

21-70 CONCRETE FLOOR WORK SPECIFICATIONS

GRIND, STAIN AND SEAL:

Remove existing VCT or carpet from flooring, concrete will be properly ground with mechanical machines to allow for proper bonding of materials. Floor holes and cracks should be filled prior to beginning the stain and seal process. Process should be used to void cracking.

Cove base should be installed when the floor has been completed.

JCSS staff will choose stain coloring and cove base color to be used.

RESEAL EXISTING CONCRETE FLOOR:

Please provide detailed process regarding methods you will use to reseal existing concrete floors. Minimally, the cove base will be replaced with new cove base, color to be selected by JCSS staff.
