LIMITED ASBESTOS INSPECTION REPORT

Project Number: EE 23-Z0172-0076

Client: Covina-Valley Unified School District
519 East Badillo Street
Covina, California 91723

Site Location: Grovecenter Elementary School
HVAC Replacement Project
775 North Lark Ellen Avenue
West Covina, California 91790

Site Use: School Property

Contact Person: Mr. Brian Johnson
Assistant Director of Maintenance & Operations, Facilities
and Transportation
Phone: (626) 974-7000, ext. 800145

Inspection Date: April 26 thru May 2, 2023
June 22, 2023

Inspected By: Mr. Rhys Kuzmic
Certified Asbestos Consultant, CAC# 09-4586

Report Assembled By: Ms. Yesenia G. Galeana
Technical Report Writer

Report Generated/Reviewed By: Mr. Tim Galeana
Certified Asbestos Consultant, # 98-2470

I. EXECUTIVE SUMMARY

Executive Environmental (EE) provided the services of a Certified Asbestos Consultant (Rhys Kuzmic, CAC No. 09-4586), to conduct a limited asbestos inspection of Buildings B (MPR), C, D, E, F and G at Grovecenter Elementary School located at 775 North Lark Ellen Avenue, West Covina, California. The inspection was conducted as a precursor to the upcoming HVAC Replacement project. At the time of the inspection, no visible signs of fire or structural damage were observed. At the request of the District, EE revisited the campus on June 22, 2023 to conduct testing of all the heater closets in conjunction with the HVAC project. Materials suspected of containing asbestos were sampled and analyzed for the presence of asbestos. Asbestos-Containing Materials (ACM), Assumed Asbestos-Containing Material and other hazardous materials were identified during these inspections. *This is considered to be a limited inspection. The inspection was limited to materials and locations anticipated to be impacted by the HVAC Replacement project, as directed by the District Representative.*

II. SAMPLING METHODOLOGY

A visual inspection of Buildings B (MPR), C, D, E, F and G was conducted prior to the collection of any bulk samples. The visual inspection was conducted to identify and record the location and condition of the materials to be sampled. Following the visual inspection, bulk material samples of the identified suspect asbestos-containing building materials were collected. The materials were categorized into homogeneous groupings, and each sample was assigned a unique sample number and placed into a sealed container. Sampling was conducted in accordance with South Coast Air Quality Management District Rule 1403 which states: the survey shall include, at a minimum, identification of all affected materials at the facility, including but not limited to all layers of flooring materials to the joist level, and all material in the wall or ceiling cavities as necessary to identify and sample. Sampling methodology follows South Coast Air Quality Management District Rule 1403(h) Sampling Protocols and Test Methods.

Upon completion of the bulk sample collection, a chain of custody was prepared and the samples were delivered to the laboratory for analysis. AmeriSci, located at 24416 South Main Street, Suite 308, Carson, California 90745 (310-834-4868) analyzed the samples using Polarized Light Microscopy (PLM). AmeriSci is an accredited participant in the National Voluntary Laboratory Accreditation Program (NVLAP), No. 200346-0. The principles described in the current Environmental Protection Agency (EPA) 600 method were used in the preparation and analysis of the bulk samples.

Note: Inaccessible suspect asbestos materials may be located within sealed ceilings, walls, or floors; or within wall cavities, interstitials, shafts, etc. Suspect asbestos materials located in these areas must be sampled prior to any activities that might cause them to be disturbed.

III. SAMPLE ANALYSIS

One hundred seventy-six (176) samples were collected during these inspections. The laboratory analysis results are identified in the following table. Materials determined not to contain asbestos are listed as “No Asbestos Detected” (NAD).

Any material found to contain more than 1% of a known asbestos substance is considered to be an asbestos-containing material (ACM). Materials falling within this category are controlled and must be handled in accordance with the California Occupational Safety & Health Administration (Cal/OSHA), EPA, and South Coast Air Quality Management District (SCAQMD) regulations.

In addition, materials which are characterized as non-ACM by EPA or other local regulatory agencies may fall within the regulatory standards of Cal/OSHA, which further regulates any materials found to contain more than 1/10 of 1%, but 1% or less, of a known asbestos substance as asbestos-containing construction materials (ACCMs). Impacting or handling ACCMs requires special employer Registration, documentation, training, and personal protective equipment. When a material is to be impacted, the National Emission Standards for Hazardous Air Pollutants (NESHAPs) regulations require further testing for materials that fall within this category.

The PLM analytical protocol requires each layer of the sample to be analyzed separately. The quantity of analyses will vary based on the number of layers in a sample and whether a "positive stop" is employed. When one sample of a homogeneous area is positive, the remainder of the samples need not be analyzed because the entire homogeneous area must be considered positive.

**Sampling results begin on the next page.

IV. FINDINGS

EE conducted a limited asbestos inspection of Buildings B (MPR), C, D, E, F and G at Grovecenter Elementary School located at 775 North Lark Ellen Avenue, West Covina, California.

Seventy One (71) homogeneous material groups were identified during the visual inspection. One hundred seventy-six (176) samples of suspect asbestos-containing materials were collected and delivered to AmeriSci of Carson, California, for analysis. The homogeneous areas and sampling results are listed on the table in Section III.

The analytical data revealed that the following materials contain asbestos or other hazardous material:

Building B – (MPR):

- HVAC woven damper cloth with expansion joint: The HVAC woven damper cloth and expansion joint located at Mechanical/Electrical room (B115) at Hayes furnace between metal duct joints and expansion joints inside furnace tested positive for asbestos content.
- Mercury-containing thermostat: Mercury-containing thermostat located at the west wall of MPR (B117) is assumed to contain mercury.

Building C - Rooms 1 and 2 (C101 and (C102):

- Roof mastic: The roof mastic located throughout the rooftop at roof jacks tested positive for asbestos content.
- Black pipe wrap over fiberglass pipe insulation: The black pipe wrap over fiberglass pipe insulation located in the attic, near center above restrooms, tested positive for asbestos content.
- Fire-rated door: The fire-rated door located in Heater room (C108) is assumed to be an asbestos-containing material.
- Mercury-containing thermostat: Mercury-containing thermostats are located at Room 1 (C101) and Room 2 (C102) by southwest sink areas are assumed to contain mercury.
- Freon-containing condenser unit: The condenser units located at the exterior, east side of Room 1 (C101) and Room 2 (C102) are assumed to contain Freon.

Building D - Room 6 thru 9 (D101 thru D104):

- Roof mastic: The roof mastic located throughout the rooftop at roof jacks tested positive for asbestos content.
- Woven heat shield: The woven heat shield located at metal flue vent pipes of Heater room (D001) and Heater room (D002) tested positive for asbestos content.
- Vibration damper joint cloth: The vibration damper joint cloth located at base of HVAC units of Heater room (D001) and Heater room (D002) tested positive for asbestos content.
- Fire-rated door: The fire-rated doors located in Heater room (D001) and Heater room (D002) are assumed to be an asbestos-containing material.
- Mercury-containing thermostat: Mercury-containing thermostats are located at the east walls of Room 6 (D101) and Room 8 (D103) and the west walls of Room 7 (D102) and Room 9 (D104) are assumed to contain mercury.
- Freon-containing condenser unit: The condenser units located at the exterior north side of Building D are assumed to contain Freon.

Building E - Room 10 thru 13 (E101 thru E104):

- Roof mastic: The roof mastic located throughout the rooftop at roof jacks tested positive for asbestos content.
- Woven heat shield: The woven heat shield located at metal flue vent pipes of Heater room (E001) and Heater room (E002) tested positive for asbestos content.
- Vibration damper joint cloth: The vibration damper joint cloth located at base of HVAC units of Heater room (E001) and Heater room (E002) tested positive for asbestos content.
- Fire-rated door: The fire-rated doors located in Heater room (E001) and Heater room (E002) are assumed to be an asbestos-containing material.
- Mercury-containing thermostat: Mercury-containing thermostats are located at the east walls of Room 10 (E101) and Room 12 (E103) and the west walls of Room 11 (E102) and Room 13 (E104) are assumed to contain mercury.
- Freon-containing condenser unit: The condenser units located at the exterior north side of Building E are assumed to contain Freon.

Building F - Room 14 thru 17 (F101 thru F104):

- Fire-rated door: The fire-rated doors located in Heater room (F001) and Heater room (F002) tested positive for asbestos content.
- Mercury-containing thermostat: Mercury-containing thermostats are located at the east walls of Room 14 (F101) and Room 16 (F103) and the west walls of Room 15 (F102) and Room 17 (F104) are assumed to contain mercury.
- Freon-containing condenser unit: The condenser units located at the exterior north side of Building F are assumed to contain Freon.

Building G - Room 18 thru 21 (G101 thru G104):

- Roof mastic: The roof mastic located throughout the rooftop at roof jacks tested positive for asbestos content.
- Woven heat shield: The woven heat shield located at metal flue vent pipes of Heater room (G001) and Heater room GE002) tested positive for asbestos content.
- Vibration damper joint cloth: The vibration damper joint cloth located at base of HVAC units of Heater room (G001) and Heater room (G002) tested positive for asbestos content.
- Fire-rated door: The fire-rated doors located in Heater room (G001) and Heater room (G002) are assumed to be an asbestos-containing material.
- Mercury-containing thermostat: Mercury-containing thermostats are located at the east walls of Room 18 (G101) and Room 20 (G103) and the west walls of Room 19 (G102) and Room 21 (G104) are assumed to contain mercury.
- Freon-containing condenser unit: The condenser units located at the exterior north side of Building G are assumed to contain Freon.

V. CONCLUSIONS/RECOMMENDATIONS

Normally, asbestos-containing material found to be in good condition is not considered a hazard, unless it is disturbed. Prior to the start of any activity, such as remodeling, demolition, or renovation that might disturb these materials, a Certified Asbestos Consultant should be contracted to design and monitor the project. A California-licensed asbestos contractor should be hired to complete the asbestos abatement procedures.

If you have any questions, please call Mr. Tim Galeana at 626-441-7050. We are glad we could be of service to you.

VI. DISCLAIMER/REPORT LIMITATIONS

All reports and recommendations are based on conditions and practices observed and information made available to Executive Environmental (EE) by the client and the designated sites/facilities on the days sampling was conducted. This report does not purport to set forth all hazards, nor to indicate that other hazards do not exist. No responsibility is assumed by EE for the control or correction of conditions or practices existing at the facilities, or at any other premises surveyed by EE, for and on the behalf of the client. Services provided by EE shall be governed by the standard of practice for professional services measured at the time those services are rendered.

All information contained in this report is proprietary and limited to the scope of services, parameters of the analytical methods used and the conditions present at the time of this inspection. Any references to quantities are considered estimates and are not to be construed as actual.

PLM Bulk Asbestos Report

23-Z0172-0076; Building: B (MPR), C (Rooms 1 And 2), D
(Rooms 6-9)

Reporting Notes:

Analyzed by: Megan A DeLara
Date: 5/4/2023

Reviewed by: Patricia Weakley

*NAD = no asbestos detected; Detection Limit <1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; NVA = No Visible Asbestos; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/R-93/116, including requirements for EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.

The receiving Laboratory is required to complete the following:

- All invoices are to be sent to: 310 E. Foothill Blvd.; Suite 200, Arcadia, CA 91006 with a copy of the lab report.
- Analyze all samples by PLM by EPA 500/R-93/116.
- Stop analysis of homogeneous groups at first positive that is greater than or equal to 1.0%.

Building Name: B (MPR)

- All lab reports and invoices are to contain the Project Number from above.
- Unsigned and reports marked draft are unacceptable.
- Report to the attention of: Yesenia Galeana, Phone: (562) 889-1327

Optional Items to be completed by the laboratory (if check marked):

Email Report to: Info@execenv.com Other: ygaleana@execenv.com;

US Mail Report to: Originating office check marked above Other:

Industrial Hygiene Laboratory Submittal
Asbestos -- PLM

Originating Office
 310 E. Foothill Blvd., Suite 200
 Arcadia, CA 91006
 Phone: 626.441.7050
 Fax: 626.441.0016

Lab Submitted to:
 AmeriSci
 EMLab (Glendale)
 LA Testing

Routine
 (5 Working Days)

RUSH (surcharges may apply)
 Circle 6 24 48 3 to 5
 One hours hours hours days

Project #:
23-Z0172-0076

Sampled by:
Rhys Kuzmic

Site Zip Code:
91791

Sample Date:
04/26/2023

Page 6 of 11

The receiving Laboratory is required to complete the following:

- All invoices are to be sent to: 310 E. Foothill Blvd.; Suite 200, Arcadia, CA 91006 with a copy of the lab report.
- Analyze all samples by PLM by EPA 600/R-93/116.
- Stop analysis of homogeneous groups at first positive that is greater than or equal to 1.0%

Building Name: C (Rooms 1 and 2)

- All lab reports and invoices are to contain the Project Number from above.
- Unsigned and reports marked draft are unacceptable.
- Report to the attention of: Yesenia Galeana, Phone: (562) 889-1327

Optional Items to be completed by the laboratory (if check marked):

US Mail Report to: Originating office check marked above Other:
 Email Report to: Info@execenv.com Other: ygaleana@execenv.com;
 Alternate billing address: 923041456

Page 9 of 22

The receiving Laboratory is required to complete the following:

- All invoices are to be sent to: 310 E. Foothill Blvd., Suite 200, Arcadia, CA 91006 with a copy of the lab report.
- Analyze all samples by PLM by EPA 600/R-93/116.
- Stop analysis of homogeneous groups at first positive that is greater than or equal to 1.0%

Building Name: G (Rooms 18-21)

- All lab reports and invoices are to contain the Project Number from above.
- Unsigned and reports marked draft are unacceptable.
- Report to the attention of: Yesenia Galeana, Phone: (562) 889-1327

Optional Items to be completed by the laboratory (if check marked):

US Mail Report to: Originating office check marked above Other: _____
 Email Report to: Info@execenv.com Other: ygaleana@execenv.com;
 Alternate billing address: _____

Sample No.:	Sample Location – Include Room information where appropriate	Material Description	Homogeneous Location		Percent Damaged
			No.	Quantity	
-111	G101 (Room 18), north	12x12 random hole ceiling tile	G101-G104 (Rooms 18-21) ceilings	35	3,800 SF ○
-112	G102 (Room 19), NE	and mastix (on drywall)		↓	↓

Reporting Notes:

Analyzed by: Rosa E. Pena
Date: 7/1/2023

Reviewed by: Patricia Weakley

*NAD = no asbestos detected; Detection Limit <1%; Reporting Limits: CVES = 1%, 400 Pt Ct = 0.25%, 1000 Pt Ct = 0.1%; NA = not analyzed; NA/PS = not analyzed / positive stop; NVA = No Visible Asbestos; PLM (polarized light microscopy) Bulk Asbestos Analysis by EPA 600/R-93/116, including requirements for EPA 600/M4-82-020 per 40 CFR 763 (NVLAP Lab #200346-0); Note: PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB materials. TEM is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing in New York State (also see EPA Advisory for floor tile, FR 59, 146, 38970, 8/1/94). NIST Accreditation requirements mandate that this report must not be reproduced except in full with the approval of the laboratory. This PLM report relates ONLY to the items tested.
