

BORE #1 AND BORE #3 INSTALATIONS

1. BORE #1

You should plan to string the bore pipe inside the Moriarty Park without damaging the grass. Any damage will require repairs. Also, you can excavate an "approach" ditch in the gravel area within the Park for the Bore pipe pull back. Also, a 4-inch weld fitting may be needed on the east end of the Bore #1 pipe for alignment. Please see the attached drawing. Finally, the drawings show two options for tying the bore pipe into the existing 4-inch ML. It was mentioned that the use of a 4-inch 45 degree elbow might be best. This option is also acceptable.

2. BORE #3

The location of the existing 2-inch polyethylene main in Hazel Street might have been mis located. You should plan to cut a window in the pavement and then repair with a patch.

Bore #1 Path
