide all test materials, equipment, chemicals, and water required for testing or disinfection at no additional cost to the Owner.

2. Perform testing according to the methods described in this section.

B. **Witness**

1. All leakage tests shall be witnessed and approved before acceptance.

2. Any test performed without witness by the Engineer, may require retesting the section in conformance with this specification at no cost to the Owner.

C. **Test Results**

1. If the field tests show excessive leakage, repair, adjust, modify, or replace the noncomplying sections until the tests are successfully completed.

2. If the field tests show noncompliance with the disinfection requirements, repeat the disinfection procedure until the tests are successfully completed.

3. This shall be done at no additional cost to the Owner.

3.8 CLEANING AND DISPOSAL

A. Remove and dispose of all excess material and debris as a result of the work completed under this section, including testing procedures.

3.9 PROTECTION

A. **Protect the sections tested** and approved, but prior to acceptance by the Owner.

B. **Protection of the tested** and approved piping sections shall include provisions during installation and testing of nearby piping, valving, or other adjacent equipment.

C. **Remove all protective measures** installed at completion and acceptance of the project.

END OF SECTION

This page intentionally left blank.

SECTION 02 41 00

DEMOLITION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. Provide the labor, tools, and equipment necessary to remove and salvage or dispose of the structures or portions thereof in accordance with the plans and specifications.

1.3 QUALITY ASSURANCE (Not used)

1.4 SUBMITTALS.

A. Submit the following submittal packages in accordance with the Division 1 Submittal Requirements and the requirements of this specification section.

B. Submittal Package No. 1 – Demolition Package

1. Package Contents. A proposed schedule of demolition for the purposes of coordinating shutoff, capping, and continuation of utility services as required to operate the facility.

1.5 JOB CONDITIONS

A. **Beginning Work**. Vacate structures to be demolished and discontinue their use prior to start of work.

B. Protection

1. Structural. Prior to the removal of any wall, beam, or column, or cutting of any openings, examine the existing structure and, when required, protect the structure by shoring, bracing, or underpinning.

2. Equipment and Tanks. Protect all equipment and tanks from dust, dirt, debris, and damage by covering with planking and tarpaulins during demolition.

3. Ensure safe passage of persons and vehicles around area of demolition. Conduct operations to prevent damage to adjacent buildings, structures, and other facilities and injury to persons.

C. **Explosives**. Do not use explosives.

1.6 DELIVERY, STORAGE, AND HANDLING

A. In accordance with Section 01 60 00.

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS (Not used)

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify the actual areas, structures or parts of structures, pipes, or other items to be demolished in the presence of the Owner and Engineer/Architect.

3.2 PREPARATION

A. **Equipment and Manpower**. Have all required equipment and staff available at the job site prior to beginning of demolition. This includes any special equipment to permit continued uninterrupted Owner operations as required.

B. **Coordination**. Provide adequate but no less than 48 hours of notice when any Owner operations are affected by demolition.

3.3 DEMOLITION

A. **Demolition Schedule**. Perform demolition work in accordance with the final approved schedule of demolition.

B. **Selective Demolition**. Perform selective demolition work in a systematic manner. Use such methods as required to complete work shown in accordance with demolition schedule and governing regulations.

1. Demolish concrete and masonry in small sections. Cut concrete and masonry at junctures with construction to remain using power-driven masonry saw or hand tools; do not use power-driven impact tools.
2. Promptly remove debris and locate demolition equipment to avoid imposing excessive loads on supporting walls, floors, or framing.
3. Provide services for effective air and water pollution controls as required by local authorities having jurisdiction.
4. Demolish foundation walls and below grade concrete slabs. Demolish and remove below grade wood or metal construction.
5. Cut off piles 1 foot below finished grade.
6. Remove all exposed reinforcing steel unless noted otherwise.
7. For slabs, use removal methods that will not crack or structurally disturb adjacent slabs or partitions. Use power saw where possible. Saw-cut a minimum of 3 inches deep around perimeter of portions of slabs to be removed.
8. Completely fill below grade areas and voids resulting from demolition work.

C. Miscellaneous

1. If unanticipated mechanical, electrical, or structural elements that conflict with intended function or design are encountered, investigate and measure both nature and extent of the conflict.
2. Submit report to Owner's Representative in written, accurate detail.
3. Pending receipt of directive from Owner's Representative, rearrange selective demolition schedule as necessary to continue overall job progress without undue delay.

D. **Salvage**. Remove with care, clean, and store all material and equipment designated to be salvaged in an approved area at the site.

E. Openings

1. Concrete. Close concrete openings using a non-shrink, non-metallic grout.

2. New. Neatly cut or drill new openings to prevent face chipping or spalling. Repair all damaged areas to a condition equivalent to that which existed prior to the start of work.

F. Patching Concrete

1. Repair all concrete that has been marred, damaged, or defaced as a result of demolition.

2. Procedure. Repair concrete surfaces as follows:

a. Saw cut and remove concrete to a depth of not less than 1 inch.

b. Remove exposed reinforcing where noted.

c. Apply an approved bonding agent to the cut surface.

d. Patch with a non-shrink, non-metallic grout finished to match the existing surface unless noted otherwise.

G. **Anchors**. Cut all embedded anchors of removed items flush with the existing surface.

H. **Pipe**. Plug all abandoned pipe at each end.

I. **Cleanup**. Remove from the site all debris, rubble, unusable materials, and items not salvaged.

END OF SECTION

This page intentionally left blank.

SECTION 02 41 16

BUILDING DEMOLITION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General**. Provide the labor, tools, equipment, and materials necessary to perform building demolition in accordance with the plans and specifications.

B. **Removal or Disposal**. This section requires removal and disposal, off-site, of the following:

1. Building structure as shown, except the items listed below which the Owner will remove prior to start of work.

2. Building foundations and supporting walls, unless otherwise noted.

1.3 QUALITY ASSURANCE (Not used)

1.4 SUBMITTALS

1.5 Submit the following in accordance with Conditions of Contract and Division 1 specification sections.

A. Submittal Package No. 1 – Schedule and Documentation

1. Package Contents.

a. Proposed schedule of operations coordination for shutoff, capping, and continuation of utility services as required. Provide a detailed sequence of demolition and removal work to ensure uninterrupted progress of Owner's on-site operations.

b. Photographs of existing adjacent structures and site improvements that might be misconstrued as damage related to removal operations. Document location where each photograph was taken and date. File with Owner's Representative prior to start of work.

c. Elevation control survey of existing adjacent structures.

1.6 JOB CONDITIONS

A. **Occupancy**. The Filter Building shall remain in operation during demolition activities.

B. **Condition of Structures**. Owner assumes no responsibility for actual condition of structures to be demolished. Conditions existing at time of inspection for bidding purpose will be maintained by Owner insofar as practicable. However, variations within structure may occur by Owner's removal and salvage operations prior to start of demolition work.

C. **Salvaged Materials**. Remove items of salvable value from structure as work progresses. Transport salvaged items from site as they are removed. Do not store or sell removed items on-site.

D. **Explosives**. Do not use explosives.

E. Traffic

1. Conduct demolition operations and removal of debris to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.

2. Do not close or obstruct streets, walks, or other occupied or used facilities without permission from authorities having jurisdiction.

3. Provide alternate routes around closed or obstructed traffic ways if required by governing regulations.

F. **Protection**. Ensure safe passage of persons around area of demolition. Conduct operations to prevent damage to adjacent buildings, structures, and other facilities and injury to persons.

1. Provide interior and exterior shoring, bracing, or support to prevent movement, settlement, or collapse of adjacent facilities to remain, and uncontrolled collapse of structures to be demolished.

G. **Damage**. Promptly repair damage caused to adjacent facilities by demolition operations.

H. **Utility Services**. Maintain existing utilities indicated to stay in service and protect against damage during demolition operations.

1. Do not interrupt existing utilities serving occupied or used facilities, except when authorized in writing by authorities having jurisdiction. Provide temporary services during interruptions to existing utilities, as acceptable to Owner and governing authorities.

2. Owner will shut off utilities serving structures. Disconnecting and sealing indicated utilities before starting demolition operations are part of this work.

1.7 DELIVERY, STORAGE, AND HANDLING (Not used)

1.8 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS (Not used)

PART 3 EXECUTION

3.1 DEMOLITION

A. Pollution Controls

1. Use water sprinkling, temporary enclosures, and other suitable methods to limit dust and dirt rising and scattering in air.

2. Comply with governing regulations pertaining to environmental protection.

3. Do not use water when it may create hazardous or objectionable conditions such as ice, flooding, and pollution.

B. **Clean adjacent structures and improvements** of dust, dirt, and debris caused by demolition operations. Return adjacent areas to condition existing prior to start of work.

C. **Building Demolition**. Demolish buildings completely and remove from site. Use such methods as required to complete work within limitations of governing regulations.

1. Remove small structures intact when acceptable and when approved.
2. Proceed with demolition in systematic manner, from top of structure to ground. Complete demolition work above each floor or tier before disturbing supporting members on lower levels.
3. Demolish concrete and masonry in small sections.
4. Remove structural framing members and lower to ground by hoists, derricks, or other suitable methods.
5. Break up and remove concrete slabs on-grade, unless otherwise shown to remain.
6. Locate demolition equipment throughout structure and remove materials so as to not impose excessive loads to supporting walls, floors, or framing.

D. Belowgrade Construction

1. Demolish foundation walls and other belowgrade construction, including concrete slabs.

E. Filling Basements and Voids

1. Completely fill belowgrade areas and voids resulting from demolition of structures in accordance with Section
31 23 00, “Excavation Backfill, and Embankment."
2. After fill placement and compaction, grade surface to meet adjacent contours and to provide flow to surface drainage structures.

3.2 SALVAGED MATERIALS

A. **General**. Carefully remove items shown to be incorporated in the new work or to be delivered to the Owner to avoid damage. Remove all other material and items from the site with further disposition at Contractor's option.

3.3 DISPOSAL OF DEMOLISHED MATERIALS

A. General

1. Remove weekly from site accumulated debris, rubbish, and other materials resulting from demolition operations.
2. Burning of combustible materials from demolished structures will not be permitted on-site.

B. **Removal**. Transport and legally dispose of off-site materials removed from demolished structures.

END OF SECTION

This page intentionally left blank.

SECTION 02 41 19

SELECTIVE DEMOLITION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. Provide the labor, tools, equipment, and materials necessary to perform selective demolition in accordance with the plans and specifications.

B. **Removal and Disposal**. This section requires the selective removal and subsequent off-site disposal of the following:

1. Portions of existing building as shown and as required to accommodate new construction.

2. Removal of stairs, ladders, grating, and cover plates as shown.

3. Removal of doors and frames indicated "remove."

4. Removal of exterior insulated metal wall panels indicated "remove."

5. Removal of existing windows indicated to be bricked in.

6. Removal and protection of existing fixtures, materials, and equipment items indicated "salvage." See Part 3.3 in this Section.

C. Removal Work Specified Elsewhere

1. Roofing and roof insulation removal is specified in Division 7.

2. Cutting holes in roof deck for installation of new rooftop mechanical equipment.

D. Related Work Specified Elsewhere

1. Patching is included within the respective sections of specifications, including removal of materials for reuse and incorporation into remodeling or new construction.

1.3 QUALITY ASSURANCE (Not used)

1.4 SUBMITTALS

A. Submit the following submittal packages in accordance with the Division 1 Submittal Requirements and the requirements within this specification section.

B. Submittal Package No. 1 – Demolition Schedule and Documentation

1. Package Contents.

a. Schedule indicating proposed sequence of operations for selective demolition work to Owner's Representative for review prior to start of work. Include coordination for shutoff, capping, and continuation of utility services as required, together with details for dust and noise control protection.

1) Provide detailed sequence of demolition and removal work to ensure uninterrupted progress of Owner's on-site operations.

2) Coordinate with Owner's continuing occupation of portions of existing building and with Owner's partial occupancy of completed new addition.

b. Photographs of existing conditions of structure surfaces, equipment, and adjacent improvements that might be misconstrued as damage related to removal operations. Document location where each photograph is taken and date. File with Owner's Representative prior to start of work.

c. Elevation control survey of existing adjacent structures.

1.5 JOB CONDITIONS

A. Occupancy

1. Owner will occupy portions of the building immediately adjacent to areas of selective demolition.

2. Conduct selective demolition work in manner that will minimize need for disruption of Owner's normal operations.

3. Provide minimum of 72 hours' advance notice to Owner of demolition activities that will affect Owner's normal operations.

4. Other restrictions related to the disruption to the Owner and restrictions on the Contractor's work are shown or listed below.

B. Condition of Structures

1. Owner assumes no responsibility for actual condition of items or structures to be demolished.

2. Conditions existing at time of inspection for bidding purposes will be maintained by Owner insofar as practicable.

3. However, minor variations within structure may occur by Owner's removal and salvage operations prior to start of selective demolition work.

C. Partial Demolition and Removal

1. Remove items indicated to be removed but of salvageable value from structure as work progresses.

2. Transport salvaged items from site as they are removed.

3. Do not store or sell removed items on-site.

D. **Protection**. Provide temporary barricades and other forms of protection to protect Owner's personnel and general public from injury due to selective demolition work.

1. Provide protective measures as required to provide free and safe passage of Owner's personnel and general public to occupied portions of building.

2. Erect temporary covered passageways as required by authorities having jurisdiction.

3. Provide interior and exterior shoring, bracing, or support to prevent movement, settlement, or collapse of adjacent facilities or work to remain, and uncontrolled collapse of structure or element to be demolished.

4. Protect from damage existing finish work that is to remain in place and becomes exposed during demolition operations.

5. Protect floors with suitable coverings when necessary.

6. Construct temporary insulated dustproof partitions where required to separate areas where noisy or extensive dirt or dust operations are performed. Equip partitions with dustproof doors and security locks.

7. Provide temporary weather protection between demolition and removal of existing construction on exterior surfaces and installation of new construction to ensure that no water leakage or damage occurs to structure or interior areas of existing building.

8. Remove protection at completion of work.

E. **Damage**. Promptly repair damage caused to adjacent facilities by demolition work.

F. Traffic

1. Conduct selective demolition operations and debris removal to ensure minimum interference with roads, streets, walks, and other adjacent occupied or used facilities.

2. Do not close, block, or otherwise obstruct streets, walks, or other occupied or used facilities without written permission from authorities having jurisdiction.

3. Provide alternate routes around closed or obstructed traffic ways if required by governing regulations.

G. **Flame Cutting**. Do not use cutting torches for removal until work area is cleared of flammable materials. At concealed spaces, such as interior of ducts and pipe spaces, verify condition of hidden space before starting flame-cutting operations. Maintain portable fire-suppression devices during flame-cutting operations.

H. Utility Services

1. Maintain existing utilities indicated to remain in service and protect them against damage during demolition operations.

2. Do not interrupt utilities serving occupied or used facilities, except when authorized in writing by authorities having jurisdiction.

3. Provide temporary services during interruptions to existing utilities, as acceptable to governing authorities.

4. Maintain fire protection services during selective demolition operations.

I. Environmental Controls

1. Use water sprinkling, temporary enclosures, and other methods to limit dust and dirt migration.

2. Comply with governing regulations pertaining to environmental protection.

3. Do not use water when it may create hazardous or objectionable conditions such as ice, flooding, and pollution.

1.6 DELIVERY, STORAGE, AND HANDLING (Not used)

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS (Not used)

PART 3 EXECUTION

3.1 PREPARATION

A. **General**. Provide interior and exterior shoring, bracing, or support to prevent movement, settlement, or collapse of areas to be demolished and adjacent facilities to remain.

1. Cease operations and notify Owner's Representative immediately if safety of structure appears to be endangered. Take precautions to support structure until determination is made for continuing operations.

2. Cover and protect furniture, equipment, and fixtures from soilage or damage when demolition work is performed in areas where such items have not been removed.

3. Erect and maintain dustproof partitions and closures as required to prevent spread of dust or fumes to occupied portions of the building.

a. Where selective demolition occurs immediately adjacent to occupied portions of the building, construct dustproof partitions of minimum 4-inch studs, 5/8-inch drywall (joints taped) on occupied side, 1/2-inch fire-retardant plywood on demolition side. Fill partition cavity with sound deadening insulation.

b. Provide weatherproof closures for exterior openings resulting from demolition work.

4. Locate, identify, stub off, and disconnect utility services that are not indicated to remain.

5. Provide bypass connections as necessary to maintain continuity of service to occupied areas of building. Provide minimum of 72 hours' advance notice to Owner if shutdown of service is necessary during changeover.

3.2 DEMOLITION

A. **General**. Perform selective demolition work in a systematic manner. Use such methods as required to complete work shown in accordance with demolition schedule and governing regulations.

1. Demolish concrete and masonry in small sections. Cut concrete and masonry at junctures with construction to remain using power-driven masonry saw or hand tools; do not use power-driven impact tools.

2. Promptly remove debris and locate demolition equipment to avoid imposing excessive loads on supporting walls, floors, or framing.

3. Provide services for effective air and water pollution controls as required by local authorities having jurisdiction.

4. Demolish foundation walls and belowgrade concrete slabs. Demolish and remove belowgrade wood or metal construction.

5. Cut off piles 1 foot below finished grade.

6. Remove all exposed reinforcing steel unless noted otherwise.

7. For slabs, use removal methods that will not crack or structurally disturb adjacent slabs or partitions. Use power saw where possible. Saw-cut a minimum of 3 inches deep around perimeter of portions of slabs to be removed.

8. Completely fill belowgrade areas and voids resulting from demolition work as specified in Section 31 23 00 "Excavation, Backfill, and Embankment."

B. Miscellaneous

1. If unanticipated mechanical, electrical, or structural elements that conflict with intended function or design are encountered, investigate and measure both nature and extent of the conflict.

2. Submit report to Owner's Representative in written, accurate detail.

3. Pending receipt of directive from Owner's Representative, rearrange selective demolition schedule as necessary to continue overall job progress without undue delay.

3.3 SALVAGED MATERIALS

A. Salvaged Items

1. Where shown as incorporated in new construction or "Salvage - Deliver to Owner," carefully remove indicated items, clean, package to prevent damage, store, and promptly turn over to Owner. A list of items to be “Salvage – Deliver to Owner” include the following:

a. Filter Gallery Valve Operators

b. PLC Hardware

c. Work Stations

d. Network Devices

e. Servers

2. Obtain receipt.

3. Historic artifacts, including cornerstones and their contents, commemorative plaques and tablets, antiques, and other articles of historic significance, remain property of Owner.

4. Notify Owner's Representative if such items are encountered and obtain acceptance regarding method of removal and salvage for Owner.

3.4 DISPOSAL OF DEMOLISHED MATERIALS

A. Remove from building site debris, rubbish, and other materials resulting from demolition operations. Transport and legally dispose of off-site.

B. **Hazardous materials encountered** during demolition operations, comply with applicable regulations, laws, and ordinances concerning removal, handling, and protection against exposure or environmental pollution.

C. **Do not burn** removed materials on project site.

3.5 CLEANUP AND REPAIR

A. General

1. Upon completion of demolition work, remove tools, equipment, and demolished materials from site.

2. Remove protections and leave interior areas broom clean.

3. Repair demolition performed in excess of that required.

4. Return elements of construction and surfaces to remain to condition existing prior to start of operations.

5. Repair adjacent construction or surfaces soiled or damaged by selective demolition work.

END OF SECTION

SECTION 02 61 20

TANK AND CHANNEL CLEANING

PART 1 PART 1 - GENERAL

1.1 RELATED DOCUMENTS.

A. **General.** Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

B. **Related Sections.** The following sections contain requirements related to this section.

1. Section 01 74 23, “Cleaning.”

1.2 DESCRIPTION OF WORK

A. **General**. The Contractor shall provide the labor, tools, equipment, and materials necessary to accomplish cleaning of tanks and channels in accordance with the drawings and as specified herein. All solids/sediment shall be removed from the below tanks and channels and/or structures in addition to cleaning as specified in Section 01 74 23 “Cleaning”.

1. The Tanks and channels and/or Structures to be cleaned are:

a. Washwater Reservoir

b. Chlorination Chamber

c. Clearwell 1A & 1B

d. Clearwell 2A & 2B

e. Clearwell 3A & 3B

f. High Service Pump Chamber 1 & 2

g. West Aerator Building

h. East Aerator Building

2. Prior to solids/sediment removal, Contractor shall remove any trash from tanks or channels and dispose in landfill under the lump sum as detailed on the Bid Form.

3. Material to be removed and disposed consists of sediment, sand, and other solids remaining in treatment tanks after all the free-draining liquid has been removed. The residual solids removed from the WTP structures shall be hauled to the washwater lagoon designated for use during Construction as approved by Engineer/ Owner.

4. Residual solids stored in the designated lagoon during construction shall be disposed as described in Section 1.4.

5. Concrete Water Reservoir Inspection Reports on the structures listed in the schedule herein and provided in Appendix III. Concrete Water Reservoir Inspection Reports were not completed on the West and East Aerator Tanks and Contractor shall assume 1-inch of an Iron/Manganese Sediment for base bids, refer to Contract Documents for the surface area and access for these structures.

1.3 SCHEDULE

A. Society for Protective Coating Report Summary

Tank/Structure	SSPC Concrete Condition	SSPC Rating	Floor Area	Depth of Sediment (IN)	Access Hatch Size (IN)	Vent (Y/N)	Ladder (Y/N)
Washwater Reservoir	B-Bug Holes E-Efflorescence R-Stains	5	45'-0" x 45'-0"	0.25 Iron/Manganese	24x24	Y	Y
Chlorination Chamber	B-Bug Holes C-Cracking E-Efflorescence M-Erosion R-Stains	2	22'-0" x 22'-7"	0.25 Iron/Manganese	24x36	N	N
Clearwell 1A	B-Bug Holes E-Efflorescence R-Stains	2	19'-8" x 79'-8"	0.25 Iron/Manganese	55x49	N	N
Clearwell 1B	B-Bug Holes E-Efflorescence R-Stains	3	18'-4" x 105'-1"	0.5 Iron/Manganese	42x36	N	Y
Clearwell 2A	B-Bug Holes C-Cracking E-Efflorescence R-Stains	5	19'-8" x 129'-0"	0.25 Iron/Manganese	55x48	N	N
Clearwell 2B	B-Bug Holes E-Efflorescence R-Stains S-Spalling	3	18'-4" x 105'-1"	0.25 Iron/Manganese	42x36	N	Y
Clearwell 3A	B-Bug Holes C-Cracking D-Deformation E-Efflorescence M-Erosion R-Stains	3	17'-8" x 34'-8"	0.25 Iron/Manganese	37x30	N	Y
Clearwell 3B	B-Bug Holes E-Efflorescence R-Stains	4	19'-8" x 34'-8"	0.25 Iron/Manganese	30x36	N	Y
High Service Pump Chamber 1	B-Bug Holes C-Cracking E-Efflorescence R-Stains	0	25'-10" x 30'-10"	0.25 Iron/Manganese	24 Dia.	N	N
High Service Pump Chamber 2	B-Bug Holes C-Cracking E-Efflorescence R-Stains	1	25'-10" x 26'-4"	0.25 Iron/Manganese	24 Dia.	N	N

1.4 SAMPLING, TESTING, & REMOVAL IN LANDFILL

A. The Owner/Engineer will make provisions for obtaining samples of removed solids on an hourly or per truck load basis.

B. The Owner/Engineer will provide for laboratory determinations of the Total Suspended Solids (TSS) of the solids at the Owner's Laboratory.

C. Daily dry weight amounts hauled (in tons) will be determined as follows (using that day's gallons hauled and average TSS value):

1. $Dry\ Weight\ in\ Tons = \frac{gallons\ hauled \times Avg.TSS\ (mg/L) \times 8.34}{2{,}000{,}000{,}000}$

2. Or using that day's wet tons of cake hauled:

3. $Dry\ Weight\ in\ Tons = wet\ tons\ \times \frac{Avg.TSS\ (mg/L)}{1{,}000{,}000}$

4. A day shall be considered as beginning at 7:00 A.M. and ending at 7:00 A.M. the following morning.

D. Contractor shall reach an agreement with the Owner/Engineer as to the volume which constitutes a load.

E. The Owner/Engineer will require the Contractor to provide portable scales or other means to determine actual quantities hauled.

F. If required for landfill disposal and if approved by Owner/Engineer, samples of the sludge, solids, and similar debris residuals in the tanks shall be taken and tested by the Contractor at an approved testing facility. The results of these tests will be made available to the Owner prior to the initiation of work.

G. The Contractor is responsible to dewater material enough to meet "paint filter test" as required by landfill.

H. **Removal and Disposal**. In general, it is the intent of this specification to provide for complete removal of the "dewatered in-place" solid materials using contractor furnished equipment, labor, and the hauling of the dewatered solids for proper disposing as described herein. Estimated dry tons per tank/structure are provided herein as applicable. Contractor shall be paid on a unit cost basis as described above. Should the actual value of solids exceed the estimated dry tons stated below and in the Bid Documents, the Contractor shall be paid for removing the excess solids based on the dry ton unit cost basis as established by Contract Documents.

1. Please Note: Prior to exceeding the estimated dry tons provided for each tank and/or structure, the Contractor shall receive approval from Engineer to continue. Removal of any excess solids beyond the established dry tons stated herein (on a structure by structure basis) without approval of the Engineer shall be at no cost to Owner.

1.5 QUALITY ASSURANCE

A. **Codes and Standards.** Perform all work in accordance with current applicable requirements of the governing agencies having jurisdiction. These requirements shall include current OEPA Rules and Occupational Safety & Health Administration confined space entry safety procedures and equipment.

B. **Shutdowns and Draining.** All tank shutdowns and draining required to clean the tanks and/or structures shall be coordinated with the Owner.

1.6 SUBMITTALS

A. **General.** The Contractor shall submit a tank and channel cleaning and disposal work plan to the Engineer for review and comment prior to beginning work. The plan shall describe in detail the means and methods proposed to remove and dispose of the sludge, solids, and similar debris residuals remaining in the tanks after drainage.

B. **Schedule and Data**. The Contractor shall submit to the Engineer a schedule for the removal of solids/sediment from the WTP. The schedule shall provide information on the anticipated hauling dates, volumes, and tons. As the work progresses, the schedule shall be updated to reflect actual data on the volumes removed and disposed.

1.7 JOB CONDITIONS

A. **General.** The Contractor shall have access to all tanks to conduct the solids/sediment and similar debris removal process. Hours of work shall be limited to normal working hours, Monday through Friday, except holidays as defined by the Contract Documents.

B. The Contractor shall plan the work to minimize the impacts of any odor or noise associated with the solids/sediment and similar debris removal operations. The Owner shall make available a potable water connection, and a plant wastewater drain for the return of dewatering recycle flows. **All costs for removing and disposing of the solids/sediment shall be paid as described in the bid forms.**

C. **Site Maintenance.** The Contractor shall be responsible for the clean-up and removal of any solids/sediment and similar debris spilled on the site. The method of such clean-up operations shall be approved by the Owner/ Engineer.

1.8 DELIVERY, STORAGE, AND HANDLING

A. (Not Used)

1.9 SPECIAL WARRANTY

A. (Not Used)

PART 2 PRODUCTS

2.1 (Not Used)

PART 3 EXECUTION

3.1 WORK SCHEDULE AND COORDINATION

A. Review Sequence of Construction Specification 01 14 00, Work Restrictions.

B. The Contractor shall schedule and coordinate all aspects of the solids/sediment and similar debris removal and disposal work. The Contractor shall coordinate the removal of the solids/sediment with the demolition of the existing equipment as shown on Contract Drawings.

3.2 TRANSPORTING AND WEIGHING

A. Meet with the Owner/ Engineer and agree to haul routes prior to beginning work.

B. Provide visible identification for each truck; maintain daily log of truck loading.

C. Provide a portable truck scale system to be used to weigh dewatered solids prior to disposal. Other weighing options may be submitted to the Owner/ Engineer for approval.

3.3 ODOR CONTROL CONTINGENCIES

A. Odor migration from the solids removal, dewatering, storage, and transportation may result in odor complaints. In the event that odor becomes a problem during the operations as determined by the Owner/ Engineer, the Contractor shall take corrective measures to reduce creation and migration of odors off site or off of transport (trucks) using tarps, process changes or other approved methods that mitigate the odors.

3.4 CLEANING UP

A. Clean up all area disturbed by solids removal and disposal operation including haul routes and disposal sites.

B. Remove all equipment and materials from the job site upon completion.

END OF SECTION

This page intentionally left blank.

SECTION 02 83 00

ASBESTOS AND LEAD PAINT COLLECTION AND DISPOSAL

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Contract Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General**. Provide the labor, tools, equipment, materials, and supervision necessary to complete the work as specified herein. The Contractor is responsible for the costs and fees for all removal and disposal to complete the work. Refer to Appendix II - Lead and Asbestos Survey Results.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work in compliance with applicable requirements of governing agencies having jurisdiction.

B. **Permits**. Obtain and pay for all permits required to perform the waste material disposal work specified herein.

C. **Safety**. Take all necessary and proper safety precautions when handling the debris in accordance with the Occupational Safety and Health Administration (OSHA) and other state and federal agencies' safety procedures.

1.4 SUBMITTALS

A. General

1. Submit all submittals in accordance with the Division 1 Submittal Requirements and the requirements within this specification section.

B. Submittal Package No. 1 – Field Test Results

1. Waste material analysis results

1.5 JOB CONDITIONS (Not used)

1.6 DELIVERY, STORAGE, AND HANDLING (Not Used)

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS (Not Used)

PART 3 EXECUTION

3.1 INSTALLATION

A. Sampling and Laboratory Analysis

1. See Appendix II – Lead and Asbestos Survey Results

B. Collection and Disposal of Nonhazardous Waste Material

1. If, from the laboratory analysis, the waste material is determined to be nonhazardous, collect, store, and dispose of the waste material generated by the surface preparation.

2. See Section 01 74 23, "Cleaning," for more information.

C. Collection of Hazardous Waste Material

1. If, from the laboratory analysis, the waste material from the surfaces samples is hazardous as defined by EPA or other governing agency regulations, collect all debris generated by the blast cleaning operation at the end of each day and store in steel containers having lockable lids.

2. Lock the steel containers and store them inside a secure, lockable trailer at the end of each day.

3. The trailer shall remain on the work site until the disposal method is determined.

D. Disposal of Hazardous Waste Material

1. Hauling, testing, and disposal procedures shall be in accordance with current regulations.

2. Act as the Owner’s agent and arrange and execute the hauling, testing, and disposal of the hazardous waste material.

3. Utilize a firm(s) licensed by the EPA, who shall be responsible for hauling, testing, and ultimate disposal.

4. Provide the Owner with the Uniform Hazardous Waste Manifest (EPA Form 8700-22A), any applications, agreements, contracts, records, and proof of receipt at the disposal site to substantiate the disposal procedures and occurrence.

5. Ensure disposal within 60 days after generation or 14 days from the time permits are received.

6. Disposal shall be within a licensed hazardous waste disposal facility approved by EPA and any other governing authority.

END OF SECTION

SECTION 03 01 73

CONCRETE REPAIR

PART 1 PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. The Contractor shall furnish all labor, tools, equipment, and materials necessary to repair the spalled, deteriorated, and delaminated areas of existing concrete, concrete joints and necessary cleaning or replacement of reinforcing steel in accordance with the plans and as specified herein.

B. Safety Requirements

1. The Contractor is responsible for providing all shoring required to insure the support, stability and integrity of the overall structure and its individual components.

2. All work is to be done in accordance with all applicable safety standards.

C. Scope of Work

1. Repair of existing exterior and interior concrete walls, floor slabs and stairs as shown on the drawings.
A.

D. Equipment

1. 1.Use maximum 30 pound chipping hammers to remove concrete. The use of jack hammers or hydraulic hoe-ram type hammers will not be permitted at any time on this project.

2. Hydrodemolition is an acceptable alternative method of removing delaminated, deteriorated concrete on the walls and beams only.

3. Use self-contained blasting equipment or equal to mechanically abrade all concrete surfaces to be coated with flexible epoxy coating system.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Comply with provisions of the following codes, specifications, standards and guides except where more stringent requirements are shown or specified:

1. American Concrete Institute (ACI) 546R-96 "Concrete Repair Guide."

2. ICRI Technical Guideline No. 03730, "Guide for Surface Preparation for the Repair of Deteriorated Concrete Resulting from Reinforcing Steel Corrosion."

3. ICRI Technical Guideline No. 03733, "Guide for Selecting and Specifying Materials for Repair of Concrete Surfaces."

4. ICRI Technical Guideline No. 03731, “Guide for Selecting Application Methods for the Repair of Concrete Surfaces."

5. ACI 318 "Building Code Requirements for Structural Concrete."

6. 6.ACI 301 "Standard Specification for Structural Concrete."

7. ACI 315 "Details and Detailing of Concrete Reinforcements."

8. Concrete Reinforcing Steel Institute (CRSI) "Reinforcing Bar Detailing."

B. **Experience.** Contractor and equipment manufacturer shall have a minimum of 5 years experience in the successful completion of concrete restoration and repair projects.

1. Installation of flexible epoxy coating system shall be performed by an applicator having satisfactory experience in the application of these or similar materials or with on-site consultation by a qualified field service representative of product manufacturer.

C. **Examination**. Authorized representatives of the Owner shall have access and the right to examine the work under this contract at all times.

D. **Testing**. Materials and installed work may require testing and retesting at any time during progress of work. Testing shall be coordinated and scheduled by the Contractor, but paid for by the Owner.

1. Retesting of rejected materials for installed work, shall be done at Contractor's Expense by a testing firm hired by the Owner.

E. **Job Standard.** Prior to installation of flexible epoxy coating system, the contractor shall install, with the owner’s approval, a mutually agreed upon test sample to show final color and appearance of the system. This test area shall serve as a job standard for the final installation.

1.4 SUBMITTALS

A. **General**. Submit the following in accordance with conditions of contract and Division 1 specification sections.

1. Product data for proprietary materials and items, including reinforcement and forming accessories, bonding compounds, repair mortars, admixtures, patching compounds, waterstops, joint systems, curing compounds, sealers, flexible epoxy coating systems, and others as requested by Engineer.

2. Installation details for flexible epoxy coating system.

3. Concrete mix design.

B. **Materials specified indicate a standard** of quality required on this project. Contractor may submit alternate materials to the Owner for approval. Alternate materials may not be used without approval from the Owner.

C. **Colored Samples.** Prepare and provide samples of colored repair materials in place where patching materials are placed on wall surfaces exposed to view that do not receive an additional surface coating. Adjust manufacturer recommended coloring agents to simulate existing surface color. Owner, contractor, and manufacturer shall review and mutually agree upon color, grade, and final texture

of flexible epoxy coating system before starting installation. The acceptance of a sample will constitute the job standard by which installation will proceed.

1.5 JOB CONDITIONS (Not Used)

1.6 DELIVERY, STORAGE AND HANDLING

A. **Manufacturer's recommendations shall be followed** in the delivery, storage and handling of all materials.

B. Store materials only in areas approved by the Owner.

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 MATERIALS

A. General

1. The types of repair materials shall be as noted below for each specific repair condition.

B. Reinforcement

1. Welded wire fabric shall conform to American Society for Testing and Materials (ASTM) A 185.

2. Deformed reinforcing bars shall conform to ASTM A 615, Grade 60.

3. All reinforcement shall be epoxy-coated per ASTM A 775.

a. Provide epoxy touch-up paint of a different color to coat nicks, cuts, and ends of bars in field.

b. Use plastic or epoxy-coated bar supports and tie wire to prevent electrical coupling between bars.

C. Bonding Agent/Corrosion Protection

1. Corr-Bond bonding agent. Euclid Chemical Company.

2. MasterEmaco P 124 bonding agent. Master Builders Technologies.

3. Sika Armatec 110 bonding agent. Sika Corporation.

D. Vertical Surface Patch Repair Mortar

1. Verticoat Supreme, microsilica and latex modified one component nonsag repair mortar. Euclid Chemical Company.

2. MasterEmaco S 488 CI repairs mortar. Master Builders Technologies.

3. SikaTop 123 Plus, a two-component polymer-modified mortar for repairs from 1/8" to 1-1/2" with greater depths using 1-1/2" lifts. Sika Corporation.

E. Horizontal Surface Patch Repair Mortar

1. Eucocrete repair mortar. Euclid Chemical Company.

2. 2.MasterEmaco T430 rapid strength repair mortar. Master Builders Technologies.

3. SikaTop 122 Plus, polymer modified two component kit for repairs greater than 1/2 inch, but less than 7 inches. Sika Corporation.

F. Curing

1. Curing materials and methods shall be in strict accordance with manufacturer's recommendations for the specific materials used.

2. Wet cure horizontal repairs for a minimum of 7 days.

G. **Flexible Epoxy Coating System** components listed below are by Tnemec Company, Inc./Ohio Coating Consultants (1-800-890-7580). Equal system may be used with engineer approval.

1. Primer: Series 201 Epoxoprime, multipurpose penetrating polyamine cured epoxy primer.

2. Flexible Membrane: Series 206 Sub-Flex EP flexible epoxy.

3. Topcoat: Series 291 Endura-Shield, chemical resistant urethane finish.

H. Crack and Joint Sealant

1. Euclid Chemical Company.

a. Primer. Eucolastic/NEO Seal Primer.

b. Sealant. Eucloastic.

2. Sika Corporation.

a. Primer. Sikaprime 429.

b. Sealant. Sikaflex 2c SL.

3. Sonneborn.

a. Primer. Primer 733.

b. Sealant. NP1 or NP2.

PART 3 EXECUTION

3.1 CONCRETE PREPARATION

A. **In areas to be patched or poured** to a new surface, all loose, delaminated and disintegrated concrete, dirt, debris, impregnations, foreign materials, etc., shall be removed and the areas thoroughly cleaned by approved methods.

1. The Contractor shall determine the location and extent of the repair areas. The surfaces shall be sounded by tapping with a rod, hammer, or chain drag method in the presence of the Owner. All unsound areas shall be marked by the contractor and removed as approved by the Owner.

2. Saw-cut edges of repairs a minimum of 1 inch deep. Take special precautions not to cut or nick existing reinforcement. Provide square or rectangular areas of repair. Sound concrete is to be removed within the saw-cut areas as necessary.

3. Removal shall be done by hand-chipping, water-blasting, or other method that will accomplish the work in a manner that will not damage or shatter the concrete that is to remain. Fine particles shall be removed by air and water operated at not less than 50 psi. Care shall be used in working around the existing reinforcing steel so as to not contact the steel directly with a pneumatic hammer or hand tool, which may cut the

steel or shatter the concrete around and beyond the repair area. See Reinforcement Preparation below.

B. **Areas of existing concrete to be coated with Flexible Epoxy Coating System** shall be mechanically abraded by means of self-contained blasting equipment or equal to remove all laitance and surface contaminants and provide a minimum profile similar to 40-60 grit sandpaper (Reference ASTM D 4259, ICRI CSP 3-5). After mechanically abrading, verify that all surfaces are clean, dry, and free of any contaminants which could adversely affect the adhesion of the flooring system.

C. **Off-site disposal of all materials removed** shall be the responsibility of the Contractor.

3.2 REINFORCEMENT PREPARATION

A. **Rusted reinforcing bars** and mesh exposed by the removal of spalled, delaminated, or unsound concrete shall have sufficient sound concrete removed to a minimum of 3/4 inch around the bar.

B. **The total surface of exposed** reinforcing steel shall be cleaned of all rust and scale. Measure the average diameter of each piece of exposed reinforcing at its thinnest point. Where the area of steel remaining is less than 85 percent of its original nominal area, splice in new reinforcing. The size and length of the new reinforcing will be determined by the Owner, and will be based on the area of reinforcing remaining and on other factors.

3.3 SUBSTRATE ACCEPTANCE

A. **After all deteriorated concrete has been removed** down to a sound substrate, all surfaces shall be inspected by the Owner or the authorized representative of the Owner for soundness. Subsequent areas identified as not being sound shall be removed. Approval by the Owner is required prior to the application of any repair materials.

B. **Any repair material which is placed** by the Contractor without acceptance of the substrate by the Owner, or the authorized representative of the Owner, will be removed and replaced by the Contractor at no additional cost to the Owner.

3.4 TEMPERATURE

A. **Hot and cold weather placement of concrete** shall be in accordance with ACI 305 and ACI 306.

B. **Consult the manufacturer for mixing**, placing, and curing procedures of repair mortars when the ambient temperature is below 50 degrees Fahrenheit (° F.) or above 85° F.

C. **Any day during which the curing temperature** falls below 45° F. shall not be counted as a curing day. If, at any time during the curing period, the curing temperature falls below 35° F. the work will be rejected and removed and replaced.

D. **For flexible epoxy coating system**, surface and surrounding air temperatures must exceed 55° F but must be less than 90° F with materials at not less than 55° F during application.

3.5 GENERAL PATCHING PRECAUTIONS

A. **A technical representative of each material supplier** shall review and approve the procedures prior to the use of their materials.

B. **Presaturate all surfaces to be patched** as specified by the manufacturer's instructions.

C. **For patches thicker than** 1-1/2 inches add 3/8-inch washed pea gravel.

D. **Do not install patches** within 90 feet of any area where concrete is being removed.

E. **Protect all patches from premature drying** and excessively hot or cold weather for the necessary period for the proper setting of the patch. Cure the patch per manufacturer's recommendations or for seven days, maintaining a temperature of 50° F. or more.

F. **Protect patches against rain and inclement weather** with tarpaulins or similar waterproof protection until the patch has set.

3.6 VERTICAL/HORIZONTAL SURFACE PATCH REPAIR

A. **Follow concrete and reinforcement preparation** as described herein.

B. **Apply bonding agent to substrate** and exposed reinforcement. Alternatively, substrate may be coated with a scrub coat of patching material immediately prior to application of patching material.

C. **Mixing and placing of repair mortars** shall be in accordance with manufacturer's instructions.

D. Finish surfaces to match existing.

E. **Properly cure and seal all repairs** per manufacturer's recommendations.

3.7 CRACK REPAIR

A. **Identify** concrete crack locations.

B. **Prepare surface** per manufacturer's recommendations.

C. **Rout or saw-cut crack** to 1/4-inch by 1/4-inch minimum configuration.

D. **Blow clean joint** with oil-free compressed air and mechanically clean crack surface per manufacturer's recommendations.

E. **Mix and place repair materials** in accordance with the manufacturer's instructions.

F. **Properly cure all repair materials** per manufacturer's recommendations.

3.8 ACCEPTANCE

A. The Owner or the authorized representative of the Owner shall review all areas and items repaired. Any work found to be defective or unsatisfactory shall be removed and replaced at no additional cost to the Owner.

3.9 CLEANUP

A. Remove all waste materials, rubbish, and debris and dispose of them at the owner's discretion.

3.10 PROTECTION

A. Protect the completed flexible epoxy coating system from water, airborne particles or other surface contaminants until cured for 24 hours. Protect from traffic, physical abuse, immersion and chemical exposure until the complete system has thoroughly cured for the minimum equivalent of 24 hours at 75°F. For different temperatures, consult the manufacturer's representative about curing times.

END OF SECTION

SECTION 03 30 00

CAST-IN-PLACE CONCRETE

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Furnish and install the cast-in-place concrete in accordance with the drawings and as specified herein.

1. This section specifies cast-in-place concrete, including formwork, reinforcing, mix design, accessories, placement procedures, joints, finishes, curing, supports for equipment and piping, and grout toppings for tanks.

2. Other specification sections may reference this section for other cast-in-place concrete items.

3. Install embedded items required for material and equipment specified in other divisions of these specifications.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work in compliance with all federal, state, and local codes and regulatory agencies.

B. **Standards**. Comply with the provisions of the following standards:

1. ACI – American Concrete Institute.

2. ASTM – American Society for Testing and Materials.

3. CRSI – Concrete Reinforcing Steel Institute.

4. AASHTO – American Association of State Highway and Transportation Officials.

5. AWWA – American Water Works Association.

C. **Concrete Testing Service**. The Owner will engage acceptable laboratory to perform material evaluation tests and to design concrete mixes at the Owner's expense. The Contractor shall coordinate and schedule all testing services.

D. **Testing**. Materials and installed work may require testing and retesting at any time during progress of work. Retesting of rejected materials or installed work shall be done at Contractor's expense.

E. **Concrete Conference**. Conduct conference at project site to comply with the following:

1. Prior to submittal of design mixes, conduct a meeting to review detailed requirements for preparing concrete design mixes and to determine procedures for satisfactory concrete operations. Review requirements for submittals, status of coordinating work, and availability of materials.

Establish preliminary work progress schedule and procedures for materials inspection, testing, and certifications. Request that representatives of each entity directly concerned with cast-in-place concrete attend conference, including, but not limited to, the following:

a. Contractor's superintendent.

b. Laboratory responsible for concrete mix design.

c. Laboratory responsible for field quality control.

d. Ready-Mix concrete supplier.

e. Concrete subcontractor.

f. Primary admixture manufacturers.

g. Engineer/Architect or Owner's Representative.

2. Concrete conference may be waived by the Engineer/Architect or Owner's Representative.

1.4 SUBMITTALS

A. General

1. Submit all submittals in accordance with the Division 1 Submittal Requirements and the requirements within this specification section.

B. Submittal Package No. 1 – Shop Drawings and Product Data

1. Product Data. Submit product data for materials and items, such as cement, reinforcement, embedded forming accessories, admixtures, patching compounds, waterstops, joint systems, and curing compounds.

2. Shop Drawings and Submittals.

a. Reinforcement. Submit shop drawings for fabrication, bending, and placement of concrete reinforcement. Comply with ACI SP-66 (88), "ACI Detailing Manual," showing bar schedules, stirrup spacing, diagrams of bent bars, and arrangement of concrete reinforcement. Include special reinforcement required for openings through concrete structures, and dowel reinforcement for masonry.

b. Concrete Mix Designs. Submit concrete mix designs for each class of concrete to be used on the project including specifics regarding admixtures proposed for each mix design. Include concrete test reports to substantiate trial batch mixes or previous performance of the same mix design.

c. Materials Certificates. Submit materials certificates with the concrete mix design. Materials certificates shall be signed by manufacturer certifying that each material item complies with or exceeds specified requirements. Provide certification from admixture manufacturers that chloride content complies with specification requirements.

d. Construction Joint Locations. Submit details which clearly show where construction joints are intended to be placed in walls, slabs, columns, beams, at stairwells, etc.

e. Box Outs. Submit proposed locations of box outs.

3. Testing Laboratories. Submit the names of the testing laboratories proposed for use to perform the material evaluation tests and also to perform the field quality control testing. An ACI certified technician shall perform all concrete testing.

C. Submittal Package No. 2 – Batch Tickets

1. Batch Tickets. Submit batch tickets for each load of concrete used on the job. Each ticket shall indicate the design mix, the project name, the date, the time of batching, and the truck number.

D. Submittal Package No. 3 – Test Reports

1. Concrete Test Reports. Submit two copies of all concrete test reports from the concrete testing laboratory directly to the Engineer/Architect.

1.5 JOB CONDITIONS

A. **Coordination**. Coordinate installation of joint materials, embedded items, vapor retarders, etc., with placement of forms and reinforcing steel. Coordinate concrete work with all other trades to prevent delays, errors, or omissions.

B. **Reference Material**. Provide a copy of ACI SP-15, Field Reference Manual, in the field office at all times during concrete construction.

C. **Climatic Conditions**. Perform placement and curing of concrete under various weather conditions in accordance with ACI 301, "Specifications for Structural Concrete for Buildings," ACI 305, "Hot Weather Concreting," and ACI 306, "Cold Weather Concreting," except as modified herein.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **General**. Comply with ACI 304, "Recommended Practice for Measuring, Mixing, and Placing Concrete."

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 MATERIALS

A. Forms

1. Exposed finish concrete forms shall be plywood, metal, metal framed plywood faced, or other acceptable panel type materials, to provide continuous, straight, smooth, exposed surfaces. Furnish in largest practicable sizes to minimize number of joints and to conform to joint system shown.

2. Unexposed finish concrete forms shall be plywood, lumber, metal, or other acceptable material. Provide lumber dressed on at least two edges and one side for tight fit.

3. Cylindrical column and support forms shall be metal, fiberglass reinforced plastic, or paper or fiber tubes.

a. When used, provide paper or fiber tubes of laminated plies with water resistant adhesive and wax impregnated exterior for weather and moisture protection.

b. Provide sufficient wall thickness to resist wet concrete loads without deformation.

B. **Form coatings.** Commercial formulation form coating compounds with a maximum volatile organic compound (VOC) of 350 milligrams per liter (mg/l) that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent treatments of concrete surfaces.

C. **Form ties.** Factory-fabricated, adjustable length, removable or snap-off metal form ties, designed to prevent form deflection and to prevent spalling concrete upon removal.

1. Provide units that will leave no metal closer than 1 inch to exposed surface.

2. Provide ties that, when removed, will leave holes not larger than 1 1/2 inch diameter in concrete surface.

D. Reinforcing Materials

1. Reinforcing Bars. ASTM A 615, A 616, including Supplemental Requirement S1, or A 617; Grade 60, deformed.

2. Epoxy Coated Reinforcing Bars. ASTM A 775.

3. Welded Wire Fabric. ASTM A 185, welded steel wire fabric, provided in flat sheets.

4. Supports for Reinforcement. Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire fabric in place. Use steel bar supports or precast concrete bar supports complying with CRSI specifications.

a. For slabs on grade, use steel bar supports with sand plates or horizontal runners or precast concrete bar supports where base material will not support chair legs.

b. For exposed-to-view concrete surfaces, where legs of supports are in contact with forms, provide supports with legs that are plastic protected (CRSI, Class 1) or stainless steel (CRSI, Class 2).

E. Concrete Materials

1. Portland Cement. ASTM C 150, Type I or Type II in areas where alkali-aggregate reaction is a problem. Use one brand of cement throughout project.

2. Fly Ash. ASTM C 618, Type C or Type F including supplementary optional physical requirements, except loss on ignition shall not exceed 3 percent.

3. Normal Weight Aggregates. ASTM C 33 and as herein specified.

a. For exposed concrete, provide aggregates from a single source.

b. For exterior exposed surfaces, do not use fine or coarse aggregates containing deleterious substances which might cause spalling.

c. Fine Aggregate. Fine aggregate shall consist of natural sand or manufactured sand.

d. Coarse Aggregate. Coarse aggregate shall consist of crushed rock, gravel, or crushed gravel.

1) Grading. The coarse aggregate shall conform to requirements for Size 57, unless otherwise approved.

2) Deleterious substances shall not exceed the percentages for Class 4S.

4. Water. Potable.

5. Admixtures. Provide admixtures that contain a maximum of 0.05 percent chloride ions by weight of cement when tested in accordance with AASHTO T260. Certificate from admixture manufacturer will be required prior to mix design approval.

a. Air-Entraining Admixture.

1) ASTM C 260, certified by manufacturer to be compatible with other required admixtures.

2) Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to, the following:

a) Darex II or Daravair, GCP Applied Technologies

b) MasterAir VR 10 or MasterAir AE 200, Master Builders, Inc.

c) Sika AER, Sika Corp.

d) AEA-92 or Air Mix 200, Euclid Chemical Co.

b. Water-Reducing Admixture.

1) ASTM C 494, Type A.

2) Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to, the following:

a) Eucon WR-75 or WR-89, Euclid Chemical Co.

b) WRDA with Hycol, GCP Applied Technologies

c) Daracem-55, GCP Applied Technologies

d) MasterPozzolith 220, MasterPozzolith 322, or MasterPolyheed, Master Builders, Inc.

e) Plastocrete 161, Sika Corp.

c. High-Range Water-Reducing (HRWR) Admixture (Super Plasticizer).

1) ASTM C 494, Type F or Type G.

2) Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to, the following:

a) Eucon 37, Euclid Chemical Co.

b) Daracem 19, Daracem ML330, or Daracem ML500, GCP Applied Technologies

c) MasterRheobuild, Master Builders, Inc.

d) Sikament, Sika Corp.

d. Noncorrosive, Nonchloride Accelerating Admixture.

1) ASTM C 494, Type C or E.

2) Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to, the following:

a) Accelguard 80, Euclid Chemical Co.

b) Polarset, GCP Applied Technologies

c) MasterSet FP 20, Master Builders, Inc.

e. Water-Reducing, Retarding Admixture.

1) ASTM C 494, Type D.

2) Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to, the following:

a) Eucon Retarder 75, Euclid Chemical Co.

b) Daratard-17, GCP Applied Technologies

c) MasterPozzolith, Master Builders, Inc.

d) Plastiment, Sika Corporation.

f. Crystalline Waterproofing Admixture. Subject to compliance with requirements, products that may be incorporated in the work include the following:

1) Penetron ADMIX.

2) Aquafin-IC.

3) Kryton KIM.

4) Xypex ADMX C-Series.

5) BASF Masterlife 300D.

2.2 ACCESSORIES

A. **Reglets**. Where resilient or elastomeric sheet flashing or bituminous membranes are terminated in reglets, provide reglets of not less than 0.0217-inch-thick (26-gauge) galvanized sheet steel. Fill reglet or cover face opening to prevent intrusion of concrete or debris.

B. Polyvinyl (PVC) Chloride Waterstops. Corps of Engineers CRD-C 572.

1. Waterstops for construction joints shall be serrated type without center bulb and at least 3/8 inch thick and 6 inches wide.

2. Waterstop for expansion joints shall be serrated type with center bulb and at least 3/8 inch thick and 9 inches wide.

3. Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include, but are not limited to, the following:

    a. Greenstreak Plastic Products Co.

    b. DuraJoint.

    c. BoMetals, Inc.

C. Bitumen Waterstops

1. Provide a single component self-sealing plastic adhesive type waterstop which is nonoxidizing, nonevaporating, nonexpanding, non-shrinking, and resistant to water, chemicals, and saturated hydrogen sulfide.

2. Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include, but are not limited to, the following:

    a. Synko-Flex, Synko-Flex Products.

    b. Seal-Tite, DuraJoint.

D. **Sand Cushion**. Clean, manufactured or natural sand conforming to ASTM C 33 or C 144.

E. **Vapor Retarder.** ASTM E 1745 Class A Compliant with a permeance of 0.01 before and after mandatory conditioning as required by (ASTM E 1745 Section 7.1 and Sub-paragraphs 7.1.1 – 7.1.5).

1. Provide vapor retarder cover over prepared base material where indicated below slabs on grade.

2. Subject to compliance with these specifications, the vapor retarder may be one of the following:

    a. Stego Wrap 15 mil by Stego Industries, LLC

    b. Vapor Flex by Layfield

    c. Moistop Ultra 15 by Fortifiber Industries

F. **Chemical Hardener.** Colorless aqueous solution containing a blend of magnesium fluosilicate and zinc fluosilicate combined with a wetting agent, containing not less than 2 pounds of fluosilicates per gallon.

1. Use hardener on existing concrete where noted.

2. Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to, the following:

    a. Surfhard, Euclid Chemical Co.

    b. Lapidolith, Sonneborn

    c. Fluohard, L&M Construction Chemical, Inc.

G. Sealer/Dustproofer

1. Floor hardener compound for new concrete shall be an acrylic containing not less than 14 percent solids.

2. Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to, the following:

   a. Super Diamond Clear VOX, Euclid Chemical Company.

   b. Dress and Seal WB30, L&M Construction Chemicals, Inc.

H. **Absorptive Cover**. Burlap cloth made from jute or kenaf, weighing approximately 9 ounces per square yard, complying with AASHTO M 182, Class 2.

I. **Moisture-Retaining Cover**. One of the following complying with ASTM C 171.

1. Waterproof paper.

2. Polyethylene film.

3. Polyethylene coated burlap.

J. **Curing Compound.** Clear styrene acrylate type, 30 percent solids content minimum.

1. Submit test data from an independent testing laboratory indicating a maximum moisture loss of 0.55 kilograms (kg) per square meter when applied at a coverage rate of 200 square feet per gallon.

2. Verify compatibility of curing compound with finishes to be used.

3. Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to, the following:

   a. Super Diamond Clear VOX, Euclid Chemical Company.

   b. Dress and Seal WB30, L&M Construction Chemicals, Inc.

K. Evaporation-Control Compound

1. Monomolecular film-forming compound applied to exposed concrete slab surfaces for temporary protection from rapid moisture loss.

2. Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to, the following:

   a. Aquafilm, Dayton Superior

   b. Eucobar, Euclid Chemical Co.

   c. E-Con, L&M Construction Chemicals, Inc.

   d. MasterKure ER 50, Master Builders, Inc.

L. Bonding Compound

1. Polyvinyl acetate or acrylic base.

2. Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to, the following:

a. Polyvinyl Acetate (Interior Only). Appropriate product by:

1) Dayton Superior Corp.

2) Euclid Chemical Co.

3) Larsen Products Corp.

4) L&M Construction Chemicals, Inc.

b. Acrylic or Styrene Butadiene. Appropriate product by:

1) Euclid Chemical Co.

2) GCP Applied Technologies

3) Master Builders, Inc.

4) Stonhard, Inc.

M. Epoxy Adhesive

1. ASTM C 881, two-component material suitable for use on dry or damp surfaces.

2. Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to, the following:

a. Sikadur 32 Hi-Mod, Sika Corp.

b. Euco Epoxy System #452 or #620, Euclid Chemical Co.

c. Epobond, L&M Construction Chemicals, Inc.

N. **Expansion Joint and Isolation Joint Material**. Use one of the following unless noted otherwise.

1. Self-expanding cork conforming to ASTM D 1752, Type III.

2. Cellular fiber-asphalt conforming to ASTM D 1751.

3. Neoprene/SBR polymer conforming to ASTM D 1056-67.

2.3 MIXES

A. General

1. Prepare design mixes for each type and strength of concrete by either laboratory trial batch or field experience methods as specified in ACI 301.

2. If trial batch method used, retain an acceptable independent testing facility for preparing and reporting proposed mix designs.

3. The testing facility shall not be the same as used for field quality control testing.

4. Submit mix designs of each proposed mix for each class of concrete at least 15 days prior to start of work.

5. Do not begin concrete production until proposed mix designs have been reviewed.

6. Limit use of fly ash not to exceed 25 percent of cement content by weight.

a. In areas where alkali aggregate reaction is a problem, do not add less than 20 percent fly ash by weight.

b. When used, fly ash shall replace cement at a 1:1 ratio for Class C fly ash and a 1.25:1 ratio for Class F fly ash (Class F fly ash to cement).

c. Adjust weights of concrete materials to provide the correct yield.

B. **Design Mixes**. Provide normal weight concrete with the following properties, unless otherwise indicated. Tolerance for air content shall be ±1 percent.

1. Class A. 4,000 pounds per square inch (psi), 28-day compressive strength.

a. Water/Cementitious Product (w/c) ratio, 0.45 maximum; minimum cementitious material, 541 pounds per cubic yard (cy).

b. 6 percent air.

2. Class B. 3,000 psi, 28-day compressive strength.

a. w/c ratio, 0.50 maximum; minimum cementitious material, 541 pounds per cy.

b. 6 percent air.

3. Class C. 2,000 psi, 28-day compressive strength.

a. w/c ratio, 0.6 maximum; minimum cementitious material, 376 pounds per cy.

b. 6 percent air.

4. Class D.

a. w/c ratio, 0.45 maximum; minimum cementitious material, 846 pounds per cy.

b. Fine aggregate to cement ratio shall not exceed 3.0 by weight.

c. 6 percent air.

5. Class S. 4,500 psi, 28-day compressive strength.

a. w/c ratio, 0.42 maximum; minimum cementitious material, 564 pounds per cy.

b. 6 percent air.

6. Class W. In accordance with Class S, except:

a. Contains crystalline waterproofing admixture in accordance with paragraph 2.1.E.5.f.

b. Dose in accordance with admixture manufacturer's recommendations.

C. **Slump Limits**. Proportion and design mixes to result in concrete slump at point of placement as follows:

1. Ramps and sloping surfaces. Less than 3 inches.

2. Reinforced foundation systems. 2 to 4 inches.

3. Concrete containing HRWR admixture (Superplasticizer). Less than 8 inches after addition of HRWR to site verified 2-inch to 3-inch slump concrete without HRWR.

4. Other concrete. Less than 4 inches for slabs and less than 5 inches for walls, curbs, bases, and other miscellaneous concrete.

D. **Chloride Content**. The maximum water-soluble chloride ion content, expressed as a percent by weight of cement contributed by all ingredients of the concrete mix shall not exceed 0.10 percent.

E. **Controlled Density Fill or Controlled Low-Strength Material**. The fine aggregates shall be fine enough to stay in suspension in the mixture to the extent required for proper flow. Provide with the following properties, unless otherwise indicated:

1. 100 psi, 28-day compressive strength.

   a. Cement, 100 pounds.

   b. Fly Ash, 250 pounds.

   c. Fine Aggregate, Saturated Surface Dry, 2,800 pounds.

   d. Water, 500 pounds maximum.

2. It is necessary for bleed water to appear on the surface immediately after the fill is struck off.

   a. A delay in bleeding indicates there are too many fines in the mixture, so reduce the fly ash quantity in increments of 50 pounds until mixture is bleeding freely.

   b. Add approximately 60 pounds of sand to replace each 50-pound increment of fly ash to maintain the original yield.

F. **Dry Pack Mortar**. Mix dry pack, consisting of one part portland cement to 2 1/2 parts fine aggregate passing a No. 16 mesh sieve, using only enough water as required for handling and placing.

G. **Cement Mortar**. A mixture of sand, cement, and water in the same proportions used for the concrete being placed, but omit all coarse aggregate.

H. **Adjustment to Concrete and Mixes**. Request mix design adjustments when characteristics of materials, job conditions, weather, test results, or other circumstances warrant, as approved. Submit laboratory test data for revised mix design and strength results for acceptance before using in work.

I. **Admixtures**. Use of Admixtures.

1. Use water-reducing admixture for placement and workability in all classes of concrete unless noted otherwise.

2. A noncorrosive nonchloride accelerating admixture may be used in concrete slabs placed at ambient temperatures below 50 degrees Fahrenheit (° F.) when approved.

3. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having total air content as indicated in the design mix.

J. **Concrete Mixing.** Ready Mix Concrete. Comply with requirements of ASTM C 94 and as specified.

1. When air temperature is between 85° F. and 90° F., mixing and delivery time shall not exceed 75 minutes.

2. When air temperature is above 90° F., mixing and delivery time shall not exceed 60 minutes unless approved otherwise.

PART 3 EXECUTION

3.1 EXAMINATION

A. **Tolerances**. Unless otherwise specified, tolerances shall be in accordance with ACI 117 and ACI 301.

B. **Inspection**. Before placing concrete, inspect and complete formwork installation, reinforcing steel, and items to be embedded or cast-in. Notify other trades to permit installation of their work; cooperate with other trades in setting such work. Verify that all wood, dirt, foreign objects, and all other debris have been removed from inside the formwork. Verify that reinforcing steel is spaced to provide the proper coverage against forms and against earth for slabs on grade. When requested, provide documentation of inspection prior to placing concrete.

C. **Site and Weather Conditions**. Do not place concrete when site conditions exist such as standing water, extreme heat or cold, etc., unless the proper precautions have been taken to properly place and protect concrete as recommended by ACI and as acceptable. Do not place concrete on frozen ground.

3.2 PREPARATION

A. Forms

1. General. Design, erect, support, brace, and maintain formwork to support vertical and lateral, static and dynamic loads that might be applied until concrete structure can support such loads. Maintain formwork construction tolerances complying with ACI 347.

2. Forms. Construct forms to sizes, shapes, lines, position, elevation, and dimensions shown and to obtain accurate alignment, location, grades, level, and plumb work in finished structures. Provide for openings, offsets, sinkages, keyways, recesses, moldings, rustications, reglets, chamfers, blocking, screeds, bulkheads, anchorages and inserts, and other features required in work. Use selected materials to obtain required finishes. Solidly butt joints and provide backup at joints to prevent leakage of cement paste.

3. Fabrication of Forms. Fabricate forms for easy removal without hammering or prying against concrete surfaces. Provide crush plates or wrecking plates where stripping may damage cast concrete surfaces. Provide top forms for inclined surfaces where slope is too steep to place concrete with bottom forms only. Kerf wood inserts for forming keyways, reglets, recesses, and the like, for easy removal.

4. Openings. Provide temporary openings where interior area of formwork is inaccessible for cleanout, for inspection before concrete placement, and for placement of concrete. Securely brace temporary openings and

set tightly to forms to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.

5. Exposed Corners and Edges. Chamfer exposed corners and edges using wood, metal, PVC, or rubber chamfer strips fabricated to produce uniform smooth lines and tight edge joints.

6. Provisions for Other Trades. Provide openings in concrete formwork to accommodate work of other trades. Determine size and location of openings, recesses, and chases from trades providing such items. Accurately place and securely support items built into forms.

7. Cleaning and Tightening. Thoroughly clean forms and adjacent surfaces to receive concrete. Remove wood, sawdust, dirt, or other debris just before concrete is placed. Retighten forms and bracing before concrete placement as required to prevent mortar leaks and maintain proper alignment.

8. Form Coatings. Coat contact surfaces of forms with an approved, nonresidual, low VOC, form coating compound before reinforcement is placed.

   a. Do not allow excess form coating material to accumulate in forms or to come into contact with in-place concrete surfaces against which fresh concrete will be placed. Apply in compliance with manufacturer's instructions.

   b. Coat steel forms with a nonstaining, rust preventative material. Rust stained steel formwork is not acceptable.

   c. Form coatings for use in water treatment plants shall be nontoxic after 30 days from the date the forms are removed.

B. Reuse of Forms

1. Clean and repair surfaces of all forms to be reused in work. Split, frayed, delaminated, or otherwise damaged form facing material will not be acceptable for exposed surfaces. Apply new form coating compound as specified for new formwork.

2. Successive Reuse. When forms are extended for successive concrete placement, thoroughly clean surfaces, remove fins and laitance, and tighten forms to close joints. Align and secure joint to avoid offsets. Do not use "patched" forms for exposed concrete surfaces except as acceptable.

3.3 INSTALLATION

A. Vapor Retarder Installation

1. General. Install vapor retarder where shown on drawings per ASTM E/643-10. Following leveling and tamping of granular base for slabs on grade, place vapor retarder sheeting with longest dimension parallel with direction of pour.

2. Lapping. Lap joints 6 inches and seal vapor barrier joints with manufacturer's recommended mastic and pressure sensitive tape.

3. Protection. After placement of vapor retarder, cover with sand cushion, dampen and compact to 100 percent as determined by ASTM D 698 to the depth as shown on drawings. Sand shall be free of self-draining water when concrete is placed.

B. Placing Reinforcement

1. General. Comply with CRSI's recommended practice for "Placing Reinforcing Bars" for details and methods of reinforcement placement and supports and as herein specified.

a. Avoiding cutting or puncturing vapor retarder barrier during reinforcement placement and concreting operations.

2. Cleaning. Clean reinforcement of loose rust and mill scale, earth, ice, and other materials that reduce or destroy bond with concrete.

3. Installation.

a. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcing by metal chairs, runners, bolsters, spacers, and hangers, as approved.

b. Place reinforcement to obtain at least minimum coverages for concrete protection as noted in ACI 301. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement operations. Set wire ties so ends are directed into concrete, not toward exposed concrete surfaces.

c. Install welded wire fabric in lengths as long as practicable. Lap adjoining pieces at least one full mesh plus 2 inches or 8 inches and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.

C. Joints

1. Construction Joints. Locate and install construction joints as indicated or, if not indicated, locate so as not to impair strength and appearance of the structure, as acceptable.

a. Provide keyways 1-1/2 inches deep in construction joints in walls and slabs and between walls and footings. Accepted bulkheads designed for this purpose may be used for slabs.

b. Place construction joints perpendicular to main reinforcement. Continue reinforcement across construction joints except as otherwise indicated.

c. The maximum length of wall pours shall not exceed 40 feet, and slab pours shall not exceed 40 feet in length or width.

d. Bond fresh concrete to hardened new concrete as follows:

1) For horizontal joints, place new concrete on a 1-inch layer of cement mortar evenly spread over the previously placed concrete. Thoroughly clean and remove laitance of previously placed concrete.

2) For vertical joints, thoroughly clean the surface of the hardened concrete and remove all laitance prior to placing new concrete.

e. If noted on the drawings, prior to placement of new concrete against old existing concrete, apply bonding agent to surface of old concrete, if accessible, immediately before placement of new concrete.

f. Make provisions to support and protect exposed waterstops during progress of work. Field-fabricate joints in waterstops in accordance with manufacturer's printed instructions. Provide continuous waterstops in construction joints as follows:

1) Liquid-bearing walls and slabs.

2) Walls or slabs subject to groundwater and/or in contact with ground.

3) Elsewhere as indicated.

2. Isolation Joints in Slabs-on-Ground. Construct isolation joints as indicated in slabs-on-ground at points of contact between slabs-on-ground and vertical surfaces, such as column pedestals, foundation walls, grade beams, and elsewhere as shown. Fill joints where noted with sealant specified in other sections of these specifications.

3. Contraction (Control) Joints in Slabs-on-Ground. Construct contraction joints in slabs-on-ground to form panels of patterns as shown. Use saw cuts 1/8 inch wide by 1/4 slab depth, unless otherwise indicated. In lieu of saw cutting and with, the Contractor may form contraction joints by inserting premolded plastic, hardboard, or fiberboard strip into fresh concrete until top surface of strip is flush with slab surface. Tool slab edges round on each side of insert. After concrete has cured, remove inserts and clean groove of loose debris.

a. Saw-cut as soon as possible after slab finishing without dislodging aggregate.

b. If joint pattern not shown, provide joints not exceeding 15 feet in either direction and located to conform to bay spacing wherever possible (at column centerlines, half bays, third bays).

c. Provide joint, filler, and sealant materials where shown.

4. Control Joints in Retaining Wall. Provide control joints at 32 feet on center maximum unless otherwise shown. Provide 1-1/2 inch deep by 1/3 wall thickness vertical keyway. Horizontal reinforcing shall not pass through joint. Joints need not be provided in retaining wall footings.

5. Expansion Joints. Construct expansion joints where shown. If not shown, provide expansion joints at interval not to exceed the following:

a. Retaining Walls. 96 feet (not required in footings).

6. Waterstop. Provide waterstops in all joints shown on the drawings and as listed in this specification.

a. Provide PVC waterstops in all joints unless noted or specified otherwise.

b. Properly support and wire all waterstops to reinforcing to remain straight and true. Heat-splice all joints per manufacturer's recommendations.

c. Provide bitumen waterstop in joint between new and existing concrete.

D. Installation of Embedded Items

1. Set and build into the work, anchorage devices and other embedded items required for other work that is attached to or supported by cast-in-place concrete. Use setting drawings, diagrams, instructions, and directions provided by other prime Contractors and suppliers of items to be attached thereto.

2. Install reglets to receive top edge of foundation sheet waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, relieving angles, and other conditions.

3. Set edge forms, bulkheads, and intermediate screed strips for slabs to obtain required elevations and contours in finished surfaces. Provide and secure units to support screed strips using strike-off templates or compacting type screeds.

E. Concrete Placement

1. Location. Provide concrete as specified in the table below unless otherwise indicated on the drawings.

Location	**Design Mix**
All reinforced concrete and nonreinforced fillets	4,500 psi Class S
Nonreinforced concrete not designated as Class A, C, or D	3,000 psi Class B
Nonreinforced so designated on plans	2,000 psi Class C
Grout fill or topping as designated on plans	Class D

2. General. Comply with ACI 304, "Recommended Practice for Measuring, Mixing, Transporting, and Placing Concrete," and as herein specified.

a. Deposit concrete continuously or in layers of such thickness that no concrete will be placed on concrete that has hardened sufficiently to cause the formation of seams or planes of weakness, or to be resistant to the penetration of a vibrator. If a section cannot be placed continuously, provide construction joints as herein specified. Deposit concrete to avoid segregation at its final location.

3. Placing Concrete in Forms. Deposit concrete in forms in horizontal layers not deeper than 24 inches and in a manner to avoid inclined construction joints. Where placement consists of several layers, place each layer while preceding layer is still plastic to avoid cold joints.

    a. Consolidate placed concrete by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping. Use equipment and procedures for consolidation of concrete in accordance with ACI 309.

    b. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations not farther than visible effectiveness of machine. Place vibrators to rapidly penetrate placed layer and at least 6 inches into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to set. At each insertion, limit duration of vibration to time necessary to consolidate concrete around reinforcement and other embedded items without causing segregation of mix.

4. Placing Concrete Slabs. Deposit and consolidate concrete slabs in a continuous operation, within limits of construction joints, until the placing of a panel or section is completed.

    a. Consolidate concrete during placing operations so that concrete is thoroughly worked around reinforcement and other embedded items and into corners. When epoxy coated reinforced steel is used, vibrators shall have nonmetallic heads.

    b. Bring slab surfaces to correct level with straightedge and strike off. Use highway straightedge, bull floats, darbies, or other means to obtain a smooth surface which is free of humps or hollows and that conforms to the required flatness and levelness. Do not disturb slab surfaces prior to beginning finishing operations.

    c. Maintain reinforcing in proper position during concrete placement.

5. Cold Weather Placing. Comply with provisions of ACI 306 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.

    a. When air temperature has fallen to or is expected to fall below 40° F. (4° C.), uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50° F. (10° C.) and not more than 80° F. (27° C.) at point of placement.

    b. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.

    c. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise accepted in mix designs.

6. Hot Weather Placing. When hot weather conditions exist that would seriously impair quality and strength of concrete, place concrete in compliance with ACI 305 and as herein specified.

   a. Cool ingredients before mixing to maintain concrete temperature at time of placement below 90° F. (32° C.). Mixing water may be chilled, or chopped ice may be used to control temperature provided water equivalent of ice is calculated to total amount of mixing water. Use of liquid nitrogen to cool concrete is Contractor's option.

   b. Cover reinforcing steel with water-soaked burlap if it becomes too hot, so that steel temperature will not exceed the ambient air temperature immediately before embedment in concrete.

   c. Fog spray forms, reinforcing steel, and subgrade just before concrete is placed.

   d. Use water reducing retarding admixture when required by high temperatures or other adverse placing conditions, when acceptable to Engineer/Architect.

   e. Use evaporation control compound in accordance with manufacturer's recommendations or fogging.

7. Adjusting Concrete Slump at Job Site.

   a. Slump Greater than Specified. Do not use concrete with slump greater than specified.

   b. Slump Less than Specified. If on arrival at the job site, the slump of the concrete is less than specified, the following remedies may be used at the Contractor's option.

      1) Add water only if the maximum specified w/c ratio is not exceeded.

      2) Additional water shall be accompanied by a quantity of cement sufficient to maintain the specified w/c ratio.

      3) Add an approved water reducing admixture.

F. Controlled Density Fill Placement

1. General. Unless noted otherwise, place controlled density fill in overexcavated areas under slabs, in utility trenches within roadways, and as directed by the Engineer/Architect.

2. Mixing Equipment. Sufficient mixing capacity of mixers shall be provided to permit the fill to be placed without interruption.

3. Placing Fill. Flowable fill shall be discharged from the mixer by any reasonable means into the space to be filled. The fill material shall be brought up uniformly to the fill line shown on the plans or as directed. Placing of any material over low strength fill may commence as soon as the surface water is gone or as directed.

G. **Finish of Formed Surfaces.** Inside face of covered basins, clear wells and reservoirs, filters below the media line, open tanks and flumes below water or

flow lines, and the outside of structures below finish grade lines shall be classified as not exposed to view.

1. Finish. Finish formed concrete surfaces in accordance with the schedule below.

Location	Type of Finish
Concrete surfaces not exposed to view or surfaces to be covered with a coating material applied directly to concrete, such as waterproofing, dampproofing, veneer plaster, or other similar system	Smooth form finish
Concrete exposed to view including surfaces which will be painted	Smooth rubbed finish or grout-cleaned finish

2. Smooth Form Finish. This is an as-cast concrete surface obtained with selected form facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch defective areas with fins and other projections completely removed and smoothed.

3. Smooth Rubbed Finish. Provide smooth-rubbed finish not later than 1 day after form removal. Moisten concrete surfaces and rub with carborundum brick or other abrasive until a uniform color and texture is produced. Do not apply cement grout other than that created by the rubbing process.

4. Grout-Cleaned Finish. Mix one part portland cement and 1-1/2 parts fine sand with sufficient water to produce a grout with the consistency of thick paint. Substitute white portland cement for a part of the gray portland cement in order to produce a color matching the color of the surrounding concrete, as determined by a trial patch. Wet the surface of the concrete sufficiently to prevent absorption of water from the grout and apply the grout uniformly with brushes or a spray gun. Immediately after applying the grout, scrub the surface with a cork float or stone to coat the surface and fill all air bubbles and holes. While the grout is still plastic, remove all excess grout by working the surface with a rubber float, burlap, or other means. After the surface whitens from drying, rub with clean burlap. The finish shall be kept damp for at least 36 hours after final rubbing.

5. Related Unformed Surfaces. At tops of walls, horizontal offsets, and similar unformed surfaces occurring adjacent to formed surfaces, strike-off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

H. Slab Finishes

1. Finish. Finish slab surfaces in accordance with the schedule below unless finish is specifically noted on the drawings:

Location	**Type of Finish**
Slabs to receive grout topping	Rough finish
Slabs to receive concrete topping or mortar setting beds for tile, Portland cement terrazzo, and other bonded applied cementitious finish flooring material, and as otherwise indicated	Scratch finish
Slabs to be covered with membrane or elastic waterproofing, membrane or elastic roofing, or sand-bed terrazzo, and as otherwise indicated	Float finish
Slabs of tanks, flumes, channels, wet wells, etc., which are submerged including grout toppings	Trowel finish after float finishing
Slabs to be exposed to view or covered with resilient flooring, carpet, ceramic or quarry tile, paint or other thin film finish coating system	Trowel finish after float finishing
Slabs to be covered with ceramic quarry tile installed with thin set mortar	Float finish followed by trowel and fine broom finish
Exterior concrete platforms, steps, ramps, and elsewhere as indicated	Float finish followed by nonslip broom finish

2. Floor Levelness, General. Floor levelness requirements below do not apply to sloped slabs or unshored slabs on metal deck.

3. Scratch Finish. After placing slabs, plane surface to tolerances for floor flatness (Ff) of 20 and floor levelness (Fl) of 17. Slope surfaces uniformly to drains where required. After leveling, roughen surface before final set with stiff brushes, brooms, or rakes.

4. Float Finish. After screeding, consolidating, and leveling concrete slabs, do not work surface until ready for floating. Begin floating, using float blades or float shoes only, when surface water has disappeared, when concrete has stiffened sufficiently to permit operation of power driven floats, or both. Consolidate surface with power driven floats or by hand floating if area is small or inaccessible to power units. Check and level surface plane to tolerances of Ff 25 - Fl 20. Cut down high spots and fill low spots. Uniformly slope surfaces to drains. Immediately after leveling, refloat surface to a uniform, smooth, granular texture.

5. Trowel Finish. After floating, begin first trowel finish operation using a power driven trowel. Begin final troweling when surface produces a ringing sound as trowel is moved over surface. Consolidate concrete surface by final hand troweling operation, free of trowel marks, uniform in texture and appearance, and with surface leveled to tolerances of Ff 50 - Fl 35. Grind smooth surface defects that would telegraph through applied floor covering system.

6. Trowel and Fine Broom Finish. Apply trowel finish as specified, then immediately follow with slightly scarifying surface by fine brooming.

7. Nonslip Broom Finish. Immediately after float finishing, slightly roughen concrete surface by brooming with stiff fiber bristle broom perpendicular to main traffic route. Coordinate required final finish with Engineer/Architect before application.

8. Rough Finish. The bottom of concrete tanks which are to receive grout topping shall receive a rough finish for maximum adhesion. The surface to receive the grout topping shall be intentionally roughened to a minimum amplitude of 1/4 inch.

9. Chemical Hardener Finish. Apply chemical hardener finish to existing interior concrete floors where indicated. Clean floors and allow to dry before applying hardener.

    a. Apply proprietary chemical hardeners, in accordance with manufacturer's printed instructions.

    b. After final coat of chemical hardener solution is applied and dried, remove surplus hardener by scrubbing and mopping with water.

10. Sealer/Dustproofer Finish. All exposed surfaces and floors within buildings which will be subject to pedestrian or vehicular traffic under normal operation, shall be treated to seal and dustproof the surface. This shall be accomplished by the use of a liquid sealer/dustproofer applied in three applications in accordance with the manufacturer's directions. Application of the sealer/dustproofer shall be performed as late as possible and just prior to completion of construction.

I. **Placing Grout Toppings**. Grout toppings shall be Class D concrete mix design unless noted otherwise.

1. Procedure.

    a. Prior to placement of the structurally bonded topping, remove all laitance, debris, and loose and foreign material from the base slab. Use water-blasting, sandblasting, or other methods acceptable to the Engineer/Architect.

    b. Thoroughly wet the base slab before placing the grout topping. Remove all standing water from the surface prior to placing neat cement grout.

    c. Brush in neat cement grout as a bonding agent immediately before application of grout topping. Do not allow neat cement grout to set prior to placing grout topping.

    d. Where recommended by manufacturer, use the tank mechanism to screed the grout on the tank floor as it is placed. Screed in accordance with the manufacturer's instructions.

    e. Trowel finish topping as specified above.

    f. Moisture cure grout toppings as specified herein.

J. Miscellaneous Concrete Items

1. Filling In. Fill in holes and openings left in concrete structures for passage of work by other trades, unless otherwise shown or directed, after work of other trades is in place. Mix, place, and cure concrete as herein specified, to blend with in-place construction. Provide other miscellaneous concrete filling shown or required to complete work.

2. Equipment Bases and Foundations. Provide machine and equipment bases and foundations, as shown on drawings. Set anchor bolts for machines and equipment complying with diagrams or templates of manufacturer furnishing machines and equipment.

3.4 CONCRETE SURFACE REPAIRS

A. **Patching Defective Areas**. Repair and patch defective areas and plug form tie holes with cement mortar immediately after removal of forms, when acceptable to Engineer/Architect.

1. Cut out honeycomb, rock pockets, and voids over 1/4 inch in any dimension down to solid concrete but in no case to a depth of less than 1 inch. Make edges of cuts perpendicular to the concrete surface. Thoroughly clean, dampen with water, and brush coat the area to be patched with specified bonding compound. Place patching mortar before bonding compound has dried.

2. For exposed-to-view surfaces, blend white portland cement and standard portland cement so that, when dry, patching mortar will match color surrounding. Provide test areas at inconspicuous location to verify mixture and color match before proceeding with patching. Compact mortar in place and strike-off slightly higher than surrounding surface. After shrinkage has occurred, grind surface until flush.

B. **Repair of Formed Surfaces**. Remove and replace concrete having defective surfaces if defects cannot be repaired to satisfaction of Engineer/Architect. Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycomb, rock pockets, fins and other projections on surface, and stains and other discolorations that cannot be removed by cleaning.

C. **Repair of Unformed Surfaces**. Repair or replace supported slabs that fail to meet the specified finish requirements. Correct levelness and flatness, and low and high areas as herein specified. For slabs on grade, remove slab between control joints and replace with concrete slab meeting floor finish and tolerances. For all other unformed surfaces, repair as follows:

1. Repair finished unformed surfaces that contain defects that affect durability of concrete. Surface defects, as such, include crazing and cracks in excess of 0.01 inch wide or that penetrate to reinforcement or completely through nonreinforced sections regardless of width, spalling, popouts, honeycomb, rock pockets, and other objectionable conditions.

2. Correct high areas in unformed surfaces by grinding after concrete has cured at least 14 days.

3. Correct low areas in unformed surfaces during or immediately after completion of surface finishing operations by cutting out low areas and replacing with patching compound. Finish repaired areas to blend into

adjacent concrete. Underlayment compounds may be used when acceptable.

4. Repair defective areas, except random cracks and single holes not exceeding 1 inch in diameter, by cutting out and replacing with fresh concrete. Remove defective areas to sound concrete with clean, square cuts and expose reinforcing steel with at least 3/4 inch clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding compound. Mix patching concrete of same materials to provide concrete of same type or class as original concrete. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.

D. **Miscellaneous Repairs**. Repair isolated random cracks and single holes not over 1 inch in diameter by dry pack method. Groove top of cracks and cut out holes to sound concrete and clean of dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding compound. Place dry pack mortar before bonding compound has dried. Compact dry pack mixture in place and finish to match adjacent concrete. Keep patched area continuously moist for not less than 72 hours.

E. **Approval**. Perform structural repairs with prior approval of Engineer/Architect for method and procedure, using specified epoxy adhesive and mortar.

F. **Alternative Repair Methods**. Repair methods not specified above may be used, subject to acceptance.

3.5 QUALITY CONTROL TESTING DURING CONSTRUCTION

A. **General**. Employ an approved testing laboratory to perform tests and to submit test reports. ACI Grade 1 certified technician employed by the testing laboratory shall be present during the placing of all concrete. The concrete testing laboratory shall send two copies of all test reports directly to the Engineer/Architect.

B. **Sampling Fresh Concrete**. Sample concrete in accordance with ASTM C 172, except modified for slump to comply with ASTM C 94.

1. Slump. Slump tests shall be performed at the point of truck discharge prior to adding plasticizers in accordance with ASTM C 143. For each class of concrete, perform one test for each compressive strength test and additional tests when concrete consistency seems to have changed. If the slump is adjusted at the job site, the concrete testing agency shall be responsible for reporting the following.

   a. Method used to adjust slump.

   b. Quantity of each material added.

   c. Resulting slump.

2. Air Content. Perform daily for each class of concrete placed in accordance with ASTM C 173 volumetric method for lightweight concrete; ASTM C 231 pressure method for normal weight concrete; one test for each compressive strength test, one test for the first load of each type of air entrained concrete delivered, and one test for each truck when air content is adjusted until consistent results are obtained.

3. Concrete Temperature. Test hourly when air temperature is 40° F. (4° C.) and below, when 80° F. (27° C.) and above, and each time a set of compressive test specimens is made.

4. Compressive Test Specimen. Perform in accordance with ASTM C 31 and as follows:

   a. Prepare one set of four standard cylinders for each compressive strength test, unless otherwise directed. Mold and store cylinders for laboratory cured test specimens except when field cured test specimens are required. Contractor may also prepare field cured test specimens to be used for early form removal.

   b. Prepare one set of cylinders for each 100 cy of concrete or fraction thereof, of each concrete class placed in any one day.

   c. Perform compressive strength tests in accordance with ASTM C 39. Test one specimen at 7 days, and two specimens at 28 days, and hold one specimen in reserve for later testing if required.

   d. When frequency of testing will provide fewer than five strength tests for a given class of concrete, conduct testing from at least five randomly selected batches or from each batch if fewer than five are used.

   e. When total quantity of a given class of concrete is less than 50 cy, Engineer/Architect may waive strength test if adequate evidence of satisfactory strength is provided.

   f. When strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, evaluate current operations and provide corrective procedures for protecting and curing the in-place concrete.

   g. Strength level of concrete will be considered satisfactory if averages of sets of three consecutive strength test results equal or exceed specified compressive strength, and no individual strength test result falls below specified compressive strength by more than 500 psi.

C. **Compressive Strength Test Reporting**. Test results will be reported in writing to Engineer/Architect, Ready-Mix producer, and Contractor within 24 hours after tests. Reports of compressive strength tests shall contain the project identification name and number, date of concrete placement, name of concrete testing service, concrete type and class, location of concrete batch in structure, design compressive strength at 28 days, concrete mix proportions and materials, compressive breaking strength, and type of break for both 7-day tests and 28-day tests.

D. **Flatness and Levelness**. Conduct random tests for flatness and levelness in accordance with ASTM E 1155 within 24 hours after final finish and as directed. Pay the cost for testing and any retesting of the areas found not to conform to the specifications after the Contractor has corrected the defects.

E. **Floor Slope**. Test unformed surfaces sloped to drain for trueness of slope and smoothness by using a template having required slope within 24 hours after final finish and as directed.

F. **Nondestructive Testing**. Impact hammer, ultrasonic pulse velocity, or other nondestructive device may be permitted if approved, but shall not be used as the sole basis for acceptance or rejection.

G. **Additional Tests**. The testing service will make additional tests of in-place concrete when test results indicate specified concrete strengths and other characteristics have not been attained in the structure. These tests shall be as directed. Testing service shall conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42, or by other methods as directed. Be responsible for all costs associated with such tests.

3.6 DEMONSTRATION

A. **General**. Prior to final acceptance of concrete work, demonstrate to representatives of the Owner and the Engineer/Architect that there are no mechanical defects or damaged areas and that concrete exposed to view is acceptable as to function and appearance.

1. Walls and Other Formed Surfaces. Representatives of the Owner, Contractor, and Engineer/Architect shall review concrete work to verify that tie holes and air voids have been patched, seams have been ground smooth, all surface defects have been repaired, and all rubbed or rubbed and painted surfaces are acceptable in appearance.

2. Floors. Representatives of the Owner, Contractor, and Engineer/ Architect shall review concrete work to verify that all surface defects have been repaired, all stains removed, residue from floor sealer/dustproof or chemical hardener has been removed, and that the required finish is acceptable. Where requested, flood selected areas of floor to a depth satisfactory to demonstrate that the area or areas drain properly to the floor drains and sumps and that there are no areas ponding water outside acceptable tolerances. Furnish water for testing and convey it to the areas being examined.

3. Liquid-Bearing Structures. All structures designed to hold water or other liquids shall be demonstrated to be watertight in accordance with ACI 350.

B. **Repair or Replacement of Defective Work**. Correct concrete work which is unacceptable in accordance with paragraph 3.4 of this section entitled "Concrete Surface Repairs." Remove concrete which, in the opinion of the Engineer/Architect, cannot be repaired satisfactorily and replace in an acceptable manner at no additional cost to the Owner.

3.7 CONCRETE CURING AND PROTECTION

A. **General**. Protect freshly placed concrete from premature drying and excessively cold or hot temperatures. In hot, dry, and windy weather, protect concrete from rapid moisture loss before and during finishing operations with an evaporation control compound. Apply in accordance with manufacturer's instructions.

B. **Curing Duration**. Start initial curing as soon as free water has disappeared from concrete surface after placing and finishing. Keep continuously moist for not less than 7 days. Maintain concrete temperatures as recommended in ACI 301 throughout the curing period.

C. **Curing Methods**. Perform curing of concrete by curing compound, by moist curing, by moisture-retaining-cover curing, and by combinations thereof in accordance with the schedule below unless curing method is specifically noted on the drawings. If unspecified, Contractor may opt for any of the methods specified below. Prior to use of curing compound on any surface, verify compatibility between curing compound and finish surface treatment.

Location	**Curing Method**
Floors and other unformed concrete surfaces	Any specified curing method
Formed concrete surfaces	Moist curing prior to form removal, followed by any of the methods specified below
Slabs to receive grout topping	Moisture cure
All other concrete	Any specified curing method

1. Moisture Curing. Provide moisture curing by following methods:
   a. Keep concrete surface continuously wet by covering with water.
   b. Use continuous water fog spray.
   c. Cover concrete surface with specified absorptive cover, thoroughly saturate cover with water, and keep continuously wet. Place absorptive cover to provide coverage of concrete surfaces and edges, with 4-inch lap over adjacent absorptive covers.
2. Moisture-Retaining-Cover Curing. Provide moisture-cover curing as follows:
   a. Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width with sides and ends lapped at least 3 inches. Immediately repair any holes or tears during curing period using cover material and waterproof tape.
3. Curing Compound. Provide curing compound as follows:
   a. Apply specified curing compound to concrete as soon as final finishing operations are complete (within 2 hours and after surface water sheen has disappeared). For formed surfaces, apply curing compound immediately after form removal. Apply uniformly in continuous operation by power spray or roller in accordance with manufacturer's directions. Apply in two coats, spread in perpendicular directions. Recoat areas subjected to heavy rainfall within 3 hours after initial application. Maintain continuity of coating and repair damage during curing period.
   b. Use curing compounds that will not affect surfaces to be covered with finish materials applied directly to concrete.
   c. Do not use curing compounds on surfaces which are to be covered with coating material applied directly to concrete, chemical hardener, waterproofing, dampproofing, membrane roofing, flooring (such as ceramic or quarry tile, glue down carpet that is not compatible with curing compound), painting,

and other coatings and finish materials, unless otherwise approved.

3.8 SHORES AND SUPPORTS

A. Comply with ACI 347 for shoring and reshoring in multistory construction, and as herein specified.

B. **Extend shoring from ground to roof** for structures four stories or less, unless otherwise permitted.

C. **Extend shoring at least three floors** under floor or roof being placed for structures over four stories. Shore floor directly under floor or roof being placed, so that loads from construction above will transfer directly to these shores. Space shoring in stories below this level in such a manner that no floor or member will be excessively loaded or will induce tensile stress in concrete members where no reinforcing steel is provided. Extend shores beyond minimums to ensure proper distribution of loads throughout structure.

D. **Remove shores and reshore** in a planned sequence to avoid damage to partially cured concrete or to supporting floors. Locate and provide adequate reshoring to support work without excessive stress or deflection.

E. **Keep reshores in place** a minimum of 15 days after placing upper tier, and longer if required, until concrete has attained its required 28-day strength and heavy loads due to construction operations have been removed.

3.9 REMOVAL OF FORMS

A. **Formwork which is not supporting** the weight of concrete, such as sides of beams, walls, columns, and similar parts of the work may be removed after cumulatively curing at not less than 50° F. (10° C.) for 24 hours after placing concrete, provided concrete is sufficiently hard not to be damaged by form removal operations, and provided curing and protection operations are maintained.

B. **Formwork supporting weight** of concrete, such as beam soffits, joists, slabs, and other structure elements, may not be removed in less than 14 days and until concrete has attained at least 75 percent of design minimum compressive strength at 28 days. Determine potential compressive strength of in-place concrete by testing field cured specimens representative of concrete location or members.

C. **Form facing material may be removed** 3 days after placement only if shores and other vertical supports have been arranged to permit removal of form facing material without loosening or disturbing shores and supports.

3.10 PROTECTION OF FORMED AND UNFORMED CONCRETE SURFACES

A. Protect concrete from damage or discoloration during the construction period caused by subsequent work performed by all other trades, including, but not limited to, concrete forming, resteel placement, equipment installation, plumbing work, electrical work, construction loading to the point of overstressing concrete, and all other actions which might adversely affect the strength or appearance of the concrete. Repair of chipped or damaged concrete and removal of rust, stains, efflorescence, and surface deposits shall be accomplished by acceptable methods.

SECTION 03 41 02

STRUCTURAL PRECAST CONCRETE VAULTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

B. **Related Sections**. The following sections contain some requirements that relate to this section:

1. Division 3 for cast-in-place concrete and non-shrink grouting.
2. Division 5 for miscellaneous metals and anchors.
3. Division 7 for caulking.
4. Division 9 for painting.
5. Division 31 for excavation, excavation support, dewatering, and fill materials.
6. Division 33 for pipe penetrations and pump station requirements.
7. Division 40 for pipe and accessory supports.

1.2 DESCRIPTION OF WORK

A. **General**. Provide the labor, tools, equipment, and materials necessary to install the precast structures in accordance with the plans and as specified herein.

B. **Extent of precast work required by this section** is indicated on drawings and by requirements of this section.

C. **Minimum Size Requirements**. The dimensions of the precast concrete structure shown on the plans are minimum dimensions that must be maintained for placement of the piping arrangement shown. Any changes or variations from that shown on the plans and specified due to manufacturer's variations shall be at no cost to the Owner. The Contractor is responsible for any changes caused by the manufacturer unit he chooses to furnish.

D. **Openings in Precast Concrete**. The manufacturer of the precast concrete structure shall be responsible for all pipe sleeve penetrations and access hatches. Provide and install all concrete supports, piping, valves, and related accessories as shown on the plans.

E. **Ladder Rungs**. The manufacturer of the precast concrete structure shall be responsible for providing the units with ladder rungs where shown on the plans.

F. **Ladders**. The manufacturer of the precast concrete structure shall be responsible for providing the units with ladders where shown on the plans.

G. **Grating and Grating Support Structure**. The manufacturer of the precast concrete structure shall be responsible for providing the units with grating and grating support structures where shown on the plans.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work associated with precast vaults in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

1. ASTM C 857, "Minimum Structural Design Loading for Underground Precast Concrete Utility Structures."
2. ACI 301, "Specifications for Structural Concrete for Buildings."
3. ACI 318, "Building Code Requirements for Reinforced Concrete."
4. AWS D1.1, "Structural Welding Code: Steel."
5. Concrete Reinforcing Steel Institute, "Manual of Standard Practice."
6. Prestressed Concrete Institute MNL 116, "Manual for Quality Control for Plants and Production of Precast Concrete Products."

B. **Manufacturer Qualifications**. Manufacturers of the precast units shall be firms regularly engaged in manufacturing factory fabricated units similar to the types and sizes required, whose products have been in satisfactory use in similar service for not less than 5 years. The manufacturer must be a member of the Prestressed Concrete Institute (PCI) and/or participate in its Plant Certification Program.

C. **Manufacturers Design.** The structural design and shop drawings for the precast units shall be stamped by a Professional Engineer registered in the State of Ohio. The design loadings shall be as shown on the drawings, as specified herein, in conformance to industry guidelines, and as required for compliance with local governing codes.

1.4 SUBMITTALS

A. **General**. Furnish manufacturer's product data, test reports, and material certification as required by Section 01 33 00, "Submittals."

B. **Submittals**. Submit the following in accordance with Conditions of Contract and Division 1 specification sections.

1. Laboratory test reports for concrete materials and mix design tests. Shop drawings and structural calculations shall be submitted to the Engineer/Architect for approval. Shop drawings shall include fully dimensioned layout drawings, location of openings in units, structural details, reinforcement, lifting devices, connections and anchorages, unit identification number and order of installation, and any other information necessary to establish exactly what is being furnished and to determine compliance with the plans and specifications. Fabrication and installation shall be in accordance with the approved shop drawings. Shop drawings shall be stamped by a professional engineer legally authorized to practice in the jurisdiction where the project is located.

1.5 JOB CONDITIONS (Not Used)

1.6 DELIVERY, STORAGE, AND HANDLING

A. **General.** Handle precast concrete vaults carefully to prevent external and internal component damage, breakage, cracking, or scoring. Do not install

damaged equipment; either replace damaged components or return unit to factory for replacement.

B. **Comply with manufacturer's rigging and installation instructions** for unloading precast concrete vaults and setting in final location.

C. **Store precast concrete units at site** as recommended by manufacturer to prevent physical damage. Arrange so identification markings are visible.

1.7 SPECIAL WARRANTY (Not used.)

PART 2 PRODUCTS

2.1 MATERIALS

A. Precast Concrete Structural Requirements

1. General

a. Design shall conform to ASTM C 857 where appropriate.

b. Top slabs shall be capable of supporting H-20 truck loads.

c. Wall loadings shall be based upon 0 to 65 pcf fluid load on the interior and 85 pcf equivalent fluid load plus 80 psf (horizontal) surcharge load on the exterior.

d. Minimum wall thickness shall be 8", minimum top slab thickness of 12", and minimum bottom slab thickness of 14".

e. Bottom slabs of all units shall be capable of resisting the anchor loads for the thrust blocks shown on the drawings.

f. Joints shall be gasketed and watertight.

g. Structure shall be designed to resist buoyancy.

2. Concrete

a. Portland Cement. ASTM C 150, Type I or Type III.

b. Use only one brand and type of cement throughout project, unless otherwise acceptable to Engineer/Architect.

c. Aggregates. ASTM C 33, and as specified here. Provide aggregates from a single source for exposed concrete.

1) Local aggregates not complying with ASTM C 33, but that have shown by special test or actual service to produce concrete of adequate strength and durability, may be used when acceptable.

d. Lightweight Aggregate. ASTM C 330.

e. Water. Potable.

f. Admixtures, General. Provide admixtures for concrete that contain not more than 0.1 percent chloride ions.

g. Air-Entraining Admixture. ASTM C 260, certified by manufacturer to be compatible with other required admixtures.

h. Water-Reducing Admixture. ASTM C 494 Type A, or other type approved for fabricator’s units.

i. Mix Proportion and Design.

1) Prepare design mixes for each type of concrete required.

2) Design mixes may be prepared by independent testing facility or by qualified precast manufacturing plant personnel at precast manufacturer's option.

3) Proportion mixes by either laboratory trial batch or field experience methods using materials to be employed on the project for each type of concrete required complying with ACI 318.

a) Produce standard weight concrete consisting of specified portland cement, aggregates, admixtures, and water to produce the following properties:

(1) Compressive strength 5,000 psi minimum at 28 days.

(2) Release strength for prestressed units – 3,500 psi.

b) Cure compression test cylinders using same methods as for precast concrete work.

4) Admixtures. Use air-entraining admixture in concrete, unless otherwise indicated.

a) Use water-reducing admixtures in strict compliance with manufacturer's directions. Admixtures to increase cement dispersion, or provide increased workability for low slump concrete, may be used subject to acceptance.

b) Use amounts as recommended by admixture manufacturer for climatic conditions prevailing at time of placing. Adjust quantities of admixtures as required to maintain quality control.

3. Reinforcing

a. Reinforcing Bars. ASTM A 615, Grade 60, deformed.

b. Welded Wire Fabric. ASTM A 185.

c. Welded Deformed Steel Wire Fabric. ASTM A 497.

d. Supports for Reinforcement. Provide supports for reinforcement including bolsters, chairs, spacers and other devices for spacing, supporting and fastening reinforcing, complying with CRSI recommendations.

4. Grout, See Specification 03 62 00.

5. Connection Materials

a. Steel Plates, Type 304 stainless.

b. Steel Shapes, Type 304 stainless.

c. Anchor Bolts. Type 316 stainless steel bolts, hexagon nuts, and washers.

d. High Strength Threaded Fasteners. Heavy hexagon structural bolts, and hardened washers, Type 316 stainless steel.

e. Welding Electrodes. Comply with AWS standards.

f. Accessories, Type 316 stainless steel. Provide clips, hangers, and other accessories required to install project units and to support subsequent construction or finishes.

6. Coating

a. Coat exterior below-grade walls. See Specification 09 90 00.

B. Precast Vault

1. Shall be built and shipped in sections. Submit section "layout" for review.

2. Pipe openings shall be made watertight and flexible.

3. Able to withstand H-20 live loads and dead loads including overburden load, soil side pressure and hydrostatic loading conditions.

4. Designed to resist buoyancy.

5. Install access steps where shown.

C. Precast Structures Hardware and Accessories

1. See pump specification for pump equipment attachments/locations.

2. Access Doors. Access doors shall be as shown on the plans and shall be capable of supporting an H-20 wheel load. The access doors shall be aluminum with stainless steel hardware. Frame shall be drainable type with upper rail bracket, chain hook, and cable holder. They shall have a frost proof lock which can be opened from the inside without a key. A wind catch shall be provided to keep the covers from coming shut under normal load. Access doors shall be Bilco Type JD-AL H-20 or equal. Access doors shall be furnished with safety grates.

D. **Steps**. Where shown or called for, install access steps at 12-inch centers. See Miscellaneous Metals specification for materials.

E. Precast Structure Appurtenances

1. Appurtenances. The following items as indicated and detailed on the plans shall be provided with the utility vault.

a. Mechanical expandable link-type rubber seal and steel wall sleeve to fill the annular space between a pipe and cored hole or sleeve which passes through the utility vault walls.

b. Cast iron bodied floor drain with 4-inch outlet pipe size, if shown.

c. Vent pipe with insect screen.

2.2 FABRICATION

A. **General.** Fabricate precast concrete units complying with manufacturing and testing procedures, quality control recommendations, and dimensional tolerances of PCI MNL 116 and as specified for types of units required.

B. **Built-In Anchorages.** Accurately position built-in anchorage devices and secure to formwork. Locate anchorages where they do not affect the position of the main reinforcement or placing of concrete. Do not relocate bearing plates in units unless acceptable to Engineer/Architect.

C. **Cast in openings** larger than 10 inches in diameter or 10 inches square in accordance with final shop drawings. Other smaller holes may be field cut by trades requiring them, as approved by Engineer.

D. **Coat surfaces** of forms with bond breaking compound before reinforcement is placed. Provide commercial formula form coating compounds that will not bond with, stain, or adversely affect concrete surfaces, and that will not impair subsequent treatments of concrete surfaces requiring bond or adhesion. Apply in compliance with manufacturer's instructions.

E. **Clean reinforcement of loose rust** and mill scale, earth, and other materials that reduce or destroy the bond with concrete.

F. **Accurately position**, support, and secure reinforcement against displacement by formwork, construction, or concrete placement operations. Locate and support reinforcement by metal chairs, runners, bolsters, spacers and hangers, as required.

G. **Place reinforcement** to obtain at least the minimum coverages for concrete protection. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Set wire ties so ends are directed into concrete, not toward exposed concrete surfaces.

H. **Pretension tendons** for prestressed concrete either by single strand tensioning method or multiple strand tensioning method. Comply with PCI MNL-116 requirements.

I. **Place concrete** in a continuous operation to prevent seams or planes of weakness from forming in precast units, complying with requirements of ACI 304. Thoroughly consolidate placed concrete by internal and external vibration without dislocating or damaging reinforcement and built-in items.

J. **Identify pick-up points and orientation** in structure with permanent markings, complying with markings indicated on final shop drawings. Imprint casting date on each precast unit on a surface that will not show in the finished structure.

K. **Finish formed surfaces** of precast concrete as indicated for each type of unit, and as follows:

1. Standard Finish. Normal plant run finish produced in forms that impart a smooth finish to concrete. Small surface holes caused by air bubbles, normal color variations and form joint marks, and minor chips and spalls will be tolerated. Major or unsightly imperfections, honeycomb, or structural defects are not permitted.

L. **Finish unformed surfaces** by trowel unless otherwise indicated. Consolidate concrete, bring to proper level with straightedge, float, and trowel to a smooth uniform finish.

1. Apply scratch finish to precast units that will receive concrete topping after installation. Following initial strikeoff, transversely scarify surface to provide ridges approximately 1/4 inch deep.

2.3 MANUFACTURERS

A. **Available Manufacturers**. Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include the following:

1. Precast Pump Station and Vaults.

a. Lindsay Concrete.

b. Mack Industries, Inc.

c. Norwalk Concrete Industries.

2. Aluminum Frames and Covers.

a. Bilco Co.

b. Halliday Industries.

c. Or equal.

PART 3 EXECUTION

3.1 INSTALLATION

A. **General**. Provide units of sizes, shapes, and locations as indicated. Determine final grading as influenced by possible adjustments in other utilities and surface features or underground obstructions before installing vault. Obtain approval for vault installation adjustments necessitated by the above. Install units plumb and level and with orientation and depth coordinated. Support on bedding material as shown on drawings.

B. **Install in accordance with ASTM C 891**, "Practice for Installation of Underground Precast Concrete Structures," and manufacturer's instructions.

C. **Elevation**. Install units with rooftop at elevation indicated on plans.

D. **Drainage**. Install drains in bottom of units where indicated. Arrange to coordinate with drainage provisions indicated or specified.

E. **Precast Access**. Install access to structures through cast aluminum frame and cover. Caulk all seams and joints inside and out. Set frames in paved areas and traffic ways flush with finished grade.

F. **Welding.** Perform welding in compliance with AWS D 1.1 and D 1.4, including qualification of welders.

1. Protect units from damage by field welding or cutting operations and provide noncombustible shield as required.

2. Repair damaged metal surfaces by cleaning and applying a coat of liquid galvanizing repair compound to galvanized surfaces and a compatible primer to painted surfaces.

G. **Powder Actuated Fasteners.** Do not use powder actuated fasteners for attaching accessory items to the surface of a precast, prestressed unit.

H. **Erection Tolerances.** Install precast units without exceeding tolerance limits specified in PCI MNL 127 "Recommended Practice for Erection of Precast Concrete."

1. Grouting Connections and Joints. After precast concrete units have been placed and secured, grout open spaces at connection and joints.

I. **Waterproofing**. Where shown and/or specified apply waterproofing to exterior surfaces of units after concrete has cured at least 3 days. Apply in accordance with requirements herein. After pipes have been connected and grouted in, and prior to backfilling, waterproof joints and connections and touch up abrasions and scars.

J. **Field-Installed Bolting Anchors**. Do not drill deeper than 3 7/8 inches for anchor bolts installed in the field.

3.2 SOURCE QUALITY CONTROL

A. **Dimensional Tolerances.** Units having dimensions smaller or greater than required and outside specified tolerance limits may be subject to additional testing as specified here.

B. **Precast units** having dimensions greater than required will be rejected if the appearance or function of the structure is adversely affected or if larger dimensions interfere with other construction. Repair or remove and replace rejected units, as required, to meet construction conditions.

C. **Strength of precast concrete units** will be considered potentially deficient if the manufacturing processes fail to comply with any of the requirements that may affect the strength of the precast units, including the following conditions:

1. Failure to meet compressive strength tests requirements.

2. Reinforcement not conforming to specified fabrication requirements.

3. Concrete curing, and protection of precast units against extremes in temperature not as specified.

4. Precast units damaged during handling and erection.

D. **Testing Precast Units.** When there is evidence that the strength of precast concrete units may not meet specification requirements, the Owner will take cores drilled from hardened concrete for compressive strength determination, complying with ASTM C 42.

E. **Patching.** Core test holes or minor irregularities (as accepted by Engineer) shall be filled with patching mortar and finished to match adjacent concrete surfaces.

F. **Defective Work.** Remove precast concrete units that do not conform to specified requirements, including strength, tolerances, and finishes. Replace with precast concrete units that meet requirements of this section.

3.3 CLEANING AND RESTORATION

A. **Cleaning**. Clean all internal surfaces including sump and remove all foreign material.

B. **Restoration**. Restore surface features at areas disturbed by excavation and reestablish original grades except as otherwise indicated. Where sod has been removed, replace it as soon as possible after backfilling is completed. Restore all areas disturbed by trenching, storing of dirt, and other work to their original condition. The restoration shall include a necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, or mulching. Restore disturbed paving as indicated.

END OF SECTION

SECTION 03 41 13

PRECAST PRESTRESSED HOLLOW CORE CONCRETE SLABS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General and Supplementary conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Furnish and install the precast prestressed hollow core concrete slabs in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work in compliance with all federal, state, and local codes and regulatory agencies.

B. **Standards**. Materials and workmanship shall be in accordance with the following standards:

1. PCI - Prestressed Concrete Institute.
2. ACI - American Concrete Institute.
3. ASTM - American Society for Testing and Materials.
4. AWS - American Welding Society.
5. UL - Underwriters' Laboratories, Inc.
6. AHA - American Hardboard Association.
7. CRSI - Concrete Reinforcing Steel Institute.

C. Qualifications

1. **Fabricator**. Firm responsible for fabrication of precast concrete slabs shall have at least 2 years of successful experience in the fabrication of precast concrete units similar to those required for this project, with sufficient production capacity to produce required units without causing delay in the work.

a. Fabricator shall design the precast slab units to support superimposed dead loads and live loads as required and for compliance with local governing code requirements.

b. Fabrication of precast slab units shall comply with PCI MNL 116, "Manual for Quality Control for Plants and Production of Precast Concrete Products."

c. Fabricator must be producer member of the PCI and/or participate in its Plant Certification Program.

D. **Fire Resistance-Rated Precast Units**. Where precast concrete units are shown or scheduled as requiring a fire resistance classification, provide units tested and listed by UL in "Fire Resistance Directory" or with each unit bearing UL label and marking.

1.4 SUBMITTALS

A. **Product Data**. Provide product data for manufactured materials and products. Include manufacturer's certifications and laboratory test reports where applicable.

B. **Shop Drawings**. Submit shop drawings showing complete information for fabrication and installation of precast concrete slabs.

1. Indicate member dimensions and cross section as well as location, size, and type of reinforcement, including special reinforcement and lifting devices necessary for handling and erection.

2. Provide layout, dimensions, and identification of each precast unit corresponding to sequence and procedure of installation. Indicate welded connections by AWS standard symbols. Detail inserts, connections, and joints, including headers, accessories, and construction at openings in precast units.

3. Indicate location and details of anchorage devices that are to be embedded in other construction. Furnish templates if required for accurate placement.

4. Provide complete design calculations prepared and stamped by a registered engineer licensed in state where project is located.

C. **Certifications**. Provide evidence of fabricator's qualifications.

D. **Concrete Test Reports**. Submit concrete records which verify that compressive strength of concrete complies with specified values of compressive strength and release strength of precast units.

1.5 JOB CONDITIONS

A. **Coordination**. Coordinate with other trades to prevent delays, errors, or omissions. Provide anchorage items and setting diagrams, templates, and directions for installation of anchorage items that are to be embedded in other construction before start of such work.

B. **Masonry Work**. Masonry walls which support precast concrete slabs shall be completed a minimum of 7 days prior to setting precast concrete slabs.

C. **Grout Installation**. Do not grout precast concrete slab joints when ambient air temperatures are below 40 degrees Fahrenheit (° F.) or when raining unless protective measures are taken to prevent grout from freezing or being diluted by rain water during placement and curing period.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery**. Deliver precast concrete slabs to project site in such quantities and at such times to ensure continuity of installation.

B. **Storage**. If possible, install precast concrete slabs directly from delivery vehicle to final structure location. Where this is not possible, units may be stored at site on delivery vehicle trailer on a level surface.

C. **Handling**. Lift and support precast concrete slabs at designated lift points. Position slabs in final location with tools and in a manner which will not damage slabs.

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 MATERIALS

A. Formwork

1. Form Materials. Provide forms and, where required, form facing materials of metal, plastic, wood, or another acceptable material that is nonreactive with concrete and will produce required finish surfaces.

2. Form Construction. Accurately construct forms, mortar tight, of sufficient strength to withstand pressures due to concrete placing operations and temperature changes, and for prestressed, pretensioning, and detensioning operations. Maintain formwork to provide completed precast concrete units of shapes, lines, and dimensions indicated, within fabrication tolerances specified in PCI MNL 116.

3. Form Design. Unless forms for plant manufactured prestressed concrete units are stripped prior to detensioning, design forms so that stresses are not induced in precast units due to deformation of concrete under prestress or movement during detensioning.

B. Concrete Materials

1. Portland Cement. ASTM C 150, Type I or Type III.

   a. Use only one brand and type of cement throughout project unless otherwise acceptable to Engineer.

2. Aggregates. ASTM C 33. Provide aggregates from a single source for exposed concrete.

3. Lightweight Aggregate. ASTM C 330.

4. Water. Potable.

5. Admixtures, General. Provide admixtures for concrete that contain not more than 0.1 percent chloride ions.

   a. Air-Entraining Admixture. ASTM C 260, certified by manufacturer to be compatible with other required admixtures.

   b. Water-Reducing Admixture. ASTM C 494, Type A, or other Type approved for fabricator's units.

C. Reinforcing Materials

1. Reinforcing Bars. ASTM A 615, Grade 60, deformed.

2. Low Alloy Steel Reinforcing Bars. ASTM A 706.

3. Steel Wire. ASTM A 82, plain, cold drawn steel.

4. Welded Wire Fabric. ASTM A 185.

5. Welded Deformed Steel Wire Fabric. ASTM A 497.

6. Supports for Reinforcement. Provide supports for reinforcement including bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing, complying with CRSI recommendations.

a. For exposed-to-view concrete surfaces, where legs of supports are in contact with forms, provide supports with legs that are plastic protected (CRSI, Class 1) or stainless steel protected (CRSI, Class 2).

D. Prestressing Tendons

1. Material. Uncoated, seven-wire, stress-relieved strand complying with ASTM A 416. Use Grade 250 unless Grade 270 is indicated.

2. Optional Material. A strand similar to above, but having the size and ultimate strength of wires increased so that the ultimate strength of the strand is increased approximately 15 percent, or a strand with increased strength but fewer number of wires per strand, may be used at manufacturer's option.

E. Connection Materials

1. Steel Weld Plates. Structural quality, hot rolled carbon steel, ASTM A 283, Grade C.

2. Steel Shapes. ASTM A 36.

3. Anchor Bolts. ASTM A 307, low carbon steel bolts, regular hexagon nuts, and carbon steel washers.

4. High-Strength Threaded Fasteners. Heavy hexagon structural bolts, and hardened washers complying with ASTM A 325.

5. Finish of Steel Units. Exposed units galvanized per ASTM A 153; others painted with rust inhibitive primer.

6. Bearing Pads. Provide bearing pads for precast concrete units as required.

a. Elastomeric Pads. Vulcanized, chloroprene elastomeric compound, molded to size or cut from a molded sheet, 50-60 shore A durometer.

b. Laminated Fabric Rubber Pads. Preformed, unused synthetic fibers and new, unvulcanized rubber. Surface hardness of 70-80 shore A durometer.

c. Frictionless Pads. Tetrafluoroethylene (TFE), with glass fiber reinforcing as required for service load-bearing stress.

d. Tempered Hardboard Pads. Smooth on both sides, complying with AHA A 135.4.

7. Welding Electrodes. Comply with AWS standards.

8. Accessories. Provide clips, hangers, and other accessories required to install project units and to support subsequent construction or finishes.

F. Grout Materials

1. Cement Grout. Portland cement, ASTM C 150 (Type I), and clean, natural sand, ASTM C 404. Mix at ratio of 1.0 part cement to 3.0 parts sand, by volume, with minimum water required for placement and hydration.

2. Nonmetallic Shrinkage Resistant Grout. Premixed, nonmetallic, noncorrosive, nonstaining product containing selected silica sands, portland cement, shrinkage compensating agents, plasticizing and water reducing agents, complying with ASTM C 1107, Grade B, with fluid consistency and a 30 minute working time.

3. Available Products. Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to, the following:

a. Nonmetallic Shrinkage Resistant Grout.

1) Conspec 100 Non-Shrink Grout (Nonmetallic), Dayton Superior, Inc.

2) Supreme Grout, Cormix, Inc.

3) Sure Grip Grout, Dayton Superior.

4) Euco N.S., Euclid Chemical Co.

5) Crystex, L & M Construction Chemicals, Inc.

6) Masterflow 928, Master Builders, Inc.

7) Sealtight 588 Grout, W.R. Meadows.

8) Set Non-Shrink, Set Products, Inc.

9) Multi-Purpose Grout, Dayton Superior.

10) Portland Expanding Grout (Non-Shrink), Target Products, Ltd.

11) Five Star Grout, U.S. Grout Corp.

12) F-100, Sauereisen Cement Company

2.2 MIXES

A. **General**. Prepare design mixes for each type of concrete required. Design mixes may be prepared by an independent testing facility or by qualified precast manufacturing plant personnel at precast manufacturer's option.

B. **Mix Designs**. Proportion mixes by either laboratory trial batch or field experience methods using materials to be employed on the project for each type of concrete required complying with ACI 318 and in accordance with the following:

1. Produce standard weight concrete consisting of specified portland cement, aggregates, admixtures, and water to produce the following properties:

a. Compressive strength - 5,000 pounds per square inch (psi) minimum at 28 days.

b. Release strength for prestressed units - 3,500 psi.

C. **Adjusting Concrete Mixes**. Mix design adjustments may be requested when characteristics of materials, job conditions, weather, test results, or other circumstances warrant. Submit laboratory test data for revised mix designs and strength results for acceptance before use in the work.

D. Admixtures

1. Use water-reducing admixtures in strict compliance with manufacturer's directions. Admixtures to increase cement dispersion or provide increased workability for low slump concrete may be used subject to acceptance.

2. Use air-entraining admixture in concrete, unless otherwise indicated.

3. Use amounts as recommended by admixture manufacturer for climatic conditions prevailing at time of placing. Adjust quantities of admixtures as required to maintain quality control.

2.3 FABRICATION

A. **General**. Fabricate precast hollow core slab units complying with manufacturing and testing procedures, quality control recommendations, and dimensional tolerances of PCI MNL-116 and as specified herein. Furnish units that are free of voids or honeycomb with straight true edges and surfaces.

B. **Built-In Anchorages**. Accurately position built-in anchorage devices and secure to formwork. Locate anchorages where they do not affect the position of the main reinforcement or placing of concrete. Do not relocate bearing plates in units unless acceptable to Engineer.

1. Include cast-in weld plates where required for anchorage or lateral bracing to structural steel members.

2. Cooperate with other trades for installation of items to be cast in hollow slab units. Notify Contractor of items not received in ample time so as not to delay work.

C. Reinforcement and Pretensioning Tendons

1. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy the bond with concrete.

2. Accurately position, support, and secure reinforcement against displacement by formwork, construction, or concrete placement operations. Locate and support reinforcement by metal chairs, runners, bolsters, spacers, and hangers, as required.

3. Place reinforcement to obtain at least the minimum coverage for concrete protection. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Set wire ties so ends are directed into concrete, not toward exposed concrete surfaces.

4. Pretension tendons for prestressed concrete either by single strand tensioning method or multiple strand tensioning method. Comply with PCI MNL-116 requirements.

5. Delay detensioning prestressed units until concrete has attained at least 70 percent of the design stress, as established by test cylinders.

a. If concrete has been heat cured, detension while concrete is still warm and moist to avoid dimensional changes that may cause cracking or undesirable stresses.

b. Detension pretensioned tendons either by gradually releasing tensioning jacks or by heat cutting tendons, using a sequence and pattern to prevent shock or unbalanced loading.

6. Adequately reinforce slab units to resist transporting and handling stresses.

D. Formwork

1. Accurately construct forms of sufficient strength to withstand pressures due to concrete placing operations, temperature changes, and pretensioning and detensioning operations. Maintain formwork to provide completed precast concrete units of shapes, lines, and dimensions indicated, within specified fabrication tolerances.

2. Coat surfaces of forms with bond breaking compound before reinforcement is placed. Provide commercial formula form coating compounds that will not bond with, stain, or adversely affect concrete surfaces, and that will not impair subsequent treatments of concrete surfaces requiring bond or adhesion. Apply in compliance with manufacturer's instructions.

E. Concrete Placement and Curing

1. Cast-in openings larger than 10 inches in diameter or 10 inches square in accordance with final shop drawings. Other smaller holes may be field cut by trades requiring them, as acceptable to Fabricator.

2. Place concrete in a continuous operation to prevent seams or planes of weakness from forming in precast units, complying with requirements of ACI 304. Thoroughly consolidate placed concrete by internal and external vibration without dislocating or damaging reinforcement and built-in items.

3. Identify pickup points and orientation in structure with permanent markings, complying with markings indicated on final shop drawings. Imprint casting date on each precast unit on a surface that will not show in the finished structure.

4. Cure by low-pressure steam, steam vapor, radiant heat and moisture, or another similar process to accelerate concrete hardening and to reduce curing time.

F. Finishes of Formed and Unformed Surfaces

1. Finish formed surfaces of precast hollow core slabs as follows:

a. Standard finish is normal plant run finish produced in forms that impart a smooth finish to concrete. Small surface holes caused by air bubbles, normal color variations and form joint marks, and minor chips and spalls will be tolerated. Major or unsightly imperfections, honeycomb, or structural defects are not permitted. Provide standard finish units unless otherwise indicated.

b. Commercial finish is achieved by removing fins and large protrusions and filling large holes. Rub or grind ragged edges. Faces are to be true, well defined surfaces.

2. Finish unformed surfaces by trowel unless otherwise indicated. Consolidate concrete, bring to proper level with straightedge, float, and trowel to a smooth uniform finish.

a. Apply scratch finish to precast units that will receive concrete topping after installation. Following initial strikeoff, transversely scarify surface to provide ridges approximately 1/4 inch deep.

G. Miscellaneous

1. Provide solid, monolithic precast slab units indicated to be an integral part of hollow slab unit system. Design and fabricate solid units to dimensions and details indicated as specified for hollow slab units.

2. Provide headers of structural steel shapes for openings larger than one slab width in accordance with hollow slab unit manufacturer's recommendations.

2.4 SOURCE QUALITY CONTROL

A. **General**. The manufacturer's production practices and quality control operations shall comply with PCI MNL 116 and as specified herein. Concrete testing may be accomplished by plant personnel, an independent testing laboratory employed by the precast manufacturer, or by a combination of both.

B. **Fabrication Tolerances**. Dimensional tolerances for precast hollow core slabs shall be as specified in PCI MNL 116.

C. **Additional Testing**. Where there is evidence that strength of precast concrete units does not meet specification requirements, the concrete testing laboratory shall take core drilled samples from hardened concrete for compressive strength determination, complying with ASTM C 42 and as follows:

1. Take at least three representative cores from precast units of suspect strength from locations directed by Engineer.

2. Test cores in a saturated surface dry condition per ACI 318 if concrete will be wet during use of completed structure.

3. Test cores in an air dry condition per ACI 318 if concrete will be dry during use of completed structure.

4. Strength of concrete for each series of cores will be considered satisfactory if their average compressive strength is at least 85 percent of 28 day design compressive strength (f'_c) and no single core is less than 75 percent of f'_c.

5. Test results shall be made in writing with copies delivered to Engineer, Contractor, and precast manufacturer. Include in test report the project identification name and number, date, name of precast concrete manufacturer, name of concrete testing service, identification letter, specific member or members represented by core tests, design compressive strength, compressive breaking strength and type of break (corrected for length diameter ratio), direction of applied load to core with respect to horizontal plane of concrete as placed, and moisture condition of core at time of testing.

D. **Patching**. Where core test results are satisfactory and precast units are acceptable for use in work, fill core holes solid with patching mortar and finish to match adjacent concrete surfaces.

E. **Defective Work**. Precast concrete units that do not conform to specified requirements, including strength, dimensional tolerances, and finishes, shall be replaced with precast concrete units that meet requirements of this section. Be responsible for cost of corrections to other work affected by or resulting from corrections to precast concrete work.

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions

1. Supporting Members. Prior to commencement of hollow core slab installation, verify that all supporting members are in place and secured. For masonry walls, verify that installation of masonry has been completed for a minimum of 7 days.

2. Anchorage Items. Verify that all anchorage items, weld plates, etc., which were to be embedded or installed in other parts of the structure have been installed correctly and in their proper location.

3.2 INSTALLATION

A. **Bearing Pads**. Install flexible bearing pads where indicated as hollow slab units are being set. Set pads on level, uniform bearing surfaces and maintain in correct position until precast units are placed.

B. **Welding**. Perform welding in compliance with AWS D 1.1 and D 1.4, including qualification of welders.

1. Protect units from damage by field welding or cutting operations and provide noncombustible shield as required.

2. Repair damaged metal surfaces by cleaning and applying a coat of liquid galvanizing repair compound to galvanized surfaces and a compatible primer to painted surfaces.

C. **Powder-Actuated Fasteners**. Do not use powder-actuated fasteners for attaching accessory items to the surface of hollow slab units unless otherwise accepted by precast manufacturer.

D. **Erection Procedures**. Follow erection procedures and sequence of erection as recommended by hollow slab unit manufacturer and as acceptable to Engineer.

1. Installation Tolerances. Install precast units without exceeding following tolerance limits:

a. Variations from Plumb. 1/4 inch in any 20-foot run or story height; 1/2 inch total in any 40-foot or longer run.

b. Variations from Level or Elevation. 1/4 inch in any 20-foot run; 1/2 inch in any 40-foot run; total ±1/2 inch at any location.

c. Variation from Position in Plan. ±1/2 inch maximum at any location.

d. Offsets in Alignment of Adjacent Members at Any Joint. 1/16 inch in any 10-foot run, 1/4 inch maximum.

2. Level slabs accurately or set to uniform slope as indicated.

3. Set slabs on solid, level bearing, with bearing surface of slab units not less than 2 inches at steel supports and not less than 3 inches at other supports, unless otherwise acceptable to Engineer.

4. Align and level by methods, procedures, and equipment as recommended by hollow slab unit manufacturer.

5. Do not cut holes or install sleeves larger than size permitted by hollow slab unit manufacturer for pipe, conduits, duct, or other penetrations after fabrication.

6. Do not cut reinforcing or prestressing strands without approval of manufacturer.

7. Field cut holes for openings that do not disturb prestressing strands in accordance with recommendations of hollow slab unit manufacturer.

8. At continuous electrical raceway joints, carefully align cells and tape butt joints in accordance with manufacturer's recommendations and to comply with applicable code requirements. Keep hollow cores free from grout and other foreign materials.

E. **Grouting Connections and Joints**. After hollow core slabs have been placed and secured, grout open spaces at connections and joints as follows:

1. Provide cement grout consisting of 1 part portland cement, 3 parts sand, and only enough water to properly mix and hydrate.

2. Provide shrinkage resistant grout consisting of premixed compound and water to provide a flowable mixture without segregation or bleeding.

3. Provide forms or other acceptable method to retain grout in place until sufficiently hard to support itself. Pack spaces with stiff grout material, tamping until voids are completely filled. Place grout to finish smooth, plumb, and level with adjacent concrete surfaces. Keep grouted joints damp for not less than 24 hours after initial set. Promptly remove grout material from exposed surfaces before it hardens.

3.3 **DEMONSTRATION.** After installation of the precast hollow core slabs, but prior to grouting of same, demonstrate to representatives of the Owner and/or the Engineer by visual inspection that the hollow core slabs have been installed in accordance with the installation tolerances specified in paragraph 3.2 D.1. The visual inspection shall also identify damaged or honeycombed areas in the hollow core slabs which require repair or replacement. Hollow core slabs which have been repaired by the Contractor shall be reinspected by the Owner and/or Engineer. Hollow core slabs which cannot be repaired to the satisfaction of the Owner and Engineer shall be replaced at no additional cost to the Owner. Payment for precast hollow core slabs shall be authorized for those units which are installed properly and exhibit no visible defects.

END OF SECTION

SECTION 03 62 00

GROUTING, NONSHRINK

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Provide the labor, tools, equipment, and materials necessary to furnish and install the nonshrink grout in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work to furnish and install the nonshrink grout in compliance with all federal, state, and local codes and regulatory agencies.

B. **Standards**. Materials and workmanship shall be in accordance with the following standards referenced herein.

1. ASTM - American Society for Testing and Materials.

1.4 UBMITTALS

A. **Product Data**. Submit manufacturer's technical data and installation instructions for each type of grout. Technical data shall show manufacturer's trade name, color, all independent laboratory tests, performance data, method of application, storage requirements, safety fact sheet, container sizes, and mixing instructions.

1.5 JOB CONDITIONS

A. **Surface Preparation.** Clean all surfaces to be grouted of loose mortar and concrete and all dirt and oil.

B. **Coordination**. Coordinate all work with other trades to prevent delays, omissions, damage, and/or interference with other work.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery**. Grout shall be delivered to the site in sealed containers bearing a label which shall list the manufacturer's name, trade name, application rate, precautionary methods required, mixing ratio, and expiration date.

B. **Storage**. Store materials in an enclosed dry area, protected from damage and moisture. Keep storage areas clean and neat at all times.

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 MATERIAL

A. Grout shall be nonshrink, nonmetallic, nonstaining, capable of developing a minimum compressive strength of 8,000 pounds per square inch (psi) at 28 days, when tested in 2-inch cubes in accordance with ASTM C-109. Grout shall be

free of any metal, plastic, gypsum, and chemicals, and guaranteed not to shrink below its original placement volume at any time.

2.2 MANUFACTURER

A. Nonshrink grout shall be one of the following:

1. Five Star Grout or Fluid Grout 100 by Five Star Products, Inc.
2. F-100 by Sauereisen Cement Company.
3. Masterflow 928 by Master Builders.
4. NS Grout by Euclid Chemical Company.
5. Or approved equal.

PART 3 EXECUTION

3.1 EXAMINATION

A. **Verification**. Confirm that all dimensions, elevations, and tolerances are correct prior to placing grout. Equipment shall be free of any vibration and properly supported when operated prior to placing grout.

3.2 PREPARATION

A. **Surface Preparation**. Clean all areas to be grouted so they are free of all oils, grease, laitance, loose particles, and foreign materials. Thoroughly wet all concrete to be grouted leaving no puddles prior to grouting. Surface preparation shall be done in accordance with the grout manufacturer's recommendations.

3.3 INSTALLATION

A. **Placement**. Mix, place and cure nonshrink grout in accordance with the manufacturer's instructions. Fill all voids and spaces, trim excess grout, and finish surface to match adjoining surfaces or as directed. Maintain a surface temperature of not less than 50 degrees Fahrenheit (° F.) for 7 consecutive days after placing the grout and keep the grout wetted for 3 consecutive days after placing.

B. Items to Be Grouted (Where Applicable)

1. Pipe, Equipment, Leveling Plates, and Base Plates. After shimming equipment to proper grade, securely tighten anchor bolts. Properly form around the base plates, allowing sufficient room around the edges for placing the grout. Provide adequate depth between the bottom of the base plate and the top of the concrete base (1" minimum) to ensure that the void is completely filled with grout.
2. Rail and Fence Posts. After all posts have been properly inserted into the holes, fill the annular space between posts and concrete with the nonshrink, nonmetallic grout. Bevel grout at juncture with post so that moisture flows away from the post.
3. Box Outs and Closing of Openings. Grout all box outs and other openings approved due to late deliveries and required to maintain the work schedule full as shown on the drawings and as specified under paragraph 3.3 A of this section.
4. As required.

3.4 FIELD QUALITY CONTROL

A. **Areas to Be Grouted**. Observe and confirm that all surfaces to be grouted are cleaned of loose mortar and concrete and all dirt and oil.

B. **Shrinkage Cracks**. Visually inspect grouted areas after 3 months and 1 year for evidence of shrinkage cracks. Replace any grout which shows evidence of cracks.

END OF SECTION

This page intentionally left blank.

SECTION 03 64 23

EPOXY INJECTION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Special Conditions, Division 1, and all related specification sections, apply to work specified in this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Provide the labor, tools, and equipment necessary to repair cracks or joints in concrete where shown on the drawings and specified herein.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work in compliance with all federal, state, and local codes and regulatory agencies.

B. **Standards**. Comply with provisions of the following standards:

1. ASTM – American Society for Testing and Materials.

2. NSF – National Sanitation Foundation.

C. **Experience**. The Contractor shall have a minimum of 5 years' successful experience in epoxy injection of the specified products.

D. **Superintendent**. The superintendent assigned to the project must have supervised five prior projects of similar magnitude. Job superintendent shall control all operations as necessary for full compliance with all requirements.

E. **Technician**. The lead epoxy injection mechanic assigned to the project must have worked on three similar projects and have a minimum of 2 years' experience.

F. **On Site**. The superintendent or lead technician shall be on the job site at all times all work related to crack injection is being performed.

G. **Equipment**. Submit records showing that Contractor has owned and operated the epoxy injection equipment, or similar epoxy injection equipment, for a minimum of 2 years.

H. **Manufacturer's Representative**. Product manufacturer's technical representative shall provide the Contractor such aid and instruction as is required to obtain proper application of the product.

1.4 SUBMITTALS

A. **Product Data**. Submit manufacturer's technical data and installation instructions for each material, including manufacturer's trade name, all independent laboratory tests, performance data, method of application, storage requirements, safety fact sheet, container sizes, and mixing instructions.

1. Provide a list of at least five projects similar in concept which he has completed in the last 5 years as a certified applicator. Such lists shall include:

2. Project name and location.

3. Client's name, address, and telephone number.

4. Project consultant.

1.5 JOB CONDITIONS

A. Coordination

1. Coordinate with Owner so as not to interfere with operation of the facility.

2. Coordinate installation of joint materials, embedded items, etc., with placement of forms and reinforcing steel. Coordinate concrete work with all other trades to prevent delays, errors, or omissions.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Material must be brought to the job site** in unopened containers and clearly marked by manufacturers to show that material is less than 1 year old at time of placement. Store material in cool, dry area where temperatures do not exceed 80 degrees Fahrenheit (° F.) for prolonged periods.

1.7 SPECIAL WARRANTY Not used.

PART 2 PRODUCTS

2.1 MATERIALS

A. **Crack Repair Resin**. Crack repair resin shall be a two-component, 100-percent-solid, moisture-insensitive epoxy conforming to ASTM C 881 formulated to repair cracks in concrete and having the following properties:

Viscosity exceed	170 (cps)
Minimum 14 flexural strength (ASTM D 790)	5,000 pounds per square inch (psi)
Minimum 14-day modulus of elasticity (ASTM D 790)	3.7×10^5
Minimum 14-day tensile strength (ASTM D 638)	6,000 psi
Minimum elongation to break	2.5 percent
Bond strength (ASTM C 882) hardened concrete to hardened concrete	2 day (dry cure), 3,000 psi 4 day (wet cure), 2,000 psi

1. Available Products. All products that come in contact with drinking water must meet NSF 60/61 requirements for drinking water applications. Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to, the following:

a. Sika Injection-307, Sika Corp.

B. **Epoxy Paste**. Epoxy paste shall be a two-component, 100-percent-solid. moisture-insensitive, nonsagging epoxy paste conforming to ASTM C 881 formulated to seal crack surface during injection and having the following properties:

14-day tensile strength (ASTM D 638)	3,500 (psi)
14-day modulus of elasticity (ASTM D 638)	3.7×10^5
Bond strength (ASTM C 882) hardened concrete to hardened concrete	2 day (dry cure), 3,000 psi 14 day (wet cure), 2,200 psi

1. Available Products. All products that come in contact with drinking water must meet NSF 60/61 requirements for drinking water applications. Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to, the following:

   a. Sikadur-30, Sika Corp.

PART 3 EXECUTION

3.1 PREPARATION

A. **Remove all dust, laitance, grease**, curing compounds, impregnations, waxes, foreign particles, and disintegrated materials to expose bare concrete from crack and concrete surface adjacent to the crack.

3.2 EXAMINATION

A. **Inspect all of the areas** and surfaces to be epoxy injected.

3.3 EQUIPMENT

A. **Demonstrate equipment's ability** to pump and dispense the injection resin at sufficient pressures to fully seal all size joints and cracks. Use proper grouting equipment designed for the application of the specified materials.

B. **Demonstrate that pumping equipment** can maintain this pressure for 5 minutes with no leaks or drop in pressure.

3.4 INSTALLATION

A. Sequence of Work

1. Accomplish demolition of concrete within 10 feet of cracks to be injected prior to injecting the cracks.

2. Accomplish grouting under the slab within 10 feet of cracks to be injected prior to injecting the cracks.

B. **Use repair procedure** in accordance with the epoxy resin manufacturer's written instructions and, in general, include the following steps as needed for crack repairs, contaminated cracks, or rough surfaces.

1. Clean all areas to be injected. Remove all debris, mineral deposits, and existing sealant materials so that cracks and joints can be seen clearly enough to lay out the porting pattern. Use one or more of the following techniques:

   a. Hammer and chisel.

   b. Wire brush.

c. Grinding wheel.

d. Sandblast.

e. Power washing.

2. Drill standard holes for ports approximately 1/2 inch into the surface of the cracks. Spacing of the holes normally varies from 6 inches up to 24 inches apart, depending upon the thickness of the concrete structure being repaired and known depth of the cracks.

3. Pressure-wash the holes and cracks clean using a 3,000-psi system. Contaminated cracks may need chemical flushing. If water cannot be used, then vacuum drill bits and high-pressure air may be used to blow cracks clean.

4. Wait 8 hours or an adequate time for cracks to dry.

5. Install ports into the drilled holes. Recess each port to secure seating.

6. Seal around ports and the crack surface using the epoxy paste. Seal the crack on the opposite side of the structure so that epoxy resin does not leak out.

7. When the sealer is fully cured, begin the epoxy injection at the lowest entry port on vertical surfaces. Begin the epoxy injection at the widest side of the crack on horizontal surfaces.

   a. For structural cracks, inject with sufficient pressure until pure resin flows out the next port, then cap the port and move onto that flowing port. Continue injecting the length of the crack until the full length is injected.

   b. For nonstructural crack, the injection pressure must be limited so as not to cause movement of the concrete adjacent to the crack. Inject slowly, allowing time for epoxy to flow into crack. Filling the full depth of the crack is not required, but seal the crack surface with injection epoxy; space ports closer if required. Cap the port and move to next port. Continue injecting the length of the crack until the full length is injected.

3.5 CLEANUP

A. **After injection epoxy has cured,** remove epoxy paste from top surface of slabs, edges of slabs, tops of walls, and sides of wall to 2 feet below top of wall, then grind the surface smooth and remove excess resin from the surface of the structure.

3.6 FIELD REPORTS

A. **At the completion of the work** provide a report stating materials used, length of crack injected, whether structural or nonstructural, and if crack was filled. Prepare as-built drawings showing location and length of structural and nonstructural crack repair.

END OF SECTION

SECTION 04 05 01

MASONRY, MORTAR AND GROUT

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. The Contractor shall provide all labor, tools, equipment, and materials necessary to furnish and install the mortar and grout for masonry work in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work in compliance with all federal, state, and local codes and regulatory agencies.

B. **Standards**. Materials and workmanship shall be in accordance with the following standards:

1. ACI - American Concrete Institute.
2. ANSI - American National Standards Institute.
3. ASTM - American Society for Testing and Materials.
4. NCMA - National Concrete Masonry Association.
5. UL - Underwriters' Laboratories, Inc.

C. **Source**. Use one source and brand for mortar materials throughout the course of the project.

1.4 SUBMITTALS

A. **Product Data**. Submit product data on each unit of material.

B. **Samples**. Submit sample showing range and color for each type of colored mortar.

1. Label samples to indicate name of color, type of colorant, and the amount of colorant used in a specific mix.

C. Certification

1. Submit certified testing laboratory reports for the mortar mix in accordance with ASTM C 270, "Mortar for Unit Masonry."
2. Submit manufacturer's certificates as called for.

D. Mix Design and Test Results

1. Submit grout mix design and strength reports in conformance with ACI 301 “Flowchart for Selection of Concrete Mixtures.”

1.5 JOB CONDITIONS

A. Climatic

1. No mortar shall be mixed in temperatures below 40 degrees Fahrenheit (° F.).

2. No frozen or contaminated materials shall be used.

B. **Volume Control**. Maintain an accurate size container on the job at all times to ensure proper proportioning of cement, lime, and sand. A graduated container shall be utilized for quantifying admixtures.

1.6 DELIVERY, STORAGE, AND HANDLING.

A. Delivery

1. Packaged Units. Deliver in sealed units, palletized, clearly marked as to manufacturer, material, weight and/or volume, handling requirements, and all else necessary complete with instructions for its use.

2. Bulk. Bulk items such as sand shall be delivered covered and kept separate from other bulk items, unloaded in prepared designated areas.

B. Storage

1. Keep all units off the ground, under cover, and in a dry location.

2. All cementitious materials that become wet shall not be used and shall be removed from the site.

3. All sand shall be covered with a waterproof covering weighted down to keep rain, snow, and contaminants off the sand.

C. **Handling**. Handle material in a manner that will minimize contamination. Handle all chemicals in strict accordance with manufacturer's recommendations and/or instructions. All material in direct contact with the ground shall not be used.

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 MATERIALS

A. **Portland Cement**. Cement shall be Type 1, meeting ASTM C 150, "Portland Cement," nonstaining without air entraining and of natural color or white as required to produce the required color.

B. **Lime**. Lime shall be hydrated, Type S, conforming to ASTM C 207, "Hydrated Lime for Masonry Purposes." Provide certificate that lime meets ASTM C 207.

C. Sand

1. Gradation. Masonry sand shall pass 100 percent through a No. 16 sieve.

2. Type.

a. Natural. Sand shall be clean, sharp, conforming to ASTM C 144, "Aggregate for Masonry Mortar."

b. Naturally Colored. Sand shall be ground marble, granite, or other sound stone required to match the reviewed sample.

c. White Sand. Clean, hard, silicaceous material free of loam, silt, or other impurities.

D. **Aggregate**. Aggregate for coarse grout shall meet ASTM C 404, "Aggregate for Masonry Grout," Table 1, Coarse Aggregate.

E. Color Pigments

1. Type.

a. Commercial iron oxide.

b. Manganese dioxide.

c. Ultramarine blue.

d. Chromium oxide.

e. Carbon black.

2. Ratio. Pigment to cement ratio by weight:

a. Carbon Black - 1 to 35

b. Other - 1 to 10

F. **Water**. Water shall be clean, free from deleterious amounts of sewage, oils, acids, alkalis, clay, or organic material.

G. Admixtures

1. Waterproofing Type. Waterproofing admixtures shall be composed of balanced colloidal blends of water repellent stearates, water reducing agent, and a neutral carrier.

a. Product and manufacturer.

1) Omicrom by Master Builders.

2) Hydrocide Powder by Sonneborn Building Products.

3) Hydrolox 400 by Chem-master Corporation.

2. Nonfreeze Type. The following nonfreeze additives are not permitted.

a. Antifreeze or its agents.

b. Calcium chlorides.

c. Sodium chlorides.

H. Epoxy Mortar

1. Epoxy mortar shall be of the sanitary type that when set and hardened shall:

a. Be free of any odor.

b. Not be affected by food processing residues, wastes, and bacteria.

c. Meet or exceed ANSI A118.3.

d. Be free of any fillers that may scratch, stain, or damage the natural face finish of the masonry.

e. Consist of two or three component mix of resin, hardener, and powder containing less than 0.1 percent free water and nonpolymerized organic solvent.

f. Match color to masonry unless noted otherwise.

2.2 PROPORTIONING AND STRENGTH

A. Mortar. Type S, Proportion Specification, ASTM C270.

B. Grout. 2000 PSI, Coarse Type, ASTM C476.

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions

1. Verify that all equipment for mixing mortar is acceptable and in working condition.

2. Verify that water and all other materials required are available and accessible at the mixing area.

3.2 PREPARATION

A. Measurement of Material

1. Method.

a. Mortar Cement and Hydrated Lime. Batched by bag.

b. Sand.

1) Batched by volume in suitably calibrated containers.

2) Provide proper allowance for bulking and consolidations.

3) Provide for weight per cubic foot of contained moisture.

2. Cement Lime Mortar.

a. Type "S" cement-lime mix of the following proportions by volume.

1) Portland Cement. 1 part.

a) White, nonstaining for cut stone and split face masonry.

b) White silica for split face masonry.

2) Hydrated Lime. 1/2 part.

3) Sand. 4 parts.

3. Epoxy Mortar.

a. Shall be sanitary type proportioned by dry volume as per the manufacturer's recommendations.

4. Fine Grout.

a. Provide the following proportions by volume:

4) Portland Cement. 1 part.

5) Hydrated Lime or Lime Putty. 0 to 1/10 part.

6) Aggregate Ratio (Measured in a Damp Loose Condition). Sand; not less than 2 1/4 and not more than three times the sum of the volumes of cement and lime.

5. Coarse Grout.

a. Provide the following proportions by volume:

7) Portland Cement. 1 part.

8) Hydrated Lime. 0 to 1/10 part.

9) Fine Aggregate Ratio (Measured in a Damp Loose Condition). Sand, not less than 2 1/4 and not more than three times the sum of the volumes of cement and lime.

10) Coarse Aggregate Ratio. Not less than one and not more than two times the sum of the volumes of cement and lime

6. Stearate Additive.

a. Limit to 3 percent of the weight of cement.

b. Use only where designated by Contract Documents.

B. Mixing of Materials

1. Mortar.

a. Use dry-mix method.

b. Add cement, sand, and lime.

c. Turn over together the materials for each batch until even in color. Dry materials indicate that cementitious material has been thoroughly distributed throughout.

d. Add water to obtain required plasticity.

e. All cementitious materials and sand shall be mixed a minimum of 5 minutes in a mechanical batch mixer after all materials are in the mixer. Hand mixing shall not be allowed.

f. Waterproofing Admixture. Comply with manufacturer's instructions for all exterior masonry mortar mix.

g. Mortar, except epoxy, may be retempered by adding water and remixing, as required for workability, but not after initial set. Mortar shall be used within a 1-1/2-hour period after the original mixing. Mortar older than 1-1/2 hours shall be discarded.

11) Epoxy mortar shall not be retempered in the mixer at any time and retempering at the board shall be avoided. Antifreeze admixtures will not be permitted.

2. Grout.

a. All cementitious materials and aggregates shall be mixed a minimum of 5 minutes in a mechanical batch mixer after all materials are in the mixer. Hand mixing shall not be allowed.

b. Add only as much water as required for workability.

c. Add waterproofing admixture to comply with manufacturer's instructions for all exterior masonry mortar mix.

d. Mix grout to have a slump between 8 and 10 inches, at time of placement.

3.3 INSTALLATION

A. **Mortar**. See Section 04 20 01, "Masonry, Construction."

B. **Grout**. See Section 04 20 01, "Masonry, Construction."

3.4 FIELD QUALITY CONTROL

A. **Mock-Up Panel**. Each batch of mortar shall be compared to the mock-up panel for consistency of texture, color, and general appearance.

END OF SECTION

SECTION 04 05 23

MASONRY, ACCESSORIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. The Contractor shall provide all labor, tools, equipment, and materials necessary to furnish and install the masonry accessories in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work in compliance with all federal, state, and local codes and regulatory agencies.

B. **Standards**. Materials and workmanship shall be in accordance with the following standards:

1. ACI - American Concrete Institute.
2. ASTM - American Society for Testing and Materials.

1.4 SUBMITTALS

A. **Product Data**. Provide data for each accessory utilized showing that each complies with the specifications. Include sizes, gauges, materials, and finishes.

B. **Shop Drawings**. Submit layout drawings showing location, size, type, material, and manufacturer as applicable to each type of masonry accessory.

C. **Samples**. Provide one sample of each unit and/or not less than a 1-foot-long section showing all features of that unit.

1.5 JOB CONDITIONS

A. **Dimensions and Quantities**. The Contractor shall verify all measurements and quantities and be responsible for same.

B. **Coordination**. All masonry work shall be coordinated so that all required accessories are available at the start to prevent delays, errors, and/or omissions.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery**. Deliver all materials in sealed containers, wrapped bundles and each clearly marked as to type of unit, size, finish, quantity, manufacturer, and model number.

B. **Storage**. Keep masonry accessories off the ground, under cover, and in dry location to prevent damage due to contaminants, corrosion, and other causes.

C. **Handling**. Handle accessories in a manner that minimizes bending, twisting, and other defects that may cause the finish masonry work to be rejected.

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 MATERIALS

A. Horizontal Joint Reinforcing

1. Fabrication. Units shall be welded wire prefabricated in straight lengths of not less than 10' 0" with matching "L" corners and "T" or "+" intersection units with two or more side rods of and cross rods welded to side rods at not more than 16 inches on center. Side rods shall be deformed and cross rods plain each not less than 9 gauge meeting ASTM A 82, "Cold-Drawn Steel Wire, Plain, for Concrete Reinforcement."

2. Finish. Reinforcing shall be hot dip galvanized after fabrication with 1.5 ounces per square foot of zinc coating complying with ASTM A 153, "Zinc-Coating (Hot Dip) on Iron and Steel Hardware," Class B-2.

3. Types.

   a. Single-Wythe Walls. Ladder type with two side rods.

   b. Multiple-Wythe Walls. Ladder type with a side rod above each wythe.

   c. Multiple-Wythe Cavity Walls. Ladder type with adjustable double eye and pintle.

B. Wire Ties

1. Fabrication. Two-piece wire and anchor assembly allowing vertical or horizontal adjustment between wall and framework with anchor section for welding to steel.

2. Materials. Wire and anchor to be hot dip galvanized after fabrication. Anchor to be of sufficient length to allow adjustment of tie for one full height of masonry unit being anchored. Wire to be not less than 1/4-inch diameter, triangular shaped, and sized to extend within 1 inch of the masonry face being anchored.

C. Dove Tail Anchor and Tie

1. Dove tail anchor shall be 1 inch wide and 1 inch deep with a 5/8-inch throat. Anchor shall be hot dip galvanized, not less than 22 gauge, and foam filled.

2. Dove tail tie shall be Type 316 stainless steel sized to fit anchor and extend to 1 inch of the face of the masonry unit being anchored. Tie may be flat or triangular.

D. **Strap Anchors**. Strap anchors for cut stone shall be Type 316 stainless steel of the sizes and types recommended by the stone supplier.

E. **Reinforcing Steel**. Reinforcing steel shall be Grade 60 billet steel meeting ASTM A 615, "Deformed and Plain Billet-Steel Bars for Concrete Reinforcement."

F. Compressible Filler

1. Use foamed polyurethane strip saturated with polybutylene waterproofing material.

2. Hydrostatic Resistance.

   a. Six feet of water, when compressed to 50 percent of its original volume.

   b. Ten feet of water, when compressed to 60 percent of its original volume.

3. Maintain resiliency to allow for installation in temperatures as low as 40° Fahrenheit (F).

4. Waterproof when compressed to 50 percent of its original volume in temperatures from -40° F. to 200° F.

5. Elongation. At least 325 percent with a tensile strength of not less than 53 pounds per square inch (psi).

6. No migration of polybutylene compound in the polyurethane strip will be allowed.

G. Premolded Control Joint Strips

1. Solid rubber strips with a Shore A durometer hardness of 60 to 80, designed to fit standard sash block and maintain lateral stability in masonry wall.

2. Size, location, and configuration as shown.

H. Neoprene Expansion Joint Strips

1. Provide bellows type strip made form 1/16-inch cured, calendared neoprene with perforated flanges.

I. **Weep Holes**. 3/8-inch outside diameter by 4 inches long clear plastic tubes filled with nylon rope. Rope shall extend 1/2 inch beyond the outside face of the plastic tube and extend 10 inches into the cavity.

J. **Masonry Vents**. Multicell, flexible ultraviolet resistant polypropylene co-polymer sized to fill head joint and permit moisture to the exterior without permitting insects access to the cavity. Color as selected or to match mortar.

K. Cavity Fill Mesh

1. Provide stainless steel 1/2-inch mesh hardware cloth, backed with asphalt impregnated cloth.

2. Install below all block courses that are to be filled with grout.

L. Through-Wall Flashings

1. Copper Flashing. Copper sheet weighing not less than 3 ounces per square foot.

M. Insulation

1. Rigid Board. Rigid closed cell extruded polystyrene having a 15-year aged "R" value of not less than 5.0 at 75° F. and shall comply with ASTM C 578, "Preformed, Cellular Polystyrene Thermal Insulation," Type VI having a compressive resistance of 40 psi and water absorption not greater than 0.1 percent by volume.

2. Preformed. Specially shaped polystyrene units designed for installation in the cores of concrete block.

3. Adhesive. Type as recommended by insulation board manufacturer.

PART 3 EXECUTION

3.1 INSTALLATION

A. **General**. See Section 04 20 01, "Masonry Construction."

END OF SECTION

SECTION 04 20 01

MASONRY, CONSTRUCTION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. The Contractor shall provide all labor, tools, equipment, and materials necessary for masonry construction in accordance with the drawings and as specified herein.

1. This section includes requirements for new masonry construction and for infill construction at existing interior masonry walls.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work in compliance with all federal, state, and local codes and regulatory agencies.

B. **Standards**. Materials and workmanship shall be in accordance with the following standards:

1. ASTM - American Society for Testing and Materials.
2. ACI - American Concrete Institute.
3. BIA – The Brick Industry Association.
4. NCMA - National Concrete Masonry Association.
5. UL - Underwriters' Laboratories, Inc.

C. **Mockups**: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution. Prepare mock-ups not less than 7 days prior to Architect’s viewing.

1. Build mockups for typical exterior wall approximately 48 inches (1200 mm) long by 60 inches (1500 mm) high by full thickness, including face and backup construction, including each type of unit masonry and accessories.

a. Build mockup for each type of exterior wall.

1) Exterior wall with CMU back-up.

2) Exterior wall with steel column back-up.

b. Expansion joint, and Contraction Joint. Include a sealant-filled joint at least 16 inches (400 mm) long in exterior wall mockup.

c. Include lower corner of window opening framed with brick sill unit at upper corner of exterior wall mockup. Make opening approximately 12 inches (300 mm) wide by 16 inches (400 mm) high.

d. Include through-wall flashing installed for a 24-inch (600-mm) length in corner of exterior wall mockup approximately 16 inches (400 mm) down from top of mockup, with a 12-inch (300-mm) length of flashing left exposed to view (omit masonry above half of flashing).

e. Include sheathing, insulation, sheathing joint-and-penetration treatment, air barrier, veneer anchors, horizontal joint reinforcing, flashing, cavity drainage material, weep holes with masonry vents, grouted masonry cores, and cavity fill mesh.

3) Demonstrate surface penetration, crack and joint treatment, and sealing of gaps, terminations, and penetrations of air barrier membrane.

f. Include section of back-up construction and air barrier membrane for testing penetrations, and seams for ASTM E 1186 and membrane adhesion per ASTM D 4541.

2. Build mock up for typical interior glazed concrete block wall to be patched and to receive infill construction approximately 32 inches (1200 mm) long by 32 inches (1200 mm) high.

a. Build mock up in existing wall. Approved mockup may become part of the completed work if undisturbed at time of Substantial Completion.

3. Clean one-half of exposed faces of mockups with masonry cleaner.

4. Protect accepted mockups from the elements with weather-resistant membrane.

5. Approval of mockups is for masonry unit selection, color, texture, and blending of masonry units; relationship of mortar and sealant colors to masonry unit colors; tooling of joints; and aesthetic qualities of workmanship.

a. Approval of mockups is also for other material and construction qualities specifically approved by Architect in writing.

b. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless such deviations are specifically approved by Architect in writing.

c. Approval of mockup is also for final masonry unit selection.

6. Modify mockup, as needed, to address Architect’s written comments. Do not proceed with masonry installation, and DO NOT PLACE ORDER FOR BRICK OR MORTAR until mockup is approved by the Architect.

7. Removal. Retain and protect mock-up during construction as a standard for judging completed masonry work. Do not alter, move, or destroy mock-up until given written permission of the Engineer/Architect. Mock-up of exterior walls hall be removed from the site on completion and acceptance of the project.

D. **Contractor's Qualifications**. Masonry Contractor shall:

1. Have 5 years' experience in masonry work.

2. Have a qualified foreman with at least three projects of similar or equal type of construction.

3. Be acceptable to the Owner.

1.4 SUBMITTALS

A. Construction Methods

1. Cold Weather. Submit procedures evidencing compliance with requirements of BIA Bulletin 1A, "Construction and Protection Recommendations for Cold Weather Masonry Construction," NCMA Tek Note 3-1A, "All-Weather Concrete Masonry Construction," and ACI 530.1, "Specification for Masonry Structures," Article 1.8.C.

2. Hot Weather. Submit procedures evidencing compliance with requirements of BIA bulletins and/or NCMA Tek Note 3-1A, "All-Weather Concrete Masonry Construction," and ACI 530.1, "Specification for Masonry Structures," Article 1.8.D.

B. **Qualifications**. Submit Masonry Contractor's qualifications as called for under Item 1.3 D. of this section. Submit name of foreman and crew complete with job title and years of experience at that position.

1.5 JOB CONDITIONS

A. **Coordination**. All chases, openings, anchors, and appurtenances for other trades shall be accurately located and built in as work progresses. Schedule and coordinate work with all other trades to avoid delays, errors, or omissions.

B. Environmental Conditions

1. Climatic. No masonry work shall be installed during inclement weather or in temperatures below 40 degrees Fahrenheit (° F.) without Engineer/Architect's review and acceptance of provisions to protect the work.

C. **Dimensions**. The Contractor shall verify all measurements and shall be responsible for all dimensions and elevations.

D. Loads

1. Do not apply uniform floor or roof loading for at least 3 days after completing masonry columns or walls.

2. Do not apply concentrated loads for at least 7 days after completing masonry columns or walls.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery**. All materials shall be delivered in sealed and clearly marked containers, and in an undamaged condition.

B. Storage

1. Keep masonry units off the ground, under cover, and in a dry location to prevent their deterioration or damage due to moisture, temperature

changes, contaminants, corrosion, and other causes. If units become wet, do not place until units are in an air dried condition.

2. Store cementitious materials off the ground, under cover, and in dry location.

3. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.

4. Store masonry accessories including metal items to prevent corrosion, accumulation of dirt and oil, and staining of masonry.

C. **Handling**. Handle materials in a manner that minimizes chips, cracks, voids, discolorations, or other defects which might be visible or cause staining in finished work.

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 MATERIALS

A. Refer to the various sections of the specifications that relate to materials for masonry work.

2.2 GLAZED CONCRETE BLOCK

A. Use salvaged units only. Salvage full size units and special shapes, as required to match existing construction, without defects on face.

PART 3 EXECUTION

3.1 EXAMINATION

A. **Site Verification of Conditions**. Verify areas and conditions under which masonry work is to be installed. Examine built-in conditions and verify locations. Mock-up panel shall be reviewed and accepted by the Owner and/or the Engineer/Architect before ordering brick and mortar.

B. **Corrections**. Do not proceed until all unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. **Protection**. All areas subject to damage and/or staining from masonry work shall be protected at all times.

B. **Cleaning**. Clean reinforcing of all loose rust, mill scale, earth, ice, or other materials which will reduce bond to the mortar or grout.

C. Wetting of Masonry Units

1. Wet brick having ASTM C 67, "Methods of Sampling and Testing Brick and Structural Clay Tiles," absorption rates greater than 0.025 ounce per inch per minute.

a. Determine absorption by placing 20 drops of water inside a circle the size of a quarter on typical units. If water is absorbed within 1-1/2 minutes, wet brick before laying.

2. Use wetting methods which ensure that each masonry unit is nearly saturated but surface dry when laid.

3. Except for absorbent units specified to be wetted, lay masonry units dry. Do not wet concrete masonry units or structural clay facing units.

3.3 INSTALLATION

A. General

1. Thickness.

a. Build walls, floors, and other masonry construction to the full thickness shown.

b. Build single wythe walls to the actual thickness of the masonry units, using units of nominal thickness shown or specified.

2. Chases and Recesses.

a. Build chases and recesses as shown.

b. Provide not less than 8 inches of masonry between chase or recess and jamb of openings, and between adjacent chases and recesses.

3. Openings.

a. Leave openings for equipment, piping, ducts, and other items to be installed subsequent to starting of masonry work.

b. After installation of said items, complete masonry work to match work immediately adjacent to openings.

4. Cutting.

a. Cut all masonry units using motor driven saws to provide clean, sharp, unchipped edges.

b. Cut units as required to provide pattern shown and to fit adjoining work neatly.

c. Use full size units without cutting wherever possible.

B. Interface with Other Work

1. Coordination. Coordinate the installation of masonry with all associated items including flashing, insulation, inserts, ties, anchors, reinforcing, and embedded items.

2. Matching Existing Masonry Work. Match coursing, pattern bond, color, and texture of new masonry work with existing work.

C. Laying Masonry Walls

1. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint widths and for accurate locating of openings, movement type joints, returns, and offsets. Avoid the use of less than half size units at corners, jambs, and where possible at other locations.

2. Lay up walls plumb and true to comply with specified construction tolerances, with courses level, accurately spaced, and coordinated with other work.

3. Fill openings left in masonry by keying every course with all exposed surfaces flush and all joints kept on line, unless otherwise shown.

4. Bond Pattern for Exposed Masonry. Lay exposed masonry in the bond pattern shown or called for, or if not shown or called for, in running bond with vertical joint in each course centered on units in courses above and below. Bond and interlock each course of each wythe at corners. Do not use units with less than nominal one half the horizontal face dimensions at corners or jambs.

5. Exposed face shells that are broken, cracked, defective, or warped shall not be used and if utilized shall be removed and replaced.

6. Stopping and Resuming Work. In each course, rack unit one-half its length for running bond, do not tooth. Clean exposed surfaces of set masonry, wet clay masonry units lightly (if required), and remove loose masonry units and mortar prior to laying fresh masonry.

    a. Grouting. Except at top of walls when grouting is to be stopped for 1 hour or longer, the top of the lift shall be 1-1/2 inches below the top of the upper most unit grouted.

7. Horizontal reinforcement shall be set in a fully uninterrupted bed of grout.

8. Apply mortar to masonry units so that mortar protruding into cells to be filled with grout is minimized. Mortar that protrudes into cells shall be parged to the masonry units.

9. Built-in Work. As construction progresses, build in items that are specified under this and other sections of the specifications. Fill in solidly with masonry around built-in items.

    a. Set embedded items accurately with templates or accepted means to prevent movement.

    b. Fill space between hollow metal frames and masonry solidly with mortar.

    c. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of hot dip galvanized metal lath in the joint below and rod mortar or grout into core.

10. Provide solid units or fill cores in hollow masonry units with grout not less than 24 inches under bearing plates, beams, lintels, posts, and similar items, and for a width of 24 inches each side of centerline of bearing, unless otherwise indicated.

11. Non-Load-Bearing Interior Walls.

    a. Build full height of story to underside of structure above, unless otherwise shown. Provide lateral support to structure.

    b. Insert compressible filler in all horizontal and vertical joints where masonry terminates.

        4) Insert filler 3/4 inches from both faces of masonry.

        5) Use filler twice as thick as the widest part of the joint.

        6) Thickness of filler shall be a minimum of 1.5 times the compressed thickness.

7) Compress filler to less than thickness of joint and insert.

8) At splices, overlap strips by 3 inches and compress ends to form tight joint.

D. Mortar Bedding and Jointing

1. Solid Units.

a. Lay solid masonry units with completely filled bed and head joint; butter ends with sufficient mortar to fill head joints and shove into place.

b. Do not slush head joints.

2. Hollow Units.

a. Lay hollow masonry units with full mortar coverage on horizontal and vertical face shells.

b. Set webs in full bed of mortar in starting course of piers, columns, and pilasters, and adjacent to cells or cavities to be reinforced or filled with concrete or grout.

3. Tooling/Joints.

a. Unless otherwise noted, joints shall be approximately 3/8 inch. Joints shall be uniform throughout.

b. Tool all joints slightly concave except for surfaces to receive fluid applied membrane air barrier where joints should be struck flush.

E. Horizontal Joint Reinforcement

1. General. Provide continuous horizontal joint reinforcement as indicated. Install longitudinal side rods in mortar for their entire length with a minimum cover of 5/8 inch on exterior side of walls, 1/2 inch elsewhere. Lap reinforcing a minimum of 12 inches.

a. Cut or interrupt joint reinforcement at control and expansion joints, unless otherwise indicated.

2. Metal Ties.

a. Use individual metal ties and shots embedded in concrete and horizontal joints of masonry to tie masonry to concrete.

b. Provide ties as shown, but not less than one metal tie for 3 square feet of wall area spaced not to exceed 24 inches on center horizontally and 16 inches on center vertically.

c. Stagger ties in alternate courses.

d. Provide additional ties within 12 inches of all openings and space not more than 3'-0" apart around perimeter of openings.

3. Ladder-Type Reinforcing.

a. All masonry walls or partitions shall have hot dip galvanized horizontal reinforcing.

b. All cavity walls shall be reinforced with ladder type double eye and pintle reinforcing.

c. All interior and noncavity walls shall be reinforced with ladder type reinforcing.

d. Use continuous reinforcing embedded in horizontal mortar joints for bond tie between wythes and as shown.

e. Install at not more than 16 inches on center vertically for walls.

4. Corners.

a. Provide interlocking masonry unit bond in each course at corners, unless otherwise shown.

b. For horizontally reinforced masonry, provide continuity at corners with prefabricated "L" units, in addition to masonry bonding.

5. Openings.

a. Reinforce masonry openings greater than 12 inches wide, with additional horizontal joint reinforcing placed so that three horizontal joints approximately 8 inches apart, immediately above the lintel and immediately below the sill are reinforced.

b. Extend additional reinforcing a minimum of 24 inches beyond jambs of the opening, except at control or expansion joints.

c. In addition to wall reinforcing, provide additional reinforcing at opening as required.

F. Vertical Reinforcing

1. Position reinforcing accurately. Support and secure vertical bars against displacement prior to grouting. Where vertical bars are shown in proximity, provide a clear distance between bars of not less than the normal bar diameter or 1 inch, whichever is greater. This also applies to contact lap splices and adjacent splices or bars.

a. At columns, piers, and pilasters, provide a clear distance between vertical bars as shown, but not less than 1-1/2 times the nominal bar diameter or 1-1/2 inches, whichever is greater. Provide lateral ties.

2. Splice reinforcing bars where shown or specified; do not splice at other points unless acceptable to the Engineer/Architect.

a. Provide minimum lap as shown on drawings or if not shown on drawings, as required by "Building Code Requirements for Concrete Masonry Structures" ACI Committee 530.

G. Grouting

1. Materials.

a. Fine Grout. Use fine grout for filling spaces less than 4 inches in both horizontal dimensions.

b. Coarse Grout. Use coarse grout for filling spaces 4 inches or larger in both horizontal dimensions.

2. Preparation.

a. Debris. Construct grout spaces free of mortar dropping, debris, loose aggregates, and any material deleterious to masonry grout.

b. Cleanouts. Provide cleanouts in the bottom course of masonry for each grout pour when the grout pour height exceeds 5 feet.

1) Construct cleanouts adjacent to each vertical bar. In solid grouted masonry, space cleanouts horizontally a maximum of 32 inches on center.

2) Construct cleanouts with an opening of sufficient size to permit removal of debris. The minimum opening dimensions shall be 3 inches.

3) After cleaning, close cleanouts with closures braced to resist grout pressure.

3. Placing.

a. Place grout using spout or chute. Place continuously: do not interrupt placing operation for more than 1 hour. Terminate grout placements 1-1/2 inches below top course of placement.

b. Grout pour and lift heights shall not exceed heights specified in ACI 530.1.

c. Bond Beams and Slab Bearing. Stop grout in vertical cells 1-1/2 inches below bond beam course or slab. Place horizontal reinforcing in bond beam; lap at corners and intersections as shown. Place grout in bond beam course before filling vertical cores above bond beam.

d. Consolidation. Consolidate grout at the time of placement.

4) Consolidate grout pours 12 inches or less in height by mechanical vibration or by puddling.

5) Consolidate pours exceeding 12 inches in height by mechanical vibration and reconsolidate by mechanical vibration after initial water loss and settlement have occurred.

H. Lintels

1. Install anchor bolts, base plates, and steel lintels of size and shape shown. Materials are specified and furnished under Division 5.

2. Provide precast or formed-in-place masonry lintels where shown and where openings of 16 inches or more are shown without structural steel lintels.

a. Thoroughly cure precast lintels before handling and installation.

b. Temporarily support formed-in-place lintels.

c. Unless otherwise shown, provide one horizontal reinforcing bar top and bottom for each 4 inches of lintel thickness.

3. For hollow masonry unit walls, unless otherwise shown, use specially formed "U" shaped masonry lintel units with reinforcing bars placed as shown, filled with grout.

4. Provide minimum bearing at each jamb of not less than 8 inches unless shown otherwise. Set edge of steel lintels back 1/2 inch from exposed faces of masonry.

I. Flashing of Masonry Work

1. Provide concealed flashings in masonry work as shown.

2. Prepare masonry surfaces smooth and free from projections which might puncture flashing.

3. Place through wall flashing on bed of mortar and cover with mortar.

4. Seal flashing penetrations with mastic before covering with mortar.

5. Terminate flashing 1/2 inch beyond face of wall, unless otherwise shown.

6. Extend flashings to edge of lintels and sills and turn up edge on sides to form pan to direct moisture to exterior.

7. Interlock end joints of deformed metal flashings by overlapping deformations not less than 4 inches and seal lap with elastic sealant.

8. Install all flashings in accordance with manufacturer's instructions.

9. Provide weep holes in the head joints of the first course of masonry immediately above concealed flashings. Space weeps 1'-4" on center, unless otherwise shown.

10. Install reglets and nailers for flashing and other related work where shown to be built into masonry work.

11. Install flashing at the base of all exterior masonry wall sections, at all sills, and above all exterior masonry openings. Extend flashing above the supporting member as shown.

J. Insulation

1. Rigid Board Insulation.

a. Install small pads of adhesive spaced approximately 1'-0" o.c. both ways on inside face or attached to inside face with plastic fasteners designed for this purpose. Fit courses of insulation between wall ties and other confining obstructions in cavity, with edges butted tightly both ways. Press units firmly against wythe of masonry or other construction as shown.

1) Fill all cracks and open gaps in insulation with crack sealer compatible with insulation and masonry.

2) Isolate insulation from any and all heating ducts and/or vents passing through with noncombustible material having limited heat conductance.

K. Control and Expansion Joints

1. Provide vertical expansion, control, and isolation joints in masonry where shown or specified.

2. Build in related items as the masonry work progresses.

3. Rake out mortar in preparation for application of caulking and sealants.

4. Elastic Expansion Joint Strips. Where shown or specified, build flanges of factory fabricated expansion joint strips into masonry.

5. Compressible Fillers.

   a. Build in compressible fillers for all expansion and control joints and where shown for all vertical and horizontal joints at tops of walls.

   b. Install in accordance with manufacturer's written instructions.

6. Control/Expansion Joint Spacing.

   a. Where location of control joints is not shown, place 3/8 inch vertical joints spaced:

      1) Exterior brick, 20'-0" on center.

      2) Interior and exterior masonry 24'-0" on center.

   b. Locate control joints at points of natural weakness in the masonry work including the following:

      1) At structural columns.

      2) Above expansion joints in the supporting structure.

      3) At vertical chases, recesses, and other points of reduction in wall thickness.

      4) At locations where masonry wall height changes.

      5) Where masonry abuts supporting structure. At one side of openings less than 6 feet in width and at both sides for openings greater than or equal to 6 feet in width.

      6) At a distance equal to one-half the wall height from corners or intersections with other masonry.

      7) Submit joint locations for review.

   c. Control joints in exterior masonry of cavity walls shall be staggered from interior masonry control joints.

L. Weep Holes

1. Location. Exterior wythe of cavity walls at foundation course, ledges, flashings, and where noted.

2. Spacing. Set weep vents every 24" on center in alternate rows. Set one row in the bed joint with the alternate row 3 inches above the bed joint.

M. Protection

1. At the close of each working day, the open top and ends of all masonry work shall be protected and kept dry by a weighted waterproof covering which overhangs the walls by a minimum of 2 feet.

2. No masonry work shall be installed during inclement weather or in temperatures below 40 degrees Fahrenheit (^{o} F.) without Engineer/Architect accepted provisions to protect the work.

3. After installation, all masonry work shall be kept from freezing during cold weather for not less than 48 hours.

4. All masonry shall be adequately braced for wind until the roof deck is applied and anchored.

5. Any masonry damaged by the elements shall be replaced at no additional cost to the Owner.

3.4 REPAIR AND RESTORATION

A. Repair

1. Remove and replace masonry units which are loose, chipped, broken, stained, or otherwise damaged, or if units do not match adjoining units.

2. Provide new units to match adjoining units and install in fresh mortar or grout, pointed to eliminate evidence of replacement.

B. Pointing

1. During the tooling of joints, enlarge any voids or holes, except weep holes or vents, and completely fill with mortar.

2. Point up all joints at corners, openings, and adjacent work to provide a neat, uniform appearance, properly prepared for application of caulking and sealant compounds.

3. Existing Work. Where shown on the drawings, existing masonry shall be pointed. Joints shall be cleaned of existing mortar to a depth not less than 1 inch from the face of the masonry. Disintegrated joints shall be cut out to the full depth of the disintegration. Joints shall be brushed and blown clean with air under pressure and pointed to the full depth of the cut. Cuts greater than 1 inch deep shall be stage pointed. Joints shall be kept wet while pointing.

3.5 FIELD QUALITY CONTROL

A. **Conformance.** All work will be reviewed for conformance to work and material utilized in the accepted mock-up panel specified in paragraph 1.3 C. of this section. All work and/or materials found not in conformance shall be removed and replaced.

3.6 CLEANING

A. **Unglazed Masonry**. Contractor shall clean exposed, unglazed masonry surface to the satisfaction of the Engineer/Architect.

1. Wipe off excess mortar as the work progresses. Dry brush at the end of each day's work.

2. Sample. After mortar is thoroughly set and cured, clean approximately 20 square feet of wall area as described. Obtain acceptance of the Engineer/Architect.

3. Final Cleaning.

   a. Dry clean to remove large particles of mortar using wood paddles and scrapers. Use chisel or wire brush if required.

   b. Presoak wall by saturating with water and flush off loose mortar and dirt.

   c. Scrub down wall with stiff fiber brush and a solution of 1/2 cup of trisodium phosphate and 1/2 cup of household detergent dissolved in 1 gallon of water.

   d. Rinse walls, using clean, pressurized water, to neutralize cleaning solution and remove loose material.

4. Acid Cleaning. Use acid cleaning upon acceptance of unit masonry manufacturer and Engineer/Architect when cleaning as outlined above is insufficient.

   a. Dry clean to remove large particles of mortar using wood paddles and scrapers. Use chisel or wire brush if required.

   b. Presoak wall by saturating with water and flush off loose mortar and dirt.

   c. Comply with the requirements and recommendations for "Cleaning Clay Products Masonry" of the Technical Notes on Brick and Tile Construction by BIA for the type of masonry and conditions involved in the work.

   d. Apply acid type cleaners in compliance with manufacturer's instructions.

   e. Protect other work from acid solutions and cleaning operations.

B. **Glazed Concrete Block**. Use job-mixed detergent for all exposed existing glazed concrete block after all masonry construction and repairs are complete.

3.7 DEMONSTRATION

A. **Visual**. The Contractor, Owner, and Engineer/Architect will visually review the masonry work for completion. The Contractor will demonstrate that all masonry materials, dimensions, built-in items, and openings are in conformance with the Contract Documents. All joints are tooled and uniform in appearance.

B. **Final Acceptance**. The visual demonstration for completion of the masonry work shall not be considered as a final acceptance of work. All and any discrepancies "punch listed" at final inspection shall be corrected by the Contractor to the satisfaction of the Engineer/Architect and Owner.

3.8 **PROTECTION**. Protect the masonry work from deterioration, discoloration, or damage during subsequent construction operations. Remove any and all protection at the completion of the project.

END OF SECTION

This page intentionally left blank.

SECTION 04 21 13

MASONRY, BRICK

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. The Contractor shall provide all labor, tools, equipment, and materials necessary to furnish and install the brick masonry in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work in compliance with all federal, state, and local codes and regulatory agencies.

B. **Standards**. Materials and workmanship shall be in accordance with the following standards:

1. ACI - American Concrete Institute.
2. ASTM - American Society for Testing and Materials.
3. BIA - Brick Institute of America.

C. **Source**. Obtain brick from one manufacturer for uniform texture and color or if blended of uniform blend.

1.4 SUBMITTALS

A. **Product Data**. Provide data for each different masonry unit showing that materials comply with specifications. Include size variation data verifying that actual range of sizes for brick falls within dimension tolerances of ASTM C 216, "Facing Brick (Solid Masonry Units Made From Clay or Shale)," where modular dimensioning is indicated.

B. **Samples**. Submit four of each type of brick selected showing the range of color, texture, and dimensions to be expected in the completed construction.

C. **Certifications**. Submit copies of manufacturer's certification that each type of brick selected complies with the specified requirement.

1.5 JOB CONDITIONS

A. **Blending**. When factory blend is not adequate, Contractor shall field blend brick as required to obtain the desired results or a match to existing.

B. **Selecting**. Where stack bond and/or select color is called for, the Contractor shall hand select brick for uniformity of size and/or color, keep isolated, and clearly mark pallets.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery**. Deliver brick in original packages and on pallets, undamaged and plainly marked as to manufacturer and material.

B. **Storage**. Brick shall be stored on pallets off the ground, covered and kept dry to prevent damage and/or staining.

C. **Handling**. Handle brick as recommended by the manufacturer.

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 MATERIALS

A. **Modular Size Brick**. Provide standard size brick, 7 5/8 inches long by 2 1/4 inches high by 3 5/8 inches wide, actual size for exposed vertical brick when laid on a stretcher. Provide special molded shapes where shown and for applications which cannot be made from standard brick.

B. **Cored Brick**. Provide solid or cored brick for vertical brickwork. Do not use cored brick with net cross sectional area less than 75 percent of gross area in the same plane or with core holes less than 3/4 inch from any edge.

C. **Solid Facing Brick**. ASTM C 216, "Facing Brick (Solid Masonry Units Made From Clay or Shale)," Grade SW, Type FBX or FBS.

D. **Brick Strength**. F'm = 2400 PSI.

2.2 BRICK ALLOWANCE

A. **Measurement**. The individual wall area of the various grades and types of bricks as determined from field measurement of masonry work shall include all specials, stretchers, soldiers, rowlocks, bullnose, and all shapes incorporated in the finished work. For final payment purposes, the completed and accepted masonry work will be measured and the number of various brick units determined on a square foot of single wall basis, not including openings, as follows:

Joint Width	No. of 2-1/4" by 7-5/8" Brick/square foot
3/8 inch	6.75

B. **Bid Allowance**. For the purpose of preparing a bid, the Contractor shall allow a material price of $650.00 per 1,000 bricks for delivery and unloading at the job site. The bid allowance shall be adjusted for final payment by the following items:

1. The cost of the brick selected by the Owner.
2. The number of bricks incorporated in the work.
3. An allowance for actual rejects and breakage of brick, not to exceed 2 percent of the number of bricks incorporated in the work.

PART 3 EXECUTION

3.1 INSTALLATION

A. **General**. See Section 04 20 01, "Masonry, Construction."

END OF SECTION

SECTION 04 22 00

MASONRY, CONCRETE BLOCK

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. The Contractor shall provide all labor, tools, equipment, and materials necessary to furnish and install the concrete block masonry in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work in compliance with all federal, state, and local codes and regulatory agencies.

B. **Standards**. Materials and workmanship shall be in accordance with the following standards:

1. ACI - American Concrete Institute
2. ASTM - American Society for Testing and Materials.
3. NCMA - National Concrete Masonry Association.

C. **Source**. Obtain block from one manufacturer with uniform texture and color.

D. **Manufacturer's Qualifications**. Manufacturer shall be a member in good standing of the National Concrete Masonry Association and manufacturing concrete masonry units for not less than 10 years.

1.4 SUBMITTALS

A. **Product Data**. Provide data for each different masonry unit showing that materials comply with specifications. Include size and strength variation data verifying that actual range of sizes and strength for block falls within tolerances required under ACI 530.1

B. Samples

1. Submit one of each type of block showing the range of color, texture, and dimensions to be expected in completed construction.

C. **Certifications**. Submit copies of manufacturer's certification that each type of masonry unit required complies with the specified requirement.

1.5 JOB CONDITIONS (Not Used)

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery**. Deliver all masonry units on pallets, separated as to size, type, and manufacturer, and clearly marked.

B. **Storage**. Store all units off the ground, covered and protected to keep dry and prevent staining and/or damage.

C. **Handling**. Handle to prevent marring or chipping of the face and/or edges, or damage to any insert.

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 MATERIALS

A. Concrete Masonry Units

1. General. All concrete block shall be normal weight, Type 1, thoroughly cured, made from Portland cement, limestone, or natural sand, gravel, or crushed stone. All units shall be square, true, and have sharp arises and dimensionally stable.

2. Standard Block. Unless otherwise shown, all concrete units shall be standard block, load bearing, two core conforming to ASTM C 90, "Load Bearing Concrete Masonry Units" and solid units conforming to ASTM C 90 except block shall be 100 percent solid.

3. Concrete Block Strength. Minimum net area compressive strength: 2,8000 PSI (f'm = 2,000 PSI)

4. Shadow Block. Shadow block shall be solid or two-core, load bearing, conforming to ASTM C 90 and of the configuration shown.

5. Precast Lintels. Precast concrete lintels shall be of the sizes shown, with not less than two Number 5 reinforcing bars (one top, one bottom) for each 4 inches of lintel width.

6. Specials. Specials such as sash blocks, corner blocks, bond beam blocks, cove blocks, grout blocks, etc., shall match the adjoining masonry units in color, texture, and finish unless noted otherwise.

B. Insulated Concrete Masonry Units

1. General. Units shall be 4 inches high by 16 inches long by 12 inches wide, or as otherwise shown on the drawings.

2. Basis of Design: Concrete Products Group, Spek-Brik, or approved equal. Color to be selected by the architect or owner.

C. Integrally Pigmented Load Bearing Units

1. General. Stretcher units to be 4 inches high by 16 inches long, widths as indicated on drawings. Units to be normal weight load bearing two-core, conforming to ASTM C90.

2. Units to have integral metallic oxide pigments and integral polymer water repellent.

3. Provide special units, as indicated on drawings, for bond beams, control and expansion joints, and lintels.

4. Color to be selected from manufacturers' standard blends. Exposed faces shall be uniform and provide the appearance of brick construction.

5. Manufacturers:

a. Old Castle “Quick-Brik.”

b. Sealtech Block “Sealbrick.”

c. Or equal.

PART 3 EXECUTION

3.1 INSTALLATION

A. **General**. See Section 04 20 01, "Masonry, Construction."

END OF SECTION

This page intentionally left blank.

SECTION 05 00 00

GRATING AND MISCELLANEOUS METALS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Provide the labor, tools, equipment, and materials necessary to furnish and install the miscellaneous metals in accordance with the drawings and the specifications. This specification does not include other division 5 specification, including Fixed metal ladders (05 51 10), Structural Steel (05 10 00), pipe tube and railings (05 52 13) and others.

1.3 QUALITY ASSURANCE

A. **Fabricator Qualifications**. Fabrication shall meet requirements of the American Institute of Steel Construction (AISC) standards.

B. **Standards**. Ensure that materials and workmanship are in accordance with the following standards referenced herein.

1. AASHTO – American Association of State Highway and Transportation Officials.
2. AISC.
3. ASTM – American Society for Testing and Materials.
4. AWS – American Welding Society.
5. OSHA – Occupational Safety and Health Administration.

1.4 SUBMITTALS

A. **Submit the following** in accordance with the Division 1 Submittal Requirements and the requirements within this specification section.

B. Submittal Package No. 1 – Shop Drawings and Product Data

1. Schedule. No products shall be delivered or installed before this submittal package has been reviewed and approved.
2. Submittal Package Contents.
    a. Manufacturer's name and model numbers.
    b. Manufacturer's standard product data and equipment specifications.
    c. Materials of construction.
    d. Dimensional layouts and required clearances.
    e. Connections including welding.
    f. Weights.

g. Anchors.

h. Bill of material.

i. Coatings.

j. Complete description in sufficient detail to permit an item by item comparison with the specifications.

k. Manufacturer's instructions.

l. Warranties.

1.5 JOB CONDITIONS

A. **Field-verify all dimensions, locations, and elevations** of anchors, bolts, plates, openings, and other miscellaneous metal items and be responsible for their proper fit.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **In accordance with Section** 01 60 00 "Materials and Equipment" and the manufacturer's instructions.

1.7 SPECIAL WARRANTY

A. Not used.

PART 2 PRODUCTS

2.1 GENERAL

A. Design

1. Proportion components not sized on the plans to provide ample strength and stiffness for the loads expected.

2. All steel shall meet the requirements of ASTM A 36.

3. All cast iron shall meet the requirements of ASTM A 48.

B. **Fabrication**. Fabricate the miscellaneous metals in accordance with the approved shop drawings.

2.2 EQUIPMENT

A. Chains

1. Multiple row of 1/4 inch, Type 304 all-welded stainless steel.

2. Type 316 stainless steel swivel safety snap at each end.

3. Type 316 stainless steel eye bolt to the railing or wall.

B. Gratings

1. Aluminum.

a. Type 6063 aluminum, rectangular pressure lock type with cross bars flush with the walking surface.

b. Bearing bars shall be not less than 3/16 inch thick with a minimum depth of 1-1/4 inches and spaced not greater than 1-3/16 inches on center.

c. Cross bars shall be 3/4 inch x 1/8 inch spaced 4 inches on center.

2. Design Loading.

a. Uniform load of 300 pounds per square foot with a deflection of not more than 1/160 of the span, unless otherwise shown.

b. Depths noted are minimum; increase depth of grating and support angle as required to meet design loading.

c. Uniform depth in any one area.

3. Supports.

a. Support gratings on all four sides by an angle of the same material as the grating.

b. Securely anchor angle supports.

c. Where the support angle extends across an opening, supplement the support angle with a structural channel.

d. Channel, unless noted otherwise, shall be of the same material as the grating and not less than 3 inches in depth.

4. Banding. Band edges and openings in the gratings with a bar equal to the bearing bar. Provide 1/8 inch thick cover plate with pegs to prevent movement for each opening.

5. Setting.

a. Set gratings flush with the finished surface.

b. Secure gratings to their supports by removable anchors.

c. Set anchors every 4 feet 0 inches on center but not less than two anchors per each section of grating.

d. Clip gratings with a span over 4 feet together.

C. Planking

1. Materials. Type 6063-T6 aluminum, unpunched, solid surface with horizontal ribbing.

2. Design Loading. Design planking for a uniform load of 300 pounds per square foot with a deflection of not more than 1/160 of the span, unless otherwise shown.

3. Supports.

a. Support planking on all four sides by an angle of the same material as the planking.

b. Securely anchor angle supports.

c. Where the support angle extends across an opening, supplement the support angle with a structural channel.

d. Channel, unless noted otherwise, shall be of the same material as the planking and not less than 3 inches in depth.

4. Banding. Band edges and openings in planking with a bar equal to the bearing bar. Provide 1/8 inch thick cover plate with pegs to prevent movement for each opening.

5. Setting. Planking shall be set flush with the finished surface, and the planking shall be of uniform depth in any one area.

6. Subject to compliance with the specifications, provide the planking from one of the following approved manufacturers.

    a. IKG Borden HD Style P.

    b. Or equal.

D. **Floor Plate Covers**. Conform to ASTM A 786 made of A283 Grade D or A36 steel.

E. Structural Shapes

1. Structural shapes including all lintels shall be ASTM A 36 steel, hot-dipped galvanized, unless noted otherwise.

2. Lintels. Minimum 8 inch bearing on each side of the opening, unless noted otherwise.

3. Other. All structural shapes other than lintels shall be as required to complete the work. All anchors, connections, bearing plates, and fabrication details shall be standard, unless otherwise noted.

F. Stairs

1. All stair treads, stringers, railings, angles, landings, anchors, clips, and supports as shown.

2. Designed to meet local, state, and OSHA requirements with a safety factor of 4.

3. Weld bent stringers to develop strength of section.

4. Continuously weld 3/16 inch closure plate to exposed ends of stringers.

G. Flumes, Baffles, and Weirs

1. Flumes, baffles, and weirs shall be of the size, shape, and material shown.

2. Weld and grind smooth all joints.

3. Provide watertight expansion joints as shown.

H. Weir Plates, Stop Plates, and Guide Frames

1. Unless drawing references Section 13 00 40, fabricate all weir plates, stop plates, and guide frames aluminum alloy 6061-T6 or equivalent, with mill finish, of the sizes and shapes shown.

2. Guide frames shall be straight and true, extruded construction, with all corners mitered, welded, and ground smooth.

3. Fit guide frames with ultra high molecular weight polyethylene seals at all points of contact.

4. Continuously secure seals with dovetail or dado joint.

5. Guide frame shall weigh a minimum of 1.5 pounds per foot.

6. Stiffen plates with structural shapes, welded in place, as required to keep the maximum deflection below 1/360 of the span under the loads developed from maximum head conditions.

7. Plates and frames shall be by the same manufacturer.

I. **Staff Gauges**. Staff gauges shall be Type 6061-T6 aluminum as shown. Numbers shall be Futura Style, 1-1/2 inches high.

J. Fasteners for aluminum or stainless steel shall be Type 316 stainless steel.

K. **Anchor Bolts**. In accordance with Section 05 05 23 "Anchors."

L. **Ladders**. Ladders as shown with all anchors, bolts, and necessary appurtenances. Weld and grind smooth all joints.

M. Stair Nosings

1. Provide all concrete stairs with antislip stair nosings.

2. Stair nosings shall be extruded aluminum with four alternating ribs of abrasive grit.

3. Abrasive grit shall be not less than 19 ounces of aluminum oxide per square foot of nosing.

N. Stair Treads

1. Grating Type. Galvanized steel with 1-1/4 inch x 3/16 inch bearing bars at 1-3/16 inches on center with nonskid nosing.

2. Concrete-Filled Steel Pan. 14 gauge steel continuously welded to stringers.

O. Covers and Frames

1. Access Openings. Covers and frames for access openings shall be cast iron or mill-finish aluminum of the size, type, and style as shown. All hardware for aluminum access doors shall be Type 316 stainless steel.

2. Pipe Openings. Covers and frames for pipe openings shall be 1/4 inch aluminum plate set in an aluminum bar frame.Covers shall be split ring type for installed pipe and solid for openings of future pipe.

3. Expansion Joints.

a. Flush Type. Cover and frame for expansion joints shall be flush type, extruded aluminum frame with 1/4 inch aluminum cover plate and neoprene insert.

b. Surface Type. Cover for expansion joints shall be preformed aluminum shapes with tapered edges, anchored on one side only. Anchors shall be stainless steel, flat head type, set flush, 12 inches on center.

P. Access Steps

1. Steps shall conform to the requirements of ASTM C 478, AASHTO M-199, and as shown.

2. Each step shall consist of a 1/2 inch Grade 60 deformed reinforcing bar encapsulated in polypropylene.

   a. The polypropylene shall conform to ASTM D 4101.

   b. The reinforcing bar shall conform to ASTM A 615.

3. Do not exceed 24 inches between the top of opening and the first step.

PART 3 EXECUTION

3.1 EXAMINATION

A. **Take field measurements** prior to preparation of shop drawings and fabrication, where possible. Do not delay job progress; allow for trimming and fitting where taking field measurements before fabrication might delay work.

3.2 PREPARATION

A. **Coordinate and furnish anchorages**, setting drawings, diagrams, templates, instructions, and directions for installation of anchorages, such as concrete inserts, sleeves, anchor rods, and miscellaneous items having integral anchors, which are to be embedded in concrete or masonry construction. Coordinate delivery of such items to project site.

3.3 GENERAL

A. Fasteners

1. Conceal fasteners where practical.

2. Countersink all bolts, properly sized, and of proper length to permit full thread in the nut and project not more than a 1/4 inch beyond the nut.

3. Provide lock washers at all nuts and nick the bolt to prevent loosening.

4. All welds shall be smooth and regular, solid, and homogeneous throughout and free from pits, slag, scale, and other defects.

5. Make joints exposed to weather watertight with gaskets or continuous welding.

6. Grind smooth all welds in exposed finished work.

B. **Holes**. Drill or punch all holes with clean, true lines and surfaces.

C. Welding

1. Unless otherwise shown, all welding shall be continuous along all adjoining planes and shall produce a neat, even finish and smooth appearance.

2. Conform to welding requirements of AWS.

3. For all welding of aluminum use inert-gas shielded-arc method conforming to AWS D1.2.

4. Weld stainless steel conforming to materials and procedures set forth in "The Procedure Handbook of Arch Welding" by Lincoln Electric Co. or other approved procedures.

D. Galvanizing

1. Where galvanized or zinc coated is called for, it shall be hot dipped after fabrication in accordance with the standard specifications of the Hot Dip Galvanizers Association.

2. Do not paint galvanized metal, unless otherwise noted.

3. Coat all abraded areas, welds, or holes drilled in the field with a zinc-rich paint.

E. **Painting**. Unless otherwise noted, see Section 09 90 00 "Painting," for miscellaneous metal coating.

F. **Anchors**. Coat all ferrous anchors that are not galvanized with an asphaltic paint prior to installation.

G. **Aluminum**. Isolate all aluminum in contact with concrete, masonry, or dissimilar metals by coating the contact surfaces with a two-part water-based, gray epoxy primer.

3.4 INSTALLATION

A. **Fabricate and install** the miscellaneous metals specified herein as shown and in accordance with approved shop drawings and the manufacturer's recommendations.

END OF SECTION

This page intentionally left blank.

SECTION 05 05 14

GALVANIZING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section. This section sets forth requirements for the performance of the galvanizing process where galvanizing is called for under this Contract. Wherever a part, fabrication, assembly, or other item is noted to be "galvanized" or "hot-dip galvanized" anywhere in the Contract Documents, this section shall govern, unless other requirements are specifically noted.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. The Contractor shall provide all labor, materials, tools, and equipment necessary to hot dip galvanize all items, parts, fabrications, and equipment required to be galvanized by this Contract. The scope of items included by this section shall be any item in this Contract which is noted to be galvanized or hot dip galvanized on the drawings or specifications or items which are supplied galvanized as a standard by any supplier. It shall be understood that this section governs such galvanizing as described in paragraph 1.1 whether or not this section is specifically mentioned or noted where the galvanizing is noted or specified.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work in compliance with all federal, state, and local codes and regulatory agencies.

B. **Standards**. Materials and workmanship shall be in conformance with the following standards as referenced herein:

1. AHDGA - American Hot Dip Galvanizers Association.
2. RCSC - Research Council on Structural Connections of the Engineering Foundation.
3. ASTM - American Society for Testing and Materials.
4. FS - Federal Specifications (DOD & MIL).

C. **Qualifications**. See paragraph 2.3.A.

1.4 SUBMITTALS

A. Certification of Compliance

1. The Contractor shall submit Certification of Compliance that the galvanizing has been performed in accordance with this section. Certification shall include the information specified in paragraph 2.3 C.

B. Galvanizing Plan

1. Prior to proceeding with any galvanizing under this Contract, the Contractor shall submit a Galvanizing Plan for review. Such Galvanizing Plan shall include as a minimum:

a. Name, location, and description of the galvanizing plant to be used along with any descriptive literature available from such plant.

b. Description of the facilities within the plant and how those facilities will be used for the galvanizing called for herein.

c. Description of the plant's quality control program.

C. Qualifications of the Galvanizer

1. The Contractor shall submit all other information necessary as proof that the qualifications of the galvanizer are as specified in paragraph 2.3.A.

1.5 JOB CONDITIONS

A. **Coordination - Interfacing.** Coordinate with all other trades to prevent delays, errors, or omissions.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **General**. See paragraph 3.1.

1.7 SPECIAL WARRANTY (Not Used)

1.8 DEFINITIONS

Term used in Contract Documents	**Definition to be used for this Contract**
Hot-Dip Galvanized	ASTM A123
Dip Galvanized	ASTM A123
Lot	ASTM A123
Galvanizer	Company Employed by Contractor performing galvanizing work.

PART 2 PRODUCTS

2.1 MATERIALS

A. Steel Materials

1. Material for galvanizing shall be geometrically suitable for galvanizing as described in ASTM A 384 and A 385. Steel materials suitable for galvanizing include structural shapes, pipe, sheet, fabrications, and assemblies.

2. Steel material shall be chemically suitable for galvanizing.

a. Recommended steel materials for hot dip galvanizing include, but are not limited to:

1) Structural Shapes and Plates. ASTM A 36, A 242 Type 2, A 283, A 500, A 501, A 529, A 572, A 588, and A 992.

2) Steel for Fasteners.

Category	Bolt Material	Nut Material
Carbon Steel	ASTM A301 GR A or B	ASTM A563 Gr A
High Strength	ASTM A325 Type 1 or 2 ASTM A490	ASTM A563 Gr DH or ASTM A194 Gr 2H
Tower Bolts	ASTM A384	ASTM A563 Gr A
Quenched & Tempered Carbon Steel Bolts	ASTM 449	ASTM A563 Gr C
Quenched & Tempered Alloy Steel Bolts	ASTM A354 Gr BC	ASTM A563 Gr DH

B. Pregalvanizing Fabrication Requirements

1. Fabricate structural steel in accordance with Class I guidelines as described in AHDGA's Recommended Details for Galvanized Structures (MA-11).

2. Fabrication practices for products shall be in accordance with the applicable portions of ASTM A 143, A 384, and A 385, except as specified herein. Avoid fabrication techniques which could cause distortion or embrittlement of the steel.

3. Consult with hot dip galvanizer regarding potential warpage problems or potential handling problems during the galvanizing process which may require modification of design before fabrication proceeds.

4. Remove all welding slag and burrs prior to delivery for galvanizing.

5. Provide holes and/or lifting lugs to facilitate handling during the galvanizing process at positions as agreed among the designer, fabricator, and galvanizer.

6. Avoid unsuitable marking paints. Consult with galvanizer about removal of grease, oil, paint, and other deleterious material prior to fabrication.

7. Remove by blast cleaning or other suitable methods, surface contaminants and coatings which would not be removable by the normal chemical cleaning process in the galvanizing operation.

2.2 GALVANIZING

A. **General**. All galvanizing shall be by the hot-dip process; no electrogalvanizing, plating, or thermal spray will be allowed.

B. **Zinc**. Zinc for galvanizing shall conform to ASTM B 6, Prime Western grade.

C. Galvanizing

1. Surface Preparation.

a. Pre-clean steelwork utilizing 10 percent sulphuric acid pickle and flux at 160 degrees Fahrenheit (° F.)

2. Application of Coating.

a. Galvanize steel members, fabrications, and assemblies after fabrication by the hot dip process in accordance with ASTM A 123. Kettle temperature shall be 850° F.

b. Galvanize bolts, nuts, and washers and iron and steel hardware components in accordance with ASTM A 153. Kettle temperature shall be 1000° F.

c. Use the "dry" galvanizing process.

d. Safeguard products against steel embrittlement in conformance with ASTM A 143.

e. Handle all articles to be galvanized in such a manner as to avoid any mechanical damage and to minimize distortion.

3. Coating Requirements.

a. Coating Weight. Shall conform with Table 1 of ASTM A 123 or ASTM A 153, as appropriate.

b. Surface Finish. Shall be continuous, adherent, as smooth and evenly distributed as possible and free from any defect detrimental to the end use of the coated article.

c. Adhesion. Shall withstand normal handling consistent with the nature and thickness of the coating and the normal use of the article.

4. Postgalvanizing Treatments.

a. Passivation shall be applied to all galvanized products which will not be painted. Galvanizer shall verify that product will not be painted before applying passivator.

b. Do not treat freshly galvanized or passivated surfaces with oils, grease, or chemicals which might interfere with adhesion of subsequent paint primers and coatings.

c. Where slip factors are required to enable friction grip bolting, these shall be obtained after galvanizing by suitable treatment of the faying surfaces in accordance with the latest edition of the Specification for Structural Joints Using ASTM A 325 or A 490 bolts as approved by the Research Council on Structural Connections of the Engineering Foundation.

5. Bolts and Nuts.

a. Galvanize bolts in standard condition as fabricated.

b. Galvanize nuts prior to tapping; then tap oversize to allow for zinc thickness on the bolts.

2.3 SOURCE QUALITY CONTROL

A. Qualifications of the Galvanizer

1. Must have at least 3 years' experience with hot-dip galvanizing to ASTM standards.

2. Must have at least two zinc kettles, one for 850 ° F. temperature and one for 1000° F. temperature.

3. Must have a heated sulfuric acid tank and a passivation dip tank.

4. Must have facilities for weighing large and small parts.

B. **Factory Inspection and Tests**. Inspections, tests, and samples shall conform with ASTM Specifications and Standards. Inspection shall be carried out by the Contractor at the galvanizer's plant. Inspection rights and privileges, procedures, and acceptance or rejection of galvanized steel material shall conform with ASTM A 123 or A 153 as applicable. Inspections and tests shall include the following:

1. Visual examination of samples and finished products.

2. Tests to determine weight or mass of zinc coating per square foot of metal surface.

C. Certification

1. A Certificate of Compliance shall be provided with each lot stating that the galvanizing complies with ASTM Specifications and Standards and all other applicable requirements specified herein.

2. Submit with the Certification for each lot, actual weight data and dry coating thickness for test specimens.

PART 3 EXECUTION

3.1 PREPARATION

A. Delivery, Storage, and Protection

1. Items without Passivation.

a. Store in a dry area protected from the weather.

b. Store in a manner that promotes good air circulation between items.

c. Do not store outside under tarps.

d. Comply with AHDGA Publication MA-10.

2. Items with Passivation. Item shall be loaded and stored as follows to prevent the formation of wet storage stain:

a. The articles shall be stacked or bundled to allow air between the galvanized surfaces during transport from the supplier. Additionally, the material shall be loaded in such a manner that continuous drainage will occur.

b. Comply with AHDGA Publication MA-10.

c. In storage, the articles shall be raised from the ground and separated with strip spaces to provide free access of air to most

parts of the surface. They shall also be inclined in a manner which will allow continuous drainage. Under no circumstances shall galvanized steel be allowed to rest on cinders or clinkers; neither shall it be stored on wet soil or vegetation.

3.2 INSTALLATION

A. Mechanical Damage

1. Engineer/Architect will review damage caused by such acts as drilling, welding, flame cutting, handling, transport, or erection. Engineer/Architect will determine if damaged areas are field repairable or if re-galvanizing by the hot dip process is required. Field repairable damage shall be repaired in accordance with Section 09 90 00 of these specifications. All repair of damaged surfaces is to be accomplished at no additional cost to the Owner.

2. Touch up prime painted surfaces with the same primer applied in the shop. Clean damaged surfaces to ensure proper paint adhesion.

3. Comply with Section 09 90 00 for all painting.

4. All mil thicknesses may be verified by use of a magnetic thickness gauge.

B. **Wet Storage Stain Damage**. Any wet storage stain shall be removed by the galvanizer if formed and discovered prior to leaving the galvanizer's plant, unless late pickup or acceptance of delivery has necessitated the material being stored in unfavorable conditions. In any event, wet storage stain shall be removed before installation so that premature failure of the coating will not occur. Wet storage stain shall be removed as follows:

1. The objects shall be arranged so that their surfaces dry rapidly.

2. Light deposits are to be removed by means of a stiff bristle (not wire) brush. Heavier deposits are to be removed by brushing with a 5 percent solution of sodium or potassium dichromate with the addition of 0.1 percent by volume of concentrated sulfuric acid. This is to be applied with a stiff bristle brush and left for about 30 seconds before thoroughly rinsing and drying. Alternatively a proprietary product such as Oakite Highlite or equal which is intended for this purpose may be used according to manufacturer's recommendations.

3. A coating thickness check will be made by the Contractor in the affected areas to ensure that the zinc coating remaining after the removal of wet storage stain is sufficient to meet or exceed the requirements of this specification.

3.3 FIELD QUALITY CONTROL

A. Field Inspection and Tests

1. Galvanized items may be field checked by and at the discretion of the Owner or the Engineer with a magnetic thickness gauge to determine adequacy of the zinc coating thickness.

2. The following conversion ratio shall be used:

a. 1.0 ounce per square feet (oz/sf) = 1.7 mils.

3. Inspection shall be in accordance with MA-2 of the AHDGA.

4. All components designated for galvanizing shall receive a minimum galvanize coating of 2.0 oz/sf or 3.4 mils, if not specifically listed in the ASTM guidelines. Items with coating thicknesses not meeting those specified herein will be rejected and shall be returned to the galvanizing subcontractor for compliance with the specifications.

SECTION 05 05 23

ANCHOR BOLTS, EXPANSION ANCHORS, AND ADHESIVE ANCHORS AND DOWELS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. Provide all labor, materials, tools, and equipment necessary to furnish and install the anchor rods, expansion anchors, and adhesive anchors and dowels in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Standards**. Ensure that materials and workmanship are in conformance with the following standards as referenced herein:

1. AISI – American Iron and Steel Institute.
2. ASTM – American Society for Testing and Materials.

B. **Installer Training**. Conduct a thorough training with the manufacturer or the manufacturer's representative. Training to consist of a review of the complete installation process for drilled-in anchors, to include but not limited to:

1. Hole drilling procedure.
2. Hole preparation and cleaning technique.
3. Adhesive injection technique and dispenser training/maintenance.
4. Rebar dowel preparation and installation.
5. Proof loading/torquing.

1.4 SUBMITTALS

A. Submit the following submittals in accordance with the Division 1 Submittal Requirements and the requirements within this specification section.

B. Submittal Package No. 1 – Shop Drawings, Product Data, and Design Criteria

1. Schedule. No products shall be delivered or installed before this submittal package has been reviewed and approved.
2. Submittal Package Contents.
    a. Copies of manufacturer's specifications, load tables, data, and dimension diagrams for the devices including manufacturer's recommended working load for each size and type of anchor proposed for use.
    b. Certification that materials conform to ASTM specifications.
    c. Certification that products conform to requirements of Underwriters' Laboratory or Factory Mutual.

d. Setting drawings and templates for location and installation of anchorage devices.

e. Anchor rods and bolts showing dimensions and material of construction.

f. When the size, length, or load carrying capacity of an anchor rod, expansion anchor, and adhesive anchor is not shown on the drawings, provide the size, length, and capacity required to carry the design load times a minimum safety factor of four.

g. Design Loads. Those imposed by the service conditions and as follows:

1) Equipment Anchors. Use the design load recommended by the equipment manufacturer and accepted by the Owner or Engineer.
2) Allowances for vibration are included in the safety factor specified above.

h. Design Data. Provide design load documentation and calculations for items sized or selected.

i. Installation instructions for adhesive anchors.

C. Submittal Package No. 2 – Samples

1. Schedule. No equipment shall be delivered or installed before this submittal package has been reviewed and approved.

2. Submittal Package Contents. Two samples of each type anchor and its components. Samples of anchor rods will not be required.

1.5 JOB CONDITIONS (Not used)

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery**. Clearly mark all items according to purpose and intended location.

B. **Storage and Handling**. Store and handle all items in accordance with the manufacturer's recommendations, but in no case exposed to the weather.

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS

2.1 MATERIALS/MANUFACTURERS

A. Threaded and Nutted Anchor Rods

1. In accordance with ASTM A 276, AISI Type 316.

2. Nuts in accordance with ASTM F 594, Group 2, and tack-welded to anchor rod.

B. Cracked Concrete Anchors

1. Provide cracked concrete anchors where International Building Code (IBC) 2018 is the design code and specified on the drawing details. Anchors that are approved for "cracked concrete" situations shall meet the requirements stated in ACI-318-19 Chapter 17.

2. Manufacturers. Subject to compliance with the specifications, provide cracked concrete anchors from one of the following approved manufacturers.

a. Expansion Anchors

1) Simpson Strong-Tie, Strong-Bolt 2.
2) Hilti, Inc., Kwik-Bolt-TZ.
3) Simpson Titan-HD.
4) Hilti HSL-3.
5) Hilti HDA.

b. Adhesive Anchors

1) Simpson Strong-Tie SET-XP
2) Hilti HIT-RE 500 V3.

C. Expansion Anchors

1. Provide stainless steel expansion anchors, nuts, and washers complying with ASTM A 276, AISI Type 316.

2. Expansion anchors shall be Underwriters' Laboratories, Factory Mutual, or International Code Council – Evaluation Service (ICC-ES) report approved.

3. Subject to compliance with the specifications, provide expansion anchors from one of the following approved manufacturers.

a. Simpson Strong-Tie, Wedge-All.

b. Wej-it Corporation.

c. Hilti, Inc., Kwik-Bolt 3.

d. Ramset Company, Red Head, Trubolt.

D. Adhesive Anchors

1. Provide adhesive cartridge as recommended by the manufacturer for the loading and depth required.

2. Provide Type 316 stainless steel threaded rod, nut, and washer or a reinforcing bar of the size and embedment shown on the drawings and in accordance with ASTM A 615, Grade 60.

3. Subject to compliance with the specifications, provide adhesive cartridges from one of the following approved manufacturers.

a. Simpson Strong-Tie, SET Epoxy.

b. Simpson Strong-Tie, AT Acrylic Adhesive.

c. Hilti, HIT-HY 200.

d. ITW/Red Head, C6+ Epoxy.

e. Hilti HIT-RE 500 V3.

E. Adhesive-Anchored Reinforcing Bar.

1. Provide adhesive cartridges as recommended by the manufacturer to receive reinforcing bar as noted.

2. Manufacturer/Model. Subject to compliance with the specifications, provide adhesive cartridges from one of the following approved manufacturers.

a. Simpson Strong-Tie, SET Epoxy.

b. Simpson Strong-Tie, AT Acrylic Adhesive.

c. Hilti HIT-RE 500 V3.

d. ITW/Red Head, C6+ Epoxy.

e. Hilti HIT-HY 200.

3. Reinforcing Bar. Comply with Section 03 30 00.

F. **Powder-Actuated Fasteners**. Do not use powder-actuated fasteners and other types of bolts and fasteners.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine conditions under which rods, bolts and anchors are to be installed, and notify the Engineer in writing of unsatisfactory conditions existing. Do not proceed with the work until unsatisfactory conditions or deficiencies have been corrected.

3.2 PREPARATION

A. Notify the Engineer prior to the installation of all adhesive anchors.

3.3 INSTALLATION

A. **Do not install** anchor rods, expansion anchors, or adhesive anchors until the item to be anchored and the anchoring device as well as related layout drawings have been accepted.

B. **Drilling and setting equipment** used and installation of expansion anchors and adhesive anchors shall be in accordance with manufacturer's instructions.

C. **Drill holes to depth** and diameter recommended by manufacturer.

D. **Clean all holes** for adhesive anchors in strict accordance with the manufacturer's instructions.

E. Use the type of anchoring device shown.

F. **Unless otherwise shown**, conform to following for expansion anchors.

1. Minimum embedment depth in concrete – 5 diameters.

2. Minimum anchor spacing on centers – 10 diameters.

3. Minimum distance to edge of concrete – 5 diameters.

4. Increase dimensions above if required to develop the required anchor load capacity.

G. **Unless otherwise shown**, conform with the manufacturer's recommendations for minimum embedment depth, minimum anchor spacing, and minimum edge distance for adhesive anchors except that minimum embedment depth in concrete shall not be less than 4 inches unless noted otherwise.

H. **Use copper-graphite antiseize** compound for all anchor nuts. Thoroughly lubricate all threaded fasteners with compound prior to assembly. Remove excess lubricant after fastener installation.

3.4 FIELD QUALITY CONTROL

A. **Inspection**. Inspect each installation for compliance with this specification and manufacturer's recommendations.

B. **Testing**. At the discretion of the Owner, adhesive anchors may be subjected to pullout-type testing up to the manufacturer's recommended working load for the anchor. If deficient anchors are found, the Contractor will be required to test all anchors and replace any deficient anchors found at no additional cost to the Owner.

C. Material Testing

1. At the discretion of the Owner up to 1 percent or up to three (whichever is greater) of each type and size of bolt, nut, washer, and anchor from each and every separate shipment or purchasing lot that are specified to be Type 316 stainless steel may be destructively tested to verify material requirements.

2. Samples will be randomly selected for this testing and be provided at no additional cost to the Owner.

3. Conduct testing at the Owner's expense.

4. The above testing may be performed at any time during the Contract.

5. Any shipment or purchasing lot, installed or not, which fails to meet the requirements of the specifications will be rejected and shall be immediately removed from the job site and replaced with material that meets the specifications.

6. Removal and replacement of noncomplying material shall be at the Contractor's expense.

3.5 CLEANING

A. After embedding concrete is placed, remove protection and clean rods, anchors, and inserts.

END OF SECTION

This page intentionally left blank.

SECTION 05 10 00

STRUCTURAL STEEL

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work.** The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install the structural steel in accordance with the plans and as specified herein.

B. **Types.** This section includes fabrication and erection of structural steel work, as shown on drawings including schedules, notes, and details showing size and location of members, typical connections, and types of steel required.

1. Structural steel is that work defined in American Institute of Steel Construction (AISC) "Code of Standard Practice" and as otherwise shown on drawings.

2. Miscellaneous metal fabrications are specified elsewhere in Division 5.

3. Refer to Division 3 for anchor bolt installation in concrete and Division 4 for anchor bolt installation in masonry.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies.** Perform all work to furnish and install the structural steel in compliance with all federal, state, and local codes and regulatory agencies. Comply with provisions of following, except as otherwise indicated:

1. AISC "Code of Standard Practice for Steel Buildings and Bridges."

a. Paragraph 4.2.1 of the above code is hereby modified by deletion of the following sentence:

1) "This approval constitutes the owner's acceptance of all responsibility for the design adequacy of any detail configuration of connections developed by the fabricator as a part of his preparation of these shop drawings."

2. AISC "Specifications for Structural Steel Buildings," including "Commentary."

3. "Specifications for Structural Joints Using American Society for Testing and Materials (ASTM) A 325 or A 490 Bolts" approved by the Research Council on Structural Connections.

4. ASTM A 6 "General Requirements for Rolled Steel Plates, Shapes, Sheet Piling and Bars for Structural Use."

B. **Qualifications for Fabricator.** Fabricator shall have a current "AISC Quality Certification Category II."

C. **Qualifications for Welding Work.** Qualify welding procedures and welding operators in accordance with American Welding Society (AWS) "Qualification" requirements.

1. If recertification of welders is required, retesting will be Contractor's responsibility.

1.4 SUBMITTALS

A. **General.** Submit the following in accordance with Conditions of Contract and Division 1 specification sections.

B. **Product Data**. Product data or manufacturer's specifications and installation instructions for following products. Include laboratory test reports and other data to show compliance with specifications (including specified standards).

1. Structural steel primer paint.

2. Shrinkage resistant grout.

C. **Shop drawings prepared under supervision** of a licensed Professional Engineer, including complete details and schedules for fabrication and assembly of structural steel members, procedures, and diagrams.

1. Include details of cuts, connections, camber, holes, and other pertinent data. Indicate welds by standard AWS symbols and show size, length, and type of each weld.

2. Provide setting drawings, templates, and directions for installation of anchor bolts and other anchorages to be installed as work of other sections.

D. **Test reports conducted on field-bolted** and welded connections. Include data on type(s) of tests conducted and test results.

E. **Certified copies of each survey** conducted by a licensed Land Surveyor, showing elevations and locations of base plates and anchor bolts to receive structural steel and final elevations and locations for major members. Indicate discrepancies between actual installation and Contract Documents.

F. **Provide certification** that welders to be employed in work have satisfactorily passed AWS qualification tests.

1.5 JOB CONDITIONS

A. **General.** Deliver materials to site at such intervals to ensure uninterrupted progress of work.

B. **Deliver anchor bolts** and anchorage devices which are to be embedded in cast-in-place concrete or masonry in ample time as not to delay work.

C. **Store materials to permit easy access** for inspection and identification. Keep steel members off ground by using pallets, platforms, or other supports. Protect steel members and packaged materials from corrosion and deterioration. If bolts and nuts become dry or rusty, clean and relubricate before use.

1. Do not store materials on structure in a manner that might cause distortion or damage to members or supporting structures. Repair or replace damaged materials or structures as directed.

1.6 DELIVERY, STORAGE, AND HANDLING (Not Used)

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 MATERIALS

A. Structural Steel Wide Flange Shapes. ASTM A 992.

B. All Other Structural Steel Shapes, Plates, and Bars. ASTM A 36 unless noted otherwise.

C. Cold-Formed Steel Tubing. ASTM A 500, Grade B.

D. **Steel Pipe.** ASTM A 53, Type E or S, Grade B; or ASTM A 501.

1. Finish. Black, except where indicated to be galvanized.

E. **Steel Castings.** ASTM A 27, Grade 65-35, medium strength carbon steel.

F. **Anchor Bolts and Threaded Rods.** ASTM F 1554, Grade 36 headed type unless otherwise indicated.

G. **Unfinished Threaded Fasteners.** ASTM A 307, Grade A, regular low carbon steel bolts and nuts.

1. Provide hexagonal heads and nuts for all connections.

H. **High-Strength (and Alternate Fastener Design) Threaded Fasteners.** Heavy hexagonal structural bolts, heavy hexagonal nuts, and hardened washers, as follows:

1. Quenched and tempered medium carbon steel bolts, nuts, and washers, complying with ASTM A 325.

a. Where indicated as galvanized, provide units that are zinc coated, either mechanically deposited complying with ASTM B 695, Class 50, or hot dip galvanized complying with ASTM A 153.

I. **Direct Tension Indicators.** ASTM F 959, type as required.

1. Use on all A 325 bolts in connections that are slip critical.

J. Electrodes for Welding. Comply with AWS Code.

K. **Structural Steel Primer Paint.** Where noted, Steel Structures Painting Council (SSPC) - Paint 2 oil alkyd unless specified otherwise in Section 09 90 00, "Painting."

L. **Galvanizing**. Structural shapes shall be hot dip galvanizing after fabrication unless otherwise noted and it shall be done in accordance with ASTM A 123. See Section 05 05 14.

M. **Nonmetallic, Shrinkage Resistant Grout.** Premixed, nonmetallic, noncorrosive, nonstaining product containing selected silica sands, Portland cement, shrinkage compensating agents, plasticizing, and water reducing agents, complying with ASTM C 1007.

1. Available Products. Subject to compliance with requirements, products that may be incorporated in the work include, but are not limited to, the following:

a. Sure Grip Grout; Dayton Superior.

b. Euco N.S.; Euclid Chemical Co.

c. Crystex; L & M Construction Chemicals, Inc.

d. Masterflow 713; Master Builders.

e. Sealtight 588 Grout; W. R. Meadows.

f. Five Star Grout; U.S. Grout Corp.

2.2 FABRICATION

A. **Shop-Fabrication and Assembly.** Fabricate and assemble structural assemblies in shop to greatest extent possible. Fabricate items of structural steel in accordance with AISC Specifications and as indicated on final shop drawings. Provide camber in structural members where indicated.

1. Properly mark and match mark materials for field assembly. Fabricate for delivery sequence that will expedite erection and minimize field handling of materials.

2. Where finishing is required, complete assembly, including welding of units, before start of finishing operations. Provide finish surfaces of members exposed in final structure free of markings, burrs, and other defects.

B. **Remove all surface blemishes** including rust and scale seam marks, roller marks, rolled trade names, and roughness by grinding, or by welding and grinding, prior to cleaning, treating, and applying surface finishes to steel which is exposed to view.

C. **Anchor Bolts.** Provide anchor bolts where indicated on the drawings.

D. **Connections.** Weld or bolt shop connections, as indicated.

1. Provide high strength threaded fasteners for all bolted connections, except where unfinished bolts are indicated.

2. Design connections to develop 55 percent of the load capacity of the member as tabulated in the beam tables, Part 2, of the AISC "Manual of Steel Construction" unless reactions or specific details are shown.

3. Connections for bracing shall be designed to develop full strength of bracing members unless forces are shown.

E. **Bolt field connections,** except where welded connections or other connections are indicated.

F. **High-Strength Bolted Construction.** Install high strength threaded fasteners in accordance with AISC "Specifications for Structural Joints Using ASTM A 325 or A 490 Bolts."

G. **Welded Construction.** Comply with AWS code and appearance requirements specified herein.

H. **Steel Wall Framing.** Select members that are true and straight for fabrication of steel wall framing. Straighten as required to provide uniform, square, and true members in completed wall framing.

I. **Build up welded door frames** attached to structural steel framing. Weld exposed joints continuously and grind smooth. Plug weld steel bar stops to frames, except where shown removable. Secure removable stops to frames with countersunk, cross recessed head machine screws, uniformly spaced not more than 10 inches on center (o.c.), unless otherwise indicated.

J. **Holes for Other Work.** Provide holes required for securing other work to structural steel framing and for passage of other work through steel framing members.

K. **Provide threaded nuts** welded to framing and other specialty items as indicated to receive other work.

L. **Cut, drill, or punch holes** perpendicular to metal surfaces. Do not flame cut holes or enlarge holes by burning. Drill holes in bearing plates.

2.3 SHOP PAINTING

A. **General.** Shop-paint structural steel, except those members or portions of members to be embedded in concrete or mortar. Paint embedded steel that is partially exposed on exposed portions and initial 2 inches of embedded areas only.

1. Do not paint surfaces to be welded or high strength bolted with friction type connections.

2. Do not paint surfaces scheduled to receive sprayed-on fireproofing.

3. Apply two coats of paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

B. **Surface Preparation.** After inspection and before shipping, clean steelwork to be painted. Remove loose rust, loose mill scale, and spatter, slag, or flux deposits. Clean steel in accordance with SSPC as follows:

1. SP-6 "Commercial Blast Cleaning," unless specified otherwise in Section 09 90 00, "Painting."

C. **Painting.** If not specified otherwise in Section 09 90 00, "Painting," immediately after surface preparation, apply structural steel primer paint in accordance with manufacturer's instructions and at a rate to provide dry film thickness of not less than 1.5 mils. Use painting methods that result in full coverage of joints, corners, edges, and exposed surfaces.

2.4 SOURCE QUALITY CONTROL

A. **General.** Materials and fabrication procedures are subject to inspection and tests in mill, shop, and field, conducted by a qualified inspection agency. Such inspections and tests will not relieve Contractor of responsibility for providing materials and fabrication procedures in compliance with specified requirements.

1. Promptly remove and replace materials or fabricated components that do not comply.

B. **Design of Members and Connections.** Details shown are typical; similar details apply to similar conditions, unless otherwise indicated. Verify dimensions at site whenever possible without causing delay in the work.

1. Promptly notify Engineer/Architect whenever design of members and connections for any portion of structure are not clearly indicated.

2. For connections not detailed on the plans and unless specific reactions, moments, shears, and axial forces are indicated, provide beam connections designed for the reaction due to the maximum uniform load which the beam can support at the span shown. Use the beam tables in the AISC "Manual of Steel Construction, Allowable Stress Design."

PART 3 EXECUTION

3.1 EXAMINATION

A. **Surveys.** Employ a licensed Land Surveyor for accurate erection of structural steel. Report discrepancies to Engineer/Architect. Do not proceed with erection until corrections have been made or until compensating adjustments to structural steelwork have been agreed upon with Engineer/Architect.

1. Check elevations of concrete and masonry bearing surfaces and location of anchor bolts and similar devices.

2. Check camber and sweep of structural members and compare to permissible variations in AISC "Manual of Steel Construction."

3. Check levelness and elevations of leveling plates and bearing plates.

B. **Examine all structural steel** and discard all damaged members.

3.2 PREPARATION

A. **Anchor Bolts.** Provide anchors as to not delay work.

1. Provide setting drawings to ensure accurate placement.

B. **Temporary Shoring and Bracing.** Provide temporary shoring and bracing members with connections of sufficient strength to bear imposed loads. Remove temporary members and connections when permanent members are in place and final connections are made. Provide temporary guy lines to achieve proper alignment of structures as erection proceeds and to resist wind and earthquake loads.

C. **Temporary Planking.** Provide temporary planking and working platforms as necessary to effectively complete work.

D. **Setting Bases and Bearing Plates.** Clean concrete and masonry bearing surfaces of bond reducing materials and roughen to improve bond to surfaces. Clean bottom surface of base and bearing plates.

1. Set loose and attached base plates and bearing plates for structural members on wedges or other adjusting devices.

2. Tighten anchor bolts after supported members have been positioned and plumbed. Do not remove wedges or shims, but if protruding, cut off flush with edge of base or bearing plate prior to packing with grout.

3. Pack grout solidly between bearing surfaces and bases or plates to ensure that no voids remain. Finish exposed surfaces, protect installed materials, and allow to cure.

4. For proprietary grout materials, comply with manufacturer's instructions.

3.3 ERECTION

A. **General.** Comply with Occupational Safety and Health Administration (OSHA) and state safety requirements.

B. **Field-Assembly.** Set structural frames accurately to lines and elevations indicated. Align and adjust various members forming part of complete frame or structure before permanently fastening. Clean bearing surfaces and other surfaces that will be in permanent contact before assembly. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

C. **Straightening of structural steel sections** by heating shall not be permitted unless approved by Engineer/Architect.

D. **Level and plumb individual members** of structure within specified AISC tolerances.

E. **Splice members** only where indicated and accepted on shop drawings.

F. **Erection Bolts.** On exposed welded construction, remove erection bolts, fill holes with plug welds, and grind smooth at exposed surfaces.

1. Comply with AISC Specifications for bearing, adequacy of temporary connections, alignment, and removal of paint on surfaces adjacent to field welds.

2. Do not enlarge unfair holes in members by burning or by using drift pins, except in secondary bracing members. Ream holes that must be enlarged to admit bolts.

G. **Gas Cutting.** Do not use gas cutting torches in field for correcting fabrication errors in primary structural framing. Cutting will be permitted only on secondary members that are not under stress, as acceptable to Engineer/Architect. Finish gas cut sections equal to a sheared appearance when permitted.

H. **Touch-Up Painting.** Unless otherwise specified in Section 09 90 00, "Painting," immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint. Apply paint to exposed areas using same material as used for shop painting.

1. Apply by brush or spray to provide minimum dry film thickness of 1.5 mils.

3.4 QUALITY CONTROL

A. **General.** Contractor will engage an independent testing and inspection agency to inspect, perform test, and prepare test reports on high strength bolted connections and welded connections. Welds will be visually inspected and some or all welds will be nondestructively tested.

B. **Testing agency shall conduct** and interpret tests, state in each report whether test specimens comply with requirements, and specifically state any deviations from them.

C. **Provide fabrication schedule** for testing agency so that required inspection and testing can be accomplished.

D. **Provide access for testing agency** to places where structural steelwork is being fabricated or produced and to the construction site so that required inspection and testing can be accomplished.

E. Testing agency may inspect structural steel at plant before shipment.

F. Testing agency will inspect structural steel at the site.

1. Field-Bolted Connections. Inspect in accordance with Research Council on Structural Connections (RCSC) "Specification for Structural Joints Using A325 or A490 Bolts."

a. For direct tension indicators, comply with requirements of ASTM F 959. Verify that gaps are less than gaps specified in Table 2.

2. Field-Welding. Inspect and test during erection of structural steel in accordance with Section 6 of AWS D1.1.

a. Certify welders and conduct inspections and tests as required. Record types and locations of defects found in work. Record work required and performed to correct deficiencies.

b. Perform visual inspection of all welds.

c. Perform tests on 100 percent of the full and partial penetration welds as follows. Inspection procedures listed are to be used at Contractor's option.

1) Liquid Penetrant Inspection. ASTM E 165.

2) Magnetic Particle Inspection. ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not acceptable.

3) Radiographic Inspection. ASTM E 94 and ASTM E 142; minimum quality level "2-2T."

4) Ultrasonic Inspection. ASTM E 164.

3. Steel Framing. Inspect and verify compliance with the details shown on the approved Contract Documents.

G. **Correct deficiencies in structural steel work** that independent inspections and laboratory test reports have indicated to be not in compliance with Contract Documents. Perform additional tests, at Contractor's expense, as necessary to reconfirm any noncompliance of original work and to show compliance of corrected work.

END OF SECTION

SECTION 05 31 00

STEEL DECK

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Furnish and install the galvanized steel decking as shown on the plans and as specified herein.

B. **Types**. This section includes steel deck units for roof applications.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Comply with provisions of the following codes and standards, except as otherwise indicated:

1. American Iron and Steel Institute (AISI) "Specification for the Design of Cold Formed Steel Structural Members."

2. American Welding Society (AWS) D1.3, "Structural Welding Code - Sheet Steel."

3. Steel Deck Institute (SDI) "Design Manual for Composite Decks, Form Decks and Roof Decks."

4. SDI "Specification for Steel Roof Deck."

B. **Qualification of Field Welding**. Use qualified welding processes and welding operators in accordance with "Welder Qualification" procedures of AWS.

C. **Factory Mutual (FM) Listing**. Provide steel roof deck units that have been evaluated by FM System and are listed in "Factory Mutual Approval Guide" for "Class I" fire-rated construction.

1.4 SUBMITTALS

A. **General**. Submit the following in accordance with Conditions of Contract and Division 1 specification sections.

1. Product data including manufacturer's specifications and installation instructions for each type of decking and accessories.

a. Provide test data for mechanical fasteners used in lieu of welding for fastening deck to supporting structures.

2. Shop drawings showing layout and types of deck units, anchorage details, and conditions requiring closure strips, supplementary framing, sump pans, cant strips, cut openings, special jointing, and other accessories.

1.5 JOB CONDITIONS (Not Used)

1.6 DELIVERY, STORAGE, AND HANDLING (Not Used)

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. **Available Manufacturers**. Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include but are not limited to the following:

1. Epic Metals Corp.
2. H. H. Robertson Co.
3. United Steel Deck, Inc.
4. Vulcraft Div., Nucor Corp.
5. Wheeling Corrugating Co.

2.2 MATERIALS

A. **Steel for Galvanized Metal Deck Units**. American Society for Testing and Materials (ASTM) A 653 Grade A with coating designation G60 (galvanizing), except G90 where exposed to weather or humid environments or noted on drawings.

B. Miscellaneous Steel Shapes. ASTM A 36.

C. **Sheet Metal Accessories**. ASTM A 653 Grade A with coating designation G60 (galvanizing) except G90 where exposed to weather or humid environment or noted on drawings.

D. **Flexible Closure Strips**. Manufacturer's standard vulcanized, closed-cell, synthetic rubber.

E. **Acoustic Sound Barrier Closures**. Manufacturer's standard mineral fiber closures.

2.3 FABRICATION

A. **General**. Form deck units in lengths to span three or more supports, with flush, telescoped, or nested 2-inch laps at ends and interlocking or nested side laps, of metal thickness, depth, and width as indicated.

B. **Roof Deck Units**. Provide deck configurations that comply with SDI "Specifications and Commentary for Steel Roof Deck."

C. **Metal Closure Strips**. Fabricate metal closure strips for openings between decking and other construction. Form to provide tight-fitting closures at open ends of cells or flutes and sides of decking.

D. **Roof Sump Pans**. Fabricate from single piece of 0.071-inch-minimum (14-gauge) galvanized sheet steel with level bottoms and sloping sides to direct water flow to drain. Provide sump pans of adequate size to receive roof drains and with bearing flanges not less than 3 inches wide. Recess pans not less than 1-1/2 inches below roof deck surface unless otherwise shown or required by deck configuration. Holes for drains will be cut in the field by others.

E. **Miscellaneous Items.** Provide miscellaneous items such as cant strips, ridge and valley plates, filler sheets, pour stops, etc., as needed to provide a completed product.

PART 3 EXECUTION

3.1 EXAMINATION

A. **Examine steel deck** and discard all damaged units.

3.2 PREPARATION

A. **Prior to deck installation**, verify that all structural members and supports are in place and ready for deck installation.

B. **Prior to deck installation**, verify that concrete supporting structure has cured and is dry.

3.3 INSTALLATION

A. **General**. Install deck units and accessories in accordance with manufacturer's recommendations and shop drawings, and as specified herein.

B. **Place deck units** on supporting steel framework and adjust to final position with ends accurately aligned and bearing on supporting members before being permanently fastened. Do not stretch or contract side lap interlocks.

C. **Align deck units** for entire length of run of cells and with close alignment between cells at ends of abutting units.

D. **Place deck units** flat and square, secured to adjacent framing without warp or deflection.

E. **Coordinate and cooperate** with structural steel erector in locating decking bundles to prevent overloading of structural members.

F. Fastening Deck Units

1. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used in correcting welding work.

    a. Use welding washers where recommended by deck manufacturer.

2. Mechanical fasteners, either powder actuated or pneumatically driven, may be used in lieu of welding. Locate mechanical fasteners and install in accordance with deck manufacturer's instructions.

3. Attach metal roof deck as follows unless indicated otherwise:

Location	Weld or Screw Size	Weld Spacing
Supporting Members	5/8-inch-diameter puddle weld	12 inches on center
Side Laps (20 Gauge or Thicker)	5/8-inch-diameter weld or 3/8 x 1-1/4" seam weld or No. 10 screw	One per span not to exceed 36 inches on center
Side Laps (22 Gauge or Thinner)	No. 10 screw	One per span not to exceed 36 inches on center

4. Uplift Loading. Install and anchor roof deck units to resist gross uplift loading of 45 pounds per square foot (psf) at eave overhang and 30 psf for other roof areas.

G. **Cutting and Fitting**. Cut and neatly fit deck units and accessories around other work projecting through or adjacent to the decking, as shown.

H. **Reinforcement at Openings**. Provide additional metal reinforcement, column closures, and closure pieces as required for strength, continuity of decking, and support of other work shown.

I. **Hanger Tabs**. Provide UL-approved hanger tabs where deck units are to receive hangers for support of ceiling construction, air ducts, diffusers, or lighting fixtures.

1. For metal roof deck provide nonpiercing or integral hanger tabs with an allowable load of 100 pounds per tab with a safety factor of 5.

2. Locate slots or clips at not more than 14 inches on center in both directions, not over 9 inches from walls at ends, and not more than 12 inches from walls at sides, unless otherwise indicated.

3. Provide manufacturer's standard hanger attachment devices.

J. **Joint Covers**. Provide metal joint covers at abutting ends and changes in direction of floor deck units, except where taped joints are required.

K. **Roof Sump Pans**. Place over openings provided in roof decking and weld to top decking surface. Space welds not more than 12 inches on center with at least one weld at each corner.

L. **Closure Strips**. Provide metal closure strips at open uncovered ends and edges of roof decking and in voids between decking and other construction. Weld into position to provide a complete decking installation.

1. Provide flexible closure strips instead of metal closures, at Contractor's option, wherever their use will ensure complete closure. Install with adhesive in accordance with manufacturer's instructions.

M. **Touch-Up Painting**. After decking installation, wire brush, clean, and paint scarred areas, welds, and rust spots on top and bottom surfaces of decking units and supporting steel members.

1. Where galvanized surfaces are damaged, prepare surfaces and repair in accordance with procedures specified in ASTM A 780.
2. Touch up galvanized surfaces with galvanizing repair paint applied in accordance with manufacturer's instructions.
3. Touch up painted surfaces with same type of shop paint used on adjacent surfaces.

N. **In areas where shop-painted surfaces** are to be exposed, apply touch-up paint to blend into adjacent surfaces.

END OF SECTION

This page intentionally left blank.

SECTION 05 51 10

FIXED METAL LADDERS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Fixed aluminum wall ladders.

1.2 RELATED SECTIONS

A. **Section 05 00 00** – Grating and Miscellaneous Metals.

1.3 REFERENCES

A. **ANSI A14.3** - American National Standard for Ladders -- Fixed -- Safety Requirements; 1992.

B. **ASTM B 209** - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2001.

C. **ASTM B 209M** - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate (Metric); 2001.

D. **ASTM B 210** - Standard Specification for Aluminum and Aluminum-Alloy Drawn Seamless Tubes; 2002.

E. **ASTM B 221** - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2000.

F. **ASTM B 221M** - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes (Metric); 2000.

G. **ASTM B 308** - Standard Specification for Aluminum - Alloy T6061-T6 Standard Structural; 2002.

H. **ASTM B 308M** - Standard Specification for Aluminum - Alloy T6061-T6 Standard Structural; 2002.

I. **OSHA 29 CFR** Standard 1910.27 - Fixed ladders; Occupational Safety and Health Standards; current edition.

1.4 SUBMITTALS

A. **Submit** under provisions of Section 01 33 00.

B. **Product Data:** Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.

2. Storage and handling requirements and recommendations.

3. Installation methods.

C. **Shop Drawings**: Detailed drawings showing complete dimensions, all materials, mounting attachments, and fabrication details.

1.5 QUALITY ASSURANCE

A. **Manufacturer Qualifications**: Company specializing in the engineering and manufacturing of metal ladders, with not less than fifty years of experience.

1.6 WARRANTY

A. **Provide manufacturer's** standard limited five-year warranty against defects in materials and workmanship.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturer: ALACO Ladder Co.

B. Or approved equal.

2.2 MATERIALS

A. **Extruded Aluminum Profiles:** ASTM B 221/B 221M, ASTM B 210, ASTM B 308/B 308M, Alloy 6061-T6; standard mill finish.

B. **Aluminum Sheet and Plate:** ASTM B 209/B 209M, Alloy 6061-T6; standard mill finish.

C. **Fasteners**: Aluminum solid aircraft rivets rated at 300 lbs (1335 N) shear strength.

D. **Cast fittings**, connectors and rung ends: Cast Aluminum alloy 356.

2.3 LADDERS

A. **Ladders** - General: Comply with ANSI A14.3 and OSHA regulations.

B. **Fixed Wall Ladders**: Extruded aluminum; serrated rungs 1-1/8 inches (29 mm) in diameter, connected to 2-7/8 inch (73 mm) side rail channels with cast aluminum rung connectors, each secured to rails by means of four solid aircraft rivets.

1. Walk-Through and Parapet Railings: Aluminum extrusions; extend not less than 42 inches (1,067 mm) above landing, 24 in (610 mm) between side rails at step through.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 INSTALLATION

A. **Install in accordance** with manufacturer's instructions and approved shop drawings, and in compliance with ANSI A14.3 and OSHA 1910.27.

3.3 PROTECTION

Protect installed products until completion of project.

A. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

SECTION 05 52 13

PIPE AND TUBE RAILINGS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. Provide the labor, tools, equipment, and materials necessary to furnish and install the pipe and tube railings in accordance with the plans and specifications.

B. This section includes the following:

1. Aluminum pipe and tube handrails and railing systems.

2. Steel pipe portable roof safety railing systems.

3. Steel pipe wall mounted roof safety railing systems.

1.3 QUALITY ASSURANCE

A. **Single-Source Responsibility**. Obtain handrails and railing systems of each type and material from a single manufacturer.

B. **Engineering Responsibility**. Engineer handrails and railing systems by professional engineer legally authorized to practice in jurisdiction where project is located.

1.4 SUBMITTALS

A. Submit the following in accordance with the Division 1 Submittal Requirements and the requirements within this specification section.

B. Submittal Package No. 1 – Product Data and Shop Drawings

1. Product data for each type of product specified.

2. Shop drawings showing fabrication and installation of handrails and railings including plans, elevations, sections, details of components, and attachments to other units of work.

a. Where installed products are indicated to comply with certain design loadings, include structural computations, material properties, and other information needed for structural analysis that has been signed and sealed by a qualified professional engineer responsible for their preparation.

3. Product test reports from and based on tests performed by qualified independent testing laboratory evidencing compliance of railing components and systems with requirements based on comprehensive testing of current products.

4. Test reports from independent testing laboratory evidencing compliance of handrails and railing systems with ASTM E 985.

5. Qualification data for firms and persons specified in "Quality Assurance" article to demonstrate their capabilities and experience. Include list of completed projects with project names, addresses, names of Engineer/Architects and Owners, plus other information specified.

C. Submittal Package No. 2 – Samples

1. Samples for initial selection purposes in form of manufacturer's color charts showing full range of colors available for those units with factory applied color finishes.

2. Samples for verification purposes of each type of exposed finish required, prepared on components indicated below that are of the same thickness and metal indicated for final unit of work. Where finishes involve normal color and texture variations, include sample sets showing full range of variations expected.

a. 6-inch-long sections of each distinctly different linear railing member including handrails, top rails, posts, and balusters.

b. Fittings and brackets.

c. Welded connections.

1.5 JOB CONDITIONS

A. Field Measurements

1. Where handrails and railings are indicated to fit to other construction, check actual dimensions of other construction by accurate field measurements before fabrication; show recorded measurements on final shop drawings.

2. Where field measurements cannot be made without delaying the work, guarantee dimensions and proceed with fabrication of products without field measurements.

3. Coordinate other construction to ensure that actual dimensions correspond to guaranteed dimensions.

1.6 DELIVERY, STORAGE, AND HANDLING

A. In accordance with Section 01 60 00.

1.7 SPECIAL WARRANTY (Not Used)

1.8 DEFINITIONS

A. Definitions in American Society for Testing and Materials (ASTM) E 985 for railing related terms apply to this section.

1.9 SYSTEM PERFORMANCE REQUIREMENTS

A. **General**. In engineering handrail and railing systems to withstand structural loads indicated, determine allowable design working stresses of railing materials based on the following:

1. For Stainless Steel. American Iron and Steel Institute (AISI) "Stainless Steel Cold-Formed Structural Design Manual."

2. For Aluminum. Aluminum Association (AA) "Specifications for Aluminum Structures."

B. **Delegated Design: Structural Performance of Handrails and Railing Systems**. Design, fabricate, and install handrails and railing systems to withstand the following structural loads without exceeding the allowable design working stress of the materials for handrails, railing systems, anchors, and connections. Apply each load to produce the maximum stress in each of the respective components comprising handrails and railing systems.

1. Top Rail of Guardrail Systems. Capable of withstanding the following loads applied as indicated:
    a. Concentrated load of 200 pounds applied at any point and in any direction.
    b. Uniform load of 50 pounds per foot applied horizontally at the required guardrail height and a simultaneous uniform load of 100 pounds per foot applied vertically downward at the top of the guardrail.
    c. Concentrated load need not be assumed to act concurrently with uniform loads.
2. Handrails Not Serving as Top Rails. Capable of withstanding the following loads applied as indicated:
    a. Concentrated load of 200 pounds applied at any point and in any direction.
    b. Uniform load of 50 pounds per foot applied in any direction.
    c. Concentrated and uniform loads need not be assumed to act concurrently.
3. Infill Area of Guardrail Systems. Capable of withstanding a horizontal concentrated load of 200 pounds applied to 1 square foot (sf) at any point in the system including panels, intermediate rails, balusters, or other elements composing the infill area. Concentrated load need not be assumed to act concurrently with loads on top rails of railing systems in determining stress on guard.

C. **Control of Corrosion**. Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

D. **Thermal Movements**. Allow for thermal movement resulting from the following maximum change (range) in ambient temperature of 120 degrees Fahrenheit (° F.) in the design, fabrication, and installation of handrails and railings to prevent buckling, opening up of joints, overstressing of components, connections and other detrimental effects. Base design calculation on actual material surface temperature range of 180° F. due to both solar heat gain and nighttime sky heat loss.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with requirements, manufacturers offering handrails and railing systems that may be incorporated in the work include but are not limited to the following:

B. Aluminum Pipe and Tube Railing Systems

1. Blum. Julius Blum & Co., Inc.
2. Moultrie Manufacturing Co.
3. Superior Aluminum Products, Inc.
4. Wagner. R & B Wagner, Inc.

C. Steel Portable and Wall Mounted Roof Safety Railing Systems

1. Safety Rail Company LLC – Basis of Design.
2. Blue Water Manufacturing, Para Rail Guardrail System
3. Kee Safety, Inc., KeeGuard
4. Flexible Lifeline Systems, FlexGuard

2.2 METALS

A. **General**. Provide metal forms and types that comply with requirements of referenced standards and that are free from surface blemishes where exposed to view in the finished unit. Exposed-to-view surfaces exhibiting pitting, seam marks, roller marks, stains, discolorations, or other imperfections on finished units are not acceptable.

B. **Aluminum**. Alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, with not less than the strength and durability properties of the alloy and temper designated below for each aluminum form required:

1. Extruded Bar and Tube. ASTM B 221, alloy 6063T5/T52.
2. Extruded Structural Pipe and Tube. ASTM B 429, 6063-T5/T52.
3. Drawn Seamless Tube. ASTM B 210, 6063-T832.
4. Plate and Sheet. ASTM B 209, 6061-T6.
5. Die and Hand Forgings. ASTM B 247, 6061-T6.
6. Castings. ASTM B 26, A356-T6.

C. **Steel.** Galvanized steel coating recommended by railing manufacturer.

D. **Brackets, Flanges, and Anchors**. Cast or formed metal of the same type material and finish as supported rails, unless otherwise indicated.

2.3 WELDING MATERIALS, FASTENERS, AND ANCHORS

A. **Welding Electrodes and Filler Metal**. Provide type and alloy of filler metal and electrodes as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.

B. **Fasteners for Anchoring Railings to Other Construction**. Select fasteners of the type, grade, and class required to produce connections that are suitable for anchoring railing to other types of construction indicated and capable of withstanding design loadings.

1. For aluminum railings, provide fasteners fabricated from Type 304 stainless steel.

C. Fasteners for Interconnecting Railing Components

1. Use fasteners of same basic metal as the fastened metal, unless otherwise indicated.

2. Do not use metals that are corrosive or incompatible with materials joined.

3. Provide concealed fasteners for interconnection of handrail and railing components and for their attachment to other work, except where otherwise indicated.

4. Provide Phillips flat-head machine screws for exposed fasteners, unless otherwise indicated.

D. **Cast-in-Place and Post-Installed Anchors in Concrete**. Anchors of type indicated below, fabricated from corrosion resistant materials with capability to sustain, without failure, load imposed within a safety factor of 4, as determined by testing per ASTM E 488, conducted by a qualified independent testing laboratory.

1. Cast-in-place anchors.

2. Chemical anchors.

2.4 FABRICATION

A. **General**. Fabricate handrails and railing systems to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of hollow members, post spacings, and anchorage, but not less than those required to support structural loads.

B. Railing Systems

1. Preassemble railing systems in shop to greatest extent possible to minimize field splicing and assembly.

2. Disassemble units only as necessary for shipping and handling limitations.

3. Clearly mark units for reassembly and coordinated installation.

4. Use connections that maintain structural value of joined pieces.

5. Clearly mark units for reassembly and coordinated installation.

C. **Form changes in direction** of railing members as follows:

1. By insertion of prefabricated elbow fittings.

2. By radius bends of radius indicated.

3. By mitering at elbow bends.

4. By bending.

5. By any method indicated above, applicable to change of direction involved.

D. **Form simple and compound curves** by bending pipe in jigs to produce uniform curvature for each repetitive configuration required; maintain cylindrical cross section of pipe throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of pipe.

E. **Welded Connections**. Fabricate railing systems and handrails for connection of members by welding. For connections made during fabrication, weld corners and seams continuously to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

2. Obtain fusion without undercut or overlap.

3. Remove welding flux immediately.

4. At tee and cross intersections, notch ends of intersecting members to fit contour of pipe to which end is joined and weld all around.

5. At exposed connections, finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing and contour of welded surface matches those adjacent.

6. Use welded connections only where non welded connections are not feasible for structural or other approved reasons.

F. Nonwelded Connections

1. Fabricate railing systems and handrails for connection of members by means of railing manufacturer's standard concealed mechanical fasteners and fittings unless otherwise indicated.

2. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.

3. Fabricate splice joints for field connection using epoxy structural adhesive where this represents manufacturer's standard splicing method.

G. **Welded Connections for Aluminum Pipe**. Fabricate pipe handrails and railing systems for connection of members by concealed internal welds, which eliminate surface grinding, using manufacturer's standard system of sleeve and socket fittings.

H. **Brackets, Flanges, Fittings, and Anchors**. Provide manufacturer's standard wall brackets, flanges, miscellaneous fittings, and anchors for interconnection of handrail and railing members to other construction.

I. **Provide inserts and other anchorage devices** for connecting handrails and railing systems to concrete or masonry work.

1. Fabricate anchorage devices capable of withstanding loadings imposed by handrails and railing systems.

2. Coordinate anchorage devices with supporting structure.

J. **For removable railing posts**, fabricate slip fit sockets from steel pipe whose inside diameter is sized for a close fit with posts and to limit deflection of post without lateral load, measured at top, to not more than 1/12 of post height.

1. Provide socket covers designed and fabricated to resist accidental dislodgement.

2. Provide chain with eye, snap hook, and staple across gaps formed by removable railing sections at locations indicated.

3. Fabricate from same metal as railings.

K. **Shear and punch metals** cleanly and accurately**.** Remove burrs from exposed cut edges.

L. **Ease exposed edges to a radius** of approximately 1/32 inch, unless otherwise indicated. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

M. **Cut, reinforce, drill, and tap miscellaneous metal work** as indicated to receive finish hardware, screws, and similar items.

N. **For handrails and railing systems** that are exposed to exterior or to moisture from condensation or other sources, provide weepholes or other means for evacuation of entrapped water in hollow sections of railing members.

O. **Fabricate joints that will be exposed** to weather in a manner to exclude water.

P. **Provide wall returns at ends** of wall-mounted handrails, unless otherwise indicated.

Q. **Toe Boards**. Where indicated, provide toe boards at railings around openings and at the edge of open-sided floors and platforms. Fabricate to dimensions and details indicated for connection to, and centered between, each railing post.

R. **Fillers**. Provide steel sheet or plate fillers of thickness and size indicated or required to support structural loads of handrails where needed to transfer wall bracket loads through wall finishes to structural supports. Size fillers to suit wall finish thicknesses to produce adequate bearing to prevent bracket rotation and overstressing of substrate.

S. Roof Safety Rail System.

1. Provide bases with pads to protect roof surface from damage for portable railings.

2. Provide manufacturer’s standard brackets, and other attachment components as needed to secure railings to wall construction indicated.

2.5 FINISHES, GENERAL

A. **Comply with National Association of Architectural Metals Manufacturers** (NAAMM) "Metal Finishes Manual" for recommendations relative to application and designations of finishes.

B. **Protect mechanical finishes** on exposed surfaces from damage by application of strippable, temporary protective covering prior to shipment.

C. Appearance of Finished Work

1. Variations in appearance of abutting or adjacent pieces are acceptable if they are within 1/2 of the range of approved samples.

2. Noticeable variations in the same piece are not acceptable.

3. Variations in appearance of other components are acceptable if they are within range of approved samples and they are assembled or installed to minimize contrast.

2.6 ALUMINUM FINISHES

A. **Finish designations prefixed by "AA"** conform to the system established by the Aluminum Association for designating aluminum finishes.

B. **Class I Clear Anodized Finish**. AA-M12C22A41; Anodic Coating: Class I Architectural, clear film thicker than 0.7 mil) complying with AAMA 607.1.

C. **Roof Safety Rail System.** Provide manufacturer's standard clear finish.

PART 3 EXECUTION

3.1 **PREPARATION**. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages, such as sleeves, concrete inserts, anchor bolts, and miscellaneous items having integral anchors that are to be embedded in concrete as masonry construction. Coordinate delivery of such items to project site.

3.2 INSTALLATION, GENERAL

A. Fit exposed connections accurately together to form tight, hairline joints.

B. Cutting, Fitting, and Placement

1. Perform cutting, drilling, and fitting required for installation of handrails and railings.

2. Set handrails and railings accurately in location, alignment, and elevation, measured from established lines and levels and free from rack.

3. Do not weld, cut, or abrade surfaces of handrails and railing components that have been coated or finished after fabrication and are intended for field connection by mechanical or other means without further cutting or fitting.

4. Set posts plumb within a tolerance of 1/4 inch in 12 feet.

5. Align rails so that variations from level for horizontal members and from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet.

C. **Field Welding**. Comply with the following requirements:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

2. Obtain fusion without undercut or overlap.

3. Remove welding flux immediately.

4. At exposed connections, finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing and contour of welded surface matches those adjacent.

D. Install self-supporting freestanding railing systems to comply with railing manufacturer's instructions.

E. **Corrosion Protection**. Coat concealed surfaces of aluminum that will come into contact with grout, concrete, masonry, wood, or dissimilar metals with a heavy coat of bituminous paint or zinc chromate primer.

F. **Fastening to In-Place Construction**. Provide anchorage devices and fasteners where necessary for securing handrails and railings to in-place construction.

3.3 ANCHORING POSTS

A. **Adjust handrails and railing systems prior** to anchoring to ensure matching alignment at abutting joints. Space posts at interval indicated but not less than that required by design loadings.

B. **Cover anchorage joint** with a round steel flange welded to post after placement of anchoring material.

C. **Leave anchorage joint exposed**, wipe off surplus anchoring material, and leave 1/8-inch buildup, sloped away from post. For installations exposed on exterior or to flow of water, seal anchoring material to comply with grout manufacturer's directions.

D. **Anchor posts to metal surfaces** with oval flanges, angle type or floor type as required by conditions, connected to posts and to metal supporting members as follows:

1. For aluminum pipe railings, attach posts as indicated using manufacturer's standard fittings designed and engineered for this purpose.

3.4 RAILING CONNECTIONS

A. Nonwelded Connections

1. Use manufacturer's standard mechanical or adhesive joints for permanently connecting railing components.

2. Use wood blocks and padding to prevent damage to railing members and fittings.

3. Seal recessed holes of exposed locking screws with plastic filler cement colored to match finish of handrails and railing systems.

4. Before installing freestanding railing system, prepare roof surface using methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

B. **Welded Connections**. Use fully welded joints for permanently connecting railing components by welding. Cope or butt components to provide 100 percent contact or use manufacturer's standard fittings designed for this purpose.

C. **Expansion Joints**. Install expansion joints at locations indicated but not further apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending 2 inches beyond joint on either side; fasten internal sleeve securely to one side; locate joint within 6 inches of post.

3.5 ANCHORING RAIL ENDS

A. **Anchor rail ends into concrete** and masonry with round flanges connected to rail ends and anchored into wall construction with post installed anchors and bolts.

B. Anchor rail ends to metal surfaces with oval or round flanges.

1. Weld flanges to rail ends.

2. Connect flanges to rail ends using nonwelded connections.

3. Bolt flanges to metal surfaces.

C. **Install removable railing sections** where indicated in slip fit metal sockets cast into concrete. Accurately locate sockets to match post spacing.

3.6 ATTACHMENT OF HANDRAILS TO WALLS

A. **Attach handrails to wall** with wall brackets and end fittings. Provide bracket with not less than 1 1/2 inch clearance from inside face of handrail and finished wall surface.

B. **Locate brackets as indicated** or, if not indicated, at spacing required to support structural loads.

C. **Secure wall brackets** and wall return fittings to building construction as follows:

1. Use type of bracket with flange tapped for concealed anchorage to threaded hanger bolt.

2. Use type of bracket with predrilled hole for exposed bolt anchorage.

3. For concrete and solid masonry anchorage, use drilled-in expansion shield and either concealed hanger bolt or exposed lag bolt, as applicable.

4. For hollow masonry anchorage, use toggle bolts with square heads.

5. For wood stud partitions, use lag bolts set into wood backing between studs. Coordinate with stud installations for accurate location of backing members.

6. For steel framed gypsum board assemblies, fasten brackets directly to steel framing or concealed anchors using self-tapping screws of size and type required to support structural loads.

7. Use manufacturer's standard mounting brackets for wall mounted Roof Safety railings.

D. **Mount handrails** only on completed walls. Do not support handrails temporarily by any means not satisfying structural performance requirements.

3.7 ADJUSTING AND CLEANING

A. **Touch-Up Painting**. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material.

B. **Clean** aluminum and stainless steel by washing thoroughly with clean water and soap, following by rinsing with clean water.

3.8 PROTECTION

A. **Protect finishes of railing systems** and handrails from damage during construction period by use of temporary protective coverings approved by railing manufacturer. Remove protective covering at time of Substantial Completion.

B. **Restore finishes damaged** during installation and construction period so that no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit or provide new units.

SECTION 06 10 00

ROUGH CARPENTRY

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work.** The Contractor shall provide all labor, materials, tools, and equipment necessary to construct rough carpentry in accordance with the plans and as specified herein.

B. **Work Included.** This section includes the following:

1. Wood grounds, nailers, blocking, and shims if needed at openings.

1.3 QUALITY ASSURANCE

A. **Codes.** Perform all work in compliance with all federal, state, and local codes.

B. **Standards.** Materials and workmanship shall be in accordance with the following standards:

1. AF&PA – American Forest & Paper Association.
2. AHA - American Hardwood Association.
3. AISI - American Iron and Steel Institute.
4. ALSC - American Lumber Standards Committee.
5. ANSI - American National Standards Institute.
6. APA - American Plywood Association.
7. ASTM - American Society for Testing and Materials.
8. AWPA - American Wood Preservers Association.
9. AWPB - American Wood Preservers Bureau.
10. Federal Specifications.
11. SPIB - Southern Pine Inspection Bureau.
12. UL - Underwriters' Laboratories, Inc.

C. **Regulatory Agencies.** Perform all work in compliance with the requirements of the following regulatory agencies:

1. ADA - Americans with Disabilities Act.
2. NFPA - National Fire Protection Association.
3. OSHA - Occupational Safety and Health Administration.

1.4 SUBMITTALS

A. **General.** Submit the following in accordance with Conditions of Contract and Division 1 specification sections.

B. **Wood Treatment Data.** Submit wood treatment data as follows including chemical treatment manufacturer's instructions for handling, storing, installing, and finishing of treated material:

1. For each type of preservative-treated wood product include certification by treating plant stating type of preservative solution and pressure process used, net amount of preservative retained, and compliance with applicable standards.

2. For waterborne-treated products include statement that moisture content of treated materials was reduced to levels indicated prior to shipment to project site.

C. **Warranties.** Submit copies of warranty of chemical treatment manufacturer for each type of treatment.

1.5 JOB CONDITIONS

A. **Coordination/Interfacing.** Coordinate with all other trades to prevent delays, errors, and omissions.

B. **Environmental Requirements.** Follow manufacturer's instructions for limitations of specified materials with regard to exposure to climatic conditions.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery and Storage.** Keep materials under cover and dry. Protect against exposure to weather and contact with damp or wet surfaces. Stack lumber as well as plywood and other panels; provide for air circulation within and around stacks and under temporary coverings including polyethylene and similar materials.

1. For lumber and plywood pressure-treated with waterborne chemicals, place spacers between each bundle to provide air circulation.

1.7 SPECIAL WARRANTY

A. **Chemical Treatment Warranty.** Manufacturer's written warranty for each type of chemical treatment required for the project.

1.8 DEFINITIONS

A. **Rough carpentry includes carpentry work** not specified as part of other sections and generally not exposed, unless otherwise specified.

PART 2 PRODUCTS

2.1 LUMBER, GENERAL

A. **Lumber Standards.** Furnish lumber manufactured to comply with PS 20 "American Softwood Lumber Standard" and with applicable grading rules of inspection agencies certified by ALSC's Board of Review.

B. **Inspection Agencies.** Inspection agencies and the abbreviations used to reference them with lumber grades and species include the following:

1. SPIB - Southern Pine Inspection Bureau.

C. **Grade Stamps.** Provide lumber with each piece factory marked with grade stamp of inspection agency evidencing compliance with grading rule requirements and identifying grading agency, grade, species, moisture content at time of surfacing, and mill.

D. **Nominal Sizes.** Nominal sizes are indicated, except as shown by detail dimensions. Provide actual sizes as required by PS 20, for moisture content specified for each use.

1. Provide seasoned lumber with 19 percent maximum moisture content at time of dressing and shipment for sizes 2 inches or less in nominal thickness, unless otherwise indicated.

2.2 DIMENSION LUMBER

A. **Light Framing.** For light framing (2 to 4 inches thick, 2 to 4 inches wide), provide the following grade and species:

1. Standard grade.

2. Southern Pine graded under SPIB rules.

2.3 BOARDS

A. **Exposed Boards.** Where boards will be exposed in the finished work, provide the following:

1. Moisture Content. 19 percent maximum, S-DRY or KD-19.

B. **Concealed Boards.** Where boards will be concealed by other work, provide lumber of 19 percent maximum moisture content (S-DRY or KD-19) and of following species and grade:

1. Southern Pine No. 2 Boards per SPIB rules.

C. **Board Sizes.** Provide sizes indicated.

2.4 MISCELLANEOUS LUMBER

A. **General.** Provide lumber for support or attachment of other construction including cant strips, bucks, nailers, blocking, furring, grounds, stripping, and similar members.

B. **Size and Shape.** Fabricate miscellaneous lumber from dimension lumber of sizes indicated and into shapes shown.

C. **Moisture Content.** Nineteen percent maximum for lumber items not specified to receive wood preservative treatment.

D. **Grade.** Standard grade light framing size lumber or No. 2 Boards per SPIB rules.

2.5 FASTENERS

A. **General.** Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.

1. Provide fasteners with a hot dip zinc coating per ASTM A 153.

B. Nails, Wire, Brads, and Staples. FS FF-N-105.

C. **Power Driven Fasteners.** National Evaluation Report NER-272.

D. **Wood Screws.** ANSI B18.6.1.

E. **Lag Bolts.** ANSI B18.2.1.

F. **Bolts.** Steel bolts complying with ASTM A 307, Grade A; with ASTM A 563 hex nuts and where indicated, flat washers.

2.6 PRESERVATIVE WOOD TREATMENT BY PRESSURE PROCESS

A. **General.** Where lumber or plywood is indicated as preservative-treated wood or is specified herein to be treated, comply with applicable requirements of AWPA Standards C2 (Lumber) and C9 (Plywood). Mark each treated item with the AWPB or SPIB Quality Mark Requirements.

B. **Aboveground Items.** Pressure-treat aboveground items with waterborne preservatives to a minimum retention of 0.25 pound per cubic foot (pcf). For interior uses, after treatment, kiln dry lumber and plywood to a maximum moisture content, respectively, of 19 percent and 15 percent. Treat indicated items and the following.

1. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.

2. Wood sills, sleepers, blocking, furring, stripping, and similar concealed members in contact with masonry or concrete.

C. **Members in Contact with Ground.** Pressure-treat wood members in contact with the ground or fresh water with waterborne preservatives to a minimum retention of 0.40 pcf.

D. **Fabrication.** Complete fabrication of treated items prior to treatment, where possible. If cut after treatment, coat cut surfaces to comply with AWPA M4. Inspect each piece of lumber or plywood after drying and discard damaged or defective pieces.

PART 3 EXECUTION

3.1 INSTALLATION, GENERAL

A. **Unusable Material.** Discard units of material with defects that impair quality of rough carpentry construction and that are too small to use in fabricating rough carpentry with minimum joints or optimum joint arrangement.

B. **Setting Rough Carpentry.** Set rough carpentry to required levels and lines, with members plumb and true to line and cut and fitted.

C. **Fitting Rough Carpentry.** Fit rough carpentry to other construction; scribe and cope as required for accurate fit. Correlate location of furring, nailers, blocking, grounds, and similar supports to allow attachment of other construction.

D. **Securement.** Securely attach rough carpentry work to substrate by anchoring and fastening as indicated.

E. **Nailing Exposed Carpentry.** Countersink nail heads on exposed carpentry work and fill holes.

F. **Nails.** Use common wire nails, unless otherwise indicated. Use finishing nails for finish work. Select fasteners of size that will not penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting of wood; predrill as required.

3.2 WOOD GROUNDS, NAILERS, BLOCKING, AND SLEEPERS

A. **General.** Install wood grounds, nailers, blocking, and sleepers where shown and where required for screeding or attachment of other work. Form to shapes as shown and cut as required for true line and level of work to be attached. Coordinate location with other work involved.

B. **Attachment.** Attach to substrates as required to support applied loading. Countersink bolts and nuts flush with surfaces, unless otherwise indicated. Build into masonry during installation of masonry work. Where possible, anchor to formwork before concrete placement.

3.3 DEMONSTRATION

A. **General.** Prior to commencement of the installation and/or application of interior and/or exterior finishes, the Contractor shall demonstrate to representatives of the Engineer/Architect (and/or Owner) that all framing and other rough carpentry members are installed at the indicated spacing, are of the indicated size and grade, and are fastened with the required anchors and fasteners, and that no members have been damaged during handling, fabrication, or installation.

1. Correct all noted deficiencies to the satisfaction of the Engineer/Architect's representative prior to commencing with finish work.

2. Demonstration and corrective measures may be phased to allow commencement of finish work according to the approved Construction Schedule.

END OF SECTION

This page intentionally left blank.

SECTION 06 80 01

COMPOSITE FABRICATIONS FOR BAFFLE WALLS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. Provide all labor, tools, equipment, and materials necessary to furnish and install, in proper operating condition, the fiberglass-reinforced plastic (FRP) baffle wall panel products and fabrications in accordance with the drawings and the specifications. Openings in the baffles, as shown on the drawings, shall be performed by the manufacturer. The baffle walls are subject to no differential in water surfaces and will be installed below grade in concrete clearwells chambers which require confined space entry during construction. The existing and proposed access manways to the clearwells are shown on the drawings; the proposed and existing access manways shall be used to lower panels into the clearwells for installation. The baffle walls are intended to direct the flow path of waters through each chamber in a multipass configuration as shown on the drawings.

1.3 QUALITY ASSURANCE.

A. **Standards**. Materials and workmanship shall be in accordance with the following standards:

1. ISO 9001
2. ANSI – American National Standards Institute.
3. ASTM – American Society for Testing and Materials.
4. AWS – American Welding Society.
5. Rockwell Laboratories.
6. NSF-61
7. Specific standards shall include the following:

Method	**Test**	**Minimum Value**
ASTM D 638	Tensile Strength	40,000 psi
ASTM D 790	Flexural Strength	32,000 psi
ASTM D 790	Flexural Modulus	8 x10^5 psi
ASTM D 2583	Barcol Hardness	50
ASTM D695	Compressive Strength	50,000 psi
ASTM D 256	Notched 120D Impact	15 lbs/in

B. **Certified Tests**. Furnish the Owner with certified test reports of the physical and mechanical properties of the product. Each panel shall have the minimum physical properties specified herein. Flexural properties shall be measured with the resin-rich upper surface in compression. Hardness tests shall be made on the resin-rich upper surface.

1.4 SUBMITTALS

A. Submit the following submittals in accordance with the Division 1 Submittal Requirements and the requirements within this specification section.

B. Submittal Package No. 1 – Shop Drawings, Product Data, and Design Criteria

1. Schedule. No products shall be delivered or installed before this submittal package has been reviewed and approved.

2. Submittal Package Contents.

a. Manufacturer's product data including material certifications on fiberglass-reinforced plastic material.

b. Shop Drawings including:

1) Manufacturer's name and model.

2) Dimensional layouts including sectional view, required clearances, and bolt and anchor locations.

3) Materials of construction.

4) Equipment specifications.

5) Weights.

6) Anchor bolts.

7) Bill of materials.

8) Installation instructions.

C. Submittal Package No. 2 – Equipment Installation Inspection Reports

1. Schedule. The operational demonstration cannot begin until these documents are approved.

2. Submittal Package Contents. Manufacturer's representative reports, in accordance with Section 01 75 00, from equipment installation inspection.

1.5 JOB CONDITIONS

A. **Interfacing**. Coordinate clearance of any composite clarifier equipment with clarifier equipment manufacturer.

B. **Environment Requirements.** The equipment shall be designed for operation in a potable water storage tank with a chlorine residual of approximately 2 mg/L.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle the composite fabrications in accordance with Section 01 60 00 and the manufacturer's instructions

1.7 SPECIAL WARRANTY

A. The manufacturer shall warrant that all composite fabrications furnished under this specification shall be free of defects in materials and workmanship for a period of 2 years from the date of acceptance.

PART 2 PRODUCTS

2.1 DESIGN CRITERIA

A. Structural members shall be designed to support all applied loads. Deflection in any direction shall not be more than L/100 of span for structural members. Connections shall be designed to transfer loads.

B. Baffle walls shall be self supporting when tank is empty.

C. The connections shall be designed to retain the baffles while the tank is full.

2.2 MATERIALS

A. **Mold each fabrication of FRP**. The resins and fiberglass reinforcing material shall be consistent with the environmental conditions and structural requirements. Materials used in the manufacture of the FRP products shall be raw materials in conformance with the specification and certified as meeting the manufacturer's approved list of raw materials. The panels shall be manufactured using the pultrusion process. A minimum 7 mil. synthetic surface veil shall be the outermost layer covering the exterior surface.

B. **Baffle panels.** The FRP baffles shall be ribbed profile in 4" depth. The baffle panels shall be a minimum of ¼" thick. The FRP baffle panels shall have top horizontal ribs that slope downward not less than 10 degrees to minimize sediment build-up.

C. **Columns.** Columns shall be standard FRP sections; spaced at no more than 10 feet or as shown on the plans. Columns shall be notched to allow for installation/ removal of the baffle panel sections after columns are installed.

D. **Visual quality.** The visual quality of the pultruded shapes shall conform to ASTM D4385.

E. **All exposed surfaces** shall be smooth and true to form in compliance with ASTM D4385.

F. **Hardware**. All fasteners, anchors, and structural hardware shall be 316 stainless steel.

G. **All connections** of Baffle Wall Panels to fiberglass columns or super structure shall be as shown on the approved shop drawings.

2.3 ACCESSORIES.

A. **Furnish anchors** in accordance with Section 05 05 23, "Anchors."

B. Furnish all other fasteners and mounting brackets in Type 316 stainless steel

2.4 MANUFACTURER.

A. **All composite fabrications** shall be supplied by the same manufacturer.

B. **Subject to compliance with the specifications**, provide the composite fabrications from one of the following approved manufacturers.

1. Strongwell
2. MFG Laminating Group
3. Enduro Composites
4. NEFCO
5. Or approved equal.

PART 3 EXECUTION

3.1 EXAMINATION

A. **Site Verification of Conditions**. Field verify that surfaces and site conditions are ready to receive work and the following conditions:

1. Existing concrete tank and collector have been cleaned and are ready for equipment to be placed.
2. All dimensions and clearance of related equipment.

B. **Responsibility**. Beginning the installation means the installer accepts the existing surfaces and conditions.

3.2 PREPARATION.

A. Complete preparatory work in accordance with manufacturer's instructions prior to equipment installation.

B. Coordinate and furnish anchorages, setting drawings, diagrams, templates, instructions and directions for installation of anchorages, including concrete inserts, sleeves, anchor bolts and miscellaneous items having integral anchors that are to be embedded in concrete or masonry construction.

C. The concrete wall surface onto which the baffle wall is mounted shall be smooth with no protrusions. Rubbing of these concrete surfaces may be required prior to installation.

3.3 INSTALLATION

A. Requirements. Fabricate and install the composite fabrications as shown, as specified herein, in accordance with the approved shop drawings and the manufacturer's instructions and recommendations.

B. The Contractor shall field verify existing dimensions and install the baffle walls in accordance with the contract drawings, approved shop drawings and manufacturer’s recommendations. Contractor shall provide footings or grout pads for structure if required.

C. Fastening to in-place construction: Provide anchorage devices and fasteners where necessary for securing miscellaneous FRP fabrications to in-place construction; include threaded fasteners for concrete and masonry inserts, toggle bolts, through-bolts, lag bolts and other connectors as recommended by the manufacturer.

D. Cutting, fitting and placement: Perform cutting, drilling and fitting required for installation of miscellaneous FRP fabrications. Set FRP fabrication accurately in location, alignment and elevation; with edges and surfaces level, plumb, true and free of rack; measured from established lines and levels.

E. Provide temporary bracing or anchors in form work for items that are to be built into concrete masonry or similar construction.

F. All field cut and drilled edges, holes and abrasions shall be sealed with a sealant compatible with the original resin as recommended by the manufacturer.

G. Install items specified as indicated and in accordance with manufacturer's instructions.

3.4 FIELD QUALITY CONTROL

A. **Inspection**. Notify and coordinate with the equipment manufacturer in a timely manner in order for them to conduct their required inspection, as required in this specification section. This shall be done at no additional cost to the Owner.

B. **Manufacturer's Representative**. A qualified representative of the equipment manufacturer shall inspect the completed installation and provide the Owner with a written certificate of approval in accordance with Section 01 33 00. The representative shall spend at least 2 hours performing the required services and submit a manufacturer's representative report as specified in Section 01 75 00.

C. **Defective Work**. If defects are found, take corrective procedures at no additional cost to the Owner.

PART 4 EQUIPMENT SCHEDULE

4.1 Baffle Walls

A. Clearwell and Chlorine Contact Tanks

Tanks	**Walls**
Clearwell Chamber No. 1A	69'-6"x15'H
Clearwell Chamber No. 2B	69'-6"x15'H
New Chlorine Contact Tank No .1	9'-6"x15'H & 36'-6"x15'H
New Chlorine Contact Tank No. 2	9'-6"x15'H & 33'-1-1/2"x15'H

4.2 Note: The height of the wall is 15', but columns will have to be 19' high to accommodate the attachment of the column to the clearwell ceiling.

END OF SECTION

This page intentionally left blank.

SECTION 07 01 50.19

PREPARATION FOR REROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. **Section Includes:**

1. Full tear-off of entire roof where indicated.

1.2 DEFINITIONS

A. **Roofing Terminology:** Definitions in ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" apply to work of this Section.

B. **Roof Re-Cover Preparation:** Existing roofing system is to remain and be prepared for new roof installed over it.

C. **Full Roof Tear-Off:** Removal of existing roofing system from deck.

1.3 ACTION SUBMITTALS

A. **Product Data:** For each type of product.

B. **Temporary Roofing Submittal:** Product data and description of temporary roofing system. If **temporary** roof remains in place, include surface preparation requirements needed to receive permanent roof, and submit a letter from roofing manufacturer, stating acceptance of the temporary roof and that its inclusion does not adversely affect the roofing system's resistance to fire and wind.

1.4 INFORMATIONAL SUBMITTALS

A. **Photographs or Videotape**: Show existing conditions of adjoining construction and site **improvements**, including exterior and interior finish surfaces, that might be misconstrued as having been damaged by reroofing operations. Submit before Work begins.

1.5 QUALITY ASSURANCE

A. **Installer Qualifications:** Approved by warrantor of existing roofing system to work on existing roofing.

B. **Reroofing Conference:** Conduct conference at Project site.

1.6 **FIELD CONDITIONS**

A. Owner will occupy portions of building immediately below reroofing area. Conduct reroofing so Owner's operations are not disrupted. Provide Owner with not less than 72 hours' notice of activities that may affect Owner's operations.

1. Coordinate work activities daily with Owner so Owner can place protective dust and water-leakage covers over sensitive equipment and furnishings, shut down HVAC and fire-alarm or -detection equipment if needed, and evacuate occupants from below work area.

2. Before working over structurally impaired areas of deck, notify Owner to evacuate occupants from below affected area. Verify that occupants below work area have been evacuated before proceeding with work over impaired deck area.

B. Protect building to be reroofed, adjacent buildings, walkways, site improvements, exterior plantings, and landscaping from damage or soiling from reroofing operations.

C. Maintain access to existing walkways, corridors, and other adjacent occupied or used facilities.

D. Limit construction loads on roof to 250 for rooftop equipment wheel loads and 25 psf for uniformly distributed loads.

E. **Weather Limitations:** Proceed with reroofing preparation only when existing and forecasted weather conditions permit Work to proceed without water entering existing roofing system or building.

PART 2 - PRODUCTS

2.1 INFILL AND REPLACEMENT MATERIALS

A. Use infill materials matching existing roofing system materials unless otherwise indicated.

2.2 AUXILIARY REROOFING MATERIALS

A. **General**: Use auxiliary reroofing preparation materials recommended by roofing system manufacturer for intended use and compatible with components of new roofing system.

PART 3 - EXECUTION

3.1 PREPARATION

A. Shut off rooftop utilities and service piping before beginning the Work.

B. Protect existing roofing system that is not to be reroofed.

C. Coordinate with Owner to shut down air-intake equipment in the vicinity of the Work. Cover air-intake louvers before proceeding with reroofing work that could affect indoor air quality or activate smoke detectors in the ductwork.

D. Maintain roof drains in functioning condition to ensure roof drainage at end of each workday. Prevent debris from entering or blocking roof drains and conductors. Use

roof-drain plugs specifically designed for this purpose. Remove roof-drain plugs at end of each workday, when no work is taking place, or when rain is forecast.

3.2 ROOF TEAR-OFF

A. **General**: Notify Owner each day of extent of roof tear-off proposed for that day.

B. Remove aggregate ballast from roofing.

C. Remove loose aggregate from aggregate-surfaced built-up bituminous roofing using a power broom.

D. **Full Roof Tear-Off:** Remove existing roofing and other roofing system components down to the deck.

1. Bitumen and felts that are firmly bonded to concrete decks are permitted to remain if felts are dry. Remove unadhered bitumen, unadhered felts, and wet felts.

2. Remove excess asphalt from steel deck. A maximum of 15 lb/100 sq. ft. (0.72 kg/sq. m) of asphalt is permitted to remain on steel decks.

3. Remove fasteners from deck.

3.3 DECK PREPARATION

A. Inspect deck after tear-off of roofing system.

B. Verify that concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263 or by pouring 1 pint (0.5 L) of hot roofing asphalt on deck at start of each day's work and at start of each roof area or plane. Do not proceed with roofing work if moisture condenses under plastic sheet or if asphalt test sample foams or can be easily and cleanly stripped after cooling.

C. If broken or loose fasteners that secure deck panels to one another or to structure are observed, or if deck appears or feels inadequately attached, immediately notify Architect. Do not proceed with installation until directed by Architect.

D. If deck surface is unsuitable for receiving new roofing or if structural integrity of deck is suspect, immediately notify Architect. Do not proceed with installation until directed by Architect.

3.4 INFILL MATERIALS INSTALLATION

A. Immediately after roof tear-off, and inspection and repair, if needed, of deck, fill in tear-off areas to match existing roofing system construction.

B. Install new roofing patch over roof infill area. If new roofing is installed the same day tear-off is made, roofing patch is not required.

3.5 BASE FLASHING REMOVAL

A. **Remove** existing base flashings. Clean substrates of contaminants, such as asphalt, sheet materials, dirt, and debris.

3.6 DISPOSAL

A. Collect demolished materials and place in containers. Promptly dispose of demolished materials. Do not allow demolished materials to accumulate on-site.

B. Transport and legally dispose of demolished materials off Owner's property.

END OF SECTION

SECTION 07 10 00

WATERPROOFING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Provide the labor, tools, equipment, and materials necessary to furnish and apply the waterproofing in accordance with the drawings and as specified herein.

B. **Masonry**. Waterproof all exterior masonry.

C. **Concrete**. Waterproof concrete where shown or called for.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work to furnish and apply the waterproofing in compliance with all federal, state, and local codes and regulatory agencies.

B. **Standards**. Materials and workmanship shall be in conformance with the following standards referenced herein.

1. ASTM – American Society for Testing and Materials.
2. COE – U.S. Army Corps of Engineers.
3. NSF – National Sanitation Foundation.
4. Ohio EPA – Ohio Environmental Protection Agency.

C. **Test**. A small area of the surface to be waterproofed shall be tested and accepted prior to application of the waterproofing to the entire surface.

1.4 SUBMITTALS

A. **Product Data**. Submit manufacturer's technical data and installation instructions for each type of waterproofing. Technical data shall show manufacturer's trade name, color, all independent laboratory tests, performance data, method of application, storage requirements, safety fact sheet, container sizes, and mixing instructions.

B. **Samples**. Submit a 1-foot-square sample of membrane waterproofing.

C. **Special Warranty**. Submit special warranty as specified in Item 1.7 of this specification.

D. Certification

1. Contractor. Certify in writing that all waterproofing has been applied in conformance with the manufacturer's instructions.
2. Manufacturer. Manufacturer shall submit in writing that preparation, installation, and protection of the waterproof membrane have been inspected and met with their approval.

E. **Conditions**. Submit, in writing, surface conditions detrimental to proper installation/application of waterproofing. Do not commence with work until the listed items are corrected.

1.5 JOB CONDITIONS

A. **Coordination**. Coordinate all work with other trades to prevent delays, omissions, damage, and/or interference with other work.

B. Environmental Conditions

1. Climatic. Perform no work when the ambient air temperature is below 40 degrees Fahrenheit (° F.) and/or the material surface to be coated is less than 50° F. or greater than 90° F.

C. **Protection**. Protect all surfaces not to be waterproofed from spillage, dripping, or splattering of the waterproofing material. Repair or replace any damage.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery**. Waterproofing shall be delivered to the site in sealed containers bearing a label which shall list the manufacturer's name, trade name, application rate, precautionary methods required, and mixing ratio.

B. **Storage**. Store materials in an enclosed dry area, protected from damage. Keep storage areas clean and neat at all times.

C. **Handling**. Handle material as recommended by the manufacturer.

1.7 **SPECIAL WARRANTY**. The manufacturer shall provide a 10-year written warranty against moisture penetration on all waterproofed areas.

PART 2 PRODUCTS

2.1 MATERIAL

A. Liquid-Applied Waterproofing

1. Concrete Surfaces.

a. Waterproofing for concrete surfaces shall be a liquid compound that will react with the alkali and moisture in the concrete to produce a gel within the concrete and bind it into a solid mass producing a higher density, higher strength, and a permanent water seal. Waterproofing shall be clear, colorless, odorless, nonflammable, nonpoisonous, noninjurious to the skin, nontoxic, and tasteless, and shall not react with wood, asphalt, tar, metal, or asbestos. Concrete waterproofing shall meet:

1) ASTM C 267, "Chemical Resistance of Mortars."

2) ASTM C 672, "Scaling Resistance of Concrete Surfaces Exposed to Deicing Chemicals."

3) COE, "Permeability of Concrete."

4) Ohio EPA, "List of Approved Materials in Contact with Potable Water."

5) NSF, "Approval for Contact with Potable Water."

b. Products/Manufacturers.

1) Evercrete-DPS by Evercrete Co., Las Vegas, Nevada.

2) Xypex by Xypex Chemical Co., Richmond, B.C., Canada.

3) Or equal.

2. Brick and Stone Surfaces.

a. Waterproofing for brick and stone surfaces shall be a clear, colorless, liquid compound capable of 97 percent repellency for water immersion test at 70 degrees Fahrenheit (^{o} F.) for 30 minutes. Brick and stone waterproofing shall meet:

1) ASTM C 67, "Absorption Test for Brick."

2) ASTM E 514, "Water Permeance Test of Masonry."

3) ASTM D 1653, "Moisture Vapor Transmission Rate."

b. Products/Manufacturers.

1) Hydrozo Clear Double 7 by Hydrozo Coatings, Lincoln, Nebraska.

2) Evercrete TS by Evercrete Co., Las Vegas, Nevada.

3) Or equal.

3. Concrete Block Surfaces.

a. Waterproofing for concrete block shall be a copolymer of plastic resins in emulsion form containing color pigments, selected mica fillers, and silicone with a minimum vapor transmission rate of 3.5 grams per 100 square inches per 24 hours. Waterproofing shall be resistant and colorfast to industrial fumes, water, and humidity.

b. Products/Manufacturers.

1) Hydrocide Super Color Coat by Sonneborn Building Products, Maspeth, New York.

2) Or equal.

B. MEMBRANE-APPLIED WATERPROOFING

1. Membrane.

a. Wall Membrane. Waterproofing membrane shall be a factory-made composite product with a minimum thickness of 60 mils and consisting of 56 mils of rubberized asphalt and 4 mils of cross-laminated polyethylene film. The membrane shall be self-adhesive and cold-applied. The rubberized asphalt shall be factory-protected with a release paper that is removed at the time of installation.

b. Under-Slab Membrane. Membrane for waterproofing under slabs shall be factory-made composite product of rubberized asphalt and an inert reinforcing scrim for a total of 65 to 70 mils.

2. Surface Conditioner. Concrete surface conditioner shall be water-based, spray- or roll-applied to produce a dust-free surface to ensure positive adhesion.

3. Mastic. As recommended by the waterproofing membrane manufacturer.

4. Protective Board.

   a. Polystyrene. One-inch-thick expanded polystyrene, with normal density of 1.0 pound per cubic foot meeting an "R" value of 4 per inch of thickness at 75° F.

   b. Asphaltic. Premolded semirigid board consisting of bitumen, mineral core, and reinforcement scaled under heat and pressure. Thickness of protective board shall be as recommended by the manufacturer, but not less than 1/4 inch.

5. Adhesive. Protective panel adhesive shall be as recommended by the manufacturer.

6. Manufacturer. Waterproofing membrane shall be Bituthene by W.R. Grace and Company, Aquasel by J&P Petroleum Products, Inc., or equal.

PART 3 EXECUTION

3.1 EXAMINATION

A. **Site Verification of Conditions**. Examine the surface to receive the waterproofing, and the conditions under which the waterproofing work is to be performed, and notify the Engineer/Architect in writing of any conditions detrimental to the proper and timely completion of the work and performance of the waterproofing. Do not proceed with the waterproofing work until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Preparation

1. All concrete shall be dry and cured a minimum of 7 days.

2. Keep surface free of dirt, mortar, concrete protrusions, oil, and foreign material; grind all projections smooth.

3. Prepare surfaces in accordance with manufacturer's recommendation.

4. Fill voids and tie holes, seal joints, and apply bond breakers as recommended by the manufacturer.

5. Install separate flashing as recommended by the manufacturer.

6. Prime the substrate as recommended by the manufacturer.

3.3 APPLICATION

A. Liquid-Applied

1. Apply liquid-applied waterproofing by brush, roller, or spray in accordance with the manufacturer's instructions to form a continuous sheath free of skips, pinholes, holidays, and other imperfections. The maximum area of coverage for a unit volume shall be as recommended by the manufacturer.

2. Number of Coats.

a. Concrete Surfaces. Minimum of two coats.

b. Brick and Stone Surfaces. Minimum of one coat.

c. Concrete Block Surfaces. Minimum of two coats for a final dry film thickness of 15 to 20 mils.

B. Membrane-Applied

1. Priming.

a. Apply surface conditioner at the dilution and rate recommended by the manufacturer. Recoat areas contaminated by dust.

b. Mask off and protect adjoining finished surfaces from excessive application of surface conditioner.

c. Surface conditioner to be completely dry prior to application of membrane.

2. Membrane.

a. Apply membrane in lengths up to 8 feet. Overlap all seams at least 2-1/2 inches. On higher walls apply membrane in two or more sections with the upper overlapping the lower by at least 2-1/2 inches. Two plies of membrane are recommended for applications on any wood surfaces. Roll all membrane with a hand roller.

b. Terminate the membrane at grade level. Press the membrane firmly to the wall with a hardwood tool such as a hammer handle or secure into a reglet. Failure to use heavy pressure at terminations can result in a poor seal. Seal the termination with mastic or liquid membrane.

c. Terminate the membrane on the top of the footing if the vertical waterproofing ties into the mud slab waterproofing or if the elevation of the interior floor slab is less than 6 inches above the footing. Extend the membrane at least 6 inches onto the mud slab waterproofing and terminate with mastic or liquid membrane. Seal all laps within 12 inches of the corner with mastic or liquid membrane.

d. Protect all joints, vertical and horizontal, construction and expansion, with two layers of waterproofing membrane. First layer shall be not less than 12 inches, second layer not less than 18 inches wide. Each strip shall be centered over the joint.

e. Seal all daily terminations with a thin troweled bead of mastic or liquid membrane.

3. Protective Board.

a. Apply protective board in accordance with manufacturer's recommendations prior to backfilling.

3.4 FIELD QUALITY CONTROL

A. Backfilling

1. Do not backfill liquid-sealed concrete for a minimum of 7 days or as directed by the manufacturer.

2. Do not backfill membrane sealed concrete surfaces until all the membrane has been checked, repaired, and/or replaced and the protective board is in place.

B. **Painting**. Do not paint liquid sealed concrete surfaces until 21 days after sealing. Clean prior to painting in strict accordance with the manufacturer's instructions.

C. **Inspection and Repair**. Inspect membrane thoroughly before covering and make any corrections immediately. Patch tears and inadequately lapped seams. Slit fishmouths and repair with a patch extending 6 inches in all directions from the slit and seal edges of the patch with mastic.

3.5 DEMONSTRATION

A. **Visual**. With the Owner and/or Engineer/Architect, visually review the waterproofing work for completion.

1. Membrane System.

a. Membrane System. Check the membrane for laps, areas covered, tears, bubbles, etc., prior to application of the protective board, cover, or other surface over the membrane.

b. Prior to backfilling, visually check the protective board for complete coverage of the membrane.

2. Liquid. Water-spray all surfaces waterproofed under full hose nozzle pressure of 40 pounds per square inch (psi). Check surface with a meter, visual balling of surface water, or with plastic test patch.

END OF SECTION

SECTION 07 21 00

BUILDING INSULATION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General.** The Contractor shall provide all labor, materials, tools, and equipment necessary to furnish and install building insulation in accordance with the plans and as specified herein.

B. **Work Included.** This section includes the following:

1. Insulation under slabs-on-grade.
2. Block/board cavity wall insulation.
3. Concealed building insulation in board form.
4. Exposed building insulation in board form.
5. Building insulation in batt form.

C. **Related Sections.** The following sections contain requirements that relate to this section:

1. Division 4 Masonry for polystyrene board insulation installed in cavity walls and masonry cells.
2. 2.Division 7 Thermal and Moisture Protection for roof insulation specified as part of roofing construction.

1.3 QUALITY ASSURANCE

A. **Codes.** Perform all work in compliance with all federal, state, and local codes.

B. **Standards.** Materials and workmanship shall be in accordance with the following standards:

1. ASTM - American Society for Testing and Materials
2. FS - Federal Specifications.
3. UL - Underwriters' Laboratories, Inc.

C. **Regulatory Agencies.** Perform all work in compliance with the requirements of the following regulatory agencies:

1. OSHA - Occupational Safety and Health Administration.
2. ADA - Americans with Disabilities Act.

D. **Fire Performance Characteristics.** Provide insulation materials identical to those whose indicated fire performance characteristics have been determined per the ASTM test method indicated below, by UL or other testing and inspecting organizations acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing and inspecting organization.

1. Surface Burning Characteristic. ASTM E 84.

2. Fire Resistance Ratings. ASTM E 119.

3. Combustion Characteristics. ASTM E 136.

E. **Single-Source Responsibility for Insulation Products.** Obtain each type of building insulation from a single source with resources to provide products of consistent quality in appearance and physical properties without delaying progress of the work.

1.4 SUBMITTALS

A. **General.** Submit the following in accordance with Conditions of Contract and Division 1 specification sections.

1. Product data for each type of insulation product specified.

2. Research reports or evaluation reports of the model code organization acceptable to authorities having jurisdiction that evidence compliance of plastic foam insulations with building code in effect for project.

1.5 JOB CONDITIONS

A. **Coordination - Interfacing.** Coordinate with all other trades to prevent delays, errors, and omissions.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **General.** Protect insulation materials from physical damage and from deterioration by moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's recommendations for handling, storage, and protection during installation.

B. **Plastics.** Protect plastic insulation as follows:

1. Do not expose to sunlight, except to extent necessary for period of installation and concealment.

2. Protect against ignition at all times. Do not deliver plastic insulating materials to project site ahead of installation time.

3. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

1.7 SPECIAL WARRANTY (Not Used)

1.8 DEFINITIONS

A. **Thermal Resistivity.** Where the thermal resistivity of insulation products is designated by "r-values," they represent the reciprocal of thermal conductivity (k-values). Thermal conductivity is the rate of heat flow through a homogenous material exactly 1 inch thick. Thermal resistivity is expressed by the temperature difference in degrees Fahrenheit (º F.) between the two exposed faces required to cause one British thermal unit (Btu) to flow through 1 square foot per hour at mean temperatures indicated.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. **Available Manufacturers.** Subject to compliance with requirements, manufacturers offering insulation products that may be incorporated in the work include, but are not limited to, the following:

1. Extruded Polystyrene Board Insulation.
    a. Amoco Foam Products Co.
    b. DiversiFoam Products.
    c. Dow. The Dow Chemical Company.
    d. UC Industries, Inc.
2. Polyisocyanurate Board Insulation.
    a. Celotex. Building Products Div., The Celotex Corporation.
3. Manufacturers of Glass Fiber Insulation.
    a. CertainTeed Corp.
    b. Knauf Fiber Glass GmbH.
    c. Manville. Building Insulations Div., Manville Sales Corp.
    d. Owens/Corning Fiberglas Corp.
4. Manufacturers of Semi-refractory Fiber Insulation.
    a. Cafco Industries Ltd.
    b. Fibrex Inc.
    c. USG. Thermafiber Div., USG Interiors, Inc.

2.2 INSULATING MATERIALS

A. **General.** Provide insulating materials that comply with requirements and with referenced standards.

1. Preformed Units. Sizes to fit applications indicated, selected from manufacturer's standard thicknesses, widths, and lengths.

B. **Extruded Polystyrene Board Insulation.** Rigid, cellular polystyrene thermal insulation with closed cells and integral high density skin, formed by the expansion of polystyrene base resin in an extrusion process to comply with ASTM C 578 for type indicated; with 5 year aged r-values of 5.4 and 5 at 40 and 75º F. (4.4 and 23.9 degrees Celsius [º C.]), respectively; and as follows:

1. Type IV, 1.6 pounds per cubic foot (pcf) minimum density, unless otherwise indicated.
2. Type V, 3.0 pcf minimum density where indicated.
3. Type VI, 1.8 pcf minimum density.
4. Type VII, 2.2 pcf minimum density.
5. Type X, 1.35 pcf minimum density.

6. Surface Burning Characteristics. Maximum flame spread and smoke developed values of 75 and 450, respectively.

C. **Polyisocyanurate Board Insulation.** Rigid, cellular thermal insulation with glass fiber reinforced polyisocyanurate closed cell foam core and manufacturer's recommended ½" coverboard on the other; complying with FS HH-I-1972/1, Class 2; aged r-values as indicated, respectively:

D. **Faced Mineral Fiber Blanket/Batt Insulation.** Thermal insulation produced by combining mineral fibers of type described below with thermosetting resins to comply with ASTM C 665 for Type III, Class A (blankets with reflective vapor retarder membrane facing with flame spread of 25 or less); foil scrim kraft or foil scrim polyethylene vapor retarder membrane on one face, and as follows:

1. Mineral Fiber Type. Fibers manufactured from glass or slag.

2. Surface Burning Characteristics. Maximum flame spread and smoke developed values of 25 and 50, respectively.

3. Flanged Units. Provide blankets/batts fabricated with facing incorporating 4-inch-wide flanges along their edges for attachment to framing members.

2.3 AUXILIARY INSULATING MATERIALS

A. **Adhesive for Bonding Insulation.** Product with demonstrated capability to bond insulation or mechanical anchors securely to substrates indicated without damaging or corroding either insulation, anchors, or substrates.

B. **Eave Ventilation Troughs.** Preformed rigid fiberboard or plastic sheets designed and sized to fit between roof framing members and to provide cross ventilation between insulated attic spaces and vented eaves.

PART 3 EXECUTION

3.1 EXAMINATION

A. **Verification of Conditions.** Examine substrates and conditions with installer present, for compliance with requirements of the sections in which substrates and related work are specified and to determine if other conditions affecting performance of insulation are satisfactory. Do not proceed with installation of insulation until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. **Cleaning.** Clean substrates of substances harmful to insulations or vapor retarders, including removal of projections that might puncture vapor retarders.

3.3 INSTALLATION

A. **General.** Comply with insulation manufacturer's instructions applicable to products and application indicated. If printed instructions are not available or do not apply to project conditions, consult manufacturer's technical representative for specific recommendations before proceeding with installation of insulation.

B. **Continuity of Insulation.** Extend insulation full thickness as indicated to envelop entire area to be insulated. Cut and fit tightly around obstructions, and fill voids with insulation. Remove projections that interfere with placement.

C. **Layers.** Apply a single layer of insulation of required thickness, unless otherwise shown or required to make up total thickness.

3.4 INSTALLATION OF PERIMETER AND UNDER SLAB INSULATION

A. **Vertical Surfaces.** On vertical surfaces, set units in adhesive applied in accordance with manufacturer's instructions. Use type of adhesive recommended by manufacturer of insulation.

B. **Top Surface Protection.** Protect top surface of horizontal insulation (from damage during concrete work) by application of protection board.

3.5 INSTALLATION OF GENERAL BUILDING INSULATION

A. **General.** Apply insulation units to substrate by method indicated, complying with manufacturer's recommendations. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.

B. **Treatment of Joints and Voids.** Seal joints between closed cell (non-breathing) insulation units by applying adhesive, mastic, or sealant to edges of each unit to form a tight seal as units are shoved into place. Fill voids in completed installation with adhesive, mastic, or sealant as recommended by insulation manufacturer.

C. **Vapor Retarder.** Set vapor retarder faced units with vapor retarder to warm side of construction, except as otherwise indicated. Do not obstruct ventilation spaces, except for firestopping.

1. Tape joints and ruptures in vapor retarder, and seal each continuous area of insulation to surrounding construction to ensure airtight installation.

D. **Foil-Faced Units.** Set reflective, foil-faced units accurately with not less than 0.75 inch air space in front of foil as indicated.

E. **Voids and Cavities.** Stuff glass fiber loose fill insulation into miscellaneous voids and cavity spaces where shown. Compact to approximately 40 percent of normal maximum volume (to a density of approximately 2.5 pcf.)

3.6 PROTECTION

A. **General.** Protect installed insulation and vapor retarders from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation will be subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

3.7 DEMONSTRATION

A. **Correct all noted deficiencies** to the satisfaction of the Engineer/Architect's representative prior to commencing with placement of concrete slabs, backfill, sheathing, interior and/or exterior finishes and other systems.

END OF SECTION

SECTION 07 27 26

FLUID-APPLIED MEMBRANE AIR BARRIERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS.

A. **Drawings** and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. **Section includes** fluid-applied, vapor-retarding membrane air barriers.

1.3 ACTION SUBMITTALS

A. **Product Data**: For each type of product.

1. Include manufacturer's written instructions for evaluating, preparing, and treating substrate; technical data; and tested physical and performance properties of products.

B. **Shop Drawings**: For air-barrier assemblies.

1. Show locations and extent of air barrier. Include details for substrate joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.

1. Include details of interfaces with other materials that form part of air barrier.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. **Product Certificates:** From air-barrier manufacturer, certifying compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with the barrier.

C. **Product Test Reports:** For each air-barrier assembly, for tests performed by a qualified testing agency.

1.5 QUALITY ASSURANCE

A. **Installer Qualifications**: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Remove and replace liquid materials** that cannot be applied within their stated shelf life.

B. Protect stored materials from direct sunlight.

1.7 FIELD CONDITIONS

A. **Environmental Limitations**: Apply air barrier within the range of ambient and substrate temperatures recommended by air-barrier manufacturer.

1. Protect substrates from environmental conditions that effect air-barrier performance.

2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

PART 2 PRODUCTS

2.1 MATERIALS, GENERAL

A. **Source Limitations**: Obtain primary air-barrier materials and air-barrier accessories from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. **General**: Air barrier shall be capable of performing as a continuous vapor-**retarding** air barrier. Air-barrier **assemblies** shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

B. **Air-Barrier Assembly Air Leakage**: Maximum 0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft. (0.2 L/s x sq. m of surface area at 75 Pa), when tested according to ASTM E 283, ASTM E 783, or ASTM E 2357.

2.3 VAPOR-RETARDING MEMBRANE AIR BARRIER

A. **Fluid-Applied, Vapor-Retarding Membrane Air Barrier**: Elastomeric, modified bituminous or synthetic **polymer** membrane.

3. Physical and Performance Properties:

a. Air Permeance: Maximum 0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. (0.02 L/s x sq. m of surface area at 75-Pa) pressure difference; ASTM E 2178.

b. Vapor Permeance: Maximum 0.1 perm (5.8 ng/Pa x s x sq. m); ASTM E 96/E 96M.

c. Ultimate Elongation: Minimum 500 percent; ASTM D 412, Die C.

2.4 ACCESSORY MATERIALS

A. **General**: **Accessory** materials recommended by air-barrier manufacturer to produce a complete air-barrier assembly and compatible with primary air-barrier material.

B. **Primer**: **Liquid** primer recommended for substrate by air-barrier material manufacturer.

PART 3 EXECUTION

3.1 EXAMINATION

A. **Examine substrates, areas, and conditions,** with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.

2. Verify that substrate has cured and aged for minimum time period recommended by air-barrier manufacturer.

3. Verify that substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.

1) Verify that masonry joints are flush and completely filled with mortar.

B. **Proceed with installation** only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

A. **Clean, prepare, treat, and seal** substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air-barrier application.

B. **Mask off adjoining surfaces** not covered by air barrier to prevent spillage and overspray affecting other construction.

C. **Remove grease,** oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

D. **Remove fins,** ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching membrane.

E. **Remove excess mortar** from masonry ties, shelf angles, and other obstructions.

F. **At changes in substrate plane,** apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.

G. **Cover gaps** in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

3.3 JOINT TREATMENT

A. **Concrete and Masonry**: Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 1193 and air-barrier manufacturer's written instructions. Remove dust and dirt from joints and cracks complying with ASTM D 4258 before coating surfaces.

1. Prime substrate and apply a single thickness of air-barrier manufacturer's recommended preparation coat extending a minimum of 3 inches (75 mm) along each side of joints and cracks. Apply a double thickness of fluid air-barrier material and embed a joint reinforcing strip in preparation coat.

3.4 TRANSITION STRIP INSTALLATION

A. **General**: Install strips, transition strips, and accessory materials according to air-barrier manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air barrier.

B. **Apply primer to substrates** at required rate and allow it to dry. Limit priming to areas that will be covered by fluid air-barrier material on same day. Reprime areas exposed for more than 24 hours.

C. **Connect and seal exterior wall air-barrier material** continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.

D. **Fill gaps in perimeter frame surfaces** of windows, curtain walls, storefronts, and doors, and miscellaneous **penetrations** of air-barrier material with foam sealant.

E. **Seal strips and transition strips** around masonry reinforcing or ties and penetrations with termination **mastic**.

F. **Repair punctures, voids, and deficient lapped seams** in strips and transition strips. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches (150 mm) beyond repaired areas in strip direction.

3.5 FLUID AIR-BARRIER MEMBRANE INSTALLATION

A. **General:** Apply fluid air-barrier material to form a seal with strips and transition strips and to achieve a **continuous** air barrier according to air-barrier manufacturer's written instructions. Apply fluid air-barrier material within manufacturer's recommended application temperature ranges.

1. Apply primer to substrates at required rate and allow it to dry.

B. **Membrane Air Barriers**: Apply a continuous unbroken air-barrier membrane to substrates according to the following thickness. Apply air-barrier membrane in full contact around protrusions such as **masonry** ties.

1. Vapor-Retarding Membrane Air Barrier: Total dry film thickness as recommended in writing by manufacturer to meet performance requirements, but not less than 40-mil (1.0-mm) dry film thickness, applied in one or more equal coats.

3.6 FIELD QUALITY CONTROL

A. **Inspections**: **Air**-barrier materials, accessories, and installation are subject to inspection for compliance with requirements. Inspections may include the following:

1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.

2. Continuous structural support of air-barrier system has been provided.

3. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.

4. Site conditions for application temperature and dryness of substrates have been maintained.

5. Maximum exposure time of materials to UV deterioration has not been exceeded.

6. Surfaces have been primed, if applicable.

7. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.

8. Termination mastic has been applied on cut edges.

9. Strips and transition strips have been firmly adhered to substrate.

10. Compatible materials have been used.

11. Transitions at changes in direction and structural support at gaps have been provided.

12. Connections between assemblies (air-barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.

13. All penetrations have been sealed.

B. **Air barriers will be considered defective** if they do not pass tests and inspections.

14. Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.

15. Remove and replace deficient air-barrier components for retesting as specified above.

C. **Repair damage to air barriers** caused by testing; follow manufacturer's written instructions.

3.7 CLEANING AND PROTECTION

A. **Protect air-barrier system from damage** during application and remainder of construction period, according to manufacturer's written instructions.

16. Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. If exposed to these conditions for more than 30 days, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed membrane according to air-barrier manufacturer's written instructions.

17. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.

B. **Clean spills, stains, and soiling from construction** that would be exposed in the completed work using cleaning agents and procedures recommended by manufacturer of affected construction.

C. Remove masking materials after installation.

END OF SECTION

This page intentionally left blank.

SECTION 07 53 23

ETHYLENE-PROPYLENE-DIENE-MONOMER (EPDM) ROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **Drawings** and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. **Section Includes:**

1. Adhered ethylene-propylene-diene-monomer (EPDM) roofing system.
2. Vapor retarder.
3. Roof insulation.

B. **Related Requirements:**

1. Section 06 10 00 "Rough Carpentry" for wood nailers and blocking.

1.3 DEFINITIONS

A. **Roofing Terminology:** Definitions in ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" apply to work of this Section.

1.4 PREINSTALLATION MEETINGS

A. **Preinstallation Roofing Conference:** Conduct conference at Project site.

1. Meet with Owner, Engineer/Architect, Owner's insurer if applicable, testing and inspecting agency representative, Contractor, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.

7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

1.5 ACTION SUBMITTALS

A. **Product Data**: For each type of product.

B. **Shop Drawings:** For roofing system. Include plans, elevations, sections, details, and attachments to other work, including:
1. Base flashings and membrane terminations.
2. Roof plan showing orientation of roof deck and orientation of roofing.
3. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.

1.6 INFORMATIONAL SUBMITTALS

A. **Qualification Data:** For Installer and manufacturer.

B. **Manufacturer Certificates:** Signed by roofing manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
1. Submit evidence of complying with performance requirements.

C. **Product Test Reports:** For components of roofing system, tests performed by manufacturer and witnessed by a qualified testing agency.

D. **Research/Evaluation Reports:** For components of roofing system, from ICC-ES.

E. **Field quality-control reports.**

F. **Sample Warranties:** For manufacturer's special warranties.

1.7 CLOSEOUT SUBMITTALS

A. **Maintenance Data:** For roofing system to include in maintenance manuals.

1.8 QUALITY ASSURANCE

A. **Manufacturer Qualifications:** A qualified manufacturer that is capable of producing a roofing system identical to that used for this Project.

B. **Installer Qualifications:** A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

1.9 DELIVERY, STORAGE, AND HANDLING

A. **Deliver roofing materials** to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

B. **Store liquid materials** in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.

1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

C. **Protect roof insulation materials** from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

D. **Handle and store roofing materials**, and place equipment in a manner to avoid permanent deflection of deck.

1.10 FIELD CONDITIONS

A. **Weather Limitations:** Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.11 WARRANTY

A. **Special Warranty:** Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.

1. Special warranty includes membrane roofing, base flashings, roof insulation, fasteners, cover boards, roofing accessories, walkway products and other components of roofing system.
2. Warranty Period: 20 years from date of Substantial Completion.

B. **Special Project Warranty:** Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering Work of this Section, including all components of roofing system such as membrane roofing, base flashing, roof insulation, fasteners, cover boards, substrate boards, vapor retarders, and walkway products, for the following warranty period:

1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. **Source Limitations:** Obtain components including roof insulation and fasteners for roofing system from same manufacturer as membrane roofing or manufacturer approved by membrane roofing manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. **General Performance:** Installed roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roofing and base flashings shall remain watertight.

1. Accelerated Weathering: Roofing system shall withstand 2000 hours of exposure when tested according to ASTM G 152, ASTM G 154, or ASTM G 155.
2. Impact Resistance: Roofing system shall resist impact damage when tested according to ASTM D 3746 or ASTM D 4272.

B. **Material Compatibility:** Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roofing manufacturer based on testing and field experience.

C. **FM Global Listing:** Roofing, base flashings, and component materials shall comply with requirements in FM Global 4450 or FM Global 4470 as part of a roofing system, and shall be listed in FM Global's "RoofNav" for Class 1 or noncombustible construction, as applicable. Identify materials with FM Global markings.

1. Fire/Windstorm Classification: Class 1A-90.
2. Hail-Resistance Rating: SH.

D. **Exterior Fire-Test Exposure:** ASTM E 108 or UL 790, Class A; for application and roof slopes indicated; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

2.3 EPDM ROOFING

A. **EPDM**: ASTM D 4637, Type I, nonreinforced, uniform, flexible EPDM sheet.

1. Subject to compliance with the requirements, provide products by one of the following manufacturers.

    a. Carlisle SynTec
    b. Firestone Building Products
    c. Johns Manville (Basis of Design)
    d. Mule-Hide Products

2. Thickness: 60 mils (1.5 mm), nominal.

3. Exposed Face Color: Black.

2.4 AUXILIARY ROOFING MATERIALS

A. **General**: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with roofing.

1. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.

B. **Sheet Flashing:** 60-mil- (1.5-mm-) thick EPDM, partially cured or cured, according to application.

C. **Bonding Adhesive:** Manufacturer's standard.

D. **Seaming Material:** Single-component, butyl splicing adhesive and splice cleaner or manufacturer's standard, synthetic-rubber polymer primer and 3-inch- (75-mm-) wide minimum, butyl splice tape with release film.

E. **Lap Sealant:** Manufacturer's standard, single-component sealant, colored to match membrane roofing].

F. **Water Cutoff Mastic:** Manufacturer's standard butyl mastic sealant.

G. **Metal Termination Bars:** Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch (25 by 3 mm) thick; with anchors.

H. **Metal Battens:** Manufacturer's standard, aluminum-zinc-alloy-coated or zinc-coated steel sheet, approximately 1 inch wide by 0.05 inch thick (25 mm wide by 1.3 mm thick), prepunched.

I. **Fasteners:** Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening membrane to substrate, and acceptable to roofing system manufacturer.

J. **Miscellaneous Accessories:** Provide pourable sealers, preformed cone and vent sheet flashings, molded pipe boot flashings, preformed inside and outside corner sheet flashings, reinforced EPDM securement strips, T-joint covers, in-seam sealants, termination reglets, cover strips, and other accessories.

2.5 VAPOR RETARDER

A. **Self-Adhering-Sheet Vapor Retarder:** ASTM D 1970, polyethylene film laminated to layer of rubberized asphalt adhesive, minimum 40-mil- (1.0-mm-) total thickness; maximum permeance rating of 0.1 perm (6 ng/Pa x s x sq. m); cold applied, with slip-resisting surface and release paper backing. Provide primer when recommended by vapor-retarder manufacturer.

2.6 ROOF INSULATION

A. **General:** Preformed roof insulation boards manufactured or approved by EPDM roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated.

B. **Polyisocyanurate Board Insulation:** ASTM C 1289, Type II, Class 1, Grade 2, felt or glass-fiber mat facer on both major surfaces.

C. **Provide preformed saddles**, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

D. **Gypsum Cover Board.** Securock Roof Board Primed, DensDeck Roof Board with Eonic Technology, Or Approved Equal.

1. Qualities: Nonstructural, noncombustible, homogenous composition panel.
2. Board Size: Four by eight feet (4'x8').
3. Thickness: One half (1/2) inch.
4. R-Value: .5
5. Compliances: UL. WH or FM listed under Roofing Systems.
6. Manufacturer: USG, Georgia-Pacific (GP), Or Approved Equal

2.7 INSULATION ACCESSORIES

A. **General**: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with roofing.

B. **Fasteners**: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Global 4470, designed for fastening roof insulation and cover boards to substrate, and acceptable to roofing system manufacturer.

2.8 WALKWAYS

A. **Flexible Walkways:** Factory-formed, nonporous, heavy-duty, solid-rubber, slip-resisting, surface-textured walkway pads or rolls, approximately 3/16 inch (5 mm) thick and acceptable to roofing system manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. **Examine** substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work:

1. Verify that roof openings and penetrations are in place and curbs are set and braced.
2. Verify that wood blocking and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.

3. Verify that concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
4. Verify that compounds that will impair adhesion of roofing components to roof deck have been removed.

B. **Proceed** with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. **Clean** substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.

B. **Prevent** materials from spilling or migrating onto surfaces of other construction.

3.3 ROOFING INSTALLATION, GENERAL

A. **Install** roofing system according to roofing system manufacturer's written instructions.

B. **Complete terminations** and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.

3.4 VAPOR-RETARDER INSTALLATION

A. **Self-Adhering-Sheet Vapor Retarder**: Prime substrate if required by manufacturer. Install self-adhering-sheet vapor retarder over area to receive vapor retarder, side and end lapping each sheet a minimum of 3-1/2 inches (90 mm) and 6 inches (150 mm), respectively. Seal laps by rolling.

B. **Completely seal** vapor retarder at terminations, obstructions, and penetrations to prevent air movement into roofing system.

3.5 INSULATION INSTALLATION

A. **Coordinate** installing roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.

B. **Comply** with roofing system and insulation manufacturer's written instructions for installing roof insulation.

C. **Install insulation under** area of roofing to achieve required thickness. Where overall insulation thickness is 2.7 inches (68 mm) or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches (150 mm) in each direction.

D. **Trim surface of insulation** where necessary so completed surface is flush and does not restrict flow of water.

E. **Install insulation** with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch (6 mm) with insulation.

1. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.

F. **Mechanically Fastened and Adhered Insulation:** Install insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type and set insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

1. Fasten and adhere insulation according to requirements in FM Global's "RoofNav" for specified Windstorm Resistance Classification.

3.6 ADHERED MEMBRANE ROOFING INSTALLATION

A. **Adhere roofing over area** to receive roofing according to membrane roofing system manufacturer's written instructions. Unroll membrane roofing and allow to relax before installing.

B. **Start installation** of roofing in presence of roofing system manufacturer's technical personnel.

C. **Accurately align roofing**, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.

D. **Bonding Adhesive:** Apply to substrate and underside of roofing at rate required by manufacturer, and allow to partially dry before installing roofing. Do not apply to splice area of roofing.

E. **In addition to adhering**, mechanically fasten roofing securely at terminations, penetrations, and perimeters.

F. **Apply roofing** with side laps shingled with slope of roof deck where possible.

G. **Adhesive Seam Installation:** Clean both faces of splice areas, apply splicing cement, and firmly roll side and end laps of overlapping roofing according to manufacturer's written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of roofing terminations.

1. Apply a continuous bead of in-seam sealant before closing splice if required by roofing system manufacturer.

H. **Tape Seam Installation:** Clean and prime both faces of splice areas, apply splice tape, and firmly roll side and end laps of overlapping roofing according to manufacturer's

written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of roofing terminations.

I. **Repair** tears, voids, and lapped seams in roofing that do not comply with requirements.

J. **Spread** sealant or mastic bed over deck-drain flange at roof drains, and securely seal membrane roofing in place with clamping ring.

3.7 BASE FLASHING INSTALLATION

A. **Install sheet flashings** and preformed flashing accessories, and adhere to substrates according to roofing system manufacturer's written instructions.

B. **Apply bonding adhesive** to substrate and underside of sheet flashing at required rate, and allow to partially dry. Do not apply to seam area of flashing.

C. **Flash penetrations** and field-formed inside and outside corners with cured or uncured sheet flashing.

D. **Clean splice areas**, apply splicing cement, and firmly roll side and end laps of overlapping sheets to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of sheet flashing terminations.

E. **Terminate and seal** top of sheet flashings and mechanically anchor to substrate through termination bars.

3.8 WALKWAY INSTALLATION

A. **Flexible Walkways:** Install walkway products in locations indicated. Adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.

3.9 FIELD QUALITY CONTROL

A. **Testing Agency:** Engage a qualified testing agency to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components, and to furnish reports to Architect.

B. **Final Roof Inspection:** Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.

C. **Repair** or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.

D. **Additional testing and inspecting,** at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.10 PROTECTING AND CLEANING

A. **Protect** membrane roofing system from damage and wear during remainder of construction period. When remaining construction does not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.

B. **Correct deficiencies** in or remove membrane roofing system that does not comply with requirements, repair substrates, and repair or reinstall membrane roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

C. **Clean overspray and spillage** from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.11 ROOFING INSTALLER'S WARRANTY

A. **Warrany**.

WHEREAS _____ of _____, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:

1. Owner:
2. Address:
3. Building Name/Type:
4. Address:
5. Area of Work:
6. Acceptance Date: _____.
7. Warranty Period:
8. Expiration Date: _____.

AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,

NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period he will, at his own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.

This Warranty is made subject to the following terms and conditions:

1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:

    a. lightning;
    b. peak gust wind speed exceeding 105 mph;
    c. fire;

d. failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
e. faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
f. vapor condensation on bottom of roofing; and
g. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.

2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.
4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.
5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.
7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

IN WITNESS THEREOF, this instrument has been duly executed this _____ day of _____, _____.

Authorized Signature: _____.

SECTION 07 60 00

FLASHING AND SHEET METAL

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to work of this section.

1.2 DESCRIPTION OF WORK

A. **General.** The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install flashing and sheet metal in accordance with the plans and as specified herein.

B. This section includes the following:

1. Metal counterflashing and base flashing (if any).
2. Metal wall flashing and expansion joints.
3. Built-in metal valleys, gutters, and scuppers.
4. Gutters and downspouts (rain drainage).
5. Exposed metal trim/fascia units.
6. Miscellaneous sheet metal accessories.
7. Elastic flashing.
8. Elastic roof/wall expansion joint systems.
9. Laminated and composition flashing.

C. **Integral masonry flashings are specified** as masonry work in sections of Division 4.

D. **Roofing accessories installed** integral with roofing membrane are specified in roofing system sections as roofing work.

E. **Roof accessory units of pre-manufactured**, set-on type are specified in Division 7 section "Roof Accessories."

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work to furnish and install the flashing and sheet metal in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

1.4 SUBMITTALS

A. **Transmittals**. Furnish manufacturer's product data, test reports, and material certifications as required.

B. **Submit the following** in accordance with Conditions of Contract and Division 1 specification sections.

1. Product Data, Flashing, Sheet Metal, and Accessories. Manufacturer's technical product data, installation instructions and general

recommendations for each specified sheet material and fabricated product.

2. Samples of the following flashing, sheet metal, and accessory items:

a. 8-inch-square samples of specified sheet materials to be exposed as finished surfaces.

1.5 JOB CONDITIONS

A. **Coordinate work of this section** with interfacing and adjoining work for proper sequencing of each installation. Ensure best possible weather resistance and durability of work and protection of materials and finishes.

1.6 DELIVERY, STORAGE, AND HANDLING (Not Used)

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 SHEET METAL FLASHING AND TRIM MATERIALS

A. **Zinc Coated Steel.** Commercial quality with 0.20 percent copper, American Society for Testing and Materials (ASTM) A 526 except ASTM A 527 for lock forming, G90 hot dip galvanized, mill phosphatized where indicated for painting; 0.0359 inch thick (20 gauge) except as otherwise indicated.

B. **Sheet Aluminum.** ASTM B 209, alloy 3003, temper H14, AA-C22A41 clear anodized finish; 0.032 inch thick (20 gauge) except as otherwise indicated.

C. **Extruded Aluminum.** Manufacturer's standard extrusions of sizes and profiles indicated, 60063-T52, AA-C22A41 clear anodized finish; 0.080 inch minimum thickness for primary legs of extrusions.

2.2 FLEXIBLE SHEET MEMBRANE FLASHING

A. **Elastic Sheet Flashing/Membrane.** Nonreinforced flexible, black elastic sheet flashing of 50 to 65 mils thickness and complying with the following:

1. Shore A Hardness (ASTM D 2240). 50 to 70.

2. Tensile Strength (ASTM D 412). 1,200 pounds per square inch (psi).

3. Tear Resistance (ASTM D 624, Die C). 20 pounds per linear inch.

4. Ultimate elongation (ASTM D 412). 250 percent.

5. Low Temperature Brittleness (ASTM D 746). -30 degrees Fahrenheit (º F.) (-35 degrees Celsius [º C]).

6. Resistance to Ozone Aging (ASTM D 1149). No cracks for 10 percent elongated sample for 100 hours in 50 parts per hundred million (pphm) (50.5 millipascal [mPa]) ozone at 104º F. (70º C.).

7. Resistance to Heat Aging (ASTM D 573). Maximum hardness increase of 15 points, elongation reduction of 40 percent, and tensile strength reduction of 30 percent, for 70 hours at 212º F. (100º C.).

B. Acceptable Products

1. Neoprene synthetic rubber sheet.

2. Butyl synthetic rubber sheet.

3. EPDM synthetic rubber sheet.

2.3 LAMINATED COMPOSITION SHEET FLASHING

A. **Copper/Paper Flashing.** 3-ounce copper sheet laminated between two sheets of bituminous impregnated creped Kraft paper or saturated fabric.

B. **Available Products.** Subject to compliance with requirements, products that may be incorporated in the Work include, but are not limited to, the following:

1. Afco Products, Inc.; Cop-A-Bond Duplex.

2. Phoenix Building Products, Inc.; Duplex Cop-R Flash.

3. York Manufacturing, Inc.; Cop-R-Tex Duplex.

C. Miscellaneous Materials and Accessories

D. **Solder.** For use with steel or copper, provide 50-50 tin/lead solder (ASTM B 32), with rosin flux.

E. **Fasteners.** Same metal as flashing/sheet metal or other noncorrosive metal as recommended by sheet manufacturer. Match finish of exposed heads with material being fastened.

F. **Bituminous Coating.** SSPC - Paint 12, solvent type bituminous mastic, nominally free of sulfur, compounded for 15 mil dry film thickness per coat.

G. **Mastic Sealant.** Polyisobutylene; non-hardening, non-skinning, nondrying, nonmigrating sealant.

H. **Elastomeric Sealant.** Generic type recommended by manufacturer of metal and fabricator of components being sealed and complying with requirements for joint sealants as specified in Division 7 section "Joint Sealers."

I. **Epoxy Seam Sealer.** Two part noncorrosive metal seam cementing compound, recommended by metal manufacturer for exterior/interior nonmoving joints including riveted joints.

J. **Adhesives.** Type recommended by flashing sheet manufacturer for waterproof/weather resistant seaming and adhesive application of flashing sheet.

K. **Paper Slip Sheet.** 5-pound rosin sized building paper.

L. **Polyethylene Underlayment.** Minimum 6-mil carbonated polyethylene film resistant to decay when tested in accordance with ASTM E 154.

M. **Reglets.** Metal or plastic units of type and profile indicated, compatible with flashing indicated, noncorrosive.

N. **Metal Accessories.** Provide sheet metal clips, straps, anchoring devices, and similar accessory units as required for installation of work, matching or compatible with material being installed, noncorrosive, size and gauge required for performance.

O. **Cast Iron Drainage Boots.** Grey iron castings of size and pattern indicated, ASTM A 48, bituminous shop coated.

P. **Gutter and Conductor Head Guards.** 20 gauge bronze or nonmagnetic stainless steel mesh or fabricated units, with selvaged edges and noncorrosive fasteners. Select materials for compatibility with gutters and downspouts.

Q. **Elastic Flashing Filler.** Closed cell polyethylene or other soft closed cell material recommended by elastic flashing manufacturer as filler under flashing loops to ensure movement with minimum stress on flashing sheet.

R. **Roofing Cement.** ASTM D 2822, asphaltic.

2.4 FABRICATED UNITS

A. **General Metal Fabrication.** Shop fabricate work to greatest extent possible. Comply with details shown and with applicable requirements of Sheet Metal and Air Conditioning Contractors' National Association (SMACNA) "Architectural Sheet Metal Manual" and other recognized industry practices. Fabricate for waterproof and weather resistant performance, with expansion provisions for running work, sufficient to permanently prevent leakage, damage, or deterioration of the work. Form work to fit substrates. Comply with material manufacturer instructions and recommendations for forming material. Form exposed sheet metal work without excessive oil canning, buckling, and tool marks, true to line and levels indicated, with exposed edges folded back to form hems.

B. **Seams.** Fabricate nonmoving seams in sheet metal with flat lock seams. For metal other than aluminum, tin edges to be seamed, form seams, and solder. Form aluminum seams with epoxy seam sealer; rivet joints for additional strength where required.

C. **Expansion Provisions.** Where lapped or bayonet type expansion provisions in work cannot be used or would not be sufficiently water/weatherproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with mastic sealant (concealed within joints).

D. **Sealant Joints.** Where movable, non-expansion type joints are indicated or required for proper performance of work, form metal to provide for proper installation of elastomeric sealant, in compliance with SMACNA standards.

E. **Separations.** Provide for separation of metal from non-compatible metal or corrosive substrates by coating concealed surfaces at locations of contact, with bituminous coating or other permanent separation as recommended by manufacturer/fabricator.

F. **Aluminum Extrusion Units.** Fabricate extruded aluminum running units with formed or extruded aluminum joint covers for installation behind main members where possible. Fabricate mitered and welded corner units.

G. **Shop Finish, Rain Drainage.** Provide manufacturer's standard baked-on white acrylic shop finish on sheet metal rain drainage units (gutters, downspouts, and similar exposed units); 1.0-mil dry film thickness.

2.5 ELASTIC EXPANSION JOINTS

A. **General.** Provide factory fabricated units of size and profile indicated, complete with prefabricated corner units, intersection units, and splicing materials. Provide complete with elastic sheet flashing forming the primary joint membrane, in a supported, "bellows" arrangement designed for securement to both sides of expansion joints. Underside of bellows insulated with adhesively applied, flexible, closed cell rubber or plastic not less than 3/8 inch thick.

B. **Type.** Metal flanged edges, 3 to 4 inches wide, formed to profiles as indicated to fit curbs and designed for nailing to curb substrate. Provide metal flanges in the following thicknesses:

1. Zinc-Coated Steel. 0.0179 inch (26 gauge).
2. Aluminum. 0.032 inch.

C. **Looped Bellows Width.** 5 to 6 inches, exclusive of flanges.

D. **Available Manufacturers.** Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include, but are not limited to, the following:

1. Afco Products, Inc.
2. Celotex Corporation.
3. International Permalite/Roofing Components Group.
4. Manville/Roofing Systems Division.
5. Phoenix Building Products, Inc.
6. York Manufacturing, Inc.

PART 3 EXECUTION

3.1 INSTALLATION REQUIREMENTS

A. **General.** Except as otherwise indicated, comply with manufacturer's installation instructions and recommendations and with SMACNA "Architectural Sheet Metal Manual." Anchor units of work securely in place by methods indicated, providing for thermal expansion of metal units; conceal fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weatherproof.

B. **Underlayment.** Where stainless steel or aluminum is to be installed directly on cementitious or wood substrates, install a slip sheet of red rosin paper and a course of polyethylene underlayment.

C. **Bed flanges of work in a thick coat** of bituminous roofing cement where required for waterproof performance.

D. **Install reglets to receive counterflashing** in manner and by methods indicated. Where shown in concrete, furnish reglets to trades of concrete work for installation as work of Division 3 sections. Where shown in masonry, furnish reglets to trades of masonry work, for installation as work of Division 4 sections.

E. **Install counterflashing in reglets**, either by snap-in seal arrangement or by welding in place for anchorage and filling reglet with mastic or elastomeric sealant, as indicated and depending on degree of sealant exposure.

F. **Install elastic flashing** in accordance with manufacturer's recommendations. Where required, provide for movement at joints by forming loops or bellows in width of flashing. Locate cover or filler strips at joints to facilitate complete drainage of water from flashing. Seam adjacent flashing sheets with adhesive, seal and anchor edges in accordance with manufacturer's recommendations.

G. **Nail flanges of expansion** joint units to curb nailers, at maximum spacing of 6 inches on center (o.c.). Fabricate seams at joints between units with minimum 3-inch overlap, to form a continuous, waterproof system.

3.2 CLEANING AND PROTECTION

A. **Clean exposed metal surfaces**, removing substances that might cause corrosion of metal or deterioration of finishes.

B. **Protection.** Advise Contractor of required procedures for surveillance and protection of flashings and sheet metal work during construction to ensure that work will be without damage or deterioration other than natural weathering at time of Substantial Completion.

END OF SECTION

SECTION 07 71 00

MANUFACTURED ROOF SPECIALTIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General.** The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install manufactured roof specialties in accordance with the plans and as specified herein.

B. This section includes the following:

1. Aluminum coping.

2. Elastic bellows-type roof expansion joint cover.

C. **Related Sections.** The following sections contain requirements that relate to this section:

1. Division 7 section "Roof Accessories" for the following work:

a. Roof hatches.

2. Division 7 section "Flashing and Sheet Metal" for the following work:

a. Metal flashing and counter flashing.

b. Elastic flashing.

c. Roof and wall expansion joints.

3. Roofing accessories installed integral with roofing membrane are specified in roofing system sections as roofing work.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work to furnish and install manufactured roof specialties in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

1.4 SUBMITTALS

A. **Submit the following** in accordance with Conditions of Contract and Division 1 specification sections.

1. Product data including manufacturer's technical data, installation instructions and general recommendations for each product specified. Include data substantiating that materials and performance comply with requirements.

2. Samples for initial selection purposes in form of manufacturer's sample finishes showing full range of colors and textures available for those units with factory applied color finishes.

1.5 JOB CONDITIONS

A. **Coordinate work of this section** with adjoining work for proper sequencing of each installation to ensure best possible weather resistance and protection of materials and finishes against damage.

1.6 DELIVERY, STORAGE, AND HANDLING (Not Used)

1.7 SPECIAL WARRANTY

A. **Special warranty.** All components shall be included with the roofing system warranty and shall be a single-source 20 Year Edge-to-Edge warranty provided by one manufacturer. Warranty shall include the roof systems, flashing, and the transition between all systems.

PART 2 PRODUCTS

2.1 MATERIALS

A. **Aluminum Extrusions.** Alloy and temper recommended by manufacturer for use intended and as required for proper application of finish indicated but not less than the strength and durability properties specified in ASTM B 221 for 6063-T5.

B. **Aluminum Sheet.** Alloy and temper recommended by manufacturer for use intended and as required for proper application of finish indicated but with not less than the strength and durability properties specified in American Society for Testing and Materials (ASTM) B 209 for 5005-H15.

2.2 MISCELLANEOUS ITEMS

A. **Exposed Fasteners.** Stainless steel, nonmagnetic, of type and size standard with manufacturer for product and application indicated. Match finish of exposed heads with material being fastened.

B. **Concealed Fasteners.** Same metal as item fastened or other noncorrosive metal as recommended by manufacturer.

C. **Mastic Sealant.** Polyisobutylene; nonhardening, nonskinning, nondrying, nonmigrating sealant.

D. **Foam Rubber Seal.** Manufacturer's standard foam.

E. **Adhesives.** Type recommended by manufacturer for substrate and project conditions, and formulated to withstand minimum 60 pounds per square foot (psf) uplift force.

2.3 ALUMINUM COPING

A. **Interlocking Multipart Coping System.** Manufacturer's standard system consisting of coping formed from aluminum sheet to profile and of thickness indicated, 22-gauge minimum, zinc-coated steel anchor plate or cleat located at coping joint, and formed aluminum gutter chair or gutter/splice plate or compression pad/gutter; with prefabricated inside and outside corners, miters welded before finishing; without exposed fasteners.

1. Thickness of Coping. 0.050 inch.

2. Available Products. Subject to compliance with requirements, products which may be incorporated in the work include, but are not limited to, the following:

a. Type AP Standard Coping; Architectural Products Co.

b. Rapid-Loc Coping; Atas Aluminum Corp.

c. Splice-Lock Coping Cover System; Cheney Flashing Co.

d. Permasnap Coping; W. P. Hickman Co.

e. Neo-Lock Coping; Merchant and Evans Industries, Inc.

f. Snap-Lok Coping; MM Systems Corp.

g. Pac-Loc Coping; Petersen Aluminum Corp.

h. Garland Roofing Products.

B. Premanufactured Snap On Flash-less Fascia. Manufacturer's standard system.

1. Thickness of Coping: 0.05

2. Available Products: Aluminum R-Mer Force Flass-less Snap-On Fascia Cover and Splice Plate, or approved equal.

2.4 ROOF-EDGE DRAINAGE SYSTEMS

A. **Gutters.** Manufactured in uniform section lengths not exceeding 12 feet, with matching corner units, ends, outlet tubes, and other accessories. Elevate back edge at least 1 inch above front edge. Furnish flat-stock gutter straps, gutter brackets, expansion joints, and expansion-joint covers fabricated from same metal as gutters.

1. Aluminum Sheet: 0.040 inch thick.

2. Gutter Profile: As indicated according to SMACNA's "Architectural Sheet Metal Manual."

3. Corners: Factory mitered mechanically clinched and sealed watertight.

4. Gutter Supports: Gutter brackets with finish matching the gutters.

B. **Downspouts.** Plain rectangular complete with mitered elbows, manufactured from the following exposed metal. Furnish with metal hangers, from same material as downspouts, and anchors.

1. Formed Aluminum: 0.040 inch thick.

2.5 ELASTIC, BELLOWS-TYPE EXPANSION JOINT COVERS

A. **General.** Provide units fabricated specifically for required applications (roof to roof. Provide prefabricated corner units, joint intersection units, splicing units, adhesives, coatings, and other components as recommended by joint unit manufacturer for a complete installation.

B. **Metal Flanged Elastic Sheet Joint System.** Provide units consisting of exposed elastic sheet over foam bellows, securely anchored at both edges to 3- to 4-inch-wide sheet metal nailing flanges, either plain or angle formed to fit curbs as required. Bellows insulated from below with adhesively applied, closed cell, flexible, rubber or plastic insulation not less than 5/16 inch thick, adhered to elastic sheet.

1. Elastic Sheet. EPDM, 60 mils.

2. Elastic Sheet Width. 5 to 6 inches between flanges.

3. Metal Flanges. Aluminum, minimum 0.032-inch thickness.

4. Available Products. Subject to compliance with requirements, products that may be incorporated in the work include but are not limited to the following:

a. Expansion Joint Shields; Celotex Corp.

b. Metalastic; International Permalite, Inc.

c. Expand-O-Flash; Manville Sales Corp.

d. Rufseal; MM Systems Corp.

e. Pate Expansion Joint Cover; The Pate Co.

f. Superflash; York Manufacturing, Inc.

2.6 FABRICATION

A. **General.** Provide items designed and fabricated to fit applications indicated and to perform optimally with respect to weather resistance, water tightness, durability, strength, and uniform appearance.

B. **Expansion Provisions.** Fabricate running lengths to allow controlled expansion not only for movement of metal components in relationship to one another but also to adjoining dissimilar materials, including flashing and roofing membrane materials, in a manner sufficient to prevent water leakage, deformation or damage.

2.7 ALUMINUM FINISHES

A. **General.** Comply with AMP 501 "Finishes for Aluminum" and AMP 505 "Applied Coatings" for finish designations and application recommendations, except as otherwise indicated. For components which are assembled or welded in factory, apply finish after fabrication is completed.

1. Provide colors or color matches as indicated or, if not indicated, as selected by Engineer/Architect from manufacturer's standard colors.

PART 3 EXECUTION

3.1 INSTALLATION

A. **General.** Comply with manufacturer's written installation instructions and recommendations. Coordinate with installation of roof deck and other substrates to receive work of this section, with vapor retarders, roof insulation, roofing membrane, flashing, and wall construction; as required to ensure that each element of the work performs properly, and that combined elements are waterproof and weathertight. Anchor products included in this section securely to structural substrates, adequate to withstand lateral and thermal stresses as well as inward and outward loading pressures.

B. **Isolation.** Where metal surfaces of units are installed in contact with dissimilar metal or corrosive substrates, including wood, apply bituminous coating on concealed metal surfaces, or provide other permanent separation as recommended by aluminum producer.

3.2 ROOF-EDGE SPECIALTIES INSTALLATION

A. **General.** Install cleats, cants, and other anchoring and attachment accessories and devices with concealed fasteners.

B. **Installation.** Anchor roof edgings with manufacturer's required devices, fasteners, and fastener spacing to meet performance requirements.

3.3 ROOF-EDGE DRAINAGE-SYSTEM INSTALLATION

A. **General.** Install components to produce a complete roof-edge drainage system according to manufacturer's written instructions. Coordinate installation of roof perimeter flashing with installation of roof-edge drainage system.

B. **Gutters.** Join and seal gutter lengths. Allow for thermal expansion. Attach gutters to firmly anchored gutter supports spaced not more than 12 inches apart. Attach ends with rivets and seal with sealant to make watertight. Slope to downspouts. Reduce spacing as required by the gutter metal manufacturer to meet performance requirements.

1. Install gutter with expansion joints at locations indicated but not exceeding 50 feet apart. Install expansion-joint caps.

C. **Downspouts.** Join sections with manufacturer's standard telescoping joints. Provide hangers with fasteners designed to hold downspouts securely to walls and 1 inch away from walls; locate fasteners at top and bottom and at approximately 60 inches o.c.

1. Provide elbows at base of downspouts at grade to direct water away from building.

3.4 CLEANING AND PROTECTION

A. **Clean exposed metal surfaces** in accordance with manufacturer's instructions. Touch-up damaged metal coatings.

B. **Protection.** Provide protective measures as required to ensure that work of this section will be without damage or deterioration at time of substantial completion.

END OF SECTION

This page intentionally left blank.

SECTION 07 72 00

ROOF ACCESSORIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General.** The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install the roof accessories in accordance with the plans and as specified herein.

B. This section includes the following:

1. Roof hatches.

2. Roof Curbs

C. **Related Sections.** The following sections contain requirements that relate to this section:

1. Division 6 section "Rough Carpentry" for roof deck and nailers.

2. Division 7 section for roofing types and roofing accessories included as part of roofing work.

3. Division 7 section "Manufactured Roof Specialties" for fascia, coping, gravel stops, and roof expansion joint covers.

4. Division 7 section "Flashing and Sheet Metal" for metal flashing.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work to furnish and install the roof accessories in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

B. **Standards.** Comply with the following:

1. Sheet Metal and Air Conditioning Contractors' National Association (SMACNA) "Architectural Sheet Metal Manual" details for fabrication of units, including flanges and cap flashing to coordinate with type of roofing indicated.

2. National Roof Contractor's Association (NRCA) "Roofing and Waterproofing Manual" details for installation of units.

3. National Fire Protection Association (NFPA) 204M for smoke and heat vent design constraints, operation, and location.

1.4 SUBMITTALS

A. **Transmittals**. Furnish manufacturer's product data, test reports, and material certifications as required.

B. **Submit the following** according to Conditions of Contract and Division 1 specification sections.

1. Product data for each type of product specified. Submit manufacturer's detailed technical product data, installation instructions and recommendations, including details of construction relative to materials, dimensions of individual components, profiles, and finishes.

2. Shop drawings showing fabrication and installation of each roof accessory specified including fully dimensioned plans, elevations, sections, details of components, and attachments to other units of work. Also show layout, anchorage details, rough-in requirements, and conditions on the roof or for other accessories.

3. Samples for initial selection purposes in the form of manufacturer's color charts showing full range of colors, textures, shapes, and sizes available for each type of roof accessory indicated.

1.5 JOB CONDITIONS (Not Used)

1.6 DELIVERY, STORAGE, AND HANDLING (Not Used)

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. **Available Manufacturers.** Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include, but are not limited to, the following:

1. Roof Hatches.

a. Babcock-Davis Hatchways, Inc.

b. Bilco Co.

c. ThyCurb Div./ThyBar Corp.

B. **Available Manufacturers.** Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include, but are not limited to, the following:

1. Roof Curbs.

a. Babcock-Davis Hatchways, Inc.

b. Bilco Co.

c. ThyCurb Div./ThyBar Corp.

2.2 MATERIALS, GENERAL

A. **Aluminum Sheets.** ASTM B 209 for Alclad alloy 3005H25 or alloy and temper required to suit forming operations with mill finish, unless indicated otherwise.

B. **Extruded Aluminum.** ASTM B 221 alloy 6063-T52 or alloy and temper required to suit structural and finish requirements. Mill finish, unless indicated otherwise.

C. **Insulation.** Manufacturer's standard rigid or semi-rigid glass fiber board of thickness indicated.

D. **Wood Nailers.** Softwood lumber, pressure treated with water borne preservatives for above ground use, complying with AWPA C2; not less than 1-1/2 inches thick.

E. **Fasteners.** Same metal as metals being fastened, or nonmagnetic stainless steel or other noncorrosive metal as recommended by manufacturer. Match finish of exposed fasteners with finish of material being fastened.

1. Where removal of exterior exposed fasteners affords access to building, provide nonremovable fastener heads.

F. **Gaskets.** Manufacturer's standard tubular or fingered design of neoprene or polyvinyl chloride (PVC), or block design of sponge neoprene.

G. **Elastomeric Sealant.** Generic type recommended by unit manufacturer that is compatible with joint surfaces; ASTM C 920, Type S, Grade NS, Class 25, and Uses NT, G, and, A.

2.3 FINISHES

A. **General.** Comply with NAAMM "Metal Finishes Manual" for recommendations on applying and designating finishes.

B. **Finish designations prefixed by Aluminum Association** (AA) conform to the system for designating aluminum finishes established by the AA.

C. **Class I, Color Anodized Finish.** AA-M12C22A42/A44 (Mechanical Finish: as fabricated, nonspecular; Chemical Finish: etched, medium matte; Anodic Coating: Class I Architectural, film thicker than 0.7 mil with integral color or electrolytically deposited color) complying with AAMA 606.1 or AAMA 608.1.

1. 1.Color. As selected by Engineer/Architect from within standard industry colors and color density range.

2.4 ROOF HATCHES

A. **General.** Fabricate units to withstand 40 lbf psf external loading and 20 pounds per square foot internal loading pressure. Frame with a minimum 9-inch-high, integral curb, double-wall construction, with a minimum 1-inch insulation, cant strips and cap flashing (roofing counterflashing), with welded or sealed mechanical corner joints. Option to include a built-in, self-drainage feature that eliminates water accumulation on the up-slope side of curb. Provide double wall cover (lid) construction with 1inch insulation core. Provide gasketing and equip corrosion resistant or hot dip galvanized hardware including pintle hinges, hold open devices, exterior padlock hasps, and both interior and exterior latch handles.

B. **Type.** Double leaf for equipment access.

1. Size: As indicated on drawings.

C. Material. Aluminum, sheets and extrusions.

2.5 ROOF CURBS

A. **General.** Internally reinforced roof-curb units capable of supporting superimposed live and dead loads, including equipment loads and other construction indicated on Drawings, bearing continuously on roof structure, and capable of meeting performance requirements; with welded or mechanically fastened and sealed corner joints, straight sides and integrally formed deck-mounting flange at perimeter bottom.

B. **Type.** Double wall insulated.

1. Size: 18” high unless otherwise noted on drawings.

C. **Material.** Aluminum, sheets and extrusions.

PART 3 EXECUTION

3.1 INSTALLATION

A. **General.** Comply with manufacturer's instructions and recommendations. Coordinate with installation of roof deck and other substrates to receive accessory units, vapor barriers, roof insulation, roofing and flashing, as required, to ensure that each element of the work performs properly and that combined elements are waterproof and weathertight. Anchor units securely to supporting structural substrates, adequate to withstand lateral and thermal stresses, as well as inward and outward loading pressures.

1. Except as otherwise indicated, install roof accessory items according to construction details of NRCA "Roofing and Waterproofing Manual."

B. **Isolation.** Where metal surfaces of units are to be installed in contact with incompatible metal or corrosive substrates, including wood, apply bituminous coating on concealed metal surfaces, or provide other permanent separation.

C. **Flange Seals.** Unless otherwise indicated, set flanges of accessory units in a thick bed of roofing cement to form a seal.

D. **Cap Flashing.** Where cap flashing is required as component of accessory, install to provide adequate waterproof overlap with roofing or roof flashing (as counterflashing). Seal with thick bead of mastic sealant, except where overlap is indicated to be left open for ventilation.

E. **Operational Units.** Test-operate units with operable components. Clean and lubricate joints and hardware. Adjust for proper operation.

3.2 CLEANING AND PROTECTION

A. **Clean exposed metal and plastic surfaces** according to manufacturer's instructions. Touch up damaged metal coatings.

END OF SECTION

SECTION 07 92 00

JOINT SEALANTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General.** The Contractor shall provide all labor, materials, tools, and equipment necessary to furnish and apply joint sealants in accordance with the plans and as specified herein.

B. **Work Included.** This section includes joint sealants for the following locations:

1. Exterior joints in vertical surfaces and nontraffic horizontal surfaces as indicated below:
    a. Control and expansion joints in cast-in-place concrete.
    b. Control and expansion joints in unit masonry.
    c. Joints between different materials listed above.
    d. Perimeter joints between materials listed above and frames of doors and windows.
    e. Control and expansion joints in ceiling and overhead surfaces.
    f. Other joints as indicated.
2. Exterior joints in horizontal traffic surfaces as indicated below:
    a. Control, expansion, and isolation joints in cast-in-place concrete slabs.
    b. Joints between different materials listed above.
    c. Other joints as indicated.
3. Interior joints in vertical surfaces and horizontal nontraffic surfaces as indicated below:
    a. Control and expansion joints on exposed interior surfaces of exterior walls.
    b. Perimeter joints of exterior openings where indicated.
    c. Joints between tops of nonload bearing unit masonry walls and underside of cast-in-place concrete slabs and beams.
    d. Vertical control joints on exposed surfaces of interior unit masonry and concrete walls and partitions.
    e. Joints on underside of precast beams and planks.
    f. Perimeter joints between interior wall surfaces and frames of interior doors, windows, and elevator entrances.

g. Perimeter joints of toilet fixtures.

h. Other joints as indicated.

4. Interior joints in horizontal traffic surfaces as indicated below:

a. Control and expansion joints in cast-in-place concrete slabs.

b. Control and expansion joints in tile flooring.

c. Other joints as indicated.

C. **Related Sections.** The following sections contain requirements that relate to this section:

1. Division 7 section "Flashing and Sheet Metal" for sealing joints related to flashing and sheet metal for roofing.

2. Division 8 "Glass and Glazing" for sealants used in glazing.

1.3 QUALITY ASSURANCE

A. **Codes.** Perform all work in compliance with all federal, state, and local codes.

B. **Standards.** Materials and workmanship shall be in accordance with the following standards:

1. AAMA - American Architectural Manufacturers Association.

2. ASTM - American Society for Testing and Materials.

3. FS - Federal Specifications.

C. **Regulatory Agencies.** Perform all work in compliance with the requirements of the following regulatory agencies:

1. ADA - Americans with Disabilities Act.

2. OSHA - Occupational Safety and Health Administration.

D. **Installer Qualifications.** Engage an experienced installer who has completed joint sealant applications similar in material, design, and extent to that indicated for project that have resulted in construction with a record of successful in service performance.

E. **Testing Laboratory Qualifications.** To qualify for acceptance, an independent testing laboratory must demonstrate to Engineer/Architect's satisfaction, based on evaluation of laboratory submitted criteria conforming to ASTM E 699, that it has the experience and capability to conduct satisfactorily the testing indicated without delaying progress of the work.

F. **Single-Source Responsibility for Joint Sealant Materials.** Obtain joint sealant materials from a single manufacturer for each different product required.

G. **Preconstruction Compatibility and Adhesion Testing.** Submit to joint sealant manufacturers samples of materials that will contact or affect joint sealants for compatibility and adhesion testing as indicated below:

1. Use test methods standard with manufacturer to determine if priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.

2. Submit not less than nine pieces of each type of material, including joint substrates, shims, joint sealant backings, secondary seals, and miscellaneous materials.

3. Schedule sufficient time for testing and analysis of results to prevent delay in the progress of the work.

4. Investigate materials failing compatibility or adhesion tests and obtain joint sealant manufacturer's written recommendations for corrective measures, including use of specially formulated primers.

5. Testing will not be required when joint sealant manufacturer is able to submit joint preparation data required above that are acceptable to Engineer/Architect and are based on previous testing of current sealant products for adhesion to, and compatibility with, joint substrates and other materials matching those submitted.

H. **Product Testing.** Provide comprehensive test data for each type of joint sealant based on tests conducted by a qualified independent testing laboratory on current product formulations within a 24-month period preceding date of Contractor's submittal of test results to Engineer/Architect.

1. Test elastomeric sealants for compliance with requirements specified by reference to ASTM C 920. Include test results for hardness, stain resistance, adhesion and cohesion under cyclic movement (per ASTM C 719), low temperature flexibility, modulus of elasticity at 100 percent strain, effects of heat aging, and effects of accelerated weathering.

2. Include test results performed on joint sealants after they have cured for 1 year.

I. **Preconstruction Field Testing.** Prior to installation of joint sealants, field test their adhesion to joint substrates as follows:

1. Locate test joints where indicated or, if not indicated, as directed by Engineer/Architect.

2. Conduct field tests for each application indicated below:

   a. Each type of elastomeric sealant and joint substrate indicated.

   b. Each type of nonelastomeric sealant and joint substrate indicated.

3. Notify Engineer/Architect 1 week in advance of the dates and times when field test will be performed.

4. Test Method. Test joint sealants by hand pull method described below:

   a. Install joint sealants in 5-foot joint lengths using same materials and methods for joint preparation and joint sealant installation required for completed work. Allow sealants to cure fully before testing.

   b. Make knife cuts horizontally from one side of joint to the other followed by two vertical cuts approximately 2 inches long at side of joint and meeting horizontal cut at top of 2-inch cuts. Place a mark 1 inch from top of 2-inch piece.

c. Use fingers to grasp 2-inch piece of sealant just above 1-inch mark; pull firmly down at a 90-degree angle or more while holding a ruler along side of sealant. Pull sealant out of joint to the distance recommended by sealant manufacturer for testing adhesive capability, but not less than that equaling specified maximum movement capability in extension; hold this position for 10 seconds.

5. Report whether or not sealant in joint connected to pulled out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each type of product and joint substrate.

6. Evaluation of Field Test Results. Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

1.4 SUBMITTALS

A. **General.** Submit the following in accordance with Conditions of Contract and Division 1 specification sections.

1. Product data from manufacturers for each joint sealant product required.

a. Certification by joint sealant manufacturer that sealants plus the primers and cleaners required for sealant installation comply with local regulations controlling use of volatile organic compounds (VOC).

2. Samples for initial selection purposes in form of manufacturer's standard bead samples, consisting of strips of actual products showing full range of colors available, for each product exposed to view.

3. Certificates from manufacturers of joint sealants attesting that their products comply with specification requirements and are suitable for the use indicated.

4. Qualification data complying with requirements specified in "Quality Assurance" article. Include list of completed projects with project names addresses, names of Engineer/Architects and Owners, plus other information specified.

5. Compatibility and adhesion test reports from elastomeric sealant manufacturer indicating that materials forming joint substrates and joint sealant backings have been tested for compatibility and adhesion with joint sealants. Include sealant manufacturer's interpretation of test results relative to sealant performance and recommendations for primers and substrate preparation needed to obtain adhesion.

6. Product test reports for each type of joint sealants indicated, evidencing compliance with requirements specified.

7. Preconstruction field test reports indicating which products and joint preparation methods demonstrate acceptable adhesion to joint substrates.

1.5 JOB CONDITIONS

A. **Coordination - Interfacing.** Coordinate with all other trades to prevent delays, errors, and omissions.

B. **Environmental Conditions.** Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside the limits permitted by joint sealant manufacturer or below 40 degrees Fahrenheit (^{o} F.) (4.4 degrees Celsius [^{o} C.]).

2. When joint substrates are wet.

C. **Joint Width Conditions.** Do not proceed with installation of joint sealants where joint widths are less than allowed by joint sealant manufacturer for application indicated.

D. **Joint Substrate Conditions.** Do not proceed with installation of joint sealants until contaminants capable of interfering with their adhesion are removed from joint substrates.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery.** Deliver materials to project site in original unopened containers or bundles with labels indicating manufacturer, product name and designation, color, expiration period for use, pot life, curing time, and mixing instructions for multicomponent materials.

B. **Storage and Handling.** Store and handle materials in compliance with manufacturer's recommendations to prevent their deterioration or damage due to moisture, high or low temperatures, contaminants, or other causes.

1.7 SPECIAL WARRANTY

A. **Special Installer's Warranty:** Installer's standard form in which Installer agrees to repair or replace elastomeric joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.

1. Warranty Period: Two years from date of Substantial Completion.

B. **Special Manufacturer's Warranty:** Manufacturer's standard form in which elastomeric sealant manufacturer agrees to furnish elastomeric joint sealants to repair or replace those that do not comply with performance and other requirements specified in this Section within specified warranty period.

1. Warranty Period: Three years from date of Substantial Completion.

C. **Special warranties** specified in this Article exclude deterioration or failure of elastomeric joint sealants from the following:

1. Movement of the structure resulting in stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression caused by structural settlement or errors attributable to design or construction.

2. Disintegration of joint substrates from natural causes exceeding design specifications.

3. Mechanical damage caused by individuals, tools, or other outside agents.

4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

1.8 SYSTEM PERFORMANCE REQUIREMENTS

A. **General**. Provide elastomeric joint sealants that have been produced and installed to establish and to maintain watertight and airtight continuous seals without causing staining or deterioration of joint substrates.

B. **Interior Applications**. Provide joint sealants for interior applications that have been produced and installed to establish and maintain airtight continuous seals that are water resistant and cause no staining or deterioration of joint substrates.

1.9 SEQUENCING AND SCHEDULING

A. **General.** Sequence installation of joint sealants to occur not less than 21 nor more than 30 days after completion of waterproofing, unless otherwise indicated.

PART 2 PRODUCTS

2.1 MATERIALS, GENERAL

A. **Compatibility.** Provide joint sealants, joint fillers, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.

B. **Colors.** Provide color of exposed joint sealants to comply with the following:

1. Provide selections made by Engineer/Architect from manufacturer's full range of standard colors for products of type indicated.

2.2 ELASTOMERIC JOINT SEALANTS

A. **Elastomeric Sealant Standard.** Provide manufacturer's standard chemically curing elastomeric sealants that comply with ASTM C 920 and other requirements indicated on each Elastomeric Joint Sealant Data Sheet at end of this section, including those requirements referencing ASTM C 920 classifications for Type, Grade, Class, and Uses.

1. Additional Movement Capability. Where additional movement capability is specified in Elastomeric Joint Sealant Data Sheet, provide products with the capability, when tested for adhesion and cohesion under maximum cyclic movement per ASTM C 719, to withstand the specified percentage change in the joint width existing at time of installation and remain in compliance with other requirements of ASTM C 920 for Uses indicated.

B. **Available Products.** Subject to compliance with requirements, elastomeric sealants that may be incorporated in the work include, but are not limited to, the products specified in the applicable paragraphs below.

2.3 SOLVENT RELEASE CURING JOINT SEALANTS

A. **Acrylic Sealant.** Manufacturer's standard one part, nonsag, solvent release curing acrylic terpolymer sealant complying with AAMA 808.3 or FS TT-S-00230 or both, with capability when tested for adhesion and cohesion under maximum cyclic movement per ASTM C 719, to withstand the following percentage change in joint width existing at time of application and remain adhered to joint substrates indicated for project without failing cohesively:

1. 12-1/2 percent movement in both extension and compression for a total of 25 percent.

B. **Butyl Sealant.** Manufacturer's standard one part, nonsag, solvent release curing, polymerized butyl sealant complying with ASTM C 1085 and formulated with minimum of 75 percent solids to be nonstaining, paintable, and have a tack free time of 24 hours or less.

C. **Pigmented Narrow Joint Sealant.** Manufacturer's standard, solvent release curing, pigmented synthetic rubber sealant complying with AAMA 803.3 and formulated for sealing joints 3/16 inch or smaller in width.

D. **Available Products.** Subject to compliance with requirements, solvent release curing joint sealants that may be incorporated in the work include, but are not limited to, the following:

1. Acrylic Sealant.
    a. 60+Unicrylic, Pecora Corp.
    b. PTI 738, Protective Treatments, Inc.
    c. PTI 767, Protective Treatments, Inc.
    d. Mono, Tremco, Inc.

2. Butyl Sealant.
    a. BC-158, Pecora Corp.
    b. PTI 757, Protective Treatments, Inc.
    c. Sonneborn Multipurpose Sealant, Sonneborn Building Products Div., ChemRex, Inc.
    d. Tremco Butyl Sealant, Tremco, Inc.
3. Pigmented Narrow Joint Sealant.
    a. PTI 200, Protective Treatments, Inc.

2.4 LATEX JOINT SEALANTS

A. **General.** Provide manufacturer's standard one part, nonsag, mildew resistant, paintable latex sealant of formulation indicated that is recommended for exposed applications on interior and protected exterior locations and that accommodates indicated percentage change in joint width existing at time of installation without failing either adhesively or cohesively.

B. **Acrylic Emulsion Sealant.** Provide product complying with ASTM C 834 that accommodates joint movement of not more than 5 percent in both extension and compression for a total of 10 percent.

C. **Silicone Emulsion Sealant.** Provide product complying with ASTM C 834 and, except for weight loss measured per ASTM C 792, with ASTM C 920 that accommodates joint movement of not more than 25 percent in both extension and compression for a total of 50 percent.

D. **Available Products.** Subject to compliance with requirements, latex joint sealants that may be incorporated in the work include, but are not limited to, the following:

1. Acrylic Emulsion Sealant.
    a. Bostik Findley; Chem-Calk 600.
    b. Pecora Corporation; AC-20+.
    c. Schnee-Morehead, Inc.; SM 8200.
    d. Sonneborn, Division of ChemRex Inc.; Sonolac.
    e. Tremco; Tremflex 834.
2. Silicone Emulsion Sealant.
    a. "Trade Mate Paintable Glazing Sealant," Dow Corning Corp.

2.5 TAPE SEALANTS

A. **Tape Sealant.** Manufacturer's standard, solvent free, butyl based tape sealant with a solids content of 100 percent formulated to be nonstaining, paintable, and nonmigrating in contact with nonporous surfaces with or without reinforcement thread to prevent stretch and packaged on rolls with a release paper on one side.

B. **Available Products.** Subject to compliance with requirements, tape sealants that may be incorporated in the work include, but are not limited to, the following:

1. Extru-Seal Tape, Pecora Corp.
2. Shim-Seal Tape, Pecora Corp.
3. PTI 606, Protective Treatments, Inc.
4. Tremco 440 Tape, Tremco, Inc.
5. MBT-35, Tremco, Inc.

2.6 PREFORMED FOAM SEALANTS

A. **Preformed Foam Sealants.** Manufacturer's standard preformed, precompressed, impregnated open cell foam sealant manufactured from high density urethane foam impregnated with a nondrying, water repellent agent; factory produced in precompressed sizes and in roll or stick form to fit joint widths indicated and to develop a watertight and airtight seal when compressed to the degree specified by manufacturer; and complying with the following requirements:

1. Properties. Permanently elastic, mildew resistant, nonmigratory, nonstaining, and compatible with joint substrates and other joint sealants.
2. Impregnating Agent. Manufacturer's standard.
3. Density. Manufacturer's standard.
4. Backing. None.
5. Backing. Pressure sensitive adhesive factory-applied to one side with protective wrapping.
6. Available Products. Subject to compliance with requirements, preformed foam sealants that may be incorporated in the work include, but are not limited to, the following:
    a. Emseal, Emseal Corp.
    b. Emseal Greyflex, Emseal Corp.

c. Wil-Seal 150, Wil-Seal Construction Foams Div., Illbruck.

d. Wil-Seal 250, Wil-Seal Construction Foams Div., Illbruck.

2.7 JOINT SEALANT BACKING

A. **General.** Provide sealant backings of material and type that are nonstaining; are compatible with joint substrates, sealants, primers and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.

B. **Plastic Foam Joint Fillers.** Preformed, compressible, resilient, nonstaining, nonwaxing, nonextruding strips of flexible plastic foam of material indicated below and of size, shape, and density to control sealant depth and otherwise contribute to producing optimum sealant performance:

1. Open cell polyurethane foam.

2. Closed cell polyethylene foam, nonabsorbent to liquid water and gas, nonoutgassing in unruptured state.

3. Proprietary, reticulated, closed cell polymeric foam, nonoutgassing, with a density of 2.5 pcf and tensile strength of 35 pounds per square inch (psi) per ASTM D 1623, and with water absorption less than 0.02 gms/cc per ASTM C 1083.

4. Any material indicated above.

C. **Elastomeric Tubing Joint Fillers.** Neoprene, butyl, EPDM, or silicone tubing complying with ASTM D 1056, nonabsorbent to water and gas, capable of remaining resilient at temperatures down to -26° F. (-32° C.). Provide products with low compression set and of size and shape to provide a secondary seal, to control sealant depth, and otherwise contribute to optimum sealant performance.

D. **Bond Breaker Tape.** Polyethylene tape or other plastic tape as recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint filler materials or joint surfaces at back of joint where such adhesion would result in sealant failure. Provide self-adhesive tape where applicable.

2.8 MISCELLANEOUS MATERIALS

A. **Primer.** Material recommended by joint sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint sealant substrate tests and field tests.

B. **Cleaners for Nonporous Surfaces.** Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming in any way joint substrates and adjacent nonporous surfaces, and formulated to promote optimum adhesion of sealants with joint substrates.

C. **Masking Tape.** Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 EXECUTION

3.1 EXAMINATION

A. **General.** Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint sealant performance. Do not proceed with installation of joint sealants until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. **Surface Cleaning of Joints.** Clean out joints immediately before installing joint sealants to comply with recommendations of joint sealant manufacturer and the following requirements:

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.

2. Clean concrete, masonry, unglazed surfaces of ceramic tile, and similar porous joint substrate surfaces by brushing, grinding, blast cleaning, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining from above cleaning operations by vacuuming or blowing out joints with oil free compressed air.

3. Remove laitance and form release agents from concrete.

4. Clean metal, glass, porcelain enamel, glazed surfaces of ceramic tile, and other nonporous surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants.

B. **Joint Priming.** Prime joint substrates where indicated or where recommended by joint sealant manufacturer based on preconstruction joint sealant substrate tests or prior experience. Apply primer to comply with joint sealant manufacturer's recommendations. Confine primers to areas of joint sealant bond; do not allow spillage or migration onto adjoining surfaces.

C. **Masking Tape.** Use masking tape where required to prevent contact of sealant with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION OF JOINT SEALANTS

A. **General.** Comply with joint sealant manufacturer's printed installation instructions applicable to products and applications indicated, except where more stringent requirements apply.

B. **Sealant Installation Standard.** Comply with recommendations of ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.

C. **Acoustical Sealant Application Standard.** Comply with recommendations of ASTM C 919 for use of joint sealants in acoustical applications as applicable to materials, applications, and conditions indicated.

D. **Installation of Sealant Backings.** Install sealant backings to comply with the following requirements:

1. Install joint fillers of type indicated to provide support of sealants during application and at position required to produce the cross sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

    a. Do not leave gaps between ends of joint fillers.

    b. Do not stretch, twist, puncture, or tear joint fillers.

    c. Remove absorbent joint fillers that have become wet prior to sealant application and replace with dry material.

2. Install bond breaker tape between sealants where backer rods are not used between sealants and joint fillers or back of joints.

E. **Installation of Sealants.** Install sealants by proven techniques that result in sealants directly contacting and fully wetting joint substrates, completely filling recesses provided for each joint configuration, and providing uniform, cross sectional shapes and depths relative to joint widths that allow optimum sealant movement capability. Install sealants at the same time sealant backings are installed.

F. **Tooling of Nonsag Sealants.** Immediately after sealant application and prior to time skinning or curing begins, tool sealants to form smooth, uniform beads of configuration indicated, to eliminate air pockets, and to ensure contact and adhesion of sealant with sides of joint. Remove excess sealants from surfaces adjacent to joint. Do not use tooling agents that discolor sealants or adjacent surfaces or are not approved by sealant manufacturer.

1. Provide concave joint configuration per Figure 5A in ASTM C 1193, unless otherwise indicated.

2. Provide flush joint configuration, per Figure 5B in ASTM C 1193, where indicated.

    a. Use masking tape to protect adjacent surfaces of recessed tooled joints.

3. Provide recessed joint configuration, per Figure 5C in ASTM C 1193, of recess depth and at locations indicated.

G. **Installation of Preformed Foam Sealants.** Install each length of sealant immediately after removing protective wrapping, taking care not to pull or stretch material, and to comply with sealant manufacturer's directions for installation methods, materials, and tools that produce seal continuity at ends, turns, and intersections of joints. For applications at low ambient temperatures where expansion of sealant requires acceleration to produce seal, apply heat to sealant in conformance with sealant manufacturer's recommendations.

3.4 CLEANING

A. **General.** Clean off excess sealants or sealant smears adjacent to joints as work progresses by methods and with cleaning materials approved by manufacturers of joint sealants and of products in which joints occur.

3.5 PROTECTION

A. **General.** Protect joint sealants during and after curing period from contact with contaminating substances or from damage resulting from construction operations or other causes so that they are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so that and installations with repaired areas are indistinguishable from original work.

3.6 DEMONSTRATION

A. **General.** Prior to final acceptance, the Contractor shall demonstrate to representatives of the Engineer/Architect (and/or Owner) that the in-place joint sealants are equal to the quality and appearance of the accepted mock-ups.

END OF SECTION

SECTION 07 92 01

CAULKING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install the caulking in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work in compliance with all federal, state, and local codes and regulatory agencies.

B. **Standards**. Materials and workmanship shall be in accordance with the following standards referenced herein.

1. ASTM – American Society for Testing and Materials.
2. FS – Federal Specification.
3. NSF – National Sanitation Foundation.

1.4 SUBMITTALS

A. **Product Data**. Submit manufacturer's specifications, including manufacturer's published data indicating that material complies with the specifications and is intended for the applications shown, recommendations and installation instructions for caulking compound and associated miscellaneous material required.

B. **Color Chart**. Submit manufacturer's standard color chart for color selection by the Owner.

1.5 JOB CONDITIONS

A. Environmental Conditions

1. Proceed with installation of caulking under weather conditions when temperatures are within manufacturer's recommended limitations for installation.
2. Proceed with the work only when forecasted weather conditions are favorable for proper care and development of high early bond strength.
3. Wherever joint width is affected by ambient temperature variations, install caulking only when temperatures are in the lower third of the manufacturer's recommended installation temperature range, so that sealant will not be subjected to excessive elongation and bond stress at subsequent low temperatures.
4. Avoid mixing sealants in direct sunlight when high temperatures prevail.

B. Protection

1. Allow no caulking to overflow or spill onto adjoining surfaces, or to migrate into the voids of adjoining surfaces including rough textured materials.

2. Use masking tape or other precautionary devices to prevent staining of adjoining surfaces by either the primer/sealer or caulking materials.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Delivery

1. Each unit shall be labeled with the following:

a. Name of material and supplier.

b. Formula or specification number, lot number, color, and date of manufacture.

c. Mixing instructions, shelf life, and curing time when applicable.

B. Storage

1. Store or expose no materials to temperatures above 90 degrees Fahrenheit (° F.) or in direct sunshine.

2. Use no materials which are outdated as indicated by shelf life.

3. Store sealant tape in a manner which will retain shape.

4. Store containers where temperature is approximately 75° F. for 16 hours before using.

C. **Handling**. Open no containers or mix components until necessary preparatory work and priming have been completed.

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 CAULKING

A. **Type**. Two component, premium grade, polyurethane base, elastomeric sealant formulated for total immersion with a nonsag and self-leveling consistency.

B. **Color**. As selected by the Owner.

C. Requirements

1. Meet ASTM C920 and FS TT-S-00227E.

2. Type. M.

3. Grade. NS.

4. Class. 25.

5. Use. NT, M, G, A.

6. Elasticity. Minimum 50 percent at 0 degrees Fahrenheit (° F.).

7. NSF "Approved for Contact with Potable Water."

2.2 MISCELLANEOUS

A. **Joint Cleaner**. Provide the type of joint cleaning compound recommended by the caulking manufacturer for all joint surfaces.

B. **Joint Primer/Sealer**. Provide the type of joint primer/sealer recommended by the caulking manufacturer for all joint surfaces.

C. **Bond Breaker Type**. Polyethylene tape or other plastic tape as recommended by the caulking manufacturer to be applied to sealant contact surfaces where bond to the substrate or joint filler must be avoided for proper performance of caulking. Provide self-adhesive tape wherever applicable.

D. **Sealant Backer Rod**. Compressible rod stock polyethylene foam, polyethylene jacketed polyurethane foam, butyl rubber foam, neoprene foam or other flexible, permanent, durable nonabsorptive material as recommended for compatibility with caulking by the manufacturer. Provide size and shape of rod which will control the joint depth.

2.3 PRODUCTS AND MANUFACTURERS

A. **Products**. Provide one of the following:

1. Sikaflex 2cNs, two-component by Sika Chemical Company.

2. Or equal.

PART 3 EXECUTION

3.1 INSTALLATION

A. **General**. Comply with caulking manufacturer's written instructions except where more stringent requirements are shown or specified.

B. Areas to Be Caulked

1. Interior and exterior perimeter of all door and window frames.

2. Interior and exterior perimeter of all louvers and wall openings.

3. Interior and exterior joints formed by the junction of masonry work, concrete, and precast decking.

4. All ceiling joints of precast concrete slabs.

5. Wall panel, fascia, soffit, and coping joints.

6. All reglets and expansion joints.

7. Where else shown on the drawings and as required by the Engineer/Architect.

C. Surface Preparation

1. Remove dirt, moisture, loose material, and other substances that would interfere with bond.

2. Clean joint surface with oil free pressurized air immediately before installation of primer/sealer.

D. Mixing

1. Two Component. Follow manufacturer's written instructions.

a. Thoroughly mix components before use.

b. Add entire contents of activator and color components to base material. Do not mix partial units.

c. Mix contents for 3 to 5 minutes as recommended by manufacturer and until color and consistency are uniform.

d. Do not use mixture after pot life has expired.

E. **Priming**. Prime all joint surfaces.

1. Allow no primer or sealer to spill or migrate onto adjoining surfaces.

2. Allow primer to dry prior to application of sealants.

F. Isolation Joint

1. Apply masking tape before installation of primer in continuous strips in alignment with the joint edge to produce sharp, clean interface with adjoining materials. Remove tape immediately after joints have been sealed and tooled as directed.

2. Install no sealants without backer rods or bond breaker tape, unless shown otherwise.

3. Roll the back-up rod stock into the joint to avoid lengthwise stretching. Do not twist, braid, puncture, or prime backer rods.

G. Placement

1. Caulking shall be by gun method. Select gun nozzle to suit conditions and provide a full bead of caulking throughout the joint.

2. Use installation techniques that will ensure caulking to be deposited in a uniform, continuous ribbon without skip marks, pin holes, air pockets, and uniform bond on opposite sides, produced by a complete "wetting" of the joint bond surfaces equally on the opposite sides.

3. Follow with hand tool in finished areas for a uniform neat appearance.

3.2 CLEANING AND PROTECTION

A. **Cleaning**. Clean adjacent surfaces of sealant or soiling resulting from the work.

1. Use solvent or cleaning agent recommended by the caulking manufacturer.

2. Leave all finish work in a neat clean condition.

B. **Curing Time**. Allow the minimum curing time as recommended by the manufacturer, but in no case shall the curing time be less than 72 hours.

C. **Protection**. Protect the caulking during the construction period so that it will be without deterioration, soiling, discoloration, or damage at the time of final acceptance.

END OF SECTION

SECTION 08 06 71

DOOR HARDWARE SCHEDULE

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section references specification sections relating to commercial door hardware for the following:

1. Swinging doors.
2. Sliding Doors.
3. Other doors to the extent indicated.

B. Commercial door hardware includes, but is not necessarily limited to, the following:

1) Mechanical door hardware.
2) Electromechanical and access control door hardware.
3) Electromechanical and access control door hardware power supplies, back-ups and surge protection.
4) Automatic operators.
5) Cylinders specified for doors in other sections.

b. Related Sections:

1) Division 08 Section “Door Hardware”.

c. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1) ANSI A117.1 - Accessible and Usable Buildings and Facilities.
2) ICC/IBC - International Building Code.
3) NFPA 70 - National Electrical Code.
4) NFPA 80 - Fire Doors and Windows.
5) NFPA 101 - Life Safety Code.
6) NFPA 105 - Installation of Smoke Door Assemblies.
7) State Building Codes, Local Amendments.

d. Standards: Reference Related Sections for requirements regarding compliance with applicable industry standards.

1.3 SUBMITTALS

a. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

b. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

1) Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."

2) Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.

3) Content: Include the following information:

a) Type, style, function, size, label, hand, and finish of each door hardware item.

b) Manufacturer of each item.

c) Fastenings and other pertinent information.

d) Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.

e) Explanation of abbreviations, symbols, and codes contained in schedule.

f) Mounting locations for door hardware.

g) Door and frame sizes and materials.

4) Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

c. Keying Schedule: Prepared under the supervision of the Owner, separate schedule detailing final keying instructions for locksets and cylinders in writing. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner to approve submitted keying schedule prior to the ordering of permanent cylinders.

d. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

e. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Submittals. The manual to include the name, address, and contact information of the manufacturers providing the hardware and their nearest service representatives. The final copies delivered after completion of the installation test to include "as built" modifications made during installation, checkout, and acceptance.

f. Warranties and Maintenance: Special warranties and maintenance agreements specified in the Related Sections.

1.4 DELIVERY, STORAGE, AND HANDLING

a. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

b. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

c. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.5 WARRANTY

a. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

1.6 MAINTENANCE SERVICE

a. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

PART 2 PRODUCTS

2.1 SCHEDULED DOOR HARDWARE

a. Refer to “PART 3 – EXECUTION” for required specification sections.

PART 3 EXECUTION

3.1 DOOR HARDWARE SETS

a. The door hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

1) Quantities listed are for each pair of doors, or for each single door.

2) The supplier is responsible for handing and sizing all products.

3) Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.

4) At existing openings with new hardware the supplier shall field inspect existing conditions prior to the submittal stage to verify the specified hardware will work as required. Provide alternate solutions and proposals as needed.

5) Refer to the "Door & Frame Schedule" on sheet A-16 in the drawings for scheduling of door hardware sets.

b. Products listed in the hardware sets shall be supplied by and in accordance with the requirements described in the specification section as noted for each item.

1) Section 08 71 00 – Door Hardware.

c. Manufacturer's Abbreviations:

1. MK - McKinney
2. PE - Pemko
3. OT - Other
4. RO - Rockwood
5. RU - Corbin Russwin
6. RF - Rixson
7. NO - Norton
8. SU - Securitron

SECTION 08 11 13

HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Standard and custom hollow metal doors and frames.
2. Steel sidelight, borrowed lite and transom frames.
3. Louvers installed in hollow metal doors.
4. Light frames and glazing installed in hollow metal doors.

B. Related Sections:

1. Division 01 Section "General Conditions".
2. Division 04 Section "Unit Masonry" for embedding anchors for hollow metal work into masonry construction.
3. Division 08 Section “Flush Wood Doors”.
4. Division 08 Section "Glazing" for glass view panels in hollow metal doors.
5. Division 08 Section "Door Hardware".
6. Division 08 Section "Access Control Hardware".
7. Division 09 Sections "Exterior Painting" and "Interior Painting" for field painting hollow metal doors and frames.

C. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. ANSI/SDI A250.8 - Recommended Specifications for Standard Steel Doors and Frames.
2. ANSI/SDI A250.4 - Test Procedure and Acceptance Criteria for Physical Endurance for Steel Doors, Frames, Frames Anchors and Hardware Reinforcing.
3. ANSI/SDI A250.6 - Recommended Practice for Hardware Reinforcing on Standard Steel Doors and Frames.
4. ANSI/SDI A250.10 - Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames.
5. ANSI/SDI A250.11 - Recommended Erection Instructions for Steel Frames.
6. ASTM A1008 - Standard Specification for Steel Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy and High-Strength Low-Alloy with Improved Formability.
7. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

8. ASTM A924 - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.
9. ASTM C 1363 - Standard Test Method for Thermal Performance of Building Assemblies by Means of a Hot Box Apparatus.
10. ANSI/BHMA A156.115 - Hardware Preparation in Steel Doors and Frames.
11. ANSI/SDI 122 - Installation and Troubleshooting Guide for Standard Steel Doors and Frames.
12. ANSI/NFPA 80 - Standard for Fire Doors and Fire Windows; National Fire Protection Association.
13. ANSI/NFPA 105: Standard for the Installation of Smoke Door Assemblies.
14. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies; National Fire Protection Association.
15. UL 10C - Positive Pressure Fire Tests of Door Assemblies.
16. UL 1784 - Standard for Air Leakage Tests of Door Assemblies.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, core descriptions, hardware reinforcements, profiles, anchors, fire-resistance rating, and finishes.

B. Door hardware supplier is to furnish templates, template reference number and/or physical hardware to the steel door and frame supplier in order to prepare the doors and frames to receive the finish hardware items.

C. Shop Drawings: Include the following:

1. Elevations of each door design.
2. Details of doors, including vertical and horizontal edge details and metal thicknesses.
3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
4. Locations of reinforcement and preparations for hardware.
5. Details of anchorages, joints, field splices, and connections.
6. Details of accessories.
7. Details of moldings, removable stops, and glazing.
8. Details of conduit and preparations for power, signal, and control systems.

D. Samples for Verification:

1. Samples are only required by request of the architect and for manufacturers that are not current members of the Steel Door Institute.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain hollow metal doors and frames through one source from a single manufacturer wherever possible.

B. Quality Standard: In addition to requirements specified, furnish SDI-Certified manufacturer products that comply with ANSI/SDI A250.8, latest edition, "Recommended Specifications for Standard Steel Doors and Frames".

C. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to UL10C (neutral pressure at 40” above sill) or UL 10C.

1. Oversize Fire-Rated Door Assemblies Construction: For units exceeding sizes of tested assemblies, attach construction label certifying doors are built to standard construction requirements for tested and labeled fire rated door assemblies except for size.
2. Temperature-Rise Limit: Where indicated and at vertical exit enclosures (stairwell openings) and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F (250 deg C) above ambient after 30 minutes of standard fire-test exposure.
3. Smoke Control Door Assemblies: Comply with NFPA 105.

    a. Smoke "S" Label: Doors to bear “S” label, and include smoke and draft control gasketing applied to frame and on meeting stiles of pair doors.

D. Fire-Rated, Borrowed-Light Frame Assemblies: Assemblies complying with NFPA 80 that are listed and labeled, by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 257. Provide labeled glazing material.

E. Pre-Submittal Conference: Conduct conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier, Installer, and Contractor to review proper methods and procedures for installing hollow metal doors and frames and to verify installation of electrical knockout boxes and conduit at frames with electrified or access control hardware.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver hollow metal work palletized, wrapped, or crated to provide protection during transit and Project site storage. Do not use non-vented plastic.

B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.

C. Store hollow metal work under cover at Project site. Place in stacks of five units maximum in a vertical position with heads up, spaced by blocking, on minimum 4-inch high wood blocking. Do not store in a manner that traps excess humidity.

1. Provide minimum 1/4-inch space between each stacked door to permit air circulation. Door and frames to be stacked in a vertical upright position.

1.6 PROJECT CONDITIONS

A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.7 COORDINATION

A. Coordinate installation of anchorages for hollow metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

B. Building Information Modeling (BIM) Support: Utilize designated BIM software tools and obtain training needed to successfully participate in the Project BIM processes. All technical disciplines are responsible for the product data integration and data reliability of their Work into the coordinated BIM applications.

1.8 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.

B. Warranty includes installation and finishing that may be required due to repair or replacement of defective doors.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide steel doors and frames from a SDI Certified manufacturer:

1. CECO Door Products (C).
2. Curries Company (CU).
3. Steelcraft (S).

2.2 MATERIALS

A. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B; suitable for exposed applications.

B. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.

C. Frame Anchors: ASTM A 653/A 653M, Commercial Steel (CS), Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.

2.3 HOLLOW METAL DOORS

A. General: Provide 1-3/4 inch doors of design indicated, not less than thickness indicated; fabricated with smooth surfaces, without visible joints or seams on exposed faces unless otherwise indicated. Comply with ANSI/SDI A250.8 and ANSI/NAAMM HMMA 867.

B. Interior Doors: Face sheets fabricated of commercial quality cold rolled steel that complies with ASTM A 1008/A 1008M. Provide doors complying with requirements indicated below by

referencing ANSI/SDI A250.8 for level and model and ANSI/SDI A250.4 for physical performance level:

1. Design: Flush panel.

    a. Fire Door Core: As required to provide fire-protection and temperature-rise ratings indicated.

2. Level/Model: Level 2 and Physical Performance Level B (Heavy Duty), Minimum 18 gauge (0.042-inch - 1.0-mm) thick steel, Model 2.
3. Top and Bottom Edges: Reinforce tops and bottoms of doors with a continuous steel channel not less than 16 gauge, extending the full width of the door and welded to the face sheet.
4. Hinge Reinforcement: Minimum 7 gauge (3/16") plate 1-1/4" x 9" or minimum 14 gauge continuous channel with pierced holes, drilled and tapped.
5. Hardware Reinforcements: Fabricate according to ANSI/SDI A250.6 with reinforcing plates from same material as door face sheets.

C. Manufacturers Basis of Design:

1. CECO Door Products (C) Honeycomb Core - Regent Series.

2.4 HOLLOW METAL FRAMES

A. General: Comply with ANSI/SDI A250.8 and with details indicated for type and profile.

B. Interior Frames: Fabricated from cold-rolled steel sheet that complies with ASTM A 1008/A 1008M.

1. Fabricate frames with mitered or coped corners. Profile as indicated on drawings.
2. Frames: Minimum 16 gauge (0.053-inch -1.3-mm) thick steel sheet.
3. Manufacturers Basis of Design:

    a. CECO Door Products (C) - BU Series.
    b. CECO Door Products (C) - SU Series.

C. Fire rated frames: Fabricate frames in accordance with NFPA 80, listed and labeled by a qualified testing agency, for fire-protection ratings indicated.

D. Hardware Reinforcement: Fabricate according to ANSI/SDI A250.6 Table 4 with reinforcement plates from same material as frames.

2.5 FRAME ANCHORS

A. Jamb Anchors:

1. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, formed from A60 metallic coated material, not less than 0.042 inch thick, with corrugated or perforated straps not less than 2 inches wide by 10 inches long; or wire anchors not less than 0.177 inch thick.

2. Stud Wall Type: Designed to engage stud and not less than 0.042 inch thick.

B. Floor Anchors: Floor anchors to be provided at each jamb, formed from A60 metallic coated material, not less than 0.042 inches thick.

C. Mortar Guards: Formed from same material as frames, not less than 0.016 inches thick.

2.6 LOUVERS

A. Metal Louvers: Unless otherwise indicated provide louvers to meet the following requirements.

1. Blade Type: Vision proof inverted V or inverted Y.
2. Metal and Finish: Galvanized steel, 0.040 inch thick, factory primed for paint finish with baked enamel or powder coated finish. Match pre-finished door paint color where applicable.

B. Louvers for Fire Rated Doors: Metal louvers with fusible link and closing device, listed and labeled for use in doors with fire protection rating of 1-1/2 hours and less.

1. Manufacturers: Subject to compliance with requirements, provide louvers to meet rating indicated.
2. Metal and Finish: Galvanized steel, 0.040 inch thick, factory primed for paint finish with baked enamel or powder coated finish. Match pre-finished door paint color where applicable.

2.7 LIGHT OPENINGS AND GLAZING

A. Stops and Moldings: Provide stops and moldings around glazed lites where indicated. Form corners of stops and moldings with butted or mitered hairline joints at fabricator’s shop. Fixed and removable stops to allow multiple glazed lites each to be removed independently. Coordinate frame rabbet widths between fixed and removable stops with the type of glazing and installation indicated.

B. Moldings for Glazed Lites in Doors and Loose Stops for Glazed Lites in Frames: Minimum 20 gauge thick, fabricated from same material as door face sheet in which they are installed.

C. Fixed Frame Moldings: Formed integral with hollow metal frames, a minimum of 5/8 inch (16 mm) high unless otherwise indicated. Provide fixed frame moldings and stops on outside of exterior and on secure side of interior doors and frames.

D. Preformed Metal Frames for Light Openings: Manufacturer's standard frame formed of 0.048-inch-thick, cold rolled steel sheet; with baked enamel or powder coated finish; and approved for use in doors of fire protection rating indicated. Match pre-finished door paint color where applicable.

2.8 ACCESSORIES

A. Mullions and Transom Bars: Join to adjacent members by welding or rigid mechanical anchors.

B. Grout Guards: Formed from same material as frames, not less than 0.016 inches thick.

2.9 FABRICATION

A. Fabricate hollow metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. When shipping limitations so dictate, frames for large openings are to be fabricated in sections for splicing or splining in the field by others.

B. Tolerances: Fabricate hollow metal work to tolerances indicated in ANSI/SDI A250.8.

C. Hollow Metal Doors:

1. Exterior Doors: Provide optional weep-hole openings in bottom of exterior doors to permit moisture to escape where specified.
2. Glazed Lites: Factory cut openings in doors with applied trim or kits to fit. Factory install glazing where indicated.
3. Astragals: Provide overlapping astragals as noted in door hardware sets in Division 08 Section "Door Hardware" on one leaf of pairs of doors where required by NFPA 80 for fire-performance rating or where indicated. Extend minimum 3/4 inch beyond edge of door on which astragal is mounted.
4. Continuous Hinge Reinforcement: Provide welded continuous 12 gauge strap for continuous hinges specified in hardware sets in Division 08 Section "Door Hardware".

D. Hollow Metal Frames:

1. Shipping Limitations: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.
2. Welded Frames: Weld flush face joints continuously; grind, fill, dress, and make smooth, flush, and invisible.

    a. Welded frames are to be provided with two steel spreaders temporarily attached to the bottom of both jambs to serve as a brace during shipping and handling. Spreader bars are for bracing only and are not to be used to size the frame opening.

3. Sidelight and Transom Bar Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by butt welding.
4. High Frequency Hinge Reinforcement: Provide high frequency hinge reinforcements at door openings 48-inches and wider with mortise butt type hinges at top hinge locations.
5. Continuous Hinge Reinforcement: Provide welded continuous 12 gauge straps for continuous hinges specified in hardware sets in Division 08 Section "Door Hardware".
6. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated for removable stops, provide security screws at exterior locations.
7. Mortar Guards: Provide guard boxes at back of hardware mortises in frames at all hinges and strike preps regardless of grouting requirements.
8. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.
9. Jamb Anchors: Provide number and spacing of anchors as follows:

a. Masonry Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:

1) Two anchors per jamb up to 60 inches high.
2) Three anchors per jamb from 60 to 90 inches high.
3) Four anchors per jamb from 90 to 120 inches high.
4) Four anchors per jamb plus 1 additional anchor per jamb for each 24 inches or fraction thereof above 120 inches high.

b. Stud Wall Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:

1) Three anchors per jamb up to 60 inches high.
2) Four anchors per jamb from 60 to 90 inches high.
3) Five anchors per jamb from 90 to 96 inches high.
4) Five anchors per jamb plus 1 additional anchor per jamb for each 24 inches or fraction thereof above 96 inches high.
5) Two anchors per head for frames above 42 inches wide and mounted in metal stud partitions.

10. Door Silencers: Except on weatherstripped or gasketed doors, drill stops to receive door silencers. Silencers to be supplied by frame manufacturer regardless if specified in Division 08 Section "Door Hardware".
11. Bituminous Coating: Where frames are fully grouted with an approved Portland Cement based grout or mortar, coat inside of frame throat with a water based bituminous or asphaltic emulsion coating to a minimum thickness of 3 mils DFT, tested in accordance with UL 10C and applied to the frame under a 3rd party independent follow-up service procedure.

E. Hardware Preparation: Factory prepare hollow metal work to receive template mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to the Door Hardware Schedule and templates furnished as specified in Division 08 Section "Door Hardware."

1. Locate hardware as indicated, or if not indicated, according to ANSI/SDI A250.8.
2. Reinforce doors and frames to receive non-template, mortised and surface mounted door hardware.
3. Comply with applicable requirements in ANSI/SDI A250.6 and ANSI/DHI A115 Series specifications for preparation of hollow metal work for hardware.
4. Coordinate locations of conduit and wiring boxes for electrical connections with Division 26 Sections.

2.10 STEEL FINISHES

A. Prime Finishes: Doors and frames to be cleaned, and chemically treated to insure maximum finish paint adhesion. Surfaces of the door and frame exposed to view to receive a factory applied coat of rust inhibiting shop primer.

1. Shop Primer: Manufacturer's standard, fast-curing, lead and chromate free primer complying with ANSI/SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; and compatible with substrate and field-applied coatings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. General Contractor to verify the accuracy of dimensions given to the steel door and frame manufacturer for existing openings or existing frames (strike height, hinge spacing, hinge back set, etc.).

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove welded in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.

B. Prior to installation, adjust and securely brace welded hollow metal frames for square, level, twist, and plumb condition.

C. Tolerances shall comply with SDI-117 "Manufacturing Tolerances Standard Steel Doors and Frames."

D. Drill and tap doors and frames to receive non-template, mortised, and surface-mounted door hardware.

3.3 INSTALLATION

A. General: Install hollow metal work plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.

B. Hollow Metal Frames: Install hollow metal frames of size and profile indicated. Comply with ANSI/SDI A250.11 and NFPA 80 at fire rated openings.

1. Set frames accurately in position, plumbed, leveled, aligned, and braced securely until permanent anchors are set. After wall construction is complete and frames properly set and secured, remove temporary braces, leaving surfaces smooth and undamaged. Shim as necessary to comply with installation tolerances.
2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with post-installed expansion anchors.
3. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with mortar.
4. Grout Requirements: Do not grout head of frames unless reinforcing has been installed in head of frame. Do not grout vertical or horizontal closed mullion members.

C. Hollow Metal Doors: Fit hollow metal doors accurately in frames, within clearances specified below. Shim as necessary.

1. Non-Fire-Rated Standard Steel Doors:

    a. Jambs and Head: 1/8 inch plus or minus 1/16 inch.
    b. Between Edges of Pairs of Doors: 1/8 inch plus or minus 1/16 inch.
    c. Between Bottom of Door and Top of Threshold: Maximum 3/8 inch.
    d. Between Bottom of Door and Top of Finish Floor (No Threshold): Maximum 3/4 inch.

2. Fire-Rated Doors: Install doors with clearances according to NFPA 80.

D. Field Glazing: Comply with installation requirements in Division 08 Section "Glazing" and with hollow metal manufacturer's written instructions.

3.4 ADJUSTING AND CLEANING

A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including hollow metal work that is warped, bowed, or otherwise unacceptable.

B. Remove grout and other bonding material from hollow metal work immediately after installation.

C. Prime-Coat and Painted Finish Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat, or painted finishes, and apply touchup of compatible air drying, rust-inhibitive primer, zinc rich primer (exterior and galvanized openings) or finish paint.

END OF SECTION

SECTION 08 12 00

DOORS AND FRAMES, ALUMINUM FULL FLUSH

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Provide all labor, tools, equipment, and materials necessary to furnish and install the aluminum full flush doors and frames in accordance with the drawings and as specified herein.

B. Related Sections.

1. Section 08 71 00 Door Hardware for door hardware to be installed on aluminum doors.

2. Section 08 80 00 Glazing for glass to be installed in aluminum doors and transoms.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies.** Perform all work in compliance with all applicable federal, state, and local codes and regulatory agencies.

B. **Standards.** All materials and workmanship shall be in compliance with the following standards.

1. AA - Aluminum Association.

2. FS - Federal Specifications.

C. **Qualifications**. Aluminum doors, frames, and accessories shall be manufactured by a single firm specializing in the production of this type of work.

1.4 SUBMITTALS

A. **General.** Comply with Section 01 33 00, “Submittals” and submit the following supplemental requirements within this specification section.

B. **Product Data.** Submit door manufacturer's technical data for each type of door and frame with accessories.

C. **Shop Drawings.** Submit drawings showing:

1. Details of doors and frames.

2. Elevation of door types.

3. Conditions of openings.

4. Details of construction of door and frames.

5. Finishes.

6. Location and installation requirements of finish hardware and reinforcement.

7. Hardware schedule for doors.

8. Door schedule utilizing same reference numbers for details and openings as those on the drawings.

9. Method of anchoring.

1.5 JOB CONDITIONS

A. **Protection**. Protect surfaces of doors and frames from stains, marks, or damage during erection and installation.

B. **Coordination.** Coordinate all work with other trades, verify openings and supports.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery.** Deliver all doors and frames in protective covers clearly noted as to size, mark number, frame, and hardware group.

B. **Storage**. Store doors, frames, and accessories off the ground, covered and protected from the elements, and allow for the movement of air to prevent condensation.

C. **Handling**. Keep all doors, frames, and accessories in original packages until ready to install or hang.

1.7 SPECIAL WARRANTY

A. **Manufacturer**. Five-year warranty against defects in workmanship and materials, including warping, rotting, decaying, or bowing.

B. **Installer**. Warrant installation procedures and performance for five years against defects due to workmanship and materials handling.

PART 2 PRODUCTS

2.1 MATERIALS

A. Doors

1. Type. Industrial aluminum, full flush type with a vertical, ribbed pattern.

2. Size. 1-3/4 inches thick of the size shown on the drawings.

3. Construction.

a. Sections. All sections shall be extruded Type 6063-T5 aluminum alloy with a thickness of not less than 0.125 inch for door stiles, and 0.50 inch for glazing moldings.

b. Surface Sheet. Face sheets shall be 0.062 inch 5005 alloy aluminum with a vertical, ribbed pattern and bonded to a 1/8 inch thick tempered hardboard.

c. Reinforcing. All cutouts, recesses, mortising, or milling operations required for hardware shall be accurately made and internally reinforced with backing plates to ensure adequate strength of the connection. All reinforcing shall be an integral part of the door.

d. Insulation. Voids within the door shall be filled with a rigid compressed high density mineral insulation complying with FS

HH-1-00529 or a foamed in place polyurethane at a 3-pound-per-cubic-foot density. R 4.75 minimum. Insulation shall fill all tubular framing.

e. Glass Stops and Seals. Glass stops and seals shall be tamperproof screwed on extruded aluminum strips with premolded rubber seals.

4. Clearance. Doors shall clear the finished floor by not more than 1/4 inch or thresholds by not more than 1/8 inch.

5. Glazing.

a. Glass: 1/4 inch tempered.

b. Glass: 1 inch insulating, tempered.

c. Glass Stops and Seals. Glass stops and seals shall be tamperproof Snap-in, 6063-T5 extruded aluminum alloy 0.050 inch thickness strips with premolded vinyl seals.

B. Frames

1. Size and Type. Frames shall be of the size and type shown and shall be not less than 0.125-inch-thick extruded Type 6063-T5 aluminum complete with 1/2 inch x 2 inch stops.

2. Reinforcing. Frames shall be internally reinforced for all hardware as required. All reinforcing shall be an integral part of the frame.

3. Anchors. Provide jamb anchors of suitable design. A minimum of three anchors per jamb shall be provided up to 7'-4", four anchors up to 8 feet, and one additional anchor per jamb for each additional 2 feet above 8 feet.

C. **Replaceable Weather Stripping**. AAMA 701, woolpile with nylon fabric, polypropylene backing at head and jambs.

2.2 FINISH

A. Doors and frames shall be finished as noted on the plans. If no finish is noted, doors and frames shall have an anodized finish in accordance with AAMA standards. Class I, minimum thickness 0.7 mil. Color to be selected by the Owner, from manufacturer's full range of standard colors.

2.3 MANUFACTURER

A. **Product and Manufacturer**. All aluminum flush doors and frames shall be by one manufacturer. Subject to compliance with requirements, manufacturer offering doors and frames which may be incorporated in the work include the following:

1. Cline Aluminum Doors Inc. Series 100BE 5-ply bevel edge heavy duty with optional finish.

2. Special-Lite, Inc.

3. Kawneer.

4. Or equal.

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions

1. Verify that all openings are properly sized and correctly located.
2. Verify that all jambs and doors are properly sized, drilled, punched, and reinforced correctly for specified hardware, anchors, glass, and glazing.

B. **Verification**. The Contractor shall verify dimensions and quantities required and are responsible for same.

3.2 PREPARATION

A. **Protection**. All units shall be field protected from damage and staining during construction. Units not factory taped or protected shall be protected with a strippable coating of detergent, shaving soap, or petroleum jelly which will be removed prior to caulking.

B. **Isolation.** Isolate all aluminum from contact with masonry, concrete, or other foreign material with a coat of epoxy paint. Paint not to be visible after erection of door and frame.

3.3 INSTALLATION

A. Setting Frames

1. Set frames accurately in position, plumbed, aligned, and securely braced until permanent anchors are set.
2. Remove temporary braces and spreader bars only after frames have been properly set and secured and wall construction is complete.
3. Set stops to conceal all wall anchors.

B. **Setting Doors.** Hang door in preset frames with all hardware, ready for operation.

3.4 REPAIR/RESTORATION

A. Damaged Work

1. Remove from the job site frames that are bowed, twisted, or otherwise unacceptable.
2. All doors and frames that are scratched, dented, stained, marred, or defaced that cannot be restored to original condition or to the satisfaction of the Owner and Engineer/Architect, shall be removed from the job site and replaced at no additional cost to the Owner.

3.5 ADJUSTMENT

A. Final Adjustments

1. Check and readjust operating finish hardware items in work just prior to final inspection.
2. Leave work in complete and proper operating conditions.

3.6 CLEANING

A. At the completion of the project, all doors shall be cleaned as recommended by the manufacturer. The Contractor shall remove all field applied protection and be responsible for any damage resulting from other cleaning methods. No abrasive cleaning agents shall be used.

3.7 DEMONSTRATION

A. **Visual.** The Contractor shall demonstrate to the Owner and Engineer/ Architect that all doors operate freely, uniformly, and quietly without binding, twisting, or sagging. Verify that all frames are solidly anchored. Verify that all hardware is functioning properly.

END OF SECTION

This page intentionally left blank.

SECTION 08 12 50

FIBERGLASS-REINFORCED PLASTIC (FRP) DOORS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General Conditions, Special Conditions, Division 1 – "General Requirements," and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General**. The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install fiberglass-reinforced plastic (FRP) doors in accordance with the plans and as specified herein.

B. **This section includes** the following products.

1. Doors. Seamless, FRP doors.

2. Frames. Seamless, FRP door frames.

3. Provide factory-finished doors and frames (gray).

C. **Door hardware is specified** in another Division 8 specification.

D. **Glass and glazing are specified** in another Division 8 specification.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work to furnish and install FRP doors in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

1.4 SUBMITTALS

A. **General.** Comply with Section 01300, "Contractor Submittals" and submit the following supplemental requirements within this specification section.

B. **Submit the following** in accordance with Conditions of Contract and Division 1 specification sections.

1. Product data for each type of door specified, including details of construction, materials, dimensions, hardware preparation, core, profiles, and finishes.

2. Shop drawings showing fabrication and installation of doors. Include elevations of door design types, conditions at openings, details of construction, location and installation requirements of door hardware and reinforcements, and details of joints and connections. Show anchorage and accessory items.

a. Provide schedule of doors and frames using same reference numbers for details and openings as those on contract drawings.

b. Coordinate door hardware preparation with door hardware requirements.

3. Samples for initial selection purposes in form of manufacturer's color charts showing full range of colors available for factory-finished doors.

4. Samples for verification purposes of each type of exposed finish required, prepared on samples not less than 3" x 5" and of same thickness and material indicated for final unit of work. Where finishes involve normal color and texture variations, include sample sets showing full range of variations expected.

1.5 JOB CONDITIONS (Not Used)

1.6 DELIVERY, STORAGE, AND HANDLING

A. **General**. Handle, store, and protect items removed and stored or reset in accordance with Section 01610 and 01611 and the manufacturer's instructions, and the supplemental requirements within this specification section.

B. **Delivery doors and frames** cardboard-wrapped or crated to provide protection during transit and job storage. Provide additional protection to prevent damage to finish of factory-finished doors and frames.

C. **Inspect doors and frames** upon delivery for damage. Minor damage may be repaired provided refinished items are equal in all respects to new work and acceptable to Engineer/Architect; otherwise, remove and replace damaged items as directed.

D. **Store doors and drames** at building site under cover. Place units on minimum 4-inch-high wood blocking. Avoid use of nonvented plastic or canvas shelters which could create humidity chamber. If cardboard wrapper on door becomes wet, remove carton immediately. Provide 1/4-inch spaces between stacked doors to promote air circulation.

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. **Manufacturer**. Subject to compliance with requirements, provide FRP doors and frames by one of the following:

1. FRP Doors and Frames.

a. Chem-Pruf Door Co.

b. Corrim Door Systems Division, Fenestra Corporation Fiberglass Technologies, Inc.

c. Marshall Vega Corp.

d. Approved Equal

2.2 MATERIALS

A. **Glass Fiber Reinforcement**. Continuous-strand mats utilizing continuous-strand roving and woven roving.

B. **Resin**. Cross-linking polymer, flame-retardant isophthalic polyester with ultraviolet (UV) inhibitor additives. Class I flame retardant by American Society for Testing and Materials (ASTM) E 84.

C. Supports, Reinforcements, and Anchors. Manufacturer's standard units.

D. **Inserts, Bolts, and Fasteners**. Manufacturer's standard units.

E. **Factory-Applied Finish**. Manufacturer's standard corrosion-resistant finish.

F. **FRP Doors.** Doors shall be made of fiberglass reinforced plastic (FRP) using Class 1 premium resin with no fillers that is specifically tailored to resist chemicals and contaminants typically found in environment for which these specifications are written. Doors shall be 1 ¾ inch thick and of flush construction, having no seams or cracks. For consistency in the resin chemistry tailored for this application and to maintain the same physical properties throughout the structure, all fiberglass components including face plates, stiles and rails and frames must be fabricated by the same manufacturer. Components obtained through various outside sources for plant assembly will not be accepted.

G. **Door Plates** shall be 0.125 inch thick minimum, molded in one continuous piece, starting with 25 mil gelcoat of the color specified, integrally molded with multiple layers of 1.5 ounces per square foot fiberglass mat and one layer of 18 ounce per square yard fiberglass woven roving. Each layer shall be individually laminated with resin as mentioned above. Door plate weight shall not be less than 0.97 lbs per square foot at a ratio of 30/70 glass to resin. Plate alone to withstand Large Missile Impact per FBC TAS 201. Face plates manufactured using the pultrusion process does not allow for a smooth molded gelcoat finish, the use of woven roving for adequate plate thickness, strength and weight, or the appropriate glass to resin ratio and will not meet the quality standards of this project.

H. **Stiles and Rails** shall be constructed starting from the outside toward the inside, with a matrix of at least three layers of 1.5 ounce per square foot of fiberglass mat. The stile and rail shall be molded in one continuous piece to a U-shaped configuration and to the exact dimensions of the door. In this manner there will be no miter joints and disparate materials used to form the one-piece stile and rail.

I. **Core material** shall be Polypropylene plastic honeycomb core with a non woven polyester veil for unparalleled plate bonding, 180 PSI typical compression range unless otherwise requested.

J. **Internal Reinforcement** shall be #2 SPF of sufficient amount to adequately support required hardware and function of same.

K. **Finish** of door frame shall be identical with 25 mil resin-rich gelcoat of the specified color integrally molded in at time of manufacture resulting in a smooth gloss surface that is dense and non-porous. To achieve optimum surface characteristics, the gelcoat shall be cured within a temperature range of 120F to 170F creating an impermeable outer surface, uniform color throughout, and a permanent homogeneous bond with the resin/fiberglass substrate beneath. Only the highest quality gelcoat will be used to ensure enduring color and physical properties. Paint and/or post application of gelcoat results in poor mechanical fusion and will be deemed unacceptable for this application. The finish of the door and frame must be field repairable without compromising the integrity of the original uniform composite structure, function or physical strength.

2.3 FABRICATION

A. **Fabricate door and frame units** to be rigid, neat in appearance, and free from defects, warp, or buckle. Fit and assemble units in manufacturer's plant. Clearly identify work that cannot be permanently factory-assembled before shipment to ensure proper assembly at project site.

1. Internal Construction. Manufacturer's standard core on inside of face sheets.

2. Clearances. Not more than 1/8 inch at jambs and heads. Not more than 3/4 inch at bottom.

B. **Fabricate exposed faces** of doors and panels, including stiles and rails of nonflush units, from FRP.

C. **Fabricate concealed stiffeners**, reinforcement, edge channels, and moldings from FRP.

D. **Fabricate top and bottom edges** of doors as integral part of door construction.

E. **Exposed Fasteners**. Unless otherwise indicated, provide oval heads for exposed screws and bolts.

F. **Hardware Preparation**. Prepare doors and frames to receive mortised and concealed hardware in accordance with final Door Hardware Schedule and templates provided by hardware supplier. Comply with applicable requirements of American National Standards Institute (ANSI) A115 Series Specifications for door preparation for hardware.

G. **Reinforce door and frames** to receive surface-applied hardware.

H. **Locate hardware as indicated** on final shop drawings or, if not indicated, in accordance with "Recommended Locations for Builder's Hardware on Standard Steel Doors and Frames," published by Door and Hardware Institute.

PART 3 EXECUTION

3.1 INSTALLATION

A. **General**. Install FRP doors and frames and accessories in accordance with final shop drawings and manufacturer's data, and as herein specified.

B. **Door Installation**. Fit FRP doors accurately in frames.

3.2 ADJUST AND CLEAN

A. **Protection Removal**. Immediately prior to final inspection, remove protective plastic wrappings from prefinished doors.

B. **Final Adjustments**. Check and readjust operating hardware items, leaving doors undamaged and in complete and proper operating condition.

END OF SECTION

SECTION 08 14 00

WOOD DOORS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to work of this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Provide the labor, tools, equipment, and materials necessary to furnish and install solid core flush wood doors in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work in compliance with applicable federal, state, and local codes and regulatory agencies.

B. **Standards**. Comply with the following standards:

1. NWWDA – National Wood Window and Door Association.
2. ANSI – American National Standards Institute.
3. AWI – Architectural Woodwork Institute Quality Standard.

C. **Qualifications**. Obtain all wood doors from a single manufacturer specializing in the production of this type of work.

1.4 SUBMITTALS

A. **Product Data**. Submit door manufacturer's technical data for each type of door, including details of core and edge construction, trim for openings and louvers, and factory finishing specifications.

B. **Shop Drawings**. Submit shop drawings showing:

1. Location and size of each door utilizing same reference numbers as those on the drawings.
2. Elevation of each kind of door.
3. Details of construction.
4. Conditions of opening.
5. Method of anchoring.
6. Location and extent of hardware blocking.
7. Fire ratings.
8. Requirements for factory finishing.
9. Indicate dimensions and locations of cutouts for locksets and other cutouts adjacent to light and louver openings.
10. Other pertinent data.

C. **Samples**. Submit samples, 1'-0" square for the following:

1. Doors for Transparent Finish. Door faces with solid wood edging representing typical range of color and grain for each species of veneer and solid lumber required.

D. **Special Warranty**. Submit manufacturer's special warranty in accordance with paragraph 1.7 of this section.

1.5 JOB CONDITIONS

A. **Environmental Conditions**. Do not deliver or install doors until conditions for temperature and relative humidity have been stabilized and will be maintained in storage and installation areas during remainder of construction period to comply with the following requirements applicable to project's geographical location:

1. Referenced AWI quality standard including Section 100-S-3, "Moisture Content."

1.6 ELIVERY, STORAGE, AND HANDLING

A. **Delivery**. Protect doors during transit to prevent damage, soiling, and deterioration. Clearly mark the size, mark number, finish, and hardware group for each door.

B. **Storage**. Comply with requirements of referenced standards and recommendations of NWWDA pamphlet "How to Store, Handle, Finish, Install, and Maintain Wood Doors," as well as with manufacturer's instructions. Identify each door with individual opening numbers which correlate with designation system used on shop drawings for door, frames, and hardware, using temporary, removable or concealed markings.

C. **Handling**. Keep doors in original packages until ready to hang. Handle per manufacturer's instructions.

1.7 SPECIAL WARRANTY

A. **General**. Warranties shall be in addition to, and not a limitation of, other rights the Owner may have under the Contract Documents.

B. **Door Manufacturer's Warranty**. Submit with shop drawing, written agreement in door manufacturer's standard form signed by manufacturer, installer, and Contractor, agreeing to repair or replace defective doors that have warped (bow, cup, or twist) or that show telegraphing of core construction in face veneers, or do not conform to tolerance limitations of referenced quality standards.

1. Interior Doors. Lifetime.

PART 2 PRODUCTS

2.1 MATERIALS

A. Doors

1. Type. Full flush solid core with wood veneer on both faces and all edges.

2. Size. 1-3/4 inches thick of the sizes shown on the drawings except closet doors which shall be 1-3/8 inches thick.

3. Core. Particleboard with minimum 30 pound density and conforming to ANSI A208 1LD2.

4. Top and Bottom Rails. Not less than 1-1/8 inches of kiln dried hardwood.

5. Stiles. Not less than 2-5/8 inches of kiln dried hardwood.

6. Cross Band. 1/16-inch-thick hardwood veneer, each face.

7. Adhesive. Type 11 water-resistant for core assembly and Type 1 water-resistant for face assembly.

8. Face. Hardwood veneer of select white maple, plain sliced, rotary cut and book match.

9. Finish. Factory-finished, sealed, and finished to medium rubbed satin.

2.2 FABRICATION

A. Prefitting

1. Factory-prefit and premachine doors to fit frame opening sizes indicated with the following uniform clearances and bevels:

a. Comply with tolerance requirements of AWI for prefitting. Comply with final hardware schedules and door frame shop drawings with hardware templates.

b. Coordinate measurements of hardware mortises in metal frames to verify dimensions and alignment before proceeding with factory premachining.

c. Provide 1/8-inch clearance at jambs and head; 1/16 inch at meeting stiles for pairs of doors; 1/8 inch at bottom of door to top of threshold, and 1/4 inch at bottom of door to top of decorative floor finish or covering.

B. Openings

1. Glass. Trim openings with molding to match door finish.

C. **Hardware**. Machine and reinforce doors for all required hardware from templates and physical samples.

D. **Veneer**. Wood veneer shall be applied to both faces and stile edges.

E. **Finish**. All wood doors shall be factory-finished.

1. Finish. AWI System No. 5 catalyzed polyurethane.

2. Staining. Match approved sample for color.

3. Effect. Filled finish.

4. Sheen. Satin medium rubbed effect.

2.3 MANUFACTURERS

A. **Manufacturers**. Subject to compliance with requirements, manufacturers offering doors which may be incorporated in the work include the following:

1. Weyerhauser Company.

2. Eggers Industries.

3. Graham Manufacturing Company.

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions

1. Verify that all openings are properly sized and correctly located.
2. Verify that all frames are correct, set, and properly anchored.
3. Verify that all jambs and doors are properly sized, drilled, punched, and reinforced correctly for specified hardware, anchors, glass and glazing, and other openings as called for.

B. **Verification**. Verify dimensions and quantities required and be responsible for same.

3.2 PREPARATION

A. **Protection**. Protect all units from damage and staining during construction. Protect all adjacent surfaces and floors from marring, staining, scratches, or damage of any kind.

3.3 INSTALLATION

A. **Hardware**. Mount all hardware as required by specifications for each door.

B. **Setting Doors**. Install wood doors to comply with manufacturer's instructions, AWI standards, and as indicated. Do not hang doors until finish work is complete and area is free of construction traffic that could damage door.

3.4 REPAIR/RESTORATION

A. **Damaged Work**. Remove from the job site all doors that are scratched, dented, stained, marred, or defaced that cannot be restored to original condition or to the satisfaction of the Owner and Engineer/Architect and replace them at no additional cost to the Owner.

3.5 **ADJUSTING**. Make final adjustments to all operating hardware for proper operation.

3.6 **CLEANING**. At the completion of the project, remove all protective covering and clean doors as recommended by the manufacturer.

3.7 DEMONSTRATION

A. **Visual**. Demonstrate that all doors operate freely, uniformly, and quietly without binding, twisting, or sagging. Verify that all frames are solidly anchored. Verify that all hardware is functioning properly.

END OF SECTION

SECTION 08 31 01

FLOOR DOORS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. Provide the labor, tools, equipment, and materials necessary to furnish and install floor doors in accordance with the plans and the specifications.

B. Interior floor doors that are flush mounted to concrete floors used to provide access to clearwells shall be covered by ½-inch thick white polypropylene sheet that extends a minimum of 3-inches beyond outside edge of gate frame, and shall be fastened to floor with ¼-inch Stainless Steel Type 316 expansion anchors at 12-inches on-center. Seal edge of plate with continuous silicon bead along edge to minimize gas leakage of chlorine fumes from entering building.

1.3 QUALITY ASSURANCE

A. **Single-Source Responsibility**. Obtain floor doors for entire project from a single manufacturer.

B. **Size Variations**. Obtain Engineer/Architect's acceptance of manufacturer's standard size units, which may vary slightly from sizes indicated.

C. **Coordination**. Furnish inserts and anchoring devices that must be built into other work for installation of floor doors. Coordinate delivery with other work to avoid delay.

1.4 SUBMITTALS

A. Submit the following packages in accordance with Division 1.

B. Submittal Package No. 1 – Product Data

1. Manufacturer’s product data, test reports, and material certifications as required.

2. Product data in form of manufacturer's technical data and installation instructions for each type of floor door assembly, including setting drawings, templates, instructions, and directions for installation of anchorage, devices.

3. Complete schedule, including types, general locations, sizes, floor construction details, finishes, latching or locking provisions, and other data pertinent to installation.

1.5 JOB CONDITIONS

A. Obtain specific locations and sizes for required floor doors from trades requiring floor to concealed equipment, and indicate on submittal schedule.

1.6 DELIVERY, STORAGE, AND HANDLING (Not Used)

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject with compliance with these specifications, floor doors shall be manufactured by:

1. Bilco.
2. Halliday.
3. U.S.F. Fabrication
4. Or equal.

2.2 MATERIALS AND FABRICATION

A. All Floor Doors.

1. Furnish each assembly manufactured as an integral unit, complete with all parts, and ready for installation.
2. Locks.
   a. Where shown or scheduled, provide one-cylinder lock per door.
   b. Furnish two keys per lock.
   c. Key all locks alike unless otherwise noted.
3. Where shown or scheduled, provide secondary safety grating or netting under the floor door rated for 300 psf live loads.
4. Where shown or scheduled, provide a gastight floor door.
5. Factory finish shall be mill finish. Bituminous coating shall be applied by the manufacturer to the exterior of the frame and all aluminum in contact with concrete or mortar.
6. Leaf shall be 1/4-inch aluminum diamond plate reinforced with aluminum stiffeners as required to prevent distortion of the leaf when in any position.
7. Able to withstand a live load of 300 pounds per square foot (lbs/sf).
8. Arrangement shall be either single leaf or double leaf hinged as shown.
9. Open to 90 degrees and lock automatically in that position.
10. Frames shall be 1/4-inch extruded aluminum.

B. Interior Floor Doors

1. Provide frames with strap anchors bolted to the exterior.
2. Cast steel hinges shall be bolted to the underside and pivot on torsion bars that counterbalance the door for easy operation.
3. Provide a vinyl grip handle to release the hold-open arm and close the cover with one hand. Handle shall be permanently attached, and when not in use, the handle shall set flush with the surface.

C. Exterior Doors

1. Provide channel frames with an anchor flange around the perimeter.
2. Equip doors with heavy forged brass hinges, stainless steel pins, spring operators for easy operation.
3. Provide a vinyl grip handle to release the hold open arm and close the cover with one hand.
4. Provide a snap lock with removable handle.
5. Provide a 1-1/2-inch drainage coupling in the door frame.
6. Pipe drainage to outlet with 1-1/2-inch polyvinyl chloride (PVC) pipe to drain.
7. Hardware shall be stainless steel.

PART 3 EXECUTION

3.1 INSTALLATION

A. Comply with manufacturer's instructions for installation of floor doors.

B. **Doors shall be modified** by the manufacturer as required when necessary to suit the installation shown.

C. **Coordinate installation** with work of other trades.

D. **Set frames accurately in position** and securely attach to supports with face plate flush and level in relation to adjacent finish surfaces.

E. **Install doors** to open in the direction shown.

F. Touch up the bituminous coating if damaged.

3.2 ATTACHMENTS

A. Floor Door Schedule.

1. Not Used.

SECTION 08 33 23

DOORS, OVERHEAD COILING-ALUMINUM

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work.** The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install overhead coiling doors, track assemblies, operators, and accessories in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Source Quality Control**. Provide overhead coiling doors as complete units produced by a single manufacturer specializing in the production of this type of work, including hardware, accessories, mounting, and installation components.

B. **Codes and Regulatory Agencies**. Perform all work in compliance with applicable federal, state, and local codes and regulatory agencies.

C. **Standards.** All material and workmanship shall be in conformance with the following standards referenced herein.

1. AA - Aluminum Association.
2. ASTM - American Society for Testing and Materials.
3. NEMA - National Electrical Manufacturers Association.
4. NFPA - National Fire Protection Association.
5. UL - Underwriters' Laboratories, Inc.

D. **Design Criteria**. Design and reinforce coiling doors to withstand 30 pounds per square foot (psf) design wind load and be capable to operate under wind loading pressure of 10 psf for doors 144 square feet (sf) or less and 7 psf for doors over 144 sf.

1.4 SUBMITTALS

A. **Product Data**. Submit manufacturer's product data, roughing-in diagrams, and installation instructions for each type and size of overhead coiling door. Provide operating instructions and maintenance information, and complete information describing fire release system including electrical rough-in instructions.

B. **Shop Drawings**. Submit shop drawings for special components and installations which are not fully dimensioned or detailed on manufacturer's data sheets. Provide setting drawings, templates, and directions for installation of anchorage devices.

C. **Operation and Maintenance Manual**. Submit overhead coiling door operation and maintenance (O&M) manual which contains O&M data on each type of door furnished.

1.5 JOB CONDITIONS

A. **Coordination.** Coordinate all work with other trades. Verify openings and supports.

B. **Stain Protection.** Protect surface of doors from stains, marks, or damage during construction.

C. **Inserts and Anchorages**. Furnish inserts and anchoring devices which must be set in concrete or built into masonry for installation of units.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery**. Deliver all doors and frames in protective covers clearly noted as to mark number and location. Coordinate delivery with other work to avoid delays.

B. **Storage**. All doors, frames, and accessories shall be stored off the ground, covered and protected from the elements, and allow for the movement of air to prevent condensation.

C. **Handling**. Keep all doors, frames, and accessories in original packages until ready to install or hang.

1.7 SPECIAL WARRANTY (Not Used)

PART 2 PRODUCTS

2.1 MATERIALS

A. **Door Curtain.** Fabricate overhead coiling door curtain of interlocking slats designed to withstand required wind loading, of continuous length for width of door without splices. Unless otherwise indicated, provide reinforcing of slats, slats as recommended by door manufacturer for size and type of door to meet required wind loads.

1. Face Slat. Provide 16-gauge minimum aluminum flat slat.

2. Insulation. Minimum 3/4-inch-thick solid expanded polyurethane between face and back slats with a minimum R value of 4.75.

3. Back Slat. Self-locking minimum 22 gauge Brown and Sharpe aluminum flat slat completely encasing the insulation.

4. Finish. All slats, unless noted otherwise, shall be finished with a dark bronze anodizing in accordance with AA-M12A41C22.

5. Endlocks. Provide locks for curtain alignment and resistance against lateral movement.

6. Windlocks. Provide high strength nylon or malleable iron secured to curtain slats with aluminum rivets. Provide windlocks on every slat on both edges of curtain.

7. Bottom Bar. Provide integral aluminum bottom bar, finished to match slats.

B. Curtain Jamb Guides

1. Fabrication. Fabricate curtain jamb guides of steel angles or channels and angles with sufficient depth and strength to retain curtain loading. Build up units with minimum 3/16-inch thick steel sections, galvanized after fabrication. Slot bolt holes for track adjustment.

2. Anchorage. Secure continuous wall angle to wall framing by 3/8 inch minimum bolts at not more than 30 inches on center (o.c.), unless closer spacing recommended by door manufacturer. Extend wall angles above door opening head to support coil brackets, unless otherwise indicated. Place anchor bolts on exterior wall guides so they are concealed when door is in closed position. Provide removable stops on guides to prevent over travel of curtain, and continuous bar for holding windlocks.

C. Weather Seals

1. Weather Seals. Provide vinyl or neoprene weather stripping for exterior exposed doors, except where otherwise indicated. At door heads, use 1/8-inch-thick continuous sheet secured to inside of curtain coil hood. At door jambs, use 1/8-inch-thick continuous strip secured to exterior side of jamb guide.

D. Counterbalancing Mechanism

1. Torsion Spring. Counterbalance doors by means of adjustable steel helical torsion spring, mounted around a steel shaft and mounted in a spring barrel and connected to door curtain with required barrel rings. Use grease sealed bearings or self-lubricating graphite bearings for rotating members.

2. Counterbalance Barrel. Fabricate spring barrel of hot formed structural quality carbon steel, welded or seamless pipe, of sufficient diameter and wall thickness to support roll up of curtain without distortion of slats and limit barrel deflection to not more than 0.03 inch per foot of span and under full load.

a. Provide spring balance of one or more oil tempered, heat treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Provide cast steel barrel plugs to secure ends of springs to barrel and shaft.

b. Fabricate torsion rod for counterbalancing shaft of case hardened steel, of required size to hold fixed spring ends and carry torsional load.

3. Brackets. Provide mounting brackets of manufacturer's standard design, either cast iron or cold rolled steel plate with bell mouth guide groove for curtain.

4. Hood. Form to entirely enclose coiled curtain and operating mechanism at opening head, and act as weather seal. Contour to suit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Provide closed ends for surface mounted hoods, and any portion of between jamb mounting projecting beyond wall face. Provide intermediate support brackets as required to prevent sag.

a. Fabricate aluminum hoods for aluminum doors of Alloy 3003 aluminum sheet not less than 0.032-inch-thick, clear anodized finish in accordance with AA-M12A41C22

2.2 ELECTRICAL DOOR OPERATORS

A. **Operator**. Motor operator shall be a 480-volt, 3-phase, 60-hertz high starting torque hoist type, bracket mounted, capable of operating the door at an approximate speed of 1 foot per second (fps). Unit shall be controlled by either NEMA 4X or 7 (XP), as shown on plans, operated momentary contact, three button, push-button station marked "Open," "Close," and "Stop," and an automatic screw type limit switch to break the circuit at termination of travel. High efficiency worm gearing, running in an oil bath shall be furnished, together with a spring set, solenoid operating brake completely housed against dust and moisture, and a magnetic reversing starter in NEMA Type 4X or 7 enclosure, as shown on plans. An emergency hand chain operator which does not affect the timing of the limit switch shall be provided to operate the door in case of power failure or removal of motor for inspection or servicing. Operator shall be designed to transmit motion to the door without shock and automatically release motor from driving unit prior to stalling so as to prevent any damage to unit from any type of overload. An efficient overload protective device, which shall be both heat and current sensing, shall be installed integral with the unit which will break the control circuit and eliminate any possible damage to motor windings. A terminal strip shall be provided in the limit switch for easy field connection of all control wiring.

B. **Safety Device**. Provide compressible, sealed, rubber air tube inside of bottom weather astragal extending full width of door. This air tube shall be connected to an air switch through a self-coiling type air hose. The air switch shall be adjustable for maximum sensitivity. Upon contact of the air tube with any obstruction, the air switch shall reverse the downward travel and return the door curtain to its full open position, without damage to the door or its supporting structure, including the prevention of support structure movement while reversing.

2.3 MANUFACTURERS

A. **Manufacturer.** Subject to compliance with requirements, provide products of one of the following:

1. Atlas Door Corp.
2. The Cookson Co.
3. Kinnear Div., Harsco Corp.
4. North American Rolling Door, Inc.
5. Overhead Door Corp.

2.4 CHAIN OPERATOR

A. **Chain-Hoist Operator**: Consisting of endless steel hand chain, chain-pocket wheel and guard, and gear-reduction unit with a maximum 25-lbf force for door operation. Provide alloy-steel hand chain with chain holder secured to operator guide.

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions

1. Verify all dimensions and quantities at the building and be responsible for same.

2. Verify that all jambs are properly sized and drilled for specific hardware, anchors, tracks, and supports required by door installation.

3.2 INSTALLATION

A. **General.** Install door and operating equipment complete with necessary hardware, jamb, and head mold strips, anchors, inserts, hangers, and equipment supports in accordance with final shop drawings, manufacturer's instructions, and as specified herein.

3.3 REPAIR/RESTORATION

A. Damaged Work

1. All doors and frames that are scratched, dented, stained, marred, or defaced that cannot be restored to original condition or to the satisfaction of the Owner and Engineer/Architect, shall be removed from the job site and replaced at no additional cost to the Owner.

3.4 ADJUSTMENT

A. **Testing and Adjusting.** Upon completion of installation including work by other trades, lubricate, test, and adjust doors to operate easily, free from warp, twist, or distortion and fitting weathertight for entire perimeter.

3.5 CLEANING

A. At the completion of the project, all doors shall be cleaned as recommended by the manufacturer. The Contractor shall remove all field applied protection and be responsible for any damage resulting from other cleaning methods. No abrasive cleaning agents shall be used.

3.6 DEMONSTRATION

A. **Visual.** The Contractor shall demonstrate to the Owner and/or Engineer/Architect that all doors operate freely, uniformly, and quietly without binding, twisting, or sagging, all hardware is functioning properly, and all doors are caulked and sealed as specified. Confirm that speed of travel is approximately 1 fps smoothly for total height of opening. Demonstrate safety device a minimum of five occurrences with some type of artificial obstruction or actual obstruction which could occur through normal use on this project.

3.7 PROTECTION

A. All doors, frames, and exposed hardware shall be adequately protected from damage and/or staining during the progress of the project. Protective covering shall be left intact until Engineer/Architect requests removal or when the project is turned over to the Owner.

END OF SECTION

This page intentionally left blank.

SECTION 08 36 13

SECTIONAL OVERHEAD DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General**. Provide the labor, tools, equipment, and materials necessary to furnish and install the sectional overhead doors in accordance with the plans and as specified herein.

B. **This section includes sectional overhead doors**, as follows:

1. Steel frame and steel panels.
2. Manually operated doors.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work to furnish and install the sectional overhead doors in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

B. **Manufacturer Qualifications**. Provide each sectional overhead door as a complete unit produced by a single manufacturer, including frames, sections, brackets, guides, tracks, counterbalance mechanisms, hardware, operators, and installation accessories.

C. **Inserts and Anchorages**. Furnish inserts and anchoring devices that must be set in concrete or built into masonry for unit installation. Provide setting drawings, templates, and directions for installation of anchorage devices. Coordinate delivery with other work to avoid delay.

D. **Miscellaneous**. See concrete and masonry sections for instruction on installing inserts and anchorage devices.

E. **Wind Loading**. Design and reinforce sectional overhead doors to withstand a 20-pound-per-square-foot (psf) wind loading pressure.

1.4 SUBMITTALS

A. **Transmittals**. Furnish manufacturer's product data, test reports, and material certifications as required.

B. **Submit the following** according to Conditions of the Contract and Division 1 specification sections.

1. Product data, roughing-in diagrams, and installation instructions for each type and size of overhead door. Include manufacturer's operating instructions and maintenance data.

1.5 **JOB CONDITIONS**

Not used.

1.6 **DELIVERY, STORAGE, AND HANDLING**

Not used.

1.7 **SPECIAL WARRANTY**

Not used.

PART 2 - PRODUCTS

2.1 **ACCEPTABLE MANUFACTURERS**

A. **Manufacturer**. Subject to compliance with requirements, provide products by one of the following:

1. Clopay Overhead Door Co.
2. Raynor Garage Door Co.
3. Wayne/Dalton Corp.
4. Overhead Door Corp.

2.2 **STEEL SECTIONS**

A. **Door Sections**. Construct door sections from galvanized, structural quality carbon steel sheets complying with American Society for Testing and Materials (ASTM) A 446, Grade A, or ASTM A 526, with a minimum yield strength of 33,000 pounds per square inch (psi), and a minimum G60 zinc coating complying with ASTM A 525.

1. Steel Sheet Thickness. 0.015 inch.
2. Exterior Section Face. Ribbed or fluted.

B. **Fabricate sections from a single sheet** to provide units not more than 24 inches high, and nominally 2 inches deep. Roll horizontal meeting edges to a continuous shiplap, rabbeted, or keyed weather seal, with a reinforcing flange return.

C. **Framing**. Enclose open section with 16 gauge galvanized steel channel, end stiles welded in place. Provide intermediate stiles, cut to door section profile, spaced at not more than 48 inches on center (o.c.) and welded in place.

D. **Reinforcement**. Reinforce bottom section with a continuous channel or angle conforming to bottom section profile.

1. Reinforce sections with continuous horizontal and diagonal reinforcing, as required by door width and design wind loading. Provide galvanized steel bars, struts, trusses or strip steel, formed to depth, and bolted or welded in place.

E. **Insulation**. Insulate inner core of steel sections with manufacturer's standard glass fiber, polystyrene, or polyurethane foam-type insulation.

1. Enclose insulation with manufacturer's standard steel sheet secured to door panel.

F. **Finish door sections** as follows:

1. Apply manufacturer's standard prime and finish coats, applied to interior and exterior door faces.

2.3 WOOD SECTIONS

Not Used.

2.4 ALUMINUM SECTIONS

Not Used.

2.5 FIBERGLASS TRANSLUCENT SECTIONS

Not Used.

2.6 TRACKS, SUPPORTS, AND ACCESSORIES

A. **Tracks**. Provide manufacturer's standard, galvanized steel track system, sized for door size and weight, and designed for clearances shown. Provide complete track assembly including brackets, bracing and reinforcing for rigid support of ball bearing roller guides for required door type and size. Slot vertical sections of track at 2 inches o.c. for door drop safety device. Slope tracks at proper angle from vertical, or otherwise design to ensure tight closure at jambs when door unit is closed. Weld or bolt to track supports.

B. **Track Reinforcement and Supports**. Provide galvanized steel track reinforcement and support members. Secure, reinforce and support tracks as required for size and weight of door to provide strength and rigidity without sag, sway, and vibration during opening and closing of doors.

C. **Support and attach tracks** to opening jambs with continuous angle welded to tracks and attached to wall. Support horizontal (ceiling tracks) with continuous angle welded to track and supported by laterally braced attachments to overhead structural members at curve and end of tracks.

D. **Weather Seals**. Provide continuous rubber, neoprene, or flexible vinyl adjustable weather-strip gasket at tops and compressible astragal on bottoms of each overhead door.

2.7 HARDWARE

A. **General**. Provide heavy-duty, rust-resistant hardware, with galvanized or cadmium-plated or stainless steel fasteners, to suit type of door.

B. **Hinges**. Provide heavy steel hinges at each end stile and at each intermediate stile, per manufacturer's recommendations for size of door. Attach hinges to door sections through stiles and rails with bolts and lock nuts or lock washers and nuts. Use rivets or self-tapping fasteners where access to nuts is not possible. Provide double-end hinges, where required, for doors exceeding 16 feet in width, unless otherwise recommended by door manufacturer.

C. **Rollers**. Provide heavy-duty rollers, with steel ball bearings in case hardened steel races, mounted with varying projections to suit slope of track. Extend roller shaft through both hinges where double hinges are required. Provide roller tires to suit size of track (3-inch diameter for 3-inch track; 2-inch diameter for 2-inch track) and as follows:

1. Neoprene or bronze tires for hazardous atmospheres.

D. **Pull Handles, Locks and Latches**. For manually operated doors, furnish lifting handles, locks, and locking device as follows:

1. Lifting Handles. Galvanized steel.
2. Locking Bars. Single side, operable from inside only.

E. **Fabricate locking device assembly** with mortise lock, spring-loaded dead bolt, chromium-plated operating handle, cam plate, and adjustable locking bar to engage through slots in tracks.

2.8 COUNTERBALANCING MECHANISM

A. **Torsion Spring**. Operation by torsion spring counterbalance mechanism, consisting of adjustable tension, tempered steel torsion springs mounted on a cross header tube or steel shaft. Connect to door with galvanized aircraft type lift cables. Provide springs calibrated for 10,000 cycles minimum.

B. **Provide cast aluminum or gray iron casting** cable drums, grooved to receive cable. Mount counterbalance mechanism with manufacturer's standard ball bearing brackets at each end of shaft. Provide one additional midpoint bracket for shafts up to 16 feet long and two additional brackets at one third points to support shafts over 16 feet long, unless closer spacing recommended by door manufacturer.

C. **Include a spring loaded, steel or bronze cam** mounted to bottom door roller assembly on each side, designed to automatically stop door if either cable breaks.

D. **Provide a spring bumper** at each horizontal track to cushion door at end of opening operation.

2.9 MANUAL DOOR OPERATION

A. **Push-Up**. Provide lift handles and pull rope for raising and lowering doors, operating with not more than 25-pound lift or pull.

2.10 ELECTRIC DOOR OPERATORS

Note Used.

PART 3 - EXECUTION

3.1 INSTALLATION

A. **General**. Install door, track, and operating equipment complete with necessary hardware, jamb and head mold stops, anchors, inserts, hangers, and equipment supports according to shop drawings, manufacturer's instructions, and as specified.

B. **Fasten vertical track assembly** to framing at not less than 24 inches o.c. Hang horizontal track from structural overhead framing with angle or channel hangers, welded and bolt fastened in place. Provide sway bracing, diagonal bracing, and reinforcing as required for rigid installation of track and door operating equipment.

C. **After completing installation**, including work by other trades, lubricate, test, and adjust doors to operate easily, free from warp, twist, or distortion and fitting weathertight for entire perimeter.

END OF SECTION

This page intentionally left blank.

SECTION 08 41 00

ALUMINUM STOREFRONTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General.** The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install aluminum and storefronts in accordance with the plans and as specified herein.

B. **This section** includes the following types of aluminum storefront work:

1. Storefront type framing system.

C. **Related Sections.** The following sections contain requirements that relate to this section:

1. Glazing requirements for aluminum and storefront, including entrances specified to be factory glazed, are included in Division 8 section "Glass and Glazing."

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work to furnish and install aluminum and storefronts in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

B. **Installer Qualifications.** Engage an experienced installer who has completed installations of aluminum storefront and entrances similar in design and extent to those required for the project and whose work has resulted in construction with a record of successful in-service performance.

C. **Manufacturer Qualifications.** Provide aluminum entrances and storefront systems produced by a firm experienced in manufacturing systems that are similar to those indicated for this project and that have a record of successful in-service performance.

D. **Fabricator Qualifications.** Provide aluminum entrances and storefront systems fabricated by a firm experienced in producing systems that are similar to those indicated for this project, and that have a record of successful in-service performance. The fabricator shall have sufficient production capacity to produce components required without causing delay in progress of the work.

E. **Single Source Responsibility.** Obtain aluminum entrance and storefront systems from one source and from a single manufacturer.

F. **Design Criteria.** The drawings indicate the size, profile, and dimensional requirements of aluminum entrance and storefront work required and are based on the specific types and models indicated. Aluminum entrance and storefront by other manufacturers may be considered, provided deviations in dimensions and profiles are minor and do not change the design concept as judged by the Engineer/Architect. The burden of proof of equality is on the proposer.

1.4 SUBMITTALS

A. **General.** Submit the following in accordance with Conditions of the Contract and Division 1 specification sections.

1. Product data for each aluminum storefront system required, including:

   a. Manufacturer's standard details and fabrication methods.
   b. Data on finishing, hardware and accessories.
   c. Recommendations for maintenance and cleaning of exterior surfaces.

2. Shop drawings for each aluminum storefront system required, including:

   a. Layout and installation details, including relationship to adjacent work.
   b. Elevations at 1/4 inch scale.
   c. Detail sections of typical composite members.
   d. Anchors and reinforcement.
   e. Provisions for expansion and contraction.
   f. Glazing details.

3. Samples for Initial Color Selection. Submit pairs of samples of each specified color and finish on 12 inch long sections of extrusions or formed shapes. Where normal color variations are anticipated, include two or more units in each set of samples indicating extreme limits of color variations.

4. Samples for Verification Purposes. The Engineer/Architect reserves the right to require additional samples, that show fabrication techniques and workmanship, and design of hardware and accessories.

5. Test Reports. Provide certified test reports from a qualified independent testing laboratory showing that aluminum storefront systems have been tested in accordance with specified test procedures and comply with performance characteristics indicated.

1.5 JOB CONDITIONS

A. **Field Measurements.** Check openings by accurate field measurement before fabrication. Show recorded measurements on shop drawings. Coordinate fabrication schedule with construction progress to avoid delay of the work.

1. Where necessary, proceed with fabrication without field measurements, and coordinate fabrication tolerances to ensure proper fit.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Deliver aluminum entrance and storefront components** in the manufacturer's original protective packaging.

B. **Store aluminum components** in a clean dry location away from uncured masonry or concrete. Cover components with waterproof paper, tarpaulin or polyethylene sheeting in a manner to permit circulation of air.

1. Stack framing components in a manner that will prevent bending and avoid significant or permanent damage.

1.7 SPECIAL WARRANTY

A. **Warranty.** Submit a written warranty, executed by the manufacturer, agreeing to repair or replace units that fail in materials or workmanship within the specified warranty period. Failures include, but are not necessarily limited to:

1. Structural failures including excessive deflection, excessive leakage or air infiltration.
2. Faulty operation.
3. Deterioration of metals, metal finishes and other materials beyond normal weathering.

B. **Warranty Period.** 3 years after the date of Substantial Completion.

C. **Owner's Rights**. The warranty shall not deprive the Owner of other rights or remedies the Owner may have under other provisions of the Contract Documents, and is in addition to and runs concurrent with other warranties made by the Contractor under requirements of the Contract Documents.

1.8 SYSTEM PERFORMANCE REQUIREMENTS

A. **General.** Provide aluminum entrance and storefront assemblies that comply with performance characteristics specified, as demonstrated by testing the

manufacturer's corresponding stock assemblies according to test methods indicated.

B. **Thermal Movement.** Design the aluminum entrance and storefront framing systems to provide for expansion and contraction of the component materials. Entrance doors shall function normally over the specified temperature range.

1. The system shall be capable of withstanding a metal surface temperature range of 180 degrees Fahrenheit (° F.) (100 degrees Celsius [° C.]) without buckling, failure of joint seals, undue stress on structural elements, damaging loads on fasteners, reduction of performance, stress on glass, or other detrimental effects.

C. **Design Requirements.** Provide aluminum entrance and storefront systems that comply with structural performance, air infiltration, and water penetration requirements indicated.

1. Wind Loads. Provide aluminum entrance and storefront assemblies capable of withstanding wind pressures of 20 pounds per square foot (psf) inward and 20 psf outward acting normal to the plane of the wall.

D. **Structural Performance.** Conduct tests for structural performance in accordance with American Society for Testing and Materials (ASTM) E 330. At the conclusion of the tests there shall be no glass breakage or permanent damage to fasteners, anchors, hardware or actuating mechanism. Framing members shall have no permanent deformation in excess of 0.2 percent of their clear span.

1. Deflection Normal to the Plane of the Wall. Test pressure required to measure deflection of framing members normal to the plane of the wall shall be equivalent to the wind load specified above. Deflection shall not exceed 1/175 of the clear span, when subjected to uniform load deflection test.

2. Deflection Parallel to the Plane of the Wall. Test pressures required to measure deflection parallel to the plane of the wall shall be equal to 1.5 times the wind pressures specified above. Deflection of any member carrying its full dead load shall not exceed an amount that will reduce glass bite below 75 percent of the design dimension and shall not reduce the edge clearance between the member and the fixed panel, glass or other fixed member above to less than 1/8 inch. The clearance between the member and an operable door or window shall be at least 1/16 inch.

E. **Air Infiltration.** Provide aluminum entrance and storefront framing system with an air infiltration rate of not more than 0.06 cubic feet per minute (cfm) per square foot (psf) of fixed area (excluding operable door edges) when tested in accordance with ASTM E 283 at an inward test pressure differential of 1.57 psf.

F. **Water Penetration.** Provide framing systems with no uncontrolled water penetration (excluding operable door edges) as defined in the test method when tested in accordance with ASTM E 331 at an inward test pressure differential of 6.24 psf.

G. **Condensation Resistance.** Where framing systems are "thermal break" construction, provide units tested for thermal performance in accordance with AAMA 1503 showing condensation resistance factor (CRF) of not less than 45.

H. **Thermal Transmittance.** Provide framing systems that have an overall U value of not more than 0.65 British thermal unit (BTU)/(hour x sf x º F.) at 15 miles per hour (mph) velocity when tested in accordance with AAMA 1503.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. **Available Manufacturers.** Subject to compliance with requirements, manufacturers offering entrance and storefront systems that may be incorporated in the work include, but are not limited to, the following:

1. EFCO Corporation.
2. Kawneer Company, Inc.
3. United States Aluminum Corp.

2.2 MATERIALS

A. **Aluminum Members.** Alloy and temper recommended by the manufacturer for strength, corrosion resistance, and application of required finish; comply with ASTM B 221 for aluminum extrusions, ASTM B 209 for aluminum sheet or plate, and ASTM B 211 for aluminum bars, rods and wire.

B. **Carbon steel reinforcement of aluminum framing members** shall comply with ASTM A 36 for structural shapes, plates and bars, ASTM A 611 for cold rolled sheet and strip, or ASTM A 570 for hot rolled sheet and strip.

C. **Glass and Glazing Materials.** Comply with requirements of "Glass and Glazing" section of these specifications.

D. **Fasteners.** Provide fasteners of aluminum, nonmagnetic stainless steel, zinc plated steel, or other material warranted by the manufacturer to be noncorrosive and compatible with aluminum components, hardware, anchors and other components.

1. Reinforcement. Where fasteners screw anchor into aluminum members less than 0.125 inches thick, reinforce the interior with aluminum or

nonmagnetic stainless steel to receive screw threads, or provide standard noncorrosive pressed-in splined grommet nuts.

2. Exposed Fasteners. Do not use exposed fasteners except for application of hardware. For application of hardware, use Phillips flat head machine screws that match the finish of member or hardware being fastened.

E. **Concealed Flashing.** 0.0179 inch (26 gauge) minimum dead soft stainless steel, or 0.026 inch thick minimum extruded aluminum of alloy and type selected by manufacturer for compatibility with other components.

F. **Brackets and Reinforcements.** Provide high strength aluminum brackets and reinforcements; where use of aluminum is not feasible provide nonmagnetic stainless steel or hot dip galvanized steel complying with ASTM A 123.

G. **Concrete and Masonry Inserts.** Provide cast iron, malleable iron, or hot dip galvanized steel inserts complying with ASTM A 123.

H. **Compression Weatherstripping.** Manufacturer's standard replaceable compressible weatherstripping gaskets of molded neoprene complying with ASTM D 2000 or molded PVC complying with ASTM D 2287.

I. **Sliding Weatherstripping.** Manufacturer's standard replaceable weatherstripping of wool, polypropylene, or nylon woven pile, with nylon fabric or aluminum strip backing, complying with AAMA 701.2.

2.3 COMPONENTS

A. **Storefront Framing System.** Provide storefront and entrance framing systems fabricated from extruded aluminum members of size and profile indicated. Include subframes and other reinforcing members of the type indicated. Provide for flush glazing storefront from the exterior on all sides without projecting stops. Shop fabricate and preassemble frame components where possible. Provide storefront frame sections without exposed seams.

1. Mullion Configurations. Provide pockets at the inside glazing face to receive resilient elastomeric glazing. Mullions and horizontals shall be one piece. Make provisions to drain moisture accumulation to the exterior.

2.4 FABRICATION

A. **General.** Fabricate aluminum entrance and storefront components to designs, sizes and thicknesses indicated and to comply with indicated standards. Sizes and profile requirements are indicated on the drawings. Variable dimensions are indicated, with maximum and minimum dimensions required, to achieve design requirements and coordination with other work.

1. Thermal Break Construction. Fabricate storefront framing system with an integrally concealed, low conductance thermal barrier, located between exterior materials and exposed interior members to eliminate direct metal-to-metal contact. Use manufacturer's standard construction that has been in use for similar projects for period of not less than 3 years.

B. **Prefabrication.** Complete fabrication, assembly, finishing, hardware application, and other work to the greatest extent possible before shipment to the project site. Disassemble components only as necessary for shipment and installation.

1. Perform fabrication operations, including cutting, fitting, forming, drilling and grinding of metal work to prevent damage to exposed finish surfaces. Complete these operations for hardware prior to application of finishes.

C. **Welding.** Comply with AWS recommendations. Grind exposed welds smooth to remove weld spatter and welding oxides. Restore mechanical finish.

1. Welding behind finished surfaces shall be performed in such a manner as to minimize distortion and discoloration on the finished surface.

D. **Dissimilar Metals.** Separate dissimilar metals with bituminous paint, or a suitable sealant, or a nonabsorptive plastic or elastomeric tape, or a gasket between the surfaces. Do not use coatings containing lead.

E. **Continuity.** Maintain accurate relation of planes and angles with hairline fit of contacting members.

1. Uniformity of Metal Finish. Abutting extruded aluminum members shall not have an integral color or texture variation greater than half the range indicated in the sample pair submittal.

F. **Fasteners.** Conceal fasteners wherever possible.

2.5 FINISHES

A. **General.** Comply with NAAMM "Metal Finishes Manual" for recommendations relative to application and designations of finishes.

B. **Finish designations prefixed by "AA"** conform to the system established by the Aluminum Association for designating aluminum finishes.

C. **Finish aluminum storefronts** to match other adjacent glazed aluminum curtain wall components. Refer to "Glazed Aluminum Curtain Wall" section for finish requirements.

D. **Class I Color Anodized Finish.** AA-M12C22A42/A44 (Mechanical Finish: as fabricated, nonspecular; Chemical Finish: etched, medium matte; Anodic Coating: Class I Architectural, film thicker than 0.7 mil with integral color or electrolytically deposited color) complying with AAMA 606.1 or AAMA 608.1.

1. Color. As selected by Engineer/Architect from within standard industry colors and color density range.

PART 3 - EXECUTION

3.1 EXAMINATION

A. **General.** Examine substrates and supports, with the Installer present, for compliance with requirements indicated, installation tolerances, and other conditions that affect installation of aluminum storefronts. Correct unsatisfactory conditions before proceeding with the installation.

1. Do not proceed with installation until unsatisfactory conditions are corrected.

3.2 INSTALLATION

A. **General.** Comply with manufacturer's instructions and recommendations for installation.

B. **Set units plumb, level, and true to line**, without warp or rack of framing members, doors, or panels. Install components in proper alignment and relation to established lines and grades indicated. Provide proper support and anchor securely in place.

C. **Construction Tolerances**. Install aluminum entrance and storefront to comply with the following tolerances:

1. Variation from Plane. Do not exceed 1/8 inch in 12 feet of length or 1/4 inch in any total length.
2. Offset from Alignment. The maximum offset from true alignment between two identical members abutting end to end in line shall not exceed 1/16 inch.
3. Diagonal Measurements. The maximum difference in diagonal measurements shall not exceed 1/8 inch.
4. Offset at Corners. The maximum out-of-plane offset of framing at corners shall not exceed 1/32 inch.

D. **Separate aluminum and other corrodible metal surfaces** from sources of corrosion or electrolytic action at points of contact with other materials.

1. Zinc or cadmium plate steel anchors and other unexposed fasteners after fabrication.
2. Paint dissimilar metals where drainage from them passes over aluminum.

3. Paint aluminum surfaces in contact with mortar, concrete or other masonry with alkali resistant coating.
4.

E. **Drill and tap frames and doors and apply surface mounted hardware items**. Comply with hardware manufacturer's instructions and template requirements. Use concealed fasteners wherever possible.

F. **Set sill members and other members** in bed of sealant as indicated, or with joint fillers or gaskets as indicated to provide weathertight construction. Comply with requirements of Division 7 for sealants, fillers, and gaskets.

G. **Refer to "Glass and Glazing" section** of Division 8 for installation of glass and other panels indicated to be glazed into doors and framing, and not preglazed by manufacturer.

3.3 ADJUSTING

A. **General.** Adjust operating hardware to function properly, for smooth operation without binding, and for weathertight closure.

3.4 CLEANING

A. **Clean the completed system, inside and out**, promptly after installation, exercising care to avoid damage to coatings.

B. **Clean glass surfaces after installation**, complying with requirements contained in the "Glass and Glazing" section for cleaning and maintenance. Remove excess glazing and sealant compounds, dirt and other substances from aluminum surfaces.

3.5 PROTECTION

A. **General.** Institute protective measures required throughout the remainder of the construction period to ensure that aluminum storefronts will be without damage or deterioration, other than normal weathering, at time of acceptance.

END OF SECTION

This page intentionally left blank.

SECTION 08 44 13

GLAZED ALUMINUM CURTAIN WALLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes glazed aluminum curtain walls.

B. Related Requirements:

1. Section 08 80 00 “Glazing” for glazing.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
2. Shop Drawings: For glazed aluminum curtain walls. Include plans, elevations, sections, full-size details, and attachments to other work.
3. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
4. Include full-size isometric details of each vertical-to-horizontal intersection of glazed aluminum curtain walls, showing the following:
    a. Joinery, including concealed welds.
    b. Anchorage.
    c. Expansion provisions.
    d. Glazing.
    e. Flashing and drainage.
5. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.

B. Samples for Initial Selection: For units with factory-applied color finishes.

C. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.

D. Fabrication Sample: Of each vertical-to-horizontal intersection of assemblies, made from 12-inch (300-mm) lengths of full-size components and showing details of the following:

    1. Joinery, including concealed welds.
    2. Anchorage.
    3. Expansion provisions.
    4. Glazing.
    5. Flashing and drainage.

E. Delegated-Design Submittal: For glazed aluminum curtain walls indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer and laboratory mockup testing agency and field testing agency.

B. Energy Performance Certificates: For glazed aluminum curtain walls, accessories, and components from manufacturer.

C. Basis for Certification: NFRC-certified energy performance values for each glazed aluminum curtain wall.

D. Product Test Reports: For glazed aluminum curtain walls, for tests performed by a qualified testing agency.

E. Quality-Control Program: Developed specifically for Project, including fabrication and installation, according to recommendations in ASTM C 1401. Include periodic quality-control reports.

F. Source quality-control reports.

G. Field quality-control reports.

H. Sample Warranties: For special warranties.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For glazed aluminum curtain walls to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. Testing Agency Qualifications: Qualified according to ASTM E 699 for testing indicated and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025.

C. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

1.8 WARRANTY

A. Special Assembly Warranty: Installer agrees to repair or replace components of glazed aluminum curtain wall that do not comply with requirements or that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
    a. Structural failures including, but not limited to, excessive deflection.
    b. Noise or vibration created by wind and thermal and structural movements.
    c. Deterioration of metals[, metal finishes,] and other materials beyond normal weathering.
    d. Water penetration through fixed glazing and framing areas.
    e. Failure of operating components.
2. Warranty Period: 5 years from date of Substantial Completion.

B. Special Finish Warranty: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.

1. Deterioration includes, but is not limited to, the following:
    a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
    b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
    c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design glazed aluminum curtain walls.

B. General Performance: Comply with performance requirements specified, as determined by testing of glazed aluminum curtain walls representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.

1. Glazed aluminum curtain walls shall withstand movements of supporting structure including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
2. Failure also includes the following:
    a. Thermal stresses transferring to building structure.
    b. Glass breakage.
    c. Noise or vibration created by wind and thermal and structural movements.
    d. Loosening or weakening of fasteners, attachments, and other components.
    e. Failure of operating units.

C. Structural Loads:

1. Wind Loads: As indicated on Drawings.
2. Other Design Loads: As indicated on Drawings.

D. Deflection of Framing Members: At design wind pressure, as follows:

1. Deflection Normal to Wall Plane: Limited to edge of glass in a direction perpendicular to glass plane not exceeding 1/175 of the glass edge length for each individual glazing lite or an amount that restricts edge deflection of individual glazing lites to 3/4 inch (19.1 mm), whichever is less.
2. Deflection Parallel to Glazing Plane: Limited to 1/360 of clear span or 1/8 inch (3.2 mm), whichever is smaller.
    a. Operable Units: Provide a minimum 1/16-inch (1.6-mm) clearance between framing members and operable units.
3. Cantilever Deflection: Where framing members overhang an anchor point, as follows:
    a. Perpendicular to Plane of Wall: No greater than 1/240 of clear span plus 1/4-inch (6. 35-mm) for spans greater than 11 feet 8-1/4 inches (3.6 m) or 1/175 times span, for spans less than 11 feet 8-1/4 inches (3.6 m).

E. Structural: Test according to ASTM E 330 as follows:

1. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.
2. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding 0.2 percent of span.
3. Test Durations: As required by design wind velocity, but not less than 10 seconds.

F. Air Infiltration: Test according to ASTM E 283 for infiltration as follows:

1. Fixed Framing and Glass Area:
    a. Maximum air leakage of 0.04 cfm/sq. ft at a static-air-pressure differential of 1.57 lbf/sq. ft. (75 Pa).

G. Water Penetration under Static Pressure: Test according to ASTM E 331 as follows:

1. No evidence of water penetration through fixed glazing and framing areas when tested according to a minimum static-air-pressure differential of 20

percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft. (300 Pa).

H. Water Penetration under Dynamic Pressure: Test according to AAMA 501.1 as follows:

1. No evidence of water penetration through fixed glazing and framing areas when tested at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft. (300 Pa).
2. Maximum Water Leakage: According to AAMA 501.1 No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.

I. Interstory Drift: Accommodate design displacement of adjacent stories indicated.

1. Design Displacement: H/400 (0.42’ per story).
2. Test Performance: Complying with criteria for passing based on building occupancy type when tested according to AAMA 501.4 at design displacement and 1.5 times the design displacement.

J. Seismic Performance: Glazed aluminum curtain walls shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. Seismic Drift Causing Glass Fallout: Complying with criteria for passing based on building occupancy type when tested according to AAMA 501.6 at design displacement and 1.5 times the design displacement.
2. Vertical Interstory Movement: Complying with criteria for passing based on building occupancy type when tested according to AAMA 501.7 at design displacement and 1.5 times the design displacement.

K. Energy Performance: Certify and label energy performance according to NFRC as follows:

1. Thermal Transmittance (U-factor): Fixed glazing and framing areas shall have U-factor of not more than 0.45 Btu/sq. ft. x h x deg F (2.55 W/sq. m x K) as determined according to NFRC 100.
2. Solar Heat Gain Coefficient: Fixed glazing and framing areas shall have a solar heat gain coefficient of no greater than 0.40 as determined according to NFRC 200.
3. Condensation Resistance: Fixed glazing and framing areas shall have an NFRC-certified condensation resistance rating of no less than 35 as determined according to NFRC 500.

L. Noise Reduction: Test according to ASTM E 90, with ratings determined by ASTM E 1332, as follows:

1. Outdoor-Indoor Transmission Class: Minimum 30.

M. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes:

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.

a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of 180 deg F (82 deg C).
b. Low Exterior Ambient-Air Temperature: 0 deg F (minus 18 deg C).

2.2 MANUFACTURERS

A. Basis of Design: Kawneer 1600.

B. Source Limitations: Obtain all components of curtain wall system, including framing spandrel panels, sun control and accessories, from single manufacturer.

2.3 FRAMING

A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.

1. Construction: Thermally broken.
2. Glazing System: Retained mechanically with gaskets on four sides.
3. Glazing Plane: Front.
4. Finish: High-performance organic finish.
5. Fabrication Method: Either factory- or field-fabricated system.

B. Pressure Caps: Manufacturer's standard aluminum components that mechanically retain glazing.

1. Include snap-on aluminum trim that conceals fasteners.

C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

D. Materials:

1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
    a. Sheet and Plate: ASTM B 209 (ASTM B 209M).
    b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221 (ASTM B 221M).
    c. Extruded Structural Pipe and Tubes: ASTM B 429/B 429M.
    d. Structural Profiles: ASTM B 308/B 308M.
2. Steel Reinforcement: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM, and prepare surfaces according to applicable SSPC standard.
    a. Structural Shapes, Plates, and Bars: ASTM A 36/A 36M.
    b. Cold-Rolled Sheet and Strip: ASTM A 1008/A 1008M.
    c. Hot-Rolled Sheet and Strip: ASTM A 1011/A 1011M.

2.4 ENTRANCES

A. Entrances: Comply with Section 08 41 13 "Aluminum-Framed Entrances and Storefronts."

2.5 SUN CONTROL

A. Sunshades: Assemblies consisting of manufacturer's standard outrigger brackets, louvers, and fascia, designed for attachment to curtain wall with mechanical fasteners.

1. Orientation: Vertical.
2. Projection from Wall: As indicated on Drawings.
3. Finish: Match adjacent glazed aluminum curtain wall.

B. Materials:

1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
    a. Sheet and Plate: ASTM B 209 (ASTM B 209M).
    b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221 (ASTM B 221M).
    c. Extruded Structural Pipe and Tubes: ASTM B 429/B 429M.
    d. Structural Profiles: ASTM B 308/B 308M.

2.6 GLAZING

A. Glazing: Comply with Section 08 80 00 "Glazing."

B. Weatherseal Sealants: ASTM C 920 for Type S; Grade NS; Class 25; Uses NT, G, A, and O; chemically curing silicone formulation that is compatible with structural sealant and other system components with which it comes in contact; recommended by structural-sealant, weatherseal-sealant, and structural-sealant-glazed curtain-wall manufacturers for this use.

2.7 ACCESSORIES

A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
2. Reinforce members as required to receive fastener threads.
3. Use exposed fasteners with countersunk Phillips screw heads, finished to match framing system.

B. Anchors: Three-way adjustable anchors with minimum adjustment of 1 inch (25.4 mm) that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.

1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.

C. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.

D. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil (0.762-mm) thickness per coat.

2.8 FABRICATION

A. Form or extrude aluminum shapes before finishing.

B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

C. Fabricate components that, when assembled, have the following characteristics:

1. Profiles that are sharp, straight, and free of defects or deformations.
2. Accurately fitted joints with ends coped or mitered.
3. Physical and thermal isolation of glazing from framing members.
4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
5. Provisions for field replacement of glazing from exterior.
6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
7. Components curved to indicated radii.

D. Fabricate components to resist water penetration as follows:

1. Internal guttering system or other means to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.
2. Pressure-equalized system or double barrier design with primary air and vapor barrier at interior side of glazed aluminum curtain wall and secondary seal weeped and vented to exterior.

E. Curtain-Wall Framing: Fabricate components for assembly using manufacturer's standard assembly method.

F. Factory-Assembled Frame Units:

1. Rigidly secure nonmovement joints.
2. Prepare surfaces that are in contact structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion.
3. Preparation includes, but is not limited to, cleaning and priming surfaces.
4. Seal joints watertight unless otherwise indicated.
5. Install glazing to comply with requirements in Section 08 80 00 "Glazing."

G. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.9 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm, or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare surfaces that will contact structural sealant according to sealant manufacturer's written instructions to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.

3.3 INSTALLATION

A. General:

1. Comply with manufacturer's written instructions.
2. Do not install damaged components.
3. Fit joints to produce hairline joints free of burrs and distortion.
4. Rigidly secure nonmovement joints.
5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
6. Where welding is required, weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
7. Seal joints watertight unless otherwise indicated.

B. Metal Protection:

1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with primer, applying sealant or tape, or installing nonconductive spacers as recommended by manufacturer for this purpose.
2. Where aluminum is in contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

C. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.

D. Install components plumb and true in alignment with established lines and grades.

E. Install glazing as specified in Section 08 80 00 "Glazing."

F. Install weatherseal sealant according to Section 07 92 00 "Joint Sealants" and according to sealant manufacturer's written instructions to produce weatherproof joints. Install joint filler behind sealant as recommended by sealant manufacturer.

3.4 ERECTION TOLERANCES

A. Erection Tolerances: Install glazed aluminum curtain walls to comply with the following maximum tolerances:

1. Plumb: 1/8 inch in 10 feet (3.2 mm in 3 m); 1/4 inch in 40 feet (6.35 mm in 12.2 m).
2. Level: 1/8 inch in 20 feet (3.2 mm in 6 m); 1/4 inch in 40 feet (6.35 mm in 12.2 m).
3. Alignment:
    a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch (12.7 mm) wide, limit offset from true alignment to 1/16 inch (1.6 mm).
    b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch (12.7 to 25.4 mm) wide, limit offset from true alignment to 1/8 inch (3.2 mm).
    c. Where surfaces are separated by reveal or protruding element of 1 inch (25.4 mm) wide or more, limit offset from true alignment to 1/4 inch (6 mm).
4. Location: Limit variation from plane to 1/8 inch in 12 feet (3.2 mm in 3.6 m); 1/2 inch (12.7 mm) over total length.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Field Quality-Control Testing: Perform the following test on representative areas of glazed aluminum curtain walls.

1. Water-Spray Test: Before installation of interior finishes has begun, areas designated by Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.
    a. Perform a minimum of three tests in areas as directed by Architect.
    b. Perform tests in each test area as directed by Architect. Perform at least three tests, prior to 10, 35, and 70 percent completion.
2. Air Infiltration: ASTM E 783 at 1.5 times the rate specified for laboratory testing in "Performance Requirements" Article but not more than 0.09 cfm/sq. ft. (0.45 L/s per sq. m) at a static-air-pressure differential of 1.57 lbf/sq. ft. (75 Pa).
    a. `
3. Water Penetration: ASTM E 1105 at a minimum uniform and cyclic static-air-pressure differential of 0.67 times the static-air-pressure differential specified for laboratory testing in "Performance Requirements" Article, but not less than 6.24 lbf/sq. ft. (300 Pa), and shall not evidence water penetration.

C. Glazed aluminum curtain walls will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

END OF SECTION

SECTION 08 45 23

FIBERGLASS-SANDWICH TRANSLUCENT PANEL ASSEMBLIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. **General.** Section includes aluminum-framed assemblies incorporating fiberglass-sandwich panels as follows:

1. Wall assemblies.

1.3 SUBMITTALS

A. **Product Data.** For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for aluminum components of panel assemblies.

B. **Shop Drawings.** For panel assemblies. Include plans, elevations, sections, details, and attachments to other work.

1. Include details of provisions for assembly expansion and contraction and for draining moisture within the assembly to the exterior.

C. **Samples for Initial Selection.** For units with factory-applied color finishes.

D. **Fabrication Samples.** Of each framing system intersection and adjacent panels, made from 12-inch lengths of full-size framing members and showing details of the following:

1. Joinery.
2. Anchorage.
3. Expansion provisions.
4. Fiberglass-sandwich panels.
5. Flashing and drainage.

E. **Qualification Data.** For qualified Installer manufacturer.

F. **Product Test Reports.** Based on evaluation of comprehensive tests performed by a qualified testing agency, for panel assemblies.

G. **Maintenance Data.** For panel assemblies to include in maintenance manuals.

H. **Warranties.** Sample of special warranties.

1.4 QUALITY ASSURANCE

A. **Manufacturer Qualifications.** For fiberglass-sandwich panels, a qualified manufacturer whose facilities, processes, and products are monitored by an independent, accredited quality-control agency for compliance with applicable requirements in ICC-ES AC04, "Sandwich Panels," or ICC-ES AC177, "Translucent Fiberglass Reinforced Plastic (FRP) Faced Panel Wall, Roof and Skylight Systems."

B. **Installer Qualifications.** Manufacturer's authorized representative who is trained and approved for installation of panel assemblies required for this Project.

1.5 WARRANTY

A. **Special Warranty.** Manufacturer's standard form in which manufacturer agrees to repair or replace components of panel assemblies that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

    a. Structural failures including, but not limited to, excessive deflection.
    b. Deterioration of metals and other materials beyond normal weathering.
    c. Water leakage.

2. Warranty Period: Five years from date of Substantial Completion.

B. **Special Fiberglass-Sandwich-Panel Warranty.** Manufacturer's standard form in which manufacturer agrees to replace panels that exhibit defects in materials or workmanship.

1. Defects include, but are not limited to, the following:

    a. Fiberbloom.
    b. Delamination of coating, if any, from exterior face sheet.
    c. Color change exceeding requirements.
    d. Delamination of panel face sheets from panel cores.

2. Warranty Period: 10 years from date of Substantial Completion.

C. **Special Aluminum-Finish Warranty.** Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.

1. Failures include, but are not limited to, checking, crazing, peeling, chalking, and fading of finishes.
2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. **Manufacturers.** Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. **Basis-of-Design Product.** Subject to compliance with requirements, provide Kalwall or comparable product by one of the following:

1. Kalwall Corporation.
2. Major Industries, Inc.
3. Skywall Translucent Systems; Vistawall Group (The).
4. Structures Unlimited, Inc.

2.2 PERFORMANCE REQUIREMENTS

A. **General Performance.** Fiberglass-sandwich-panel assemblies shall withstand the effects of the following forces without failure due to defective manufacture, fabrication, installation, or other defects in construction:

1. Structural loads.
2. Thermal movements.
3. Movements of supporting structure.
4. Dimensional tolerances of building frame and other adjacent construction.
5. Failure includes, but is not limited to, the following:

    a. Deflection exceeding specified limits.
    b. Water leakage.
    c. Thermal stresses transferred to building structure.
    d. Noise or vibration created by wind, thermal, or structural movements.
    e. Loosening or weakening of fasteners, attachments, and other components.

B. **Structural Loads.**

1. Seismic Loads: As indicated on Drawings.
2. Wind Loads:

    a. As indicated on the structural drawings.

C. **Deflection Limits.**

1. Vertical Panel Assemblies: Limited to 1/60 of clear span for each assembly component.
2. Overhead Panel Assemblies: Limited to 1/60 of clear span for each assembly component.

D. **Water Penetration under Static Pressure.** Provide panel assemblies that do not evidence water penetration through fixed glazing and framing areas when tested according to ASTM E 331 at a minimum static-air-pressure difference of 20 percent of positive wind-load design pressure, but not less than 10 lbf/sq. ft.

E. **Thermal Movements.** Allow for thermal movements from ambient- and surface-temperature changes. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 100 deg F, material surfaces.

F. **Energy Performance.** Provide panel assemblies with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below and certified and labeled according to NFRC:

1. Thermal Transmittance (U-Factor): Fixed glazing and framing areas shall have U-factor of not more than 0.23 Btu/sq. ft. x h x deg F as determined according to NFRC 100.
2. Solar-Heat-Gain Coefficient: Fixed glazing and framing areas shall have a solar heat gain coefficient of no greater than .32 as determined according to NFRC 200.
3. Air Infiltration: Maximum air leakage through fixed glazing and framing areas of 0.30 cfm/sq. ft. of fixed wall area as determined according to ASTM E 283 at a minimum static-air-pressure differential of 6.24 lbf/sq. ft.

2.3 ALUMINUM FRAMING SYSTEMS

A. **Components.** Manufacturer's standard extruded-aluminum members of thickness required and reinforced as required to support imposed loads.

1. Construction: Thermally broken, extruded aluminum.

B. **Aluminum.** Alloy and temper recommended in writing by manufacturer for type of use and finish indicated.

1. Sheet and Plate: ASTM B 209.
2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
3. Extruded Structural Pipe and Tubes: ASTM B 429/B 429M.
4. Structural Profiles: ASTM B 308/B 308M.

C. **Brackets and Reinforcements.** Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning skylight components.

D. **Fasteners and Accessories.** Manufacturer's standard, corrosion-resistant, nonstaining, and nonbleeding fasteners and accessories; compatible with adjacent materials.

1. At closures, retaining caps, or battens, use ASTM A 193/A 193M, 300 series stainless-steel screws.
2. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
3. At movement joints, use slip-joint linings, spacers, and sleeves of material and type recommended in writing by manufacturer.

E. **Concrete and Masonry Inserts.** Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.

F. **Anchor Bolts.** ASTM A 307, Grade A, galvanized steel.

G. **Concealed Flashing.** Corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.

H. **Exposed Flashing and Closures.** Aluminum sheet not less than 0.040 inch thick, finished to match framing.

I. **Framing Gaskets.** Manufacturer's standard.

J. **Frame-System Sealants.** As recommended in writing by manufacturer.

K. **Corrosion-Resistant Coating.** Cold-applied asphalt mastic, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.4 FIBERGLASS-SANDWICH PANELS

A. **Description.** Assembly of uniformly colored, translucent, thermoset, fiberglass-reinforced-polymer face sheets bonded to both sides of a grid core.

1. Self-Ignition Temperature: 650 deg F or more per ASTM D 1929.
2. Smoke-Developed Index: 450 or less per ASTM E 84, or 75 or less per ASTM D 2843.
3. Flame-Spread Index: Not more than 25 per ASTM E 84.
4. Combustibility Classification: Class CC1 per ASTM D 635.
5. Interior Finish Classification: Class A per ASTM E 84.

B. **Panel Thickness.** 2-3/4 inches.

C. **Panel Strength Characteristics.**

1. Maximum Panel Deflection: 3-1/2 inches when a 4-by-12-foot panel is tested according to ASTM E 72 at 34 lbf/sq. ft., with a maximum 0.090-inch set deflection after five minutes.
2. Panel Support Strength: Capable of supporting, without failure, a 300-lbf concentrated load when applied to a 3-inch- diameter disk according to ASTM E 661.

D. **Grid Core.** Mechanically interlocked, extruded-aluminum I-beams, with a minimum flange width of 7/16 inch.

1. Extruded Aluminum: ASTM B 221, in alloy and temper recommended in writing by manufacturer.
2. I-Beam Construction: Thermally broken, extruded aluminum.
3. Grid Pattern: Inline rectangle, nominal 12 by 24 inches.

E. **Exterior Face Sheet.**

1. Thickness: 0.070 inches.
2. Color: Crystal.
3. Color Change: Not more than 3.0 units Delta E when measured according to ASTM D 2244, after outdoor weathering in southern Florida compliant with procedures in ASTM D 1435, with panels mounted facing south and as follows:

    a. Panel Mounting Angle: Not more than 45 degrees from horizontal.
    b. Exposure Period: 60 months.

4. Erosion Protection: Integral, embedded-glass erosion barrier.
5. Impact Resistance: No fracture or tear at impact of 70 ft. x lbf by a 3-1/4-inch- diameter, 5-lb freefalling ball according to UL 972 test procedure.

F. **Interior Face Sheet.**

1. Thickness: 0.045 inch.
2. Color: Crystal.

G. **Fiberglass-Sandwich-Panel Adhesive.** ASTM D 2559.

1. Compatible with facing and core materials.
2. Tensile and shear bond strength of aged adhesive ensures permanent adhesion of facings to cores, as evidenced by testing tensile strength according to ASTM C 297 and shear bond strength according ASTM D 1002. Use accelerated aging procedures that comply with aging requirements for adhesives with high resistance to moisture in ICC-ES AC05, "Sandwich Panel Adhesives."

2.5 FABRICATION

A. **Frame System Fabrication.**

1. Fabricate components before finishing.
2. Fabricate components that, when assembled, have the following characteristics:

    a. Profiles that are sharp, straight, and free of defects or deformations.
    b. Accurately fitted joints with ends coped or mitered.
    c. Internal guttering systems or other means to drain water passing through joints, condensation occurring within components, and moisture migrating within assembly to exterior.

3. Fabricate sill closures with weep holes and for installation as continuous component.
4. Reinforce components as required to receive fastener threads.

B. **Panel Fabrication.** Factory assemble and seal panels.

1. Laminate face sheets to grid core under a controlled process using heat and pressure to produce straight adhesive bonding lines that cover width of core members and that have sharp edges.

a. White spots indicating lack of bond at intersections of grid-core members are limited in number to four for every 40 sq. ft. of panel and limited in diameter to 3/64 inch.

2. Fabricate with grid pattern that is symmetrical about centerlines of each panel.
3. Fabricate panel to allow condensation within panel to escape.
4. Reinforce panel corners.

2.6 ALUMINUM FINISHES

A. **High-Performance Organic Finish.** Two-coat fluoropolymer finish complying with AAMA 2604 and containing not less than 50 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 EXAMINATION

A. **Examine.** Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. **Proceed**. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. **General.**

1. Comply with manufacturer's written instructions.
2. Do not install damaged components.
3. Fit joints between aluminum components to produce hairline joints free of burrs and distortion.
4. Rigidly secure nonmovement joints.
5. Install anchors with separators and isolators to prevent metal corrosion, electrolytic deterioration, and immobilization of moving joints.
6. Seal joints watertight unless otherwise indicated.

B. **Metal Protection.** Where aluminum components will contact dissimilar materials, protect against galvanic action by painting contact surfaces with corrosion-resistant coating or by installing nonconductive spacers as recommended in writing by manufacturer for this purpose.

C. **Install continuous aluminum sill closures** with weatherproof expansion joints and locked and sealed corners. Locate weep holes at rafters.

D. **Install components to drain water** passing through joints, condensation occurring within aluminum members and panels, and moisture migrating within assembly to exterior.

E. **Install components plumb** and true in alignment with established lines and elevations.

F. **Erection Tolerances.** Install panel assemblies to comply with the following maximum tolerances:

1. Alignment: Limit offset from true alignment to 1/32 inch where surfaces abut in line, edge to edge, at corners, or where a reveal or protruding element separates aligned surfaces by less than 3 inches; otherwise, limit offset to 1/8 inch.
2. Location and Plane: Limit variation from true location and plane to 1/8 inch in 12 feet, but no greater than 1/2 inch over total length.

END OF SECTION

SECTION 08 51 13

ALUMINUM WINDOWS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work.** The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install the aluminum windows in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies.** Perform all work in compliance with all federal, state, and local codes and regulatory agencies.

B. **Standards.** All materials and workmanship shall be in conformance with the following standards.

1. AA - Aluminum Association.

C. **Qualifications**. Aluminum windows and accessories shall be manufactured by a single firm specializing in the production of this type of work.

1.4 SUBMITTALS

A. **Shop Drawings**. Submit shop drawings showing materials, types, sizes, connections, anchorage, protection, weather stripping seals, glazing beads, finish hardware, and all other details of construction and fabrication. Fabrication and erection shall be in accordance with the approved shop drawings.

B. **Warranty**. Submit manufacturer's warranty in accordance with paragraph 1.7 A of this specification.

1.5 JOB CONDITIONS

A. **Coordination**. Coordinate all work with other trades to prevent delays, errors, and/or omissions.

B. **Openings**. Opening dimensions shown are actual masonry and/or concrete openings. Windows shall be undercut 1/4 inch to allow for leveling and caulking.

C. **Protection**. The factory is to apply a heavy coat of alkali resistant epoxy paint to portions of the aluminum which come in contact with the masonry, concrete, steel, or other dissimilar metals. Any field applied coating shall be as furnished by the manufacturer. All units shall be field protected from damage and staining during construction. Units not factory taped or protected shall be protected with a strippable coating of detergent, shaving soap, or petroleum jelly which will be removed prior to caulking.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery**. Deliver all windows in time for installation. Keep in protective covers and clearly note as to size, type, and mark number.

B. **Storage**. All windows and accessories shall be stored in strict compliance with the manufacturer's instructions.

C. **Handling**. All units shall be kept protected until used. Handle to prevent damage to unit, finish, and seals.

PART 2 PRODUCTS

2.1 MATERIALS

A. **Framing.** All window framing, mullions, muttins, subframe, and blocking shall be 6063 extruded aluminum.

B. **Weather Stripping.** Weather stripping shall be neoprene rubber.

C. **Hardware.** Screws, nuts, bolts, rivets, and reinforcements shall be aluminum or nonmagnetic stainless steel. Coated or plated material will not be accepted. All exposed hardware shall be white bronze finished to match the window. All strikes shall be concealed and of nonmagnetic stainless steel.

D. **Screens.** Screens shall be 14 x 18 mesh aluminum wire fabric mounted in a 6063 aluminum frame complete with all necessary hardware.

2.2 WINDOWS

A. **Type**. Windows except where noted otherwise shall be fixed type thermo-barrier, of the size and style shown.

B. Construction

1. Fixed Type. Frame members shall be a minimum of 4-1/2 inches in depth with a wall thickness not less than 0.125 inches. All members shall be extruded as a single section. Frame members shall be mechanically joined and factory sealed to form a watertight joint.

2. Projected Type. Frame and sash members shall be a minimum of 2 1/2 inches in depth with a wall thickness not less than 0.125 inches. All members shall be extruded as a single section. Sash members shall be constructed with mitered corners reinforced with aluminum corner blocks, cold welded with an epoxy adhesive and hydraulically crimped. Sash shall present a flush condition with the frame. Frame members shall be mechanically joined and factory sealed to form a watertight joint.

C. **Thermal Barrier**. A thermal separator of polyurethane or polyvinyl chloride shall be poured in place to maintain a minimum of 3/8 inch separation between the exterior and interior metal surfaces. No hardware or fasteners shall violate this barrier.

D. **Weather Stripping**. Sash and window shall be weather-stripped with two rows of neoprene installed in dovetail grooves extruded in the sash members.

E. **Subframe**. Provide subframe as shown to provide positive anchorage to the masonry and provide complete cover for masonry cavity. Subframe shall not violate thermal features of the window.

F. **Glazing**. Windows shall be designed for outside glazing with screwed on extruded aluminum strips. All screws shall be flat head, countersunk, and set flush.

G. **Hinged Window.** Hinged window shall be provided as a single unit, hinged to operate as a door. Window shall be hinged to subframe with manufacturer's standard components to hold window open. Window shall be gasketed and internally locked. Hinge location shall be as indicated on the drawings.

2.3 FINISH

A. All aluminum, unless noted otherwise, shall have an anodized finish meeting AAMA standards. Color to be selected by the owner.

2.4 MANUFACTURER

A. **Model and Manufacturer**. Subject to compliance with requirements, manufacturers offering windows which may be incorporated in the work include the following:

1. Fixed. Kawneer 8400 TL or approved equal.

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions

1. Verify that all dimensions and quantities at the building and be responsible for same.

2. Verify that all openings are complete and ready for window installation.

3.2 INSTALLATION

A. Erection

1. Set all windows and light panels straight, plumb, and true.

2. Position windows and light panels to provide adequate and uniform caulking space on exterior and interior face.

3. Anchor windows securely to subframe and subframe to wall.

4. Set all hardware and accessories in accordance with shop drawings and manufacturer's instructions.

3.3 REPAIR/RESTORATION

A. Damaged Work

1. Remove from the job site all windows that are bowed, twisted, or otherwise unacceptable.

2. All windows and light panels that are scratched, dented, stained, marred, or defaced that cannot be restored to original condition or to the satisfaction of the Owner and Engineer/ Architect, shall be removed from the job site and replaced at no additional cost to the Owner.

3.4 FIELD QUALITY CONTROL

A. **Manufacturer's Field Service.** After completion and prior to acceptance of the windows, a manufacturer's representative shall adjust and true each window to ensure ease of operation and ensure a positive weather seal.

3.5 CLEANING

A. At the completion of the project, windows and light panels shall be cleaned as recommended by the manufacturer. The Contractor shall remove all field applied protection and be responsible for any damage resulting from other cleaning methods. No abrasive cleaning agents shall be used.

3.6 DEMONSTRATION

A. **Operational.** The Contractor shall demonstrate to the Owner and Engineer/Architect that all operating sash operates freely, uniformly, and easily without binding, twisting, or sagging.

B. **Seals.** The Contractor shall demonstrate to the Owner and Engineer/Architect that all seals and caulking are functioning by spraying each unit with water for not less than 3 minutes at a minimum rate of 0.33 gallons per minute (gpm) per square foot with no water infiltration through the window.

C. **Water.** Water will be furnished by the Owner for the initial test only. All failures that have to be retested will be at the Contractor's expense.

END OF SECTION

SECTION 08 64 00

PLASTIC UNIT SKYLIGHTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General**. Provide the labor, tools, equipment, and materials necessary to furnish and install the plastic unit skylights in accordance with the plans and as specified herein. All new skylights installed shall be equipped with a skylight protection screen as detailed herein.

B. **This section includes** plastic unit skylights.

C. **Related Sections**. The following sections contain requirements that relate to this section:

1. Division 6 section "Rough Carpentry" for wood curbs and nailers.

2. Division 7 section "Roof Specialties:" Roof edge flashings and drainage systems.

3. Division 7 section "Flashing and Sheet Metal" for metal flashing for skylights.

D. **Refer to roofing system sections** for roofing accessories to be built into the roofing system to accommodate work of this section.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work to furnish and install the plastic unit skylights in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

B. **Fire-Test Response Characteristics**. Provide plastic sheets identical to those tested for the following fire test response characteristics, per American Society for Testing and Materials (ASTM) test method indicated below, by Underwriters' Laboratories, Inc. (UL) or other testing and inspecting agencies acceptable to authorities having jurisdiction. Identify plastic sheets with appropriate markings of applicable testing and inspecting organization.

1. Self-Ignition Temperature. 650 degrees Fahrenheit (° F.) (343.33 degrees Celsius [° C.]) or greater when tested per ASTM D 1929 on plastic sheets in the thickness intended for use.

2. Smoke density of 75 or less when tested per ASTM D 2843 on plastic sheets in the thickness intended for use.

3. Relative Burning Characteristics. As follows, when tested per ASTM D 635:

a. Acrylic. Burning rate of 2.5 inches per minute or less when tested on plastic glazing indicated below with a nominal thickness of 0.060 inch or the thickness intended for use.

4. The Skylight Protection Screen shall be tested to a 200 Ib Static Load.

1.4 SUBMITTALS

A. **Submit the following** according to the Conditions of Contract and Division 1 specification sections.

1. Product data for each type of skylight specified, including details of construction relative to materials, dimensions of individual components, profiles, finishes, and glazing light transmission and thermal characteristics.

2. Shop drawings showing fabrication and installation of skylights, including plans, elevations, sections, details of components, and attachments to other units of work.

3. Samples for initial selection purposes in the form of manufacturer's color charts showing a full range of colors available for each type of skylight glazing, retainer, frame, and curb indicated

4. Include details of construction and installation of the Skylight Protection Screen.

1.5 JOB CONDITIONS

A. Not used.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Not used.

1.7 SPECIAL WARRANTY

A. **General**. Warranties specified in this section shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and shall be in addition to and run concurrent with other warranties made by the Contractor under requirements of the Contract Documents.

B. **Skylight Warranty**. Provide written warranty signed by manufacturer, agreeing to repair or replace work that exhibits defects in materials or workmanship and guaranteeing weathertight and leak free performance. "Defects" is defined as uncontrolled leakage of water and abnormal aging or deterioration.

1. Warranty Period. Five years from date of Substantial Completion.

C. **Plastic Warranty**. Provide written warranty signed by manufacturer agreeing to repair or replace work that has or develops defects in the plastic. "Defects" is defined as abnormal aging or deterioration.

1. Warranty Period for Acrylic. Five years from date of Substantial Completion against yellowing

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. **Available Manufacturers**. Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include, but are not limited to, the following:

1. Bristolite Skylights.
2. Fiore Skylights, Inc.
3. Naturalite/EPI Skylight Systems.
4. Sunglo Skylight Products.
5. Wasco Products, Inc.

2.2 MATERIALS

A. **Aluminum Sheets**. ASTM B 209 for Alclad alloy 3005-H25 or alloy and temper required to suit forming operations and finish requirements. Mill finish unless indicated otherwise.

B. **Extruded Aluminum**. ASTM B 221 alloy 6063-T52 or alloy and temper required to suit structural and finish requirements. Mill finish unless indicated otherwise.

C. **Plastic Sheets**. Monolithic, formable, transparent (colorless and tinted) or translucent (white) sheets with good weather and impact resistance.

1. Acrylic. ASTM D 4802, thermoformable, cast or continuous cast acrylic (methacrylate), Category C-1 or C-2, Type UVA (formulated with ultraviolet absorber), with Finish 1 (smooth or polished), unless otherwise indicated.

D. **Wood Curbs and Nailers**. Softwood lumber, pressure treated with waterborne preservatives for above ground use, complying with American Wood Preservers Association (AWPA) C2; not less than 1-1/2 inch nominal thickness.

E. **Fasteners**. Same metal as metals being fastened, or nonmagnetic stainless steel or other noncorrosive metal as recommended by manufacturer. Match finish of exposed fasteners with finish of material being fastened.

F. **Bituminous Coating**. Steel Structures Painting Council (SSPC)-Paint 12, solvent type, bituminous mastic, nominally free of sulfur and containing no asbestos fibers, compounded for 15 mil dry film thickness per coating.

G. **Mastic Sealant**. Polyisobutylene; nonhardening, nonskinning, nondrying, nonmigrating sealant.

H. **Elastomeric Sealant**. Generic type recommended by unit manufacturer that is compatible with joint surfaces. ASTM C 920; Type S; Grade NS; Class 25; and Uses NT, G, A, and (as applicable to joint substrates indicated) O.

I. **Roofing Cement**. ASTM D 4586, nonasbestos fibrated, asphalt cement designed for trowel application or other adhesive compatible with roofing system.

2.3 FINISHES

A. **General**. Comply with National Association of Architectural Metal Manufacturers (NAAMM) "Metal Finishes Manual" recommendations for application and designations of finishes.

B. **Finish designations prefixed by AA** conform to the system for designating aluminum finishes established by the Aluminum Association (AA).

C. **Class I, Clear Anodized Finish**. AA-C22A41 (Chemical Finish: etched, medium matte; Anodic Coating: Class I Architectural, clear film thicker than 0.7 mil) complying with American Architectural Manufacturers Association (AAMA) AAMA 607.1.

2.4 PLASTIC SKYLIGHT UNITS

A. **General**. Factory-assembled unit consisting of plastic glazing, extruded aluminum glazing retainer, gasketing, inner frame that may be incorporated into the curb, and integral curb with self-contained roof flashing flanges.

B. **Curb**. Self-flashing, self-supporting double wall, formed or extruded (or combination) aluminum curb, minimum 0.040 inch wall thickness, enclosing minimum 1 inch glass fiber board (or equivalent) insulation and with minimum 3 inch roof flanges, with welded or sealed mechanical joints at corners.

1. Height. 9 inches above roofing.

2. Taper. Where roof deck slopes more than 1/4 inch per foot, provide tapered curb heights to match slope and result in level dome installation.

C. **Condensation Control**. Fabricate skylight units with integral internal gutters and nonclogging weeps to collect and dispose of condensation.

D. **Thermal Break**. Fabricate skylight units with thermal barrier separating interior metal framing from materials exposed to outside temperature.

E. **Operable Skylight Vent**. Equip unit with hinges, operating hardware, and weather sealing gaskets.

F. **Shape and Size**. As indicated.

G. **Glazing**. Thermoformed acrylic.

1. Sheet Thicknesses. Provide glazing plastic sheet thickness required for 40 pounds per foot (lb/f) per square foot (psf) positive (external) loading and 20 lbf psf negative or uplift (internal) loading as recommended by the skylight manufacturer for unit size and shape.

2. Profile. Double dome, 25-percent rise.

a. Outer Glazing Color. Colorless, transparent acrylic, 92-percent visible light transmittance.

b. Inner Glazing Color. White, No. 2067, translucent acrylic, 72-percent visible light transmittance.

3. Glazing Gaskets. Manufacturer's standard glazing system of EPDM or neoprene, closed cell sponge neoprene, or EPDM, or of partially vulcanized butyl tape or liquid applied elastomeric sealant.

2.5 SKYLIGHT PROTECTION SCREEN

A. Materials:

1. Screen: hot dipped galvanized finish on carbon welded steel wire mesh, 4”x4” spacing, and wire diameter of 0.20” min.

2. Frame: Extruded aluminum alloy per ASTM B221 with minimum effective thickness of 0.1”. Frame shall include a pocket for the edges of the screen material and a downward leg for attachment to any vertical surface of a skylight retainer or frame

3. Adjustment Bar: Aluminum bar stock that is ¼” x 1”, alloy per ASTM B221 (6063-T5 min). Bar shall be slotted for width adjustment in the field.

4. Fasteners: Non-magnetic stainless steel or other non-corrosive metal as recommended by the manufacturer.

B. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealing or tape recommended by the manufacturer.

C. Refer to Contract Drawings for additional requirements.

PART 3 EXECUTION

3.1 INSTALLATION

A. **General**. Comply with manufacturer's instructions and recommendations. Coordinate with installation of roof deck and other substrates to receive skylight units. Coordinate with installation of vapor barriers, roof insulation, roofing, and flashing as required to assure that each element of the work performs properly and that combined elements are waterproof and weathertight. Anchor units securely to supporting structural substrates, adequate to withstand lateral and thermal stresses as well as inward and outward loading pressures.

1. Except as otherwise indicated, install roof skylights according to construction details of "NRCA Roofing and Waterproofing Manual."

B. **Isolation**. Where metal surfaces of units are to be installed in contact with incompatible metal or corrosive substrates, including wood, apply bituminous coating on concealed metal surfaces, or provide another permanent separation.

C. **Flange Seals**. Except as otherwise indicated, set flanges of accessory units in a thick bed of roofing cement to form a seal.

D. **Cap Flashing**. Where cap flashing is required as component of the skylight, install to provide an adequate waterproof overlap with roofing or roof flashing (as counterflashing). Seal with thick bead of mastic sealant, except where overlap is indicated to be left open for ventilation.

E. **Operational Units**. Test-operate units with operable components. Clean and lubricate joints and hardware. Adjust for proper operation.

F. **Skylight Protection Screen.** Comply with manufacturer’s written instructions for protecting, handling and installing fall protection components.

3.2 CLEANING AND PROTECTION

A. **Clean exposed metal and plastic surfaces** according to manufacturer's instructions. Touch up damaged metal coatings.

END OF SECTION

SECTION 08 71 00

DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes commercial door hardware for the following:

1. Swinging doors.
2. Sliding doors.
3. Other doors to the extent indicated.

B. Door hardware includes, but is not necessarily limited to, the following:

1. Mechanical door hardware.
2. Electromechanical door hardware.
3. Cylinders specified for doors in other sections.

C. Related Sections:

1. Division 08 Section “Hollow Metal Doors and Frames”.
2. Division 08 Section “Flush Wood Doors”.
3. Division 08 Section “Aluminum-Framed Entrances and Storefronts”.

D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
2. ICC/IBC - International Building Code.
3. NFPA 70 - National Electrical Code.
4. NFPA 80 - Fire Doors and Windows.
5. NFPA 101 - Life Safety Code.
6. NFPA 105 - Installation of Smoke Door Assemblies.
7. State Building Codes, Local Amendments.

E. Standards: All hardware specified herein shall comply with the following industry standards as applicable. Any undated reference to a standard shall be interpreted as referring to the latest edition of that standard:

1. ANSI/BHMA Certified Product Standards - A156 Series.
2. UL10C - Positive Pressure Fire Tests of Door Assemblies.
3. ANSI/UL 294 - Access Control System Units.

4. UL 305 - Panic Hardware.
5. ANSI/UL 437- Key Locks.

1.3 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."

2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.

3. Content: Include the following information:

    a. Type, style, function, size, label, hand, and finish of each door hardware item.
    b. Manufacturer of each item.
    c. Fastenings and other pertinent information.
    d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
    e. Explanation of abbreviations, symbols, and codes contained in schedule.
    f. Mounting locations for door hardware.
    g. Door and frame sizes and materials.
    h. Warranty information for each product.

4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

C. Shop Drawings: Details of electrified access control hardware indicating the following:

1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:

a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
b. Complete (risers, point-to-point) access control system block wiring diagrams.
c. Wiring instructions for each electronic component scheduled herein.

2. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.

D. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.

E. Informational Submittals:

1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

F. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Procedures.

1.4 QUALITY ASSURANCE

A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.

B. Certified Products: Where specified, products must maintain a current listing in the Builders Hardware Manufacturers Association (BHMA) Certified Products Directory (CPD).

C. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

D. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.

E. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.

1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.

2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.

F. Each unit to bear third party permanent label demonstrating compliance with the referenced standards.

G. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:

1. Function of building, purpose of each area and degree of security required.
2. Plans for existing and future key system expansion.
3. Requirements for key control storage and software.
4. Installation of permanent keys, cylinder cores and software.
5. Address and requirements for delivery of keys.

H. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.

1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
3. Review sequence of operation narratives for each unique access controlled opening.
4. Review and finalize construction schedule and verify availability of materials.
5. Review the required inspecting, testing, commissioning, and demonstration procedures

I. At completion of installation, provide written documentation that components were applied to manufacturer's instructions and recommendations and according to approved schedule.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.6 COORDINATION

A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

B. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.7 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:

1. Structural failures including excessive deflection, cracking, or breakage.
2. Faulty operation of the hardware.
3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
4. Electrical component defects and failures within the systems operation.

C. Standard Warranty Period: One year from date of Substantial Completion, unless otherwise indicated.

D. Special Warranty Periods:

1. Ten years for mortise locks and latches.
2. Five years for exit hardware.
3. Twenty five years for manual overhead door closer bodies.
4. Two years for electromechanical door hardware.

1.8 MAINTENANCE SERVICE

A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

PART 2 - PRODUCTS

2.1 SCHEDULED DOOR HARDWARE

A. General: Provide door hardware for each door to comply with requirements in Door Hardware Sets and each referenced section that products are to be supplied under.

B. Designations: Requirements for quantity, item, size, finish or color, grade, function, and other distinctive qualities of each type of door hardware are indicated in the Door Hardware Sets at the end of Part 3. Products are identified by using door hardware designations, as follows:

1. Named Manufacturer's Products: Product designation and manufacturer are listed for each door hardware type required for the purpose of establishing requirements. Manufacturers' names are abbreviated in the Door Hardware Schedule.

C. Substitutions: Requests for substitution and product approval for inclusive mechanical and electromechanical door hardware in compliance with the specifications must be submitted in writing and in accordance with the procedures and time frames outlined in Division 01, Substitution Procedures. Approval of requests is at the discretion of the architect, owner, and their designated consultants.

2.2 HANGING DEVICES

A. Hinges: ANSI/BHMA A156.1 certified butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.

1. Quantity: Provide the following hinge quantity:

a. Two Hinges: For doors with heights up to 60 inches.
b. Three Hinges: For doors with heights 61 to 90 inches.
c. Four Hinges: For doors with heights 91 to 120 inches.
d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.

2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:

a. Widths up to 3’0”: 4-1/2” standard or heavy weight as specified.
b. Sizes from 3’1” to 4’0”: 5” standard or heavy weight as specified.

3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:

a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.

4. Hinge Options: Comply with the following:

a. Non-removable Pins: With the exception of electric through wire hinges, provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for the all out-swinging lockable doors.

5. Manufacturers:

a. Bommer Industries (BO).
b. Hager Companies (HA).
c. McKinney Products; ASSA ABLOY Architectural Door Accessories (MK).

B. Continuous Geared Hinges: ANSI/BHMA A156.26 Grade 1-600 certified continuous geared hinge. with minimum 0.120-inch thick extruded 6060 T6 aluminum alloy hinge leaves and a minimum overall width of 4 inches. Hinges are non-handed, reversible and fabricated to template screw locations. Factory trim hinges to suit door height and prepare for electrical cut-outs.

1. Manufacturers:

a. Bommer Industries (BO).
b. Hager Companies (HA).
c. Pemko Products; ASSA ABLOY Architectural Door Accessories (PE).

2.3 DOOR OPERATING TRIM

A. Flush Bolts and Surface Bolts: ANSI/BHMA A156.3 and A156.16, Grade 1, certified.

1. Flush bolts to be furnished with top rod of sufficient length to allow bolt retraction device location approximately six feet from the floor.
2. Furnish dust proof strikes for bottom bolts.
3. Surface bolts to be minimum 8” in length and U.L. listed for labeled fire doors and U.L. listed for windstorm components where applicable.
4. Provide related accessories (mounting brackets, strikes, coordinators, etc.) as required for appropriate installation and operation.

5. Manufacturers:

a. Burns Manufacturing (BU).
b. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).
c. Trimco (TC).

B. Door Push Plates and Pulls: ANSI/BHMA A156.6 certified door pushes and pulls of type and design specified in the Hardware Sets. Coordinate and provide proper width and height as required where conflicting hardware dictates.

1. Push/Pull Plates: Minimum .050 inch thick, size as indicated in hardware sets, with beveled edges, secured with exposed screws unless otherwise indicated.
2. Door Pull and Push Bar Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door unless otherwise indicated.

3. Offset Pull Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door and offset of 90 degrees unless otherwise indicated.
4. Fasteners: Provide manufacturer's designated fastener type as indicated in Hardware Sets.

5. Manufacturers:

    a. Burns Manufacturing (BU).
    b. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).
    c. Trimco (TC).

2.4 CYLINDERS AND KEYING

A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.
1. Manufacturers:

    a. Match Existing, Field Verify.

B. Cylinder Types: Original manufacturer cylinders able to supply the following cylinder formats and types:

1. Threaded mortise cylinders with rings and cams to suit hardware application.
2. Rim cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
3. Bored or cylindrical lock cylinders with tailpieces as required to suit locks.
4. Tubular deadlocks and other auxiliary locks.
5. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
6. Keyway: Manufacturer’s Standard.

C. Keying System: Each type of lock and cylinders to be factory keyed.

1. Supplier shall conduct a "Keying Conference" to define and document keying system instructions and requirements.
2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.
3. Existing System: Field verify and key cylinders to match Owner's existing system.

D. Key Quantity: Provide the following minimum number of keys:

1. Change Keys per Cylinder: Two (2)
2. Master Keys (per Master Key Level/Group): Five (5).
3. Construction Keys (where required): Ten (10).
4. Construction Control Keys (where required): Two (2).
5. Permanent Control Keys (where required): Two (2).

E. Construction Keying: Provide construction master keyed cylinders.

F. Key Registration List (Bitting List):

1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.
2. Provide transcript list in writing or electronic file as directed by the Owner.

2.5 MECHANICAL LOCKS AND LATCHING DEVICES

A. Mortise Locksets, Grade 1 (Heavy Duty): ANSI/BHMA A156.13, Series 1000, Operational Grade 1 Certified Products Directory (CPD) listed. Locksets are to be manufactured with a corrosion resistant steel case and be field-reversible for handing without disassembly of the lock body.

1. Where specified, provide status indicators with highly reflective color and wording for “locked/unlocked” or “vacant/occupied” with custom wording options if required. Indicator to be located above the cylinder with the inside thumb-turn not blocking the visibility of the indicator status. Indicator window size to be a minimum of 2.1” x 0.6” with a curved design allowing a 180 degree viewing angle with protective covering to prevent tampering.

2. Manufacturers:

    a. Corbin Russwin Hardware (RU) - ML2000 Series.

2.6 LOCK AND LATCH STRIKES

A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:

1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.
4. Double-lipped strikes: For locks at double acting doors. Furnish with retractable stop for rescue hardware applications.

B. Standards: Comply with the following:

1. Strikes for Mortise Locks and Latches: BHMA A156.13.
2. Strikes for Bored Locks and Latches: BHMA A156.2.
3. Strikes for Auxiliary Deadlocks: BHMA A156.36.
4. Dustproof Strikes: BHMA A156.16.

2.7 CONVENTIONAL EXIT DEVICES

A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:

1. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as

required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.

2. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer's catalog and template book for specific requirements.

3. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.

4. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.

5. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.

    a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.
    b. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.

6. Vertical Rod Exit Devices: Where surface or concealed vertical rod exit devices are used at interior openings, provide as less bottom rod (LBR) unless otherwise indicated. Provide dust proof strikes where thermal pins are required to project into the floor.

7. Narrow Stile Applications: At doors constructed with narrow stiles, or as specified in Hardware Sets, provide devices designed for maximum 2" wide stiles.

8. Dummy Push Bar: Nonfunctioning push bar matching functional push bar.

9. Rail Sizing: Provide exit device rails factory sized for proper door width application.

10. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.

B. Conventional Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 Certified Products Directory (CPD) listed panic and fire exit hardware devices furnished in the functions specified in the Hardware Sets. Exit device latch to be stainless steel, pullman type, with deadlock feature.

    1. Manufacturers:

        a. Corbin Russwin Hardware (RU) - ED4000 / ED5000 Series.

C. Security Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 Certified Products Directory (CPD) listed rim panic and fire exit hardware devices furnished in the functions specified in the Hardware Sets. Exit device latch to be constructed of high grade, heat

treated, corrosion resistant nickel steel alloy, and have a full 3/4" throw projection with slide action positive deadlocking.

1. Static Load Force Resistance: Minimum 3000 lbs certified independent tested.

2. Manufacturers:

    a. Corbin Russwin Hardware (RU) - ED4000S / ED5000S Series.

2.8 DOOR CLOSERS

A. All door closers specified herein shall meet or exceed the following criteria:

1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers.

2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.

3. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the Americans with Disabilities Act, provide units complying with ANSI ICC/A117.1.

4. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.

5. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.

6. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide through-bolt and security type fasteners as specified in the hardware sets.

B. Door Closers, Surface Mounted (Heavy Duty): ANSI/BHMA A156.4, Grade 1 Certified Products Directory (CPD) listed surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control. Provide non-handed units standard.

1. Manufacturers:

    a. Norton Door Controls (NO) - 7500 Series.

2.9 ARCHITECTURAL TRIM

A. Door Protective Trim

1. General: Door protective trim units to be of type and design as specified below or in the Hardware Sets.

2. Size: Fabricate protection plates (kick, armor, or mop) not more than 2" less than door width (LDW) on stop side of single doors and 1" LDW on stop side of pairs of doors, and not more than 1" less than door width on pull side. Coordinate and provide proper width and height as required where conflicting hardware dictates. Height to be as specified in the Hardware Sets.

3. Where plates are applied to fire rated doors with the top of the plate more than 16" above the bottom of the door, provide plates complying with NFPA 80. Consult manufacturer's catalog and template book for specific requirements for size and applications.

4. Protection Plates: ANSI/BHMA A156.6 certified protection plates (kick, armor, or mop), fabricated from the following:

    a. Stainless Steel: 300 grade, 050-inch thick.

5. Options and fasteners: Provide manufacturer's designated fastener type as specified in the Hardware Sets. Provide countersunk screw holes.

6. Manufacturers:

    a. Burns Manufacturing (BU).
    b. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).
    c. Trimco (TC).

2.10 DOOR STOPS AND HOLDERS

A. General: Door stops and holders to be of type and design as specified below or in the Hardware Sets.

B. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 certified door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.

1. Manufacturers:

    a. Burns Manufacturing (BU).
    b. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).
    c. Trimco (TC).

C. Overhead Door Stops and Holders: ANSI/BHMA A156.8, Grade 1 Certified Products Directory (CPD) listed overhead stops and holders to be surface or concealed types as indicated in Hardware Sets. Track, slide, arm and jamb bracket to be constructed of extruded bronze and shock absorber spring of heavy tempered steel. Provide non-handed design with mounting brackets as required for proper operation and function.

1. Manufacturers:

    a. Rixson Door Controls (RF).
    b. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).
    c. Sargent Manufacturing (SA).

2.11 ARCHITECTURAL SEALS

A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.

B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.

1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.

C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.

1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NPFA 252, Standard Methods of Fire Tests of Door Assemblies.

D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.

E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.

F. Manufacturers:

1. National Guard Products (NG).
2. Pemko Products; ASSA ABLOY Architectural Door Accessories (PE).
3. Reese Enterprises, Inc. (RE).

2.12 FABRICATION

A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.13 FINISHES

A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.

B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware

C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2 PREPARATION

A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.

B. Wood Doors: Comply with ANSI/DHI A115-W series.

3.3 INSTALLATION

A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.

1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.

B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:

1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
2. Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."
3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.

C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and

reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.

D. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."

E. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.4 FIELD QUALITY CONTROL

A. Field Inspection (Punch Report): Reference Division 01 Sections “Closeout Procedures”. Produce project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.

1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.
2. Submit documentation of incomplete items in the following formats:

    a. PDF electronic file.
    b. Electronic formatted file integrated with the Openings Studio™ door opening management software platform.

3.5 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.6 CLEANING AND PROTECTION

A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.

B. Clean adjacent surfaces soiled by door hardware installation.

C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

3.7 DEMONSTRATION

A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

3.8 DOOR HARDWARE SETS

A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

1. Quantities listed are for each pair of doors, or for each single door.

2. The supplier is responsible for handing and sizing all products.

3. Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.

4. At existing openings with new hardware the supplier shall field inspect existing conditions prior to the submittal stage to verify the specified hardware will work as required. Provide alternate solutions and proposals as needed.

B. Refer to Section 08 06 71, Door Hardware Sets, for hardware sets.

END OF SECTION

SECTION 08 80 00

GLAZING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **Drawings and general provisions** of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. **This Section includes glazing** for the following products and applications, including those specified in other Sections where glazing requirements are specified by reference to this Section:

1. Glazing for windows.
2. Glazing for doors.

1.3 DEFINITIONS

A. **Manufacturers of Glass Products:** Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.

B. **Glass Thicknesses:** Indicated by thickness designations in millimeters according to ASTM C 1036.

C. **Interspace:** Space between lites of an insulating-glass unit that contains dehydrated air or a specified gas.

D. **Deterioration of Coated Glass:** Defects developed from normal use that are attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in metallic coating.

E. **Deterioration of Insulating Glass:** Failure of hermetic seal under normal use that is attributed to the manufacturing process and not to causes other than glass breakage and practices for maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.

1.4 PERFORMANCE REQUIREMENTS

A. **General:** Provide glazing systems capable of withstanding normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, and

installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.

B. **Thermal Movements:** Provide glazing that allows for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures acting on glass framing members and glazing components. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

1.5 ACTION SUBMITTALS

A. **Product Data:** For each glass product and glazing material indicated.

B. **Samples:** For the following products, in the form of 12-inch-square Samples for glass.

1. Insulating glass for each designation indicated.

C. **Glazing Schedule:** Use same designations indicated on Drawings for glazed openings in preparing a schedule listing glass types and thicknesses for each size opening and location.

D. **Product Certificates:** Signed by manufacturers of glass and glazing products certifying that products furnished comply with requirements.

1. For solar-control low-e-coated glass, provide documentation demonstrating that manufacturer of coated glass is certified by coating manufacturer.

1.6 INFORMATIONAL SUBMITTALS

A. **Qualification Data:** For installers.

B. **Preconstruction Adhesion and Compatibility Test Report:** From glazing sealant manufacturer indicating glazing sealants were tested for adhesion to glass and glazing channel substrates and for compatibility with glass and other glazing materials.

C. **Product Test Reports:** For each of the following types of glazing products:

1. Insulating glass.

D. **Warranties:** Special warranties specified in this Section.

1.7 QUALITY ASSURANCE

A. **Installer Qualifications:** An experienced installer who has completed glazing similar in material, design, and extent to that indicated for this Project; whose work has resulted in glass installations with a record of successful in-service performance; and who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.

B. **Source Limitations for Glass:** Obtain the following through one source from a single manufacturer for each glass type: Insulating Glass.

C. **Source Limitations for Glazing Accessories:** Obtain glazing accessories through one source from a single manufacturer for each product and installation method indicated.

D. . **Glass Product Testing**: Obtain glass test results for product test reports in "Submittals" Article from a qualified testing agency based on testing glass products.

1. Glass Testing Agency Qualifications: An independent testing agency with the experience and capability to conduct the testing indicated, as documented according to ASTM E 548.

E. **Elastomeric Glazing Sealant Product Testing**: Obtain sealant test results for product test reports in "Submittals" Article from a qualified testing agency based on testing current sealant formulations within a 36-month period.

1. Test elastomeric glazing sealants for compliance with requirements specified by reference to ASTM C 920, and where applicable, to other standard test methods.

F. **Safety Glazing Products:** Comply with testing requirements in 16 CFR 1201.

1. Subject to compliance with requirements, obtain safety glazing products permanently marked with certification label of the Safety Glazing Certification Council or another certification agency acceptable to authorities having jurisdiction.

2. Where glazing units, including Kind FT glass and laminated glass, are specified in Part 2 articles for glazing lites more than 9 sq. ft. in exposed surface area of one side, provide glazing products that comply with Category II materials, for lites 9 sq. ft. or less in exposed surface area of one side, provide glazing products that comply with Category I or II materials, except for hazardous locations where Category II materials are required by 16 CFR 1201 and regulations of authorities having jurisdiction.

G. **Glazing Publications:** Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.

1. GANA Publications: GANA’s “Glazing Manual.”

2. IGMA Publication for Insulating Glass: SIGMA TM-3000, "Glazing Guidelines for Sealed Insulating Glass Units."

H. **Preinstallation Conference:** Conduct conference at Project site to comply with requirements in Division 01.

1.8 DELIVERY, STORAGE, AND HANDLING

A. **Protect glazing materials according** to manufacturer's written instructions and as needed to prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.

1.9 PROJECT CONDITIONS

A. **Environmental Limitations:** Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.

1. Do not install liquid glazing sealants when ambient and substrate temperature conditions are outside limits permitted by glazing sealant manufacturer or below 40 deg F.

1.10 WARRANTY

A. **Manufacturer's Special Warranty for Coated-Glass Products:** Manufacturer's standard form, made out to Owner and signed by coated-glass manufacturer agreeing to replace coated-glass units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.

1. Warranty Period: 10 years from date of Substantial Completion.

B. **Manufacturer's Special Warranty on Insulating Glass:** Manufacturer's standard form, made out to Owner and signed by insulating-glass manufacturer agreeing to replace insulating-glass units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. **Basis-of-Design/Manufacturer Products:** Subject to compliance with requirements, provide products by PPG Industries, Inc. or comparable products by one of the fabricator’s/manufacturer’s following:

1. AFG Industries.
2. Guardian Industries Corp.
3. Oldcastle Glass Corp.
4. Pilkington Building Products (N.A.).
5. Viracom.

2.2 GLASS PRODUCTS

A. **Heat-Treated Float Glass:** ASTM C 1048; Type I (transparent flat glass); Quality-Q3; of class, kind, and condition indicated.

1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed, unless otherwise indicated.
2. For uncoated glass, comply with requirements for Condition A.
3. For coated vision glass, comply with requirements for Condition C (other uncoated glass).
4. Provide kind HS (heat strengthened) float glass where indicated.

    a. HS-1: 1/4-inch thick, blue tint, heat strengthened (PPG Vistacool Azuria).

5. Provide Kind FT (fully tempered) where safety glass is indicated.

    a. TG-1: 1/4-inch thick, clear, tempered glass.

    b. TG-2: 1/4-inch Thick, blue tint, tempered glass (PPG Vistacool Azuria).

B. **Insulating-Glass Units, General:** Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, and complying with ASTM E 774 for Class CBA units and with requirements specified.

1. Provide Kind FT (fully tempered) glass lites where safety glass is indicated.
2. Overall Unit Thickness and Thickness of Each Lite: Dimensions indicated for insulating-glass units are nominal and the overall thicknesses of units are measured perpendicularly from outer surfaces of glass lites at unit's edge.
3. Sealing System: Dual seal, with primary and secondary sealants as follows:

    a. Manufacturer's standard sealants.

4. Spacer Specifications: Manufacturer's standard spacer material and construction complying with the following requirements:

    a. Spacer Material: Manufacturer's standard.
    b. Desiccant: Molecular sieve or silica gel, or blend of both.
    c. Corner Construction: Manufacturer's standard corner construction.

5. Insulating Unit (IG-1): 1-inch thick.

    a. Outboard Lite: 1/4-inch tinted tempered glass (TG-1).
    b. Air Space: 1/2-inch.
    c. Inboard Lite: 1/4-inch clear tempered glass (TG-1) with Low-E coating on surface #3 (PPG Solarban 60).

d. Visible Light Transmittance: 42%.
e. Solar Energy Transmittance: 16%.
f. Ultra-Violet Transmittance: 11%.
g. Visible Light - Exterior Reflectance: 20%
h. Solar Energy Reflectance: 11%.
i. Winter U-Value: 0.30 Btu/(hr x sq.ft. x °F)
j. Summer U-Value: 0.29 Btu/(hr x sq.ft. x °F)
1. Shading Coefficient: 0.30.

m. Solar Factor (SHGC): 0.26.
n. Color selected by owner.
o. Provide tempered glass where required by code.

6. Insulating Unit (IG-2): 1-inch thick:

a. Outboard Lite: 1/4-inch, tinted heat strengthened glass (HS-1).
b. Air Space: 1/2-inch.
c. Inboard Lite: 1/4-inch clear, with Low-E coating on surface #3 (PPG Solarban 60).
d. Visible Light Transmittance: 42%.
e. Solar Energy Transmittance: 16%.
f. Ultra-Violet Transmittance: 11%.
g. Visible Light - Exterior Reflectance: 20%.
h. Solar Energy Reflectance: 11%.
i. Winter U-Value: 0.30 Btu/(hr x sq.ft. x °F).
j. Summer U-Value: 0.29 Btu/(hr x sq.ft. x °F).
1. Shading Coefficient: 0.30.
m. Solar Factor (SHGC): 0.26.
n. Color selected by owner.
o. Ceramic Coated Spandrel Glass. ASTM C 1048, Type I, Condition B, Quality-Q3

7. Interior, Single-pane Glass

a. 1/4-inch clear tempered.

2.3 GLAZING GASKETS

A. **As recommended** by framing manufacturer.

2.4 GLAZING SEALANTS

A. **General:** Provide products of type indicated, complying with the following requirements:

1. Compatibility: Select glazing sealants that are compatible with one another and with other materials they will contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service

and application, as demonstrated by sealant manufacturer based on testing and field experience.

2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
3. Colors of Exposed Glazing Sealants: As selected by Associate from manufacturer's full range.

2.5 GLAZING TAPES

A. **As recommended** by framing system manufacturer.

2.6 MISCELLANEOUS GLAZING MATERIALS

A. **General:** Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.

B. **Cleaners, Primers, and Sealers:** Types recommended by sealant or gasket manufacturer.

C. **Setting Blocks:** Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.

D. **Spacers:** Elastomeric blocks or continuous extrusions with a Shore, Type A durometer hardness required by glass manufacturer to maintain glass lites in place for installation indicated.

E. **Edge Blocks:** Elastomeric material of hardness needed to limit glass lateral movement (side walking).

2.7 FABRICATION OF GLAZING UNITS

A. **Fabricate glazing units** in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

A. **Examine framing glazing,** with Installer present, for compliance with the following:

1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.

2. Presence and functioning of weep system.
3. Minimum required face or edge clearances.
4. Effective sealing between joints of glass-framing members.

B. **Proceed with installation** only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. **Clean glazing channels and other framing members** receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

3.3 GLAZING, GENERAL

A. **Comply with combined written instructions** of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.

B. **Glazing channel dimensions,** as indicated on Drawings, provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances. Adjust as required by Project conditions during installation.

C. **Protect glass edges from damage during handling and installation.** Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.

D. **Apply primers to joint surfaces** where required for adhesion of sealants, as determined by preconstruction sealant-substrate testing.

E. **Install setting blocks** in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

F. **Do not exceed edge pressures** stipulated by glass manufacturers for installing glass lites.

G. **Provide spacers for glass lites** where length plus width is larger than 50 inches as follows:

1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
2. Provide 1/8-inch minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

H. **Provide edge blocking where** indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

I. **Set glass lites** in each series with uniform pattern, draw, bow, and similar characteristics.

J. **Where wedge-shaped gaskets are driven** into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

K. **Square cut wedge-shaped gaskets** at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

3.4 TAPE GLAZING

A. **Position tapes on fixed stops** so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.

B. **Install tapes continuously,** but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.

C. **Cover vertical framing joints** by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.

D. **Place joints in tapes at corners of opening** with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.

E. **Do not remove release paper from tape** until just before each glazing unit is installed.

F. **Center glass lites** in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.

3.5 GASKET GLAZING (DRY)

A. **Fabricate compression gaskets** in lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.

B. **Insert soft compression gasket** between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.

C. **Center glass lites** in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

D. **Install gaskets** so they protrude past face of glazing stops.

3.6 SEALANT GLAZING (WET)

A. **Install continuous spacers,** or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.

B. **Force sealants into glazing channels** to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.

C. **Tool exposed surfaces of sealants** to provide a substantial wash away from glass.

3.7 CLEANING AND PROTECTION

A. **Protect exterior glass from damage** immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels, and clean surfaces.

B. **Protect glass from contact with contaminating substances** resulting from construction operations, including weld splatter. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended by glass manufacturer.

C. **Examine glass surfaces** adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.

D. **Remove and replace glass** that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.

E. **Wash glass on both exposed surfaces** in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

END OF SECTION

SECTION 08 90 00

LOUVERS AND VENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General.** The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install the louvers and vents in accordance with the plans and as specified herein.

B. **This section includes the following**:

1. Fixed metal wall louvers.
2. Adjustable metal wall louvers.
3. Acoustical louvers.
4. Blank off panels for wall louvers.
5. Wall vents.

C. **Air intake louvers for heating, ventilating**, and air conditioning (HVAC) terminal units are specified with units in Division 23.

D. **Related Sections.** The following sections contain requirements that relate to this section.

1. Division 7 section "Joint Sealers" for sealants installed in perimeter joints between louver frames and adjoining construction.
2. Division 9 section "Painting" for field painting of louvers.
3. Division 8 section "Steel Doors and Frames" for louvers in hollow metal doors and frames.
4. Division 8 section "Custom Hollow Metal Work" for louvers in hollow metal doors and frames.
5. Division 23 section "Metal Ductwork" for ductwork connected to metal wall louvers.
6. Division 23 section "Electric Control Systems" for electric and electronic control of motor operated adjustable metal wall louvers.
7. Division 26 section "Electrical Connections" for electrical power connections for motor operated adjustable metal wall louvers.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work to furnish and install the louvers and vents in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

B. **Single-Source Responsibility.** Obtain louvers and vents from a single source where alike in one or more respects with regard to type, design, and factory applied color finish.

C. **Qualify welding processes** and welding operators in accordance with D1.2 "Structural Welding Code - Aluminum" and D1.3 "Structural Welding Code - Sheet Steel."

1. Certify that each welder employed in unit of work of this section has satisfactorily passed American Welding Society (AWS) qualification tests for welding processes involved and, if pertinent, has undergone recertification.
2. Testing for recertification is Contractor's responsibility.

D. **Engineer Qualifications.** Professional engineer licensed to practice in jurisdiction where project is located and experienced in providing engineering services of the kind indicated which has resulted in the successful installation of louvers similar in material, design, and extent to that indicated for this project.

E. **Sheet Metal and Air Conditioning Contractors' National Association (SMACNA) Standard.** Comply with SMACNA "Architectural Sheet Metal Manual" recommendations for fabrication, construction details, and installation procedures.

F. **Underwriters' Laboratories, Inc. (UL) and National Electrical Manufacturers Association (NEMA) Compliance.** Provide motors and related components for motor operated adjustable louvers which are listed and labeled by UL and comply with applicable NEMA standards.

1.4 SUBMITTALS

A. **Transmittals**. Furnish manufacturer's product data, test reports, and material certifications as required.

B. **Product data for each product** indicated.

C. **Shop Drawings of Louver Units and Accessories**. Include plans, elevations, sections, and details showing profiles, angles, spacing of louver blades; unit dimensions related to wall openings and construction; free areas for each size indicated; and profiles of frames at jambs, heads and sills.

1. Where installed products are indicated to comply with certain structural design loadings, include structural computations, material properties, and other information needed for structural analysis which has been prepared by, or under the supervision of, a qualified professional engineer.

D. **Wiring diagrams detailing wiring** for power and control systems; differentiating clearly between manufacturer-installed wiring and field-installed wiring.

E. **Samples for initial selection purposes** in form of manufacturer's color charts showing full range of colors available for those units with factory applied color finishes.

F. **Samples for verification purposes** of each type of metal finish required, prepared on 6 inch square metal samples of same thickness and alloy indicated for final unit of work. Where finishes involve normal color and texture variations, include sample sets showing full range of variations expected.

G. **Product test reports** evidencing compliance of units with performance requirements indicated.

H. **Product certificates signed by louver manufacturers** certifying that their products which comply with project requirements are licensed to bear Air Movement and Control Association (AMCA) Seal based on tests made in accordance with AMCA Standard 500 and complying with AMCA Certified Ratings Program.

I. **Qualification data for firms and persons** specified in "Quality Assurance" article to demonstrate their capabilities and experience.

1.5 JOB CONDITIONS

A. **Field Measurements.** Check actual louver openings by accurate field measurements before fabrication; show recorded measurements on final shop drawings. Coordinate fabrication schedule with construction progress to avoid delay of the work.

1.6 DELIVERY, STORAGE, AND HANDLING

Not used.

1.7 SPECIAL WARRANTY

Not used.

1.8 DEFINITIONS

A. **Louver Terminology.** Refer to Air Movement and Control Association (AMCA) Publication 501-85 for definitions of terms for metal louvers not otherwise defined in this section or referenced standards.

1.9 SYSTEM PERFORMANCE REQUIREMENTS

A. **Structural Performance.** Design, engineer, fabricate, and install exterior metal wall louvers to withstand the effects of loads and stresses from wind and normal thermal movement, without evidencing permanent deformation of louver components including blades, frames, and supports; noise or metal fatigue caused by louver blade rattle or flutter; and permanent damage to fasteners and anchors:

1. Wind Load. Uniform pressure (velocity pressure) of 20 pounds per foot (lbf) per square foot (psf) acting inwards or outwards.

2. Wind Load. Uniform pressures (velocity pressures) indicated on drawings, acting inwards or outwards.

3. Normal thermal movement is defined as that resulting from the following maximum change (range) in ambient temperature. Base design calculations on actual surface temperatures of metals due to both solar heat gain and night time sky heat loss.

   a. Temperature Change (Range). 100 degrees Fahrenheit (° F.) (55.5 degrees Celsius [° C.]).

B. **Air Performance, Water Penetration, and Air Leakage Ratings.** Provide louvers complying with performance requirements indicated as demonstrated by testing manufacturers stock units, of height and width indicated, according to AMCA Standard 500.

C. **Airborne Sound Transmission Loss.** Provide acoustical louvers complying with airborne sound transmission loss ratings indicated, as demonstrated by testing manufacturer's stock units according to American Society for Testing and Materials (ASTM) E 90.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. **Available Manufacturers.** Subject to compliance with requirements, manufacturers offering products which may be incorporated in the work include, but are not limited to, the following:

1. Louvers.

   a. Airline Products Co. Div., Danzer Metal Works Co.
   b. Airolite Co.
   c. Airstream Products Div., Penn Ventilator Co., Inc.
   d. American Warming and Ventilating, Inc.
   e. Arrow United Industries.
   f. Construction Specialties, Inc.
   g. Industrial Louvers, Inc.
   h. Reliable Metal Products.
   i. Ruskin Mfg. Div., Phillips Industries, Inc.

2. Metal Wall Vents.

   a. Airline Products Co. Div., Danzer Metal Works Co.
   b. Airolite Co.
   c. Airstream Products Div., Penn Ventilator Co., Inc.
   d. Arrow United Industries.
   e. Construction Specialties, Inc.
   f. Industrial Louvers, Inc.
   g. Riesner Vent Brick Corp.
   h. Reliable Metal Products.
   i. Ruskin Mfg. Div., Phillips Industries, Inc.
   j. Sunvent Industries, Sylro Sales Corp.

2.2 MATERIALS

A. **Galvanized Steel Sheet.** ASTM A 526 or A 527, G90 zinc coating, mill phosphatized.

B. **Aluminum Sheet.** ASTM B 209, Alloy 3003 or 5005 with temper as required for forming, or as otherwise recommended by metal producer to produce required finish.

C. **Aluminum Extrusions.** ASTM B 221, Alloy 6063-T5 or T-52.

D. **Fasteners.** Of same basic metal and alloy as fastened metal, unless otherwise indicated. Do not use metals which are corrosive or incompatible with materials joined.

1. Use types, gauges, and lengths to suit unit installation conditions.
2. Use Phillips flat head machine screws for exposed fasteners, unless otherwise indicated.

E. **Anchors and Inserts.** Of type, size, and material required for type of loading and installation indicated. Use nonferrous metal or hot dip galvanized anchors and inserts for exterior installations and elsewhere as required for corrosion resistance. Use toothed steel or expansion bolt devices for drilled-in-place anchors.

F. **Bituminous Paint.** SSPC-Paint 12 (cold applied asphalt mastic).

G. **Galvanizing Repair Paint.** High zinc dust content paint for re-galvanizing welds in galvanized steel, complying with SSPC-Paint-20.

2.3 FABRICATION, GENERAL

A. **General.** Fabricate louvers and vents to comply with requirements indicated for design, dimensions, materials, joinery, and performance.

B. **Preassemble louvers in shop** to minimize field-splicing and assembly. Disassemble units as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

C. **Maintain equal louver blade spacing**, including separation between blades and frames at head and sill, to produce uniform appearance.

D. **Fabricate frames**, **including integral sills**, to fit in openings of size indicated with allowances made for fabrication and installation tolerances of louvers, adjoining construction, and perimeter sealant joints.

E. **Include supports, anchorages, and accessories** required for complete assembly.

F. **Provide vertical mullions** of type and at spacing indicated but not further apart than recommended by manufacturer, or 72 inches on center (o.c.), whichever is less. At horizontal joints between louver units provide horizontal mullions except where continuous vertical assemblies are indicated.

G. **Provide sill extensions and loose sills** made of same material as louvers, where indicated, or required for drainage to exterior and to prevent water penetrating to interior.

H. **Join frame members to one another** and to fixed louver blades as follows, unless otherwise indicated, or size of louver assembly makes bolted connections between frame members necessary:

1. With fillet welds, concealed from view.
2. With fillet welds, concealed from view; or mechanical fasteners; or a combination of these methods; as standard with louver manufacturer.

2.4 FIXED EXTRUDED-ALUMINUM WALL LOUVERS

A. **Horizontal Drainable Fixed-Blade Louvers.** Extruded-aluminum frames and louver blades; designed to collect and drain water to exterior at sill by means of gutters in front edges of blades and of channels in jambs and mullions; complying with the following requirements.

1. Louver Depth. 6 inches, unless otherwise indicated.

2. Frame Thickness. 0.125 inch, unless otherwise indicated.

3. Louver Blade Thickness. 0.125 inch, unless otherwise indicated.

4. Louver Blade Angle. 45 degrees, unless otherwise indicated.

5. Performance Requirements. As follows, determined by testing units 48 inches wide by 48 inches high per AMCA Standard 500:

   a. Louver Free Area. Not less than 7.34 square feet (sf).
   b. Static Pressure Loss. Not more than 0.15 inch water gauge at an airflow of 1,000 feet per minute (fpm) free area intake velocity.
   c. Water Penetration. Not more than 0.02 ounces psf of free area at an airflow of 1,450 fpm free area velocity when tested for 15 minutes.

6. AMCA Seal. Mark units with AMCA Certified Ratings Seal.

B. **Horizontal Drainable Sightproof Fixed-Blade Louvers.** Extruded-aluminum frames and sightproof louver blades; designed to collect and drain water to exterior at sill by means of gutters in front edges of blades and of channels in jambs and mullions; complying with the following requirements:

1. Louver Depth. 5 inches.

2. Frame Type. Channel flange.

3. Frame Thickness. 0.081 inch.

4. Louver Blade Thickness. 0.081 inch.

5. Louver Blade Profile. As indicated.

6. Louver Blade Spacing. 2 inches o. c.

7. Performance Requirements. As follows, determined by testing units 48 inches wide by 48 inches high per AMCA Standard 500:

   a. Louver Free Area. Not less than 8.42 sf.
   b. Static Pressure Loss. Not more than 0.15 inch water gauge at an airflow of 750 fpm free area intake velocity.
   c. Water Penetration. Not more than 0.02 ounce psf of free area at an airflow of 760 fpm free area velocity when tested for 15 minutes.

8. AMCA Seal. Mark units with AMCA Certified Ratings Seal.

9. Product. Subject to compliance with requirements, provide Model K605 manufactured by Airolite Co.

C. **Horizontal Nondrainable Fixed-Blade Louvers.** Extruded-aluminum frames and louver blades, complying with the following requirements:

1. Louver Depth. 6 inches, unless otherwise indicated.

2. Frame Type. Channel flange, unless otherwise indicated.

3. Frame Thickness. 0.081 inch, unless otherwise indicated.

4. Louver Blade Thickness. 0.081 inch, unless otherwise indicated.

5. Louver Blade Profile. As indicated.

6. Louver Blade Angle. 45 degrees, unless otherwise indicated.

7. Performance Requirements. As follows, determined by testing units 48 inches wide by 48 inches high per AMCA Standard 500:

   a. Louver Free Area. Not less than 6.67 sf.
   b. Static Pressure Loss. Not more than 0.15 inch water gauge at an airflow of 810 fpm free area intake velocity.
   c. Water Penetration. Not more than 0.02 ounce psf of free area at an airflow of 855 fpm free area velocity when tested for 15 minutes.

8. AMCA Seal. Mark units with AMCA Certified Ratings Seal.

D. **Continuous Horizontal Fixed-Blade Louvers.** Extruded-aluminum frames and louver blades with supporting framework concealed from view from outside face of louver by placing braces, mullions, and brackets on inside face; with close fitting, field made splice joints in blades designed to permit expansion and

contraction without deforming blades or framework; and complying with the following requirements:

1. Louver Depth. 6 inches, unless otherwise indicated.
2. Frame Type. Channel flange.
3. Frame Thickness. 0.081 inch, unless otherwise indicated.
4. Louver Blade Thickness. 0.081 inch, unless otherwise indicated.
5. Louver Blade Profile. As indicated.
6. Louver Blade Angle. 45 degrees, unless otherwise indicated.
7. Louver Blade Spacing. 6 inches o.c. for 6 inch deep, 45 degree angle louver blades.
8. Louver Free Area. Not less than 6.83 sf 48-inch-wide-by-48-inch-high section.
9. Exterior Corners. Prefabricated corner units with mitered and welded blades aligned with straight sections, with concealed bracing.

E. **Vertical Sightproof Fixed-Blade Louvers.** Extruded-aluminum frames and vertical sightproof louver blades complying with the following requirements.

1. Louver Depth. As indicated.
2. Frame Type. Channel flange.
3. Frame Thickness. 0.081 inch.
4. Louver Blade Thickness. 0.081 inch.
5. Louver Blade Profile. As indicated.
6. Louver Blade Spacing. As indicated.
7. Louver Free Area. As indicated.

2.5 FIXED FORMED SHEET METAL WALL LOUVERS

A. **Horizontal Drainable Fixed-Blade Louvers.** Frames and louver blades fabricated from metal of kind and in form indicated below; designed to collect and drain water to exterior at sill by means of gutters in front edges of blades and of channels in jambs and mullions; complying with the following requirements:

1. Louver Blade Metal and Thickness. Galvanized steel sheet, 0.0635 inch (16 gauge), unless otherwise indicated.

2. Louver Blade Metal and Thickness. Galvanized steel sheet, 0.0516 inch (18 gauge), unless otherwise indicated.

3. Louver Blade Metal and Thickness. Aluminum sheet, 0.040 inch, unless otherwise indicated.

4. Louver Blade Metal and Thickness. As indicated.

5. Frame Metal and Thickness. Same as louver blades, unless otherwise indicated.

6. Louver Depth. 6 inches, unless otherwise indicated.

7. Louver Blade Angle. 45 degrees, unless otherwise indicated.

8. Performance Requirements. As follows, determined by testing units 48 inches wide by 48 inches high per AMCA Standard 500:

   a. Louver Free Area. Not less than 7.61 sf.
   b. Static Pressure Loss. Not more than 0.15 inch water gauge at an airflow of 960 fpm free area intake velocity.
   c. Water Penetration. Not more than 0.02 ounce psf of free area at an airflow of 1,100 fpm free area velocity when tested for 15 minutes.

9. AMCA Seal. Mark units with AMCA Certified Ratings Seal.

B. **Horizontal Nondrainable Fixed-Blade Louvers.** Frames and louver blades fabricated from metal of kind and in form indicated below; complying with the following requirements:

1. Louver Blade Metal and Thickness. As indicated.

2. Frame Metal and Thickness. Same as louver blades, unless otherwise indicated.

3. Louver Depth. 6 inches, unless otherwise indicated.

4. Frame Type. Channel flange, unless otherwise indicated.

   a. Continuous Vertical Assemblies. Where height of louver units exceed fabrication and handling limitations, fabricate units to permit field bolted assembly with blade pattern uninterrupted in vertical spacing with close fitting joints in jamb frames, reinforced with splice plates.

5. Louver Blade Profile. As indicated.

6. Louver Blade Angle. 45 degrees, unless otherwise indicated.

7. Performance Requirements. As follows, determined by testing units 48 inches wide by 48 inches high per AMCA Standard 500:

   a. Louver Free Area. Not less than 5.88 sf.
   b. Static Pressure Loss. Not more than 0.15 inch water gauge at an airflow of 960 fpm free area intake velocity.
   c. Water Penetration. Not more than 0.02 ounce psf of free area at an airflow of 800 fpm free area velocity when tested for 15 minutes.

8. AMCA Seal. Mark units with AMCA Certified Ratings Seal.

2.6 ADJUSTABLE EXTRUDED-ALUMINUM WALL LOUVERS

A. **General.** Provide adjustable blade louvers with manufacturer's recommended bearings and operating mechanisms to suit louver sizes and actuator indicated below:

1. Hand operation with push bars.

2. Hand operation with spring, chain, wall bracket, and 160 degrees Fahrenheit (° F.) (71 degrees Celsius [° C.]) fusible link.

3. Crank operation, with removable crank operator in sill or jamb.

4. Chain operation, with tension spring, wall clip, pull chain and 160° F. (71° C.) fusible link.

5. Motor operation, with two directional, 110 volt alternating current (Vac), 60 cycle motor, and limit switches wired for grounding, equipped as follows:
   a. Loose toggle switch and indicator light, ready for installation.

B. **Single-Frame Combination Drainable Fixed/Adjustable Louvers.** Drainable fixed blades and adjustable blades combined in single frame; with both blades and frames fabricated from aluminum extrusions; designed to collect and drain water to exterior at sill by means of gutters in front edges of fixed blades and of channels in jambs and mullions; complying with following requirements:

1. Louver Depth. 6 inches, unless otherwise indicated.

2. Frame Thickness. 0.125 inch, unless otherwise indicated.

3. Fixed Louver Blade Thickness. 0.081 inch, unless otherwise indicated.

4. Adjustable Louver Blade Thickness. 0.125 inch, unless otherwise indicated.

5. Louver Blade Angle. 45 degrees, unless otherwise indicated.

6. Performance Requirements. As follows, determined by testing units 48 inches wide by 48 inches high per AMCA Standard 500:

   a. Louver Free Area. Not less than 7.22 sf.
   b. Air Leakage. Not more than 3.5 cubic feet per minute (cfm) psf of louver gross area at a differential static pressure of 0.15 inch water gauge with adjustable louver blades closed.
   c. Static Pressure Loss. Not more than 0.15 inch water gauge at an airflow of 980 fpm free area intake velocity.
   d. Water Penetration. Not more than 0.02 ounce psf of free area at an airflow of 950 fpm free area velocity when tested for 15 minutes.

7. AMCA Seal. Mark units with AMCA Certified Ratings Seal.

C. **Drainable Adjustable-Blade Louvers.** Extruded-aluminum frames and louver blades; designed to collect and drain water to exterior at sill by means of gutters in front edges of adjustable blades and of channels in jambs and mullions; complying with the following requirements:

1. Louver Depth. 6 inches, unless otherwise indicated.

2. Frame Thickness. 0.125 inch, unless otherwise indicated.

3. Louver Blade Thickness. 0.125 inch, unless otherwise indicated.

4. Louver Blade Angle. 45 degrees, unless otherwise indicated.

5. Accessories. Equip louvers as follows:

   a. Snap on blade edge gaskets for each louver blade to produce continuous air tight closures.

   b. Metal jamb seals between adjustable louver blade ends and jambs to restrict air leakage fabricated from the following:

      1) Stainless steel, American Iron and Steel Institute (AISI) Type 301, with No. 2B finish.

6. Performance Requirements. As follows, determined by testing units 48 inches wide by 48 inches high per AMCA Standard 500:

   a. Louver Free Area. Not less than 7.22 sf.
   b. Air Leakage. Not more than 3.5 cfm psf of louver gross area at a differential static pressure of 0.15 inch water gauge with adjustable louver blades closed.
   c. Static Pressure Loss. Not more than 0.15 inch water gauge at an airflow of 980 fpm free area intake velocity.
   d. Water Penetration. Not more than 0.02 ounce psf of free area at an airflow of 980 fpm free area velocity when tested for 15 minutes.

7. AMCA Seal. Mark units with AMCA Certified Ratings Seal.

D. **Nondrainable Adjustable-Blade Louvers.** Extruded aluminum frames and louver blades complying with the following requirements:

1. Louver Depth. 6 inches, unless otherwise indicated.
2. Frame Type. Channel flange, unless otherwise indicated.
3. Frame Thickness. 0.125 inch, unless otherwise indicated.
4. Louver Blade Thickness. 0.125 inch, unless otherwise indicated.
5. Louver Blade Profile. As indicated.
6. Louver Blade Angle. 45 degrees, unless otherwise indicated.
7. Louver Blade Spacing. As indicated.
8. Louver Free Area. Not less than 6.83 sf for 48 inch wide by 48 inch high section.

2.7 FIXED ACOUSTICAL WALL LOUVERS

A. **Fixed Extruded-Aluminum Wall Louvers.** Extruded-aluminum louver blades and frames filled on interior with mineral fiber rigid board acoustical insulation

that is retained by perforated aluminum sheet; and complying with the following requirements:

1. Louver Depth. 8 inches, unless otherwise indicated.

2. Frame Thickness. 0.125 inch, unless otherwise indicated.

3. Louver Blade Thickness. 0.125 inch, unless otherwise indicated.

4. Louver Blade Angle. 45 degrees, unless otherwise indicated.

5. Louver Blade Spacing. 8 inches for 8 inch deep louvers.

6. Louver Blade Spacing. As indicated.

7. Louver Free Area. 4.07 sf for 48 inch wide by 48 inch high unit.

8. Airborne sound transmission loss rated as follows per ASTM E 413 as follows, determined by testing per ASTM E 90:

    a. Sound Transmission Class (STC) Rating. 10.

2.8 LOUVER SCREENS

A. **General.** Provide each exterior louver with louver screens complying with the following requirements:

1. Screen Location for Adjustable Louvers. Exterior face, unless otherwise indicated.
2. Screening Type. Bird screening, unless otherwise indicated.

3. Screening Type. Insect screening where indicated.

B. **Secure screens to louver frames** with stainless steel machine screws, spaced at each corner and at 12 inch o.c. between.

C. **Louver Screen Frames.** Fabricate screen frames with mitered corners to louver sizes indicated and to comply with the following requirements:

1. Metal. Same kind and form of metal as indicated for louver frames to which screens are attached.

    a. Reinforce extruded aluminum screen frames at corners with clips.

2. Finish. Same finish as louver frames to which louver screens are attached.

3. Type. Rewireable frames with a driven spline or insert for securing screen mesh.

D. **Louver Screening for Aluminum Louvers.** Fit aluminum louver screen frames with screening covering louver openings and complying with the following requirements:

1. Bird Screening. 1/2-inch-square mesh formed with 0.063-inch-diameter aluminum wire.
2. Insect Screening. 18 x 16 mesh formed with 0.012-inch-diameter aluminum wire.

E. **Louver Screening for Galvanized Steel Louvers.** Fit galvanized steel louver screen frames with screening complying with the following requirements:

**********{BEG COMMENT}
RETAIN ONE REQUIREMENT FROM CHOICES BELOW.
**********{END COMMENT}

1. Bird Screening. 1/2-inch-square mesh formed with 0.063-inch-diameter galvanized steel wire.
2. Insect Screening. 18 x 14 mesh formed with 0.011-inch-diameter galvanized steel wire.

2.9 BLANK OFF PANELS

A. **General.** Fabricate blank off panels from materials and to sizes indicated and to comply with the following requirements:

1. Finish. Match finish applied to louvers with respect to coating type, color and gloss.

2. Attach blank off panels to back of louver frames with stainless steel sheet metal screws.

B. **Non-insulated Blank Off Panels.** Metal sheet complying with the following requirements:

1. Aluminum sheet for aluminum louvers, thickness as follows:

   a. 0.051 inch, unless otherwise indicated.

2. Galvanized steel sheet for galvanized steel louvers, thickness as follows:

   a. 0.051 inch, unless otherwise indicated.

C. **Insulated Blank Off Panels.** Laminated metal faced panels consisting of insulating core surfaced on back and front with metal sheets; complying with the following requirements:

1. Thickness. 1 inch.
2. Metal Facing Sheets. Aluminum sheet, 0.032 inch thick.
3. Insulating Core. Unfaced rigid glass fiber board insulation complying with ASTM C 612, Class 1 and 2.

4. Edge Treatment. Trim perimeter edges of blank off panels with louver manufacturer's standard extruded aluminum channel frames 0.081 inch thick, with corners mitered and with same finish as panels.
5. Seal perimeter joints between panel faces and louver frames with polyvinyl chloride compression gaskets, 1/8 inch by l inch.

2.10 WALL VENTS

A. **Extruded-Aluminum Wall Vents.** Extruded-aluminum louvers and frames not less than 0.125 inch thick and assembled by welding; with 18 x 14 mesh aluminum wire insect screening on inside face; incorporating weep holes, continuous drip at sill, and integral water stop on inside edge of sill; of load bearing design and construction.

2.11 FINISHES, GENERAL

A. **Comply with National Association of Architectural Metal Manufacturers** (NAAMM) "Metal Finishes Manual" for recommendations relative to application and designations of finishes.

B. **Finish louvers after assembly**.

2.12 ALUMINUM FINISHES

A. **Finish designations prefixed by "AA"** conform to the system established by the Aluminum Association for designating aluminum finishes.

B. **Class II Clear Anodized Finish.** AA-M12C22A31 (Mechanical Finish: as fabricated, non-specular; Chemical Finish: etched, medium matte; Anodic Coating: Class II Architectural, clear film thicker than 0.4 mil).

C. **Class I Clear Anodized Finish.** AA-M12C22A41 (Mechanical Finish: as fabricated, non-specular; Chemical Finish: etched, medium matte; Anodic Coating: Class I Architectural: clear film thicker than 0.7 mil) complying with AAMA 607.1.

D. **Conversion Coated Finish.** AA-C12C42 (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: chemical conversion coating, acid chromate fluoride phosphate pretreatment).

1. Organic Coating. Air dried zinc chromate primer with not less than 2.0 mils dry film thickness.

E. **Class I Color Anodized Finish.** AA-M12C22A42/A44 (Mechanical Finish: as fabricated, nonspecular; Chemical Finish: etched, Medium Matte; Anodic Coating: Class II Architectural, film thicker than 0.7 mil with integral color or electrolytically deposited color) complying with AAMA 606.1 or AAMA 608.1.

1. Color. As selected by Engineer/Architect from within standard industry colors and color density range.

F. **Baked Enamel Finish.** AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: chemical conversion coating, acid

chromate fluoride phosphate pretreatment; Organic Coating: as specified below). Apply baked enamel in compliance with paint manufacturer's specifications for cleaning, conversion coating, and painting.

1. Organic Coating. Thermosetting modified acrylic enamel primer/topcoat system complying with AAMA 603.8 except with minimum dry film thickness of 1.5 mils, medium gloss.
2. Color. As selected by Engineer/Architect from manufacturer's standard colors.

G. **High-Performance Organic Coating.** AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: chemical conversion coating, acid chromate fluoride phosphate pretreatment; Organic Coating: as specified below) Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturer's instructions.

1. Fluorocarbon Two-Coat Coating System. Manufacturer's standard two-coat thermocured system, composed of specially formulated inhibitive primer and fluorocarbon color topcoat containing not less than 70 percent polyvinyldene resin by weight; complying with AAMA 605.2.
   a. Color and Gloss. As selected by Engineer/Architect from manufacturer's standard choices for color and gloss.

2.13 GALVANIZED STEEL SHEET FINISHES

A. **Surface Preparation.** Clean surfaces of dirt, grease, and other contaminants followed by a conversion coating of type suited to organic coating applied over it. Clean welds, mechanical connections, and abraded areas followed by application of galvanizing repair paint to comply with ASTM A 780.

B. **Factory-Priming for Field-Painting.** Where field-painting after installation is indicated, apply air dried primer immediately following cleaning and pretreatment.

C. **Baked Enamel Finish.** Immediately after cleaning and pretreatment, apply manufacturer's standard two-coat baked-enamel finish consisting of epoxy prime coat and thermosetting alkyd melamine resin topcoat, with not less than 1.0 mils dry film thickness for topcoat.

D. **High-Performance Organic Coating.** Immediately after cleaning and pretreatment, apply organic coating specified below to comply with coating and resin manufacturer's instructions.

1. Fluorocarbon Two-Coat Coating System. Manufacturer's standard two-coat thermocured system, composed of specially formulated inhibitive primer and fluorocarbon color topcoat containing not less than 70 percent polyvinyldene resin by weight.

   a. Color and Gloss. As selected by Engineer/Architect from manufacturer's standard choices for color and gloss.

PART 3 - EXECUTION

3.1 PREPARATION

A. **Coordinate setting drawings, diagrams**, templates, instructions, and directions for installation of anchorages which are to be embedded in concrete or masonry construction. Coordinate delivery of such items to project site.

3.2 INSTALLATION

A. **Locate and place louver units** plumb, level, and in proper alignment with adjacent work.

B. **Use concealed anchorages** where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.

C. **Form closely fitted joints** with exposed connections accurately located and secured.

D. **Provide perimeter reveals and openings** of uniform width for sealants and joint fillers, as indicated.

E. **Repair finishes damaged by cutting**, welding, soldering, and grinding operations require for fitting and jointing. Restore finishes so there is no evidence of corrective work. Return items which cannot be refinished in field to shop, make required alterations and refinish entire unit, or provide new units.

F. **Protect galvanized and nonferrous metal surfaces** from corrosion or galvanic action by application of a heavy coating of bituminous paint on surfaces which will be in contact with concrete, masonry, or dissimilar metals.

G. **Install concealed gaskets**, flashings, joint fillers, and insulation, as louver installation progresses where required to make louver joints weathertight. Comply with Division 7 section "Joint Sealers" for sealants applied during installation of louver.

3.3 ADJUSTING AND PROTECTION

A. **Protect louvers and vents** from damage of any kind during construction period including use of temporary protective coverings where needed and approved by louver manufacturer. Remove protective covering at time of Substantial Completion.

B. **Restore louvers and vents** damaged during installation and construction period, so that no evidence remains of correction work. If results of restoration are unsuccessful, as judged by Engineer/Architect, remove damaged units and replace with new units.

1. Clean and touch up minor abrasions in finishes with air dried coating that matches color and gloss of, and is compatible with, factory applied finish coating.

C. **Test operation of adjustable wall louvers** and adjust as needed to produce fully functioning units which comply with requirements.

3.4 CLEANING

A. **Periodically clean exposed surfaces** of louvers and vents, which are not protected by temporary covering, to remove fingerprints and soil during construction period; do not let soil accumulate until final cleaning.

B. **Before final inspection**, clean exposed surfaces with water and with a mild soap or detergent not harmful to finishes. Rinse thoroughly and dry surface.

SECTION 09 29 00

GYPSUM DRYWALL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Provide the labor, tools, equipment, and materials necessary to furnish and install metal support systems and gypsum drywall finish systems in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work in compliance with all federal, state, and local codes and regulatory agencies.

B. **Standards**. All material, testing, and workmanship shall be in conformance with the following standards as referenced herein:

1. ASTM – American Society for Testing and Materials.

1.4 SUBMITTALS

A. **Product Data**. Furnish manufacturer's published product data for each product specified.

B. **Samples**. Submit the following:

1. Drywall – 4" x 4" x full thickness, one of each type specified.
2. Trim – 6-inch-long section of each shape called for and/or required.
3. Fasteners – One of each type and size.

1.5 PROJECT CONDITIONS

A. **Environmental Conditions**. Establish and maintain environmental conditions for application and finishing gypsum board to comply with ASTM C 840 and with gypsum board manufacturer's recommendations.

B. **Minimum Room Temperatures**. For gypsum board to framing, maintain not less than 50 degrees Fahrenheit (° F.) (10 degrees Celsius [° C.]) for 48 hours prior to application and continuously thereafter until drying is complete.

C. **Ventilation**. Ventilate building spaces to remove water not required for drying joint treatment materials. Avoid drafts during dry, hot weather to prevent materials from drying too rapidly.

1.6 **DELIVERY, STORAGE, AND HANDLING**

A. **Delivery**. Deliver materials in original packages, containers, or bundles bearing brand name and identification of manufacturer or supplier.

B. **Storage**. Store materials inside under cover and keep them dry and protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic, and other causes. Neatly stack gypsum boards flat to prevent sagging.

C. **Handling**. Handle gypsum boards to prevent damage to edges, ends, and surfaces. Do not bend or otherwise damage metal corner beads and trim.

1.7 **SPECIAL WARRANTY**

Not used.

PART 2 - PRODUCTS

2.1 **STEEL FRAMING FOR CEILINGS**

A. **Steel Studs and Runners**. ASTM C 645, with flange edges of studs bent back 90 degrees and doubled over to form 3/16-inch-minimum lip (return) and complying with the following requirements for minimum thickness of base (uncoated) metal and for depth:

1. Thickness. 0.0329 inch unless otherwise indicated on the drawings.
2. Depth. 6 inches, unless otherwise indicated on the drawings.
3. Galvanized.

B. **Fasteners**. Fasteners shall be of type, size, corrosion resistance material, holding power, and other properties required to fasten steel framing and furring members securely to substrates involved, complying with the recommendations of gypsum drywall manufacturers for applications indicated.

2.2 **GYPSUM BOARD**

A. **General**. Provide gypsum board of types indicated in maximum lengths available to minimize end-to-end joints.

1. Thickness. Provide gypsum board in thicknesses indicated, or if not otherwise indicated, in 5/8-inch thicknesses to comply with ASTM C 840 for application system and support spacing indicated.

B. **Gypsum Wallboard**

1. Type. Moisture resistant.
2. Edges. Tapered and featured (rounded or beveled) for prefilling.

2.3 TRIM ACCESSORIES

A. **Corner Bead and Edge Trim for Interior Installation**. Corner beads, edge trim, and control joints shall comply with ASTM C 1047 and requirements indicated below:

1. Material. Formed metal complying with the following requirement:

   a. Sheet steel coated with zinc by hot dip or electrolytic processes, or with aluminum.

2. Edge trim shapes indicated below by reference to designations of Figure 1 in ASTM C 1047:

   a. "LC" bead, unless otherwise indicated.
   b. "LK" bead with square nose for use with kerfed jambs.
   c. "U" bead where indicated.

3. One Piece Control Joint. Formed with V-shaped slot per Figure 1 in ASTM C 1047, with slot opening covered with removable strip.

2.4 GYPSUM BOARD JOINT TREATMENT MATERIALS

A. **General**. Provide materials complying with ASTM C 475, ASTM C 840, and recommendations of manufacturer of both gypsum board and joint treatment materials for the application indicated.

B. **Joint Tape**. Paper reinforcing tape, unless otherwise indicated on the drawings.

1. Use pressure-sensitive or staple-attached open-weave glass-fiber reinforcing tape with compatible joint compound where recommended by manufacturer of gypsum board and joint treatment materials for application indicated.

C. **Setting-Type Joint Compounds**. Factory-prepackaged, job mixed, chemical hardening powder products formulated for uses indicated.

1. Where setting type joint compounds are indicated for use as taping and topping compounds, use formulation for each which develops greatest bond strength and crack resistance and is compatible with other joint compounds applied over it.
2. For prefilling gypsum board joints, use formulation recommended by gypsum board manufacturer for this purpose.

D. **Drying Type Joint Compounds**. Factory-prepackaged vinyl-based products complying with the following requirements for formulation and intended use.

1. Ready Mix Formulation. Factory-premixed product.
2. Topping compound formulated for finish (third) coats.
3. All-purpose compound formulated for use as topping compound.

2.5 **MISCELLANEOUS MATERIALS**

A. **General**. Provide auxiliary materials for gypsum drywall construction which comply with referenced standards and the recommendations of the manufacturer of the gypsum board.

B. **Fastening Adhesive for Metal**. Special adhesive recommended for laminating gypsum boards to steel framing.

C. **Gypsum Board Screws**. ASTM C 1002.

D. **Asphalt Felt**. ASTM D 226, Type I (No. 15).

E. **Sound-Attenuation Blankets**. Unfaced mineral-fiber blanket insulation produced by combining mineral fibers manufactured from glass or slag with thermosetting resins to comply with ASTM C 665 for Type I (blankets without membrane facing).

PART 3 - EXECUTION

3.1 **EXAMINATION**

A. **General**. Examine substrates to which drywall construction attaches or abuts, preset hollow metal frames, cast-in anchors, and structural framing, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of drywall construction. Do not proceed with the installation until unsatisfactory conditions have been corrected.

3.2 **INSTALLATION OF STEEL FRAMING, GENERAL**

A. **Steel Framing Installation Standard**. Install steel framing to comply with ASTM C 754 and with ASTM C 840 requirements that apply to framing installation.

1. Install supplementary framing, blocking, and bracing at terminations in the work and for support of fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, and similar construction to comply with details indicated and with recommendations of gypsum board manufacturer, or if none available, with "Gypsum Construction Handbook" published by United States Gypsum Company.

3.3 **INSTALLATION OF STEEL FRAMING**

A. **Installation**

1. Install runners (tracks) at structural walls and columns where gypsum drywall stud system abuts other construction.

a. Where studs are installed directly against exterior walls, install asphalt felt strips between studs and wall.

2. Installation Tolerances. Install each steel framing and furring member so that fastening surfaces do not vary more than 1/8 inch from plane of faces of adjacent framing.

3. Install steel studs in sizes and at spacings indicated but not less than that required by referenced steel framing installation standard.

   a. For single- and double-layer construction. 16 inches on center.

4. Frame openings as required for electrical and mechanical

3.4 APPLICATION AND FINISHING OF GYPSUM BOARD, GENERAL

A. **Gypsum Board Application and Finishing Standard**. Install and finish gypsum board to comply with ASTM C 840.

1. Locate exposed end butt joints as far from center of walls as possible, and stagger not less than 24 inches in alternate courses of board.

2. Install ceiling boards across framing with no joints, except at walls.

3. Install exposed gypsum board with face side out. Do not install imperfect, damaged, or damp boards. Butt boards together for a light contact at edges and ends with not more than 1/16 inch open space between boards. Do not force into place.

4. Locate either edge or end joints over supports, except in horizontal applications where intermediate supports or gypsum board back blocking is provided behind end joints. Position boards so that like edges abut, tapered edges against tapered edges, and mill cut or field cut ends against mill cut or field cut ends. Do not place tapered edges against cut edges or ends. Stagger vertical joints over different studs on opposite sides of partitions.

5. Attach gypsum board to steel studs so that leading edge or end of each board is attached to open (unsupported) edge of stud flange first.

6. Attach gypsum board to supplementary framing and blocking provided for additional support at openings and cutouts.

7. Form control joints and expansion joints at locations indicated, with space between edges of boards prepared to receive trim accessories.

8. Space fasteners in gypsum boards in accordance with referenced gypsum board application and finishing standard and manufacturer's recommendations.

3.5 METHODS OF GYPSUM BOARD APPLICATION

A. **Single-Layer Application**. Install gypsum wallboard as follows:

1. On ceilings apply gypsum board prior to wall/partition board application to the greatest extent possible.

B. **Fastening Methods**. Apply gypsum boards to steel framing with adhesive and supplementary screws.

3.6 INSTALLATION OF DRYWALL TRIM ACCESSORIES

A. **General**. Where feasible, use the same fasteners to anchor trim accessory flanges as required to fasten gypsum board to the supports. Otherwise, fastening flanges shall comply with manufacturer's recommendations.

B. **Edge Trim**. Install metal edge trim whenever edge of gypsum board would otherwise be exposed or semiexposed, and except where plastic trim is indicated. Provide type with face flange to receive joint compound except where "U" bead (semifinishing type) is indicated.

1. Install "LC" bead where drywall construction is tightly abutted to other construction and back flange can be attached to framing or supporting substrate.
2. Install "LK" bead where substrate is kerfed to receive long flange of trim.
3. Install U type trim where edge is exposed, revealed, gasketed, or sealant filled (including expansion joints).

C. **Control Joints**. Install control joints at locations indicated, or if not indicated, at spacings and locations required by referenced gypsum board application and finish standard, and approved by the Engineer/Architect for visual effect.

3.7 FINISHING OF DRYWALL

A. **General**. Apply joint treatment at gypsum board joints (both directions); flanges of corner bead, edge trim, and control joints; penetrations; fastener heads, surface defects, and elsewhere as required to prepare work for decoration.

1. Prefill open joints and rounded or beveled edges, if any, using setting type joint compound.

2. Apply joint tape at joints between gypsum boards, except where trim accessories are indicated.

3. Finish interior gypsum wallboard by applying the following joint compounds in three coats (not including prefill of openings in base), and sand between coats and after last coat (level 5):

   a. Embedding and First Coat. Setting type joint compound.
   b. Fill (Second) Coat. Setting type joint compound.
   c. Finish (Third) Coat. Ready mix drying type all purpose or topping compound.

3.8 **PROTECTION**

A. **Protection**. Provide final protection and maintain conditions, in a manner suitable to installer, which ensures gypsum drywall construction being without damage or deterioration at time of substantial completion.

SECTION 09 30 13

TILE, CERAMIC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Provide the labor, tools, equipment, and materials necessary to furnish and install ceramic tile in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work in accordance with all federal, state, and local codes and regulatory agencies.

B. **Standards**. All material, testing, and workmanship shall be in conformance with the following standards as referenced herein:

1. ANSI – American National Standards Institute.
2. TCA – Tile Council of America.

1.4 SUBMITTALS

A. **Product Data**. Submit manufacturer's product data on all materials.

B. **Shop Drawings**. Furnish drawings that show sizes, colors, patterns, accessories, method of installation, and finishes.

C. **Samples**

1. Unglazed. Submit 12" x 12" sample for each pattern layout, size, and color.
2. Glazed. Submit two 4" x 4" samples of each color selected and one of each trim piece, such as cove, cap, bullnose, etc.
3. Grout. Submit grout sample for type and color.
4. Adhesive. Submit 1/2 pint of each type of adhesive.

1.5 JOB CONDITIONS

A. **Coordination**. Schedule and coordinate all work to avoid delays, errors, and/or omissions.

B. **Environmental Conditions**. Comply with the referenced standards.

C. **Extra Stock**. An additional 2 percent of each tile color, size, shape, and type from the same batch run shall be supplied to the Owner for future use.

1.6 **DELIVERY, STORAGE, AND HANDLING**

A. **Delivery**. Deliver materials in original packages or containers bearing brand name, color, lot number, and identification. Do not deliver tile and accessories until building is under cover. Extra stock shall be delivered at the same time, packed, and clearly marked.

B. **Storage**. Store materials inside and under cover and keep dry. Keep in original containers until used.

C. **Handling**. Handle all material in accordance with the manufacturer's directions.

1.7 **SPECIAL WARRANTY**

Not used.

PART 2 - PRODUCTS

2.1 **TILE**

A. **Unglazed**. Tile shall be fine grained porcelain body with color throughout the tile. Tile shall be stain proof, dent proof, frost proof, virtually impervious with an absorption factor of 1/2 percent.

1. Size. Tile shall be 2" x 2" and 1" x 1" size not less than 1/4 inch thick.
2. Pattern. As selected by the Engineer to match existing.

B. **Slip Resistant**. Same as unglazed with the addition of 7-1/2 percent abrasive by weight.

C. **Glazed**. Glazed tile shall be 4 1/4 x 4 1/4, 5/16 with high gloss, cushion edge, self spacers for 1/16 inch joint. Tile shall have moisture absorption not greater than 16 percent and breaking strength not less than 100 pounds.

D. **Trim**. All trim shall be same material as tile.

2.2 **ADHESIVE**. Epoxy type meeting ANSI A188.

2.3 **GROUT**. Grout shall be epoxy cement as recommended by the TCA. Color shall match tile selected by the Owner.

2.4 **MANUFACTURER**. American Olean Tile Company, Monarch Tile Manufacturing, Summitville Tiles, Inc., or equal.

PART 3 - EXECUTION

3.1 **EXAMINATION**

A. **Site Verification of Conditions**. Examine substrates on which ceramic tile is to be installed for compliance with requirements for installation conditions and

tolerances. Do not proceed with the installation until unsatisfactory conditions have been corrected.

3.2 **SURFACE PREPARATION**

A. **Condition**. Surfaces which are to receive tile shall be free of defects, depressions, or other imperfections that can affect bonding and a satisfactory and acceptable installation.

B. **Waterproofing**. Prior to installation of the tile, all walls shall be sealed tight and prime coated as recommended by the adhesive manufacturer.

3.3 **INSTALLATION**

A. **Bedding**. Tile shall be installed by the thin bed method.

B. **Layout.** Tile shall be carefully centered to avoid cuts to no less than one half tile size. All joints shall be straight, true, and even width throughout. Tile to be installed level with no less variation than 1/8 inch in 8 feet, unless noted otherwise on the drawings.

C. **Cutting**. Grind all cuts and fit tile close around all pipe, outlets, and fittings; splitting of tile is expressly prohibited. No broken, chipped, or cracked tile will be accepted.

D. **Grouting**. Tile joints shall be grouted solid and uniformly with all excess grout removed.

3.4 **CLEANING**. All tile shall be cleaned and treated with two coats of clear silicone.

SECTION 09 30 99

Restoration of Marble, Terrazzo, & Tile Flooring

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. Stone Flooring

1. Maintain and repair as required plywood protection over all existing stone floors installed.

2. Resurface stone floors utilizing a 300-400 grit and seal with water and oil repellent sealer.

3. Repair stone floors with polyester resin as required. Repairs include holes drilled thru stone, damage where demolished partitions were removed, and chips/cracks.

B. Terrazzo Flooring

1. Maintain and repair as required plywood protection over all existing terrazzo floors installed during the soft demolition phase.

2. Resurface terrazzo flooring and border strips with a 300-400 grit and seal with water and oil repellent sealer.

3. Repair terrazzo floor where it is chipped or damaged to match original.

C. Tile Flooring

1. Replace broken and damaged tile with new tile to match existing.

D. Clean existing flooring.

1.3 QUALITY ASSURANCE

A. Restoration Specialist: Firm having minimum 5-years experience in comparable restoration Projects, employing personnel skilled in the restoration and operations specified.

B. Field Constructed Mock-Up: Prior to start of work, prepare a cleaning and restoration mock-up of each required floor surface where directed by the Owner. Demonstrate cleaning and restoration materials and methods proposed for use. Obtain Owner approval of visual qualities before proceeding with the work.

1.4 SUBMITTALS

A. Product Data: Manufacturer's technical data for each product to be used, including recommendations for application and use.

B. Cleaning and Restoration Program: Written program for each phase of cleaning and restoration including protection of surrounding materials during work.

1. Describe materials, methods and equipment to be used for each phase of work.

2. If alternative methods and materials are proposed, furnish written description, including documentation of successful use on other comparable Projects.

1.5 JOB CONDITIONS

A. Protect surrounding surfaces from damage resulting from the work.

B. Prevent grout and mortar from staining face of surrounding surfaces. Remove grout and mortar immediately from exposed surfaces.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original and unopened containers and packaging, bearing labels indicating type and names of products and manufacturers.

B. Protect materials during storage and construction from wetting by rain or ground water, and from staining or intermixture with earth and other types of materials.

C. Protect grout, mortar and other materials from deterioration by moisture and temperature.

1. Store in a dry location or in waterproof containers.

2. Keep containers tightly closed and away from open flames.

3. Comply with manufacturer's recommendations for storage temperature requirements.

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS

2.1 MATERIALS AND EQUIPMENT

A. Water for Cleaning: Clean, potable, free of oils, acids, alkalis, salts, and organic matter.

B. Brushes: Fiber bristles.

C. Sealer: Mira Seal or approved equal water and oil repellent sealer recommended for use on stone of the type required.

D. Polyester Repair Resin: Akami Marble Repair Compound or approved equal.

PART 3 EXECUTION

3.1 RESTORATION OF EXISTING MARBLE, TERRAZZO AND TILE FLOORS

A. Preservation and Maintenance:

1. Cleaning Methods:

a. Cleaning shall begin with the gentlest means possible.

b. Cleaning and stain-removal products shall be tested on a small, inconspicuous area before using.

c. Do not use abrasive cleaners or mechanical equipment on stone and tile floors.

d. Do not use acid-based cleaning solutions on stone and tile floors because they can damage the complex silicates in a glaze. Acid-based cleaner may be needed to remove discoloration or staining

caused by lime or cement mortar, but shall be tested first, used with caution, and applied only to a wetted floor.

e. Pre-wet floor tile before cleaning.

f. Rinse after cleaning.

g. Organic growth, including mold or mildew, shall be eliminated with a dilute solution of household bleach and a neutral household detergent or a dilute (5- to 10-percent) solution of tri-sodium phosphate (TSP). After application, scrub the floor with a natural bristle or nylon brush and rinse with clear water. Do not leave bleach solutions on floor for more than a few minutes since the alkali in the bleach can lead to the formation of a white efflorescent deposit.

2. Protective Coatings: Comply with ADA Guidelines for a static coefficient of friction of 0.6 for level surfaces and 0.8 for ramps. Apply a non-slip sealer or water to stone and tile floors if required.

B. Repair and Replacement:

1. Mortar Joint Repair: Check floor for loose tiles that need to be re-grouted. Carefully remove damaged mortar by hand and wet joints or apply a bonding agent prior to re-grouting. Use a grout that matches the old in color and consistency.

2. Tile Repair: Removing one tile can endanger surrounding tiles so it may be better to preserve and retain an original tile that is only slightly damaged rather than replacing it.

3. Tile Replacement: When an individual tile or a larger portion of a floor is missing or so severely damaged that it cannot be repaired, or if it has become a safety hazard then it shall be replaced. If damage to tiles is the result of more than normal wear and tear, identify the source of the problem and correct before replacing damaged tiles.

4. Selective Replacement:

a. This cautious approach attempts to replace only the most seriously damaged tiles and shall be undertaken when only a small number of tiles are involved. Unless old, matching tiles can be found and reused, replacement requires specially fabricated reproduction tiles. If possible, individual tiles that are damaged may be replaced with matching tiles salvaged from other, less prominent areas of the floor or from other buildings.

b. Replacing a single damaged tile is based on the ability to remove only the deteriorated tile without harming surrounding tiles. Attempts to remove one or several damaged tiles often fail because a hammer and chisel are used. To avoid damaging good tiles, the grout around the damaged tile shall be removed using a grout saw or for joints wider than 3/8-inch, a dry-cutting diamond blade mounted in an angle grinder or circular saw.

c. New reproduction tile may be different in thickness from the existing tile. If the setting bed does not have enough mortar to grip and hold the tile, one new tile laid among the originals will

eventually come loose. If the new and old tiles are different thickness, the setting bed in which the new tiles are laid shall be modified in height as required to create a level finished surface.

5. Sectional Replacement:

   a. Sectional replacement includes removal of a complete section of damaged tile and replacing that section in it's entirety with new reproduction tiles. Original tiles that remain in good condition shall be saved to be reused in other sections where only a few tiles are damaged.

   b. When laying a section of reproduction tiles, use materials and installation methods including expansion joints or flexible expansion material. Comply with recommendations in the Tile Council of America (TCA) "Handbook for Ceramic Tile Installation".

END OF SECTION

SECTION 09 51 13

ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.1 **RELATED DOCUMENTS**

A. **Drawings and general provisions** of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 **SUMMARY**

A. **This Section includes acoustical panels and exposed suspension systems for ceilings.**

1.3 **DEFINITIONS**

A. **AC:** Articulation Class.

B. **CAC:** Ceiling Attenuation Class.

C. **LR:** Light Reflectance coefficient.

D. **NRC:** Noise Reduction Coefficient.

1.4 **SUBMITTALS**

A. **Product Data:** For each type of product indicated.

B. **Coordination Drawings:** Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

1. Ceiling suspension system members.
2. Method of attaching hangers to building structure.
3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, access panels, and special moldings.
4. Minimum Drawing Scale: 1/8 inch = 1 foot (1:96).

C. **Samples for Initial Selection:** For components with factory-applied color finishes.

D. **Samples for Verification:** For each component indicated and for each exposed finish required, prepared on Samples of size indicated below.

1. Acoustical Panel: Set of 6-inch- (150-mm-) square Samples of each type, color, pattern, and texture.

2. Exposed Suspension System Members, Moldings, and Trim: Set of 12-inch- (300-mm-) long Samples of each type, finish, and color.

E. **Product Test Reports:** Based on evaluation of comprehensive tests performed by a qualified testing agency, for each acoustical panel ceiling.

F. **Research/Evaluation Reports:** For each acoustical panel ceiling and components.

G. **Maintenance Data:** For finishes to include in maintenance manuals.

1.5 QUALITY ASSURANCE

A. **Acoustical Testing Agency Qualifications:** An independent testing laboratory, or an NVLAP-accredited laboratory, with the experience and capability to conduct the testing indicated. NVLAP-accredited laboratories must document accreditation, based on a "Certificate of Accreditation" and a "Scope of Accreditation" listing the test methods specified.

B. **Source Limitations:**

1. Acoustical Ceiling Panel: Obtain each type through one source from a single manufacturer.

C. **Fire-Test-Response Characteristics:** Provide acoustical panel ceilings that comply with the following requirements:

1. Fire-Resistance Characteristics: Where indicated, provide acoustical panel ceilings identical to those of assemblies tested for fire resistance per ASTM E 119 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

2. Surface-Burning Characteristics: Provide acoustical panels with the following surface-burning characteristics complying with ASTM E 1264 for Class A materials as determined by testing identical products per ASTM E 84:

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Deliver acoustical panels, suspension** system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.

B. **Before installing acoustical panels,** permit them to reach room temperature and a stabilized moisture content.

C. **Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.**

1.7 PROJECT CONDITIONS

A. **Environmental Limitations:** Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and

ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1.8 COORDINATION

A. **Coordinate layout and installation** of acoustical panels and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

1.9 EXTRA MATERIALS

A. **Furnish extra materials described** below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Acoustical Ceiling Panels: Full-size panels equal to 2.0 percent of quantity installed.
2. Suspension System Components: Quantity of each exposed component equal to 2.0 percent of quantity installed.

PART 2 - PRODUCTS

2.1 ACOUSTICAL PANELS, GENERAL

A. **Acoustical Panel Standard:** Provide manufacturer's standard panels of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectance, unless otherwise indicated.

1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches (400 mm) away from test surface per ASTM E 795.

B. **Acoustical Panel Colors and Patterns:** Match appearance characteristics indicated for each product type.

C. **Broad Spectrum Antimicrobial Fungicide and Bactericide Treatment:** Provide acoustical panels treated with manufacturer's standard antimicrobial formulation that inhibits fungus, mold, mildew, and gram-positive and gram-negative bacteria and showing no mold, mildew, or bacterial growth when tested according to ASTM D 3273 and evaluated according to ASTM D 3274 or ASTM G 21.

2.2 ACOUSTICAL PANELS FOR ACOUSTICAL PANEL CEILING (ACT-1 and 2)

A. **Available Manufactures:** Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:

1. Armstrong World Industries, Inc.
2. BPB USA
3. Chicago Metallic Corporation
4. Ecophon CertainTeed, Inc.

5. Tectum Inc.
6. USG Interiors, Inc.

B. **ACT-1 Basis-of-Design Product:** Subject to compliance with requirements, provide Armstrong World Industries,: Cirrus Tegular or a comparable product by one of the above:

1. Classification: Provide panels complying with ASTM E 1264 for type, form, and pattern as follows:

    a. Type and Form: Type III, mineral base with painted finish; Form 1, nodular.

    b. Pattern: E (lightly textured)

2. Color: White

3. LR: Not less than 0.85.

4. NRC: Not less than 0.60

5. CAC: Not less than 35.

6. Edge/Joint Detail: Beveled tegular.

7. Thickness: 3/4-inch (15 mm).

8. Modular Size: 24 by 24 inches (610 by 1220 mm).

9. Antimicrobial Treatment: Broad spectrum fungicide and bactericide based.

C. **ACT-2 Basis-of-Design Product:** Subject to compliance with requirements, provide Armstrong World Industries,: Ceramaguard Fine Fissured or a comparable product by one of the above. Cereramaguard shall be used for all bathrooms, locker rooms, toilets, , and labatory.:

1. Classification: Provide panels complying with ASTM E 1264 for type, form, and pattern as follows:

    a. Type and Form: Type XX, other types; described as high-density, ceramic- and mineral-base panels with scrubbable finish, resistant to heat, moisture, and corrosive fumes.

    b. Pattern: CE (perforated: small holes and lightly textured).

2. Color: White

3. LR: Not less than 0.80.

4. NRC: Not less than 0.55

5. CAC: Not less than 40.

6. Edge/Joint Detail: Square.

7. Thickness: 5/8 inch (15 mm).

8. Modular Size: 24 by 24 inches (610 by 1220 mm).

D.

2.3 METAL SUSPENSION SYSTEMS, GENERAL

A. **Metal Suspension System Standard:** Provide manufacturer's standard direct-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C 635.

B. **Finishes and Colors, General:** Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes. Provide manufacturer's standard factory-applied finish for type of system indicated.

1. High-Humidity Finish: Comply with ASTM C 635 requirements for "Coating Classification for Severe Environment Performance" where high-humidity finishes are indicated.

C. **Attachment Devices:** Size for five times the design load indicated in ASTM C 635, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.

D. **Wire Hangers, Braces, and Ties:** Provide wires complying with the following requirements:

1. Zinc-Coated, Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.
2. Stainless-Steel Wire: ASTM A 580/A 580M, Type 304, nonmagnetic.
3. Size: Select wire diameter so its stress at 3 times hanger design load (ASTM C 635, Table 1, "Direct Hung") will be less than yield stress of wire, but provide not less than 0.106-inch- (2.69-mm-) diameter wire.

2.4 METAL SUSPENSION SYSTEM FOR ACOUSTICAL PANEL CEILING ACT 1 and 2

A. **Manufactures:** Subject to compliance with requirements, provide one of the following:

1. Armstrong World Industries, Inc.
2. BPB USA
3. Chicago Metallic Corporation
4. Ecophon CertainTeed, Inc.
5. USG Interiors, Inc.

B. **Basis-of-Design Product:** Subject to compliance with requirements, provide Armstrong World Industries; 15/16” AL Prelude Plus at **ACT-1** locations and 15/16” Prelude at **ACT-2** locations or a comparable product by one of the above:

C. **Wide-Face, Capped, Double-Web, Steel Suspension System:** Main and cross runners roll formed from cold-rolled steel sheet, pre-painted, electrolytically zinc coated, or hot-dip galvanized according to ASTM A 653/A 653M, not less than G30 (Z90) coating designation, with prefinished 15/16-inch- (24-mm-) wide metal caps on flanges.

1. Structural Classification: Intermediate-duty system.

2. End Condition of Cross Runners: Override (stepped) or butt-edge type.
3. Face Design: Flat, flush.
4. Cap Material: Aluminum cold-rolled sheet.
5. Cap Finish: Painted white

2.5 METAL EDGE MOLDINGS AND TRIM

A. **Available Manufactures:** Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:

1. Armstrong World Industries, Inc.
2. BPB USA
3. Chicago Metallic Corporation
4. Fry Reglet Corporation
5. Gordon, Inc.
6. USG Interiors, Inc

B. **Extruded-Aluminum Edge Moldings and Trim:** Where indicated, provide manufacturer's extruded-aluminum edge moldings and trim of profile indicated or referenced by manufacturer's designations, including splice plates, corner pieces, and attachment and other clips, complying with seismic design requirements and the following:

1. Aluminum Alloy: Alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than the strength and durability properties of aluminum extrusions complying with ASTM B 221 (ASTM B 221M) for Alloy and Temper 6063-T5.
2. Finish designations prefixed by AA comply with system established by the Aluminum Association for designating aluminum finishes.
3. Conversion-Coated Finish: AA-M12C42 (Chemical Finish: cleaned with inhibited chemicals; acid-chromate-fluoride-phosphate conversion coating).
4. Conversion-Coated and Factory-Primed Finish: AA-M12C42R1x (Chemical Finish: cleaned with inhibited chemicals; acid-chromate-fluoride-phosphate conversion coating; organic coating).

PART 3 - EXECUTION

3.1 EXAMINATION

A. **Examine substrates, areas, and** conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. **Measure each ceiling area** and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans.

3.3 INSTALLATION

A. **General:** Install acoustical panel ceilings to comply with ASTM C 636 and seismic design requirements indicated, per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."

B. **Suspend ceiling hangers from building's structural members and as follows:**

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
4. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both structure to which hangers are attached and type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
6. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
7. Space hangers not more than 48 inches (1200 mm) o.c. along each member supported directly from hangers, unless otherwise indicated; provide hangers not more than 8 inches (200 mm) from ends of each member.
8. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.

C. **Install edge moldings and** trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.

1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
2. Screw attach moldings to substrate at intervals not more than 16 inches (400 mm) o.c. and not more than 3 inches (75 mm) from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3.2 mm in 3.6 m). Miter corners accurately and connect securely. Do not use exposed fasteners, including pop rivets, on moldings and trim.

D. **Install suspension system runners so they are square and securely interlocked with one another.** Remove and replace dented, bent, or kinked members.

E. **Install acoustical panels with** undamaged edges and fit accurately into suspension system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.

a. As indicated on reflected ceiling plans.

2. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension system runners and moldings.
3. For reveal-edged panels on suspension system members with box-shaped flanges, install panels with reveal surfaces in firm contact with suspension system surfaces and panel faces flush with bottom face of runners.

3.4 FIELD QUALITY CONTROL

A. **Special Inspections: Owner will engage** a qualified special inspector to perform the following special inspections and prepare reports:

1. Suspended ceiling system.
2. Hangers, anchors and fasteners.

B. **Remove and replace acoustical** panel ceiling hangers and anchors and fasteners that do not pass tests and inspections and retest as specified above.

3.5 CLEANING

A. **Clean exposed surfaces of** acoustical panel ceilings, including trim, edge moldings, and suspension system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION 09 51 13

SECTION 09 65 13

RESILIENT WALL BASE AND ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General.** The Contractor shall provide the labor, tools, equipment, and materials necessary to furnish and install resilient wall base and accessories in accordance with the plans and as specified herein.

B. **This section** includes the following:

1. Resilient wall base.
2. Resilient flooring accessories.
3. Resilient carpet accessories.
4. Resilient stair accessories and flooring.

C. **Related Sections.** The following sections contain requirements that relate to this section:

1. Division 9 section "Resilient Tile Flooring."

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work to furnish and install resilient wall base and accessories in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

B. **Single Source Responsibility for Products.** Obtain each type and color of product specified from a single source with resources to provide products of consistent quality in appearance and physical properties without delaying progress of the work. Manufacturer shall offer a coordinated color selection for resilient products.

C. **Fire Performance Characteristics.** Provide products with the following fire performance characteristics as determined by testing products per American Society for Testing and Materials (ASTM) test method indicated below by Underwriters' Laboratories, Inc. (UL) or another testing and inspecting agency acceptable to authorities having jurisdiction.

1. Critical Radiant Flux. 0.45 watts per square centimeter or more per ASTM E 648.
2. Smoke Density. Less than 450 per ASTM E 662.

1.4 SUBMITTALS

A. **Transmittals**. Furnish manufacturer's product data, test reports, and material certifications as required.

B. **Submit the following** in accordance with Conditions of Contract and Division 1 specification sections.

1. Product data for each type of product specified.
2. Samples for initial selection purposes of manufacturer's standard sample sets in form of pieces cut from each type of product specified showing full range of colors and patterns available.

1.5 JOB CONDITIONS

A. **Temperature**. Maintain a minimum temperature of 70º F. (21º C.) in spaces to receive products specified in this section for at least 48 hours prior to installation, during installation, and for not less than 48 hours after installation. After this period, maintain a temperature of not less than 55º F. (13º C.).

1. Do not install products until they are at the same temperature as that of the space where they are to be installed.

B. **Installation**. Close spaces to traffic during installation of products specified in this section.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery**. Deliver products to project site in original manufacturer's unopened cartons and containers, each bearing names of product and manufacturer, project identification, and shipping and handling instructions.

B. **Store** products in dry spaces protected from the weather with ambient temperatures maintained between 50 degrees Fahrenheit (º F.) (10 degrees Celsius [º C.]) and 90º F. (32º C.).

1. Move products into spaces where they will be installed at least 48 hours in advance of installation.

1.7 SPECIAL WARRANTY

Not used.

1.8 SEQUENCING AND SCHEDULING

A. **General**. Sequence installing products specified in this section with other construction to minimize possibility of damage and soiling during remainder of construction period.

1.9 **EXTRA MATERIALS**

A. **Delivery.** Deliver extra materials to Owner. Furnish extra materials matching products installed as described below, packaged with protective covering for storage, and identified with labels clearly describing contents.

1. Furnish not less than 10 linear feet for each 500 linear feet or fraction thereof of each different type and color of resilient wall base installed.

PART 2 - PRODUCTS

2.1 **MANUFACTURERS**

A. **Manufacturers.** Subject to compliance with requirements, provide products of one of the following:

1. Manufacturers of Resilient Wall Base and accessories:

Johnson Rubber Co., Inc.
Roppe Rubber Corp.

2.2 **RESILIENT WALL BASE**

A. **Rubber Wall Base.** Products complying with FS SS-W-40, Type I, with matching end stops and preformed or molded corner units, and as follows:

1. Height: 4" and 6"
2. Thickness: 1/8" gage.
3. Style: Standard top-set cove for resilient floors.
4. Style: Straight base without cove for carpet floors (as noted).

2.3 **RESILIENT ACCESSORIES**

A. **Resilient Edge Strips, Reducers, and Transitions**. 1/8" thick, homogenous rubber composition, tapered or bullnose edge, color to match flooring, or as selected by Architect from standard colors available; not less than 1" wide. Profiles appropriate for floor materials.

2.4 **INSTALLATION ACCESSORIES**

A. **Concrete Slab Primer.** Nonstaining type as recommended by flooring manufacturer.

B. **Trowelable Underlayments and Patching Compounds.** Latex modified, portland cement based formulation provided or approved by flooring manufacturer for applications indicated.

C. **Adhesives.** Water resistant type recommended by manufacturer to suit resilient flooring product and substrate conditions indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. **Examine** areas where installation of products specified in this section will occur, with installer present, to verify that substrates and conditions are satisfactory for installation and comply with manufacturer's requirements and those specified in this section.

3.2 PREPARATION

A. **General.** Comply with manufacturer's installation specifications for preparing substrates indicated to receive products indicated.

B. **Use trowelable** leveling and patching compounds per manufacturers directions to fill cracks, holes, and depressions in substrates.

C. **Remove coatings**, including curing compounds, and other substances that are incompatible with flooring adhesives and that contain soap, wax, oil, or silicone, by using a terrazzo or concrete grinder, a drum sander, or a polishing machine equipped with a heavy duty wire brush.

D. **Broom** or vacuum clean substrates to be covered immediately before installing products specified in this section. Following cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust.

E. **Apply concrete slab primer**, if recommended by flooring manufacturer, prior to applying adhesive. Apply according to manufacturer's directions.

3.3 INSTALLATION

A. **General.** Install products specified in this section using methods indicated according to manufacturer's installation directions.

B. **Apply resilient wall base** to walls, columns, pilasters, casework, and other permanent fixtures in rooms and areas where base is required. Install wall base in lengths as long as practicable. Tightly adhere wall base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.

1. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient wall base with manufacturer's recommended adhesive filler material.
2. Install premolded inside and exterior corners before installing straight pieces.

C. **Place resilient accessories** so they are butted to adjacent materials of type indicated and bond to substrates with adhesive. Install reducer strips at edges of flooring that otherwise would be exposed.

3.4 CLEANING AND PROTECTION

A. **Perform the following** operations immediately after completing installation:

1. Remove visible adhesive and other surface blemishes using cleaner recommended by manufacturers of resilient product involved.
2. Sweep or vacuum floor thoroughly.
3. Do not wash floor until after time period recommended by manufacturer.
4. Damp mop resilient accessories to remove black marks and soil.

B. **Protect** flooring against mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period. Use protection methods indicated or recommended by manufacturer of resilient product involved.

1. Apply protective floor polish to resilient accessories that are free from soil, visible adhesive, and surface blemishes.

    a. Use commercially available metal, cross linked, acrylic product acceptable to resilient accessory manufacturer.
    b. Coordinate selection of floor polish with Owner's maintenance service.

C. **Clean** products specified in this section not more than 4 days prior to dates scheduled for inspections intended to establish date of Substantial Completion in each area of project. Clean products using method recommended by manufacturer.

END OF SECTION

This page intentionally left blank.

SECTION 09 66 23

RESINOUS MATRIX TERRAZZO FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes thin-set, epoxy-resin terrazzo flooring and base.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Include terrazzo installation requirements. Include plans, elevations, sections, component details, and attachments to other work.

C. Samples: For each exposed product and for each color and texture specified.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: Engage an installer who is a contractor member of NTMA.

B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1.5 FIELD CONDITIONS

A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting terrazzo installation.

B. Control and collect water and dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. NTMA Standards: Comply with NTMA's "Terrazzo Specifications and Design Guide" and with written recommendations for terrazzo type indicated unless more stringent requirements are specified.

2.2 EPOXY-RESIN TERRAZZO

A. Epoxy-Resin Terrazzo: Comply with NTMA's "Terrazzo Specifications and Design Guide" and manufacturer's written instructions for matrix and aggregate proportions and mixing.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

    a. Doyle Dickerson Terrazo, Inc.; Terrazzco EZpour Epoxy.
    b. Key Resin Company; Key Epoxy Terrazzo.
    c. Master Terrazzo Technologies LLC; Morricite.
    d. Quadrant Chemical Corporation; Quadset Epoxy Terrazzo.
    e. Sherwin Williams Company, General Polymers; Terrazzo 1100.
    f. Terrazzo & Marble Supply Companies; Terroxy Resin Systems.

2. Thickness: 3/8 inch nominal.
3. Mix Color and Pattern: Match existing.

B. Materials:

1. Flexible Reinforcing Membrane: Manufacturer's resinous membrane with fiberglass scrim for substrate-crack preparation and reflective-crack reduction.
2. Primer: Manufacturer's product recommended for substrate and use indicated.
3. Epoxy-Resin Matrix: Manufacturer's standard recommended for use indicated and in color required for mix indicated.

    a. Physical Properties without Aggregates:

        1) Hardness: 60 to 85 per ASTM D 2240, Shore D.
        2) Minimum Tensile Strength: 3000 psi (20.7 MPa) per ASTM D 638 for a 2-inch (51-mm) specimen made using a "C" die per ASTM D 412.
        3) Minimum Compressive Strength: 10,000 psi (6.9 MPa) per ASTM D 695, Specimen B cylinder.
        4) Chemical Resistance: No deleterious effects by contaminants listed below after seven-day immersion at room temperature per ASTM D 1308.

            a) Distilled water.
            b) Mineral water.
            c) Isopropanol.
            d) Ethanol.

e) 0.025 percent detergent solution.
f) 1.0 percent soap solution.
g) 10 percent sodium hydroxide.
h) 10 percent hydrochloric acid.
i) 30 percent sulfuric acid.
j) 5 percent acetic acid.

b. Physical Properties with Aggregates: For resin blended with Georgia white marble, ground, grouted, and cured per requirements in NTMA's "Terrazzo Specifications and Design Guide"; comply with the following:

1) Flammability: Self-extinguishing, maximum extent of burning 1/4 inch (6.35 mm) per ASTM D 635.
2) Thermal Coefficient of Linear Expansion: 0.0025 inch/inch per deg F (0.0025 mm/mm per 0.5556 deg C) for temperature range of minus 12 to plus 140 deg F (minus 24 to plus 60 deg C) per ASTM D 696.

4. Aggregates: Comply with NTMA gradation standards for mix indicated and contain no deleterious or foreign matter.

a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C 131.
b. 24-Hour Absorption Rate: Less than 0.75 percent.
c. Dust Content: Less than 1.0 percent by weight.

5. Finishing Grout: Resin based.

2.3 STRIP MATERIALS

A. Thin-Set Divider Strips: L-type angle, 1/4 inch (6.4 mm) deep.

1. Material: Aluminum, match existing configuration.
2. Top Width: Match existing.

B. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material and color of divider strips and in depth required for topping thickness indicated.

C. Accessory Strips: Match divider-strip width, material, and color unless otherwise indicated. Use the following types of accessory strips as required to provide a complete installation:

1. Base-bead strips for exposed top edge of terrazzo base.
2. Edge-bead strips for exposed edges of terrazzo.
3. Nosings for terrazzo stair treads and landings.

2.4 MISCELLANEOUS ACCESSORIES

A. Strip Adhesive: Epoxy-resin adhesive recommended by adhesive manufacturer for this use.

1. Manufacturer’s stand, low VOC adhesive.

B. Strip Anchoring Devices: Provide mechanical anchoring devices or adhesives for strip materials as recommended by manufacturer and required for secure attachment to substrate.

C. Patching and Fill Material: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.

D. Joint Compound: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.

E. Resinous Matrix Terrazzo Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by sealer manufacturer for use on terrazzo type indicated.

F. Sealer: Slip- and stain-resistant, penetrating-type sealer that is chemically neutral; does not affect terrazzo color or physical properties; is recommended by sealer manufacturer; and complies with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated.

1. Surface Friction: Not less than 0.6 according to ASTM D 2047.
2. Acid-Base Properties: With pH factor between 7 and 10.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.

B. Concrete Slabs:

1. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with terrazzo.

    a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
    b. Repair damaged and deteriorated concrete according to terrazzo manufacturer's written recommendations. Install flexible reinforcing membrane at substrate cracks in areas to receive terrazzo.
    c. Use patching and fill material to fill holes and depressions in substrates according to terrazzo manufacturer's written instructions.

C. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.

1. Moisture Testing: Test for moisture content by method recommended in writing by terrazzo manufacturer. Proceed with installation only after substrates pass testing.

3.2 EPOXY-RESIN TERRAZZO INSTALLATION

A. Comply with NTMA's written recommendations for terrazzo and accessory installation.

B. Place according to manufacturer's written instructions and NTMA's "Terrazzo Specifications and Design Guide."

C. Installation Tolerance: Limit variation in terrazzo surface from level to 1/4 inch in 10 feet (6.4 mm in 3 m); noncumulative.

D. Primer: Apply to terrazzo substrates according to manufacturer's written instructions.

E. Strip Materials:

1. Divider and Control-Joint Strips:

   a. Locate divider strips to separate new and existing terrazzo, and to match existing divider pattern.
   b. Install control-joint strips back to back directly above concrete-slab control joints.
   c. Install control-joint strips with gap between strips, and install sealant in gap.
   d. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.

2. Accessory Strips: Install as required to provide a complete installation.

F. Repair: Cut out and replace terrazzo areas that evidence lack of bond with substrate. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by Architect.

3.3 CLEANING AND PROTECTION

A. Cleaning:

1. Remove grinding dust from installation and adjacent areas.
2. Wash surfaces with cleaner according to NTMA's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow them to dry thoroughly.

B. Sealing:

1. Seal surfaces according to NTMA's written recommendations.
2. Apply sealer according to sealer manufacturer's written instructions.

C. Protection: Provide final protection and maintain conditions, in a manner acceptable to Installer, that ensure that terrazzo is without damage or deterioration at time of Substantial Completion.

END OF SECTION

This page intentionally left blank.

SECTION 09 90 00

PAINTING

PART 1 - GENERAL

1.1 RELATED DOCUMENT

A. **General**. Drawings and general provisions of Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. This section includes surface preparation, painting, and finishing of exposed interior and exterior surfaces. Surface preparation, priming, and finish coats specified in this section are in addition to shop priming and surface treatment specified under other sections.

1. Per Part 4.1 C, painting shall include disturbed and undisturbed areas. Undisturbed Areas. Paint the following undisturbed surfaces in their entirety.

B. **Definitions**. "Paint" includes coating systems materials, primers, emulsions, enamels, stains, sealers and fillers, and other applied materials whether used as prime, intermediate, or finish coats.

1.3 QUALITY ASSURANCE

A. **Standards**. Ensure that material and workmanship are in accordance with the following standards as referenced herein:

1. SSPC – The Society for Protective Coatings.
2. Corps of Engineers.
3. NSF – NSF International.
4. ICRI – International Concrete Repair Institute.
5. ASTM – American Society for Testing and Materials.
6. NACE – National Association of Corrosion Engineering.
7. NAPF – National Association of Pipe Fabricators, Inc.

B. **Single Source Responsibility**. Provide primers, coats, and finish coats from the same manufacturer.

C. **Compatibility of Work**

1. Review other sections in which primers are provided to ensure compatibility of the total systems for various substrates.
2. On request, furnish information on characteristics of finish materials to ensure use of compatible primers.
3. Notify the Engineer/Architect of problems anticipated using the materials specified.

SUBMITTALS

D. **General**

1. Submit all submittals in accordance with the Division 1 Submittal Requirements and this specification section.

E. **Submittal Package No. 1 – Product Data**

1. Product Data.

a. Submit manufacturer's technical information, label analysis, and application instructions for each material proposed for use.
b. List each material and cross-reference the specific coating, finish system, and application.
c. Identify each material by the manufacturer's catalog number and general classification.

F. **Submittal Package No. 2 – Color Charts**

1. Samples. Submit manufacturer's color charts for Owner's use.

1.4 **JOB CONDITIONS**

A. **Environmental Conditions**

1. Climatic.

a. Apply water-based paints only when the temperature of surfaces to be painted and surrounding air temperatures are between 40 degrees Fahrenheit (° F.) and 90° F.

b. Apply solvent thinned paints only when the temperature of surfaces to be painted and surrounding air temperatures are between 45° F. and 95° F.

c. Do not apply paint:

1) In precipitation or fog of any kind.
2) When the relative humidity exceeds 85 percent.
3) At surface temperatures less than 5° F. above the dew point.
4) To damp or wet surfaces.

d. When approved, continue painting during inclement weather if surfaces and areas to be painted are enclosed and heated within temperature limits specified by the manufacturer during application and drying periods.

2. Ventilation.

a. Be responsible for maintaining adequate ventilation, temperature, and humidity control in all areas where paint is being applied, drying, or curing.

1) "Adequate" ventilation, temperature, and humidity levels are considered to be those required by regulatory agencies and guidelines, the paint manufacturer's product application data, the requirements of this section, and the Owner's Representative.

B. **Warning Signs**

1. Provide and display prominent warning signs indicating "WARNING - PAINTING AND ABRASIVE BLASTING WORK UNDERWAY" throughout the job site wherever surface preparation or painting operations are being performed.

a. These signs shall be no less than 3' x 3' in size, and placed at clearly visible locations near all points of access by person or vehicle to the work area(s).

C. **Lead Bearing Paint**. Contractor is responsible for providing means to remove paint from steel frames in a manner that complies with the local, state and federal rules and regulations regarding protecting workers and surrounding areas from dust migration while preparing areas for painting in accordance with other sections of this Section 09 90 00 Painting.

C. **Priming and Painting Fireproofing of Exposed Structural Steel.**

1. Painting New Exposed Structural Steel to be Covered by Fireproofing: Contractor is responsible for coordination of shop/prime coat of structural steel that will covered by fireproofing after fabricated and/or erection. A prime coat of paint shall be provided in the shop that is approved by the Fireproofing Manufacturer. Fireproofing shall not be coated until all field installation by trades is complete. Any fireproofing shall be repaired prior to application of paint to protect fireproofing. The primer and top coats shall be compatible with the fireproofing material. All fireproofing will be painted in accordance with the schedule provided for new exposed structural steel provided under this contract that is designated to have fireproofing.

2. Painting Existing Exposed Structural Steel has Fireproofing. All existing exposed structural steel that has previously covered with fireproofing, shall be painted to match new work per paint schedule. Contractor to repair any existing fireproofing that has been disturbed prior to application of new paint to match new work. All paint coatings shall be approved by fireproofing manufacturer for compatibility.

3. Repairs: Prior to painting exposed structural steel that has been fireproofing, the Contractor will repair any fireproofing that is disturbed

or damaged by demolition work, or during installation of new work that disturbs or damages fireproofing on existing structural steel, shall be repaired in accordance with manufacturer recommendations for surface preparation and application of fireproofing to those in areas being repaired. The repaired areas will be primed with suitable primer paint, and a new finish paint applied in accordance with the paint schedule.

1.5 DELIVERY, STORAGE, AND HANDLING

A. **Delivery**. Deliver materials to the job site in the manufacturer's original, unopened containers bearing a label from the manufacturer that includes the following:

1. Product name or title of material.
2. Product description (generic classification or binder type).
3. Federal Specification number, if applicable.
4. Manufacturer's stock number and date of manufacture.
5. Contents by volume, for pigment and vehicle constituents.
6. Thinning and application instructions.
7. Color name and number.
8. Manufacturer's name.

B. **Storage**

1. Store materials not in use in tightly covered containers in a well ventilated area at a minimum ambient temperature of 45° F.
2. Keep storage area in a clean condition, free of foreign materials and residue.
3. Store clean rags in a metal container with a tight-fitting cover.
4. Remove oily rags and waste daily.

C. **Handling**. Take necessary measures to ensure that workers and work areas are protected from fire and health hazards resulting from handling, mixing, and application.

1.6 SPECIAL WARRANTY

Not used.

PART 2 - PRODUCTS

2.1 **MANUFACTURERS**. Use products of the manufacturers listed in the painting schedule. No "Or Equals" will be considered for this project. Submit any potential substitutes according to the General Conditions.

2.2 **PIPE BANDING TAPE, LABELING, AND DIRECTIONAL ARROWS**

A. **Minimum 2 inches wide**, self-sticking.

B. **Meets ASTM** B 946.

C. **5-mil minimum** thickness.

D. **Label text heights** shall be sized as follows:

Under 3/4"	Arrows only
3/4" to 1-1/4"	1/2"
1-1/2" to 2"	3/4"
2-1/2" to 6"	1-1/4"
8" to 10"	2-1/2"
10" and over	3-1/2"

E. **Approved Manufacturers**

1. W. H. Brady Company.
2. Seton Identification Products.
3. Or equal.

2.3 **THINNERS**. Use only the recommended products of the manufacturer furnishing the paint.

2.4 **COLORS**. All colors not specified will be selected by the Owner. Where multiple coats are specified, shade-tint each coat of paint for visual inspection of the number of coats applied.

2.5 **POTABLE WATER CONTACT**. Coatings in contact with potable water shall meet NSF Standard 61 and shall be listed by NSF.

PART 3 - EXECUTION

3.1 **EXAMINATION**

A. **Compliance**

1. Examine substrates and conditions for compliance with paint application requirements.
2. Correct unsatisfactory conditions before painting.
3. Start of painting will be construed as the Applicator's acceptance of surfaces and conditions within a particular area.
4. If any surface to be finished cannot be put in proper condition, notify the Engineer/Architect immediately in writing or assume full responsibility for failure to do so and correct any unsatisfactory work.

3.2 PREPARATION

A. General Procedures

1. Remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and similar items in place that are not to be painted, or protect them before surface preparation and painting.
2. Remove these items if necessary for complete painting of the items and adjacent surfaces.
3. Following completion of painting operations in each space or area, reinstall items by workers skilled in the trades involved.
4. All surfaces must be clean, dry, and free of oil, grease, chalk, and other containments.
5. Schedule cleaning and painting so that dust and other contaminants from the cleaning process will not fall on wet paint.

B. **Surface Preparation**. Clean and prepare surfaces to be painted in accordance with the manufacturer's instructions for each particular substrate condition and as specified.

1. Provide barrier coats over incompatible primers or remove and reprime.

2. Cementitious Materials. Prepare concrete, concrete masonry block, cement plaster, and mineral fiber reinforced cement panel surfaces to be painted.

    a. Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents.

    b. Roughen as required to remove glaze.

    c. If hardeners or sealers have been used to improve curing, use mechanical methods of surface preparation.

    d. Use abrasive blast cleaning methods according to SSPC-SP13/NACE 6, ICRI CSP 2-3 to prepare concrete unless an alternate method is approved.

    e. Prepare all concrete surfaces designated chemical resistant per ICRI CSP 3-5 minimum with all bugholes opened and filled with an epoxy surfacer (Paint Code F in the Schedule).

    f. Determine alkalinity and moisture content of surfaces by performing appropriate tests.

        1) If surfaces are sufficiently alkaline to cause blistering and burning of finish paint, correct this condition before application.
        2) Do not paint surfaces where moisture content exceeds the manufacturer's recommendations.

3. Wood.

    a. Clean surfaces of dirt, oil, and other foreign substances with scrapers, mineral spirits, and sandpaper, as required.
    b. Sand surfaces smooth which are exposed to view and remove dust when finished.
    c. Scrape and clean small, dry, seasoned knots and apply a thin coat of white shellac or other recommended knot sealer before application of primer.
    d. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood filler. Sand smooth when dried.

4. Ferrous Metals. Clean nongalvanized ferrous metal surfaces; remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with SSPC-SP1/SP2/SP3.

    a. Blast steel surfaces that will be submerged in accordance with requirements of SSPC Specification SSPC-SP 10, near white blast cleaning. Maintain a minimum 2-mil profile.
    b. Abrasive-blast-clean nonsubmerged steel per SSPC-SP 6, Commercial Blast Cleaning creating a minimum 1.5-mil profile.
    c. Brush off blast cleaned (SSPC-SP 7, Brush-Off Blast Cleaning) epoxy shop-primed surfaces that will be submerged and have not been painted for 60 days or longer before application of the intermediate and finish coats.
    d. Blast ductile iron surfaces in accordance with requirements of NAPF 500 Abrasive Blast Cleaning.
    e. Touch up bare areas and prime coats that have been damaged. Surface preparation shall be the same as the original surface preparation. Touch up with the same primer as the shop coat.
    f. Prime all surfaces blast-cleaned on the same day or before rusting or soiling occurs.

5. Plastic. Clean surface and sand uniformly to resemble 80-100 grit sandpaper.

6. Existing Epoxy Finishes. Thoroughly and uniformly sand or otherwise abrade prior to recoating.

C. **Materials Preparation**. Carefully mix and prepare paint materials in accordance with manufacturer's directions.

1. Maintain containers used in mixing and application of paint in a clean condition, free of foreign materials and residue.
2. Stir material before application to produce a mixture of uniform density; stir as required during application.
3. Do not stir surface film into material. Remove film and, if necessary, strain material before using.
4. Use only thinners approved by the paint manufacturer, and only within recommended limits.

3.3 APPLICATION

A. Requirements

1. Apply paint in accordance with manufacturer's directions. Use applicators and techniques best suited for substrate and type of material being applied.

2. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to formation of a durable paint film.

    a. Paint colors, surface treatments, and finishes are indicated in Part 4 of this section.
    b. Provide finish coats that are compatible with primers used.
    c. Apply additional coats when undercoats, stains, or other conditions show through final coat of paint until paint film is of uniform finish, color, and appearance. Give special attention to ensure that surfaces, including edges, corners, crevices, welds, and exposed fasteners, receive a dry film thickness equivalent to that of flat surfaces.
    d. Grind all 90-degree angles of carbon steel and apply a stripe coat of the specified primer.

B. Special Techniques/Requirements

1. Do not permit spraying unless approved in writing.
2. Ensure that the application, drying time between coats, and mixing are in accordance with the recommendations of the manufacturer.
3. Protect all areas from damage by equipment, materials, spatterings, drippings, and overspray. Take particular care to prevent staining of concrete. Immediately remove all spattering, dripping, and overspray. Paint or repaint any area discolored or stained as directed.
4. Prior to installation, finish-paint all surfaces inaccessible after installation.

3.4 MARKING

A. **Color Coding**. Paint and mark according to function all exposed piping as specified in Part 4 of this section.

B. **Banding**. Band all exposed piping as specified in Part 4 of this section. Space banding as directed, but not greater than 10 feet apart with a minimum of one group of bands between fittings.

C. **Flow Arrows**. Provide arrows indicating flow direction on all exposed piping.

D. **Labeling**. Label all exposed piping with the function of the pipe. Apply labeling on any single run of pipe before any tees or elbows, but not greater than 20 feet on center.

3.5 FIELD QUALITY CONTROL

A. **The Owner reserves the right** to invoke the following test procedure at any time and as often as desired during the period when paint is being applied.

1. The Owner will engage the services of an independent testing agency to sample the paint material being used. Samples of material delivered to the project will be taken, identified, sealed, and certified in the presence of the Contractor.

2. If test results show material being used does not comply with the published manufacturer's specifications for that paint system:

   a. Stop painting.
   b. Remove noncomplying paint.
   c. Pay for testing.
   d. Repaint surfaces coated with rejected paint.
   e. Remove rejected paint from previously painted surfaces if, upon repainting with specified paint, the two coatings are incompatible.

B. **The Owner reserves the right** to check the minimum dry mil thickness per coat (MDMTPC) at any time following application. Repaint areas not meeting minimum requirements.

C. **Provide a 10' x 10' mock-up** of each specified system, including surface preparation and finish color. The mock-up may remain as part of the completed project. Proceed with the rest of the paint application when authorized to proceed in writing.

3.6 PROTECTION

A. **Cover**. Protect work of other trades, whether to be painted or not, against damage by painting. Correct damage in an acceptable manner by cleaning, repairing or replacing, and repainting.

B. **Signs**

1. Provide "wet paint" signs to protect newly painted finishes.
2. Remove temporary protective wrappings provided by others for protection of their work after completion of painting operations.
3. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.
4. Remove all "Wet Paint" signs and other warning signs utilized during installation and curing.

3.7 DEMONSTRATION

A. **Visual**. The Contractor, Owner, and Engineer/Architect will visually review the painting for completion, colors, finish, and uniformity before acceptance by Owner.

PART 4 - SCHEDULE

4.1 GENERAL

A. **Dry Film Thickness Per Coat**. DFT is the acronym for this term in the following schedules. Do not exceed the manufacturer's recommended maximum dry film thickness per coat.

B. **New Work**. Paint all new surfaces according to paragraph 4.2.

C. **Existing Areas**

1. Compatibility Test. Before painting, patch test all areas for compatibility of new paint with existing and notify the Engineer/Architect of any incompatibility.

2. Adhesion Test. Before painting, perform the tests per ASTM D 3359, Methods A and/or B, followed by a report detailing the system tested, their results, and any recommended changes to the specified system.

3. Disturbed Areas.

   a. Paint all surfaces of existing areas disturbed due to tie-ins, closing of openings, cutting new openings, rerouting of pipe, relocating or removal of equipment, and other related work as specified herein.
   b. Color match existing surface and paint to lap existing by not less than 3 inches.

4. Undisturbed Areas. Paint the following undisturbed surfaces in their entirety.

   a. All previously painted surfaces in the plant shall be prepared and painted per this specification. Previously painted surfaces include but are not limited to walls, ceilings, floors, door frames, piping, valves, valves operators, operators, conduit, utility boxes, pumps, equipment, structural steel, miscellaneous metals, and steel handrail.
   b. Appendix II of the specifications includes a summary report of the cursory paint sampling analysis. The intent is to prep and paint all door frames without removal of the existing coating. Contractor shall abide by all local, state and federal requirements for handling and surface preparation of lead containing existing coatings.

D. **Coding and Banding**. When exposed, color code and band the following piping, fittings, and valves with the specified colors:

Material	Tnemec	PPG	Carboline	Sherwin Williams	International	ICI/Devoe

Shop applied primer for Structural Steel that will receive fireproofing	Q	Provide special shop prime coat to fabricated structural steel after cleaning and fabrication that is approved by fireproofing manufacturer. Field touch up prior to installation of fireproofing. S**olvent based fireproofing products must be compatible with primer. Contractor to apply minimum 4 mils of flat, low end epoxy primer per schedule, or other primer that is approved by fireproofing manufacturer.**					

END OF SECTION

SECTION 09 96 35

CHEMICAL-RESISTANT COATING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. The Contractor shall provide the labor, tools, equipment, and materials necessary for surface preparation and to furnish and install the epoxy coating in accordance with the plans and as specified herein at the following locations:

1. The interior surface of the chemical storage containment sumps shall be suitable for the intended chemical exposure to be encountered. Material must be capable to withstand a complete submergence for the following chemicals at ambient temperature without crazing, peeling, blistering, or loss of protection for the concrete substrate. Slight discoloration only is permissible. Submit test data to verify that product conforms to this criterion.

a. Hydrofluosilicic Acid (Fluorosilicic Acid)

1.	Molecular Formula:	H_2SiF_6
2.	Solution Strength:	23% to 25%
3.	Specific Gravity:	1.31 to 1.37
4.	pH:	3.6 to 4.6

b. Sodium Bisulfite

1.	Molecular Formula:	$NAHSO_3$
2.	Solution Strength:	34% to 42%
3.	Specific Gravity:	1.25
4.	pH:	1.5 to 2.0

c. Chlorine Gas

1.	Molecular Formula:	Cl_2
2.	Solution Strength:	100%
3.	Specific Gravity:	Compressed Gas

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work in compliance with all federal, state, and local codes and regulatory agencies.

B. **Installer's Qualification.** The Installer of work of this section shall have 5 years minimum proven experience in this type of installation and shall have satisfactorily completed three jobs of similar size and type within the last 5 years.

C. **Manufacturer's Material Certification.** The Manufacturer of materials in this Section shall have 5 years minimum proven experience of their materials in similar type applications.

1.4 SUBMITTALS

A. **Product Data.** Submit copies of manufacturer's technical information, including label analysis and application instructions for each material proposed for use.

1. Include surface preparation required for each base coat or prime coat product.

2. Include complete job site mixing and preparation procedures, including straining instructions.

3. Include test data in compliance with Paragraph 1.3 A.

B. **Shop Drawings.** Show areas to be coated, proposed protection procedure, repair data, termination and joints, method of application.

C. Certification. Submit:

1. Installer's Certification of Compliance with Paragraph 1.3 B of this Section.

2. Material Certification of Compliance with Paragraph 1.3 C and 1.7 A of this Section.

1.5 JOB CONDITIONS

A. **Preinstallation Conference**. Hold a pre-installation conference with all parties concerned with the work, its application, protection, and guarantee.

B. **Coordination.** Schedule and coordinate work with other trades to avoid delays, errors, and omissions.

C. **Environmental Conditions.** Do not proceed with epoxy coating until the following conditions are met:

1. All work penetrating or built into the substrate is completed.

2. A minimum of 30 days after concrete has been placed to permit curing of concrete.

3. If substrate and ambient air temperature is less than 50 degrees Fahrenheit or 10 degrees Celsius.

4. The Contractor shall be responsible for maintaining adequate ventilation, temperature, and humidity control in all areas where the epoxy coating is being applied, including application, drying, and curing periods.

5. The Contractor shall provide and display prominent warning signs indicating that the epoxy coating work is being performed. The signs shall be no less than 3’ x 3’ in size and shall be placed at clearly visible locations near all points of access to the work area(s).

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery.** Deliver materials to the job site in the manufacturer's original, unopened packages and containers bearing manufacturer's name and label and the following information:

1. Product name or title of material.
2. Product description (generic classification or binder type).
3. Manufacturer's stock number and date of manufacture.
4. Contents by volume, for pigment and vehicle constituents.
5. Thinning instructions.
6. Application instructions.
7. Color, name, and number.

B. **Storage.** Materials not in use shall be stored in tightly covered containers in a well-ventilated area at a minimum ambient temperature of 50º F. (10º C.). Keep storage area in a clean condition, free of foreign materials and residue. Store clean rags in a metal container with a tight fitting cover.

C. **Handling.** Keep storage area neat and orderly. Remove oily rags and waste daily. Take necessary measures to ensure that workers and work areas are protected from fire and health hazards resulting from handling, mixing, and application.

1.7 SPECIAL WARRANTY

A. None.

PART 2 PRODUCTS

2.1 MATERIALS

A. Epoxy Coating

1. Prime Coat. A high solids, pigmented epoxy primer and binder resin with good blush resistance and is low in viscosity to promote penetration of the concrete substrate and excellent wetting of mortar aggregate.

a. Properties.

1. Mixing Ratio. 2:1; or as recommended by manufacturer.
2. VOC (EPA Method 24): <50 g/L mixed: 0.41 lbs/gal
3. Viscosity, mixed. 1500 to 3000 centipoise (cps).
4. Adhesion. 300 pounds per square inch concrete failure
5. Compressive Strength. 9,000 pounds per square inch
6. Flammability. Self-extinguishing over concrete
7. Flexural Strength. 6,000 pounds per square inch.
8. Hardness, Shore D. 75/65 per ASTM D 2240 test method
9. Tensile Strength. 3,000 pounds per square inch minimum per ASTM D 638
10. Pot Life. Gallon Mass 25 to 30 minutes @ 73ºF.

2. Finish Coat. A pigmented, high-build, high solids Novalac epoxy which resists vapor, splash, spillage, or immersion to certain aggressive acids, alkalies, and solvents. This epoxy shall bond aggressively to the properly prepared and primed substrates, protecting the substrate from damaging chemicals.

a. Properties.

1. Mixing Ratio. 2:1; or as recommended by manufacturer.
2. VOC (EPA Method 24): <50 g/L mixed: 0.41 lbs/gal
3. Viscosity, mixed. 1,000 centipoise (cps).
4. Adhesion. 300 pounds per square inch concrete failure
5. Abrasion Resistance. 100 mg loss per ASTM D4060 CS17 wheel, 1,000 cycles test method.
6. Flammability. Self-extinguishing over concrete
7. Hardness, Shore D. 80 per ASTM D 2240 test method
8. Resistance to Elevated Temperatures. No slip or flow at required temperature of 158ºF.
9. Pot Life. Gallon Mass 40 minutes @ 73ºF.

3. Spreading Rate.
   a. Prime coat. 6-20 mils or 150-500 microns
   b. Finish coat. 10-20 mils or 250-500 microns
4. Color.
   a. All surfaces shall be coated with alternating color layers.
   b. Finish color shall be selected by Owner.
5. Products/Manufacturers.
   a. Primer Coat: General Polymers GP3579 STANDARD EPOXY PRIMER/ BINDER (PARTS A & B) by Sherwin Williams, or approved equal.
   b. Finish Coat: General Polymers GP 3741 NOVO_FLO SOLVENT/ACID RESITATNT COATING (PARTS A & B)by Sherwin Williams, or approved equal.

B. Chemical-Resistant Coating

1. A high acid resistant, two- or three-component polymer-based 100 percent solids vinyl ester coating. The mixing ratio shall be as recommended by the manufacturer.
2. Minimum dry mil thickness per coat (MDMTPC).

	MDMTPC
Prime Coat	15
Intermediate Coat	15
Finish Coat	15

3. Coloration. Coat all surfaces with alternating color layers. For example, the base coat could be cream, intermediate coat light, and top coat off-white.
4. Products/Manufacturers.
   a. Plasite 4007, Carboline.
   b. Series 120 Vinestra, Tenemec Company, Inc.
   c. Series 8000 CoRezyn, Interplastic Corporation.

C. Miscellaneous Items.

1. Provide primers, fillers, glass granules, sealers, joint tapes, adhesives, and accessories as recommended by the manufacturer of the epoxy coating and chemical resistant coating for the application shown.

2. The drying schedule shall comply with manufacturer's recommendations.

D. Repair Parts.

1. Provide one 0.9 gallon kit for touch-up and repair.

PART 3 EXECUTION

3.1 INSPECTION

A. **Surface Examination**. Contractor shall examine the surface to receive the chemical resistant protective coating and the conditions under which the chemical resistant protective coating work is to be performed, and notify the Engineer/Architect in writing of any conditions detrimental to the proper and timely completion of the work and performance of the coating. Do not proceed with the chemical resistant protective coating work until unsatisfactory conditions have been corrected. Start of chemical resistant coating application will be construed as the applicator's acceptance of surfaces and conditions within a particular area.

3.2 PREPARATION OF SUBSTRATE

A. General

1. Surfaces shall be prepared in accordance with Manufacturer's recommendation. A vapor/moisture barrier shall be provided if recommended by the Manufacturer.

2. Surfaces shall be free of dirt, foreign material, and projections.

3. Fill voids, seal joints, and apply bond breakers as recommended by the Manufacturer.

4. Safety. Refer to MSDS sheet befoe use.

5. Prime the substrate as recommended by the Manufacturer.

6. Contractor will clean and remove all residues and:

a. Concrete surfaces should be shot blasted and surface shall be clean and dry. It shall be the Contractor's responsibility to remove materials used to prepare the surfaces for coating. Materials shall be removed off the site for proper disposal. Objects and surfaces not to be coated shall be protected.

b. Glazed tile shall be mechanically roughened per the manufacturer's recommendations and then prepped per 5.a above.

c. Mixing.

1. Premix the individual components so as to redistribute any pigments that may have settled during storage. Mixing the chemical resistant coating shall be as recommended by the manufacturer.

3.3 APPLICATION

A. General

1. Do not allow liquid and mastic compounds to enter drains and pipes. Prevent spillage and migration onto other surfaces of the work.

2. Apply in accordance with manufacturer's recommendations.

3. Walls. Protective coating may be applied by brush or roller. No spray applications will be permitted.

a. Apply a uniform coating to the surfaces indicated. Apply second coat of protective coating after initial "set" of the first application but not longer than 48 hours.

b. Allow at least 7 days cure at between 70 to 75 degrees Fahrenheit. Lower temperatures will require longer cure times.

4. Floors, stair treads, and other varying surfaces.

a. Apply a uniform prime coat to the surfaces indicated and allow to dry to initial set.

b. The intermediate coat should be applied and immediately broadcast with glass granules into the coating at a rate of 100 percent saturation or approximately 0.2 to 0.3 pounds per square foot.

c. The finish coat of protective coating should be applied and broadcast with glass granules at a rate of 100 percent saturation or approximately 0.3 to 0.4 pounds per square foot.

B. **Protection**. Protect work and restrict access to protective coating until coating has reached a complete cure.

3.4 FIELD QUALITY CONTROL

A. **After completion of each coat**, the Contractor shall notify The Engineer/Architect for visual inspection. Proceed with succeeding coats only after inspection and approval of the previous coat by the Engineer/Architect.

3.5 CLEAN UP AND PROTECT

A. **During the progress of the work**, remove from the site all discarded materials, rubbish, cans, and rags at the end of each day.

B. **After final cure**, clean wearing surfaces to remove any excess or loose glass granules.

C. **At the completion of work** of other trades, touch-up and restore all damaged or defaced surfaces.

END OF SECTION

SECTION 10 14 00

SIGNS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General**. Provide the labor, tools, equipment, and materials necessary to furnish and install the signs in accordance with the plans and as specified herein.

B. **This section includes the following types** of signs:

1. Panel signs.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work to furnish and install the signs in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

B. **Underwriters' Laboratories, Inc. (UL) and National Electrical Manufacturers Association (NEMA) Compliance**. Provide lighting fixtures and electrical components for illuminated signs that are labeled and listed by UL and comply with applicable NEMA standards.

C. **Single-Source Responsibility**. For each separate type of sign required, obtain signs from one source from a single manufacturer.

D. **Design Criteria**. The drawings indicate sizes, profiles, and dimensional requirements of signs. Other signs with deviations from indicated dimensions and profiles may be considered, provided deviations do not change the design concept. The burden of proof of equality is on the proposer.

1.4 SUBMITTALS

A. **Submit the following** in accordance with Conditions of the Contract and Division 1 specification sections.

1. Product Data. Include manufacturer's construction details relative to materials, dimensions of individual components, profiles, and finishes for each type of sign required.

2. Shop Drawings. Provide shop drawings for fabrication and erection of signs. Include plans, elevations, and large scale sections of typical

members and other components. Show anchors, grounds, reinforcement, accessories, layout, and installation details.

a. Provide message list for each sign required, including large scale details of wording and layout of lettering.

3. Samples. Provide the following samples of each sign component for initial selection of color, pattern and surface texture as required and for verification of compliance with requirements indicated.
   a. Samples for initial selection of color, pattern, and texture:

      1) Cast Acrylic Sheet Manufacturer's color charts consisting of actual sections of material including the full range of colors available for each material required.

1.5 **JOB CONDITIONS**

Not Used.

1.6 **DELIVERY, STORAGE, AND HANDLING**

Not used.

1.7 **SPECIAL WARRANTY**

Not used.

PART 2 - PRODUCTS

2.1 **MANUFACTURERS**

A. **Available Manufacturers**. Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include, but are not limited to, the following.

1. Manufacturers of Panel Signs.

   a. ABC Architectural Signing System, Division of Nelson-Harkins Industries.
   b. Architectural Graphics, Inc.
   c. ASI Sign Systems, Inc.

2.2 **MATERIALS**

A. **Cast Acrylic Sheet**. Provide cast (not extruded or continuous cast) methyl methacrylate monomer plastic sheet, in sizes and thicknesses indicated, with a minimum flexural strength of 16,000 pounds per square inch (psi) when tested in accordance with American Society for Testing and Materials (ASTM) D 790, a minimum allowable continuous service temperature of 176 degrees Fahrenheit (º F.) (80 degrees Celsius [º C.]), and of the following general types.

1. Opaque Sheet. Where sheet material is indicated as "opaque," provide colored opaque acrylic sheet in colors and finishes as selected from the manufacturer's standards.

B. **Plastic Laminate**. Provide high-pressure plastic laminate engraving stock with face and core plies in contrasting colors, in finishes and color combinations indicated or, if not indicated, as selected from the manufacturer's standards.

C. **Fasteners**. Use concealed fasteners fabricated from metals that are not corrosive to the sign material and mounting surface.

D. **Anchors and Inserts**. Use nonferrous metal or hot dipped galvanized anchors and inserts for exterior installations and elsewhere as required for corrosion resistance. Use toothed steel or lead expansion bolt devices for drilled-in-place anchors. Furnish inserts, as required, to be set into concrete or masonry work.

E. **PANEL SIGNS**

F. **Panel Signs**. Comply with requirements indicated for materials, thicknesses, finishes, colors, designs, shapes, sizes, and details of construction.

1. Produce smooth, even, level sign panel surfaces, constructed to remain flat under installed conditions within a tolerance of plus or minus 1/16 inch measured diagonally.

G. **Unframed Panel Signs**. Fabricate signs with edges mechanically and smoothly finished to conform with the following requirements.

H. **Graphic Content and Style**. Provide sign copy that complies with the requirements indicated for size, style, spacing, content, position, material, finishes, and colors of letters, numbers, and other graphic devices.

I. **Raised Copy**. Machine-cut copy characters from matte finish opaque acrylic sheet and chemically weld onto the acrylic sheet forming sign panel face. Produce precisely formed characters with square cut edges free from burrs and cut marks.

1. Panel Material. Matte-finished opaque acrylic sheet.
2. Raised Copy Thickness. 1/8 inch.

J. **Applied Copy**. Die cut characters from vinyl film with pressure-sensitive adhesive backing. Apply copy to the exposed face of the sign panel.

1. Panel Material. Matte-finished opaque acrylic sheet.

2.3 **FINISHES**

A. **Colors and Surface Textures**. For exposed sign material that requires selection of materials with integral or applied colors, surface textures or other characteristics related to appearance, provide color matches indicated, or if not indicated, as selected by the Architect from the manufacturer's standards.

PART 3 - EXECUTION

3.1 **INSTALLATION**

A. **General**. Locate sign units and accessories where indicated, using mounting methods of the type described and in compliance with the manufacturer's instructions.

1. Install signs level, plumb, and at the height indicated, with sign surfaces free from distortion or other defects in appearance.

B. **Wall-Mounted Panel Signs**. Attach panel signs to wall surfaces using the methods indicated below:

1. Vinyl Tape Mounting. Use double-sided foam tape, of thickness indicated, to mount signs to smooth, nonporous surfaces. Do not use this method for vinyl-covered or rough surfaces.
2. Silicone Adhesive Mounting. Use liquid silicone adhesive recommended by the sign manufacturer to attach sign units to irregular, porous, or vinyl covered surfaces. Use double-sided vinyl tape where recommended by the sign manufacturer to hold the sign in place until the adhesive has fully cured.

3.2 CLEANING AND PROTECTION

A. **General**. At completion of the installation, clean soiled sign surfaces in accordance with the manufacturer's instructions. Protect units from damage until acceptance by the Owner.

END OF SECTION

SECTION 10 14 16

PROJECT PLAQUE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Provide the labor, tools, equipment, and materials necessary to install the project plaque in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work in compliance with all federal, state, and local codes and regulatory agencies.

1.4 SUBMITTALS

A. **Shop Drawings**. Furnish manufacturer's product data, proposed lettering layout, and fasteners for review.

B. **Samples**. Submit two "rubbings" of the plaque for review. The "rubbings" shall show the actual finished lettering in order that the spelling and overall appearance may be reviewed prior to fabrication.

1.5 JOB CONDITIONS

Not used.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **General**. Package, handle, and store in accordance with the manufacturer's instructions.

1.7 SPECIAL WARRANTY

Not used.

PART 2 - PRODUCTS

2.1 MATERIALS

A. **Plaque**. The plaque shall be cast from virgin aluminum ingots. The plaque shall have satin finish raised border with deep block style letters on a black lathered background. The size of the plaque shall be as shown on the drawings.

B. **Text**. The wording shall include the name of the Owner; Burgess & Niple, Inc.; Prime Contractors; and the completion date. Owners' names shall include all of

the official names and titles listed on the title sheet of the drawings or their replacements.

PART 3 - EXECUTION

3.1 EXAMINATION

A. **Verification**. The text shall be reviewed by the Contractor for correctness and casting quality.

B. **Location**. The designated wall area for the plaque location shall be free of obstruction and clean.

C. **The wall area** behind the plaque shall be finished in the same manner as the adjacent surfaces so that the plaque may be removed in the future.

3.2 PREPARATION

A. **Fasteners**. The required number of concealed fasteners shall be delivered to the site.

B. **Cleaning**. The wall area onto which the plaque shall be mounted shall be cleaned to the satisfaction of the Owner.

C. **Isolating Coating**. The back of the plaque and the fastener locations shall be coated with epoxy material.

3.3 INSTALLATION

A. **Methods**. The plaque shall be surface mounted with concealed fasteners in a location shown on the drawings or located where directed by the Engineer/Architect.

3.4 FIELD QUALITY CONTROL

A. **Inspection**. Inspect the plaque installation and check that each fastener is tight and secure and that the plaque is mounted true and plumb.

END OF SECTION

SECTION 10 21 13

TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General**. Provide the labor, tools, equipment, and materials necessary to furnish and install the toilet compartments in accordance with the plans and as specified herein.

B. **Types of toilet compartments** include:

1. Metal, stainless steel.

C. **Styles of toilet compartments** include:

1. Floor anchored, overhead braced.

D. **Styles of screens** include:

1. Floor anchored.

E. **Supports for attaching compartments** to overhead structural system are specified in a Division 5 section.

F. **Toilet accessories**, such as toilet paper holders, grab bars, and purse shelves, are specified in another Division 10 section.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work to furnish and install the toilet compartments in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

B. **Field Measurements**. Take field measurements prior to preparation of shop drawings and fabrication, where possible, to ensure proper fitting of work. However, allow for adjustments where taking of field measurements before fabrication might delay work.

C. **Coordination**. Furnish inserts and anchorages which must be built into other work for installation of toilet compartments and related items. Coordinate delivery with other work to avoid delay.

1.4 **SUBMITTALS**

A. **Transmittals**. Furnish manufacturer's product data, test reports, and material certifications as required.

B. **Submit the following** in accordance with Conditions of Contract and Division 1 specification sections.

1. Product data for materials, fabrication, and installation including catalog cuts of anchors, hardware, fastenings, and accessories.
2. Shop drawings for fabrication and erection of toilet compartment assemblies not fully described by product drawings, templates, and instructions for installation of anchorage devices built into other work.
3. Samples of full range of colors for each type of unit required. Submit 6-inch-square samples of each color and finish on same substrate to be used in work, for color verification after selections have been made.

1.5 **JOB CONDITIONS**

Not used.

1.6 **DELIVERY, STORAGE, AND HANDLING**

Not used.

1.7 **SPECIAL WARRANTY**

Not used.

PART 2 - PRODUCTS

2.1 **MANUFACTURERS**

A. **Available Manufacturers**. Subject to compliance with requirements, manufacturers offering products which may be incorporated in the work include, but are not limited to, the following:

1. Stainless Steel.

a. ASI Accurate Partitions Corp.
b. Bobrick Washroom Equipment, Inc.
c. Global Steel Products Corp.
d. Metpar Steel Products Corp.

2. Solid Plastic
a. Scranton Products

2.2 **MATERIALS**

A. **General**. Provide materials which have been selected for surface flatness and smoothness. Exposed surfaces which exhibit pitting, seam marks, roller marks, stains, discolorations, telegraphing of core material, or other imperfections on finished units are not acceptable.

B. **Stainless Steel Sheets**. ASTM A 167, Type 302/304, finished on exposed faces with No. 4 satin finish, in following minimum thicknesses:

1. Pilasters. 0.0516 inch (18 gauge).
2. Doors, Panels, and Screens. 0.0396 inch (20 gauge).

C. **Concealed Anchorage Reinforcement**. Minimum 0.108-inch (12-gauge), galvanized steel sheet.

D. **Concealed Tapping Reinforcement**. Minimum 0.0785-inch (14-gauge), galvanized steel sheet.

E. **Core Material for Metal Partitions**. Manufacturer's standard sound deadening honeycomb of impregnated Kraft paper in thickness to provide finished dimension of 1 inch minimum for doors, panels, and screens and 1-1/4 inches minimum for pilasters.

F. **Pilaster Shoes and Caps**. ASTM A 167, Type 302/304 stainless steel, not less than 3 inches high, 0.0396 inch thick (20 gauge), finished to match hardware.

G. **Stirrup Brackets**. Manufacturer's standard design for attaching panels to walls and pilasters, either chromium-plated nonferrous cast alloy (Zamac) or anodized aluminum.

H. **Hardware and Accessories**. Manufacturer's standard design, heavy duty operating hardware and accessories of chromium-plated, nonferrous cast alloy (Zamac).

I. **Overhead Bracing**. Continuous extruded-aluminum, antigrip profile, with clear anodized finish.

J. **Anchorages and Fasteners**. Manufacturer's standard exposed fasteners of stainless steel, chromium plated steel, or brass, finished to match hardware, with theft-resistant-type heads and nuts. For concealed anchors, use hot-dip galvanized, cadmium-plated, or other rust-resistant protective coated steel.

2.3 FABRICATION

A. **General**. Furnish standard doors, panels, screens, and pilasters fabricated for compartment system. Furnish units with cutouts, drilled holes, and internal reinforcement to receive partition mounted hardware, accessories, and grab bars, as indicated.

B. **Door Dimensions**. Unless otherwise indicated, furnish 24-inch-wide in-swinging doors for ordinary toilet stalls and 32-inch-wide (clear opening) out-swinging doors for stalls equipped for use by handicapped.

C. **Metal Toilet Compartments and Screens**. Pressure-laminate seamless face sheets to core material and seal edges with continuous interlocking strip or with lapped and formed edges. Weld edges and corners with exposed welds ground smooth.

D. **Overhead-Braced Compartments**. Furnish galvanized steel supports and leveling bolts at pilasters as recommended by manufacturer to suit floor conditions. Make provisions for setting and securing continuous, extruded-aluminum, antigrip, overhead bracing at top of each pilaster. Provide shoe at each pilaster to conceal supports and leveling mechanism.

E. **Floor-Supported Compartments**. Furnish galvanized steel anchorage devices complete with threaded rods, lock washers, and leveling adjustment nuts at pilasters to permit structural connection at floor. Provide shoe at each pilaster to conceal anchorage.

F. **Wall-Supported Compartments**. Fabricate divider panels of two steel sheets with internal reinforcing to form unit which is "V" shaped in plan, approximately 6 inches wide at wall and tapered to approximately 1 inch at pilaster. Furnish complete with anchorages and supporting framework for installation in other work. Provide anchorage system with mechanical adjustment for leveling panels.

G. **Wall-Hung Screens**. Furnish panel units in sizes indicated, of same construction and finish as partition system panels.

H. **Hardware**. Furnish hardware for each compartment to comply with American National Standards Institute (ANSI) A117.1 for handicapped accessibility and as follows.

1. Hinges. Cutout inset type, adjustable to hold door open at any angle up to 90 degrees. Provide gravity type, spring-action cam type, or concealed-torsion rod type to suit manufacturer's standards.
2. Latch and Keeper. Recessed latch unit, designed for emergency access, with combination rubber faced door strike and keeper.
3. Latch and Keeper. Manufacturer's standard surface mounted latch unit, designed for handicapped accessibility, with combination rubber faced door strike and keeper.
4. Coat Hook. Manufacturer's standard unit, combination hook and rubber tipped bumper, sized to prevent door hitting mounted accessories.
5. Door Pull. Manufacturer's standard unit for out swinging doors. Provide pulls on both faces of handicapped compartment doors.

2.4 FINISH

A. **Color**. Manufacturer's standard stainless steel.

PART 3 - EXECUTION

3.1 INSTALLATION

A. **General**. Comply with manufacturer's recommended procedures and installation sequence. Install compartment units rigid, straight, plumb, and level. Provide clearances of not more than 1/2 inch between pilasters and panels, and not more than 1 inch between panels and walls. Secure panels to walls with not less than two stirrup brackets attached near top and bottom of panel. Locate wall brackets so that holes for wall anchorages occur in masonry or tile joints. Secure panels to pilasters with not less than two stirrup brackets located to align with stirrup

brackets at wall. Secure panels in position with manufacturer's recommended anchoring devices.

B. **Overhead-Braced Compartments**. Secure pilasters to floor and level, plumb, and tighten installation with devices furnished. Secure overhead brace to each pilaster with not less than two fasteners. Hang doors and adjust so that tops of doors are parallel with overhead brace when doors are in closed position.

C. **Floor-Supported Compartments**. Set pilaster units with anchorages having not less than 2 inches penetration into structural floor, unless otherwise recommended by partition manufacturer. Level, plumb, and tighten installation with devices furnished. Hang doors and adjust so that tops of doors are level with tops of pilasters when doors are in closed position.

D. **Wall-Supported Compartments**. Secure divider panels to built-in anchorage devices using concealed fasteners. Level, plumb, and tighten installation with devices furnished. Hang doors and adjust so that bottoms of doors are level with bottoms of pilasters when doors are in closed position.

E. **Screens**. Attach with anchoring devices as recommended by manufacturer to suit supporting structure. Set units to provide support and to resist lateral impact.

3.2 ADJUST AND CLEAN

A. **Hardware Adjustment**. Adjust and lubricate hardware for proper operation. Set hinges on in swinging doors to hold open approximately 30 degrees from closed position when unlatched. Set hinges on out swinging doors (and entrance swing doors) to return to fully closed position.

B. **Clean exposed surfaces** of partition systems using materials and methods recommended by manufacturer, and provide protection as necessary to prevent damage during remainder of construction period.

SECTION 10 28 00

TOILET AND BATH ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Provide the labor, tools, equipment, and materials necessary to furnish and install the toilet and bath accessories in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Codes and Regulatory Agencies**. Perform all work in compliance with all federal, state, and local codes and regulatory agencies.

B. **Standards**. Materials and workmanship shall be in accordance with the following standards referenced herein.

1. ASTM – American Society for Testing and Materials.
2. FS – Federal Specifications.

1.4 SUBMITTALS

A. **Product Data**. Submit manufacturer's technical data and installation instructions for each unit. Technical data shall show manufacturer's trade name, colors, model number, cleaning instructions, storage, and maintenance requirements.

B. **Shop Drawings**. Submit drawings showing location and layout, anchoring details, hardware, sizes, type, finish, and grade.

1.5 JOB CONDITIONS

A. **Coordination**. Coordinate with other trades for installation of anchors, inserts, mounting, and other conditions so as not to cause delays, omissions, and errors.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery**. Do not deliver toilet accessories until building is enclosed and ready for accessories.

B. **Storage**. Store accessories in original clearly marked packaging until ready for installation. Protect from damage at all times.

C. **Handling**. Handle per manufacturer's instruction at all times.

1.7 **SPECIAL WARRANTY**

A. **Mirrors**. As noted.

PART 2 - PRODUCTS

2.1 **COMBINATION MIRROR, PAPER TOWEL DISPENSER, AND SOAP DISPENSER**

A. **Type**. Recessed.

B. **Style**. Multipurpose unit.

C. **Size**. 600 C-fold towels with interchangeable paper drop.

D. **Material.** Type 304 stainless steel. 20 gauge.

E. **Finish**. No. 4 Satin.

F. **Manufacturer/Model**

1. Bobrick B-3302.
2. Bradley 130.

2.2 **WASTE RECEPTACLE**

A. **Type**. Surface mounted.

B. **Size**. 6.4-gallon capacity.

C. **Material**. Type 304 stainless steel.

D. **Finish**. No. 4 Satin.

E. **Accessories**. Removable vinyl liner.

F. **Manufacturer/Model**

1. Bobrick B-279.
2. Bradley 357.

2.3 **TOILET TISSUE DISPENSER**

A. **Type**. Surface mounted.

B. **Size**. Two roll.

C. **Material**. Type 304 stainless steel.

D. **Finish**. No. 4 Satin.

E. **Manufacturer/Model**

1. Bobrick B-2840.
2. Bradley 528.

PART 3 - EXECUTION

3.1 EXAMINATION

A. **Site Verification of Conditions**. Prior to installation of toilet and bath accessories, verify that:

1. All clearances have been or will be met.
2. Bases, anchors, supports, and openings are located correctly and are of the proper sizes and materials.

B. **Variations**. Correct any variations from the requirements shown on the drawings at no additional cost to the Owner. Submit all methods of correction in writing for approval and acceptance.

3.2 PREPARATION

A. **Protection**. Protect all surface areas from damage. Protect all finished walls and floors with adequate covering to prevent scratches, chips, and/or stains.

3.3 INSTALLATION

A. **Fasteners**. Use concealed fastenings wherever possible. All fasteners and anchors to be Type 316 stainless steel.

B. **Anchors**. Provide anchors, bolts, and other necessary anchorages, and attach accessories securely to walls and partitions in locations as shown.

C. **Mounting**

1. Install concealed mounting devices and fasteners fabricated of the same material as the accessories as recommended by manufacturer.
2. Install exposed mounting devices and fasteners finished to match the accessories.
3. Provide theft-resistant fasteners for all accessory mountings.

D. **Accessories**. Secure toilet room accessories in accordance with the manufacturer's instructions for each item and each type of substrate construction.

3.4 ADJUSTMENT AND CLEANING

A. **Adjustment**. Adjust accessories for proper operation.

B. **Cleaning**. After completion of installation, clean and polish all exposed surfaces.

3.5 **DEMONSTRATION**

A. **Visual**. With Owner and/or Engineer/Architect, inspect each unit for visual deficiencies and to ensure that all units are secure and all colors and finishes are uniform.

B. **Tests**. Demonstrate that all units operate easily and freely, all latches and locks operate satisfactorily, and all units are securely fastened.

3.6 **PROTECTION**. Provide protection of each unit until final acceptance, and remove same at completion of the project or when directed.

END OF SECTION

SECTION 10 44 00

FIRE EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General**. Provide the labor, tools, equipment, and materials necessary to furnish and install fire equipment in accordance with the plans and as specified herein.

B. **This section includes the following**:

1. Fire extinguishers.
2. Mounting brackets.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work to furnish and install fire equipment in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

B. **Underwriters' Laboratories, Inc. (UL) Listed Products**. Fire extinguishers UL-listed and bear UL "Listing Mark" for type, rating, and classification of extinguisher.

C. **Factory Mutual (FM) Listed Products**. Fire extinguishers approved by FM Research Corporation for type, rating, and classification of extinguisher and carry appropriate FM marking.

1.4 SUBMITTALS

A. **Transmittals**. Furnish manufacturer's product data, test reports, and material certifications as required.

B. **Submit the following** in accordance with Conditions of Contract and Division 1 specification sections.

1. Product Data. Product data for each type of product specified.

1.5 JOB CONDITIONS

Not used.

1.6 DELIVERY, STORAGE, AND HANDLING

Not used.

1.7 SPECIAL WARRANTY

Not used.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. **Available Manufacturers**. Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include, but are not limited to, the following:

1. Ansul Fire Protection, Wormald US Inc.
2. J.L. Industries.
3. Larsen's Manufacturing Co.

2.2 FIRE EXTINGUISHERS

A. **General**. Provide fire extinguishers for each location indicated, in colors and finishes selected by Engineer/Architect from manufacturer's standard, which comply with requirements of governing authorities.

1. Fill and service extinguishers to comply with requirements of governing authorities and manufacturer.
2. Abbreviations indicated below identify extinguisher types related to UL classification and rating system and not necessarily to type and amount of extinguishing material contained in extinguisher.

B. **Multipurpose Dry Chemical Type**. UL-rated 2-A:10:B:C, 5-pound nominal capacity, in enameled steel container.

2.3 MOUNTING BRACKETS

A. **General**. Provide brackets designed to prevent accidental dislodgement of extinguisher, of sizes required for type and capacity of extinguisher indicated in plated finish.

1. Provide brackets for extinguishers.

PART 3 - EXECUTION

3.1 INSTALLATION

A. **General**. Install items included in this section in locations and at mounting heights indicated, or if not indicated, at heights to comply with applicable regulations of governing authorities.

1. Securely fasten mounting brackets and fire extinguisher cabinets to structure, square and plumb, to comply with manufacturer's instructions.

2. Where exact location of bracket-mounted fire extinguishers is not indicated, locate as directed by Engineer/Architect.

END OF SECTION

This page intentionally left blank.

SECTION 10 51 13

METAL LOCKERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of Contract, including General and Supplementary Conditions, Division 1, and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **Scope of Work**. Provide the labor, tools, equipment, and materials necessary to furnish and install metal lockers in accordance with the drawings and as specified herein.

1.3 QUALITY ASSURANCE

A. **Dimensions**. Verify all dimensions and quantities at the building. Where lockers are shown wall to wall, provide end closers and fillers as required.

B. **Installation**. Installer shall be approved by the manufacturer and experienced in the assembly of locker parts.

1.4 SUBMITTALS

A. **Product Data**. Submit manufacturer's product data consisting of product specifications, installation instructions, finishes, and accessories.

B. **Shop Drawings**. Show metal lockers in dimensioned relation to adjacent surfaces. Show lockers in detail, method of installation, fillers, trim, base, door swing, and accessories. Include locker numbering sequence information.

C. **Samples**. Submit samples for each color on squares of same metal to be used for fabrication of lockers. Furnish not less than six colors.

1.5 JOB CONDITIONS

A. **Coordination**. Coordinate layout and installation with other trades to ensure proper enclosure and prevent delay in work, errors, and/or omissions.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery**. Do not deliver metal lockers until building is enclosed and ready for locker installation. Protect from damage during delivery.

B. **Storage**. Store lockers and locker accessories off the ground and not exposed to the elements. Keep in original packaging until used.

C. **Handling**. Handle lockers per manufacturer's recommendations, without scratching and/or damages.

1.7 **SPECIAL WARRANTY**

Not used.

PART 2 - PRODUCTS

2.1 **MATERIALS**

A. **Sheet Steel**. Mild cold rolled and leveled furniture steel, free from buckle, scale, and surface imperfections.

B. **Fasteners**. Cadmium, zinc, or nickel plated steel; exposed bolt heads, slotless type; self-locking nuts or lock washers for nuts on moving parts.

C. **Equipment**. Hooks and hang rods of cadmium plated or zinc plated steel.

D. **Number Plates**. Manufacturer's standard etched, embossed, or stamped, aluminum or stainless steel metal number plates with embossed numerals not less than 3/8 inch high. Number lockers in sequence as directed by Engineer/Architect. Attach plates to each locker door, near top, centered, with at least two fasteners of same finish as number plate.

2.2 **FABRICATION**

A. **Construction**. Fabricate lockers square, rigid, and without warp, with metal faces flat and free of dents or distortion. Make exposed metal edges safe to touch. Weld frame members together to form rigid, one-piece structure. Weld, bolt, or rivet other joints and connections. Grind exposed welds flush. Do not expose bolts or rivet heads on fronts of locker doors or frames.

B. **Frames**. Fabricate of 16-gauge channels or 12-gauge angles, minimum with continuous stop/strike formed on vertical members.

C. **Finishing**. Chemically pretreat metal with degreasing and phosphatizing process. Apply baked on enamel finish to all surfaces, exposed and concealed, except plates and nonferrous metal.

1. Color. Provide locker units in color(s) selected by Engineer/Architect from manufacturer's standards. Concealed parts may be manufacturer's standard neutral color.

D. **Body**. Fabricate back of 18-gauge steel and sides of 16-gauge steel, with double-flanged connections extending full height. Form top and bottom of not less than 16-gauge steel, with flanged edges.

1. Provide not less than 20-gauge steel sheet hat shelf set approximately 9 inches below the top. Shelf to be flanged on all sides with channel front.

E. **Door**. One-piece, minimum 14-gauge sheet steel, flanged at all edges, constructed to prevent springing when opening or closing. Fabricate to swing 180 degrees.

1. Reinforcing. Provide extra bracing or reinforcing on inside of doors over 15 inches wide.
2. Ventilation. Provide stamped, louvered vents in door face, as is standard with the manufacturer.
3. Hinges. Steel, full-loop, five-knuckle, nonremovable pin. Weld to inside of frame and secure to door with not fewer than two factory-installed fasteners that are completely concealed and tamperproof when door is closed. Provide at least three hinges for each door over 42 inches high; at least two hinges for doors 42 inches high or less.

F. **Projecting Handle and Latch**. Positive automatic, prelocking, stainless steel, pry-resistant latch, recessed and pull with rubber silencers; chromium plated, heavy duty, vandalproof lift up handle, containing strike and eye for padlock; and with not less than three-point latching action.

G. **Equipment**. Furnish each locker with hat shelf, one double prong hook, and not fewer than three single prong wall hooks.

H. **Filler Panels**. Provide filler panels where indicated, of not less than 16 gauge steel sheet, factory fabricated and finished to match locker units.

2.3 MANUFACTURERS

A. **Manufacturer**. Subject to compliance with requirements, provide products of one of the following:

1. Debourgh.
2. The Interior Medart.
3. List Industries, Inc.
4. Republic Storage Systems.

PART 3 - EXECUTION

3.1 EXAMINATION

A. **Site Verification of Conditions**. Prior to installation of lockers, verify that:

1. All clearances have been or will be met.
2. Bases, anchors, supports, and openings are located correctly and are of the proper sizes and materials.

B. **Variations**. Correct any variations from the requirements shown on the drawings at no additional cost to the Owner. Submit all methods of correction in writing approval and acceptance.

3.2 PREPARATION

A. **Protection**. Protect all surface areas from damage. Protect all finished floors with adequate covering to prevent scratches, chips, and/or stains.

3.3 INSTALLATION

A. **General**

1. Install metal lockers on concrete bases at locations shown in accordance with manufacturer's instructions for plumb, level, rigid, and flush installation.
2. Space fasteners approximately 48 inches on center (o.c.), unless otherwise recommended by manufacturer, and apply through backup reinforcing plates where necessary to avoid metal distortion, using concealed fasteners. All fasteners projecting into the locker area shall be finished with crown dome nuts.
3. Install trim and metal filler panels using concealed fasteners. Provide flush, hairline joints against adjacent surfaces.

3.4 **REPAIRS/RESTORATION**

A. **Damages**. Satisfactorily repair all chips, scratches, stains, and other disfiguring conditions of all units and accessories. Replace any unit that cannot be repaired satisfactorily at no additional cost to the Owner.

3.5 **ADJUSTING**. Adjust all doors to operate easily without binding and to open and close freely, and verify that all locking devices are operating properly.

3.6 **CLEANING**. Clean units of all marks, mars, smears, and foreign materials to a factory finish appearance. Use only material and methods recommended by the locker manufacturer.

3.7 **DEMONSTRATION**

A. **Visual**. With Owner and/or Engineer/Architect, inspect each unit for visual deficiencies and to ensure that all exposed fasteners within each unit are capped and all colors and finishes are uniform.

B. **Tests**. Demonstrate that all locker doors operate easily and freely without binding and/or twisting, all latches and locks operate satisfactorily, and all units are securely fastened.

3.8 **PROTECTION**. Provide protection of each unit until final acceptance, and remove same at completion of the project or when directed.

END OF SECTION

SECTION 11 01 00

SAFETY EQUIPMENT

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. **General**. Drawings and general provisions of the Contract and all related specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General**. Provide the labor, tools, equipment, and materials necessary to furnish and install the safety equipment for use by operation and maintenance personnel working within the confined space of the chlorine contact tanks and clearwell.

B. Equipment to be provided includes the following:

1. Confined space personal safety equipment in accordance with the plans and as specified herein.

C. **Types**. Types of equipment required for project include the following:

1. Provide two (2) vest type safety harnesses, each with two (2) aluminum D-ring shoulder and back d-rings for confined space use with Portable Fall Arrest System (PFAS).

2. Provide sixteen (16) Portable Fall Arrest Anchor Posts and two (2) Rescue Davit Arm made of light-weight Aluminum with Four (4) Heavy Duty Carrying Bags for PFAS Davit Arm.

3. Provide two (2) drill operated power winch and two (2) self-retracting lifelines.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work to furnish and install the life safety equipment in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

1.4 SUBMITTALS

A. **General**. Comply with Section 01 33 00, “Submittals” and submit following supplemental requirements within this specification section.

B. **Transmittals**. Furnish manufacturer's product data, test reports, and material certifications as required.

C. **Shop Drawings**. Submit plans, elevations and details for work not fully shown by published product data; include rough-in dimensions and service connection details.

1.5 JOB CONDITIONS

A. **General**. Handle, store, and protect items in accordance with Section 01 60 00 and the manufacturer’s instructions. Mount units after new hand railing systems are installed. Coordinate locations with Owner/Engineer.

1.6 DELIVERY, STORAGE, AND HANDLING (Not used)

1.7 SPECIAL WARRANTY (Not used)

PART 2 PRODUCTS

2.1 MATERIALS AND COMPONENTS

A. **General**. Provide manufacturer's standard packaged, pre-engineered or prefabricated units except as otherwise indicated, with selections as indicated to comply with requirements; and with components of each unit complying with manufacturer's published product literature, and as required for a complete system.

B. **Stainless Steel**. American Iron and Steel Institute (AISI) Type 302/304, with manufacturer's standard directional polish or satin finish on exposed surfaces.

C. Confined Space Safety Equipment

1. Portable Fall-Arrest Post (PFAP)

a. Provide 4-stage telescoping post constructed of lightweight aluminum for easy transport and setup. The 4-position extendable post shall support 3 independent swivel tie-offs for fall arrest anchorage and accommodate attachment of portable davit arm. Post shall be Portable Fall Arrest Post with three independent tie-off points that provide 360-degree protection for 3 workers. Provide a 18-inch adjustable offset to the increase the mast height. Base of post shall be constructed of aluminum and designed with built-in lifeline attachment, leveling screws to plumb system and stainless-steel pin for attachment to anchor plate.

b. Provide for field welding to embedded steel anchor plate in concrete deck at designated locations. Anchor plate shall be epoxy coated steel, heavy floor anchor base plate and properly sized anchor bolts to handle 50% of maximum design loads in case of one fallen worker and 2 additional workers assisting his removal. Stainless steel removable pins shall be used to retain post for easy setup and tear down.

c. Provide heavy duty Portable Fall-arrest Anchor Post Bag. Bag shall be constructed from heavy duty materials with rugged zippers, padded side panels and adjustable carrying straps.

2. Portable Davit

a. Provide portable davit for attachment of winches and fall protection devices. Davit shall include quick-attach screws fittings to attach Rescue Davit to post. Anchorage cables shall be provided to retain davit arm in correct position. Davit shall work in two positions and extend 42-inches out from the post. Davit shall work in only the 2nd and 4th positions. Davit shall work in only the 2nd and 4th positions. Davit shall be Model 8516693 manufactured by DBI-SALA or equal, and shall attach to 4 position PFAP Model 8516691 post by DBI-SALA or equal

b. Davit shall be provided with brackets designed for mounting of winch and self-extracting lifeline.

c. Provide heavy duty bag for carrying davit with permanently mounted winch. Provide heavy duty Portable Fall-arrest Anchor Post Bag. Bag shall be constructed from heavy duty materials with rugged zippers, padded side panels and adjustable carrying straps. Bag shall be able to store Davit Arm and permanently mounted winch.

d. Provide sixteen (16) **Bolt-On Uni-Anchor with Tie-Off Zinc Plated** floor mount base plates Model 85000009 as manufactured by DB SALA or approved equal. Provide 1" grout under base and attach floor flange to concrete with 4-1/2" 316 stainless steel anchor bolts set in a ¾" hole with epoxy adhesive.

e. Furnish and install sixteen (16) base plate for mounting portable PFAS post at locations shown on the plans including and summarized in the schedule herein.

3. Winch

a. Retrieval and rescue wind shall be compact design, constructed of 304 stainless steel. Winch shall be permanently mounted to davit arm.

b. Winch shall be equipped with digital indicator that counts revolutions of the drum to determine next service interval. Standard features include a braking system with three

a) independent working pawls, centrifugal back-up brake, and carrying handle and cable retainer spring. Winch shall include double locking swivel safety snap will be provided. All components are zinc-plated or anodized aluminum.

c. A friction brake shall be engaged by a minimum of 2 kg. Brake pad wear indicator monitors the condition of braking mechanism and shall include an inertial (centrifugal) safety back-up brake.

d. Winch shall be able to be operated through a power drive hub on the 9:1 drive. An overload clutch shall be provided to install between the power hub drive and the electrical or pneumatic drill to eliminate overloading the winch during retrieval. This clutch shall protect the winch operator and the retrieved worker from injury. The clutch is installed and removed with the use of special tools when switching to the manual 4:1 manual crank drive option. A two speed gear reduction shall be used to provide the capability of retrieval/descent at an average speed from 4 meter/minute up to 9 meter/minute/. Two speed manual winches shall utilize removable aluminum crank winch. Unit shall be provided with minimum 100 feet of stainless steel cable.

4. Self-Retracting Lifeline (SLR) for Emergency Escape Device.

a. Provide two (2) sealed Self-Retracting Lifeline with automatic rewind. Sealed unit to be constructed of corrosion resistant materials with 304 stainless steel cables and snap hooks, suitable for mounting on Portable Anchor Post or Davit. Centrifugal speed regulator shall control speed of descent to 4 feet per second.

Maximum load is 450 pounds. Lifeline shall contain 200 feet of stainless steel cable.

b. SRLs incorporate a sealed design separates all dynamic components including the motor spring and brake, from foreign elements such as grease, moisture and dirt.

5. Harness

a. Provide two (2) full body harness with two (2) D-Ring on shoulder and one (1) on back.

6. **Approved manufacturers** for confined space safety systems shall be:

a. DBI-SALA

b. Pelsue

c. DCIS Inc.

d. Approved equal.

2.2 FABRICATION

A. **General**. Fabricate with manufacturer's standard joints and seams, with exposed edges smoothed. Provide mounting brackets and hardware sized and spaced to withstand impacts and pressures of normal operations, suitable for mounting to aluminum hand railing.

PART 3 EXECUTION

3.1 **Installation.** Contractor shall install all equipment at the locations shown on the contract drawings per the manufacturer’s recommendation. Provide on-site training by the manufacturer’s technical representative, on the proper use of the equipment. Training shall be conducted in two separate sessions for a total of 6 hours of instruction.

PART 4 PART 4 - EQUIPMENT SCHEDULE

4.1 GENERAL

A. Locations

-Two (2) West Aerator Building
-One (1) East Aerator Building
-Four (4) Exterior Entry Hatches to Clearwells
-Two (2) Filter Gallery for Filters #5 and #6
-One (1) Floor Hatch in Lobby
-Four (4) Access Hatches to Clearwells, Chlorine Contact Tanks, & Fluoridation Tanks
-Two (2) at High Service Pump Chamber No.1&2.

PFAS Post Quantity	2
Anchor Post Extensions	2
Base Concrete Anchors	16
Davit Arms w/ Bracket	2
Heavy Duty Storage Bags	2
SS Wire Rope Retrieval Winch w/ Carabiner	2
Full Body Harness	2 (1 LG & 1 XL)
SS Carabiner (*)	2
Capacity	450-lbs
Maximum boom extension (from center of mast to end of boom)	42-inches

(Does not include allowance for grout or a steel leveling plate if required to distribute load of yoke assembly to concrete floor)

* Provide CMC Rescue ProTech Auto-Lock Stainless Steel Carabiner NFPA G Rated with each Davit system.

END OF SECTION

SECTION 13 34 23.05

SMALL METAL BUILDING SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General**. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to this section.

1.2 DESCRIPTION OF WORK

A. **General**. Provide the labor, tools, equipment, and materials necessary to furnish and install the metal building systems in accordance with the plans and as specified herein. This section includes all materials and erection required for building to be supplied complete with all necessary component parts, including foundation anchors, to form a complete building system and all parts shall be new and free from all defects or imperfections. The building width and length shall be measured from the outside of the building wall panels and the height of the building shall be the distance measured from the bottom surface of the base channel to the exterior juncture of the roof and sidewall panels.

B. **This section includes a single-story, single-span**, rigid-frame-type pre-engineered metal building of the nominal length, width, eave height, and gable roof pitch indicated.

1. Exterior walls are covered with field-assembled insulated wall panels attached to framing members using exposed fasteners. End walls are not expandable.
2. Gable Roof system consisting of the manufacturer's standard standing seam insulated roof.
3. Manufacturer's standard building components and accessories may be used, provided components, accessories, and complete structure conform to design indicated and specified requirements.

C. **Related Sections**. The following sections contain requirements that relate to this section:

1. Division 3 – Cast-in-Place Concrete. Concrete floor and foundations and installation of anchor bolts are specified in Division 3 and are to be coordinated with the manufacturer’s recommendations.
2. Sealants and caulking are specified in Division 7.
3. Sectional Overhead Doors are specified in Division 8.
4. Fiberglass reinforced plastic (FRP) Doors are specified in Division 8.

5. Finish hardware and provisions for master-keying are specified in Division 8.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all work to furnish and install the metal building systems in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

B. **Installer Qualifications**. Engage an experienced installer to erect the pre-engineered metal building who has specialized in the erection and installation of types of metal buildings systems similar to that required for this project and who is certified in writing by the metal building system manufacturer as qualified for erection of the manufacturer's products.

C. **Manufacturer Qualifications**. Provide pre-engineered metal buildings manufactured by a firm experienced in manufacturing metal buildings systems that are similar to those indicated for this project and have a record of successful in-service performance.

D. **Single-Source Responsibility**. Obtain the metal building system components, including structural framing, wall and roof covering, and accessory components, from one source from a single manufacturer.

E. **Design Criteria**. The drawings indicate size, profiles, and dimensional requirements of the pre-engineered metal buildings and are based on the specific type and model indicated. Metal building systems having equal characteristics by other manufacturers may be considered provided that deviations in dimensions and profiles are minor and do not change the design concept or intended performance as judged by the Engineer/ Architect. The burden of proof of equality is on the proposer.

1.4 SUBMITTALS

A. **General**

1. All submittals shall be submitted in accordance with the Division 1 Submittal Requirements and the requirements within this specification section.

B. **Submittal Package No. 1 – Shop Drawings and Product Data**

1. Product Data. Product data consisting of metal building system manufacturer's product information for building components and accessories.

2. Shop Drawings. Shop drawings for metal building structural framing system, roofing and siding panels, and other metal building system components and accessories that are not fully detailed or dimensioned in manufacturer's product data.

a. Structural Framing. Furnish complete erection drawings prepared by or under the supervision of a professional engineer legally authorized to practice in the jurisdiction where the project is located. Include details showing fabrication and assembly of the metal building system. Show anchor bolts settings and sidewall, end wall, and roof framing. Include transverse cross sections.

b. Roofing and Siding Panels. Provide layouts of panels on walls and roofs, details of edge conditions, joints, corners, custom profiles, supports, anchorages, trim, flashings, closures, and special details. Include transverse cross sections.

c. Building Accessory Components. Provide details of metal building accessory components to clearly indicate methods of installation including the following:

1) Personnel Doors. Provide elevations and details of each type of door and frame, including anchors and reinforcement; show location and installation requirements for finish hardware. Provide schedule of doors and frames using the same reference numbers for details and openings as those indicated on the drawings; include complete hardware schedule.

2) Sheet Metal Accessories. Provide layouts at 1/4-inch scale. Provide details of ventilators, louvers, gutters, downspouts, pipe penetrations, and other sheet metal accessories at not less than 1-1/2-inch scale showing profiles, methods of joining, and anchorages.

C. **Submittal Package No. 2 – Samples for Initial Selection Purposes**

1. Samples for Initial Selection Purposes. In the form of manufacturer's color charts or chips showing full range of colors, textures, and patterns available for metal roofing and siding panels with factory-applied finishes.

D. **Submittal Package No. 3 – Samples for Verification Purposes and Certification**

1. Samples for Verification Purposes. Of roofing and siding panels. Provide sample panels 12 inches long by actual panel width, in the

profile, style, color, and texture indicated. Include clips, battens, fasteners, closures, and other panel accessories.

2. Installer Certificates. Signed by metal building manufacturer written certification certifying that the installer complies with requirements included under the "Quality Assurance" Article.

3. Professional Engineer's Certificate. Prepared and signed by a Professional Engineer, legally authorized to practice in the jurisdiction where project is located, verifying that the structural framing and covering panels meet indicated loading requirements and codes of authorities having jurisdiction.

E. **Submittal Package No. 4 –Building Code Submittals**

1. Provide all request drawings, design calculations, and other miscellaneous submittals as required by the governing authorities during jurisdiction. Submittals shall be in a form acceptable to the governing authority and shall be submitted in a timely manner so as not to delay the plan approval process.

1.5 JOB CONDITIONS

Not used.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **General**. Deliver prefabricated components, sheets, panels, and other manufactured items so they will not be damaged or deformed. Package wall and roof panels for protection against transportation damage.

B. **Handling**. Exercise care in unloading, storing, and erecting wall and roof covering panels to prevent bending, warping, twisting, and surface damage.

C. **Storage/Protection**. Stack materials on platforms or pallets, covered with tarpaulins or other suitable weather tight ventilated covering. Store metal wall and roof panels so that water accumulations will drain freely. Do not store panels in contact with other materials that might cause staining, denting or other surface damage.

1.7 SPECIAL WARRANTY

A. **Roofing and Siding Panel Finish Warranty**. Furnish the roofing and siding panel manufacturer's written warranty, covering failure of the factory applied exterior finish on metal wall and roof panels within the warranty period. This warranty shall be in addition to and not a limitation of other rights the Owner may

1. Warranty period for factory-applied exterior finishes on wall and roof panels is 20 years after the date of Substantial Completion.

1.8 SYSTEM PERFORMANCE REQUIREMENTS

A. **General**. Engineer, design, fabricate and erect the pre-engineered metal building system to withstand loads from winds, gravity, structural movement including movement thermally induced, and to resist in-service use conditions that the building will experience, including exposure to the weather, without failure.

1. Design each member to withstand stresses resulting from combinations of loads that produce the maximum allowable stresses in that member as prescribed in Metal Building Manufacturers Association's (MBMA) "Design Practices Manual."

B. **Design Loads**. Basic design loads, as well as auxiliary and collateral loads, are indicated on the drawings.

1. Basic design loads include live load, wind load, and seismic load, in addition to the dead load.
2. Auxiliary loads include dynamic live loads such as those generated by cranes and material handling equipment.
3. Collateral loads include additional dead loads over and above the weight of the metal building system such as sprinkler systems and roof mounted mechanical systems.

C. **Structural Framing and Roof and Siding Panels**. Design primary and secondary structural members and exterior covering materials for applicable loads and combinations of loads in accordance with the MBA's "Design Practices Manual."

1. Structural Steel. Comply with the American Institute of Steel Construction's (AISC) "Specifications for the Design, Fabrication and Erection of Structural Steel for Buildings" for design requirements and allowable stresses.
2. Light Gauge Steel. Comply with the American Iron and Steel Institute's (AISI) "Specification for the Design of Cold Formed Steel Structural Members" and "Design of Light Gauge Steel Diaphragms" for design requirements and allowable stresses.
3. Welded Connections. Comply with the American Welding Society's (AWS) "Standard Code for Arc and Gas Welding in Building Construction" for welding procedures.

D. **Building Accessories**. Provide metal building system accessories that comply with the following criteria:

1. Doors and Frames shall be Fiberglass Reinforced Plastic (FRP) per Specification Section 08 71 50.
2. Sectional Overhead Doors shall be per Specification Section 08 36 13.

3. Door hardware shall be powder coated or stainless steel per Specification Section 08 71 00.

1.9 EXTRA MATERIALS

A. **Maintenance Stock**. Furnish at least 5 percent excess over required amount of nuts, bolts, screws, washers, and other required fasteners for each metal building. Pack in cartons labeled to identify the contents and store on the site where directed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. **Available Manufacturers**. Subject to compliance with requirements, manufacturers offering metal building systems that may be incorporated in the work include but are not limited to the following:

B. **Manufacturer**. Subject to compliance with specified requirements, provide metal building systems provided by one of the following:

1. Cornerstone Building / MCBI
2. Star Building Systems
3. Parkline, Inc.
4. A&S Building Systems
5. American Buildings Company
6. Or Equal

2.2 MATERIALS

The following materials specifications apply as required for the products used in the approved building system.

A. **Hot-Rolled Structural Steel Shapes**. Comply with ASTM A 36 or A 529.

B. **Steel Tubing or Pipe**. Comply with ASTM A 500, Grade B, ASTM A 501, or ASTM A 53.

C. **Steel Members Fabricated from Plate or Bar Stock**. Provide 42,000 pounds per square inch (psi) minimum yield strength. Comply with ASTM A 529, ASTM A 570, or ASTM A 572.

D. **Steel Members Fabricated by Cold Forming**. Comply with ASTM A 607, Grade 50.

E. **Cold-Rolled Carbon Steel Sheet**. Comply with requirements of ASTM A 366 or ASTM A 568.

F. **Hot-Rolled Carbon Steel Sheet**. Comply with requirements of ASTM A 568 or ASTM A 569.

G. **Structural-Quality Zinc-Coated (Galvanized) Steel Sheet**. Comply with ASTM A 653 with G90 coating. Grade to suit manufacturer's standards.

H. **Aluminum Zinc Alloy.** ASTM A792 with coating conforming to AZ%% (55%) standard by hot dipping process.

I. **Commercial-Quality Zinc-Coated (Galvanized) Steel Sheet**. Comply with ASTM A 653 with G60 coating.

J. **Aluminum-Coated Steel Sheets**. Comply with ASTM A 463 with T1-40 coating.

K. **Aluminum Sheets**. Comply with ASTM B 209 for Alclad alloy 3003 or 3004 with temper as required to suit forming operations.

L. **Bolts for Structural Framing**. Comply with ASTM A 307 or ASTM A 325 as necessary for design loads and connection details.

M. **Thermal Insulation**. Glass fiber blanket insulation, complying with ASTM C 991, of 0.5 pounds per cubic foot density, thickness as indicated, with UL flame spread classification of 25 or less, and 2 inch wide continuous vapor tight edge tabs.

1. Vapor Barrier. Vinyl reinforced foil or Foil reinforced kraft paper.
2. Retainer Strips. 26-gauge (0.0179-inch) formed galvanized steel retainer clips colored to match the insulation facing.

N. **Paint and Coating Materials**. Comply with performance requirements of the federal specifications indicated. Unless specifically indicated otherwise, compliance with compositional requirements of federal specifications indicated is not required.

1. Shop Primer for Galvanized Metal Surfaces. Zinc-dust zinc-oxide primer selected by the manufacturer for compatibility with substrate. Comply with FS TT-P-641.

2.3 STRUCTURAL FRAMING

A. **Framing**. Provide the following framing members:

1. Flange and Sag Bracing. 1 5/8-inch-by-1-5/8-inch angles fabricated from 16-gauge (0.0598-inch) shop-painted roll-formed steel.

2. Base or Sill Angles. Fabricate from 14-gauge (0.0747-inch) cold-formed galvanized steel sections.

3. Secondary end wall structural members, except columns and beams, shall be the manufacturer's standard sections fabricated from 14-gauge (0.0747-inch) cold-formed galvanized steel.

B. **Wind Bracing**. Provide adjustable wind bracing using 1/2-inch-diameter threaded steel rods or manufacturer standard units; comply with ASTM A 36 or ASTM A 572, Grade D. Locate interior end bay bracing only where indicated.

C. **Bolts**. Provide shop-painted bolts except when structural framing components are in direct contact with roofing and siding panels. Provide zinc-plated or cadmium-plated bolts when structural framing components are in direct contact with roofing and siding panels.

D. **Shop Painting**. Clean surfaces to be primed of loose mill scale, rust, dirt, oil, grease, and other matter precluding paint bond. Follow procedures of Steel Structures Painting Council (SSPC) SP3 for power tool cleaning, SSPC-SP7 for brush off blast cleaning, and SSPC-SP1 for solvent cleaning.

1. Prime structural steel primary and secondary framing members with the manufacturer's standard rust-inhibitive primer.
2. Prime galvanized members, after phosphoric acid pretreatment, with manufacturer's standard zinc-dust zinc-oxide primer.

2.4 ROOFING AND SIDING PANELS

A. **Roof and Ceiling Panels**.

1. General. Roof panels shall be supplied in a single continuous length from eave line to eave line or ridge line and shall be designed to tightly interlock so that no fasteners are required at intermediate points along the panel side laps. Roof panels shall be 24”, 18", or 12" wide with a smooth surface between the interlocking side ribs. The interlocking ribs shall be a minimum 3" high and shall be turned upward. All roof panels shall be factory punched for connection at the eave line of the building.
2. Fasteners. There shall be no fastener penetrations through the roof covering except at eave lines, ridge lines and roof accessory openings such as skylights and ventilators. Provide a snap-together, trapezoidal standing seam roof system shall be Ultra-Dek as manufactured by MBCI or approved equal
3. Finish. Roof panels shall be a nominal 26 gauge steel coated on both sides with a coating of corrosion resistant aluminum-zinc alloy conforming to ASTM A 792 specification with the coating conforming to AZ55 (55%) standard by a continuous hot dipping process. Coating weight shall be a minimum of 0.50 oz. of aluminum-zinc alloy per square foot of coated sheet equivalent to about 0.8 mil thickness on each side.

Minimum yield strength of panel material shall be 50,000 PSI. Coating shall be Signature 300 as manufacture red by MBCI or approved equal.

4. Ceiling Panels. The metal ceiling system consists of 3" deep 16" wide interlocking panels of nominal 26 gauge embossed galvanized steel, factory painted White. The ceiling system is supported at its perimeter by concealed angles and hook bolts. The ceiling system is furnished complete with all necessary connectors and fasteners. Roof and wall interior liner panels shall be Ultra-Dek metal structural panel with exposed fastener system as manufactured by MBCI or approved equal.
5. Insulation. The ceiling shall be insulated with 2 layers of 16" wide by 3 1/2" thick R-26 unfaced fiberglass insulation laid at right angles to the panel fibs. The "U" value through the finished ceiling would be a maximum of 0.05 BTU's per square foot (R21.3) when calculated in accordance with the "Zone Method" contained in ASHRAE "Handbook of Fundamentals", 1981 edition. Eave height -9".

B. Wall Panels.

1. General. Exterior wall panels of the building shall be a single continuous length from the base channel to the roof line of the building at the sidewalls and end walls of the building except where interrupted by wall openings.
2. Dimensions.
   a. Exterior Wall Panels. Wall panel system shall be up to 36” wide with exposed metal fastener system, with ribs at 12” spacing with a rib depth of 1-1/8" high. Wall panels shall be AVP metal structural panel with exposed fastener system as manufactured by MBCI or approved equal.
   b. Interior Liner Wall Panels. Roof and wall interior liner wall and ceiling liner panels with maximum coverage of 36-inches shall have 1-1/4”-inch ribs and a rib spacing of 12" centers with a rib standing 1-1/8, with exposed fastener system. Wall and ceiling liner panels shall be PBR metal structural panel with exposed fastener system as manufactured by MBCI or approved equal.
3. Fasteners. Wall panels system is furnished complete with all necessary connectors and utilize and exposed fastener system.. manufactured by MBCI or approved equal.
4. Material Properties. Wall panels shall be nominal 26-gauge galvanized steel conforming to ASTM A-653 specifications with the galvanized coating conforming to G90 (1.25 oz. commercial) standards. Minimum yield strength of panel material shall be 40,000 PSI. Panel material shall be embossed with a random pattern pebble embosser of approximately .007 - .008 depth.
5. Coatings.
   a. All exterior surfaces of the galvanized steel wall covering, and exterior trim shall receive a factory, roller applied, paint coating having an exterior coating thickness of 0.8 to 1.2 mils of dry film thickness. The finish coat for wall panels shall be a siliconized polyester formulation of one of the Manufacturer’s standard

colors. Coating shall be equal to Signature 300 as manufactured by MBCI or equal. Interior Liner panel color shall be white.

b. The wall panel color coating shall carry a low fire hazard rating equal to a Class 1 material as defined by Factory Mutual. The panel coating shall have achieved a Flame Spread Index of 0 and a Fuel Contributed Index of 5 or less when tested in accordance with ASTM E-84 test procedures.

c. Exterior color coatings shall meet the following performance standards after 10 years continuous exposure in normal atmospheric conditions not containing corrosive fumes such as chemical fumes or salt spray.

1) Panels shall show no evidence of blistering, peeling, or chipping.

2) Panels shall not show surface chalking in excess of the No. 8 rating D659 as established by the American Society of Testing Materials (ASTM).

3) Panels, after cleaning, shall not show color change in excess of five (5) NBS units when measured in accordance with the ASTMD-2244 standard.

4) The above performance standards shall not apply where panels have been damaged by fire, radiation or other physical damage.

6. Insulation. Interior wall insulation shall be 3-1/2" R13 fiberglass.

7. Coating shall be Signature 300 as manufacture red by MBCI or approved equal.

C. **Fasteners**. Self-tapping screws, bolts, nuts, self-locking rivets, self-locking bolts, end welded studs, and other suitable fasteners designed to withstand design loads.

1. Provide metal backed neoprene washers under heads of fasteners bearing on weather side of panels.
2. Use aluminum or stainless steel fasteners for exterior application and galvanized or cadmium plated fasteners for interior applications.
3. Locate and space fastenings in true vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of neoprene washer.
4. Provide fasteners with heads matching color of roofing or siding sheets by means of plastic caps or factory applied coating.

D. **Accessories**. Provide the following sheet metal accessories factory-formed of the same material in the same finish as roof and wall panels.

1. Flashings.
2. Closers.
3. Fillers.
4. Metal expansion joints.
5. Ridge covers.
6. Fascias.

E. **Flexible Closure Strips**. Closed cell, expanded cellular rubber, self-extinguishing flexible closure strips. Cut or premold to match configuration of roofing and siding sheets. Provide closure strips where indicated or necessary to ensure weathertight construction.

F. **Sealing Tape**. Pressure sensitive 100 percent solids grey polyisobutylene compound sealing tape with release paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.

G. **Joint Sealant**. One part elastomeric polyurethane, polysulfide, or silicone rubber sealant as recommended by the building manufacturer.

2.5 PERSONNEL DOORS

A. General. Provide openings to accept FRP door(s) and frames specified in Division 8 and as shown on the plans. Contractor is responsible for coordinating matching of openings and doors between the respective manufacturers.

2.6 SHEET METAL ACCESSORIES

A. **General**. Provide aluminum sheet metal accessories with aluminum roofing and siding panels.

B. **Gutters**. Form in 8-foot-long sections, complete with end pieces, outlet tubes, and other special pieces as required. Size in accordance with Sheet Metal and Air Conditioning Contractors' National Association (SMACNA). Join sections with riveted and soldered or sealed joints. Provide expansion type slip joint at center of runs. Furnish gutter supports spaced 36 inches on center, constructed of same metal as gutters. Provide bronze, copper, or aluminum wire ball strainers at outlets. Finish to match roof fascia and rake.

C. **Downspouts**. Form in 10-foot-long sections, complete with elbows and offsets. Join sections with 1-1/2-inch telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch away from walls; locate fasteners at top and bottom and at approximately 5 feet on center in between. Finish to match wall panels.

D. **Wall Louvers**. Provide louvers, size and design indicated, of 18-gauge (0.0478-inch) steel. Fold or bead blades at edges, set at an angle that excludes driving rains, and secure to frames by riveting or welding. Finish to match wall panels.

1. Provide vertical mullions for louvers 4 feet and more in width, with one mullion for each 4 feet of width.
2. Provide flanges on interior face of frames where air intake or exhaust louvers are indicated to be connected with mechanically operated dampers or metal ductwork.
3. Provide 1/2" x 1/2" galvanized steel mesh bird screens in rewirable frames on exterior face of louvers. Secure with clips to ensure ease of

removal for cleaning and rewiring. Fabricate screens and frames of same type metal as louvers.

2.7 FABRICATION

A. **General**. Design prefabricated components and necessary field connections required for erection to permit easy assembly and disassembly.

1. Fabricate components in such a manner that once assembled, they may be disassembled, repackaged, and reassembled with a minimum amount of labor.
2. Clearly and legibly mark each piece and part of the assembly to correspond with previously prepared erection drawings, diagrams, and instruction manuals.

B. **Structural Framing**. Shop-fabricate framing components to indicated size and section with base plates, bearing plates, and other plates required for erection, welded in place. Provide holes for anchoring or connections shop drilled or punched to template dimensions.

1. Shop Connections. Provide power riveted, bolted, or welded shop connections.
2. Field Connections. Provide bolted field connections.

PART 3 - EXECUTION

3.1 ERECTION

A. **Framing**. Erect framing true to line, level, plumb, rigid, and secure. Level base plates to a true even plane with full bearing to supporting structures, set with double nutted anchor bolts. Use a non-shrinking grout to obtain uniform bearing and to maintain a level base line elevation. Moist cure grout for not less than 7 days after placement.

B. **Purlins and Girts**. Provide rake or gable purlins with tight fitting closure channels and fascias. Locate and space wall girts to suit door and window arrangements and heights. Secure purlins and girts to structural framing and hold rigidly to a straight line by sag rods.

C. **Bracing**. Provide diagonal rod or angle bracing in roof and sidewalls as indicated.

1. Movement resisting frames may be used in lieu of sidewall rod bracing, to suit manufacturer's standards.
2. Where diaphragm strength of roof or wall covering is adequate to resist wind forces, rod or angle bracing will not be required.

D. **Framed Openings**. Provide shapes of proper design and size to reinforce openings and to carry loads and vibrations imposed, including equipment furnished under mechanical and electrical work. Securely attach to building structural frame.

3.2 ROOFING AND SIDING

A. **General**. Arrange and nest sidelap joints so prevailing winds blow over, not into, lapped joints. Lap ribbed or fluted sheets one full rib corrugation. Apply panels and associated items for neat and weathertight enclosure. Avoid "panel creep" or application not true to line. Protect factory finishes from damage.

1. Field cutting of exterior panels by torch is not permitted.
2. Provide weather-seal under ridge cap. Flash and seal roof panels at eave and rake with rubber, neoprene, or other closures to exclude weather.

B. **Wall Sheets**. Install wall system per manufacturer's requirements. Handle and apply any sealants and backup in accordance with the sealant manufacturer's recommendations.

1. Align bottom of wall panels and fasten panels with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws. Fasten window and door frames with machine screws or bolts. When building height requires two rows of panels at gable ends, align lap of gable panels over wall panels at eave height.
2. Install screw fasteners with power tools having controlled torque adjusted to compress neoprene washer tightly without damage to washer, screw threads, or panels. Install screws in predrilled holes.
3. Provide weatherproof escutcheons for pipe and conduit penetrating exterior walls.

C. **Sheet Metal Accessories**. Install gutters, downspouts, ventilators, louvers, and other sheet metal accessories in accordance with manufacturer's recommendations for positive anchorage to building and weathertight mounting. Adjust operating mechanism for precise operation.

D. **Doors and Frames**. Install doors and frames straight, plumb, and level. Securely anchor frames to building structure. Set units with 1/8 inch maximum clearance between door and frame at jambs and head and 3/4 inch maximum between door and floor. Adjust hardware for proper operation.

E. **Thermal Insulation**. Install insulation concurrently with installation of ceiling and wall panels in accordance with manufacturer's directions. Install blankets straight and true in one piece lengths with both sets of tabs sealed to provide a complete vapor barrier. Locate insulation on underside of roof sheets, extending across the top flange of purlin members and held taut and snug to roofing panels with retainer clips. Install retainer strips at each longitudinal joint, straight and taut, nesting with roof rib to hold insulation in place.

F. **Cleaning and Touch-Up**. Clean component surfaces of matter that could preclude paint bond. Touch up abrasions, marks, skips, or other defects to shop primed surfaces with same type material as shop primer. Coat non-building surfaces in accordance with specification Section 09 90 00, as applicable.

END OF SECTION

SECTION 14 24 02

LIMITED USE LIMITED APPLICATION (LULA) ELEVATOR

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1. Division 26 Sections for electrical service for elevators to and including disconnect and fused switches at machine room.
2. Division 26 Sections for standby power source, transfer switch, and connection from auxiliary contacts in transfer switch to controller.
3. Division 26 Section "Voice and Data Communication Cabling" for telephone service to elevators.
4. Section 03 33 00 - Cast-in-Place Concrete: Concrete for elevator machine foundation, and pit.
5. Section 08 71 00 - Finish Hardware.
6. Section 09 29 00 - Gypsum Drywall: Shaft walls.
7. Section 09 90 00 - Painting: Interior transparent wood finish in cab.

1.2 SUMMARY OF WORK

A. Provide a complete, fully functional LULA elevator in the lobby of the WTP, meeting all current code requirements, as described herein and as shown on the Drawings.

B. The Contractor is responsible for coordination of demolition work related to preparing for the installation of the new elevator. The Contractor is responsible for the new hoistway and machine room.

C. The Contractor shall be responsible to bring power and lighting to the new Elevator Machine Room and the Hoist Room. The Contractor is responsible for installation of Smoke Detector in Elevator and Machine Rooms, and to wire to Elevator Control Panel.

1.3 SUBMITTALS

A. Shop Drawings

1. Submit shop drawings for the elevator system, components and controls, as outlined in Section 01 33 00.
2. Shop drawings shall include point-to-point control wiring diagrams that will be used for the elevator installation.

B. Product Data. Manufacturer's data sheets on each product to be used, including:
1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Shop Drawings: Provide a complete layout of lift equipment detailing dimensions and clearances as required.

D. Selection Samples. For each finish product specified requiring selection of color or finish, two complete sets of color

1.4 REGULATORY REQUIREMENTS

A. Comply with the following regulations, or any later version incorporated by OBC:

1. American National Standards Institute (ANSI) B-29.2 - Chain Standards for Inverted Tooth (Silent) Chains and Sprockets.

2. American Society of Mechanical Engineers (ASME) A17.1 - Safety Code for Elevators and Escalators.

3. American Society of Mechanical Engineers (ASME) A18.1 - Safety Standard for Platform and Stairway Chair Lifts.

4. CSA B44.1 - Elevator and Escalator Electrical Equipment.

5. CSA B355 - Lifts for Persons with Physical Disabilities.

6. CSA B613 - Private Residence Lifts for Persons with Physical Disabilities.

7. U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG)".

8. ICC/ANSI A117.1 - Accessible and Usable Buildings and Facilities.

9. NFPA 70 - National Electric Code.

10. CSA - National Electric Code.

11. Americans with Disabilities Act

1.5 INSPECTIONS AND PERMITS

A. Obtain and pay for all required permits, inspections and fees, including "Permit(s) to Install" and "Elevator Operating Permit".

B. Arrange for and make all required inspections and tests.

C. Turn over all inspection certificates and operating permits to The Owner, upon completion of the Work.

1.6 DELIVERY, STORAGE AND HANDLING

A. Store, protect and handle materials in accordance with manufacturer's recommendations to prevent damage, soiling or deterioration.

B. Fully protect movable and operating equipment from weather damage.

C. Materials shall not be delivered to the site until areas in which they are to be installed are ready to receive them in their place of final installation.

D. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with local requirements.

1.7 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install systems under environmental conditions outside manufacturer's absolute limits.

1.8 TRAINING

A. Provide a minimum of four (4) hours of instruction and training for The Owner's staff in the operation and maintenance of the elevators and controls.

1.9 SPECIAL WARRANTY

A. Coverage - this warranty applies to the repair or replacement, at Manufacturer's option, of parts that fail due to defective material or workmanship. Manufacturer may, at its option, provide factory reconditioned parts. This warranty is provided to the Authorized Dealer on behalf of the final purchaser of the product and is not transferable. The Manufacturer's warranty does not cover labor charges for the removal, repair or replacement of warranty parts but such costs may be covered for a period of time by Authorized Dealer's warranty, which is provided to purchaser separately.

1. The manufacturer shall offer a 36-month limited warranty on parts from date of shipment.

PART 2 - PRODUCTS

2.1 ACCEPTABLE VENDORS

A. Obtain all elevator equipment through one Vendor. Approved Vendor’s are as follows:

1. Savaria, Brampton, ON, Canada (Basis of Design)

2. Approved Equivalent

2.2 ELEVATOR - GENERAL

A. Work described in this section includes providing equipment, incidental material and labor required for complete, operable roped hydraulic passenger elevator installation. Elevator shall be erected, installed, adjusted, tested and placed in operation by system manufacturer, or manufacturer's authorized installer.

B. Elevators shall be in accordance with the ASME A17.1-B44 and ADA compliant including local codes and regulations except where specified otherwise.

C. Limited Use Limited Application elevator type:

1. Hydraulic
   a. 2:1 roped hydraulic drive.
   b. Duty cycle: normal 30 trips per day, heavy 75 trips per day with a maximum number of start per hour on a standard installation of 15x

D. Limited Use Limited Application elevator shall consist of:

1. Rated Load: 1400 lb (635 kg)
2. Rated Speed: 30 f.p.m. (nominal) (0.15 m/s)
3. Travel: 12 feet. (FF Elevation 972 to FF Elevation 984)
4. Cab Configuration: Enter/exit same side.
5. Car Platform Size: 48” W by 54” D (1219 mm by 1371 mm)
6. Levels Serviced: 2
7. Car Operation: Automatic.
8. Power Supply: 208 Volt, 3 Phase, 30 Amps + 110 Volt, 15 amp, 1 Phase 60 Hz
9. Emergency Power: Battery operation in down direction
10. Controller: PLC
11. Manual Lowering: Outside the hoist way in machine room

E. Elevator Cab Design:

1. Car Enclosure: Steel cab with standard PLAM overlays & stainless steel dropped ceiling and trims.
2. Cab Walls: Laminate Overlay with Stainless Steel Trim.
3. Ceiling Finish: Stainless Steel Drop Down Ceiling with a combination of hidden panel lighting and LED pot lights.
4. Car doors and frames shall be 1 1/2 hour ULC Fire rated and 2 speed horizontally sliding. Car door finish shall be Stainless Steel brushed #4.
5. Handrail: A stainless steel single handrail, with 1-1/2 inch (38 mm) diameter rail shall be located on the control wall of the cab.
6. Carpet Tile: Carpet tile shall be provided for the elevator car floor. Provide carpet tile identical to that tested for the following fire performance characteristics, per test method indicated below, by Underwriters' Laboratories, Inc. (UL) or other testing and inspecting organizations acceptable to authorities having jurisdiction. Identify carpet tile with appropriate markings of applicable testing and inspecting organization. Test Method shall be DOC FF 1-70.

F. Automatic Landing Doors

1. Landing doors and frames shall be 1 1/2 hour ULC Fire rated, 2 speed horizontally sliding with concealed mechanical interlock.
   Door finish shall be:
   a. Stainless Steel brushed #4

G. Car Operation:

1. Car Operating Panel shall consist of metal push bottoms with illuminated haloes, tactile identifications, emergency stop/alarm button, on/off key switch and emergency light mounted on a removable stainless steel panel (Type 304 #4 Stainless Steel Finish).

2. Digital floor indicator and directional indicator in cab and at each landing.

3. An ADA hands free phone shall be supplied within car operating panel.

4. Emergency Operation - The car shall be equipped with a battery operated light fixture, emergency battery lowering device and alarm in case of normal building supply failure. The battery shall be the rechargeable type with an automatic recharging system. A manual lowering device shall be located outside the hoistway in the machine room.

H. Fire Service.

1. Phase 1 fire recall service only.

2.3 DRIVE SYSTEM

A. Hydraulic 2:1 roped drive

1. Pumping Unit and Controller: The pumping unit and controller shall be in a separate machine room. The controller and pump unit shall be pre-wired and tested prior to shipment. Pump unit shall incorporate the following features:
   a. Smooth stops at each landing.
   b. Submersible pump and motor.
   c. Adjustable pressure relief valve.
   d. Manually operable down valve to lower lift in the event of an emergency. This valve shall be activated from the machine room.
   e. Gate valve to isolate cylinder from pump unit.
   f. Emergency lowering by battery power from the car control

2. Cylinder and Plunger:
   a. The cylinder shall be constructed of steel pipe of sufficient thickness and suitable safety margin. The top of the cylinder shall be equipped with a cylinder head with an internal guide ring and self-adjusting packing.
   b. The plunger shall be constructed of a solid steel shaft of proper diameter machined true and smooth. The plunger shall be provided with a stop electrically welded to the bottom to prevent the plunger from leaving the cylinder
   c. Cable: Aircraft Cable 2 X 3/8" (10 mm) DIA. Minimum breaking strength of 12,000 lb (5455 kg) each.

3. Guide Yoke: The 2:1 guide yoke assembly shall be supplied with one (1) sheave, guide shoes, bearings and guards.

4. Guide Rails and Brackets: Steel 8 lb per ft guide rails and adjustable brackets shall be used to guide the platform and sling.

5. Motor/Pump: 240 1 Phase or 208 3 Phase,/ 5HP

2.4 LEVELING DEVICE

A. The lift shall be provided with an anti-creep device which will maintain the carriage level within 1/2 inch (12 mm) of each landing.

B. All limit switch and leveling device switches shall be located in a position to be inaccessible to unauthorized persons.

2.5 TERMINAL STOPPING DEVICE

A. Normal terminal stopping devices shall be provided at top and bottom of runway to stop the car positively and automatically.

2.6 WIRING

A. All wiring and electrical connections shall comply with applicable codes. Insulated wiring shall have flame-retardant and moisture-proof outer covering and shall be run in conduit or electrical wire ways if located outside the unit enclosure. Quick disconnect harnesses shall be used when possible.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Do not begin installation until hoistway and machine room has been properly prepared.

B. Site dimensions shall be taken to verify that tolerances and clearances have been maintained and meet local regulations.
If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. The following preparatory work to receive the lifts specified in this section is part of the work of other sections:
   1. Permanent 208 VAC, 30 amp three phase power to operate lift to be provided from a lockable fused/cartridge type disconnect switch with auxiliary contacts for battery operation. 110 VAC, 15 amp single phase power to operate the lighting circuit. Refer to drawings for permanent power specifications and location of disconnects.
   2. Provide a plumb and square hoistway with smooth interior surfaces, including fascias or furring of the hoistway interior.
   3. Provide rough openings per lift contractor's shop drawings.
   4. Provide substantial, level pit floor slab as indicated on the lift contractor's shop drawings.

3.3 ELEVATOR INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install the components of the elevator system that are required and that are required by jurisdictional authorities to license the elevator.

A. Trained employees of the elevator contractor shall perform installation work.

B. Adjust elevator for proper operation and clean unit thoroughly.

C. Instruct users in operating procedures and owner's maintenance person in trouble-shooting and maintenance procedures.

3.4 LIFT INSTALLATION

A. Install all the components of the lift system that are specified in this section to be provided, and that are required by jurisdictional authorities to license the lift.

B. Trained employees of the lift contractor shall perform all installation work of this section.

C. Adjust lift for proper operation and clean unit thoroughly.

D. Instruct users in operation procedures and Owner's maintenance person in trouble-shooting and maintenance procedures.

3.5 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

This page intentionally left blank.

SECTION 22 05 00

COMMON WORK RESULTS FOR PLUMBING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **Drawings and general provisions** of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. **Scope**

1. CONTRACTOR shall provide all labor, materials, equipment and incidentals as shown, specified and required to provide a complete plumbing system as shown on the drawings and specified.

B. **Coordination**

1. Review installation procedures under other Sections and coordinate the installation of items that must be installed with plumbing, general provisions.

C. **Related Sections**

1. Division 1, General Requirements.
2. Section 22 13 16, Plumbing Piping.
3. Section 22 13 19, Plumbing Specialties.
4. Section 22 14 29, Sump Pumps.
5. Section 22 33 00, Electric Domestic Water Heaters.
6. Section 22 45 00, Emergency Plumbing Fixtures.
7. Section 23 05 29, HVAC and Plumbing Piping and Equipment Hangers and Supports.
8. Section 23 07 00, HVAC and Plumbing Insulation.

1.3 QUALITY ASSURANCE

A. **Reference Standards.** Comply with the latest edition of the applicable provisions and recommendations of the following, except as otherwise shown or specified:

1. American National Standards Institute (ANSI).
2. American Society for Testing and Materials (ASTM).
3. American Water Works Association (AWWA).
4. Plumbing and Drainage Institute (P.D.I.).

B. **Regulatory Requirements**

1. Comply with applicable provisions of regulatory agencies below and others having jurisdiction:

    a. Ohio Building Code.
    b. Ohio Plumbing Code.

2. Code provisions supersede the Contract Documents.

3. Notify the ENGINEER of conflicts between code provisions and the Contract Documents prior to Shop Drawing submittals.

4. Permits. The CONTRACTOR shall arrange for all inspections required by the Plumbing Inspector, and shall inform the ENGINEER of all pending inspection schedules.

C. **Steel Support Welding:** Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."

D. **Steel Pipe Welding:** Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

E. **Electrical Characteristics for Plumbing Equipment:** Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

1.4 **SUBMITTALS**

A. Submit the following in accordance with conditions of contract and Division 1 specification sections:

1. Shop Drawings shall include manufacturer’s literature, specifications, installation diagrams, including isometrics and engineering data.
2. Project Record Documents: Prepare and submit comprehensive record drawings for the principal plumbing work performed under this Section.

B. **Product Data.** Submit data on new or replacement equipment and parts.

C. **Product Data.** For the following:

1. Transition fittings.
2. Dielectric fittings.

3. Mechanical sleeve seals.
4. Escutcheons.

D. **Welding certificates.**

1.5 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Delivery, storage and handling of materials shall be in accordance with conditions of contract and Division 1 specification sections.

1. Check with manufacturers and vendors as to the physical sizes of equipment to ensure that it will fit in the spaces assigned and instruct the manufacturers and vendors as to the maximum shipping sizes of equipment that can be accommodated at the site.

1.6 COORDINATION

A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for plumbing installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for plumbing items requiring access that are concealed behind finished surfaces. Access panels and doors are specified in Division 08 Section "Access Doors and Frames."

1.7 DEFINITIONS

A. **Finished Spaces.** Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

B. **Exposed, Interior Installations.** Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

C. **Exposed, Exterior Installations.** Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

D. **Concealed, Interior Installations.** Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.

E. **Concealed, Exterior Installations.** Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

F. The following are industry abbreviations for plastic materials:
1. ABS: Acrylonitrile-butadiene-styrene plastic.

2. CPVC: Chlorinated polyvinyl chloride plastic.
3. PE: Polyethylene plastic.
4. PVC: Polyvinyl chloride plastic.

G. The following are industry abbreviations for rubber materials:

1. EPDM: Ethylene-propylene-diene terpolymer rubber.
2. NBR: Acrylonitrile-butadiene rubber.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. **Manufacturers**: Subject to compliance with requirements, provide products by the manufacturers specified.

2.2 PIPE, TUBE, AND FITTINGS

A. **Refer to individual Division 22** piping Sections for pipe, tube, and fitting materials and joining methods.

B. **Pipe Threads:** ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.3 JOINING MATERIALS

A. **Refer to individual Division 22** piping Sections for special joining materials not listed below.

B. **Pipe-Flange Gasket Materials.** Suitable for chemical and thermal conditions of piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.

    a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
    b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

2. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.

C. **Flange Bolts and Nuts.** ASME B18.2.1, carbon steel, unless otherwise indicated.

D. **Plastic, Pipe-Flange Gasket, Bolts, and Nuts.** Type and material recommended by piping system manufacturer, unless otherwise indicated.

E. **Solder Filler Metals.** ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

F. **Brazing Filler Metals.** AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.

G. **Welding Filler Metals.** Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

H. **Solvent Cements for Joining Plastic Piping**

1. ABS Piping: ASTM D 2235.
2. CPVC Piping: ASTM F 493.
3. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
4. PVC to ABS Piping Transition: ASTM D 3138.

I. **Fiberglass Pipe Adhesive.** As furnished or recommended by pipe manufacturer.

2.4 TRANSITION FITTINGS

A. **AWWA Transition Couplings.** Same size as, and with pressure rating at least equal to and with ends compatible with, piping to be joined.

1. Manufacturers

a. Cascade Waterworks Mfg. Co.
b. Dresser Industries, Inc.; DMD Div.
c. Ford Meter Box Company, Incorporated (The); Pipe Products Div.
d. JCM Industries.
e. Smith-Blair, Inc.
f. Viking Johnson.
g. Or equal.

2. Underground Piping NPS 1-1/2 and Smaller: Manufactured fitting or coupling.
3. Underground Piping NPS 2 and Larger: AWWA C219, metal sleeve-type coupling.
4. Aboveground Pressure Piping: Pipe fitting.

B. **Plastic-to-Metal Transition Fittings**. CPVC and PVC one-piece fitting with manufacturer's Schedule 80 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.

1. Manufacturers

a. Eslon Thermoplastics.
b. Or equal.

C. **Plastic-to-Metal Transition Adaptors**. One-piece fitting with manufacturer's SDR 11 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.

1. Manufacturers

a. Thompson Plastics, Inc.
b. Or equal.

D. **Plastic-to-Metal Transition Unions.** MSS SP-107, CPVC and PVC four-part union. Include brass end, solvent-cement-joint end, rubber O-ring, and union nut.

1. Manufacturers

a. NIBCO INC.
b. NIBCO, Inc.; Chemtrol Div.
c. Or equal.

E. **Flexible Transition Couplings for Underground Nonpressure Drainage Piping.** ASTM C 1173 with elastomeric sleeve, ends same size as piping to be joined, and corrosion-resistant metal band on each end.

1. Manufacturers

a. Cascade Waterworks Mfg. Co.
b. Fernco, Inc.
c. Mission Rubber Company.
d. Plastic Oddities, Inc.
e. Or equal.

2.5 DIELECTRIC FITTINGS

A. **Description.** Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.

B. **Insulating Material.** Suitable for system fluid, pressure, and temperature.

C. **Dielectric Unions.** Factory-fabricated, union assembly, for 250-psig minimum working pressure at 180 deg F.

1. Manufacturers

a. Capitol Manufacturing Co.
b. Central Plastics Company.
c. Eclipse, Inc.
d. Epco Sales, Inc.
e. Hart Industries, International, Inc.
f. Watts Industries, Inc.; Water Products Div.
g. Zurn Industries, Inc.; Wilkins Div.
h. Or equal.

D. **Dielectric Flanges.** Factory-fabricated, companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.

1. Manufacturers

    a. Capitol Manufacturing Co.
    b. Central Plastics Company.
    c. Epco Sales, Inc.
    d. Watts Industries, Inc.; Water Products Div.
    e. Or equal.

E. **Dielectric-Flange Kits.** Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.

1. Manufacturers

    a. Advance Products & Systems, Inc.
    b. Calpico, Inc.
    c. Central Plastics Company.
    d. Pipeline Seal and Insulator, Inc.
    e. Or equal.

2. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig minimum working pressure where required to suit system pressures.

F. **Dielectric Couplings.** Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.

1. Manufacturers:

    a. Calpico, Inc.
    b. Lochinvar Corp.
    c. Or equal.

G. **Dielectric Nipples.** Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F.

1. Manufacturers

    a. Perfection Corp.
    b. Precision Plumbing Products, Inc.
    c. Sioux Chief Manufacturing Co., Inc.
    d. Victaulic Co. of America.
    e. Or equal.

2.6 MECHANICAL SLEEVE SEALS

A. **Description.** Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.

1. Manufacturers

a. Advance Products & Systems, Inc.
b. Calpico, Inc.
c. Metraflex Co.
d. Pipeline Seal and Insulator, Inc.
e. Or equal.

2. Sealing Elements: EPDM or NBR interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
3. Pressure Plates: Stainless steel. Include two for each sealing element.
4. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.7 SLEEVES

A. **Galvanized-Steel Sheet.** 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

B. **Steel Pipe.** ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.

C. **Cast Iron.** Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

D. **Stack Sleeve Fittings.** Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.

1. Underdeck Clamp: Clamping ring with set screws.

E. **Molded PVC.** Permanent, with nailing flange for attaching to wooden forms.

F. **PVC Pipe.** ASTM D 1785, Schedule 40.

G. **Molded PE.** Reusable, PE, tapered-cup shaped, and smooth-outer surface with nailing flange for attaching to wooden forms.

2.8 ESCUTCHEONS

A. **Description.** Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.

B. **One-Piece, Deep-Pattern Type.** Deep-drawn, box-shaped brass with polished chrome-plated finish.

C. **One-Piece,** Cast-**Brass Type.** With set screw.

1. Finish: Polished chrome-plated and rough brass.

D. **Split-Casting, Cast-Brass Type.** With concealed hinge and set screw.

1. Finish: Polished chrome-plated and rough brass.

E. **One-Piece, Stamped-Steel Type.** With set screw or spring clips and chrome-plated finish.

F. **Split-Plate, Stamped-Steel Type.** With concealed hinge, set screw or spring clips, and chrome-plated finish.

G. **One-Piece, Floor-Plate Type.** Cast-iron floor plate.

H. **Split-Casting, Floor-Plate Type.** Cast brass with concealed hinge and set screw.

2.9 GROUT

A. **Description.** ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.

1. Characteristics. Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: 5000-psi, 28-day compressive strength.
3. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 INSPECTION

A. CONTRACTOR shall examine the conditions under which the work is to be installed and notify the ENGINEER in writing of conditions detrimental to the proper and timely completion of the work. CONTRACTOR shall correct any unsatisfactory conditions before proceeding with the work.

B. **Verification of Site Conditions**. CONTRACTOR shall examine the site(s) and existing facilities and compare them with the Contract Documents with respect to the conditions of the premises, location of or connection of existing facilities and any obstructions which may be encountered and conduct his work to minimize disruption to existing conditions.

3.2 PLUMBING DEMOLITION

A. Refer to Division 1 Section "Cutting and Patching" and Division 2 for general demolition requirements and procedures.

B. Disconnect, demolish, and remove plumbing systems, equipment, and components indicated to be removed.

1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
2. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
3. Equipment to Be Removed: Disconnect and cap services and remove equipment.
4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.

C. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.3 PIPING SYSTEMS - COMMON REQUIREMENTS

A. Install piping according to the following requirements and Division 22 Sections specifying piping systems.

B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

F. Install piping to permit valve servicing.

G. Install piping at indicated slopes.

H. Install piping free of sags and bends.

I. Install fittings for changes in direction and branch connections.

J. Install piping to allow application of insulation.

K. Select system components with pressure rating equal to or greater than system operating pressure.

L. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:

1. New Piping

    a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
    b. Chrome-Plated Piping: One-piece, cast-brass type with polished chrome-plated finish.
    c. Insulated Piping: One-piece, stamped-steel type with spring clips.
    d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.
    e. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type.
    f. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece or split-casting, cast-brass type with polished chrome-plated finish.
    g. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge and set screw.
    h. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass type with rough-brass finish.
    i. Bare Piping in Unfinished Service Spaces: One-piece, stamped-steel type with concealed hinge and set screw or spring clips.
    j. Bare Piping in Equipment Rooms: One-piece, cast-brass type.
    k. Bare Piping in Equipment Rooms: One-piece, stamped-steel type with set screw or spring clips.
    l. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece, floor-plate type.

2. Existing Piping. Use the following:

    a. Chrome-Plated Piping: Split-casting, cast-brass type with chrome-plated finish.
    b. Insulated Piping: Split-plate, stamped-steel type with concealed hinge and spring clips.
    c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split-casting, cast-brass type with chrome-plated finish.
    d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split-plate, stamped-steel type with concealed hinge and spring clips.
    e. Bare Piping at Ceiling Penetrations in Finished Spaces: Split-casting, cast-brass type with chrome-plated finish.
    f. Bare Piping at Ceiling Penetrations in Finished Spaces: Split-plate, stamped-steel type with concealed hinge and set screw.
    g. Bare Piping in Unfinished Service Spaces: Split-casting, cast-brass type with rough-brass finish.
    h. Bare Piping in Unfinished Service Spaces: Split-plate, stamped-steel type with concealed or exposed-rivet hinge and set screw or spring clips.
    i. Bare Piping in Equipment Rooms: Split-casting, cast-brass type.
    j. Bare Piping in Equipment Rooms: Split-plate, stamped-steel type with set screw or spring clips.

k. Bare Piping at Floor Penetrations in Equipment Rooms: Split-casting, floor-plate type.

M. Sleeves are not required for core-drilled holes.

N. Permanent sleeves are not required for holes formed by removable PE sleeves.

O. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs.

P. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.

1. Cut sleeves to length for mounting flush with both surfaces.

a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.

2. Install sleeves in new walls and slabs as new walls and slabs are constructed.
3. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:

a. Steel Pipe Sleeves: For pipes smaller than NPS 6.
b. Steel Sheet Sleeves: For pipes NPS 6 and larger, penetrating gypsum-board partitions.
c. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level. Refer to Division 7 Section "Flashing and Sheet Metal" for flashing.

1) Seal space outside of sleeve fittings with grout.

4. Except for underground wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using joint sealants appropriate for size, depth, and location of joint. Refer to Division 7 Section "Joint Sealants" for materials and installation.

Q. **Aboveground, Exterior-Wall Pipe Penetrations.** Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

1. Install steel pipe for sleeves smaller than 6 inches in diameter.
2. Install cast-iron "wall pipes" for sleeves 6 inches and larger in diameter.
3. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

R. **Underground, Exterior-Wall Pipe Penetrations.** Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

1. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

S. **Fire-Barrier Penetrations.** Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Division 7 for materials.

T. Verify final equipment locations for roughing-in.

U. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

3.4 PIPING JOINT CONSTRUCTION

A. Join pipe and fittings according to the following requirements and Division 22 Sections specifying piping systems.

B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

D. **Soldered Joints.** Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.

E. **Brazed Joints.** Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.

F. **Threaded Joints**. Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

G. **Welded Joints**. Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.

H. **Flanged Joints.** Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

I. **Plastic Piping Solvent-Cement Joints.** Clean and dry joining surfaces. Join pipe and fittings according to the following:

1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
2. ABS Piping: Join according to ASTM D 2235 and ASTM D 2661 Appendixes.
3. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
4. PVC Pressure Piping: Join schedule number ASTM D 1785, PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D 2855.
5. PVC Nonpressure Piping: Join according to ASTM D 2855.
6. PVC to ABS Nonpressure Transition Fittings: Join according to ASTM D 3138 Appendix.

J. **Plastic Pressure Piping Gasketed Joints.** Join according to ASTM D 3139.

K. **Plastic Nonpressure Piping Gasketed Joints.** Join according to ASTM D 3212.

L. **PE Piping Heat-Fusion Joints.** Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.

1. Plain-End Pipe and Fittings: Use butt fusion.
2. Plain-End Pipe and Socket Fittings: Use socket fusion.

M. **Fiberglass Bonded Joints.** Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

3.5 PIPING CONNECTIONS

A. Make connections according to the following, unless otherwise indicated:

1. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.
3. Dry Piping Systems: Install dielectric unions and flanges to connect piping materials of dissimilar metals.
4. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

3.6 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.

B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.

C. Install plumbing equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.

D. Install equipment to allow right of way for piping installed at required slope.

3.7 PAINTING

A. Painting of plumbing systems, equipment, and components is specified in Division 9 Section "Painting".

B. **Damage and Touchup.** Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.8 CONCRETE BASES

A. **Concrete Bases.** Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.

1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Install anchor bolts to elevations required for proper attachment to supported equipment.
6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

3.9 ERECTION OF METAL SUPPORTS AND ANCHORAGES

A. Refer to Division 5 Section "Miscellaneous Metals" for structural steel.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor plumbing materials and equipment.

C. **Field Welding.** Comply with AWS D1.1.

3.10 ERECTION OF WOOD SUPPORTS AND ANCHORAGES

A. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor plumbing materials and equipment.

B. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.

C. Attach to substrates as required to support applied loads.

3.11 GROUTING

A. Mix and install grout for plumbing equipment base bearing surfaces, pump and other equipment base plates, and anchors.

B. Clean surfaces that will come into contact with grout.

C. Provide forms as required for placement of grout.

D. Avoid air entrapment during placement of grout.

E. Place grout, completely filling equipment bases.

F. Place grout on concrete bases and provide smooth bearing surface for equipment.

G. Place grout around anchors.

H. Cure placed grout.

3.12 FIELD QUALITY CONTROL

A. **Performance.** All work shall be done by a firm experienced and properly manned and tooled in the work specified.

B. Installation with Division 26 requirements.

END OF SECTION

SECTION 22 05 53

PLUMBING IDENTIFICATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to work of this section.

B. **Related Sections.** This section is Division 1 Basic Mechanical Materials and Methods section, and is part of each Division 22 or Division 23 section making reference to identification devices specified herein.

C. **Factory Fabrication.** Mechanical identification furnished as part of factory-fabricated equipment, is specified as part of equipment assembly in other Division 22 or 23 sections.

D. **Other Mechanical Identification.** Refer to other Division 22 or 23 sections for identification requirements at central station mechanical control center; not work of this section.

E. **Electrical Identification.** Refer to Division 26 sections for identification requirements of electrical work; not work of this section.

1.2 DESCRIPTION OF WORK

A. **General.** The Contractor shall provide the labor, tools, equipment, and materials necessary to construct the project in accordance with the plans and as specified herein.

B. **The Contractor shall provide** the labor, tools, equipment, and materials necessary to perform the work in accordance with the plans and as specified herein.

C. **Types.** Types of identification devices specified in this section include the following:

1. Painted identification materials.
2. Plastic pipe markers.
3. Plastic tape.
4. Underground-type plastic line marker.
5. Plastic duct markers.
6. Valve tags.
7. Valve schedule frames.
8. Engraved plastic laminate signs.
9. Plastic equipment markers.
10. Plasticized tags.

1.3 **QUALITY ASSURANCE**

A. **Codes and Standards**. Perform all work in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

1. American National Standards Institute (ANSI) Standards. Comply with ANSI A13.1 for lettering size, length of color field, colors, and viewing angles of identification devices.

B. **Manufacturer Qualifications**. Firms regularly engaged in manufacturer of identification devices of types and sizes required, whose products have been in satisfactory use in similar service for not less than 5 years.

1.4 **SUBMITTALS**

A. **Transmittals**. Furnish manufacturer's product data, test reports, and material certifications as required.

B. **Product Data**. Submit manufacturer's technical product data and installation instructions for each identification material and device required.

C. **Samples**. Submit samples of each color, lettering style and other graphic representation required for each identification material or system.

D. **Schedules**. Submit valve schedule for each piping system, typewritten and reproduced on 8-1/2" x 11" bond paper. Tabulate valve number, piping system, system abbreviation (as shown on tag), location of valve (room or space), and variations for identification (if any). Mark valves which are intended for emergency shut off and similar special uses, by special "flags," in margin of schedule. In addition to mounted copies, furnish extra copies for Maintenance Manuals as specified in Division 1.

E. **Maintenance Data**. Include product data and schedules in maintenance manuals; in accordance with requirements of Division 1.

1.5 **JOB CONDITIONS** (Not Used)

1.6 **DELIVERY, STORAGE, AND HANDLING** (Not Used)

1.7 **SPECIAL WARRANTY** (Not Used)

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. **Manufacturer**. Subject to compliance with requirements, provide mechanical identification materials of one of the following:

1. Allen Systems, Inc.
2. Brady (W.H.) Co.; Signmark Div.
3. Industrial Safety Supply Co., Inc.
4. Seton Name Plate Corp.

2.2 MECHANICAL IDENTIFICATION MATERIALS

A. **General**. Provide manufacturer's standard products of categories and types required for each application as referenced in other Division 22 or 23 sections. Where more than single type is specified for application, selection is Installer's option, but Installer shall provide single selection for each product category.

2.3 PLASTIC PIPE MARKERS

A. **Snap-On Type**. Provide manufacturer's standard preprinted, semirigid snap-on, color coded pipe markers, complying with ANSI A13.1

B. **Pressure-Sensitive Type**. Provide manufacturer's standard preprinted, permanent adhesive, color-coded, pressure-sensitive vinyl pipe markers, complying with ANSI A13.1

C. **Insulation**. Furnish 1-inch-thick molded fiberglass insulation with jacket for each plastic pipe marker to be installed on uninsulated pipes subjected to fluid temperatures of 125 degrees Fahrenheit (º F.) or greater. Cut length to extend 2 inches beyond each end of plastic pipe marker.

D. **Small Pipes**. For external diameters less than 6 inches (including insulation if any), provide full band pipe markers, extending 360 degrees around pipe at each location, fastened by one of the following methods:

1. Snap-on application of pretensioned semirigid plastic pipe marker.
2. Adhesive lap joint in pipe marker overlap.
3. Laminated or bonded application of pipe marker to pipe (or insulation).
4. Taped to pipe (or insulation) with color coded plastic adhesive tape, not less than 3/4 inch wide; full circle at both ends of pipe marker, tape lapped 1-1/2 inches.

E. **Large Pipes**. For external diameters of 6 inches and larger (including insulation if any), provide either full band or strip type pipe markers, but not narrower than three times letter height (and of required length), fastened by one of the following methods:

1. Laminated or bonded application of pipe marker to pipe (or insulation).
2. Taped to pipe (or insulation) with color coded plastic adhesive tape, not less than 1-1/2 inch wide; full circle at both ends of pipe marker, tape lapped 3 inches.
3. Strapped-to-pipe (or insulation) application of semirigid type, with manufacturer's standard stainless steel bands.

F. **Lettering**. Manufacturer's standard preprinted nomenclature which best describes piping system in each instance, as selected by Engineer/Architect in cases of variance with names as shown or specified.

G. **Lettering.** Comply with piping system nomenclature as specified, scheduled or shown, and abbreviate only as necessary for each application length.

1. Arrows. Print each pipe marker with arrows indicating direction of flow, either integrally with piping system service lettering (to accommodate both directions), or as a separate unit of plastic.

2.4 PLASTIC TAPE

A. **General**. Provide manufacturer's standard color coded pressure sensitive (self-adhesive) vinyl tape, not less than 3 mils thick.

B. **Width**. Provide 1-1/2-inch-wide tape markers on pipes with outside diameters (including insulation, if any) of less than 6 inches, 2-1/2-inch-wide tape for larger pipes.

C. **Color**. Comply with ANSI A13.1, except where another color selection is indicated.

2.5 UNDERGROUND-TYPE PLASTIC LINE MARKER

A. **General**. Manufacturer's standard permanent, bright colored, continuous printed plastic tape, intended for direct burial service; not less than 6 inches wide by 4 mils thick. Provide tape with printing which most accurately indicates the type of service of buried pipe.

1. Provide multiple-ply tape consisting of solid aluminum foil core between two layers of plastic tape.

2.6 PLASTIC EQUIPMENT MARKERS

A. **General**. Provide manufacturer's standard laminated plastic, color coded equipment markers. Conform to the following color code:

1. Green. Cooling equipment and components.
2. Yellow. Heating equipment and components.
3. Yellow/Green. Combination cooling and heating equipment and components.
4. Brown. Energy reclamation equipment and components.

5. Blue. Equipment and components that do not meet any of the above criteria.
6. For hazardous equipment, use colors and designs recommended by ANSI A13.1.

B. **Nomenclature**. Include the following, matching terminology on schedules as closely as possible:

1. Name and plan number.
2. Equipment service.
3. Design capacity.
4. Other design parameters such as pressure drop, entering and leaving conditions, rpm, etc.

C. **Size**. Provide approximate 2-1/2" x 4" markers for control devices, dampers, and valves; and 4-1/2" x 6" for equipment.

2.7 PLASTICIZED TAGS

A. **General**. Manufacturer's standard preprinted or partially preprinted accident prevention tags, of plasticized card stock with matte finish suitable for writing, approximately 3-1/4" x 5-5/8", with brass grommets and wire fasteners, and with appropriate preprinted wording including large size primary wording (as examples: DANGER, CAUTION, DO NOT OPERATE).

2.8 LETTERING AND GRAPHICS

A. **General**. Coordinate names, abbreviations and other designations used in mechanical identification work, with corresponding designations shown, specified or scheduled. Provide numbers, lettering and wording as indicated or, if not otherwise indicated, as recommended by manufacturers or as required for proper identification and operation/maintenance of mechanical systems and equipment.

B. **Multiple Systems**. Where multiple systems of same generic name are shown and specified, provide identification which indicates individual system number as well as service (as examples; Boiler No. 3, Air Supply No. 1H, Standpipe F12).

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION REQUIREMENTS

A. **Coordination**. Where identification is to be applied to surfaces which require insulation, painting or other covering or finish, including valve tags in finished mechanical spaces, install identification after completion of covering and painting. Install identification prior to installation of acoustical ceilings and similar removable concealment.

3.2 PIPING SYSTEM IDENTIFICATION

A. **General**. Install pipe markers of one of the following types on each system indicated to receive identification, and include arrows to show normal direction of flow:

1. Stenciled markers, including color coded background band or rectangle, and contrasting lettering of black or white. Extend color band or rectangle 2 inches beyond ends of lettering.
2. Plastic pipe markers, with application system as indicated under "Materials" in this section. Install on pipe insulation segment where required for hot noninsulated pipes.
3. Stenciled markers, black or white for best contrast, wherever continuous color-coded painting of piping is provided.

B. **Location.** Locate pipe markers and color bands as follows wherever piping is exposed to view in occupied spaces, machine rooms, accessible maintenance spaces (shafts, tunnels, plenums) and exterior nonconcealed locations.

1. Near each valve and control device.
2. Near each branch, excluding short take offs for fixtures and terminal units; mark each pipe at branch, where there could be question of flow pattern.
3. Near locations where pipes pass through walls or floors/ceilings, or enter nonaccessible enclosures.
4. At access doors, manholes and similar access points which permit view of concealed piping.
5. Near major equipment items and other points of origination and termination.
6. Spaced intermediately at maximum spacing of 50 feet along each piping run, except reduce spacing to 25 feet in congested areas of piping and equipment.
7. On piping above removable acoustical ceilings, except omit intermediately spaced markers.

3.3 UNDERGROUND PIPING IDENTIFICATION

A. **General**. During back filling/top soiling of exterior underground piping systems, install continuous underground-type plastic line marker, located directly over buried line at 6 inches to 8 inches below finished grade. Where multiple small lines are buried in common trench and do not exceed overall width of 16 inches, install single line marker. For tile fields and similar installations, mark only edge pipe lines of field.

3.4 MECHANICAL EQUIPMENT IDENTIFICATION

A. **General**. Install engraved plastic laminate sign or plastic equipment marker on or near each major item of mechanical equipment and each operational device, as specified herein if not otherwise specified for each item or device. Provide signs for the following general categories of equipment and operational devices:

1. Main control and operating valves, including safety devices and hazardous units such as gas outlets.
2. Meters, gauges, thermometers and similar units.
3. Fuel burning units including boilers, furnaces, heaters, stills, and absorption units.
4. Pumps, compressors, chillers, condensers, and similar motor driven units.
5. Heat exchangers, coils, evaporators, cooling towers, heat recovery units, and similar equipment.
6. Fans, blowers, primary balancing dampers and mixing boxes.
7. Packaged HVAC central station or zone type units.
8. Tanks and pressure vessels.
9. Strainers, filters, humidifiers, water treatment systems and similar equipment.

B. **Optional Sign Types**. Where lettering larger than 1 inch height is needed for proper identification, because of distance from normal location of required identification, stenciled signs may be provided in lieu of engraved plastic, at installer's option.

C. **Lettering Size**. Minimum 1/4-inch-high lettering for name of unit where viewing distance is less than 2'-0", 1/2 inch high for distances up to 6'-0", and proportionately larger lettering for greater distances. Provide secondary lettering of 2/3 to 3/4 of size of the principal lettering.

D. **Text of Signs**. In addition to name of identified unit, provide lettering to distinguish between multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations.

E. **Optional Use of Plasticized Tags**. At Installer's option, where equipment to be identified is concealed above acoustical ceilings or similar concealment, plasticized tags may be installed within concealed space to reduce amount of text in exposed sign (outside concealment).

F. **Nonoccupied Spaces.** Operational valves and similar minor equipment items located in nonoccupied spaces (including machine rooms) may, at installer's option, be identified by installation of plasticized tags in lieu of engraved plastic signs.

3.5 ADJUSTING AND CLEANING

A. **Adjusting**. Relocate any mechanical identification device which has become visually blocked by work of this division or other divisions.

B. **Cleaning**. Clean face of identification devices, and glass frames of valve charts.

3.6 EXTRA STOCK

A. **Furnish minimum of 5 percent extra stock** of each mechanical identification material required, including additional numbered valve tags (not less than 3) for each piping system, additional piping system identification markers, and additional plastic laminate engraving blanks of assorted sizes.

1. Where stenciled markers are provided, clean and retain stencils after completion of stenciling and include used stencils in extra stock, along with required stock of stenciling paints and applicators.

END OF SECTION

SECTION 22 07 19

PLUMBING INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. **General.** Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 specification sections, apply to work of this section.

B. **Related Sections**. The following sections contain requirements that relate to this section.

1. Refer to Section 22 05 29, "Supports and Anchors," for protection saddles, protection shields, and thermal hanger shields; not work of this section.
2. Refer to Section 22 05 53, "Mechanical Identification," for installation of identification devices for piping, ductwork, and equipment; not work of this section.

1.2 DESCRIPTION OF WORK

A. **General.** The Contractor shall provide the labor, tools, equipment, and material necessary to perform mechanical insulation work in accordance with the plans and as specified herein.

B. **Types.** Types of mechanical insulation specified in this section include the following:

1. Piping Systems Insulation.

    a. Fiberglass.
    b. Cellular glass.
    c. Calcium silicate.
    d. Flexible unicellular.

2. Equipment Insulation.

    a. Fiberglass.
    b. Calcium silicate.
    c. Cellular.
    d. Flexible unicellular.

1.3 QUALITY ASSURANCE

A. **Codes and Standards**. Perform all mechanical insulation work in compliance with applicable requirements of governing agencies having jurisdiction and in accordance with these plans and as specified herein.

B. **Manufacturer's Qualifications**. Firms regularly engaged in manufacture of mechanical insulation products, of types and sizes required, whose products have been in satisfactory use in similar services for not less than 3 years.

C. **Installer's Qualifications**. Firm with at least 5 years' successful installation experience on projects with mechanical insulations similar to that required for this project.

D. **Flame/Smoke Ratings**. Provide composite mechanical insulation (insulation, jackets, coverings, sealers, mastics and adhesives) with flame spread index of 25 or less, and smoke developed index of 50 or less, as tested by American Society for Testing and Materials (ASTM) E 84 (National Fire Protection Association [NFPA] 255) method.

1. Exception. Outdoor mechanical insulation may have flame spread index of 75 and smoke developed index of 150.
2. Exception. Industrial mechanical insulation that will not affect life safety egress of building may have flame spread index of 75 and smoke developed index of 150.

1.4 SUBMITTALS

A. **Transmittals**. Furnish manufacturer's product data, test reports, and material certifications as required.

B. **Product Data**. Submit manufacturer's technical product data and installation instructions for each type of mechanical insulation. Submit schedule showing manufacturer's product number, k-value, thickness, and furnished accessories for each mechanical system requiring insulation.

C. **Maintenance Data**. Submit maintenance data and replacement material lists for each type of mechanical insulation. Include this data and product data in maintenance manual.

1.5 JOB CONDITIONS

A. **Coordination**. Coordinate with all other trades to prevent delays, errors, or omissions.

B. **Climatic Conditions**. Do not perform installation when ambient conditions would cause damage to the materials, jacketing, or otherwise violate manufacturer's installation requirements.

1.6 DELIVERY, STORAGE, AND HANDLING

A. **Delivery.** Deliver insulation, coverings, cements, adhesives, and coatings to site in containers with manufacturer's stamp or label, affixed showing fire hazard indexes of products.

B. **Protection and Damage.** Protect insulation against dirt, water, and chemical and mechanical damage. Do not install damaged or wet insulation; remove wet or damaged insulation from project site.

1.7 **SPECIAL WARRANTY**

Not used.

PART 2 - PRODUCTS

2.1 **PRODUCTS/MATERIALS**

A. **Piping Insulation**

1. Fiberglass Piping Insulation. ASTM C 547, Class 1 for use up to 450 degrees Fahrenheit (° F.); Class 2 for use up to 650° F. and Class 3 for use up to 1,200° F.
2. Cellular Glass Piping Insulation. ASTM C 552, Type II, Class 2.
3. Calcium Silicate Piping Insulation. ASTM C 533, Type I for use up to 1,200° F.; Type II for use up to 1,800° F.

2.2 **COMPONENTS**

A. **Jacketing Material for Equipment Insulation**. Provide presized glass cloth jacketing material, not less than 7.8 ounces per square yard, or metal jacket at installer's option, except as otherwise indicated.

2.3 **ACCESSORIES**

A. **Insulation Accessories**. Provide staples, bands, wires, tape, anchors, corner angles and similar accessories as recommended by insulation manufacturer for applications indicated.

B. **Insulation Compounds**. Provide cements, tapes, adhesives, coatings, sealers, protective finishes and similar compounds as recommended by insulation manufacturer for applications indicated.

C. **Equipment Insulation**

1. Rigid Fiberglass Equipment Insulation. ASTM C 612, Class 2.
2. Flexible Fiberglass Equipment Insulation. ASTM C 553, Type I, Class B-6 (3 pounds per cubic foot density).
3. Calcium Silicate Equipment Insulation. ASTM C 533, Type I, Block, for use to 1,200° F.; Type II, Block, for use up to 1,800° F.
4. Cellular Glass Equipment Insulation. ASTM C 552, Type I.

2.4 **SOURCE QUALITY CONTROL**

A. **Manufacturer**. Subject to compliance with requirements, provide products of one of the following:

1. Armstrong World Industries, Inc.
2. Certainteed Corp.
3. Knauf Fiber Glass GmbH.
4. Manville Products Corp.
5. Owens-Corning Fiberglas Corp.
6. Pittsburgh Corning Corp.

PART 3 - EXECUTION

3.1 EXAMINATION

A. **Examine areas and conditions** under which mechanical insulation is to be installed. Do not proceed with work until unsatisfactory conditions have been corrected in manner acceptable to installer.

3.2 ERECTION/INSTALLATION/APPLICATION

A. **Piping Insulation**

1. General. Install insulation products in accordance with manufacturer's written instructions, and in accordance with recognized industry practices to ensure that insulation serves its intended purpose.
2. Sequence of Work. Install insulation on pipe systems subsequent to installation of heat tracing, painting, testing, and acceptance of tests.
3. Surfaces. Install insulation materials with smooth and even surfaces. Insulate each continuous run of piping with full length units of insulation, with a single cut piece to complete run. Do not use cut pieces or scraps abutting each other.
4. Joints. Clean and dry pipe surfaces prior to insulating. Butt insulation joints firmly together to ensure a complete and tight fit over surfaces to be covered.
5. Vapor Barrier. Maintain integrity of vapor barrier jackets on pipe insulation, and protect to prevent puncture or other damage.
6. Valves and Fittings. Cover valves, fittings and similar items in each piping system with equivalent thickness and composition of insulation as applied to adjoining pipe run. Install factory molded, precut or job fabricated units (at installer's option) except where specific form or type is indicated.
7. Structural Penetrations. Extend piping insulation without interruption through walls, floors and similar piping penetrations, except where otherwise indicated.
8. Hangers. Butt pipe insulation against pipe hanger insulation inserts. For hot pipes, apply 3-inch-wide vapor barrier tape or band over the butt joints. For cold piping apply wet coat of vapor barrier lap cement on butt joints and seal joints with 3-inch-wide vapor barrier tape or band.
9. Copper Pipe. Insulation used in below grade and outdoor installations shall be free from nitrites and not contain more than 0.2 percent ammonia.
10. Outdoor Insulation. Insulation of Piping Exposed to Weather. Protect outdoor insulation from weather by installing outdoor protective finish or jacketing as recommended by the manufacturer.

B. **Plumbing Piping Application**

1. Insulation Omitted. Omit insulation on chrome plated exposed piping (except for handicapped fixtures), air chambers, unions, strainers, check valves, balance cocks, flow regulators, drain lines from water coolers, drainage piping located in crawl spaces or tunnels, buried piping, fire protection piping, and preinsulated equipment. Plumbing piping (Hot and

Cold Potable) shall be completely insulated including all fittings, valves, unions, etc. when installed in Class 1 Division 1, Group D rated areas**.**

2. Cold Piping.

a. Application Requirements. Insulate the following cold plumbing piping systems:

1) Potable cold water piping.
2) Potable chilled water piping.
3) Plumbing vents within 6 lineal feet of roof outlet.

b. Insulate each piping system specified above with one of the following types and thicknesses of insulation:

1) Flexible Unicellular. 1/2-inch thickness.

3. Hot Piping.

a. Application Requirements. Insulate the following hot plumbing piping systems:

1) Potable hot water piping.
2) Potable hot water recirculating piping.
3) Hot drain piping.

b. Insulate each piping system specified above with one of the following types and thicknesses of insulation.

1) Flexible Unicellular. 1inch for pipe sizes up to 2 inches. 1-1/2 inches for pipe sizes larger.

4. Storm Drains.

a. Application Requirements. Insulate the following storm drain piping systems:

1) All horizontal roof drain piping
2) The first 2 feet of vertical roof drain piping at all transitions from horizontal .
3) All roof drain piping within 6 lineal feet of roof drain.

b. Insulate each piping system specified above with one of the following types and thicknesses of insulation:

1) Flexible Unicellular. 1/2-inch thickness.

C. **Equipment Insulation**

1. General. Install equipment thermal insulation products in accordance with manufacturer's written instructions, and in compliance with

recognized industry practices to ensure that insulation serves intended purpose.

2. Surfaces. Install insulation materials with smooth and even surfaces and on clean and dry surfaces. Redo poorly fitted joints. Do not use mastic or joint sealer as filler for gapping joints and excessive voids resulting from poor workmanship.
3. Vapor Barrier. Maintain integrity of vapor barrier on equipment insulation and protect it to prevent puncture and other damage.
4. Temperature. Do not apply insulation to equipment, breechings, or stacks while hot.
5. Joints. Apply insulation using the staggered joint method for both single and double layer construction, where feasible. Apply each layer of insulation separately.
6. Cement. Coat insulated surfaces with layer of insulating cement, troweled in workmanlike manner, leaving a smooth continuous surface. Fill in scored block, seams, chipped edges and depressions, and cover over wire netting and joints with cement of sufficient thickness to remove surface irregularities.
7. Jacket. Cover insulated surfaces with all service jacketing neatly fitted and firmly secured. Lap seams at least 2 inches. Apply over vapor barrier where applicable.
8. Omit Insulation. American Society of Mechanical Engineers (ASME) stamp, and manufacturer's nameplate. Provide neatly beveled edge at interruptions of insulation.
9. Removable Insulation. Provide removable insulation sections to cover parts of equipment which must be opened periodically for maintenance; include metal vessel covers, fasteners, flanges, frames and accessories.
10. Equipment Exposed to Weather. Protect outdoor insulation from weather by installation of weather barrier mastic protective finish, or jacketing, as recommended by the manufacturer.

D. **Equipment Insulation Application**

1. Cold Equipment (Below Ambient Temperature).

a. Application Requirements. Insulate the following cold equipment:

1) Cold water storage tanks.

b. Insulate each item of equipment specified above with one of the following types and thicknesses of insulation:

1) 1-1/2 inches Flexible Unicellular.

3.3 REPAIR/RESTORATION

A. **General.** Repair damaged sections of existing mechanical insulation, either previously damaged or damaged during this construction period. Use insulation of same thickness as existing insulation, install new jacket lapping and sealed over existing.

B. **Replacement.** Replace damaged insulation which cannot be repaired satisfactorily, including units with vapor barrier damage and moisture saturated units.

3.4 PROTECTION

A. **Protection**. Insulation installer shall advise Contractor of required protection for insulation work during remainder of construction period, to avoid damage and deterioration.

END OF SECTION

This page intentionally left blank.

SECTION 22 13 16

PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. **Scope**

1. CONTRACTOR shall provide all labor, materials, equipment and incidentals as shown, specified and required to furnish and install plumbing piping.

B. **Coordination**

1. Review installation procedures under other Sections and coordinate the installation of items that must be installed with plumbing piping.

C. **Related Sections**

1. Division 1, General Requirements.
2. Section 22 05 00, Common Work Results for Plumbing.
3. Section 22 13 19, Plumbing Specialties.
4. Section 22 14 29, Sump Pumps.
5. Section 22 33 00, Electric Domestic Water Heaters.
6. Section 22 45 00, Emergency Plumbing Fixtures.
7. Section 23 05 29, HVAC and Plumbing Piping and Equipment Hangers and Supports.
8. Section 23 07 00, HVAC and Plumbing Insulation.

1.3 PERFORMANCE REQUIREMENTS

B. Components and installation shall be capable of withstanding the following minimum working pressure unless otherwise indicated:

1. Soil, Waste, and Vent Piping: 10-foot head of water.
2. Storm Drainage Piping: 10-foot head of water.

1.4 QUALITY ASSURANCE

A. **Reference Standards.** Comply with the latest edition of the applicable provisions and recommendations of the following, except as otherwise shown or specified:

1. Ohio Building Code.
2. Ohio Plumbing Code.

1.5 **SUBMITTALS**

A. Submit the following in accordance with conditions of contract and Division 1 specification sections:

1. Product Data: For the following:

a. Pipes and Fittings.
b. Valves and Specialties.

1.6 **PRODUCT DELIVERY, STORAGE AND HANDLING**

A. Delivery, storage and handling of materials shall be in accordance with conditions of contract and Division 1 specification sections.

1. All material labels or tags will be intact and legible.

PART 2 - PRODUCTS

2.1 **MATERIALS**

A. **Copper Water Tube**

1. Tube

a. Reference: ANSI H23.1.
b. Type: K or L.
c. Temper: Hard-drawn or soft annealed.

2. Fittings

a. Reference: ANSI B16.22.
b. Reference: ANSI B16.26.
c. Reference: ANSI B16.18.

3. Joints

a. Sweat

1) Solder Metal: ASTM B 32 Type 95-5TA.
2) Flux: FS 0-F-506, Type 1.

b. Flanged

1) Flanges: ANSI B16.24, 150 lb. Class.
2) Gaskets: Red rubber, ASTM D1330, Grade 1, 1/8-inch thick.
3) Nuts and Bolts: ASTM A 307.

4. Unions

a. Reference: FS WW-U-516.
b. Material: Bronze.
c. Rating: 250 pound W.O.G.

B. **Waste, Vent and Storm Drainage Piping**

1. Cast Iron Soil Pipe and Fittings

a. Pipe and Fittings: ASTM A 74.
b. Weight: Service weight.
c. Joints

1) Caulked

a) Lead: FS QQ-C-40, Type I, Grade AA.
b) Jute Packing: FS HH-P-117, Type I.

2) Compression

a) Gasket: Rubber, ASTM C 564.
b) Lubricant: As recommended by pipe manufacturer.

2. Hubless Cast Iron

a. Pipe and Fittings: CISPI Standard No. 301 or ASTM A 888.
b. Joints: CISPI Standard No. 310.

3. Steel Pipe and Fittings

a. Pipe: ASTM A 53.
b. Weight: Schedule 40.
c. Finish: Galvanized.
d. Fittings: ASME B 16.9 threaded so as to allow 1/8-inch or ¼-inch per foot grade, as needed.

4. No-hub Couplings

a. Product and Manufacturer: Provide hubless couplings manufactured by one of the following:

1) Anaco, Husky Series 4000.
2) Clampall, Heavy Duty Type 304.
3) Or approved equal.

b. Provide as optional method for connecting hubless drain lines of dissimilar materials.

C. **Dielectric Couplings**

1. Type: Union or flange.
2. Product and Manufacturer: Provide dielectric couplings and manufactured by one of the following:

    a. Watts Regulatory Company.
    b. Epco Sales Incorporated.
    c. Or approved equal.

3. Ratings

    a. Unions: 250 psi, ANSI B16.39.
    b. Flanges: 175 psi, ANSI B16.42 (iron) ANSI B16.24 (Bronze).

D. **Transition Couplings**

1. General Requirements: Fitting or device for joining piping with small differences in OD's or of different materials. Include end connections same size as and compatible with pipes to be joined.
2. Fitting-Type Transition Couplings: Manufactured piping coupling or specified-piping-system fitting.
3. Shielded, Nonpressure Transition Couplings

    a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

        1) Cascade Waterworks Mfg. Co.
        2) Mission Rubber Company; a division of MCP Industries, Inc.
        3) Or approved equal.

    b. Standard: ASTM C 1460.
    c. Description: Elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.

E. **Bronze Body Gate Valves**

1. Product and Manufacturer: Provide valves as manufactured by one of the following:

    a. Stockham Valves and Fittings, Fig. No. B-124.
    b. Lunkenheimer Company, Fig. No. 3155.
    c. Or approved equal.

2. Type: Rising stem, union bonnet solid wedge disc.

    a. Materials: Brass and bronze.
    b. Rating: 150 lb. SWP.
    c. End Connections: Solder joint.

F. **Bronze Body Gate Valve, Hose End**

1. Product and Manufacturer: Provide valves manufactured by one of the following:

    a. Jenkins Brothers, Fig. No. 372.
    b. Walworth Col, Fig. No. 24.
    c. Or approved equal.

2. Type: Non-rising stem, solid wedge inside screw, hose outlet.
3. Materials: Brass and bronze

    a. Rating: 200 psi non-shock cold water.
    b. End Connection: Screwed end with solder adapter.

G. **Bronze Body Check Values**

1. Product and Manufacturer: Provide valve manufactured by one of the following:

    a. Stockham Valves and Fittings, Fig. No. B-309.
    b. Lukenheimer Company, Fig. No. 2145.
    c. Or approved equal.

2. Type: Swing, regrinding bronze disc, screw-in cap.

    a. Materials: Brass and bronze.
    b. Rating: 200 lb. SWP.
    c. End Connections: Solder joint.

H. **Bronze Body Globe Valves**

1. Product and Manufacturer: Provide valves manufactured by one of the following:

    a. Stockham Valves and Fittings, Fig. No. B-24.
    b. Lukenheimer Company, Fig. No. 126.
    c. Or approved equal.

2. Type: Composition disc, union bonnet.
3. Materials: Brass and bronze.
4. Rating: 150 lb. SWP.
5. End Connections: Solder joint.

I. **Bronze Body Ball Valves**

1. Product and Manufacturer: Provide valves manufactured by one of the following:

    a. Watts Regulator Company No. B-6001.
    b. Jenkins Bros. Fig. 902T.
    c. Or approved equal.

2. Type: Non-blowout stem, adjustable packing gland, quarter turn, full port ball valve.
3. Materials

    a. Body: Cast bronze.
    b. Ball: Chrome plated brass or stainless steel.
    c. Packing and Seats: Teflon

4. Rating: 400 psi WOG.
5. End Connections: Solder End.

J. **Gas Service Piping, 0.5 PSIG to 5 PSIG**

1. NPS 1 and Smaller

    a. Pipe: Steel pipe, ASTM A53/A53M, Type E or S, Grade B; Schedule 40, black.
    b. Fittings: Malleable-iron, threaded, ASMEB16.3, Class 150.
    c. Joints: Threaded, ASMEB16.39, Class 150.

2. NPS 1 ¼ to NPS 2 ½

    a. Pipe: Steel pipe, ASTM A53, Type E or S, Grade B, Schedule 40, Black.
    b. Fittings: Welded, ASME B 16.9, wrought steel or ASME B16.11 forged steel.
    c. Joints: Welded.

3. Steel flanges and flanged fittings: ASME B16.5.

    a. Joint compound and tape: Suitable for natural gas.
    b. Gasket Material: Thickness, material, and type suitable for natural gas.
    c. Furnish pipe and fittings with factory-applied, corrosion-resistant poly-ethylene coating for use in corrosive atmosphere.

K. **Gas Service Valves**

1. Valves, NPS 2 AND Smaller: Threaded ends according to ASME B1.20.1 for pipe threads.
2. Valves, NPS 2-1/2 AND Larger: Flanged ends according to ASME B16.5 for steel flanges and according to ASME B 16.24 for copper and copper-alloy flang-es.
3. Appliance Connector Valves: ANSI Z21.15 and IAS listed.
4. Gas Stops: Bronze body with AGA stamp, plug type with bronze plug and flat or square head, ball type with chrome-plated brass ball and lever handle, or butterfly valve with stainless-steel disc and fluorocarbon elastomer seal and lever handle; 2-psig minimum pressure rating.
5. Gas Valves, NPS 2 and Smaller: ASME B16.33 and IAS-listed bronze body and 125-psig pressure rating.
6. Plug Valves, NPS 2-1/2 and Larger: ASME B16.38 AND mss sp-78 cast-iron, lubricated plug valves, with 125-psig pressure rating.

7. General-Duty Valves, NPS 2/1/2 and Larger: MSS SP-70, ASME B16.38, cast-iron body gate valves, OS&Y type with solid wedge, suitable for fuel gas service, with "WOG" indicated on valve body, and 125-psig pressure rating.
8. Gas Valve Applications

    a. Appliance Shutoff Valves for Pressure 0.5 psig or Less: Appliance connector valve or gas stop.
    b. Appliance Shutoff Valves for Pressure 0.5 to 2 psig: Gas stop or gas valve.
    c. Piping Line Valves, NPS 2 and Smaller: Gas valve.
    d. Piping Line Valves, NPS 2-1/2 and Larger: Plug valve or general-duty valve.

L. **Y-Pattern Strainers**

1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig.

M. **Basket Strainers**

1. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig.

N. **T-Pattern Strainers**

1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
2. End Connections: Grooved ends.
3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 57 percent free area.
4. CWP Rating: 750 psig.

O. **Weatherproof Vent Cap.** Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

P. **General Requirements for Metallic Valves, NPS 2 and Smaller.** Comply with ASME B16.33.

1. CWP Rating: 125 pgig.
2. Threaded Ends: Comply with ASME B1.20.1.
3. Dryseal Threads on Flare Ends: Comply with ASME B1.20.3.

4. Tamperproof Feature: Locking feature for valves indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
5. Listing: Listed and labeled by an NRTL acceptable to authorities having jurisdiction for valves 1 inch and smaller.
6. Service Mark: Valves 1-1/4 inches to NPS 2 shall have initials "WOG" permanently marked on valve body.

Q. **General Requirements for Metallic Valves, NPS 2-1/2 and Larger.** Comply with ASME B16.38.

1. CWP Rating: 125 psig.
2. Flanged Ends: Comply with ASME B16.5 for steel flanges.
3. Tamperproof Feature: Locking feature for valves indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
4. Service Mark: Initials "WOG" shall be permanently marked on valve body.

R. **Bronze Plug Valves.** MSS SP-78.

1. Manufacturers:

    a. Lee Brass Company.
    b. McDonald, A. Y. Mfg. Co.
    c. Or approved equal.

2. Body: Bronze, complying with ASTM B 584.
3. Plug: Bronze.
4. Ends: Threaded, socket, or flanged as indicated in "Underground Manual Gas Shutoff Valve Schedule" and "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
5. Operator: Square head or lug type with tamperproof feature where indicated.
6. Pressure Class: 125 psig.
7. Listing: Valves NPS 1 and smaller shall be listed and labeled by an NRTL acceptable to authorities having jurisdiction.
8. Service: Suitable for natural-gas service with "WOG" indicated on valve body.=

S. **Gas Pressure Regulators General Requirements**

1. Single stage and suitable for natural gas.
2. Steel jacket and corrosion-resistant components.
3. Elevation compensator.
4. End Connections: Threaded for regulators NPS 2 and smaller; flanged for regulators NPS 2-1/2 and larger.

T. **Line Gas Pressure Regulators.** Comply with ANSI Z21.80.

1. Manufacturers

    a. Actaris.
    b. American Meter Company.
    c. Eclipse Combustion, Inc.

d. Invensys.
e. Or approved equal.

2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
6. Orifice: Aluminum; interchangeable.
7. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
9. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff.
10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
12. Maximum Inlet Pressure: 20 psig.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

A. All water piping 2½ -inches and smaller, run within the interior of a building, shall be hard-drawn copper type "L" with solder joints and connections.

B. All underground water piping 3-inches and smaller shall be soft annealed copper type "K" with soldered joints and connections.

C. All exposed water piping and valves to plumbing fixtures shall be chrome-plated brass, unless otherwise specified.

D. All valves for copper or brass piping shall be bronze bodied unless otherwise specified.

E. All exposed gravity waste, vent and roof drainage piping run within the interior of the building shall be hubless cast iron or threaded galvanized steel. Concealed gravity soil, waste and vent piping in chases may be threaded galvanized steel or hubless cast iron.

F. All underground soil, waste and storm drainage piping within the building shall be service weight cast iron with gasketed or caulked joints.

G. Underground natural-gas piping shall be steel pipe with wrought-steel fittings and welded joints, or mechanical couplings. Coat pipe and fittings with protective coating for steel piping.

H. Above ground natural-gas piping shall be the following:

1. Steel pipe with wrought-steel fittings and welded joints.

I. Indoor gas Piping Schedule for System Pressures More than 0.5 psig and less than 5 psig.

1. Aboveground, branch piping NPS 3 and smaller shall be the following:

a. Steel pipe with malleable-iron fittings and threaded joints.

2. Aboveground, distribution piping shall be the following:

a. Steel pipe with malleable-iron fittings and threaded joints.

J. Indoor Gas Piping Schedule for System Pressures more than 5 psig.

1. Aboveground, Branch Piping: Steel pipe with steel welding fittings and welded joints.
2. Aboveground, distribution piping shall be the following:

a. Steel pipe with steel welding fittings and welded joints.

3.2 VALVE APPLICATIONS

A. Where specific valve types are not indicated, the following requirements apply:

1. Shutoff Duty: Use gate, or ball.
2. Throttling Duty: Use globe, or ball.
3. Drain Duty: Hose-end drain valves.

3.3 PIPING INSTALLATION

A. Basic piping installation requirements are specified in Division 22 Section "Common Work Results for Plumbing."

B. Install domestic water service piping to exterior water distribution piping in sizes and locations indicated.

C. Install domestic water piping with 1/32-inch-per-foot (¼ percent) slope downward toward drain valve.

D. Install cast-iron soil pipe and cast-iron soil pipe fittings according to CISPI “Cast Iron Soil Pipe and Fittings Handbook, Volume I,” Chapter IV, “Installation of Cast Iron Soil Pipe and Fittings.”

1. Install encasement on underground piping according to ASTM A 674 or AWWA C105.

E. Install cast-iron sleeve with water stop and mechanical sleeve seal at each service pipe penetration through foundation wall. Select number of interlocking rubber links required to make installation watertight. Sleeves and mechanical sleeve seals are specified in Division 22 Section "Common Work Results for Plumbing."

F. Install wall-penetration fitting system at each service pipe penetration through foundation wall. Make installation watertight.

G. Make changes in direction for sanitary, storm, and vent piping using appropriate Y branches, Y branches with 1/8 bends, and long-sweep 1/4, 1/5, 1/6, 1/8, and 1/16 bends. Sanitary tees and short-sweep quarter bends may be used on vertical stacks of drainage lines where change in direction of flow is from horizontal to vertical. Use long-turn double Y-branch and 1/8-bend fittings where two fixtures are installed back-to-back or side-by-side and have a common drain. Straight tees, elbows and crosses may be used on vent lines. Make no change in direction of flow greater than 90 degrees. Where different sizes of drainage pipes and fittings are connected, use proper size standard increasers and reducers. Reduction of the size of drainage piping in the direction of flow is prohibited.

H. Install sanitary, storm and vent piping at the following minimum slopes, except where another slope is indicated:

1. Sanitary and Storm Building Drain: ¼-inch per foot (2 percent) for piping 3-inches and smaller; 1/8-inch per foot (1 percent) for piping 4-inches and larger.
2. Horizontal Sanitary and Storm Drainage Piping: 1/8-inch per foot (1 percent).
3. Vent Piping: 1/8-inch per foot (1 percent).

I. **Outdoor Gas Piping Installation**

1. Comply with the International Fuel Gas Code for installation and purging of natural-gas piping.
2. Install underground, natural-gas piping buried at least 36 inches below finished grade. Comply with requirements in Division 2 for excavating, trenching, and backfilling.

    a. If natural-gas piping is installed less than 36 inches below finished grade, install it in containment conduit.

3. Steel Piping with Protective Coating:

    a. Apply joint cover kits to pipe after joining to cover, seal, and protect joints.

4. Install fittings for changes in direction and branch connections.
5. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

    a. Install steel pipe for sleeves smaller than 6 inches in diameter.
    b. Install cast-iron "wall pipes" for sleeves 6 inches and larger in diameter.

6. Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.
7. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve.

Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

J. **Indoor Gas piping installation**

1. Comply with the International Fuel Gas Code for installation and purging of natural-gas piping.
2. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
3. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
4. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
5. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
6. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
7. Locate valves for easy access.
8. Install natural-gas piping at uniform grade of 2 percent down toward drip and sediment traps.
9. Install piping free of sags and bends.
10. Install fittings for changes in direction and branch connections.
11. Install escutcheons at penetrations of interior walls, ceilings, and floors.

    a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
    b. Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.
    c. Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type.
    d. Piping at Ceiling Penetrations in Finished Spaces: One-piece cast-brass type with polished chrome-plated finish.
    e. Piping in Unfinished Service Spaces: One-piece, cast-brass type with polished chrome-plated finish.
    f. Piping in Equipment Rooms: One-piece, cast-brass type.

12. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.

    a. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than 3 inches long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.

13. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.
14. Connect branch piping from top or side of horizontal piping.

15. Install unions in pipes NPS 3 and smaller, adjacent to each valve, at final connection to each piece of equipment. Unions are not required at flanged connections.
16. Do not use natural-gas piping as grounding electrode.
17. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve.
18. Install pressure upstream and downstream from each line regulator.

K. **Valve Installation**

1. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless-steel tubing, aluminum, or copper connector.
2. Install underground valves with valve boxes.
3. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.

L. **Piping Joint Construction**

1. Ream ends of pipes and tubes and remove burrs.
2. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
3. Threaded Joints

    a. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
    b. Cut threads full and clean using sharp dies.
    c. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
    d. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
    e. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

4. Welded Joints

    a. Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators.
    b. Bevel plain ends of steel pipe.
    c. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.

5. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter.
6. Flanged Joints: Install gasket material, size, type, and thickness appropriate for natural-gas service. Install gasket concentrically positioned.

3.4 HANGERS AND SUPPORTS INSTALLATION

A. Hangers and support devices are specified in Section 23 05 29 “HVAC and Plumbing Piping and Equipment Hangers and Supports.”

B. Install hangers for horizontal piping with following maximum spacing and minimum rod sizes:

Nom. Pipe Size (Inches)	Steel Pipe Max. Span (Feet)	Copper Tube Max. Span (Feet)	Min. Rod Diameter (Inches)
Up to ¾	7	5	3/8
1	7	6	3/8
1-1/4	7	7	3/8
1-1/2	9	8	3/8
2	10	8	3/8
2-1/2 & Larger	11	9	½

C. Support vertical steel pipe and copper tube at each floor.

D. Install pipe stands for roof mounted gas piping per manufacturer's recommendations, but not to exceed 10 feet centers depending on the load. Each pipe stand shall be properly elevated to even load weight at all pipe stands.

3.5 CONNECTIONS

A. **Supply Runouts to Fixtures.** Install hot- and cold-water supply piping runouts to sizes indicated, but not smaller than required by plumbing code to fixtures.

B. **Drainage Runouts to Fixtures.** Provide drainage and vent piping runouts, with approved trap, sizes indicated, but not smaller than required by plumbing code, to plumbing fixtures and drains.

C. Locate drainage piping runouts as close as possible to bottom of floor slab supporting fixtures or drains.

D. Unions shall be provided for all screwed piping at connections to equipment on each side of non-flanged valves and at convenient locations to permit disassembly of piping.

E. All connections between ferrous and non-ferrous piping materials shall be made with dielectric couplings.

F. Care shall be taken so as not to leave tool marks or abrasions on plated, polished or soft metal piping.

G. Wherever changes in sizes of piping occur, changes shall be made with reducing fittings. The use of bushings is not permitted unless otherwise shown.

H. **Gas Piping Connections**

1. Coordinate piping installations and specialty arrangements with schematics on Drawings. If Drawings are explicit enough, these requirements may be reduced or omitted.
2. Connect to utility's gas main according to utility's procedures and requirements.
3. Install natural-gas piping electrically continuous, and bonded to gas appliance equipment grounding conductor of the circuit powering the appliance according to NFPA 70.
4. Install piping adjacent to appliances to allow service and maintenance of appliances.

5. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72 inches of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.
6. Sediment Traps: Install tee fitting with capped nipple in bottom to form drip, as close as practical to inlet of each appliance.

3.6 FIELD QUALITY CONTROL

A. Inspect water distribution piping as follows:

1. Do not enclose, cover, or put into operation water distribution piping system until has been inspected and approved by the authority having jurisdiction.
2. During progress of the installation, notify the plumbing official having jurisdiction at least 24 hours prior to time inspection must be made. Perform tests specified below in presence of the plumbing official.

    a. Roughing-In Inspection: Arrange for inspection of piping system before concealed or closed-in after system roughing-in and prior to setting fixtures.
    b. Final Inspection: Arrange for final inspection by plumbing official to observe tests specified below and to ensure compliance with requirements of plumbing code.

3. Re-inspections: When a plumbing official finds that piping system will not pass test or inspection, make required corrections and arrange for re-inspection by the plumbing official.

B. Test water distribution piping as follows:

1. Test for leaks and defects in new water distribution piping systems. IF testing is performed in segments, submit separate report for each test, complete with diagram of portion of system tested.
2. Leave uncovered and unconcealed in new, altered, extended, or replaced water distribution piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved for testing.
3. Cap and subject the piping system to a static water pressure of 50 psig above the operating pressure without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for 4 hours. Leaks and loss in test pressure constitute defects that must be repaired.
4. Repair leaks and defects with new materials and retest system or portion thereof until satisfactory results are obtained.

C. Test storm drainage piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
2. Leave uncovered and unconcealed new, altered, extended, or replaced storm drainage piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.

3. Test Procedure: Test storm drainage piping**,** except outside leaders, on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.
4. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
5. Prepare reports for tests and required corrective action.

D. Inspect drainage piping as follows:

1. Do not enclose, cover or put into operation drainage and vent piping system until it has been inspected and approved by the authority having jurisdiction.
2. During progress of installation, notify the plumbing official having jurisdiction at least 24 hours prior to time such inspection must be made. Perform tests specified below in presence of the plumbing official.
    a. Roughing-In Inspection: Arrange for inspection of piping system after system roughing-in, before concealing, and prior to setting fixtures.
    b. Final Inspection: Arrange for final inspection by plumbing official to observe tests specified below and to ensure compliance with requirements of plumbing code.

3. Re-inspections: Make required corrections and arrange for reinspection by plumbing official when piping system fails to pass test or inspection.

E. **Drainage and Vent Piping System Tests.** Test drainage and vent systems according to procedures of authority having jurisdiction or, in absence of published procedure, as follows:

1. Test for leaks and defects in new drainage and vent piping system. If testing is performed in segments, submit a separate report for each test, complete with a diagram of the portion of the system tested.
2. Rough Plumbing Test Procedure: Except for outside leaders and perforated or open-jointed drain tile, test piping of plumbing drainage and venting systems on completion of roughing-in piping installation. Tightly close all openings in piping system and fill with water to point of overflow, but not less than 10 feet head of water. Water level shall not drop during the period from 15 minutes before inspection starts through completion of inspection. Inspect joints for leaks.

F. Tests and Inspect Gas Piping.

1. Test, inspect, and purge natural gas according to the International Fuel Gas Code and authorities having jurisdiction.
2. Natural-gas piping will be considered defective if it does not pass tests and inspections.
3. Prepare test and inspection reports.

3.7 CLEANING

A. Clean and disinfect water distribution piping as follows:

1. Purge new piping and parts of existing domestic water piping that have been altered, extended, or repaired before using.
2. Use purging and disinfecting procedures prescribed by authorities having jurisdiction or, if methods are not prescribed, procedures described in either AWWA C651 or AWWA C652 or as described below:
    a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
    b. Fill system or part thereof with water/chlorine solution with at least 50 ppm of chlorine. Isolate with valves and allow to stand for 24 hours.
    c. Drain system or part thereof of previous solution and refill with water/chlorine solution with at least 200 ppm of chlorine. Isolate and allow to stand for three hours.
    d. Flush system with clean, potable water until no chlorine is in water coming from system after the standing time.
    e. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedures if biological examination shows contamination.

E. Clean non-potable domestic water piping as follows:

1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
2. Use purging procedures prescribed by authorities having jurisdiction or; if methods are not prescribed, follow procedures described below:

    a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
    b. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedures if biological examination shows contamination.

F. Prepare and submit reports of purging and disinfecting activities.

3.8 COMMISSIONING

A. **Fill Water Systems.** Check compression tanks to determine that they are not air bound and that system is completely full of water.

B. Before operating systems perform these steps:

1. Close drain valves, hydrants, and hose bibbs.
2. Open shutoff valves to full open position.
3. Open throttling valves to proper setting.
4. Remove plugs used during testing of piping systems and plugs used for temporary sealing of piping during installation.

C. Check plumbing equipment and verify proper settings, adjustments, and operation. Do not operate water heaters before filling with water.

D. Check plumbing specialties and verify proper settings, adjustments, and operation.

END OF SECTION

SECTION 22 13 19

PLUMBING SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. **Scope**

1. CONTRACTOR shall provide all labor, materials and incidentals as shown, and required to furnish and install the plumbing specialties as specified herein.

B. **Coordination**

1. Review installation procedures under other Sections and coordinate the installation of items that must be installed with the plumbing specialties.

C. **Related Sections**

1. Division 1, General Requirements.
2. Section 22 05 00, Common Work Results for Plumbing.
3. Section 22 13 16, Plumbing Piping.
4. Section 22 14 29, Sump Pumps.
5. Section 22 33 00, Electric Domestic Water Heaters.
6. Section 22 45 00, Emergency Plumbing Fixtures.
7. Section 23 05 29, HVAC and Plumbing Piping and Equipment Hangers and Supports.
8. Section 23 07 00, HVAC and Plumbing Insulation.

1.3 QUALITY ASSURANCE

A. **Reference Standards.** Comply with the latest edition of the applicable provisions and recommendations of the following, except as otherwise shown or specified:

1. ANSI A13.1, Scheme for the Identification of Piping Systems.
2. ANSI A21.10-93, Ductile-Iron and Gray-Iron Fittings, 3-inch through 48-inch, for Water and Other Liquids (AWWA C110).
3. ANSI A21.11-95, Rubber Gasket Joints for Ductile-Iron Pressure Pipe and Fittings (AWWA C111).
4. ANSI A21.51-96, Ductile-Iron Pipe, Centrifugally Cast, for Water or Other Liquids (AWWA C151).

5. ANSI B16.3-92, Malleable-Iron Threaded Fittings.
6. ANSI B16.5-96, Pipe Flanges and Flanged Fittings NPS ½ through NPS 24.
7. ANSI B16.15-85, Cast Bronze Threaded Fittings, classes 125 and 250.
8. ANSI B16.22-95, Wrought Copper and Copper Alloy Solder-Joint Pressure Fittings.
9. ANSI B16.24-91, Cast Copper Alloy Pipe Flanges and Flanged Fittings.
10. ANSI B16.26-88, Cast Copper Alloy Fittings for Flared Copper Tubes.
11. ANSI B125.2, Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless Pipe for Ordinary Uses (ASTM A 120).
12. ANSI H23.1, Seamless Copper Water Tube (ASTM B 88).
13. ANSI H27.1, Seamless Red Brass Pipe, Standard Sizes (ASTM B 43).
14. ASTM A 183, Carbon Steel Track Bolts and Nuts.
15. ASTM A 307, Carbon Steel Externally and Internally Threaded Standard Fasteners.
16. ASTM B 32, Solder Metal.
17. ASTM D 1330-85, Rubber Sheet Gaskets.
18. ASTM D 2000-96, Rubber Products in Automotive Applications.
19. FS 0-F-506B, Flux Soldering: Paste and Liquid.
20. FS WW-U-531C, Unions, Pipe; Steel or Malleable Iron; Threaded Connection.
21. FS WW-U-516, Unions, Brass or Bronze; 250 pound.
22. PDI WH-201.
23. ANSI/AWWA C651-92, Disinfecting Water Mains.

B. The specifications in this Section are subject to the administrative and procedural requirements specified in Division 1, as well as the broader requirements of the General Conditions.

1.4 **PERFORMANCE REQUIREMENTS**

A. Provide components and installation capable of producing piping systems with following minimum working-pressure ratings, unless otherwise indicated:

1. Domestic Water Piping: 125 psig.
2. Sanitary waste and vent piping: 10-foot head of water.
3. Storm drainage piping: 10-foot head of water.

1.5 **SUBMITTALS**

A. Submit the following in accordance with conditions of contract and Division 1 specification sections:

1. Product Data: For the following:
    a. Pipe and Fittings.
    b. Valves.
    c. Backflow Preventers and Vacuum Breakers.
    d. Strainers.
    e. Water Hammer Arresters.
    f. Hose Bibbs and Wall Hydrants.
    g. Dielectric Couplings.
    h. Water – Tempering Equipment.
    i. Trap seal primer valves.
    j. Floor drains
    k. Floor drain inlet fittings
    l. Roof drains

B. Submit detailed ¼-inch scale drawings showing materials and dimensions of the complete potable water piping system, in plan and in section.

C. **Product Data**. Submit data for new or replacement equipment and parts.

D. **Quality Assurance/Control Submittals**

1. Submit certificate on pressure testing.

E. **Operation and Maintenance Manuals**

1. Submit to the ENGINEER complete Operation and Maintenance Data in accordance with Division 1.

1.6 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Delivery, storage and handling of materials shall be in accordance with conditions of contract and Division 1 specification sections.

1. All material labels or tags will be intact and legible.

1.7 WARRANTY

A. The manufacturer shall provide a written warranty on equipment, materials, parts and labor in the name of the Owner. The warranty period shall begin on the date of final acceptance of all the pumping equipment by the Owner. The warranty period shall be for a two-year duration. Warranty must be fully executed and signed by the CONTRACTOR and the manufacturer prior to final completion.

1.8 DEFINITIONS

A. **W.O.G.** Non-shock cold water, oil or gas.

B. **N.P.T.** National Pipe Threads.

C. **P.S.I.** Pounds per square inch (pressure).

D. **I.P.S.** Iron Pipe Size.

PART 2 - PRODUCTS

2.1 MATERIALS

A. **Water Hammer Arresters**

1. Product and Manufacturer: Provide water hammer arresters manufactured by one of the following:
    a. Hydrotrol by Jay R. Smith Manufacturing Company
    b. Shoktrol by Zurn Industries.
    c. Watts Regulator Co.
    d. Or approved equal
2. Materials:
    a. Casing: Stainless Steel
    b. Bellows: Stainless Steel
    c. Bellows contents: Nitrogen gas
3. Connections: Male NPT thread.
4. Maximum Working Pressure: 250 psig
5. Sizing and Certification: P.D.I. WH-201

B. **Automatic Air Vents**

1. Product and Manufacturer: Provide air vents manufactured by one of the following:
    a. Conbraco
    b. Armstrong Pumps, Inc.
    c. Honeywell Water Controls
    d. Or approved equal
2. Type: Automatic vent air eliminator with built-in air chamber
3. Construction:
    a. Body: Bronze
    b. Finish: Chrome plated exterior
    c. Overflow connector: Provide connection for ¼ inch OD copper tubing
    d. Ratings: 75 psig working pressure

C. **Balancing valves**

1. Product and Manufacturer: Provide air vents manufactured by one of the following:
    a. Amtrol, Inc.

b. Armstrong Pumps, Inc.

c. Flow Design, Inc.

d. ITT Industries; Bell & Gossett Div.

e. Taco, Inc.

f. Or approved equal

2. Calibrated Balancing Valves: Adjustable, with two readout ports and memory setting indicator. Include manufacturer's standard hoses, fittings, valves, differential pressure meter, and carrying case.

3. NPS 2 and Smaller: Bronze body with brass ball, adjustment knob, calibrated nameplate, and threaded or solder-joint ends.

4. NPS 2 and Smaller: Bronze, Y-pattern body with adjustment knob and threaded ends.

D. **Drains**

1. Roof Drains - RD:

a. Manufacturer:
1) J. R. Smith Manufacturing Co., Fig.1015Y-R-C
2) Or approved equal.

b. Type & Size: Round top, diameter as indicated on plans.

c. Material:
1) Body: Duco cast iron with adjustable extension sleeve, reversible collar, combined flashing clamp and gravel stop, no-hub outlet.
2) Dome: Cast iron.

2. Floor Drain - FD:

a. Type & Size: 8” Round top, 4” outlet size.

b. Material:
1) Body: Duco cast iron, with flashing collar and adjustable strainer, no-hub outlet, with trap primer connection.
2) Grate: nickel bronze, type A.

c. Manufacturer:
1) J. R. Smith Manufacturing Co., Fig.2005Y-(A).
2) Or approved equal.

3. Floor Drain Inlet Fittings:

a. Product and Manufacturer:
1) J.R. Smith Manufacturing Co., Fig. 2695Y
2) Watts Drainage Products
3) Zurn Plumbing Products Group
4) Or approved equal

b. Floor drain inlet fitting shall be cast iron, with threaded inlet and no-hub outlet and trap seal primer valve connection.

E. **Cleanouts**

1. Floor Cleanouts:
    a. Type: Round top, heavy-duty, adjustable.
    b. Size: The same size as the pipe they serve up to 4", 4-inch for larger pipes.
    c. Material:
        1) Duco cast iron body.
        2) PVC Plug.
    d. Manufacturer:
        1) J. R. Smith Manufacturing Co., Fig.4105C.
        2) Or equal.
2. Tee (at the riser), In-line and Pipe Cleanouts-CO:
    a. Size: The same size as the pipe they serve up to 4", 4-inch for larger pipes.
    b. Type: Taper thread plug with round frame and cover.
    c. Material:
        1) Duco cast iron spigot ferrule, cast bronze plug.
    d. Manufacturer:
        1) J. R. Smith Manufacturing Co., Fig.4436C
        2) Or equal.
3. Wall Cleanout:
    a. Size: 4-inch for 4-inch and larger pipes.
    b. Type: Taper thread plug with round frame and cover.
    c. Material:
        1) Duco cast iron spigot ferrule, cast bronze plug.
    d. Manufacturer:
        1) J. R. Smith Manufacturing Co, Fig. 4436C
        2) Or equal.

F. **Strainers**

1. Type: "Y" Body self-cleaning with blow-off cock.
2. Materials:
    a. Body: Bronze or cast iron.
    b. Screen: 20 mesh Monel, for sizes through 2-inch, 1/16-inch brass for sizes 2½-inch through 3-inch.
3. Connections: Threaded.
4. Manufacturer:
    a. Mueller Steam Specialty Company
    b. Armstrong steam Specialty Company.

c. Or equal.

G. **Hose Bibb HB**

1. Valve:

a. Type: Globe, Hose end, 300 pounds per square inch non-shock cold water; renewable composition disc; screw in bonnet; female threaded inlet.

b. Materials: Bronze construction.

c. Inlet Size: ¾-inch.

d. Hose Thread Size: ¾-inch, match plant standard thread.

e. Accessories: Provide the following with each hose bib.
1) Cap and chain.
2) Vacuum breaker.

f. Operation: Handwheel.

2. Vacuum Breaker:

a. Type: Non-removable, atmospheric.

b. Materials: Brass body, silicon rubber diaphragm and stainless steel disc.

3. Manufacturer:

a. NIBCO.

b. Or equal.

H. **Freeze-proof Wall Hydrant**

1. Type: Anti-siphon, non-freeze.

2. Material:

a. Casing: Bronze nickel plated.

3. Connection:

a. Inlet: 1-inch sweat end.

b. Outlet: 1-inch hose thread, universal type.

4. Vacuum Breaker: Integral.

5. Wall Clamp: Adjustable with setscrew.

6. Manufacturer:

a. Jay R. Smith Manufacturing Company, Fig. No. 5609QT-WH.

b. Zurn Plumbing Products Group.

c. NIBCO.

d. Or approved equal.

I. **Backflow Preventer.** ¾-inch to 2 inches

1. Type: Reduced pressure principle.
2. Standard: ASSE 1013.
3. Operation: Continuous-pressure applications.
4. Pressure Loss: 12 psig maximum, through middle 1/3 of flow range
5. Materials:
    a. Body and Cover: Cast iron, ASTM 126.
    b. Main Valve Trim: Bronze, ASTM B-61.
    c. Differential Relief Valve: Bronze STM B-61 with stainless steel 316 trim.
6. Maximum Working Pressure: 175 pounds per square inch gage.
7. Fluid: Water.
8. Temperature Range: 35 degrees F to 110 degrees F.
9. End Connections: Threaded for NPS 2 and smaller.
10. Configuration: Designed for horizontal, straight through flow.
11. Accessories:
    a. Valves: Ball type with threaded ends on inlet and outlet of NPS 2 and smaller.
    b. Air-Gap Fitting: ASME A112.1.2, matching backflow-preventer connection.
    c. Accessories: Strainer.
12. Manufacturer:
    a. Watts Regulator, 009 Series.
    b. Or equal.

J. **Vacuum Breaker.** Pressure Type.

1. Type: To prevent back siphoning of contaminated water into a potable water supply.
2. Materials:
    a. Hood: Stainless steel.
    b. Bonnet: Bronze.
    c. Vent Disc: Silicone rubber.
    d. Disc Holder Float: Polyethylene.
    e. Check Valve Disc: Silicone rubber.
    f. Check Valve Seat: Bronze.
    g. Body: Bronze.
3. Accessories:

a. Gate valves on inlet and outlet.

b. Ball valve test cocks.

4. Reference: ASSE Standard No. 1020.

5. Working Pressure: 150 pounds per square inch.

6. Installation: Vertical, minimum 12 inches above fixture vacuum breaker serves.

7. Manufacturer:

a. Watts Regulator Company No. 800.

b. Or equal.

K. **Trap Seal Primer Valves**

1. Product and Manufacturer: Provide trap primer valves by one of the following:

a. Precision Plumbing Products, Inc., Model PR-500.

b. Watts Regulator Co.

c. Zurn Plumbing Products Group

d. Or approved equal

2. Construction:

a. Body: Brass

b. Seals: O-ring 40 degrees F to 450 degrees F

c. Inlet and Outlet: 1/2 inch

d. Integral backflow preventer, vacuum breaker: ASSE 1001.

e. Standard: ASSE 1044,

f. Electric Controls: 24-hour timer, solenoid valve, and manual switch for 120-V ac power (where are indicated on plans).

3. Provide Distribution Units as required

a. Body: Brass.

b. Seals: O-ring 40 degrees F to 450 degrees F.

c. Inlet and Outlet: 1/2-inch.

L. **Water Tempering Equipment TMV-A**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Armstrong International, Inc., model Rada Z358-40

b. Lawler Manufacturing Company, Inc.

c. Leonard Valve Company.

d. Powers; a Watts Industries Co.

e. Symmons Industries, Inc.

f. Or approved equal.

2. Standard: ASSE 1017.

3. Pressure Rating: 150 psig.

4. Type: Exposed-mounting, thermostatically controlled water mixing valve.

5. Material: Chrome-plated DZR brass/stainless steel construction.

6. Connections: Threaded inlets and outlet.

7. Accessories: Manual temperature control, integral inlet check valves and strainers, adjustable temperature-control handle, integral thermometer, integral sight flow indicator, integral thermostatic return limiter.

8. Tempered-Water Setting: 85 deg F .

9. Tempered-Water Design Flow Rate: 23 gpm .

10. Supplied by packaged tepid water heating system manufacturer. Refer to Division 22 Section 22 33 00 “Electric Domestic Water Heaters”.

2.2 **FINISHES**

A. All non-insulated water piping shall be primed and finished painted in accordance with Division 9 Section “Painting”.

PART 3 - EXECUTION

3.1 **INSPECTION**

A. CONTRACTOR shall examine the conditions under which the Work is to be installed and notify the ENGINEER in writing of conditions detrimental to the proper and timely completion of the Work. Do not proceed with the Work until unsatisfactory conditions have been corrected.

3.2 **PREPARATION**

A. No Work is to begin without submittal review and ENGINEER notification.

3.3 **INSTALLATION**

A. Coordination. Review installation procedures under other sections and coordinate the Work that must be installed with or attached to the plumbing system.

B. Performance. All Work shall be done by a firm experienced and properly manned and tooled in the Work specified.

C. Pipe sizes specified are for nominal inside dimensions.

D. All work will be properly supported to prevent any movement when in service.

E. The finished installed Work is to be properly identified and labeled by approved means.

F. Insulate all hot and cold copper water piping as described in Section 23 07 00, HVAC and Plumbing Insulation.

G. Installation of potable water piping shall be in accordance with Section 22 05 00, Common Work Results for Plumbing.

H. All piping shall be pitched to facilitate draining. Drain valves shall be furnished at system low points.

I. Provide harnessed flexible couplings on all equipment suction and discharge lines.

J. Harnessed flexible couplings or pipe loops shall be provided on all piping subject to thermal expansion.

K. Isolation valves and unions shall be provided for all piping at connections to equipment and when a branch line joins a main line.

L. All connections between ferrous and non-ferrous piping materials shall be made with dielectric couplings.

M. Care shall be taken so as not to leave tool marks or abrasions on plated, polished, or soft metal piping.

N. Wherever changes in sizes of piping occur, changes shall be made with reducing fittings. The use of bushings is not permitted unless otherwise shown.

O. All exposed unfurred (not in walls) pipes, whether insulated or not, shall be identified with pipe labels and the direction of flow indicated. Labels may be omitted from piping where the use is obvious, due to its connections to fixtures and where the appearance would be objectionable in finished rooms; as approved by the OWNER or OWNER's Representative.

1. Near each valve and branch connection.
2. Wherever piping emerges or disappears from view, when viewed from the floor of the room in which it is installed.
3. At not more than 50 foot intervals.

P. All pipes entering ceilings, floors, and walls in finished areas, and all piping to fixtures shall have escutcheon plates.

Q. Seal or cap all piping at the end of each workday.

R. All exposed water piping to plumbing fixtures shall be chrome-plated brass, unless otherwise specified.

S. Soft annealed copper tubing may be used for temporary work.

T. All valves for copper or brass piping shall be bronze bodied unless otherwise specified.

U. Water hammer arresters shall be sized in accordance with PDI-WH201.

V. Provide backflow preventers wherever local code requires and at all building potable water system connection(s) to the plant Water Distribution System and at all connection(s) of the building potable water system to process water systems, process equipment, or chemically-treated potable water user systems or equipment.

1. Locate backflow preventers in same room as connected equipment or system.
2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe to floor

drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are not acceptable for this application.

3. Do not install bypass piping around backflow preventers.

W. Provide vacuum breakers wherever local code requires and wherever potable water is supplied without direct connection to process areas or equipment.

X. Use frost-proof wall hydrants or hose bibbs for outside use.

Y. Install temperature-actuated water mixing valves with check stops or shutoff valves on inlets and with shutoff valve on outlet.

1. Install thermometers in supply and outlet piping connections to water-tempering equipment.

2. Install cabinet-type units recessed in or surface mounted on wall as specified.

Z. Install air vents at high points of water piping.

3.4 FIELD QUALITY CONTROL

A. **Pressure testing.** Comply with Section 22 13 16, “Plumbing Piping”.

B. Repair or replace any damaged components as directed by the ENGINEER.

C. Water-tempering equipment will be considered defective if it does not pass tests and inspections.

3.5 CLEANING AND DISINFECTION

A. Comply with Division 1 sections.

B. Comply with the disinfection requirements in Section 22 13 16, “Plumbing Piping”.

C. The CONTRACTOR shall submit certification that all potable water piping has been disinfected.

END OF SECTION

SECTION 22 14 29

SUMP PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. Scope

1. CONTRACTOR shall provide all labor, materials, equipment and incidentals as shown, specified and required to furnish and install the plumbing fixtures as shown and specified.

B. Coordination

1. Review installation procedures under other Sections and coordinate the installation of items that must be installed with plumbing fixtures.

C. Related Sections

1. Division 01, General Requirements.
2. Section 22 05 00, Common Work Results for Plumbing.
3. Section 22 13 16, Plumbing Piping.
4. Section 22 13 19, Plumbing Specialties.
5. Section 23 05 29, HVAC and Plumbing Piping and Equipment Hangers and Supports.
6. Section 23 07 00, HVAC and Plumbing Insulation.

1.3 QUALITY ASSURANCE

A. **Reference Standards.** Comply with the latest edition of the applicable provisions and recommendations of the following, except as otherwise shown or specified:

1. Standards of the Hydraulic Institute.
2. National Electric Code.
3. Standards of National Electrical Manufacturers Association.
4. Institute of Electrical and Electronic Engineers.
5. American National Standards Institute.
6. Standards of American Water Works Association.

B. **Requirements of Regulatory Agencies**

1. Building Codes: Comply with applicable requirements of all governing authorities and the following codes:

   a. Ohio Basic Building Code.
   b. Ohio Plumbing Code.

C. **Electrical Components, Devices, and Accessories.** Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. **UL Compliance.** Comply with UL 778 for motor-operated water pumps.

1.4 **SUBMITTALS**

A. Submit the following in accordance with conditions of contract and Division 1 specification sections:

1. Product Data. For the following:

   a. Sump pump.
   b. Assembly of parts lists.
   c. Any other fixtures utilized on this project not listed above.

B. **Operation and Maintenance Manuals**

1. Submit to the ENGINEER complete Operation and Maintenance Data in accordance with Division 1.

1.5 **PRODUCT DELIVERY, STORAGE AND HANDLING**

A. Delivery, storage and handling of materials shall be in accordance with conditions of contract and Division 1 specification sections.

B. All material labels or tags will be intact and legible.

C. Retain shipping flange protective covers and protective coatings during storage.

D. Protect bearings and couplings against damage.

E. Comply with pump manufacturer's written rigging instructions for handling.

1.6 **WARRANTY**

A. The manufacturer shall provide a written warranty on equipment, materials, parts and labor in the name of the Owner. The warranty period shall begin on the date of final acceptance of all the pumping equipment by the Owner. The warranty pe-

riod shall be for a two-year duration. Warranty must be fully executed and signed by the CONTRACTOR and the manufacturer prior to final completion.

PART 2 - PRODUCTS

2.1 SUBMERSIBLE SUMP PUMPS

A. **Available Manufacturers**

1. Zoeller
2. Weil Pump Co.
3. Bell & Gossett
4. Or approved equal

B. **Description.** Factory-assembled and -tested, simplex, single-stage, centrifugal, submersible, plug-in sump pumps complying with UL 778 and HI 1.1-1.2 and HI 1.3 for submersible sump pumps.

1. Casing and Impeller: Cast-iron or plastic casing with inlet strainer and metal or plastic impeller.
2. Pump and Motor Shaft: Stainless steel, with factory-sealed, grease-lubricated ball bearings.
3. Motor: Hermetically sealed, capacitor-start type, with built-in overload protection; three-conductor waterproof power cable of length required, and with grounding plug and cable-sealing assembly for connection at pump.
4. Moisture-Sensing Probe: Internal moisture sensor with moisture alarm.

C. **Pump Discharge Piping.** Factory or field fabricated, ASTM A 53/A 53M, Schedule 40, galvanized-steel pipe.

D. **Controls**

1. Switch Type: Mechanical-float or Mercury-float type, in NEMA 250, Type 6 enclosures with mounting rod and electric cables.
2. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with mechanical-float or mercury-float switch matching control and electric bell; 120-V ac, with transformer and contacts for remote alarm bell.

E. **Piping, Valves and Fittings**

1. Threaded Union
2. Shutoff Valve
3. Check Valve
4. Size as noted on plans
5. Connect to existing discharge piping
6. Material shall be schedule 40 pvc unless otherwise noted on the plans.

F. **Capacity and Characteristics.** See drawings.

PART 3 - EXECUTION

3.1 INSPECTION

A. CONTRACTOR shall examine the conditions under which the Work is to be installed and notify the ENGINEER in writing of conditions detrimental to the proper and timely completion of the Work. Do not proceed with the Work until unsatisfactory conditions have been corrected.

3.2 EXAMINATION

A. Examine roughing-in for plumbing piping to verify actual locations of drainage piping connections before sump pump installation.

3.3 INSTALLATION

A. **Pump Installation Standards.** Comply with HI 1.4 for installation of sump pumps.

3.4 CONNECTIONS

A. Comply with requirements for piping specified in Division 22 Section "Plumbing Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to equipment to allow service and maintenance.

3.5 FIELD QUALITY CONTROL

A. **Tests and Inspections**

1. Perform each visual and mechanical inspection.
2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. See Division 1 for retesting and reinspecting requirements and for requirements for correcting the Work.

C. Pumps and controls will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.6 STARTUP SERVICE

A. Perform startup service.

B. Complete installation and startup checks according to manufacturer's written instructions.

3.7 ADJUSTING

A. Adjust pumps to function smoothly, and lubricate as recommended by manufacturer.

B. Adjust control set points.

3.8 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain pumps.

END OF SECTION

This page intentionally left blank.

SECTION 22 33 00

ELECTRIC DOMESTIC WATER HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. **Scope**
   1. CONTRACTOR shall provide all labor, materials, equipment and incidentals as shown, specified and required to furnish and install the plumbing fixtures as shown and specified.

B. **Coordination**
   1. Review installation procedures under other Sections and coordinate the installation of items that must be installed with plumbing fixtures.

C. **Related Sections**
   1. Division 1, General Requirements.
   2. Section 22 05 00, Common Work Results for Plumbing.
   3. Section 22 13 16, Plumbing Piping.
   4. Section 22 13 19, Plumbing Specialties.
   5. Section 23 05 29, HVAC and Plumbing Piping and Equipment Hangers and Supports.
   6. Section 23 07 00, HVAC and Plumbing Insulation.

1.3 QUALITY ASSURANCE

A. **Requirements of Regulatory Agencies**
   1. Building Codes. Comply with applicable requirements of all governing authorities and the following codes:
      a. Ohio Basic Building Code.
      b. Ohio Plumbing Code.

B. **Electrical Components, Devices, and Accessories.** Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. **ASHRAE/IESNA 90.1 Compliance.** Applicable requirements in ASHRAE/IESNA 90.1.

D. **ASME Compliance.** Where ASME-code construction is indicated, fabricate and label commercial, domestic-water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

E. **NSF Compliance.** Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61, "Drinking Water System Components - Health Effects."

1.4 SUBMITTALS

A. Submit the following in accordance with conditions of contract and Division 1 specification sections:
   1. Product Data. For the following:
      a. For each type and size of domestic-water heater indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. **Product Certificates.** For each type of commercial electric, domestic-water heater, from manufacturer.

C. **Operation and Maintenance Manuals**
   1. Submit to the ENGINEER complete Operation and Maintenance Data in accordance with Division 1.

1.5 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Delivery, storage and handling of materials shall be in accordance with conditions of contract and Division 1 specification sections.
   1. All material labels or tags will be intact and legible.

1.6 WARRANTY

A. **Special Warranty.** Manufacturer's standard form in which manufacturer agrees to repair or replace components of electric, domestic-water heaters that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures including storage tank and supports.
      b. Faulty operation of controls.
      c. Deterioration of metals, metal finishes, and other materials beyond normal use.
   2. Warranty Periods. From date of Substantial Completion.
      a. Commercial, Electric, Storage, Domestic-Water Heaters:
         1) Storage Tank: Five years.
         2) Controls and Other Components: Five years.
      b. Compression Tanks: Five years.

PART 2 - PRODUCTS

2.1 PACKAGED TEPID WATER HEATING SYSTEM

A. **Available Manufacturers**
   1. Hubbell Model EMV-120.
   2. Or approved equal.

B. Comply with UL 1453 requirements for storage-tank-type water heaters.

C. **Storage-Tank Construction.** Steel vertical arrangement.
   1. Tappings: Factory fabricated of materials compatible with tank and piping connections. Attach tappings to tank before testing.
      a. NPS 2 and Smaller: Threaded ends according to ASME B1.20.1.
      b. NPS 2-1/2 and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges, and according to ASME B16.24 for copper and copper-alloy flanges.
   2. Pressure Rating: 150 psig.
   3. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.

D. **Factory-Installed Appurtenances and Accessories**
   1. Anode Rod: Replaceable magnesium.
   2. Drain Valve: Factory installed, corrosion-resistant metal complying with ASSE 1005.
   3. Insulation: Comply with ASHRAE/IESNA 90.1.
   4. Jacket: Steel with enameled finish.
   5. Heating Elements: Electric, screw-in or bolt-on immersion type arranged in multiples of three.
   6. Temperature Control: Adjustable thermostat.
   7. Safety Controls: High-temperature-limit and low-water cutoff devices or systems.
   8. Relief Valves: ASME rated and stamped and complying with ASME PTC 25.3, for combination temperature and pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.
   9. Thermostatic mixing valve –factory packaged and piped, set to 85 deg.

E. **Accessories**
   1. Pressure Relief Valves: ASME rated and stamped and complying with ASME PTC 25.3. Include pressure setting less than water heater working-pressure rating.
   2. Piping-Type Heat Traps: Field-fabricated piping arrangement according to ASHRAE/IESNA 90.1-2004 or ASHRAE 90.2-2004.
   3. Shock Absorbers: ASSE 1010 or PDI WH 201, Size A water hammer arrester.

F. **Capacity and Characteristics.** See drawings.

2.2 COMPRESSION TANKS

A. **Available Manufacturers**
   1. ELBI of America.
   2. AMTROL Inc.
   3. Taco, Inc.
   4. Or approved equal.

B. **Description.** Steel pressure-rated tank constructed with welded joints and factory-installed butyl-rubber diaphragm. Include air pre-charge to minimum system-operating pressure at tank.

C. **Construction**
   1. Tappings: Factory-fabricated steel, welded to tank before testing and labeling. Include ASME B1.20.1, pipe thread.
   2. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
   3. Air-Charging Valve: Factory installed.

D. **Capacity and Characteristics**
   1. Working-Pressure Rating: 150 psig.
   2. Air Pre-charge Pressure: 40 psig.
   3. Capacity: See drawings.

PART 3 - EXECUTION

3.1 INSPECTION

A. CONTRACTOR shall examine the conditions under which the Work is to be installed and notify the ENGINEER in writing of conditions detrimental to the proper and timely completion of the Work. Do not proceed with the Work until unsatisfactory conditions have been corrected.

3.2 DOMESTIC-WATER HEATER INSTALLATION

A. **Commercial, Electric, Domestic-Water Heater Mounting.** Install commercial, electric, domestic-water heaters on concrete base. Comply with requirements for concrete bases specified in Division 03 Section "Cast-in-Place Concrete."
   1. Exception: Omit concrete bases for commercial, electric, domestic-water heaters if installation on stand, bracket, suspended platform, or directly on floor is indicated.
   2. Maintain manufacturer's recommended clearances.
   3. Arrange units so controls and devices that require servicing are accessible.
   4. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
   5. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
   6. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   7. Install anchor bolts to elevations required for proper attachment to supported equipment.
   8. Anchor domestic-water heaters to substrate.

B. Install electric, domestic-water heaters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
   1. Install shutoff valves on domestic-water-supply piping to domestic-water heaters and on domestic-hot-water outlet piping. Comply with requirements for shutoff valves specified in Division 22 Section "Plumbing Piping."

C. Install combination temperature-and-pressure relief valves in top portion of storage tanks. Use relief valves with sensing elements that extend into tanks. Extend commercial-water-heater re-

lief-valve outlet, with drain piping same as domestic-water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.

D. Install water-heater drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for electric, domestic-water heaters that do not have tank drains.

E. Install thermometers on outlet piping of electric, domestic-water heaters.

F. Install piping-type heat traps on inlet and outlet piping of electric, domestic-water heater storage tanks without integral or fitting-type heat traps.

G. Fill electric, domestic-water heaters with water.

H. Charge domestic-water compression tanks with air.

3.3 CONNECTIONS

A. Comply with requirements for piping specified in Division 22 Section "Plumbing Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to electric, domestic-water heaters, allow space for service and maintenance of water heaters. Arrange piping for easy removal of domestic-water heaters.

3.4 IDENTIFICATION

A. **Identify system components.** Comply with requirements for identification specified in Division 22 Section "Identification for Plumbing Piping and Equipment."

3.5 SOURCE QUALITY CONTROL

A. **Factory Tests.** Test and inspect domestic-water heaters specified to be ASME-code construction, according to ASME Boiler and Pressure Vessel Code.

B. Electric, domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Division 1 for retesting and re-inspecting requirements and for requirements for correcting the Work.

C. Prepare test and inspection reports.

3.6 FIELD QUALITY CONTROL

A. Perform tests and inspections.
   1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   2. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
   3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Electric, domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Division 1 for retesting and re-inspecting requirements and for requirements for correcting the Work.

C. Prepare test and inspection reports.

3.7 **DEMONSTRATION**

A. Train Owner's maintenance personnel to adjust, operate, and maintain commercial, electric, domestic-water heaters

END OF SECTION

SECTION 22 40 00

PLUMBING FIXTURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. **Scope**
1. CONTRACTOR shall provide all labor, materials, equipment and incidentals as shown, specified and required to furnish and install the plumbing fixtures as shown and specified.

B. **Coordination**
1. Review installation procedures under other Sections and coordinate the installation of items that must be installed with plumbing fixtures.

C. **Related Sections**
1. Division 1, General Requirements.
2. Section 22 05 00, Common Work Results for Plumbing.
3. Section 22 13 16, Plumbing Piping.
4. Section 22 13 19, Plumbing Specialties.
5. Section 23 05 29, HVAC and Plumbing Piping and Equipment Hangers and Supports.
6. Section 23 07 00, HVAC and Plumbing Insulation.

1.3 QUALITY ASSURANCE

A. **Reference Standards.** Comply with the latest edition of the applicable provisions and recommendations of the following, except as otherwise shown or specified:
1. FS WW-P-54 lb., Plumbing Fixtures-Land Use.

B. **Requirements of Regulatory Agencies**
1. Building Codes: Comply with applicable requirements of all governing authorities and the following codes:
   a. Ohio Basic Building Code.
   b. Ohio Plumbing Code.

C. **NSF Standard.** Comply with NSF 61, "Drinking Water System Components - Health Effects," for fixture materials that will be in contact with potable water.

1.4 SUBMITTALS

A. Submit the following in accordance with conditions of contract and Division 1 specification sections:
1. Product Data: For the following:
   a. Water closets.

b. Lavatories
c. Urinals
d. Assembly of parts lists.
e. Any other fixtures utilized on this project not listed above.

B. **Operation and Maintenance Manuals**
1. Submit to the ENGINEER complete Operation and Maintenance Data in accordance with Division 1.

1.5 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Delivery, storage and handling of materials shall be in accordance with conditions of contract and Division 1 specification sections.
1. All material labels or tags will be intact and legible.

1.6 WARRANTY

A. The manufacturer shall provide a written warranty on equipment, materials, parts and labor in the name of the Owner. The warranty period shall begin on the date of final acceptance of all the pumping equipment by the Owner. The warranty period shall be for a two-year duration. Warranty must be fully executed and signed by the CONTRACTOR and the manufacturer prior to final completion.

1.7 DEFINITIONS

A. **Plumbing Fixture.** Fixture with fixed, potable-water supply.

PART 2 - PRODUCTS

2.1 LAVATORY (LAV)

A. **Wall hung lavatory**
1. Manufacturer:
1) American Standard
2) Zurn
3) Sloan.
4) Or approved equal.

2. Materials:
a. Basin: Vitreous china wall mounted, 21" x 18", single center faucet, Model SS-3003 by Sloan. Floor mounted support in chase areas, wall mounted support in non-chase areas.

b. Trim: Chicago Faucet No. 802-317ABCP supply faucet, wrist blade handles, chrome plated offset wheelchair grid drain, chrome plated 1-1/4 inch 17 gauge brass P-trap and arm with escutcheon; 3/8 inch loose key angle stops with flexible supplies. Install Trap Wrap (or approved equal) to supply and drain lines. Install ASSE 1070 mixing valve.

2.2 URINAL (UR)

A. **Wall hung urinal**
   1. Manufacturer:
      1) American Standard
      2) Zurn
      3) Sloan.
      4) Or approved equal.

   2. Materials:
      a. Urinal: Vitreous china, washout flush, integral trap, 3/4 inch top spud, with carrier, Sloan Model SU-1009 with optima smooth #186-0.125 DBP smooth flush valve, 0.125 gpm. Battery operated flush valve

      b. Flush Valve: Exposed battery operated flushometer; Sloan No. #186-0.125 DBP smooth flush valve.

2.3 WATER CLOSET (WC)

A. **Floor mounted water closet**
   1. Manufacturer:
      1) American Standard
      2) Zurn
      3) Sloan.
      4) Or approved equal.

   2. Materials:
      a. Bowl: Wall mounted, vitreous china, water closet & flushometer combo, elongated rim; Sloan No. WETS-2450.1420. Battery operated flush valve. Mount at ADA height

      b. Seat: Solid white plastic, open front, extra heavy, stainless steel hinge; Bemis Model No. 1955CT.

PART 3 - EXECUTION

3.1 INSPECTION

A. CONTRACTOR shall examine the conditions under which the Work is to be installed and notify the ENGINEER in writing of conditions detrimental to the proper and timely completion of the Work. Do not proceed with the Work until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Assemble plumbing fixture piping, fittings, control valves, and other components.

B. Install fixtures level and plumb.

C. Fasten fixtures to substrate.

D. Install shutoff valves in water-supply piping to fixtures. Use ball, gate, or globe valve if specific type valve is not indicated. Install valves chained or locked in open position if permitted. Install

valves in locations where they can easily be reached for operation. Comply with requirements for valves specified in Division 22 Section "Plumbing Piping."

E. Install dielectric fitting in supply piping to emergency equipment if piping and equipment connections are made of different metals.

F. Install indirect waste piping on drain outlet of emergency equipment receptors that are indicated to be indirectly connected to drainage system.

G. Install escutcheons on piping wall and ceiling penetrations in exposed, finished locations. Comply with requirements for escutcheons specified in Division 22 Section "Common Work Results for Plumbing."

3.3 CONNECTIONS

A. Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems.

B. Connect hot- and cold-water-supply piping to hot- and cold-water fixtures. Comply with requirements for hot- and cold-water piping specified in Division 22 Section "Plumbing Piping."

C. Where installing piping adjacent to plumbing fixtures, allow space for service and maintenance of fixtures.

3.4 IDENTIFICATION

A. Install equipment nameplates or equipment markers on plumbing fixtures. Comply with requirements for identification materials specified in Section 23 05 53 "HVAC and Plumbing Identification."

3.5 FIELD QUALITY CONTROL

A. Upon completion of the Work, all labels shall be removed, fixtures and trim shall be cleaned of all dirt, grease and markings, all valves properly adjusted, and all units shall be in working order.

B. **Mechanical-Component Testing.** After plumbing connections have been made, test for compliance with requirements. Verify ability to achieve indicated capacities.

C. **Tests and Inspections**

2. Perform each visual and mechanical inspection.
3. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
4. Operational Test: After plumbing connections have been made, run units to confirm proper unit operation.
5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. See Division 1 for retesting and reinspecting requirements for correcting the Work.

E. Plumbing fixtures will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports.

3.6 **ADJUSTING**

A. Adjust or replace fixture flow regulators for proper flow.

B. Adjust equipment temperature settings.

END OF SECTION

This page intentionally left blank.

SECTION 22 45 00

EMERGENCY PLUMBING FIXTURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. **Scope**
   1. CONTRACTOR shall provide all labor, materials, equipment and incidentals as shown, specified and required to furnish and install the plumbing fixtures as shown and specified.

B. **Coordination**
   1. Review installation procedures under other Sections and coordinate the installation of items that must be installed with plumbing fixtures.

C. **Related Sections**
   1. Division 1, General Requirements.
   2. Section 22 05 00, Common Work Results for Plumbing.
   3. Section 22 13 16, Plumbing Piping.
   4. Section 22 13 19, Plumbing Specialties.
   5. Section 23 05 29, HVAC and Plumbing Piping and Equipment Hangers and Supports.
   6. Section 23 07 00, HVAC and Plumbing Insulation.

1.3 QUALITY ASSURANCE

A. **Reference Standards.** Comply with the latest edition of the applicable provisions and recommendations of the following, except as otherwise shown or specified:
   1. FS WW-P-54 lb., Plumbing Fixtures-Land Use.

B. **Requirements of Regulatory Agencies**
   1. Building Codes: Comply with applicable requirements of all governing authorities and the following codes:
      a. Ohio Basic Building Code.
      b. Ohio Plumbing Code.

C. **Electrical Components, Devices, and Accessories.** Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. **ANSI Standard.** Comply with ANSI Z358.1, "Emergency Eyewash and Shower Equipment."

E. **NSF Standard.** Comply with NSF 61, "Drinking Water System Components - Health Effects," for fixture materials that will be in contact with potable water.

1.4 SUBMITTALS

A. Submit the following in accordance with conditions of contract and Division 1 specification sections:
   1. Product Data: For the following:
      a. Safety showers.
      b. Assembly of parts lists.
      c. Any other fixtures utilized on this project not listed above.

B. **Operation and Maintenance Manuals**
   1. Submit to the ENGINEER complete Operation and Maintenance Data in accordance with Division 1.

1.5 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Delivery, storage and handling of materials shall be in accordance with conditions of contract and Division 1 specification sections.
   1. All material labels or tags will be intact and legible.

1.6 WARRANTY

A. The manufacturer shall provide a written warranty on equipment, materials, parts and labor in the name of the Owner. The warranty period shall begin on the date of final acceptance of all the pumping equipment by the Owner. The warranty period shall be for a two-year duration. Warranty must be fully executed and signed by the CONTRACTOR and the manufacturer prior to final completion.

1.7 DEFINITIONS

A. **Plumbed Emergency Plumbing Fixture.** Fixture with fixed, potable-water supply.

B. **Tepid.** Moderately warm.

PART 2 - PRODUCTS

2.1 EMERGENCY SHOWERS – COMBINATION UNITS

A. **Corrosion Resistant Emergency Eyewash and Drench Shower Station**
   1. Manufacturer:
      a. Inside combination drench shower/eyewash unit: ESHR:
         1) Haws Co., Model 8336.
         2) Speakman.
         3) Or approved equal.
   2. Materials:
      a. Shower Head: 10-inch diameter ABS Plastic. Valve: 1-inch IPS 316 stainless steel ball valve with flow regulator and stay-open control valve, operated by stainless steel pull chain with ring handle.
      b. Eyewash: 11-inch diameter ABS Plastic bowl with Axion MSR eye/face wash heads and ABS Plastic dust cover assembly
      c. Schedule 80 PVC vertical piping with 2 ½”-inch diameter PVC floor flange.

d. Unit Supply and Waste: 1¼-inch IPS.
e. Identification Sign: 14-inch by 3½-inch plastic sign designed for wall mounting
f. Inside units shall be combination drench shower/eyewash unit.
g. Outside units shall be cable heated combination eyewash/drench shower units. With stay-open ball valves located inside building.
h. CONTRACTOR to supply all pipe fittings, and appropriate support brackets and hangers to install eyewashes and drench showers.
i. Pipe and fittings shall be Schedule 80 PVC.
j. All hardware to be stainless steel.

3. Alarm System:
   a. Type: Audible and visual alarm system, complete and factory wired, except for power connection, operated by a waterproof flow switch.
   b. Light: Strobe type, 258,000 candlepower, solid state, weatherproof.
   c. Alarm: 103 decibels at 10 feet.
   d. Flow Switch: Paddle-type, for horizontal mounting. AC, 125 volt, 5 amps, single pole, double throw UL listed, NEMA 4X stainless steel enclosure.
      1) Provide relays and enclosures as necessary to provide inputs necessary for local alarm local annunciators and any other indication required by the application or shown on the Drawings.
      2) Bradley Corp., Model S19-320, or equal.

PART 3 - EXECUTION

3.1 INSPECTION

A. CONTRACTOR shall examine the conditions under which the Work is to be installed and notify the ENGINEER in writing of conditions detrimental to the proper and timely completion of the Work. Do not proceed with the Work until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Assemble emergency plumbing fixture piping, fittings, control valves, and other components.

B. Install fixtures level and plumb.

C. Fasten fixtures to substrate.

D. Install shutoff valves in water-supply piping to fixtures. Use ball, gate, or globe valve if specific type valve is not indicated. Install valves chained or locked in open position if permitted. Install valves in locations where they can easily be reached for operation. Comply with requirements for valves specified in Division 22 Section "Plumbing Piping."
   1. Exception: Omit shutoff valve on supply to group of plumbing fixtures that includes emergency equipment.
   2. Exception: Omit shutoff valve on supply to emergency equipment if prohibited by authorities having jurisdiction.

E. Install dielectric fitting in supply piping to emergency equipment if piping and equipment connections are made of different metals.

F. Install indirect waste piping on drain outlet of emergency equipment receptors that are indicated to be indirectly connected to drainage system.

G. Install escutcheons on piping wall and ceiling penetrations in exposed, finished locations. Comply with requirements for escutcheons specified in Division 22 Section "Common Work Results for Plumbing."

3.3 CONNECTIONS

A. Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems.

B. Connect hot- and cold-water-supply piping to hot- and cold-water, water-tempering equipment. Connect output from water-tempering equipment to emergency plumbing fixtures. Comply with requirements for hot- and cold-water piping specified in Division 22 Section "Plumbing Piping."

C. Where installing piping adjacent to emergency plumbing fixtures, allow space for service and maintenance of fixtures.

3.4 IDENTIFICATION

A. Install equipment nameplates or equipment markers on emergency plumbing fixtures and equipment and equipment signs on water-tempering equipment. Comply with requirements for identification materials specified in Section 23 05 53 "HVAC and Plumbing Identification."

3.5 FIELD QUALITY CONTROL

A. Upon completion of the Work, all labels shall be removed, fixtures and trim shall be cleaned of all dirt, grease and markings, all valves properly adjusted, and all units shall be in working order.

B. **Mechanical-Component Testing.** After plumbing connections have been made, test for compliance with requirements. Verify ability to achieve indicated capacities.

C. **Tests and Inspections**

2. Perform each visual and mechanical inspection.
3. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
4. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.
5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. See Division 1 for retesting and reinspecting requirements for correcting the Work.

E. Emergency plumbing fixtures will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports.

3.6 **ADJUSTING**

A. Adjust or replace fixture flow regulators for proper flow.

B. Adjust equipment temperature settings.

END OF SECTION

This page intentionally left blank.

SECTION 23 05 00

COMMON WORK RESULTS FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. **General**: Provide all labor, materials, tools, and equipment necessary to furnish and install HVAC equipment and systems in accordance with the drawings and as specified herein.

B. **This Section includes the following**:

1. Piping materials and installation instructions common to most piping systems.
2. Transition fittings.
3. Dielectric fittings.
4. Mechanical sleeve seals.
5. Sleeves.
6. Grout
7. HVAC demolition.
8. Equipment installation requirements common to equipment sections.
9. Painting and finishing.
10. Concrete bases.
11. Supports and anchorages.
12. Sealing HVAC related openings/work between at surfaces of wet areas.
13. Condensate drains.

1.3 QUALITY ASSURANCE

A. **Steel Support Welding**: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."

B. **Electrical Characteristics for HVAC Equipment**: Equipment of higher greater electrical demands (such as hp, current, etc.) may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

1.4 SUBMITTALS

A. Submit the following in accordance with conditions of contract and Division 1 specification sections:

1. Product Data for the following:

a. Sleeves.

b. Supports and anchorages.
c. Mechanical sleeve seals.

2. Welding certificates.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Delivery, storage and handling of materials shall be in accordance with conditions of contract and Division 1 specification sections.

B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

C. Deliver duct sections and HVAC equipment with openings covered and protected.

D. Store plastic pipes and FRP ductwork and FRP accessories protected from direct sunlight. Support to prevent sagging and bending.

1.6 DEFINITIONS AND ABBREVIATIONS

A. **Finished Spaces**: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

B. **Exposed, Interior Installations**: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

C. **Exposed, Exterior Installations**: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

D. **Concealed, Interior Installations**: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and chases.

E. **Concealed, Exterior Installations**: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

F. The following are industry abbreviations for plastic materials:

1. CPVC: Chlorinated polyvinyl chloride plastic.
2. PE: Polyethylene plastic.

3. PVC: Polyvinyl chloride plastic.

G. The following are industry abbreviations for rubber materials:

1. EPDM: Ethylene-propylene-diene terpolymer rubber.
2. NBR: Acrylonitrile-butadiene rubber.

1.7 COORDINATION

A. Arrange for pipe and duct spaces, chases, slots, and openings in building structure during progress of construction, to allow for HVAC installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for HVAC items requiring access that are concealed behind finished surfaces. Architectural surface access panels and doors are specified in Division 08 Section "Access Doors and Frames."

PART 2 - PRODUCTS

2.1 PIPE, TUBE, AND FITTINGS

A. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.2 JOINING MATERIALS

A. Refer to individual Division 23 piping Sections for special joining materials not listed below.

B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.

a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

2. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.

C. **Flange Bolts and Nuts**: ASME B18.2.1, stainless steel, unless otherwise indicated.

D. **Plastic, Pipe-Flange Gasket, Bolts, and Nuts**: Type and material recommended by piping system manufacturer, unless otherwise indicated.

E. **Solder Filler Metals**: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

F. **Brazing Filler Metals**: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.

G. **Welding Filler Metals**: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

H. **Solvent Cements for Joining Plastic Piping**:

1. CPVC Piping: ASTM F 493.

2.3 MECHANICAL SLEEVE SEALS

A. **Description**: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.

1. Manufacturers:

a. Advance Products & Systems, Inc.
b. Calpico, Inc.
c. Metraflex Co.
d. Pipeline Seal and Insulator, Inc.
e. Or equal.

2. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
3. Pressure Plates: Stainless steel. Include two for each sealing element.
4. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.4 SLEEVES

A. **Galvanized-Steel Sheet**: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint, for non-corrosive areas.

B. **Steel Pipe**: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends, for non-corrosive areas.

C. **Sheet and Pipe for Corrosive Areas**: Similar to two items directly above but stainless steel.

2.5 GROUT

A. Description: ASTM C 1107, Grade B, non-shrink and nonmetallic, dry hydraulic-cement grout.

1. Characteristics: Post-hardening, volume-adjusting, non-staining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: 5000-psi, 28-day compressive strength.
3. Packaging: Premixed and factory packaged.

2.6 CONDENSATE DRAINS

A. Drains to be CPVC.

2.7 EQUIPMENT/COMPONENT FEATURES FOR ALARMING TO/THRU SCADA SYSTEM

A. Provide and install project equipment/components with necessary switches, outputs, inputs, etc. to allow proper alarming by same to building SCADA systems, refer to Section 23 09 93.

PART 3 - EXECUTION

3.1 HVAC DEMOLITION

A. Refer to Division 01 Section "Cutting and Patching" and Division 02 Section "Selective Structure Demolition" for general demolition requirements and procedures.

B. Disconnect, demolish, and remove HVAC systems, equipment, and components indicated to be removed.

1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
2. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
3. Ducts to Be Removed: Remove portion of ducts indicated to be removed and plug remaining ducts with same or compatible ductwork material.
4. Ducts to Be Abandoned in Place: Cap or plug ducts with same or compatible ductwork material.
5. Equipment to Be Removed: Disconnect and cap services and remove equipment.
6. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
7. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Owner.

C. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.2 PIPING JOINT CONSTRUCTION

A. Join pipe and fittings according to the following requirements and Division 23 Sections specifying piping systems.

B. Ream ends of pipes and tubes and remove burrs.

C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

D. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:

1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
2. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.

E. Plastic Non-pressure Piping Gasketed Joints: Join according to ASTM D 3212.

3.3 PIPING CONNECTIONS

A. Make connections according to the following, unless otherwise indicated:

1. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.

3.4 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

A. Install equipment to allow maximum possible headroom unless specific mounting heights are indicated.

B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.

C. Install HVAC equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.

3.5 PAINTING

A. Any required painting of HVAC systems, equipment, and components is specified in Division 09 Sections "Interior Painting" and "Exterior Painting."

B. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.6 CONCRETE BASES

A. Concrete Bases: Anchor equipment and/or curbs to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.

1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Install anchor bolts to elevations required for proper attachment to supported equipment.
6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

3.7 ERECTION OF METAL SUPPORTS AND ANCHORAGES

A. Refer to Division 05 Section "Metal Fabrications" for structural steel.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor HVAC materials and equipment.

C. Field Welding: Comply with AWS D1.1.

3.8 GROUTING

A. Mix and install grout for HVAC equipment base bearing surfaces and other equipment base plates, and anchors.

B. Clean surfaces that will come into contact with grout.

C. Provide forms as required for placement of grout.

D. Avoid air entrapment during placement of grout.

E. Place grout, completely filling equipment bases.

F. Place grout on concrete bases and provide smooth bearing surface for equipment.

G. Place grout around anchors.

H. Cure placed grout.

3.9 SEALING HVAC RELATED OPENINGS/WORK AT SURFACES OF WET AREAS

A. Seal all Division 23 penetrations and work (including sealing inside and around any control conduits) at all surfaces common to wet areas (such as filter rooms). Refer to architectural specifications for sealer type.

END OF SECTION

SECTION 23 05 13

HVAC MOTORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. Scope:
   1. CONTRACTOR shall provide all labor, materials, equipment and incidentals as shown, specified and required to furnish and install motors.

B. Coordination:
   1. Review installation procedures under other Sections and coordinate the installation of items that must be installed with motors.

1.3 QUALITY ASSURANCE

A. Reference Standards: Comply with the latest edition of the applicable provisions and recommendations of the following, except as otherwise shown or specified:
   1. NFPA 70, National Electric Code.
   2. National Electrical Manufacturers Association (NEMA).

1.4 SUBMITTALS

A. Submit the following in accordance with conditions of contract and Division 1 specification sections:

   1. Shop Drawings: Submit for approval the following:

      a. Dimensional Data.

      b. Power and Control Wiring Diagram.

      c. Clear statement of suitability of motor for corrosive airstream/environment and/or for classified/explosion-proof space or airstream use as required on project.

   2. Operation and Maintenance Data.

1.5 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Delivery, storage and handling of materials shall be in accordance with conditions of contract and Division 1 specification sections.

1.6 **COORDINATION**

A. Coordinate features of motors, installed units, and accessory devices. Provide motors that are:
   1. Compatible with the following:
      a. Magnetic controllers.
      b. Multispeed controllers.
      c. Reduced-voltage controllers.
      d. Variable frequency drives.
   2. Matched to torque and horsepower requirements of the load.
   3. Matched to ratings and characteristics of supply circuit and required control sequence.

B. Coordinate motor support with requirements for driven load; access for maintenance and motor replacement; installation of accessories, belts, belt guards; and adjustment of sliding rails for belt tensioning.

C. Coordinate size and location of concrete bases or motor driven equipment. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 3 Section.

1.7 **WARRANTY**

A. The manufacturer shall provide a written warranty on equipment, materials, parts and labor in the name of the Owner. The warranty period shall begin on the date of final acceptance of all the pumping equipment by the Owner. The warranty period shall be for a two year duration. Warranty must be fully executed and signed by the CONTRACTOR and the manufacturer prior to final completion.

PART 2 - PRODUCTS

2.1 **MOTOR CHARACTERISTICS (UNLESS SCHEDULED DIFFERENTLY)**

A. Motors 1/2 HP and Larger: Three phase.

B. Motors equal to or smaller than 1/3 HP: Single phase.

C. Frequency Rating: 60 Hz.

D. Voltage Rating: NEMA standard voltage selected to operate on nominal circuit voltage to which motor is connected.

E. Service Factor: 1.15 for totally enclosed motors.

F. Normal Duty: Continuous duty at ambient temperature of 105 deg F and at altitude of 330 ft above sea level.

G. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

H. Enclosure: Totally enclosed fan cooled (TEFC), unless otherwise indicated or otherwise required for installation location.

2.2 POLYPHASE MOTORS

A. Description: NEMA MG 1, Design B, medium induction motor.

B. Efficiency: Premium efficiency, as defined in NEMA MG 1.

C. Stator: Copper windings, unless otherwise indicated.
   1. Multispeed motors shall have separate winding for each speed or shall be two-speed/one winding per the drawing schedules.

D. Rotor: Squirrel cage, unless otherwise indicated.

E. Bearings: Double-shielded, pre-lubricated ball bearings suitable for radial and thrust loading.

F. Temperature Rise: Match insulation rating, unless otherwise indicated.

G. Insulation: Class F, unless otherwise indicated.

H. Code Letter Designation:
   1. Motors 15 HP and Larger: NEMA starting Code F or G.
   2. Motors Smaller Than 15 HP: Manufacturer's standard starting characteristics.

I. Enclosure: Cast iron for motors 7.5 HP and larger; rolled steel for motors smaller than 7.5 HP.
   1. Finish: Manufacturer's standard.

2.3 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

A. Motors Used with Reduced-Inrush Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.

B. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
   1. Designed with critical vibration frequencies outside operating range of controller output.
   2. Temperature Rise: Matched to rating for Class B insulation.
   3. Insulation: Class H
   4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
   5. VFD rated.

C. Rugged-Duty Motors (required in corrosive areas/airstreams): Totally enclosed fan cooled, with 1.25 minimum service factor and greased bearings. Windings insulated with non-hygroscopic material, and applied in a double dip and bake process. Motor Housing Finish: Corrosion-resistant primer and with mill and chemical duty paint to withstand minimum 500 hours ASTM B117-90 Salt Spray Test.

D. Explosion-Proof Motors: Provide as scheduled.

E. Source Quality Control: Perform the following tests on each motor according to NEMA MG 1:
   1. Measure winding resistance
   2. Read no-load current and speed at rated voltage and frequency.
   3. Measure locked rotor current at rated frequency.
   4. Perform high-potential test.

2.4 SINGLE-PHASE MOTORS

A. Type: One of the following, to suit starting torque and requirements of specific motor application:
   1. Permanent-split capacitor.
   2. Split-phase start, capacitor run.
   3. Capacitor start, capacitor run.

B. Shaded-Pole Motors: For motors 1/20 hp and smaller only.

C. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

D. Bearings: Ball type for belt-connected motors and other motors with high radial forces on motor shaft; sealed, pre-lubricated—sleeve type for other single-phase motors.

E. Source Quality Control: Perform the following tests on each motor according to NEMA MG 1:
   1. Measure winding resistance.
   2. Read no-load current and speed at rated voltage and frequency.
   3. Measure locked rotor current at rated frequency.
   4. Perform high-potential test.

2.5 SINGLE PHASE MOTORS WITH ADDITIONAL REQUIREMENTS

A. Rugged-Duty Motors (required in moist and/or corrosive areas/airstreams): Totally enclosed fan cooled, with 1.25 minimum service factor and greased bearings. Windings insulated with non-hygroscopic material, and applied in a double dip and bake process. Motor Housing Finish: Corrosion-resistant primer and with mill and chemical duty paint to withstand minimum 500 hours ASTM B117-90 Salt Spray Test.

B. Explosion-Proof Motors: Provide as scheduled.

C. Source Quality Control: Perform the following tests on each motor according to NEMA MG 1:
   1. Measure winding resistance
   2. Read no-load current and speed at rated voltage and frequency.
   3. Measure locked rotor current at rated frequency.
   4. Perform high-potential test.

PART 3 - EXECUTION (NOT APPLICABLE)

END OF SECTION

This page intentionally left blank.

SECTION 23 05 16

HYDRONIC PIPING SPECIALTIES

PART 1-GENERAL

1.1 SECTION INCLUDES

A. ASME safety relief valves.

B. Manual and automatic air vents.

C. ASME compression and expansion tanks.

D. Air separators with automatic air vents.

E. Strainers.

1.2 SUBMITTALS

A. Submit shop drawings and product data per applicable Division I Specification.

B. Shop drawings shall include product data noting materials, sizes, and dimensions.

1.3 QUALITY ASSURANCE

A. Pressure piping shall meet ASME B31.9 Code.

B. Safety relief valve requirements shall meet ASME Boiler and Pressure Vessel Code.
