Project Concept Report – Page 2 County: Rockdale

# PROJECT LOCATION MAP

# PLANNING AND BACKGROUND

**Project Justification Statement: Project Justification Statement:** This project was initiated by the local government of Rockdale County. It is a two-to-four lane widening project intended to add capacity, increase mobility, and reduce potential for crashes on Sigman Road. A section of Sigman Road has already been widened to four lanes with a raised median from I-20 on the west side of Conyers to east of Lester Road. Also, Sigman Road through the intersection of SR 20 (Loganville Highway) is four-lanes. The project would result in a uniform typical section for Sigman Road throughout its length along the developed area north of I-20 to Dogwood Connector.

Sigman Road has conflicts between fast-moving peak-hour through traffic and local traffic attempting to access driveways and cross-streets, resulting in extreme delays and frequent traffic crashes. The proposed project would provide relief for this congestion and operational problems caused by the heavy traffic volumes associated with adjacent existing and expanding residential and commercial development.

Current traffic volumes range from 13,080 to 15,940 vehicles per day (vpd) and are projected to increase to 24,480 to 40,880 vpd by the design year 2045. Without improvement, five key intersections would be operating at capacity or failing Levels of Service (LOS E or F) under future 2045 no-build conditions. Widening of Sigman Road would improve the 2045 design year LOS at all intersections to an acceptable LOS D or better.

A reduction in traffic congestion and improvement of traffic operational movements at both signalized and unsignalized intersections would also in turn reduce the frequency and severity of crashes on Sigman Road. Crash and injury rates on sections of Sigman Road for years 2010, 2011 and 2012 are higher than the statewide averages for urban principal arterials similar to Sigman Road. An average of 58% of the crashes on Sigman Road are rear-end collisions. Rear-end collisions are an indicator of traffic congestion.

The project would also add context sensitive design improvements in the form of a multi-use path and a grassed median with potential for landscaping. The median would also serve to improve the safety and efficiency of the roadway by limiting left-turn movements and controlling access points.

The project limits for Sigman Road widening would begin 650 feet east of Lester Road, which is the end of a four-lane divided section and extend to Dogwood Connector. Dogwood Connector would be a logical terminus for the project. Sigman Road beyond Dogwood Connector is already four-lanes divided with an interchange at I-20 and would complete a four-lane northern loop around the City of Conyers. Because of funding constraints, the Sigman Road widening project is being funded under three P.I. Numbers: <u>0013163</u> - Sigman Road from 650 east of Lester Road to Irwin Bridge Road; <u>0013594</u> – Sigman Road from Irwin Bridge Road to SR 138; and, <u>752210</u> – Sigman Road from SR 138 to Dogwood Connector.

Rockdale County and the City of Conyers have plans to connect a multi-use trail around various parts of the city to provide greater east-west connectivity through the county and points beyond. Therefore, the widening projects (P.I. Nos. 0013163, 0013594 and 752210) will include a multi-use trail on the

Project Concept Report – Page 4 County: Rockdale

north side of Sigman Road which would expand the existing multi-use trail system. P.I. No. 0012886 includes the funding for the multi-use trail from east of Lester Road to Irwin Bridge Road.

**Existing conditions:** Sigman Road has a posted speed limit of 45 miles per hour (mph), no paved shoulders, and has left turns and right-turn lanes at some of the major signalized intersections. Also, two through lane exists on Sigman Road in each direction through the intersection of SR 20 (Loganville Highway). Sigman Road serves as the most direct east-west facility for local and commercial traffic to access I-20. Sigman Road also serves as a major collection point for smaller east-west collector roadways that provide access into and out of City of Conyers, including Rockbridge Road, Irwin Bridge Road (CR 442), Loganville Highway, Milstead Road, Eastview Road and SR 138. Sigman Road is an urban principal arterial and has land uses that include Conyers Middle School, Rockdale Medical Center and hospital, a recreational complex with baseball fields, several churches, a church cemetery, residential subdivisions, shopping centers and industrial businesses.

There are several existing box culverts along this section of Sigman Road, but no bridges or significant retaining walls. Major utilities in the area include an underground gas or petroleum pipeline on easement crossing Sigman Road southeast of SR 138, and a power line easement that crosses Sigman Road 200' east of Rockbridge Road.

Other projects in the area: There are nine major transportation infrastructure projects programmed in the study area and contained within the Atlanta Regional Commission's (ARC's) TIP or RTP. They are described below.

- STP00-9336-00(001), P.I. No. 752270: Old Covington Highway from Green Street to SR 138/20 (Walnut Grove Road). The proposed project would widen the roadway from 2 lanes to 4 lanes. Engineering was authorized in fiscal year 2004 and right-of-way acquisition in 2007 and 2011. Construction is programmed for fiscal year 2014. The ARC TIP reference number is RO-034.
- P.I. No. 721582: Salem Road Connector (Old Salem Road Realignment) Relocate intersection from the vicinity of SR 20/138 to south of I-20. Engineering was authorized in fiscal year 2006 and 2011. Right-of-way acquisition is programmed in 2018. Construction is programmed in fiscal year 2019. The ARC TIP reference number is RO-138C.
- CSSTP-0006-00(935), P.I. No. 0006935: SR 20 (Loganville Highway) at West Hightower Trail & Chandler Road. The proposed project would be an intersection improvement project. Engineering was authorized in fiscal year 2006 and 2011. Right-of-way acquisition is programmed in 2017 and construction is programmed in 2019. The ARC TIP reference number is RO-242C.
- P.I. No. 0011640: Hardin/O'Kelly Street Bicycle and Pedestrian Improvements from Dogwood Drive to Green Street. Engineering was authorized in fiscal year 2013. Right-of-way acquisition is programmed in 2015 and construction in 2017. The ARC TIP reference number is RO-248.
- NH000-0035-01(033), P.I. No. 731048: I-20 East Interchange Improvements at SR 138/20 (Walnut Grove Road/McDonough Highway). This project would include bridge and road widening from 4 to 6 lanes and ramp improvements. Engineering is programmed in fiscal year 2015. Right-of-way acquisition is programmed in 2018 and construction are programmed in long range (2020-2030). The ARC TIP reference number is RO-AR-138.
- 6. P.I. No. 0006934: Commerce Crossing/I-20 Overpass from Old Salem Road to Old Covington Highway. The project is approximately 0.4 mile in length. The project is programmed in long range (2020-2030). The ARC RTP reference number is RO-243.

Project Concept Report – Page 5 County: Rockdale

MPO: Atlanta TMA

TIP #: RO-235C, RO-235D, RO-235E & RO-256

- 7. Millers Chapel Road Widening from SR 138 to SR 20. This project would widen the roadway from 2 lanes to 4 lanes. The project length is approximately 0.6 mile. The project is programmed in long range (2020-2030). The ARC RTP reference number is RO-015F.
- CSSTP-0006-00(931), P.I. No. 0006931: Sigman Road Extension/Hayden Quarry Road from DeKalb County Line to I-20 at Sigman Road. This project is approximately 0.9 mile in length. The project is programmed in long range (2031-2040). The ARC RTP reference number is RO-235A.
- 9. P.I. No. 0007869: SR 20 (Loganville Highway) from Sigman Road to Pleasant Hill Road. The proposed project would widen the roadway from 2 lanes to 4 lanes. The project length is approximately 7.1 miles. The project is programmed in long range (2031-2040). The ARC RTP reference number is RO-242A.

# **DESIGN AND STRUCTURAL**

**Description of the proposed project:** This project, located in central Rockdale County and partially within the City of Conyers, would widen and improve approximately 6.26 miles of Sigman Road from just east of Lester Road to Dogwood Connector. The project is proposed to be constructed under four project numbers.

- P.I. No. 0013163 Sigman Rd. from 650 feet east of Lester Rd. to Irwin Bridge Road (1.3 miles)
- P.I. No. 0013594 Sigman Rd. from Irwin Bridge Rd. to 970 feet east of SR 138 (2.9 miles)
- P.I. No. 752210 Sigman Road from 300 feet east of SR 138 to Dogwood Connector (2.3 miles)
- P.I. No. 0012886 Multi-use trail funding from 650 feet east of Lester Road to Irwin Bridge Road

Sigman Rd. would be widened from two-lanes to four 12'-lanes separated by a 20' raised median. The shoulders would be upgraded to urban-type with curb and gutter. The left shoulder would be widened to 18' with a 10' multi-use path and the right shoulder would be widened to 12' with a standard 5' sidewalk.

**Major Structures:** There are a number of box culverts on Sigman Road as listed in the table below, but there are no bridges. Proposed retaining walls to reduce environmental impacts are shown in the table on Page 7.

| Structure   | Existing  | Proposed   |
|-------------|---|--|
| 6' x 6'     | <ul> <li>Located 250' west of Rockbridge Rd.</li> </ul> | At this time, the existing                             |

#### Mainline Design Features: Sigman Rd. (CR 435 / SR 20) / Urban Principal Arterial

\*The minimum median width will be used for this project to reduce the environmental and right-of-way impacts.

Major Interchanges/Intersections: Major intersections along this project include: Rockbridge Road, Stepping Stone Lane, Irwin Bridge Road, Old Camp Trail, Sigman East Drive, Callaway Crossing, Conyers Middle School, SR 20 (Loganville Hwy)/Milstead Avenue, Milstead Road, Renaissance Drive, Eastview Road, SR 138, Saratoga Business Pkwy/E. Park Drive, Gees Mill Road, Gees Mill Business Pkwy, Old Covington Road, Dogwood Connector. Median openings are proposed at these intersections.

Lighting required: No X Yes Rockdale County DOT has expressed interest in lighting this corridor. Roadway lighting is included in the construction cost estimate.

Intersection Skew Angle: One side of Irwin Bridge Road has an existing skew angle of approximately 61 degrees and may require a design variance. The need for the variance will be thoroughly evaluated. This skew angle will be corrected if feasible from a cost and right-of-way impact perspective.

- Williams/Transcontinental pipeline

There is an existing aerial pole line extending the length of the project along Sigman Road. It connects with a substation located just northwest of the intersection with Gees Mill Road beyond the project limits. There is one power line easement which crosses Sigman Road 200' east of Rockbridge Road. This facility is presumably owned by Georgia Power.

SUE Required: No X Yes I Undetermined

At this time, it is anticipated that a SUE process will occur to locate all utilities at a quality level (QL) B. Depending on the nature of the conflict, QL-A may be necessary in some instances.

Public Interest Determination Policy and Procedure recommended?

\*The 2 houses at the intersection with Old Camp Trail have the highest potential to be displacements because of the steep grade on Old Camp Trail and because Sigman Road has been shifted to that side to avoid a stream, but additional survey and design work would be necessary before making a final determination as to whether the homes must be displaced. Efforts will be made to avoid the displacements by constructing retaining walls and/or raising the roadway grade.

Impacts to USACE property anticipated? X No Yes Undetermined

Project Concept Report – Page 11 County: Rockdale

# CONTEXT SENSITIVE SOLUTIONS

Issues of Concern: There are no context sensitive issues or concerns identified within the corridor.

**Context Sensitive Solutions Proposed:** This project is a collaborative effort between business and community leaders. Although there are not any specific context sensitive issues identified, the design will provide sidewalks and a multi-use path along Sigman Road within the project limits. These facilities will provide a context sensitive feature to the environment.

### **ENVIRONMENTAL & PERMITS**

Is a PAR required? No Yes Completed – Date:

#### **Environmental Comments and Information:**

**NEPA/GEPA:** An Environmental Assessment (EA) will be prepared to reflect the current economic, environmental, cultural and social affects. All special studies will be conducted and completed in accordance with current GDOT standards.

There are streams and wetlands along the project corridor that would have to be addressed. These resources were identified during the ecology field work and the proposed roadway alignment has been shifted and retaining wall locations identified to avoid and minimize impacts to these resources.

**Ecology:** Detailed field work was performed to identify streams and wetlands. Coordination with the Department of Natural Resources was completed in order to identify potential presence of protected species and/or habitats and any seasonal survey requirements.

History: A No Historic Resources Survey Report was completed for this project.

**Archeology:** An archaeological field survey was conducted and a short form of negative findings was completed.

The FY 2014-2019 Transportation Improvement Program (TIP) under the PLAN 2040 Regional Transportation Plan (RTP) is the current adopted plan for the Atlanta area showing the region's highest transportation priorities. It was adopted by the Atlanta Regional Commission (ARC) Board on March 26, 2014 with GRTA Board action on April 9, 2014. ARC received a conformity determination from the US DOT on April 30, 2014.

(See TIP sheets in Attachment #11.)

Air Quality Impact Assessment was conducted according to the latest GDOT policy effective December 20, 2012. CO, Ozone, PM  $_{2.5}$ , and MSATs were evaluated as part of this assessment. This project is consistent with the State Implementation Plan for the attainment of clean air quality in Georgia and would be in compliance with both state and federal air quality standards.

Noise Effects: Noise Impact Assessment was conducted using TNM in compliance with 23 USC Section 109(h) and (i) and according to the new GDOT Noise Abatement policy, effective July 13, 2011.

**Public Involvement:** A Public Information Open House (PIOH) is tentatively scheduled for the second week of October.

**Major stakeholders:** The following is a list of stakeholders that have been identified thus far: Rockdale County, City of Conyers, Conyers-Rockdale Chamber of Commerce, Rockdale Hospital, Conyers Middle School, Rockdale County Sheriff's Office, Rockdale County Fire Department, City of Conyers Police Department and traveling public.

# CONSTRUCTION

Issues potentially affecting constructability/construction schedule:

Detours are not anticipated for stage construction. However there are 12 major box culverts that will be analyzed hydrologically during the preliminary design process to verify that they have sufficient capacity. If any of the major box culverts need to be replaced then detours are required at which time we will pursue public involvement.

In addition, there is an aerial power pole line running the length of the project requiring relocation that will further complicate the staging efforts.

Early Completion Incentives recommended for consideration: 🛛 No 🗌 Yes Early Completion Incentives are not anticipated at this time.

## COORDINATION, ACTIVITIES, RESPONSIBILITIES, AND COSTS

Initial Concept Meeting: May 6, 2015, see attached minutes.

Concept Meeting: September 3, 2015, see attached minutes.

Other coordination to date: Two meetings have been held with Rockdale County to discuss the concept. The meetings took place on August 23, 2012 and August 28, 2013. The minutes of these meetings are included in the attachments of this report.

## **REASONS FOR COST INCREASE AND CONTINGENCY JUSTIFICATION:**

THE PROJECT TYPE IS RECONSTRUCTION/REHABILITATION ADDED CAPACITY. THE MID POINT CONTINGENCY OF 15% WAS USE DUE TO THE PROJECT'S POTENTIAL FOR INCREASED COSTS FOR RETAINING WALLS TO AVOID ENVIRONMENTAL RESOURCES. THE CONSTRUCTION, ROW, AND UTILITY COSTS OF THE MULTI-USE TRAIL ON THIS PROJECT IS BEING FUNDED THROUGH P.I. NO. 0012886.

# **CONTINGENCY SUMMARY**

# **REIMBURSABLE UTILTY COSTS**

| UTILITY OWNER              | REIMBURSABLE COST |

Hi Wade,

You previously approved the utility estimates for this project on July 25, 2014, however the project number has changed and the last project number (752210) was left off of the email for approval. Attached is the Utility estimates. Could you send another email of approval with all the right P.I. Nos. so that I can include it in the attachments of the concept report.

#### LOS Analysis for Intersections on the Project Corridor<sup>1</sup>

<sup>1</sup>Analysis used Synchro 8 Software, which uses HCM methodology.

<sup>2</sup>Signalized intersections are indicated by bold typeface. All other intersections are stop-controlled. LOS for un-signalized intersections is for the stop-

controlled (side street) movement. LOS for signalized intersections is the weighted average of all movements

\*Renaissance Drive may require traffic signals. LOS with traffic signals shown in parenthesis.

Attachment 7 Concept Hydrology Study for MS4 Requirements

#### MS4 Requirements – Concept Level Sigman Road Widening Project PI Nos. 0013163, 752200 & 752210, Rockdale County

Blue line streams from USGS topographic maps and county GIS and minor streams located by the Moreland Ecology Department are shown on the concept plan.

Wetland areas are shown on the concept plan. NWI locations are shown and have been field verified by the Moreland Ecology Department.

## Area 1 Station 1117+00 Left

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the beginning of the project to the existing 42" culvert near 1117+30.

| New Impervious Area | 1.87  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.187 | acre-ft  |
| WQv=                | 8146  | Cubic Ft |
| Permanent Poolv=    | 4073  | Cubic Ft |
| CPv=                | 24438 | Cubic Ft |
| 25-year detention   | 12219 | Cubic Ft |
| Total Volume        | 36657 | Cubic Ft |
| Length              | 96    | Ft       |
| Width               | 64    | Ft       |
| Depth               | 6     | Ft       |

## Area 2 Station 1117+00 Right

The widening of Sigman Road occurs on the right side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the beginning of the project to the existing 42" culvert near 1117+30.

| New Impervious Area | 0.90  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.09  | acre-ft  |
| WQv=                | 3920  | Cubic Ft |
| Permanent Poolv=    | 1960  | Cubic Ft |
| CPv=                | 11760 | Cubic Ft |
| 25-year detention   | 5880  | Cubic Ft |
| Total Volume        | 17640 | Cubic Ft |
| Length              | 68    | ft       |
| Width               | 45    | ft       |
| Depth               | 6     | ft       |

This area will be treated with a wet detention pond.

#### Area 3 Station 1118+00 Left

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the existing 42" culvert near station 1117+30 to the high point near station 1120+00.

This area will be treated with an enhanced swale.

| New Impervious Area | 0.29  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.029 | acre-ft  |
| WQv=                | 1263  | Cubic Ft |
| CPv=                | 3789  | Cubic Ft |
| Total Volume        | 5052  | Cubic Ft |
| Length              | 225   | ft       |
| Width               | 15    | ft       |
| Depth               | 1.5   | ft       |

## Area 4 Station 1118+00 Right

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the existing 42" culvert near station 1117+30 to the high point near station 1120+00.

| New Impervious Area | 0.11  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.011 | acre-ft  |
| WQv=                | 479   | Cubic Ft |
| CPv=                | 1437  | Cubic Ft |
| Total Volume        | 1916  | Cubic Ft |
| Length              | 175   | ft       |
| Width               | 8     | ft       |
| Depth               | 1.5   | ft       |

This area will be treated with an enhanced swale.

#### Area 5 Station 1122+50 Left

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1120+00 to the 6x6 box culvert near station 1122+50.

This area will be treated with an enhanced swale.

| New Impervious Area | 0.27  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.027 | acre-ft  |
| WQv=                | 1176  | Cubic Ft |
| CPv=                | 3528  | Cubic Ft |
| Total Volume        | 4704  | Cubic Ft |
| Length              | 220   | ft       |
| Width               | 15    | ft       |
| Depth               | 1.5   | ft       |

## Area 6 Station 1122+00 Left

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1120+00 to the 6x6 box culvert near station 1122+50.

| New Impervious Area | 0.08  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.008 | acre-ft  |
| WQv=                | 348   | Cubic Ft |
| CPv=                | 1044  | Cubic Ft |
| Total Volume        | 1392  | Cubic Ft |
| Length              | 120   | ft       |
| Width               | 8     | ft       |
| Depth               | 1.5   | ft       |

This area will be treated with an enhanced swale.

## Area 7 Station 1122+50 Right

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway.

Due to the proximity of the existing buildings, no water quality facility can be constructed in this area.

#### Area 8 Station 1122+50 Left

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway.

Due to the proximity of the stream and the side road, no water quality facility can be constructed in this area.

## Area 9 Station 1125+50 Left

The widening of Sigman Road occurs on the right side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1128+50 to the intersection near station 1125+00.

| New Impervious Area | 0.14  | Acres    |
|---------------------|-------|----------|
| · · · ·             |       |          |
| WQv=                | 0.014 | acre-ft  |
| WQv=                | 610   | Cubic Ft |
| CPv=                | 1830  | Cubic Ft |
| Total Volume        | 2440  | Cubic Ft |
| Length              | 225   | ft       |
| Width               | 8     | ft       |
| Depth               | 1.5   | ft       |

This area will be treated with an enhanced swale.

#### Area 10 Station 1125+50 Right

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway.

Due to the proximity of the electrical transmission line and the side road, no water quality facility can be constructed in this area.

## Area 11 Station 1134+50 Left

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway.

Due to the historical property located in this drainage area, no water quality facility can be constructed in this area.

## Area 12 Station 1134+50 Right

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drains is from the high point near station 1128+50 to the 4'x6' box culvert near station 1134+50.

| New Impervious Area | 0.57    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.057   | acre-ft  |
| WQv=                | 2483    | Cubic Ft |
| Permanent Poolv=    | 1242    | Cubic Ft |
| CPv=                | 7449    | Cubic Ft |
| 25-year detention   | 3724.5  | Cubic Ft |
| Total Volume        | 11173.5 | Cubic Ft |
| Length              | 54      | ft       |
| Width               | 36      | ft       |
| Depth               | 6       | ft       |

This area will be treated with a wet detention pond.

#### Area 13 Station 1134+50 Left

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the 4'x6' box culvert near station 1134+50 the high point near station 1147+00.

| New Impervious Area | 0.65    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.065   | acre-ft  |
| WQv=                | 2831    | Cubic Ft |
| Permanent Poolv=    | 1416    | Cubic Ft |
| CPv=                | 8493    | Cubic Ft |
| 25-year detention   | 4246.5  | Cubic Ft |
| Total Volume        | 12739.5 | Cubic Ft |
| Length              | 57      | ft       |
| Width               | 38      | ft       |
| Depth               | 6       | ft       |

## Area 14 Station 1134+50 Right

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the 4'x6' box culvert near station 1134+50 the high point near station 1147+00.

| New Impervious Area | 1.19  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.119 | acre-ft  |
| WQv=                | 5184  | Cubic Ft |
| Permanent Poolv=    | 2592  | Cubic Ft |
| CPv=                | 15552 | Cubic Ft |
| 25-year detention   | 7776  | Cubic Ft |
| Total Volume        | 23328 | Cubic Ft |
| Length              | 77    | ft       |
| Width               | 51    | ft       |
| Depth               | 6     | ft       |

This area will be treated with a wet detention pond.

#### Area 15 Station 1151+25 Left

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1147+00 to the 30" culvert near station 1151+25.

| New Impervious Area | 0.22  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.022 | acre-ft  |
| WQv=                | 958   | Cubic Ft |
| Permanent Poolv=    | 479   | Cubic Ft |
| CPv=                | 2874  | Cubic Ft |
| 25-year detention   | 1437  | Cubic Ft |
| Total Volume        | 4311  | Cubic Ft |
| Length              | 33    | ft       |
| Width               | 22    | ft       |
| Depth               | 6     | ft       |

#### Area 16 Station 1151+25 Right

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1147+00 to the 30" culvert near station 1151+25.

Due to the proximity of the existing buildings, no water quality facility can be constructed in this area.

#### Area 17 Station 1151+50 Left

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the 30" culvert near station 1151+25 to the high point near station 1160+00.

| New Impervious Area | 0.45  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.045 | acre-ft  |
| WQv=                | 1960  | Cubic Ft |
| Permanent Poolv=    | 980   | Cubic Ft |
| CPv=                | 5880  | Cubic Ft |
| 25-year detention   | 2940  | Cubic Ft |
| Total Volume        | 8820  | Cubic Ft |
| Length              | 48    | ft       |
| Width               | 32    | ft       |
| Depth               | 6     | ft       |

## Area 18 Station 1151+50 Right

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the 30" culvert near station 1151+25 to the high point near station 1160+00.

During the design phase, consideration should be given to the prospect of acquiring detention pond #1 and expanding its foot print to provide water quality treatment in this area.

| New Impervious Area | 0.83    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.083   | acre-ft  |
| WQv=                | 3615    | Cubic Ft |
| Permanent Poolv=    | 1808    | Cubic Ft |
| CPv=                | 10845   | Cubic Ft |
| 25-year detention   | 5422.5  | Cubic Ft |
| Total Volume        | 16267.5 | Cubic Ft |
| Length              | 65      | ft       |
| Width               | 43      | ft       |
| Depth               | 6       | ft       |

This area will be treated with a wet detention pond.

## Area 19 Station 1180+00 Right

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1160+00 to the 5x5 box culvert near station 1191+75. Due to the proximity of the stream to the roadway the water quality facility will have to be located near station 1180+00 and the area from 1180+00 to 1191+75 will not be treated.

| New Impervious Area | 1.91  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.191 | acre-ft  |
| WQv=                | 8320  | Cubic Ft |
| Permanent Poolv=    | 4160  | Cubic Ft |
| CPv=                | 24960 | Cubic Ft |
| 25-year detention   | 12480 | Cubic Ft |
| Total Volume        | 37440 | Cubic Ft |
| Length              | 98    | ft       |
| Width               | 65    | ft       |
| Depth               | 6     | ft       |

## Area 20 Station 1191+75 Left

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1160+00 to the high point near station 1202+00.

Due to the high density residential and commercial development in this area, no area is available for the treatment facility to be constructed. This area will not be treated.

#### Area 21 Station 1191+75 Right

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the 5x5 box culvert near station 1191+75 to the high point near station 1202+00.

Due to the high density residential and commercial development in this area, no area is available for the treatment facility to be constructed. This area will not be treated.

#### Area 22 Station 1205+00 Left

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1202+00 to the 66" culvert near station 1205+50.

| New Impervious Area | 0.18  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.018 | acre-ft  |
| WQv=                | 784   | Cubic Ft |
| Permanent Poolv=    | 392   | Cubic Ft |
| CPv=                | 2352  | Cubic Ft |
| 25-year detention   | 1176  | Cubic Ft |
| Total Volume        | 3528  | Cubic Ft |
| Length              | 30    | ft       |
| Width               | 20    | ft       |
| Depth               | 6     | ft       |

## Area 23 Station 1205+50 Left

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1226+00 to the 66" culvert near station 1205+50.

| New Impervious Area | 1.06    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.106   | acre-ft  |
| WQv=                | 4617    | Cubic Ft |
| Permanent Poolv=    | 2309    | Cubic Ft |
| CPv=                | 13851   | Cubic Ft |
| 25-year detention   | 6925.5  | Cubic Ft |
| Total Volume        | 20776.5 | Cubic Ft |
| Length              | 74      | ft       |
| Width               | 49      | ft       |
| Depth               | 6       | ft       |

This area will be treated with a wet detention pond.

#### Area 24 Station 1205+00 Right

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1202+00 to the 66" culvert near station 1205+50.

| New Impervious Area | 0.33   | Acres    |
|---------------------|--------|----------|
| WQv=                | 0.033  | acre-ft  |
| WQv=                | 1437   | Cubic Ft |
| Permanent Poolv=    | 719    | Cubic Ft |
| CPv=                | 4311   | Cubic Ft |
| 25-year detention   | 2155.5 | Cubic Ft |
| Total Volume        | 6466.5 | Cubic Ft |
| Length              | 41     | ft       |
| Width               | 27     | ft       |
| Depth               | 6      | ft       |

## Area 25 Station 1205+50 Right

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1226+00 to the 66" culvert near station 1205+50.

| New Impervious Area | 1.95  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.195 | acre-ft  |
| WQv=                | 8494  | Cubic Ft |
| Permanent Poolv=    | 4247  | Cubic Ft |
| CPv=                | 25482 | Cubic Ft |
| 25-year detention   | 12741 | Cubic Ft |
| Total Volume        | 38223 | Cubic Ft |
| Length              | 99    | ft       |
| Width               | 66    | ft       |
| Depth               | 6     | ft       |

This area will be treated with a wet detention pond.

## Area 26 Station 1239+00 Right

The widening of Sigman Road is minimal in this area. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1226+00 to the 36" culvert near station 1240+00.

| New Impervious    |        |         |
|-------------------|--------|---------|
| Area              | 0.16   | Acres   |
| WQv=              | 0.016  | acre-ft |
|                   |        | Cubic   |
| WQv=              | 697    | Ft      |
|                   |        | Cubic   |
| Permanent Poolv=  | 349    | Ft      |
|                   |        | Cubic   |
| CPv=              | 2091   | Ft      |
|                   |        | Cubic   |
| 25-year detention | 1045.5 | Ft      |
|                   |        | Cubic   |
| Total Volume      | 3136.5 | Ft      |
| Length            | 29     | Ft      |
| Width             | 19     | Ft      |
| Depth             | 6      | Ft      |

## Area 27 Station 1240+50 Left

The widening of Sigman Road is minimal in this area. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1226+00 to the 36" culvert near station 1240+00.

| New Impervious Area | 0.67    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.067   | acre-ft  |
| WQv=                | 2919    | Cubic Ft |
| Permanent Poolv=    | 1460    | Cubic Ft |
| CPv=                | 8757    | Cubic Ft |
| 25-year detention   | 4378.5  | Cubic Ft |
| Total Volume        | 13135.5 | Cubic Ft |
| Length              | 59      | ft       |
| Width               | 39      | ft       |
| Depth               | 6       | ft       |

This area will be treated with a wet detention pond.

#### Area 28 Station 1239+00 Right

The widening of Sigman Road occurs on theright side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1251+00 to the 36" culvert near station 1240+00.

| New Impervious Area | 1.05  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.105 | acre-ft  |
| WQv=                | 4574  | Cubic Ft |
| Permanent Poolv=    | 2287  | Cubic Ft |
| CPv=                | 13722 | Cubic Ft |
| 25-year detention   | 6861  | Cubic Ft |
| Total Volume        | 20583 | Cubic Ft |
| Length              | 72    | ft       |
| Width               | 48    | ft       |
| Depth               | 6     | ft       |

# Area 29 Station 1240+50 Left

The widening of Sigman Road occurs on the right side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1251+00 to the 36" culvert near station 1240+00.

| New Impervious Area | 0.57    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.057   | acre-ft  |
| WQv=                | 2483    | Cubic Ft |
| Permanent Poolv=    | 1242    | Cubic Ft |
| CPv=                | 7449    | Cubic Ft |
| 25-year detention   | 3724.5  | Cubic Ft |
| Total Volume        | 11173.5 | Cubic Ft |
| Length              | 54      | ft       |
| Width               | 36      | ft       |
| Depth               | 6       | ft       |

This area will be treated with a wet detention pond.

## Area 30 Station 1269+00 Right

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1251+00 to the 6x8 double box culvert near station 1269+00.

| New Impervious Area | 1.71    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.171   | acre-ft  |
| WQv=                | 7449    | Cubic Ft |
| Permanent Poolv=    | 3725    | Cubic Ft |
| CPv=                | 22347   | Cubic Ft |
| 25-year detention   | 11173.5 | Cubic Ft |
| Total Volume        | 33520.5 | Cubic Ft |
| Length              | 93      | ft       |
| Width               | 62      | ft       |
| Depth               | 6       | ft       |

# Area 31 Station 1269+00 Left

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1251+00 to the 6x8 double box culvert near station 1269+00.

| New Impervious Area | 0.93    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.093   | acre-ft  |
| WQv=                | 4051    | Cubic Ft |
| Permanent Poolv=    | 2026    | Cubic Ft |
| CPv=                | 12153   | Cubic Ft |
| 25-year detention   | 6076.5  | Cubic Ft |
| Total Volume        | 18229.5 | Cubic Ft |
| Length              | 68      | ft       |
| Width               | 45      | ft       |
| Depth               | 6       | ft       |

This area will be treated with a wet detention pond.

## Area 32 Station 1269+00 Left

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1289+00 to the 6x8 double box culvert near station 1269+00.

| New Impervious Area | 1.03    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.103   | acre-ft  |
| WQv=                | 4487    | Cubic Ft |
| Permanent Poolv=    | 2244    | Cubic Ft |
| CPv=                | 13461   | Cubic Ft |
| 25-year detention   | 6730.5  | Cubic Ft |
| Total Volume        | 20191.5 | Cubic Ft |
| Length              | 72      | ft       |
| Width               | 48      | ft       |
| Depth               | 6       | ft       |

## Area 33 Station 1269+00 Right

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1289+00 to the 6x8 double box culvert near station 1269+00.

| New Impervious Area | 1.91  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.191 | acre-ft  |
| WQv=                | 8320  | Cubic Ft |
| Permanent Poolv=    | 4160  | Cubic Ft |
| CPv=                | 24960 | Cubic Ft |
| 25-year detention   | 12480 | Cubic Ft |
| Total Volume        | 37440 | Cubic Ft |
| Length              | 98    | ft       |
| Width               | 65    | ft       |
| Depth               | 6     | ft       |

This area will be treated with a wet detention pond.

## Area 34 Station 1293+00 Right

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1289+00 to the 60" culvert near station 1293+00.

This area will be treated with an enhanced swale.

| New Impervious Area | 0.38  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.038 | acre-ft  |
| WQv=                | 1655  | Cubic Ft |
| CPv=                | 4965  | Cubic Ft |
| Total Volume        | 6620  | Cubic Ft |
| Length              | 325   | ft       |
| Width               | 14    | ft       |
| Depth               | 1.5   | ft       |

## Area 35 Station 1293+00 Left

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1289+00 to the 60" culvert near station 1293+00.

| New Impervious Area | 0.21  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.021 | acre-ft  |
| WQv=                | 915   | Cubic Ft |
| CPv=                | 2745  | Cubic Ft |
| Total Volume        | 3660  | Cubic Ft |
| Length              | 300   | ft       |
| Width               | 8     | ft       |
| Depth               | 1.5   | ft       |

This area will be treated with an enhanced swale.

### Area 36 Station 1293+00 Right

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1303+00 to the 60" culvert near station 1293+00.

| New Impervious Area | 0.95  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.095 | acre-ft  |
| WQv=                | 4138  | Cubic Ft |
| Permanent Poolv=    | 2069  | Cubic Ft |
| CPv=                | 12414 | Cubic Ft |
| 25-year detention   | 6207  | Cubic Ft |
| Total Volume        | 18621 | Cubic Ft |
| Length              | 69    | ft       |
| Width               | 46    | ft       |
| Depth               | 6     | ft       |

# Area 37 Station 1293+00 Left

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1303+00 to the 60" culvert near station 1293+00.

| New Impervious Area | 0.52    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.052   | acre-ft  |
| WQv=                | 2265    | Cubic Ft |
| Permanent Poolv=    | 1133    | Cubic Ft |
| CPv=                | 6795    | Cubic Ft |
| 25-year detention   | 3397.5  | Cubic Ft |
| Total Volume        | 10192.5 | Cubic Ft |
| Length              | 51      | ft       |
| Width               | 34      | ft       |
| Depth               | 6       | ft       |

This area will be treated with a wet detention pond.

## Area 38 Station 1318+50 Right

The widening of Sigman Road occurs symmetrically. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1303+00 to the 4x6 box culvert near station 1318+50.

| New Impervious Area | 0.37  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.037 | acre-ft  |
| WQv=                | 1612  | Cubic Ft |
| Permanent Poolv=    | 806   | Cubic Ft |
| CPv=                | 4836  | Cubic Ft |
| 25-year detention   | 2418  | Cubic Ft |
| Total Volume        | 7254  | Cubic Ft |
| Length              | 44    | ft       |
| Width               | 29    | ft       |
| Depth               | 6     | ft       |

## Area 39 Station 1318+50 Left

The widening of Sigman Road occurs symmetrically. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1303+00 to the 4x6 box culvert near station 1318+50.

This area will not be treated. Insufficient room to construct a water quality structure is present between the outfall and an existing commercial/industrial building.

## Area 40 Station 1318+50 Right

The widening of Sigman Road occurs symmetrically. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1340+00 to the 4x6 box culvert near station 1318+50.

| New Impervious Area | 1.46  | Acres    |
|---------------------|-------|----------|
| WQv=                | 0.146 | acre-ft  |
| WQv=                | 6360  | Cubic Ft |
| Permanent Poolv=    | 3180  | Cubic Ft |
| CPv=                | 19080 | Cubic Ft |
| 25-year detention   | 9540  | Cubic Ft |
| Total Volume        | 28620 | Cubic Ft |
| Length              | 86    | ft       |
| Width               | 57    | ft       |
| Depth               | 6     | ft       |

# Area 41 Station 1318+50 Left

The widening of Sigman Road occurs symmetrically. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1340+00 to the 4x6 box culvert near station 1318+50.

| New Impervious Area | 1.70    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.17    | acre-ft  |
| WQv=                | 7405    | Cubic Ft |
| Permanent Poolv=    | 3703    | Cubic Ft |
| CPv=                | 22215   | Cubic Ft |
| 25-year detention   | 11107.5 | Cubic Ft |
| Total Volume        | 33322.5 | Cubic Ft |
| Length              | 92      | ft       |
| Width               | 61      | ft       |
| Depth               | 6       | ft       |

This area will be treated with a wet detention pond.

## Area 42 Station 1354+50 Right

The widening of Sigman Road occurs to the left of the centerline. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1340+00 to the 4x6 box culvert near station 1354+50.

| New Impervious Area | 1.38    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.138   | acre-ft  |
| WQv=                | 6011    | Cubic Ft |
| Permanent Poolv=    | 3006    | Cubic Ft |
| CPv=                | 18033   | Cubic Ft |
| 25-year detention   | 9016.5  | Cubic Ft |
| Total Volume        | 27049.5 | Cubic Ft |
| Length              | 83      | ft       |
| Width               | 55      | ft       |
| Depth               | 6       | ft       |

# Area 43 Station 1354+50 Left

The widening of Sigman Road occurs to the left of the centerline. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1340+00 to the 4x6 box culvert near station 1354+50.

| New Impervious Area | 0.75    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.075   | acre-ft  |
| WQv=                | 3267    | Cubic Ft |
| Permanent Poolv=    | 1634    | Cubic Ft |
| CPv=                | 9801    | Cubic Ft |
| 25-year detention   | 4900.5  | Cubic Ft |
| Total Volume        | 14701.5 | Cubic Ft |
| Length              | 62      | ft       |
| Width               | 41      | ft       |
| Depth               | 6       | ft       |

This area will be treated with a wet detention pond.

## Area 44 Station 1354+50 to Station 1361+00 Left and Right

This area is located between two culvert crossing and streams. Due to the location of the streams and an existing commercial/industrial building no water quality structures can be constructed in this area.

## Area 45 Station 1361+00 Right

The widening of Sigman Road occurs to the left of the centerline. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1388+00 to the 60" culvert near station 1361+00.

| New Impervious Area | 2.57    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.257   | acre-ft  |
| WQv=                | 11195   | Cubic Ft |
| Permanent Poolv=    | 5598    | Cubic Ft |
| CPv=                | 33585   | Cubic Ft |
| 25-year detention   | 16792.5 | Cubic Ft |
| Total Volume        | 50377.5 | Cubic Ft |
| Length              | 114     | ft       |
| Width               | 76      | ft       |
| Depth               | 6       | ft       |

# Area 46 Station 1364+00 Left

The widening of Sigman Road occurs to the left of the centerline. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1388+00 to the 72" culvert near station 1364+00.

| New Impervious Area | 1.24    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.124   | acre-ft  |
| WQv=                | 5401    | Cubic Ft |
| Permanent Poolv=    | 2701    | Cubic Ft |
| CPv=                | 16203   | Cubic Ft |
| 25-year detention   | 8101.5  | Cubic Ft |
| Total Volume        | 24304.5 | Cubic Ft |
| Length              | 80      | ft       |
| Width               | 53      | ft       |
| Depth               | 6       | ft       |

This area will be treated with a wet detention pond.

## Area 47 Station 1405+00 Right

The widening of Sigman Road occurs to the left of the centerline. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1388+00 to the 72" culvert near station 1405+00.

| New Impervious Area | 1.62    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.162   | acre-ft  |
| WQv=                | 7057    | Cubic Ft |
| Permanent Poolv=    | 3529    | Cubic Ft |
| CPv=                | 21171   | Cubic Ft |
| 25-year detention   | 10585.5 | Cubic Ft |
| Total Volume        | 31756.5 | Cubic Ft |
| Length              | 90      | ft       |
| Width               | 60      | ft       |
| Depth               | 6       | ft       |

## Area 48 Station 1405+00 Left

The widening of Sigman Road occurs to the left of the centerline. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1388+00 to the 72" culvert near station 1405+00.

| New Impervious Area | 0.88    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.088   | acre-ft  |
| WQv=                | 3833    | Cubic Ft |
| Permanent Poolv=    | 1917    | Cubic Ft |
| CPv=                | 11499   | Cubic Ft |
| 25-year detention   | 5749.5  | Cubic Ft |
| Total Volume        | 17248.5 | Cubic Ft |
| Length              | 66      | ft       |
| Width               | 44      | ft       |
| Depth               | 6       | ft       |

This area will be treated with a wet detention pond.

## Area 49 Station 1405+00 Right

The widening of Sigman Road occurs to the left of the centerline. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1430+00 to the 72" culvert near station 1405+00.

| New Impervious Area | 2.38    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.238   | acre-ft  |
| WQv=                | 10367   | Cubic Ft |
| Permanent Poolv=    | 5184    | Cubic Ft |
| CPv=                | 31101   | Cubic Ft |
| 25-year detention   | 15550.5 | Cubic Ft |
| Total Volume        | 46651.5 | Cubic Ft |
| Length              | 110     | ft       |
| Width               | 73      | ft       |
| Depth               | 6       | ft       |

## Area 50 Station 1405+00 Left

The widening of Sigman Road occurs to the left of the centerline. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1430+00 to the 72" culvert near station 1405+00.

| New Impervious Area | 1.29    | Acres    |
|---------------------|---------|----------|
| WQv=                | 0.129   | acre-ft  |
| WQv=                | 5619    | Cubic Ft |
| Permanent Poolv=    | 2810    | Cubic Ft |
| CPv=                | 16857   | Cubic Ft |
| 25-year detention   | 8428.5  | Cubic Ft |
| Total Volume        | 25285.5 | Cubic Ft |
| Length              | 81      | ft       |
| Width               | 54      | ft       |
| Depth               | 6       | ft       |

The purpose of the meeting was to discuss the new contract

### Items Discussed

- Wanted TIA funding for this project.
- Want concept for everything, then will do design from Lester to Irwin (Ph1)
- 2 intersections are ready to go to construction; not designed for widening (outside of Ph1)
  - Move forward or wait? County wants to move forward.
  - Would like to take a preliminary look and at least move strain poles to ultimate location
  - County will send us plans
- Want to consider bike path. Either lanes or multi-use path.
  - Bike path on all 3 segments
  - Park & Ride Dogwood Connector
  - City's master plan includes bike path on Sigman
  - Part of Sigman is already on bike route.
  - Master plan has path along Covington Hwy
  - Want MA to make recommendation: bike lanes or multi-use path, need CST estimate
  - County will provide copy of city's master plan
- There is a culvert within the city's section that was a constraint (low point between Publix and Hospital)
- Section between 138 & Dogwood is on bad soil, significant fill; consider staging & replacing fill.
- County counted 18%-21% truck traffic at Sigman/ North Salem/ Old Covington. There is industry between 138 & Old Covington
- Salem/ 120 project did not meet "logical termini"
  - FHWA suggested extending into Sigman
  - County put job on hold
  - *This Project will draw traffic from 162. 162 could be 6-lanes.*
- Possible extension of bike path along Lester by others. County now looking at concept
- County only has 2-D GIS and aerial photography
- County will provide accident data

- CONCEPT: Aerial concept & report OK for deliverable.
- Property Issues? None that he knows of
- Utility Issues? There was an AT&T long lines at Sigman & Gees Mill Rd.
- Raised medians, sidewalks should be included
- County ok with 11' lanes but prefer 12'
- Phase 1 alone may have logical termini
  - Irwin Bridge is highest volume cross road
- 1 PIOH should be OK, but city may want another meeting.
  - 2-D display on aerial OK
- CONCERN: Meeting Construction schedule for Ph1 (FY2017)
  - BMH & County should kickoff preliminary design before CE approval
- County thinks they have most of the ROW they need for 4 lanes on Ph1
- May be a stream on north side
- Consider flush median in highly developed areas near 138 & hospital (the SR section of Sigman)
- With raised median look at U-Turn openings.
- Signals
  - No new locations come to mind
  - Rockbridge, maybe, none in Ph1
  - Not wild about roundabouts
- Email & Update Schedule
- <u>Need to send letters to Property owners</u>

The purpose of this meeting was to discuss the concept alternatives for the Sigman Rd. Project in central Rockdale County. MA provided an overall, aerial display of Alternative 2 – the Preferred Concept – as a visual-aid. The key points of the meeting are summarized below.

• MA evaluated and presented two concept alternatives (and no-build scenario) as described below.

#### Alternative 1

This alternative consists of widening the road symmetrically, such that the proposed centerline matches the existing centerline. This alternative results in significant environmental impacts, particularly to streams and wetlands, that would require an Individual 404 Permit at the cost of additional time and expense.

### Alternative 2

This alternative consists of asymmetrical widening where the proposed centerline is independent of the existing, allowing the roadway alignment to shift to avoid the significant stream and wetland impacts associated with Alternative 1. Alternative 2 is slightly more expensive than Alternative 1 due to the additional retaining walls that are necessary to reduce impacts; however, Alternative 2 would not require an Individual 404 Permit and is the Preferred Concept Alternative.

- Rockdale County (Miguel) agreed with MA that we should move forward with Alternative 2.
- At Old Camp Trail, the Alt 2 alignment for Sigman Rd. is shifted to the north to avoid a stream. This shift could potentially displace the two properties on the corners. MA will design the improvements to try to avoid the two displacements through the use of retaining walls, raising the roadway grade, or a combination thereof. Old Camp Trail has a steep 12% up-grade.
- MA provided copies of Project Need, Effectiveness, and Logical Termini Justification Form, Draft Concept Report (75% complete), and concept layout for Alternative 2. County would like for MA to go ahead and submit Logical Termini Justification Form and Traffic Study to GDOT for approval.
- The County has submitted schedule to GDOT. MA will contact Darrell Dejean, GDOT PM, to make sure baseline schedule has been set up in GDOT's system. Darrell was contacted on 8-29-2013 and stated that baseline schedule would be approved in roughly one month (around first of October).
- County would like the three current phases to be named Phases 2, 3 & 4. The already-constructed portion from I-20 to Lester Rd. is considered Phase 1. Phase 2 would come next with R/W currently slated for FY 2015.

- County requested fee estimate for Phase 2 engineering (Lester Rd. to Irwin Bridge Rd.). This work would begin in January according to our current schedule.
- County stated their preference for a CE document instead of a more-involved EA. The Phase 1 section from I-20 to Lester was done as a CE. MA stated that, based on previous experience, FHWA would require an EA for a project such as this, but that MA would move forward and push for a CE. The EA would add another year or so to the schedule. Most of that would be review time.
- There are three traffic signal projects along Sigman Rd. that are either already under or will soon be under construction. The locations are listed below.
  - At Sarasota Business Pkwy, existing two-way stop on cross-street to be upgraded to signal.
  - At Gees Mill Rd., existing four-way stop to be upgraded to traffic signal.
  - At Old Covington Hwy, existing traffic signal to be modified. County measured 18% truck traffic at this intersection.
- County indicated that there is shallow rock on west side of project and poor soil conditions/distressed pavement on the east side from SR 138 to I-20.
- There is an existing multi-use path on Irwin Bridge Rd. County wants connectivity to Park & Ride Lot on Lester Rd. that will be provided by the proposed 10' multi use path.
- There are a few new industrial developments under way on the east side around Gees Mill Rd.
- County mentioned possible use of bottom-less culverts. MA mentioned that single span bridges may be a comparable alternative to bottom-less culverts from an economical and environmental standpoint.
- MA described new MS4 Hydrology Study that is now required for GDOT Concept Reports. County asked that this work be included in Phase 1 fee estimate as contingency.
- County requested PowerPoint slides of the overall project and each phase.
- Phase 4 has high truck traffic. It is in industrial area.
- Miguel requested that he be copied on all project correspondence.

### ACTION ITEMS

- MA to contact Darrell Dejean re: baseline schedule.
- MA to move forward with Alt 2.
- MA to submit traffic study to GDOT.
- MA to submit fee estimate for Phase 2 to County.

Mr. Xavier James identified the project and stated its description. He noted that right-of-way is anticipated to be scheduled for 2017 and construction in 2018.

Mr. LN Manchi then discussed the background and history of this project, the scheduling, the cost responsibilities, and the phasing of construction. He stated that project #0013163 is currently in the TIP for PE, ROW and construction with Xavier James as the GDOT project manager. Projects #752200 & 752210 have PE programmed in the TIP with local funding so that the environmental special studies and document could be reviewed by FHWA. Rockdale County plans to design and environmentally clear all three segments of the project and plans to let to contract each project as construction funds become available.

Ms. Karla Poshedly presented the concept layout, stating the need and purpose, project justification, typical section and other features of the project.

Questions and answers were made informally during Ms. Poshedly's presentation. Below are comments that were made during the concept team meeting.

- Expand the Project Justification Statement to include some specifics of Average Daily Traffic Volumes (ADT's), Levels of Service (LOS's) and crash data on Page 3 of the concept report for both no-build and build scenarios. Also, mention economic development and growth in the area and identify points of interest, such as schools, parks, community center, emergency services etc.
- Change the standard and proposed design vehicle on Page 7 from WB 62 to WB 67 as the project is close to I-20.

- Off-site Detours Anticipated: check the box "undetermined" instead of "yes". Off-site detours would be difficult because of the schools, emergency services, etc. If off-site detours are needed for this project, a detour meeting and report will be required. It was indicated by the attendees that the PIOH meeting is a good opportunity to discuss any detours that are known at the time.
- Check "yes" for median usage in the Design Variance table and place a note under the table explaining where and why a design variance will be needed. The second median opening at Conyers Middle school will be needed for school buses to circulate into and out of the school.
- Contact Paul Tanner in the GDOT Office of Transportation Data to determine if whether a temporary state route would be needed for construction on Sigman Road.
- Check information pertaining to GRTA Express Bus Services in the study area.
- Update traffic year in the pavement design.
- Add Williams/Transcontinental pipeline to the list of utility involvements.
- List the anticipated number of impacted parcels separately under each P.I. Number.
- Check "yes" for the box indicating the need for a CWA Section 404 Permit and indicate that the permit type would be NWP 14.
- Place the word "unknown" in the remarks for Buffer Variance.
- Check "no" for the box related to FEMA clarifying that there would be no FEMA coordination required for this project.
- Summarize the explanation of the projects in the TIP and RTP in a table format.
- State May 6, 2015 as the date of the Initial Concept Meeting and indicate that the minutes are attached.
- Add utility owners to the list of responsible parties for utility relocation.
- Change GDOT to Rockdale County as the responsible party for Letting to Contract.
- Change GDOT to Rockdale County as the responsible party for Construction Supervision.
- Change GDOT to Rockdale County as the responsible party for Environmental Mitigation.
- Change GDOT to Rockdale County as the responsible party for Construction Inspection & Materials Testing.
- Separate the project costs for each P.I. Number and show the 80/20 split for federal and local matching funds where applicable.
- It was mentioned that the PFA was not prepared as the project was scheduled to be a local let project.
- Verify that the utility costs only include the reimbursable costs.
- Modify the layout to include improvements on the side streets and the location of existing traffic signals. Traffic study to include this information.
- Evaluate the possibility of reducing the sidewalk and shoulder widths of the project and determine if it can be reduced to save costs and reduce right-of-way impacts.

### Minutes of Concept Team Meeting

### P.I. Nos. 0013163, 0013594, 752210 & 0012886 Rockdale County

### Sigman Road Widening from east of Lester Road to Dogwood Connector

### September 3, 2015 at 10:00 AM GDOT Conference Room 405

After introductions, Mr. Xavier James identified the project and stated its description. He noted that the right-of-way for P.I. No. 0013163 is anticipated to be scheduled for 2017 and construction in 2018.

Mr. LN Manchi discussed the changing of the P.I. Numbers to clarify the project description and funding. He discussed the limits of the multi-use path and explained that P.I. No. 0012886 would be used to fund the multi-use path from east of Lester Road to Irwin Bridge Road.

Mr. Miguel Valentin, Transportation Director for Rockdale County, offered the following introduction to the project. He stated that the project has been in the works for many years; starting in the 1990's and is a priority project for the County. The initial phase was built in the 1990's and the remaining phases have not advanced due to funding constraints. However, the County's goal is to deliver the entire project over time as funding becomes available.

Ms. Karla Poshedly then presented the project justification, other projects in the area, traffic projections, functional classification, design criteria, utilities and other features of the project. She also discussed intersection improvements other than the Sigman Road widening which included:

- double left-turn lanes from eastbound Sigman Road to northbound SR 20
- double left-turn lanes on southbound SR 20 to eastbound Sigman Road
- double left-turns on SR 138 northbound and southbound

Mr. Manchi then explained the environmental studies to date and the permits that would be required for this project.

Mr. Brad Hale discussed construction and possible detours. He said detours are not anticipated for this project. However, there are 10 culverts on this project that will need to be evaluated to determine whether these culverts would have sufficient capacity and would not be replaced. If replacement is required, then a detour plan would be prepared and presented to the public and implemented during construction.

Ms. Poshedly then discussed the cost estimates, alternatives that were considered and project layout.

Questions and answers were made informally during Ms. Poshedly's presentation. Below are comments that were made during the concept team meeting.

- Include lighting costs in the construction costs.
- Obtain a letter of support for lighting. Discuss with Walt Taylor of GDOT. Include letter in Attachments of the concept report.
- Show lighting on typical section.
- P.I. No. 0012886 will only include the cost of the concrete for the trail. ROW and grading will be part of the Sigman Road widening P.I. No. 0013163.
- Look at walls verses ROW for cost savings when designing the multi-use path.
- Break out the cost estimate of the multi-use path in the Summary of Cost table on Page 14.
- Label the multi-use path on the typical section.
- Change P.I. No. on ROW table on Page 10.
- Show \$0 ROW for P.I. No. 0013163 on ROW table on Page 10.
- Revise text in construction section relating to detours on Page 13.
- Change P.I. No. in Cost Estimate Summary Table on Page 14.

There were no comments from GDOT Planning and Utilities Departments that attended.
