SUBSTITUTION REQUEST FORM

Note: Failure to complete this form with complete and accurate information in a timely manner will nullify any request for substitution.

TO: _____

PROJECT: _____

We hereby submit for your consideration the following product(s), material(s), and/or detail(s) instead of the specified item per the contract documents for the above indicated project and the following specified reference:

ITEM DESCRIPTION	SPEC SECTION	SPEC PARAGRAPH	DRAWINGS

Proposed Substitution: _____

a. Attach complete technical data, including laboratory tests, if applicable.

b. Include complete information on changes to Drawings and/or Specifications, which proposed substitution would require for its proper installation.

c. Submit with this request all necessary samples and substantiating data to prove equal quality and performance to that which is specified. Clearly mark manufacturer's literature and test reports to indicated equality in performance.

d. Upon submitting any substitution, the Contractor and/or Subcontractors certify that the substituted product does not contain detectable amounts of asbestiform minerals and/or lead compounds in concentrations greater than 1/10th of 1% (0.1%).

Fill in blanks below:

A. Does the proposed substitution affect dimensions indicated on Drawings?

Yes___No___
Explanation: _____
___

_____
___

B. Will the undersigned pay for changes to the building design, including design, engineering and processing costs caused by the proposed substitution?

Yes___No___
Explanation:_____

___

_____

C. Does the proposed substitution have an effect on other trades?

Yes___No___
Explanation:_____

___

_____

D. Does the proposed substitution have an effect on applicable code requirements?

Yes___No___
Explanation:_____

___

_____

E. Outline differences between proposed substitution and specified item:

_____

_____

F. Are the manufacturer's guarantees of the proposed substitution the same as the specified item?

Yes___No___
Explanation:_____

___

_____

G. Is the proposed substitution listed with and conform to the same requirements of the same testing agencies as the specified item, such as ICBO, ASTM, etc.?

Yes___No___
Explanation:_____

___

Has the proposed substitution been accepted by DSA?

Yes ____No ____
Explanation: _____

CERTIFICATION OF EQUAL PERFORMANCE AND ASSUMPTION OF LIABILITY
FOR EQUAL PERFORMANCE BY CONTRACTOR

The undersigned states that the function, appearance and quality are equivalent or superior to the specified item.

NOTICE TO DESIGN-BUILD ENTITIES

NOTICE IS HEREBY GIVEN that the Peralta Community College District ("District") of Oakland, California, acting through its Governing Board, hereinafter referred to as the District, will accept proposals for the award of a Design Build Project.

PCCD PROJECT NO. 20-21/06
BERKELEY CITY COLLEGE- 2118 MILVIA STREET PROJECT

Each proposal must conform to and be responsive to the contract documents and be submitted on a form furnished by the District. Proposals can only be submitted by those Design-Build Entities who have been invited to submit proposals for this Project. The following firms are hereby invited to submit proposals:

1. Blach Construction Co. & Mark Cavagnero Associates
2. Turner Construction Co. & Gould Evans, Inc.
3. XL Construction Corp. & Ratcliff Architects

DETERMINATION OF BEST VALUE: The District will review proposals and request that the three (3) firms participate in an interview process. If the Contract is to be awarded, District will award the Contract to the responsive Design-Build Entity whose proposal is determined to provide the Best Value to the District. District shall provide Document 00 51 03 Notice of Award within one hundred twenty (120) calendar days of Proposal submission. District's written decision shall support the award of the Contract by stating the basis of the award.

THIS IS A LABOR AGREEMENT PROJECT: This project is subject to the terms of the Program Labor Agreement (PLA) executed between the Peralta Community College District and the Building and Construction Trades Council of Almeda County, AFL-CIO . Copies of the PLA are available as part of the DBE-RFP package, Appendix D.

PREVAILING WAGE: The successful proposer shall be required to pay its workers on this project a sum not less than the general prevailing wage rate of per diem wages and not less than the general prevailing rate for holiday and overtime work for work of a similar character in the locality in which the project is performed as provided under California Labor Code section 1770 et sec. The District has determined the prevailing rate of per diem wages and the general prevailing rate for holidays and overtime work in the locality in which this project is to be performed for each craft, classification or type of work needed to execute the work.

Design-Build Entity shall be required to post, at each job site, a copy of such prevailing rate of per diem wages as determined by the Director of the California Department of Industrial Relations.

This project is a Public Works Project. All Contractors and Subcontractors must be registered with the California Department of Industrial Relations (DIR) pursuant to Labor Code Section 1773.3 for monitoring of labor compliance with DIR. For complete information, refer to the following link: www.dir.ca.gov/public-works/SB854.html

SUBSTITUTION OF SECURITIES: District will permit successful Proposer to substitute securities for retention monies withheld to ensure performance of Contract, as set forth in Document 00 57 00 (Escrow Agreement in Lieu of Retention), in accordance with California Public Contract Code, Section 22300. By this reference, Document 00 57 00 (Escrow Agreement in Lieu of Retention) is incorporated in full in this Document 00 11 13.

RESTRICTIONS ON SUBSTITUTIONS AND SOLE SOURCE ITEMS: As a limitation on Proposer's privilege to substitute "or equal" items, District has found that certain items are designated as District standards and certain items are designated to match existing items in use on a particular public improvement either completed or in the course of completion or are available from one source. As to such items, District will not permit substitution. Such items are described in the Bidding Documents.

The Peralta Community College District is an equal opportunity employer.

PART 1 – GENERAL

1.1 SUMMARY

1.1.1 This section provides the rules and procedures by which the District will discuss and negotiate a design build contract with the Proposers whose proposals were determined to be the most advantageous pursuant to the best value method.

1.1.2 Pursuant to the Request for Proposal, the Proposers acknowledged and agreed that by signing their proposal, the District choses to reserve for itself the right to discuss and negotiate a design build contract with the Proposers to determine which proposal is most advantageous to the District would be awarded the contract.

1.2.3 Upon reserving this right, District is required under California Education Code section 17250.25(a)(2)(C)(v) to provide the rules and procedures it shall observe to ensure that any discussions or negotiations to determine the most advantageous proposal are conducted in a fair and impartial manner.

1.2 RULES AND PROCEDURES

1.2.1 Preliminary Completeness Review. As part of the preliminary completeness review process the District may, in its sole discretion, discuss any apparently patently defective or non-responsive Proposal with the submitting Proposer to clarify or correct any errors by the District in reviewing the proposal, to request additional clarifying, instructive, advisory, or corrective information, and to otherwise determine whether a defect may be waived as inconsequential.

1.2.2. Technical Review. During the detailed technical review of Proposers' proposals the District may, in its sole discretion, submit written and/or oral questions to the Proposers regarding their proposals. Proposers must answer the District's questions in writing. The technical review question and answer process is not to be treated as an opportunity for Proposers to change or supplement their proposals; it is intended to make clear, refine or otherwise explain elements of the Proposers' technical proposals.

1.2.3. Technical Review Presentations. Should the District elect to require Proposers to make detailed technical presentations regarding the essential elements of their Proposals, on one or more Evaluation Factor Categories, the District may, in its sole discretion, ask questions of the presenters regarding the presentation topic and/or its relationship to other elements of the Proposal.

1.2.4. Requests for Supplemental Information and Proposals. The District has reserved the right to request supplemental information and proposals from the Proposers. If the District elects, in its sole discretion, to make a request for supplemental material from any Proposer, the District will make a similar request of all Proposers, with equal time for response given to all Proposers.

1.2.5. Best and Final Offer. The District may, at its sole option, either accept a Proposer's proposal by award of a contract or enter into further discussions with one or more Proposers whose proposals are deemed to be reasonably

susceptible of being considered for award. After discussions are concluded or as part of on-going contract negotiations, the District may, in its sole discretion, request a "Best and Final Offer" from one or more Proposers for consideration by the District.

1.2.6. Proposal Evaluations. The District will evaluate responsive Proposers' written proposals and assign each proposal a score pursuant to the scoring criteria described in the Request for Proposal. If there is any conflict between these Rules and the Request for Proposals, the Request for Proposals shall prevail. Special attention should be noted that the following minimum factors collectively represent at least fifty percent (50%) of the total weight of consideration given to all criteria factors in this RFP. The proposals will be ranked from lowest to highest score based on the District's evaluation of all criteria.

1.2.7. Evaluation Panel(s). The District will assemble one or more Evaluation Panels to evaluate the technical components of the Proposals. Evaluation Panels may be composed of members of the Project's construction management team, District's designated contract negotiator(s), specialists from the District's Risk Management Department, the District's Legal Office or authorized Special Counsel to the District, and other qualified individuals whose participation the District determines is necessary or appropriate.

1.2.8. Interview/Presentation Panel. The District will assemble an Interview/Presentation Panel, whose members will be similar to that of the Evaluation Panel(s) and who will score the Proposers presentations of their Proposals. Interview/Presentation Panel members will not know the initial score or rankings of the proposals assigned by the Evaluation Panel(s); if such knowledge comes to them, they will be replaced on the panel by a person of equivalent or higher level. The Interview/Presentation Panel will meet separately with each Proposer for the presentation of their proposal. Each Proposer will be asked to give a short proposal overview. To the maximum extent practical, each Proposer will address the major concerns of the Interview/Presentation Panel, and should be prepared to answer any questions that may arise as a result of the presentation. The Proposers will be chosen by lot to determine the order of presentations. Proposers will bring no more than six (6) representatives to the panel. Proposers representatives will be comprised of the team as noted in the DBE proposal only. No management nor business developing personnel allowed on the presentation team. Proposer's representatives may make a visual presentation; they may bring copies of their proposal.

1.2.9. Interview/Presentation Panel Scoring. Upon completion of each interview/presentation, each member of the Evaluation Panel will separately and confidentially score each Proposer on all criteria. The District will receive the panel member's scores, and combine them with the Proposers' scores for all Evaluation Factor Categories to come to a total score. The proposals will be re-ordered, if necessary, from lowest to highest. Upon re-ordering, the Proposers with the two highest scores will be contacted, and negotiations may commence to determine which proposal is the most advantageous to the District. If there is a tie between the 2nd and 3rd proposals, then negotiations will commence by and among the top three proposals and the District.

1.2.10. Contract Negotiations. The District will assemble a Contract Negotiation Team to engage the Proposer with the highest ranked proposal. The District may, in its sole discretion, conduct concurrent negotiations with the Proposer having the second highest ranked proposal. Upon successful conclusion of negotiations, the District will notify the Proposer having the proposal that is the most advantageous to the District.

1.3. CONE OF SILENCE.

1.3.1 "Cone of Silence" means a prohibition on any communication, oral or written, regarding particular Requests for Proposals (RFP), bids, proposals, contract negotiations, or other competitive solicitations between:

1.3.1.1 Any person who seeks an award of the Project from the District, including a Proposer or Proposer's representative, and

1.3.1.2 Any person appointed to evaluate or recommend selection in such procurement process.

1.3.2 Notwithstanding the foregoing, the Cone of Silence shall not apply to communications with, among or between the Project Manager, Criteria Architect, Construction Manager, and District Special Counsel and their respective staff, or with designated staff who are not serving on an Evaluation Panel or the Interview/Presentation Panel, to obtain clarification or information concerning the subject solicitation. Further, nothing herein shall prohibit District employees or representatives from communicating with each other. For purposes of this section, "Proposer's representative" means an employee, partner, officer, or director of a Proposer, or consultant, lobbyist, or actual or potential subcontractor or sub-consultant of a Proposer.

1.3.3 A Cone of Silence applies to this procurement as of the date this section is issued conformed for release. The Cone of Silence shall terminate at the time the SFUSD Board of Education votes to award or approve a contract, to reject all bids or responses, or otherwise take action that ends the solicitation.

1.3.4 Nothing contained herein shall prohibit any prequalified Proposer or any Proposer's representative:

1.3.4.1 from making public presentations at duly noticed pre-bid conferences or before duly noticed Evaluation Panel and/or Interview/Presentation Panel meetings;

1.3.4.2 from engaging in contract negotiations with the District;

1.3.4.3 from making a public presentation to the Board of Trustees during any duly noticed public meeting; or

1.3.4.4 from communicating in writing with any District employee or official for purposes of seeking clarification or additional information, subject to the provisions of the applicable RFP, or bid documents.

1.3.5 Nothing contained herein shall prohibit the Project Manager or other respective staff from initiating contact with a prequalified Proposer or Proposer's representative and subsequent communications related thereto for the purpose of obtaining further information regarding the RFP, bid, or competitive solicitation or as otherwise permitted by this Section. For purposes of this Section and when not otherwise precluded by the operation of this Section from doing so, the Project Manager or designee shall accept communications from prequalified Proposers or Proposer's representatives while a Cone of Silence is applicable to this competitive solicitation. Such contact shall be in writing and shall be provided to the members of the applicable evaluation, including any response thereto.

1.3.6 The District's Legal Office shall be informed of any person who is alleged to have violated the requirements of this Section. In each such instance, an investigation may be performed and the results of each investigation including a determination of violation, if any, shall be compiled in a report.

1.3.6.1 If there is a determination of violation, the District reserves the right to reprimand, penalize in the form of lower ranking or points, or entirely disqualify the Proposer who committed the violation from further consideration for the pending competitive solicitation.

1.3.6.2 A copy of the report, including a determination of violation, if any, and notice of the penalty imposed as provided for in this Section, if any, shall be immediately furnished or mailed to the Proposer or person who has been investigated.

1.3.5.4

END OF SECTION

EXISTING SITE CONDITIONS

1. This document sets forth the terms and conditions under which a Proposer may review, study, use or rely upon geotechnical data for, or areas near, the Project site (the "Site"), and existing conditions information concerning existing conditions at the Site. This document, the available geotechnical data, and the supplied existing conditions information are not Contract Documents.

2. **REPORTS AND INFORMATION.**

   2.1 District, its consultants and prior contractors have collected documents that provide a general description of the Site and conditions of the Work. These documents may consist of geotechnical reports near and around the Site, contracts, contract specifications, tenant improvement contracts, as-built drawings, utility drawings, and information regarding Underground Facilities. These reports, documents and other information are not part of the Contract Documents.

   2.2 Proposers must inspect all available geotechnical reports and all information regarding existing conditions provided by the District.

   2.3 The following reports and information regarding existing conditions and Underground Facilities at or contiguous to the Site are included with this RFP as reference documents: Refer to RFP document and District registry,

   2.4 The reports, documents, and information described herein are not part of the Contract Documents. However, for Proposer's convenience, copies of the documents have been provided with the Project Manual and Criteria Documents.

3. **USE OF INFORMATION ON EXISTING CONDITIONS.**

   3.1 Above-Ground Existing Conditions. Under no circumstances shall District be deemed to make a warranty or representation of visible existing above-ground conditions, as-built conditions, or other above-ground actual conditions verifiable by reasonable independent investigation. These conditions are verifiable by the Proposer by the performance of its own independent investigation, which the Proposer must perform prior to submitting a Proposal. The Proposer must not rely on the information supplied by District regarding existing above-ground conditions. By submitting a Proposal, Proposer represents and agrees it is not relying on any information regarding existing above-ground conditions supplied by District to the extent such conditions are verifiable by reasonable independent investigation.

   3.2 Underground Facilities. Information supplied regarding existing Underground Facilities at or contiguous to the Site is based on information furnished to District by others (e.g., the owners or builders of such Underground Facilities or others). For those Underground Facilities that are owned by District, District will be responsible for the accuracy of information regarding Underground Facilities and for any conditions that materially differ from those indicated in the information provided by the District, provided that Proposer has conducted an independent

review of the information provided by the District and discrepancies were not apparent. Proposer is responsible for understanding and interpreting all information on Underground Facilities other than those owned by District and District agrees that Proposer is not responsible for the accuracy of such information or reports. In reviewing any information regarding Underground Facilities, Proposer is responsible for making all reasonable interpretations and drawing all reasonable conclusions from that information but shall be solely responsible for any unreasonable interpretations or conclusions drawn therefrom. Compensation to the Design Builder for unknown differing site conditions shall be allowed as is provided for in the Contract Documents.

4. **LIMITED RELIANCE PERMITTED ON CERTAIN INFORMATION.**

4.1 Geotechnical Data. By submitting a Proposal, Proposer represents and agrees that in submitting its Proposal, it is not relying on any geotechnical data supplied by District, except as specifically set forth herein.

4.2 The Proposer may rely upon the accuracy of the "technical data" contained in the geotechnical reports and drawings identified above, but only insofar as it relates to subsurface conditions and only if Proposer has conducted a thorough review of such technical data and discrepancies were not apparent. The term "technical data" in the referenced reports and drawings shall be limited as follows:

4.2.1 The term "technical data" shall include actual reported depths, reported quantities, reported soil types, reported soil conditions, and reported material, equipment or structures that were encountered during subsurface exploration.

4.2.2 The term "technical data" does not include, and the Proposer may not rely upon, any other data, interpretations, opinions, or information shown or indicated in such drawings or reports that otherwise relate to subsurface conditions or described structures.

4.2.3 The term "technical data" shall not include the location of Underground Facilities.

4.2.4 The Proposer may not rely on the completeness of reports and drawings for design or construction. The Proposer may rely upon the general accuracy of the "technical data" contained in such reports or drawings.

4.2.5 The Proposer is responsible for making reasonable interpretations of technical data and reports. The Proposer is solely responsible for any unreasonable interpretation or conclusion drawn from any "technical data" or any other data, interpretations, opinions or information contained in supplied geotechnical data. However, compensation for unknown differing site conditions shall be allowed as is provided for in the Contract Documents.

5. **INVESTIGATIONS.**

5.1 Before submitting a Proposal, each Proposer shall conduct its own visual inspection of the Site and will be responsible for performing its own Geotechnical Investigation and report all other investigations that Proposer deems are necessary to make its Proposal and for performing and furnishing Work in accordance with the time, price and other terms and conditions of the Contract Documents. Proposer may rely upon the geotechnical and existing conditions data provided by the District only to the extent the Proposer's geotechnical engineer deems appropriate in the exercise of its professional judgment. The design shall not be developed based solely upon the information provided by the District.

Each Proposer will be responsible for obtaining and reviewing such additional or supplementary examinations, investigations, explorations, tests, studies and data concerning conditions (surface, subsurface and Underground Facilities) at or contiguous to the Site or otherwise, as deemed necessary by its geotechnical engineer, that may affect structural design, cost, progress, performance or furnishing of Work or that relate to any aspect of the means, methods, techniques, sequences or procedures of construction to be employed by the Proposer and safety precautions and programs incident thereto, and for performing reasonable on-site inspections for visible conditions, which the Proposer deems necessary to make its Bid and for performing and furnishing the Work in accordance with the time, price and other terms and conditions of the Contract Documents.

Each Proposer shall conduct its own Hazardous Material Survey the Proposer deems necessary for the performance of its work.

6. **ACCESS TO SITE**.

6.1 Subject to District approval and reasonable scheduling, District will provide each Proposer access to the Site to conduct such examinations and investigations as each Proposer deems necessary for submission of its Proposal.

7. Section 01 88 20 (Miscellaneous Hazardous Materials Performance Requirements) describes hazardous material information included with the Request for Proposal Documents and use of data therein.

8. **REPORTS AND INFORMATION.**

8.1 The District, its consultants, Contractors, and agents have prepared and are preparing documents providing a general description of the Project Site and identifying locations of known or suspected hazardous materials. The existing documents consist of surveys included in the Project Manual. Additional documents may be provided to Proposers in an Addendum.

8.2 The Project Site consists of the following:

The Work generally consists of two primary phases:

Phase 1: Demolition of the existing office building at 2118 Milvia Street, Berkeley, CA 94704 originally constructed in 1966. Work includes the demolition of entire building, disposal of all existing building components down to and including slab, foundations, 12" of pier caps and site features including, but not limited to all existing utilities, gas meters, storm and sewer drainage, paving, trees and stumps, fencing, etc. within the designated scope of work boundaries.

The work also to include the abatement and removal of all asbestos containing material, lead base paint removal and pcb ballast removal in entire structure.

Phase 2: Completion of underground demolition and construction a new, 6-story classroom and administration building under DSA jurisdiction. The new building will be comprised primarily of general use classrooms, art and anthropology classrooms, faculty and administrative offices, a Learning Resource Center, Student Services & Learning Communities, student lounge, wellness clinic, rooftop patio, and building services for Berkeley City College.

9. **USE OF DATA**

9.1 Data regarding the locations and types of hazardous materials was obtained for use of District and its consultants, Contractors, agents, and tenants for planning and design and are not part of the Contract Documents. Proposer may rely on this information for its accuracy regarding the locations of potentially hazardous materials related to the Work. The provisions of Section 4 (Limited Reliance Permitted on Certain Information) apply to any hazardous materials information. Compensation to the Design Builder for unknown differing site conditions, including conditions that differ materially from those indicated in the reports or surveys referred to herein, shall be allowed as provided in the Contract Documents.

9.2 District does not warrant and makes no representation regarding the accuracy, completeness or thoroughness of any information verifiable by visual inspection. By submitting a Proposal, Proposer represents and agrees that in submitting a Proposal it has reviewed the data regarding existing conditions supplied by District concerning the general location of potentially hazardous materials.

10. **INVESTIGATIONS.**

10.1 Before submitting a Proposal, each Proposer shall conduct its own visual inspection of the Site, and with the District's consent, shall perform other investigations that Proposer deems are necessary to make its Proposal and for performing and furnishing Work in accordance with the time, price and other terms and conditions of the Contract Documents.

END OF DOCUMENT

LABOR COMPLIANCE PROGRAM

SECTION I
PUBLIC WORKS SUBJECT TO PREVAILING WAGE LAWS

State prevailing wage rates apply to all public works contracts as set forth in Labor Code Sections 1720 *et seq*., and include, but are not limited to, such types of work as construction, alteration, demolition, repair, or maintenance work. The Division of Labor Statistics and Research (DLSR) predetermines the appropriate prevailing wage rates for particular construction trades and crafts by county.

1 A. Types of Contracts to Which Prevailing Wage Requirements Apply

As provided in California Labor Code sections 17250.30(d)(2) and (d)(3), the regulations adopted by the Department of Industrial Relations pursuant to subdivision (g) of Section 1771.5 of the Labor Code apply such that the District shall reimburse the department for its reasonable and directly related costs of performing prevailing wage monitoring and enforcement on public works projects pursuant to rates established by the department as set forth in subdivision (h) of Section 1771,5 of the Labor Code. In lieu of reimbursing the Department of Industrial Relations for its reasonable and directly related costs of performing, monitoring, and enforcement on public works projects, the District will continue operating its existing previously approved labor compliance program to monitor and enforce prevailing wage requirements on this project because the District entered into a collective bargaining agreement that binds all of the contractors performing work on the project and that includes a mechanism for resolving disputes about the payment of wages.

SECTION II
JOB START MEETING

After the District awards the contract, and prior to the commencement of the work, a Job Start meeting (Pre-Job conference) may be conducted by the Labor Compliance Officer (LCO) with the contractor and those subcontractors listed in its bid documents.

At that meeting, the LCO will discuss the federal and state labor law requirements applicable to the contract, including prevailing wage requirements, the respective record keeping responsibilities, the requirement for the submittal of certified payroll records to the District, and the prohibition against discrimination in employment.

The LCO will provide the contractor and each subcontractor with a Checklist of Labor Law Requirements and will discuss in detail the following checklist items:

1. The contractor’s duty to pay prevailing wages (Labor Code Section 1770 et seq.);

2. The contractor’s duty to employ registered apprentices (Labor Code Section 1777.5);

3. The penalties for failure to pay prevailing wages and to employ apprentices, including forfeitures and debarment (Labor Code Sections 1775, 1777.7, and 1813);

4. The requirement to maintain and submit copies of certified payroll records to the District, on a weekly basis, as required (Labor Code Section 1776), and penalties for failure to do so (Labor Code Section 1776(g)); the requirement includes and applies to all subcontractors performing work on the project even if their portion of the work is less than one-half of one percent (1/2 of 1%) of the total amount of the contract.

5. The prohibition against employment discrimination (Labor Code Sections 1735 and 1777.6; the Government Code; and Title VII of the Civil Rights Act of 1964, as amended);

6. The prohibition against taking or receiving a portion of an employee's wages (Labor Code Section 1778) (kickback);

7. The prohibition against accepting fees for registering any person for public works (Labor Code Section 1779) or for filing work orders on public works (Labor Code Section 1780);

8. The requirement to list all subcontractors that are performing one-half of one percent of the total amount of the contract (Public Contract Code Section 4100 et seq.);

9. The requirement to be properly licensed and to require all subcontractors to be properly licensed, and the penalty for employing workers while unlicensed (Labor Code Section 1021 and under California Contractors License Law, also, see Business and Professions Code Section 7000, et seq.);

10. The prohibition against unfair competition (Business and Professions Code Sections 17200-17208);

11. The requirement that the contractor and subcontractor be properly insured for Workers' Compensation (Labor Code Section 1861); and

12. The requirement that the contractor abide by the Occupational Safety and Health laws along with all regulations that apply to the project.

It will be the DBE's responsibility to provide copies of the LCP package to all listed subcontractors and to any substituted subcontractors.

SECTION III
REVIEW OF CERTIFIED PAYROLL RECORDS

A. Certified Payroll Records Required

The DBE and each subcontractor shall maintain payrolls and basic records (timecards, canceled checks, cash receipts, trust fund forms, accounting ledgers, tax forms, superintendent and foreman daily logs, etc.) during the course of the work and shall preserve them for a period of three (3) years thereafter for all trades workers working on the project. Such records shall include the name, address, and social security number of each worker, his or her classification, a general description of the work each employee performed each day,

the rate of pay (including rates of contributions for, or costs assumed to provide fringe benefits), daily and weekly number of hours worked, and actual wages paid.

1. Submittal of Certified Payroll Records

   The DBE and each subcontractor shall maintain weekly certified payroll records for submittal to the Peralta Community College District LCO as required. The DBE shall be responsible for the submittal of payroll records of all its subcontractors. All certified payroll records shall be accompanied by a statement of compliance signed by the DBE or each subcontractor indicating that the payroll records are correct and complete, that the wage rates contained therein are not less than those determined by the Director of the Department of Industrial Relations, and that the classifications set forth for each employee conform with the work performed.

   Time cards, front and back copies of cancelled checks, daily logs, employee sign-in sheets and/or any other record maintained for the purposes of reporting payroll may be requested by the Labor Compliance Officer at any time and shall be provided within 10 days following the receipt of the request.

2. Full Accountability

   Each individual, laborer or craftsperson working on the project must appear on the payroll. The basic concept is that the employer who pays the trades worker must report that individual on its payroll. This includes individuals working as apprentices in an apprenticeable trade. Owner-operators are to be reported by the contractor employing them, rental equipment operators are to be reported by the rental company paying the workers' wages.

   Sole owners and partners who work on a contract must also submit a certified payroll record listing the days and hours worked, and the trade classification descriptive of the work actually done.

   The DBE shall provide the records required under this section to the District within five (5) days of each payday, and make them available for inspection by the Department of Industrial Relations, and shall permit representatives of each to interview trades workers during working hours on the project site.

3. Responsibility for Subcontractors

   DBE shall be responsible for ensuring adherence to labor standards provisions by its subcontractors. Moreover, DBE is responsible for Labor Code violations of its subcontractors in accordance with Labor Code section 1775.

4. Payment to Employees

   Employees must be paid unconditionally, and not less often than once each week, the full amounts, that are due and payable for the period covered by the particular payday. Thus, an employer must establish a fixed workweek (Sunday through Saturday, for example) and an established payday (such as every Friday or the preceding day should such

payday fall on a holiday). On each and every payday, each worker must be paid all sums due as of the end of the preceding workweek and must be provided with an itemized wage statement.

If an individual is called a subcontractor, whereas, in fact, he/she is merely a journey level mechanic supplying only his/her labor, such an individual would not be deemed a bona fide subcontractor and must be reported on the payroll of the DBE as a trades worker. Moreover, any person who does not hold a valid contractor's license cannot be a subcontractor, and anyone hired by that person is the worker or employee of the general contractor for purposes of prevailing wage requirements, certified payroll reporting and workers' compensation laws.

The worker's rate for straight time hours must equal or exceed the rate specified in the contract by reference to the "Prevailing Wage Determinations" for the class of work actually performed. Any work performed on Saturday, Sunday, and/or on a holiday, or portion thereof, must be paid the prevailing rate established for those days regardless of the fixed workweek. The hourly rate for hours worked in excess of 8 hours in a day and 40 hours in a workweek shall be premium pay. All work performed on Saturday, Sunday and holidays shall be paid pursuant to the Prevailing Wage determination.

B. Apprentices

Apprentices shall be permitted to work as such only when they are registered, individually, under a bona fide apprenticeship program registered and approved by the State Division of Apprenticeship Standards. The allowable ratio of apprentices to journeypersons in any craft/classification shall not be greater than the ratio permitted to the DBE as to its entire workforce under the registered program.

Any worker listed on a payroll at an apprentice wage rate who is not registered shall be paid the journey level wage rate determined by the Department of Industrial Relations for the classification of the work he/she actually performed. Pre-apprentice trainees, trainees in non-apprenticeable crafts, and others who are not duly registered will not be permitted on the project unless they are paid full prevailing wage rates as journeypersons.

Compliance with California Labor Code Section 1777.5 requires all public works contractors and subcontractors to:

1. Submit contract award information to the apprenticeship committee for each apprenticeable craft or trade in the area of the Project;

2. Request dispatch of apprentices from the applicable Apprenticeship Program(s) and employ apprentices on public works projects in a ratio to journeypersons which in no case shall be less than one (1) hour of apprentice work to each five (5) hours of journeyperson work; and

3. Contribute to the applicable Apprenticeship Program(s) or the California Apprenticeship Council in the amount identified in the prevailing wage rate publication for journeypersons and apprentices. If payments are not made to an Apprenticeship Program, they shall be

made to the California Apprenticeship Council, Post Office Box 420603, San Francisco, CA 94142.

If the DBE is registered to train apprentices, it shall furnish written evidence of the registration (i.e., Apprenticeship Agreement or Statement of Registration) of its training program and apprentices, as well as the ratios allowed and the wage rates required to be paid thereunder for the area of construction, prior to using any apprentices in the contract work. It should be noted that a prior approval for a separate project does not confirm approval to train on any project. The DBE/subcontractor must check with the applicable Joint Apprenticeship Committee to verify status.

C. Audit of Certified Payroll Records

Audits shall be conducted by the LCO, and shall also be conducted at the request of the Labor Commissioner to determine whether all trades workers on project sites have been paid according to the prevailing wage rates.

END OF SECTION

KNOW ALL PERSONS BY THESE PRESENTS:

WHEREAS, the governing board ("Board") of the Peralta Community College District ("District") and [Design/Builder] ("Principal") have entered into a contract for the furnishing of all materials and labor, services and transportation, necessary, convenient, and proper to perform the following project:

[Name Of] Project

("Project" or "Contract") which Contract dated _____, 2020, and all of the Contract Documents attached to or forming a part of the Contract, are hereby referred to and made a part hereof; and

WHEREAS, pursuant to law and the Contract, the Principal is required, before entering upon the performance of the work, to file a good and sufficient bond with the body by which the Contract is awarded in an amount equal to one hundred percent (100%) of the Contract price, to secure the claims to which reference is made in sections 9000 through 9510 and 9550 through 9566 of the Civil Code, and division 2, part 7, of the Labor Code.

NOW, THEREFORE, the Principal and _____ _____ ("Surety") are held and firmly bound unto all laborers, material men, and other persons referred to in said statutes in the sum of _____ Dollars ($_____), lawful money of the United States, being a sum not less than the total amount payable by the terms of Contract, for the payment of which sum well and truly to be made, we bind ourselves, our heirs, executors, administrators, successors, or assigns, jointly and severally, by these presents.

The condition of this obligation is that if the Principal or any of its subcontractors, or their heirs, executors, administrators, successors, or assigns of any, all, or either of them shall fail to pay for any labor, materials, provisions, or other supplies, used in, upon, for or about the performance of the work contracted to be done, or for any work or labor thereon of any kind, or for amounts required to be deducted, withheld, and paid over to the Employment Development Department from the wages of employees of the Principal or any of his or its subcontractors of any tier under Section 13020 of the Unemployment Insurance Code with respect to such work or labor, that the Surety will pay the same in an amount not exceeding the amount herein above set forth, and also in case suit is brought upon this bond, will pay a reasonable attorney's fee to be awarded and fixed by the court, and to be taxed as costs and to be included in the judgment therein rendered.

It is hereby expressly stipulated and agreed that this bond shall inure to the benefit of any and all persons, companies, and corporations entitled to file claims under section 9100 of the Civil Code, so as to give a right of action to them or their assigns in any suit brought upon this bond.

Should the condition of this bond be fully performed, then this obligation shall become null and void; otherwise it shall be and remain in full force and affect.

And the Surety, for value received, hereby stipulates and agrees that no change, extension of time, alteration, or addition to the terms of Contract or the specifications accompanying the same shall in any manner affect its obligations on this bond, and it does hereby waive notice of any such change, extension, alteration, or addition.

IN WITNESS WHEREOF, two (2) identical counterparts of this instrument, each of which shall for all purposes be deemed an original thereof, have been duly executed by the Principal and Surety above named, on the _____ day of _____, 20___.

Principal	Surety
By	By
	Name of California Agent of Surety
	Address of California Agent of Surety
	Telephone No. of California Agent of Surety

Design/Builder must attach a Notarial Acknowledgment for all Surety's signatures and a Power of Attorney and Certificate of Authority for Surety. The California Department of Insurance must authorize the Surety to be an admitted surety insurer.

END OF DOCUMENT

PERFORMANCE BOND
(100% of Contract Price)

KNOW ALL PERSONS BY THESE PRESENTS:

WHEREAS, the governing board ("Board") of the Peralta Community College District ("District") and [Design/Builder] ("Principal") have entered into a contract for the furnishing of all materials and labor, services and transportation, necessary, convenient, and proper to perform the following project:

[Name Of] Project

("Project" or "Contract") which Contract dated _____, 2020, and all of the Contract Documents attached to or forming a part of the Contract, are hereby referred to and made a part hereof; and

WHEREAS, said Principal is required under the terms of the Contract to furnish a bond for the faithful performance of the Contract.

NOW, THEREFORE, the Principal and _____ _____ ("Surety") are held and firmly bound unto the Board of the District in the penal sum of

_____

Dollars ($_____), lawful money of the United States, for the payment of which sum well and truly to be made we bind ourselves, our heirs, executors, administrators, successors, and assigns jointly and severally, firmly by these presents, to:

- Promptly perform all the work required to complete the Project; and

- Pay to the District all damages the District incurs as a result of the Principal's failure to perform all the Work required to complete the Project.

Or, at the District's sole discretion and election, the Surety shall obtain a bid or bids for completing the Contract in accordance with its terms and conditions, and upon determination by the District of the lowest responsible bidder, arrange for a contract between such bidder and the District and make available as Work progresses sufficient funds to pay the cost of completion less the "balance of the Contract Price," and to pay and perform all obligations of Principals under the Contract, including, without limitation, all obligations with respect to warranties, guarantees and the payment of liquidated damages. The term "balance of the Contract Price," as used in this paragraph, shall mean the total amount payable to Principal by the District under the Contract and any modifications thereto, less the amount previously paid by the District to the Principal, less any withholdings by the District allowed under the Contract. District shall not be required or obligated to accept a tender of a completion contractor from the Surety for any or no reason.

The condition of the obligation is such that, if the above bound Principal, its heirs, executors, administrators, successors, or assigns, shall in all things stand to and abide by, and well and truly keep and perform the covenants, conditions, and agreements in the Contract and any alteration thereof made as therein provided, on its part to be kept and performed at the time and in the intent and meaning, including all contractual guarantees and warrantees of materials and workmanship, and shall indemnify and save harmless the District, its trustees, officers and agents, as therein stipulated, then this obligation shall become null and void, otherwise it shall be and remain in full force and virtue.

Surety expressly agrees that the District may reject any contractor or subcontractor proposed by Surety to fulfill its obligations in the event of default by the Principal. Surety shall not utilize Principal in completing the Work nor shall Surety accept a Bid from Principal for completion of the Work if the District declares the Principal to be in default and notifies Surety of the District's objection to Principal's further participation in the completion of the Work.

As a condition precedent to the satisfactory completion of the Contract, the above obligation shall hold good for a period equal to the warranty and/or guarantee period of the Contract, during which time Surety's obligation shall continue if Design/Builder shall fail to make full, complete, and satisfactory repair and replacements and totally protect the District from loss or damage resulting from or caused by defective materials or faulty workmanship. The obligations of Surety hereunder shall continue so long as any obligation of Design/Builder remains. Nothing herein shall limit the District's rights or the

Design/Builder's or Surety's obligations under the Contract, law or equity, including, but not limited to, California Code of Civil Procedure section 337.15.

The Surety, for value received, hereby stipulates and agrees that no change, extension of time, alteration, or addition to the terms of the contract or to the work to be performed thereunder or the specifications accompanying the same shall in any way affect its obligation on this bond. The Surety also stipulates and agrees that it shall not be exonerated or released from the obligation of this bond by any overpayment or underpayment by the District that is based upon estimates approved by the Architect. The Surety does hereby waive notice of any such change, extension of time, alteration, or addition to the terms of the Contract or to the work or to the specifications.

IN WITNESS WHEREOF, two (2) identical counterparts of this instrument, each of which shall for all purposes be deemed an original thereof, have been duly executed by the Principal and Surety above named, on the _____ day of _____, 20___.

Principal	Surety
By	By
	Name of California Agent of Surety
	Address of California Agent of Surety
	Telephone No. of California Agent of Surety

Design/Builder must attach a Notarial Acknowledgment for all Surety's signatures and a Power of Attorney and Certificate of Authority for Surety. The California Department of Insurance must authorize the Surety to be an admitted surety insurer.

REGISTERED SUBCONTRACTORS LIST
(Labor Code Section 1771.1)

PROJECT: [Name Of] Project

Date Submitted (for Updates): _____

Design/Builder acknowledges and agrees that it must clearly set forth below the name and Department of Industrial Relations (DIR) registration number of each subcontractor for all tiers who will perform work or labor or render service to Design/Builder or its subcontractors in or about the construction of the Work at least two (2) weeks before the subcontractor is scheduled to perform work. This document is to be updated as all tiers of subcontractors are identified.

Design/Builder acknowledges and agrees that, if Design/Builder fails to list as to any subcontractor of any tier who performs any portion of Work, the Contract is subject is subject to cancellation and the Design/Builder will be subjected to penalty under applicable law.

If further space is required for the list of proposed subcontractors, attach additional copies of page 2 showing the required information, as indicated below.

END OF DOCUMENT

HAZARDOUS MATERIALS
PROCEDURES & REQUIREMENTS

1. Summary

   This document includes information applicable to hazardous materials and hazardous waste abatement.

2. Notice of Hazardous Waste or Materials

   a. Design/Builder shall give notice in writing to the District, the Construction Manager, and the Architect promptly, before any of the following materials are disturbed, and in no event later than twenty-four (24) hours after first observance, of any:

      (1) Material that Design/Builder believes may be a material that is hazardous waste or hazardous material, as defined in section 25117 of the Health

and Safety Code, that is required to be removed to a Class I, Class II, or Class III disposal site in accordance with provisions of existing law;

(2) Other material that may present a substantial danger to persons or property exposed thereto in connection with Work at the site.

b. Design/Builder's written notice shall indicate whether the hazardous waste or material was shown or indicated in the Contract Documents to be within the scope of Work, and whether the materials were brought to the site by Design/Builder, its Subcontractors, suppliers, or anyone else for whom Design/Builder is responsible. As used in this section the term "hazardous materials" shall include, without limitation, asbestos, lead, Polychlorinated biphenyl (PCB), petroleum and related hydrocarbons, and radioactive material.

c. In response to Design/Builder's written notice, the District shall investigate the identified conditions.

d. If the District determines that conditions do not involve hazardous materials or that no change in terms of Contract is justified, the District shall so notify Design/Builder in writing, stating reasons. If the District and Design/Builder cannot agree on whether conditions justify an adjustment in Contract Price or Contract Time, or on the extent of any adjustment, Design/Builder shall proceed with the Work as directed by the District.

e. If after receipt of notice from the District, Design/Builder does not agree to resume Work based on a reasonable belief it is unsafe, or does not agree to resume Work under special conditions, then District may order such portion of Work that is in connection with such hazardous condition or such affected area to be deleted from the Work, or performed by others, or District may invoke its rights to terminate the Contract in whole or in part. District will determine entitlement to or the amount or extent of an adjustment, if any, in Contract Price or Contract Time as a result of deleting such portion of Work, or performing the Work by others.

f. If Design/Builder stops Work in connection with any hazardous condition and in any area affected thereby, Design/Builder shall immediately redeploy its workers, equipment, and materials, as necessary, to other portions of the Work to minimize delay and disruption.

3. Additional Warranties and Representations

a. Design/Builder represents and warrants that it, its employees, and its subcontractors and their employees, shall at all times have the required levels of familiarity with the Site and the Work, training, and ability to comply fully with all applicable laws and contractual requirements for safe and expeditious performance of the Work, including whatever training is or may be required regarding the activities to be performed (including, but not limited to, all training required to address adequately the actual or potential dangers of Contract performance).

b. Design/Builder represents and warrants that it, its employees, and its subcontractors and their employees, shall at all times have and maintain in good standing any and all certifications and licenses required by applicable federal, state, and other governmental and quasi-governmental requirements applicable to the Work.

c. Design/Builder represents and warrants that it has studied carefully all requirements of the Specifications regarding procedures for demolition, hazardous waste abatement, or safety practices, specified in the Contract, and prior to submitting its bid, has either (a) verified to its satisfaction that the specified procedures are adequate and sufficient to achieve the results intended by the Contract Documents, or (b) by way of approved "or equal" request or request for clarification and written Addenda, secured changes to the specified procedures sufficient to achieve the results intended by the Contract Documents. Design/Builder accepts the risk that any specified procedure will result in a completed Project in full compliance with the Contract Documents.

4. Monitoring and Testing

a. District reserves the right, in its sole discretion, to conduct air monitoring, earth monitoring, Work monitoring, and any other tests (in addition to testing required under the agreement or applicable law), to monitor Contract requirements of safe and statutorily compliant work methods and (where applicable) safe re-entry level air standards under state and federal law upon completion of the job, and compliance of the work with periodic and final inspection by public and quasi-public entities having jurisdiction.

b. Design/Builder acknowledges that District has the right to perform, or cause to be performed, various activities and tests including, but not limited to, pre-abatement, during abatement, and post-abatement air monitoring, that District shall have no obligation to perform said activities and tests, and that a portion of said activities and tests may take place prior to the completion of the Work by Design/Builder. In the event District elects to perform these activities and tests, Design/Builder shall afford District ample access to the Site and all areas of the Work as may be necessary for the performance of these activities and tests. Design/Builder will include the potential impact of these activities or tests by District in the Contract Price and the Scheduled Completion Date.

c. Notwithstanding District's rights granted by this paragraph, Design/Builder may retain its own industrial hygiene consultant at Design/Builder’s own expense and may collect samples and may perform tests including, but not limited to, pre-abatement, during abatement, and post-abatement personal air monitoring, and District reserves the right to request documentation of all such activities and tests performed by Design/Builder relating to the Work and Design/Builder shall immediately provide that documentation upon request.

5. Compliance with Laws

a. Design/Builder shall perform safe, expeditious, and orderly work in accordance with the best practices and the highest standards in the hazardous waste

abatement, removal, and disposal industry, the applicable law, and the Contract Documents, including, but not limited to, all responsibilities relating to the preparation and return of waste shipment records, all requirements of the law, delivering of all requisite notices, and obtaining all necessary governmental and quasi-governmental approvals.

b. Design/Builder represents that it is familiar with and shall comply with all laws applicable to the Work or completed Work including, but not limited to, all federal, state, and local laws, statutes, standards, rules, regulations, and ordinances applicable to the Work relating to:

(1) The protection of the public health, welfare and environment;

(2) Storage, handling, or use of asbestos, PCB, lead, petroleum based products, radioactive material, or other hazardous materials;

(3) The generation, processing, treatment, storage, transport, disposal, destruction, or other management of asbestos, PCB, lead, petroleum, radioactive material, or hazardous waste materials or other waste materials of any kind; and

(4) The protection of environmentally sensitive areas such as wetlands and coastal areas.

6. Disposal

a. Design/Builder has the sole responsibility for determining current waste storage, handling, transportation, and disposal regulations for the job Site and for each waste disposal facility. Design/Builder must comply fully at its sole cost and expense with these regulations and any applicable law. District may, but is not obligated to, require submittals with this information for it to review consistent with the Contract Documents.

b. Design/Builder shall develop and implement a system acceptable to District to track hazardous waste from the Site to disposal, including appropriate "Hazardous Waste Manifests" on the EPA form, so that District may track the volume of waste it put in each landfill and receive from each landfill a certificate of receipt.

c. Design/Builder shall provide District with the name and address of each waste disposal facility prior to any disposal, and District shall have the express right to reject any proposed disposal facility. Design/Builder shall not use any disposal facility to which District has objected. Design/Builder shall document actual disposal or destruction of waste at a designated facility by completing a disposal certificate or certificate of destruction forwarding the original to the District.

7. Permits

a. Before performing any of the Work, and at such other times as may be required by applicable law, Design/Builder shall deliver all requisite notices and obtain the

approval of all governmental and quasi-governmental authorities having jurisdiction over the Work. Design/Builder shall submit evidence satisfactory to District that it and any disposal facility:

(1) have obtained all required permits, approvals, and the like in a timely manner both prior to commencement of the Work and thereafter as and when required by applicable law; and

(2) are in compliance with all such permits, approvals and the regulations.

For example, before commencing any work in connection with the Work involving asbestos-containing materials, or PCBs, or other hazardous materials subject to regulation, Design/Builder agrees to provide the required notice of intent to renovate or demolish to the appropriate state or federal agency having jurisdiction, by certified mail, return receipt requested, or by some other method of transmittal for which a return receipt is obtained, and to send a copy of that notice to District. Design/Builder shall not conduct any Work involving asbestos-containing materials or PCBs unless Design/Builder has first confirmed that the appropriate agency having jurisdiction is in receipt of the required notification. All permits, licenses, and bonds that are required by governmental or quasi-governmental authorities, and all fees, deposits, tap fees, offsite easements, and asbestos and PCB disposal facilities expenses necessary for the prosecution of the Work, shall be procured and paid for by Design/Builder. Design/Builder shall give all notices and comply with the all applicable laws bearing on the conduct of the Work as drawn and specified. If Design/Builder observes or reasonably should have observed that Plans and Specifications and other Contract Documents are at variance therewith, it shall be responsible for promptly notifying District in writing of such fact. If Design/Builder performs any Work contrary to applicable laws, it shall bear all costs arising therefrom.

b. In the case of any permits or notices held in District's name or of necessity to be made in District's name, District shall cooperate with Design/Builder in securing the permit or giving the notice, but the Design/Builder shall prepare for District review and execution upon approval, all necessary applications, notices, and other materials.

8. Indemnification

To the fullest extent permitted by law, the indemnities and limitations of liability expressed throughout the Contract Documents apply with equal force and effect to any claims or liabilities imposed or existing by virtue of the removal, abatement, and disposal of hazardous waste. This includes, but is not limited to, liabilities connected to the selection and use of a waste disposal facility, a waste transporter, personal injury, property damage, loss of use of property, damage to the environment or natural resources, or “disposal” and “release” of materials associated with the Work (as defined in 42 U.S.C. § 960l *et seq*.).

9. Termination

District shall have an absolute right to terminate for default immediately without notice and without an opportunity to cure should Design/Builder knowingly or recklessly commit a material breach of the terms of the Contract Documents, or any applicable law, on any matter involving the exposure of persons or property to hazardous waste. However, if the breach of contract exposing persons or property to hazardous waste is due solely to an ordinary, unintentional, and non-reckless failure to exercise reasonable care, then the procedures for termination for cause shall apply without modification.

END OF DOCUMENT

PART 1 – GENERAL

1. Requirement to Escrow Bid Documentation

   a. Design Builder shall submit, within seven (7) days after the date of the Notice of Award, one copy of all documentary information received or generated by Design Builder in preparation of bid prices for this Contract, as specified herein. This material is referred to herein as "Escrow Bid Documentation." The Escrow Bid Documentation of the Design Builder will be held in escrow for the duration of the Contract.

   b. Design Builder agrees, as a condition of award of the Contract, that the Escrow Bid Documentation constitutes all written information used in the preparation of its bid, and that no other written bid preparation information shall be considered in resolving disputes or claims. Design Builder also agrees that nothing in the Escrow Bid Documentation shall change or modify the terms or conditions of the Contract Documents.

   c. The Escrow Bid Documentation will not be opened by District except as indicated herein. The Escrow Bid Documentation will be used only for the resolution of change orders and claims disputes.

   d. Design Builder's submission of the Escrow Bid Documentation, as with the bonds and insurance documents required, is considered an essential part of the Contract award. Should the Design Builder fail to make the submission within the allowed time specified above, District may deem the Design Builder to have failed to enter into the Contract, and the Design Builder shall forfeit the amount of its bid security, accompanying the Design Builder's bid, and District may award the Contract to the next most advantageous proposal.

   e. NO PAYMENTS WILL BE MADE, NOR WILL DISTRICT ACCEPT PROPOSED CHANGE ORDERS UNTIL THE ABOVE REQUIRED INFORMATION IS SUBMITTED AND APPROVED.

   f. The Escrow Bid Documentation shall be submitted in person by an authorized representative of the Design Builder to the District.

2. Ownership of Escrow Bid Documentation

   a. The Escrow Bid Documentation is, and shall always remain, the property of Design Builder, subject to review by District, as provided herein.

   b. Escrow Bid Documentation constitute trade secrets, not known outside Design Builder's business, known only to a limited extent and only by a limited number of employees of Design Builder, safeguarded while in Design Builder's possession, extremely valuable to Design Builder, and could be extremely valuable to Design Builder's competitors by virtue of it reflecting Design Builder's contemplated techniques of construction. Subject to the provisions herein, District agrees to safeguard the Escrow Bid Documentation, and all information contained therein, against disclosure to the fullest extent permitted by law.

3. Format and Contents of Escrow Bid Documentation

   a. Design Builder may submit Escrow Bid Documentation in its usual cost-estimating format; a standard format is not required. The Escrow Bid Documentation shall be submitted in English.

   b. Escrow Bid Documentation must clearly itemize the estimated costs of performing the work of each bid item contained in the bid schedule, separating bid items into sub-items as required to present a detailed cost estimate and allow a detailed cost review. The Escrow Bid Documentation shall include all subcontractor bids or quotes, supplier bids or quotes, quantity takeoffs, crews, equipment, calculations of rates of production and progress, copies of quotes from subcontractors and suppliers, and memoranda, narratives, add/deduct sheets, and all other information used by the Design Builder to arrive at the prices contained in the bid proposal. Estimated costs should be broken down into Design Builder's usual estimate categories such as direct labor, repair labor, equipment ownership and operation, expendable materials, permanent materials, and subcontract costs as appropriate. Plant and equipment and indirect costs should be detailed in the Design Builder's usual format. The Design Builder's allocation of indirect costs, contingencies, markup, and other items to each bid item shall be identified.

   c. All costs shall be identified. For bid items amounting to less than $10,000, estimated unit costs are acceptable without a detailed cost estimate, provided that labor, equipment, materials, and subcontracts, as applicable, are included and provided that indirect costs, contingencies, and markup, as applicable, are allocated.

   d. Bid Documentation provided by District should not be included in the Escrow Bid Documentation unless needed to comply with the following requirements.

4. Submittal of Escrow Bid Documentation

   a. The Escrow Bid Documentation shall be submitted by the Design Builder in a sealed container within seven (7) days after the date of the Notice of Award. The container shall be clearly marked on the outside with the Design Builder's name, date of submittal, project name and the words "Escrow Bid Documentation – Intended to be opened in the presence of Authorized Representatives of Both District and Design Builder".

   b. By submitting Escrow Bid Documentation, Design Builder represents that the material in the Escrow Bid Documentation constitutes all of the documentary information used in preparation of the bid and that the Design Builder has personally examined the contents of the Escrow Bid Documentation container and has found that the documents in the container are complete.

   c. If Design Builder's proposal is based upon subcontracting any part of the work, each subcontractor whose total subcontract price exceeds 5 percent of the total contract price proposed by Design Builder, shall provide separate Escrow Documents to be included with those of Design Builder. Those documents shall be opened and examined in the same manner and at the same time as the examination described above for Design Builder.

   d. If Design Builder wishes to subcontract any portion of the Work after award, District retains the right to require Design Builder to submit Escrow Documents for the subcontractor before the subcontract is approved.

5. Storage, Examination and Final Disposition of Escrow Bid Documentation

   a. The Escrow Bid Documentation will be placed in escrow, for the life of the Contract, in a mutually agreeable institution. The cost of storage will be paid by Design Builder for the duration of the project until final Contract payment. The storage facilities shall be the appropriate size for all of the Escrow Bid Documentation and located conveniently to both District's and Design Builder's offices.

   b. The Escrow Bid Documentation shall be examined by both District and Design Builder, at any time deemed necessary by either District or Design Builder, to assist in the negotiation of price adjustments and change orders or the settlement of disputes and claims. In the case of legal proceedings, Escrow Bid Documentation shall be used subject to the terms of an appropriate protective order if requested by Design Builder.

      Examination of the Escrow Bid Documentation is subject to the following conditions:

      (1) As trade secrets, the Escrow Bid Documentation is proprietary and confidential to the extent allowed by law.

(2) District and Design Builder shall each designate, in writing to the other party seven (7) days prior to any examination, the names of representatives who are authorized to examine the Escrow Bid Documentation. No other person shall have access to the Escrow Bid Documentation.

(3) Access to the documents may take place only in the presence of duly designated representatives of both District and Design Builder. If Design Builder fails to designate a representative or appear for joint examination on seven (7) days notice, then the District representative may examine the Escrow Bid Documentation alone upon an additional three (3) days notice if a representative of Design Builder does not appear at the time set.

c. The Escrow Bid Documentation will be returned to Design Builder at such time as the Contract has been completed and final settlement has been achieved.

END OF SECTION

PART 1 – GENERAL

1. Requirement to Escrow Bid Documentation

   a. Design Builder shall submit, within seven (7) days after the date of the Notice of Award, one copy of all documentary information received or generated by Design Builder in preparation of bid prices for this Contract, as specified herein. This material is referred to herein as "Escrow Bid Documentation." The Escrow Bid Documentation of the Design Builder will be held in escrow for the duration of the Contract.

   b. Design Builder agrees, as a condition of award of the Contract, that the Escrow Bid Documentation constitutes all written information used in the preparation of its bid, and that no other written bid preparation information shall be considered in resolving disputes or claims. Design Builder also agrees that nothing in the Escrow Bid Documentation shall change or modify the terms or conditions of the Contract Documents.

   c. The Escrow Bid Documentation will not be opened by District except as indicated herein. The Escrow Bid Documentation will be used only for the resolution of change orders and claims disputes.

   d. Design Builder's submission of the Escrow Bid Documentation, as with the bonds and insurance documents required, is considered an essential part of the Contract award. Should the Design Builder fail to make the submission within the allowed time specified above, District may deem the Design Builder to have failed to enter into the Contract, and the Design Builder shall forfeit the amount of its bid security, accompanying the Design Builder's bid, and District may award the Contract to the next most advantageous proposal.

   e. NO PAYMENTS WILL BE MADE, NOR WILL DISTRICT ACCEPT PROPOSED CHANGE ORDERS UNTIL THE ABOVE REQUIRED INFORMATION IS SUBMITTED AND APPROVED.

   f. The Escrow Bid Documentation shall be submitted in person by an authorized representative of the Design Builder to the District.

2. Ownership of Escrow Bid Documentation

   a. The Escrow Bid Documentation is, and shall always remain, the property of Design Builder, subject to review by District, as provided herein.

   b. Escrow Bid Documentation constitute trade secrets, not known outside Design Builder's business, known only to a limited extent and only by a limited number of employees of Design Builder, safeguarded while in Design Builder's possession, extremely valuable to Design Builder, and could be extremely valuable to Design Builder's competitors by virtue of it reflecting Design Builder's contemplated techniques of construction. Subject to the provisions herein, District agrees to safeguard the Escrow Bid Documentation, and all information contained therein, against disclosure to the fullest extent permitted by law.

3. Format and Contents of Escrow Bid Documentation

   a. Design Builder may submit Escrow Bid Documentation in its usual cost-estimating format; a standard format is not required. The Escrow Bid Documentation shall be submitted in English.

   b. Escrow Bid Documentation must clearly itemize the estimated costs of performing the work of each bid item contained in the bid schedule, separating bid items into sub-items as required to present a detailed cost estimate and allow a detailed cost review. The Escrow Bid Documentation shall include all subcontractor bids or quotes, supplier bids or quotes, quantity takeoffs, crews, equipment, calculations of rates of production and progress, copies of quotes from subcontractors and suppliers, and memoranda, narratives, add/deduct sheets, and all other information used by the Design Builder to arrive at the prices contained in the bid proposal. Estimated costs should be broken down into Design Builder's usual estimate categories such as direct labor, repair labor, equipment ownership and operation, expendable materials, permanent materials, and subcontract costs as appropriate. Plant and equipment and indirect costs should be detailed in the Design Builder's usual format. The Design Builder's allocation of indirect costs, contingencies, markup, and other items to each bid item shall be identified.

   c. All costs shall be identified. For bid items amounting to less than $10,000, estimated unit costs are acceptable without a detailed cost estimate, provided that labor, equipment, materials, and subcontracts, as applicable, are included and provided that indirect costs, contingencies, and markup, as applicable, are allocated.

   d. Bid Documentation provided by District should not be included in the Escrow Bid Documentation unless needed to comply with the following requirements.

4. Submittal of Escrow Bid Documentation

   a. The Escrow Bid Documentation shall be submitted by the Design Builder in a sealed container within seven (7) days after the date of the Notice of Award. The container shall be clearly marked on the outside with the Design Builder's name, date of submittal, project name and the words "Escrow Bid Documentation – Intended to be opened in the presence of Authorized Representatives of Both District and Design Builder".

   b. By submitting Escrow Bid Documentation, Design Builder represents that the material in the Escrow Bid Documentation constitutes all of the documentary information used in preparation of the bid and that the Design Builder has personally examined the contents of the Escrow Bid Documentation container and has found that the documents in the container are complete.

   c. If Design Builder's proposal is based upon subcontracting any part of the work, each subcontractor whose total subcontract price exceeds 5 percent of the total contract price proposed by Design Builder, shall provide separate Escrow Documents to be included with those of Design Builder. Those documents shall be opened and examined in the same manner and at the same time as the examination described above for Design Builder.

   d. If Design Builder wishes to subcontract any portion of the Work after award, District retains the right to require Design Builder to submit Escrow Documents for the subcontractor before the subcontract is approved.

5. Storage, Examination and Final Disposition of Escrow Bid Documentation

   a. The Escrow Bid Documentation will be placed in escrow, for the life of the Contract, in a mutually agreeable institution. The cost of storage will be paid by Design Builder for the duration of the project until final Contract payment. The storage facilities shall be the appropriate size for all of the Escrow Bid Documentation and located conveniently to both District's and Design Builder's offices.

   b. The Escrow Bid Documentation shall be examined by both District and Design Builder, at any time deemed necessary by either District or Design Builder, to assist in the negotiation of price adjustments and change orders or the settlement of disputes and claims. In the case of legal proceedings, Escrow Bid Documentation shall be used subject to the terms of an appropriate protective order if requested by Design Builder.

      Examination of the Escrow Bid Documentation is subject to the following conditions:

      (1) As trade secrets, the Escrow Bid Documentation is proprietary and confidential to the extent allowed by law.

(2) District and Design Builder shall each designate, in writing to the other party seven (7) days prior to any examination, the names of representatives who are authorized to examine the Escrow Bid Documentation. No other person shall have access to the Escrow Bid Documentation.

(3) Access to the documents may take place only in the presence of duly designated representatives of both District and Design Builder. If Design Builder fails to designate a representative or appear for joint examination on seven (7) days notice, then the District representative may examine the Escrow Bid Documentation alone upon an additional three (3) days notice if a representative of Design Builder does not appear at the time set.

c. The Escrow Bid Documentation will be returned to Design Builder at such time as the Contract has been completed and final settlement has been achieved.

END OF SECTION

1. Mitigation Measures

Contractor shall comply with all applicable mitigation measures, if any, adopted by any public agency with respect to this Project pursuant to the California Environmental Quality Act. (Public Resources Code section 21000 *et seq*.)

2. Modernization Projects

2.27 Access. Access to the school buildings and entry to buildings, classrooms, restrooms, mechanical rooms, electrical rooms, or other rooms, for construction purposes, must be coordinated with District and onsite District personnel before Work is to start. Unless agreed to otherwise in writing, only a school custodian will be allowed to unlock and lock doors in existing building(s). The custodian will be available only while school is in session. If a custodian is required to arrive before 7:00 a.m. or leave after 3:30 p.m. to accommodate Contractor's Work, the overtime wages for the custodian will be paid by the Contractor, unless at the discretion of the District, other arrangements are made in advance.

2.28 Keys. Upon request, the District may, at its own discretion, provide keys to the school site for the convenience of the Contractor. The Contractor agrees to pay all expenses to re-key the entire school site and all other affected District buildings if the keys are lost or stolen, or if any unauthorized party obtains a copy of a key or access to the school.

2.29 Maintaining Services. The Contractor is advised that Work is to be performed in spaces regularly scheduled for instruction. Interruption and/or periods of shutdown of public access, electrical service, water service, lighting, or other utilities shall be only as arranged in advance with the District. Contractor shall provide temporary services to all facilities interrupted by Contractor's Work.

2.30 Maintaining Utilities. The Contractor shall maintain in operation during duration of Contract, drainage lines, storm drains, sewers, water, gas, electrical, steam, and other utility service lines within working area.

2.31 Confidentiality. Contractor shall maintain the confidentiality of all information, documents, programs, procedures and all other items that Contractor encounters while performing the Work. This requirement shall be ongoing and shall survive the expiration or termination of this Contract and specifically includes, without limitation, all student, parent, and employee disciplinary information and health information.

2.32 Work during Instructional Time. By submitting its bid, Contractor affirms that Work may be performed during ongoing instruction in existing facilities. If so, Contractor agrees to cooperate to the best of its ability to minimize any disruption to school operations and any use of school facilities by the public up to, and including, rescheduling specific work activities, at no additional cost to District.

2.33 No Work during Student Testing. Contractor shall, at no additional cost to the District and at the District's request, coordinate its Work to not disturb District students

including, without limitation, not performing any Work when students at the Site are taking State or Federally-required tests.

3. Badge Policy for Contractors

All Contractors doing work for the District will provide their workers with identification badges. These badges will be worn by all members of the Contractor's staff who are working in a District facility.

3.27 Badges must be filled out in full and contain the following information:

3.27.1 Name of Contractor

3.27.2 Name of Employee

3.27.3 Contractor's address and phone number

3.28 Badges are to be worn when the Contractor or his/her employees are on site and must be visible at all times. Contractors must inform their employees that they are required to allow District employees, the Architect, the Construction Manager, the Program Manager, or the Project Inspector to review the information on the badges upon request.

3.29 Continued failure to display identification badges as required by this policy may result in the individual being removed from the Project or assessment of fines against the Contractor.

4. Substitution for Specified Items

4.27 Whenever in the Specifications any materials, process, or article is indicated or specified by grade, patent, or proprietary name, or by name of manufacturer, that Specification shall be deemed to be followed by the words “or equal.” Contractor may, unless otherwise stated, offer any material, process, or article that shall be substantially equal or better in every respect to that so indicated or specified.

4.27.1 If the material, process, or article offered by Contractor is not, in the opinion of the District, substantially equal or better in every respect to that specified, then Contractor shall furnish the material, process, or article specified in the Specifications without any additional compensation or change order.

4.27.2 This provision shall not be applicable with respect to any material, product, thing or service for which District made findings and gave notice in accordance with Public Contract Code section 3400(c); therefore, Contractor shall not be entitled to request a substitution with respect to those materials, products or services.

4.28 A request for a substitution shall be submitted as follows:

4.28.1 Contractor shall notify the District in writing of any request for a substitution at least ten (10) days prior to bid opening as indicated in the Instructions to Bidders.

4.28.2 Requests for Substitutions after award of the Contract shall be submitted within thirty-five (35) days of the date of the Notice of Award (for work included in RFP), within thirty-five (35) days of the date of receipt of bids for individual trade packages.

4.29 Accompanying substitution request, Contractor shall provide data substantiating a request for substitution of “an equal” item, including but not limited to the following:

4.29.1 All variations of the proposed substitute from the material specified including, but not limited to, principles of operation, materials, or construction finish, thickness or gauge of materials, dimensions, weight, and tolerances;

4.29.2 Available maintenance, repair or replacement services;

4.29.3 Increases or decreases in operating, maintenance, repair, replacement, and spare parts costs;

4.29.4 Whether or not acceptance of the substitute will require other changes in the Work (or in work performed by the District or others under Contract with the District); and

4.29.5 The time impact on any part of the Work resulting directly or indirectly from acceptance of the proposed substitute.

4.30 No substitutions shall be made until approved, in writing, by the District. The burden of proof as to equality of any material, process, or article shall rest with Contractor. The Contractor warrants that if substitutes are approved:

4.30.1 The proposed substitute is equal or superior in all respects to that specified, and that such proposed substitute is suitable and fit for the intended purpose and will perform adequately the function and achieve the results called for by the general design and the Contract Documents;

4.30.2 The Contractor provides the same warranties and guarantees for the substitute that would be provided for that specified;

4.30.3 The Contractor shall be fully responsible for the installation of the substitute and any changes in the Work required, either directly or indirectly, because of the acceptance of such substitute, with no increase in Contract Price or Contract Time. Incidental changes or extra component parts required to accommodate the substitute will be made by the Contractor without a change in the Contract Price or Contract Time;

4.30.4 The Contractor shall be responsible for any re-design costs occasioned by District's acceptance and/or approval of any substitute; and

4.30.5 The Contractor shall, in the event that a substitute is less costly than that specified, credit the District with one hundred percent (100%) of the net difference between the substitute and the originally specified material. In this event, the Contractor agrees to execute a deductive Change Order to reflect that credit.

4.31 In the event Contractor furnishes a material, process, or article more expensive than that specified, the difference in the cost of that material, process, or article so furnished shall be borne by Contractor.

4.32 In no event shall the District be liable for any increase in Contract Price or Contract Time due to any claimed delay in the evaluation of any proposed substitute or in the acceptance or rejection of any proposed substitute.

4.33 Contractor shall be responsible for any costs the District incurs for professional services, DSA fees, or delay to the Project Schedule, if applicable, while DSA reviews changes for the convenience of Contractor and/or to accommodate Contractor's means and methods. District may deduct those costs from any amounts owing to the Contractor for the review of the request for substitution, even if the request for substitution is not approved. District, at its sole discretion, shall deduct from the payments due to and/or invoice Contractor for all the professional services and/or DSA fees or delay to the Project Schedule, if applicable, while DSA reviews changes for the convenience of Contractor and/or to accommodate Contractor's means and methods arising herein.

5. Weather Days

Delays due to Adverse Weather conditions will only be permitted in compliance with the provisions in the General Conditions and only if the number of days of Adverse Weather exceeds the following parameters and Contractor can verify that the excess days of Adverse Weather caused delays:

January	5	July	2
February	5	August	2
March	5	September	3
April	4	October	3
May	3	November	4
June	2	December	5

6. Insurance Policy Limits

All of Contractor's insurance shall be with insurance companies with an A.M. Best rating of no less than ___TBD_____. The limits of insurance shall not be less than:

Commercial General Liability	Product Liability and Completed Operations, Fire Damage Liability – Split Limit	[E.G. Low Risk: $1,000,000 per occurrence; $2,000,000 aggregate
		Intermediate Risk: $2,000,000 per occurrence; $4,000,000 aggregate
		High Risk: $5,000,000 per occurrence; $10,000,000 aggregate]

Automobile Liability – Any Auto	Combined Single Limit	[E.G. Personal vehicles: $500,000 Commercial vehicles: $2,000,000
		Personal vehicles: $100,000 per person/ $300,000 per accident]
Workers' Compensation		Statutory limits pursuant to State law
Employers' Liability		[E.G. $5M]
Builder's Risk (Course of Construction)		Replacement Cost
Pollution Liability		[E.G. $1M per claim; $2M aggregate]

7. Permits, Certificates, Licenses, Fees, Approvals

7.27 Payment for Permits, Certificates, Licenses, Fees, and Approvals. As required in the General Conditions, the Contractor shall secure and pay for all permits, licenses, approvals, and certificates necessary for the prosecution of the Work with the exception of the following:

7.27.1 DSA permit fees

With respect to the above-listed items, Contractor shall be responsible for securing such items; however, District will be responsible for payment of these charges or fees. Contractor shall notify the District of the amount due with respect to such items and to whom the amount is payable. Contractor shall provide the District with an invoice and receipt with respect to such charges or fees.

7.28 General Permit For Storm Water Discharges Associated With Construction and Land Disturbance Activities

7.28.1 Contractor acknowledges that all California school districts are obligated to develop and implement the following requirements for the discharge of storm water to surface waters from its construction and land disturbance activities (storm water requirements):

7.28.1.1 Projects that disturb less than one acre of land and are not part of a larger common plan of development or sale, in accordance with Title 24, Chapter 5.106.1, shall prevent the pollution of stormwater runoff from the construction activities through one or more of the following measures:

7.28.1.1.1 Comply with lawfully enacted stormwater management and/or erosion control ordinance.

7.28.1.1.2 Prevent loss of soil through wind or water erosion by adhering to a Storm Water Pollution Prevention Plan ("SWPPP") implementing an effective combination of erosion and sediment control and good housekeeping best management practices ("BMPs").

7.28.1.1.2.1 Soil loss BMP's that should be considered for implementation as appropriate for each project include, but are not limited to, the following:

7.28.1.1.2.1.1 Scheduling construction activity during dry weather, when possible.

7.28.1.1.2.1.2 Preservation of natural features, vegetation, soil, and buffers around surface waters.

7.28.1.1.2.1.3 Drainage swales or lined ditches to control stormwater flow.

7.28.1.1.2.1.4 Mulching or hydroseeding to stabilize disturbed soils.

7.28.1.1.2.1.5 Erosion control to protect slopes.

7.28.1.1.2.1.6 Protection of storm drain inlets (gravel bags or catch basin inserts).

7.28.1.1.2.1.7 Perimeter sediment control (perimeter silt fence, fiber rolls).

7.28.1.1.2.1.8 Sediment trap or sediment basin to retain sediment on site.

7.28.1.1.2.1.9 Stabilized construction exits.

7.28.1.1.2.1.10 Wind erosion control.

7.28.1.1.2.1.11 Other soil loss BMP's acceptable to the enforcing agency.

7.28.1.1.2.2 Good housekeeping BMP's to manage construction equipment, materials, non-stormwater discharges, and wastes that should be considered for implementation as appropriate for each project include, but are not limited to, the following:

7.28.1.1.2.2.1 Dewatering activities.

7.28.1.1.2.2.2 Material handling and waste management.

7.28.1.1.2.2.3 Building materials stockpile management.

7.28.1.1.2.2.4 Management of washout areas (concrete, paints, stucco, etc.).

7.28.1.1.2.2.5 Control of vehicle/equipment fueling to contractor's staging area.

7.28.1.1.2.2.6 Vehicle and equipment cleaning performed off site.

7.28.1.1.2.2.7 Spill prevention and control.

7.28.1.1.2.2.8 Other housekeeping BMP's acceptable to the enforcing agency.

7.28.1.2 Projects that disturb one acre or more of land, or disturb less than one acre of land but are part of a larger common plan of development or sale shall comply with all lawfully enacted stormwater discharge regulations in accordance with Title 24, Chapter 5.106.2.

7.28.2 Contractor shall comply with any District storm water requirements that are approved by the District and applicable to the Project, at no additional cost to the District.

7.28.3 At no additional cost to the District, Contractor shall provide a Qualified Storm Water Practitioner who shall be onsite and implement and monitor any and all SWPPP requirements applicable to the Project, including but not limited to:

7.28.3.1 At least forty eight (48) hours prior to a forecasted rain event, implementing the Rain Event Action Plan (REAP) for any rain event requiring implementation of the REAP, including any erosion and sediment control measures needed to protect all exposed portions of the site; and

7.28.3.2 Monitoring any Numeric Action Levels (NALs), if applicable.

8. Project Labor Agreement/Payroll Records

The District has entered into a Project Labor Agreement ("PLA"), which covers this Project. Accordingly, the following provision is added as Section 26.4.6:

26.4.6 As Contractor and its subcontractors have agreed to be bound by the terms of the PLA entered into by the District [on or about / dated] _____, Contractor and its subcontractors may be excused from uploading CPRs electronically using DIR's eCPR System by uploading the CPRs by electronic XML file or entering each record manually using the DIR's iform (or current form) online at http://www.dir.ca.gov/Public-Works/Certified-Payroll-Reporting.html , or by using a more current application and URL. However, within ten (10) days of any request by the District or Labor Commissioner, Contractor and its subcontractors shall provide CPRs showing the name, address, social security number, work classification, straight time, and overtime hours worked each day and week, and the actual per diem wages paid to each journeyman, apprentice, worker, or other employee employed by the Contractor and/or each subcontractor in connection with the Work.

9. As-Builts and Record Drawings

9.27 Contractor shall submit Record Drawings pursuant to the Contract Documents consisting of one set of computer-aided design and drafting ("CADD") files plus one set of record Drawings

10. Disabled Veteran Business Enterprise

Pursuant to Education Code section 71028 and Public Contract Code section 10115, the District has a participation goal for disabled veteran business enterprises ("DVBE") of at least three percent (3%) per year of the overall dollar amount expended each year on District projects. Therefore, the lowest responsive responsible bidder awarded the Contract must submit the Disabled Veteran Business Enterprise Participation Certification to the District with its executed Agreement, identifying the steps contractor took to solicit DVBE participation in conjunction with this Contract.

11. Construction Manager

The District will use a Construction Manager on the Project that is the subject of this Contract. Swinerton Management Company is the Construction Manager for this Project.

12. Program Manager

AECOM is the Program Manager designated for the Project that is the subject of this contract.

13. Federal Funds

As this Project is funded in whole or in part by federal funds, Contractor and all Subcontractors are subject to civil or criminal prosecution for any violation of the federal False Claims Act set forth under section 1001 of title 18 and section 231 of title 31 of the United States Code.

13.27.1

END OF SECTION

1.1 GENERAL:

1.1.1 The following additional requirements apply to this Project that is being reviewed by the Division of the State Architect (DSA).

1.2 ADDITIONAL REQUIREMENTS:

1.2.1 In addition to the duties specified in the Contract Documents, the duties of the Design Builder shall be in accordance with the requirements specified in Title 24 of the California Code of Regulations (CCR).

1.2.2 In addition to the duties specified in the Contract Documents, the duties of the Architect and the Architect's consultants shall be in accordance with the requirements specified in Part 1, Title 24, CCR.

1.2.3 DSA is not subject to arbitration proceedings.

1.2.4 Notify DSA at start of construction in accordance in Part 1, Title 24, CCR.

1.2.5 Design Builder shall submit 100 % Construction Documents to DSA for approval.

1.2.6 Design Builder shall schedule a Presubmittal meeting with DSA and the Design Build Team to obtain specific requirements from DSA for submittal of construction documents and to make DSA aware of the scheduled submittal date.

1.2.7 If and when applicable, addenda and change orders shall be submitted to and approved by DSA. Do not begin any work under an addendum or change order until such applicable DSA approval is obtained. Addenda and change orders shall be in accordance in Part 1, Title 24, CCR.

1.2.8 If and when applicable, do not begin work under a written order until a change order has been submitted to and approved by DSA in accordance with Part 1, Title 24, CCR. Substitutions effecting structural, fire/life/safety or access compliance shall be submitted as change orders for DSA approval. The Design Builder will be responsible for the additional architectural and engineering costs associated with the review and regulatory processing of these substitutions.

1.2.9 Unless otherwise indicated or specified, perform the work in conformance with the latest edition of applicable regulatory requirements. A copy of Part 1 and Part 2 of Title 24, CCR shall be available on the Project site. If and when applicable, the codes adopted by the City, County, State and Federal agencies shall govern minimum requirements for this Project.

1.2.10 Design Builder shall submit verified reports in accordance with Part 1, Title 24, CCR.

1.2.11 DSA may supervise construction, reconstruction, or repair in accordance with Part 1, Title 24, CCR.

1.2.12 Construction shall be observed by a full-time Project Inspector approved by DSA in accordance with Part 1, Title 24, CCR.

1.2.13 Testing requirements of the District's Testing Laboratory shall be in accordance with Part 1,Title 24, CCR.

1.2.14 Special Inspection on masonry construction, glued laminated lumber, wood framing using timber connectors, ready-mixed concrete, gunite, pre-stressed concrete, high strength steel bolt installation, welding, pile driving, and mechanical and electrical work shall be as required by Part 1,Title 24, CCR. The costs of special inspection will be paid for by the District.

PART 2 – PRODUCTS (Not Used)

PART 3 – EXECUTION (Not Used)

END OF SECTION

PART 1 - GENERAL

1.1 GENERAL:

1.1.1 The following additional requirements apply to this Project that is being reviewed by the Division of the State Architect (DSA).

1.2 ADDITIONAL REQUIREMENTS:

1.2.1 In addition to the duties specified in the Contract Documents, the duties of the Design Builder shall be in accordance with the requirements specified in Title 24 of the California Code of Regulations (CCR).

1.2.2 In addition to the duties specified in the Contract Documents, the duties of the Architect and the Architect's consultants shall be in accordance with the requirements specified in Part 1, Title 24, CCR.

1.2.3 DSA is not subject to arbitration proceedings.

1.2.4 Notify DSA at start of construction in accordance in Part 1, Title 24, CCR.

1.2.5 Design Builder shall submit 100 % Construction Documents to DSA for approval.

1.2.6 Design Builder shall schedule a Presubmittal meeting with DSA and the Design Build Team to obtain specific requirements from DSA for submittal of construction documents and to make DSA aware of the scheduled submittal date.

1.2.7 If and when applicable, addenda and change orders shall be submitted to and approved by DSA. Do not begin any work under an addendum or change order until such applicable DSA approval is obtained. Addenda and change orders shall be in accordance in Part 1, Title 24, CCR.

1.2.8 If and when applicable, do not begin work under a written order until a change order has been submitted to and approved by DSA in accordance with Part 1, Title 24, CCR. Substitutions effecting structural, fire/life/safety or access compliance shall be submitted as change orders for DSA approval. The Design Builder will be responsible for the additional architectural and engineering costs associated with the review and regulatory processing of these substitutions.

1.2.9 Unless otherwise indicated or specified, perform the work in conformance with the latest edition of applicable regulatory requirements. A copy of Part 1 and Part 2 of Title 24, CCR shall be available on the Project site. If and when applicable, the codes adopted by the City, County, State and Federal agencies shall govern minimum requirements for this Project.

1.2.10 Design Builder shall submit verified reports in accordance with Part 1, Title 24, CCR.

1.2.11 DSA may supervise construction, reconstruction, or repair in accordance with Part 1, Title 24, CCR.

1.2.12 Construction shall be observed by a full-time Project Inspector approved by DSA in accordance with Part 1, Title 24, CCR.

1.2.13 Testing requirements of the District's Testing Laboratory shall be in accordance with Part 1,Title 24, CCR.

1.2.14 Special Inspection on masonry construction, glued laminated lumber, wood framing using timber connectors, ready-mixed concrete, gunite, pre-stressed concrete, high strength steel bolt installation, welding, pile driving, and mechanical and electrical work shall be as required by Part 1,Title 24, CCR. The costs of special inspection will be paid for by the District.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

This Section includes summary of work including:

1.1.1 Work covered by Contract Documents
1.1.2 Work under other contracts
1.1.3 Future work
1.1.4 Work sequence
1.1.5 Cooperation of Design Builder and coordination with other work
1.1.6 Maintenance
1.1.7 Occupancy requirements
1.1.8 Reference Standards
1.1.9 Products or services ordered in advance
1.1.10 District furnished products
1.1.11 Execution

1.2 WORK COVERED BY CONTRACT DOCUMENTS

1.2.1 The work includes to construct the 2118 Milvia Street Project at Berkeley City College for the Peralta Community College District.

1.2.2 The DBE will ensure adequate protection of the facility and vehicular and pedestrian traffic at all times.

1.2.3 The Contract requires Design Builder to commission and turn over the 2118 Milvia Street Project to District as a completed project in accordance with the terms and conditions of the Contract Documents. The Project is more fully described in the Criteria Documents included with this Project Manual and the Design Builder's Proposal.

1.2.4 Unless provided otherwise in the Contract Documents, all risk of loss to Work covered by the Contract Documents shall rest with Design Builder until Final Completion and Acceptance of the Work by the District or termination of the Design-Build Contract, whichever occurs first.

1.3 WORK UNDER OTHER CONTRACTS

1.3.1 DBE to provide Geotechnical Engineering report.

1.3.2 DBE to provide testing for hazardous materials.

1.4 FUTURE WORK

1.4.1 Not Used.

1.5 WORK SEQUENCE

1.5.1 Not Used.

1.6 COOPERATION OF DESIGN BUILDER AND COORDINATION WITH OTHER WORK.

1.6.1 Should construction work, or work of any other nature, be underway by other forces or by other contractors within or adjacent to the limits of the Work at the time of executing the Contract, or should work be performed under the contracts listed in paragraphs 1.3 and 1.4 above, the Design Builder shall cooperate with all such other contractors or forces to the end that any delay or hindrance to their work will be avoided. The cost of such cooperation will be considered as included in the contract price and no additional payment will be made therefor. Design Builder shall coordinate with such other contractors and forces as required by Document 00 50 00 (Agreement).

1.6.2 District reserves the right to perform other or additional work, within or adjacent to the limits of the Work specified, at any time by the use of other forces. In the event that the performance of such other or additional work materially increases or decreases Design Builder's costs, the work and the amount to be paid therefor will be appropriately adjusted as determined by District.

1.6.3 Design Builder shall limit use of the Site for the Work and for construction operations to allow for:

1.6.3.1 District's operations
1.6.3.2 Work by other contractors

1.6.4 Design Builder shall coordinate use of and access to the Site with other contractors, utilities, and District's forces, as required by Document 00 50 00 (Agreement). District has final authority over coordination, use of premises, and access to the Site.

1.6.5 Design Builder shall cooperate with District and others who may occupy or begin work on Site and inside any building thereon prior to completion of Work of this Contract.

1.6.6 Design Builder shall cooperate with contractors for other area work, not included in Contract, but which may take place during construction period.

1.6.7 Design Builder, and all design consultants and major subcontractors shall participate in partnering sessions as described in Section 00 50 00 (Agreement).

1.7 MAINTENANCE

1.7.1 Cost of maintenance of systems and equipment prior to Substantial Completion, as defined in section 00 50 00 (Form of Agreement), is included in the Contract Price and no additional payment will be made therefor.

1.8 OCCUPANCY REQUIREMENTS

1.8.1 Whenever, in the opinion of District, Work or any part thereof is in a condition suitable for use, and the best interest of District requires such use, District may take Beneficial Occupancy of and connect to, open for public use, or use the Work or such part thereof pursuant to paragraph 8.16.3 (Beneficial Occupancy) of paragraph 1.7 of section 00 50 00 (Agreement). In such case, District will inspect the Work or part thereof, and issue a Certificate of Beneficial Occupancy for that part of Work.

1.8.2 Prior to date of Final Acceptance of the Work by District, all necessary repairs or renewals in Work or part thereof so used, not due to ordinary wear and tear, but due to defective design, materials or workmanship or to operations of Design Builder, shall be made at expense of Design Builder, as required in section 00 50 00 (Agreement).

1.8.3 Use by District of Work or part thereof as contemplated by this Section shall in no case be construed as constituting acceptance of Work or any part thereof. Such use shall neither relieve Design Builder of any responsibilities under Contract, nor act as a waiver by District of any of the requirements thereof.

1.8.4 District may specify in the Contract Documents that portions of the Work, including electrical and mechanical systems or separate structures, shall be substantially completed on milestone dates prior to the Substantial Completion of all of the Work. Design Builder shall notify District in writing when Design Builder considers any such part of the Work ready for its intended use and substantially complete and request District to issue a Certificate of Substantial Completion for that part of the Work.

PART 2 - PRODUCTS

2.1 REFERENCE STANDARDS

2.1.1 For products specified by association or trade standards, comply with requirements of District standards, except where more rigid requirements are specified or are required by applicable codes.

2.2 PRODUCTS OR SERVICES ORDERED IN ADVANCE

2.2.1 District furnished products listed in paragraph 2.3 below will be procured under separate contracts and provided by District or vendor to Design Builder for installation under the terms of paragraph 1.6 above. Design Builder to provide utility service and stub out connections as necessary for the installation of District furnished products.

2.3 DISTRICT FURNISHED PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.1 Internet/Web-Based Project Management Software**.** The Design Builder is directed to use the project's existing Internet/Web-based project management software, to track and manage the project, as described in Section 01 31 20 Project Management Software.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

This Section includes a summary of the Work including:

1.1.1 Design Services
1.1.2 Proposal Phase
1.1.3 Design Confirmation Phase
1.1.4 Construction Documents Phase
1.1.5 Construction Phase
1.1.6 Operation/Project Close Out

1.2 DESIGN SERVICES

1.2.1 Summary of Design and Technical Requirements

1.2.1.1 The Criteria Documents set forth the District's minimum design and construction requirements for the Project that the Design Builder shall meet in preparing designs and constructing the Project. Design Builder shall prepare designs to meet these requirements and submit deliverables as described in these requirements. The requirements of this Section supplement but do not supersede the requirements of the Criteria Documents.

1.2.1.2 As required in this specification, Design Builder shall submit designs and deliverables meeting the requirements of the Contract Documents at the completion of the Collaboration Phase, 100% Schematic Design, 100% Design Development, 50% Construction Documents and 100% Construction Documents. DBE shall obtain District approval at each milestone prior to continuing with design. Design Builder may elect to create incremental packages of major building components or activities it deems advantageous towards scheduling or permitting efficiencies.

1.2.1.3 Unless specifically and expressly limited, Design Builder's scope of work shall include all engineering, procurement and construction necessary to complete the Project.

1.2.2 Summary of Work

1.2.2.1 Unless specifically excluded from this Contract, Design Builder shall provide to District all professional architectural, engineering services and other specialty consultants as necessary to perform Design Builder's obligations under the Contract Documents and to complete the Project including, but not limited to, the requirements of the Criteria Documents, as modified, if at all, pursuant to section 00 50 00 (For of Agreement) (the "Services").

1.2.2.2 Design Builder shall perform the Services using the persons and subconsultants listed in Design Builder's Pre-Qualification Questionnaire and Proposal and may substitute personnel or subconsultants only upon the District's written consent, which is in District's discretion but will not be unreasonably withheld. Design Builder represents that it and its subconsultants possess all necessary training, qualifications, licenses and permits to perform the Services, and that their performance of the Services will conform to the standard of practice of a professional that specializes in performing professional services of like nature and complexity of the Services. Design Builder's licensed subconsultants (architectural, engineering and other specialty consultants) shall owe a duty of care to the District in performing their architectural and engineering portions of the Services.

1.2.2.3 Design Builder and its subconsultants shall make an independent assessment of the accuracy of the information provided by the District concerning existing conditions (including but not limited to existing utilities and structures and tie-ins to existing or contemplated facilities) and the adequacy of available design information/technical reports. Design Builder shall rely on the results of its own independent investigations and not on information provided by District. Design Builder shall conduct such further investigations of existing conditions as are necessary for Design Builder to perform the Services and shall advise District of any further design or other services necessary to complete the Project.

1.2.2.4 Design Builder's design shall provide that all surfaces, fixtures and equipment are readily accessible for maintenance, repair or replacement by ladders, power lifts, cat walks, and the like without exceeding the design loads of the floors, roofs, ceilings, and that such access is in conformance with Cal OSHA. All drawings, shop drawings and specifications in the Construction Documents, structural, electrical and other design calculations, site data, and any other deliverable required by State or Federal law shall comply with State and Federal standards. Design Builder shall comply with any other requirements of public or private authorities with jurisdiction over the Project, the Construction Documents, or tie-ins to the Project. Design Builder shall comply with the applicable standard of care of a specialist when preparing Construction Documents to comply with applicable building codes, ordinances, statutes, laws, District standards, governmental regulations and private restrictions, including necessary tie-ins, applicable to the Project and the Services, including, but not limited to, those listed in this Contract, all environmental, energy conservation, energy tie-in, and disabled access requirements, regulations and standards of State and local Fire Marshals or other authorities having jurisdiction over the Project.

1.2.2.5 District at all times shall have the right (but not the duty) to review Design Builder's design work, whether performed by Design Builder or a subconsultant of any tier, and whether in a final or preliminary form,

to determine progress and conformance to the requirements of the Contract Documents. In the event the District should ever dispute the conformance of any design work (at any stage) with the intent of the Contract Documents, then the District's determination shall control and the Design Builder and/or its subconsultants shall perform the disputed design services and/or work to completion in accord with the District's determination. The Design Builder shall, however, retain its rights under the procedure of Article 13 of section 00 50 00 (Agreement) for disputes and claims, and Design Builder may under that procedure and in its name advance any claim of a subconsultant of any tier.

1.2.2.6 All work associated with the abatement of hazardous materials is the responsibility of the Design Builder. The Design Builder shall employ an industrial hygienist to perform and monitor the work. Refer to Section 01 88 20 (Miscellaneous Hazardous Materials Performance Requirements) for additional information.

1.2.2.7 All work associated with permanent signage and wayfinding is the responsibility of the Design Builder.

1.2.2.7.1 The Design Builder will work closely with the District and the District Standards to develop signage and wayfinding scope that meets the needs of the Project. The Wayfinding and Signage subconsultant shall address the following items while developing their design:

1.2.2.7.1.1 Changeability – Design must allow for the cost effective modification as the needs of the Project change over time. Signage should be specified so that the District can easily update signage on site.

1.2.2.7.1.2 Durability and Maintenance – Signage and wayfinding materials must be extremely durable and easily maintainable.

1.2.2.7.1.3 Coordination with other disciplines such as architecture, interior design, and lighting design to ensure a coordinated and integrated wayfinding design.

1.2.2.7.1.4 Readability and universal messages that intuitively meet the needs of the District.

1.2.2.7.1.5 Code Compliance.

1.2.2.7.1.6 Exterior and site wayfinding that identifies the Project, main entry, vehicular access,

pedestrian access, property boundaries, and directions on surrounding City streets.

1.2.2.7.1.7 Interior wayfinding that identifies the Project identity, department identification, room identification, and staff specific signage.

1.2.2.7.1.8 Enhanced environmental graphics that consider appropriate application of electronic media, interactive technologies, public artwork and architectural solutions to address wayfinding challenges.

1.2.2.7.2 The Design Builder will submit its design for signage and wayfinding to the District in accordance with the provisions of this Section.

1.2.2.8 Design Builder's Interior Design Services.

1.2.2.8.1 The Design Builder shall provide all Interior Design services for the Project.

1.2.3 Coordination of Architectural and Engineering Subconsultants/Other Contractors

1.2.3.1 Design Builder shall fully coordinate all architectural and engineering disciplines and subconsultants involved in completing the Work, including but not limited to, all subconsultants employed by Subcontractors or suppliers. Design Builder's subconsultants of all tiers shall fully coordinate with Design Builder and all architectural and engineering disciplines and subconsultants involved in completing the Work.

1.2.3.1.1 Design Builder shall require its subconsultants to agree in their subcontracts to coordinate with Design Builder and other subconsultants.

1.2.3.1.2 See Section 01 31 19 (Project Meetings) for minimum meeting requirements.

1.2.4 Project Master Schedule

1.2.4.1 Design Builder shall complete or cause to be completed all services required under this Agreement in accordance within Contract Time as defined in Article 9 of Section 00 50 00 (Form of Agreement) as well as all approved project schedules and updates thereto.

1.2.4.2 Design Builder shall provide District with a design and construction schedule that outlines dates and time periods for the delivery of Design Builder's services and requirements for information from the District for the performance of its services. The Project Master

Schedule will include activities for completing the project design documents (through release for construction), significant construction milestones, construction submittals and long lead item procurement, dates for decisions by District affecting schedule, and utility interruptions affecting Project operations. For more detailed information refer to Section 00 50 00 (Agreement).

1.2.4.3 The Project Master Schedule shall be updated monthly, and shall meet the following requirements:

1.2.4.3.1 The schedule shall fit within and coordinate with the Milestone Schedule in Exhibit B of Section 00 50 00 (Form of Agreement) including any and all design interfaces.

1.2.4.3.2 The schedule shall be in fully operational Primavera® (latest edition) computer software format.

1.2.4.4 Design Builder shall adjust and cause its retained subconsultants and Subcontractors to adjust activities, personnel levels, and the sequence, duration and relationship of services to be performed in a manner that will comply with the approved schedules.

1.2.4.5 Design Builder has no restraints on when it may bid or assign work to Subcontractors.

1.2.5 Deliverables Required Under This Agreement - General

All deliverables required under this Agreement shall be submitted in full compliance with the Contract Documents, shall be submitted in at least triplicate (or such greater number as the District may reasonably request) and, when contained on electronic media, shall be submitted in printed form as well as on electronic media when requested by the District. In the event of a conflict between the electronic version and hard copy versions of Design Builder's documents, the hard copy shall govern.
DBE shall provide interior and exterior color boards and materials for District approval. Final presentation shall include both interior and exterior elevations for approval.
Deficiencies in deliverables and modifications to conform to program requirements and modifications to achieve acceptability of deliverables to District, shall be promptly performed as part of the Stipulated Sum.

1.3 PROPOSAL & RECONCILIATION PHASE

1.3.1 Proposal Phase Documents

In response to the Request for Proposal the Design Builder shall submit Proposal Phase Documents as required by the Request for Proposal. Upon selection by PCCD, DBE shall work with the District to Reconcile and finalize scope of Work as specified in Section 00 26 40 (Rules and Procedures for Discussions and Negotiations).

1.4 DESIGN CONFIRMATION PHASE

1.4.1 Period of Service

1.4.1.1 After reconciliation of the Design Builder's Proposal, and upon written authorization from the District, Design Builder shall proceed with the performance of the services called for in the Collaboration Phase, as described in Section 00 50 00 (Form of Agreement). The intent of the Design Builder's Design Collaboration Phase is to obtain District approval for design revisions, refinements, and concept elaborations produced by the Design Builder prior to formal Design and Construction Document Production. Design Builder may elect to submit Collaboration Phase Documents incrementally by major building phases, components, or areas to facilitate economy of schedule provided overall design concept is clear and adhered to.

1.4.1.2 Design Builder shall submit deliverables required to execute and manage the Collaboration Phase including a revised detailed Cost Estimate with breakdown of all Project Costs.

1.4.1.3 Design Builder shall at the outset of this Phase make full written disclosure to District, and obtain District's express written approval of, any proposed innovative, unique, proprietary or sole source design features. District retains full discretion to disapprove such features.

1.5 DESIGN AND CONSTRUCTION DOCUMENTS PHASE

1.5.1 Period of Service

1.5.1.1 After acceptance by the District of the requirements of the Collaboration Phase, and upon written authorization from the District, Design Builder shall proceed with the performance of the services called for in the Design and Construction Document Phases.

1.5.1.2 Design Builder shall submit the deliverables required by these Phases, within the period approved and required in the Project Milestone Schedule.

1.5.2 Construction Documents Design Builder shall prepare final Construction Documents to show the work to be furnished and performed by Design Builder. The Construction Documents shall become a part of the Contract Documents. Construction Documents shall set forth in detail the requirement for construction of all work to be performed by Design Builder. Construction Documents shall not supersede the Contract Documents where the Contract Documents contain a more stringent requirement. Construction Documents shall consist of all site, architectural, structural, MEP and specialty design drawings, specifications, calculations and details to obtain all regulatory approvals and construct the project.

1.5.2.1 Architectural

1.5.2.1.1 Completed site plan.

1.5.2.1.2 Completed floor plans, elevations, and sections.

1.5.2.1.3 Architectural details and large blow-ups completed.

1.5.2.1.4 Finish, door, and hardware schedules completed, including all details.

1.5.2.1.5 Site utility plans completed.

1.5.2.1.6 Fixed equipment details and identification completed.

1.5.2.1.7 Reflected ceiling plans completed.

1.5.2.2 Structural

1.5.2.2.1 Structural floor plans and sections with detailing completed.

1.5.2.2.2 Structural calculations completed.

1.5.2.3 Mechanical

1.5.2.3.1 Large scale mechanical details completed including fire sprinkler system.

1.5.2.3.2 Mechanical schedules for equipment completed.

1.5.2.3.3 Completed mechanical schematic for environmental cooling and exhaust equipment.

1.5.2.3.4 Complete energy conservation calculations and report necessary for compliance with California Title 24 energy requirements.

1.5.2.4 Electrical

1.5.2.4.1 Lighting and power plan showing all switching and controls. Fixture schedule and lighting details completed.

1.5.2.4.2 Distribution information on power consuming equipment, including lighting, power, signal and communication device(s) branch wiring completed.

1.5.2.4.3 All electrical equipment schedules completed.

1.5.2.4.4 Low Voltage and special system component and distribution plans completed including Fire Alarm system.

1.5.2.4.5 Electrical load calculations completed.

1.5.2.5 Civil

1.5.2.5.1 All site plans, site utilities, parking and roadway systems completed.

1.5.3 Attend Required Meetings Attend meetings with community, representatives of the District and its designated consultants and appropriate governmental agencies and provide information and diagrams to fully describe the project.

1.5.4 Deliverables Contractor shall submit one (1) electronic copy of all milestone documents, including Collaboration, 100% SD, 100% DD, 50% CD & 100% CD, and two (2) hard copies to District.

1.5.5 Specifications shall be prepared in conformance with the most current edition available of Master Format of the Construction Specification Institute. Design Builder shall have complete responsibility to secure timely review and approval by all authorities with jurisdiction, including but not limited to the Division of the State Architect. It is the intent of the District to work in close coordination to assist the Design Builder in the plan review process to support a timely review and approval process schedule.

1.5.6 The same architectural and engineering team (and team personnel) that prepare documents submitted to authorities with jurisdiction shall complete the Construction Documents.

1.5.7 Compliance with Codes, Regulations and Requirements Prepare Construction Documents in full compliance with the Contract Documents, applicable building codes, ordinances, District standards, governmental regulations and private restrictions, applicable to the Work.

1.5.8 Make full written disclosure to District, and obtain District's express written approval of, any proposed innovative, unique, proprietary or sole source design features.

1.5.9 Warranty Design Builder warrants to District that the final design, as expressed in the Construction Documents: :

1.5.9.1 Will be constructible, workable, serviceable and within the Design Builder's detailed estimate of costs and schedule;

1.5.9.2 Will comply in all respects with the requirements of the Contract Documents (Certificate of Warranty) and (Certificate of Warranty Fire and Life Safety) listed in Section 00 45 00.

1.5.9.3 Will not call for the use of hazardous or banned materials.

1.5.9.4 Will fully comply with applicable building codes, ordinances, standards, governmental regulations and private restrictions, applicable to the Work.

1.5.10 Cost Estimate The Design Builder shall submit to the District an updated Cost Estimate and identify cost changes since the Proposal Estimate (providing one (1) electronic copy). This estimate shall consist of unit costs applied to the Element Level (Level 3 National Institute of Standards and Technology Uniformat II Classification) items and quantities of work. This estimate shall be organized in a format acceptable to the District. The District will use this estimate for cost reconciliation and design change order reviews.

1.6 CONSTRUCTION PHASE

1.6.1 Upon District's acceptance of Design Builder's Construction Documents for technical divisions or other portions of the Work as Design Builder and District may agree, Design Builder may commence construction of the Work shown.

1.6.2 General Administration of Construction Design Builder's architectural, design, and engineering, and other subconsultants, including the industrial hygienist, shall make regular visits to the site at intervals appropriate to the various stages of construction as necessary to assure that construction conforms to the final design of the Construction Documents as approved.

1.6.3 Quality Control and Reporting Design Builder's architectural, design, and engineering, and other subconsultants, including the industrial hygienist, shall participate fully in Design Builder's required quality control program and shall have a duty to advise Design Builder and District in writing of any observations of defective work, work not in conformance with Construction Documents, and lack of progress consistent with the schedule of work in areas associated with their services. See Section 01 45 00 (Quality Control).

1.6.4 Design Builder's architectural, design, and engineering subconsultants, including the industrial hygienist, shall establish and maintain to the satisfaction of District, a computer database compatible with databases maintained by District. The Design Builder's database shall maintain complete and accurate records regarding its activities related to fulfilling the requirements of Section 01 45 00 (Quality Control). Design Builder shall make such database available to District at all reasonable times and turn over the database in both hard and electronic form to District upon completion or termination of this Agreement.

1.6.5 Together with District, Design Builder and Design Builder's architectural, design, and engineering subconsultants, shall visit the Project to observe any apparent defects in the construction, correct such deficiencies, and supply information as needed regarding replacement, correction, or diminished value of defective work.

1.6.6 Design Builder shall provide to District for District's approval two (2) copies of a color schedule, samples of types and size acceptable to the District of textures and finishes of all materials in the Work at the Project. Actual materials to be used in the construction of the building shall be mounted on a board(s) suitable for display purposes for faculty, staff and the community to observe. Provide separate color boards for interior and exterior finishes.

1.7 OPERATION/PROJECT CLOSE-OUT PHASE

1.7.1 Operation/Close Out During the Operation/Project Close-Out Phase, Design Builder and Design Builder's architectural, design, and engineering subconsultants shall, when requested by District, provide all necessary architectural, design and engineering services, including services of its architectural, design and engineering subconsultants, for:

1.7.1.1 Refining, adjusting and correcting of any equipment or systems.

1.7.1.2 Start-up, testing and placing in operation all equipment and systems. See Section 01 35 50 (CALGreen Environmental Requirements).

1.7.1.3 Completion of punch list work and observation of any apparent defects in the completed construction, correction of such deficiencies, and supply information as needed regarding replacement, correction, or diminished value of defective work.

1.7.1.4 Training District's staff to operate and maintain all equipment and systems. Training shall be professionally videotaped with two (2) copies provided to District for their use.

1.7.1.5 Assisting District in developing systems and procedures for control of the operation and maintenance of and record keeping for the Project.

1.7.1.6 Preparation of electronic record sets and sets of reproducible record prints or Drawings showing those changes made during the construction process, based on the marked-up prints, Drawings and other data.

1.8 DESIGN BUILDER'S OBLIGATION FOR FINISHED CONSTRUCTION

1.8.1 District's right to review Design Builder's design including, but not limited to, Construction Documents, shop drawings, samples and submittals, as specified in the Contract Documents, shall not relieve Design Builder of its responsibility for a complete design and construction complying with the requirements of the Contract Documents; but rather, such review shall be in furtherance of the District's monitoring and accepting the design as developed and issued by the Design Builder, consistent with these Contract Documents. Design Builder's responsibility to design and construct the Project in conformance with the Contract Documents including, but not limited to, the applicable performance standard and any fully executed change orders, shall be absolute. Such duty may not be altered or diminished by any action other than a signed change order.

1.8.2 Auto CAD, Revit, and Other Electronic Data (BIM) Provide all electronic files of all Construction Documents drawings including as-bid, as-built, and all record Drawings. Prepare electronic record sets and sets of reproducible record prints or Drawings showing those changes made during the construction process. Electronic data shall conform to District requirements for compatibility with District equipment and software.

PART 2 - PRODUCTS (Not used)

PART 3 - EXECUTION (Not used)

END OF SECTION

1.1 RELATED DOCUMENTS

1.1.1. The Contract Documents, including Section 00 50 00 (Form of Agreement) and other Division 0 and 1 Specification Sections, apply to this Section.

1.2 USE OF PREMISES

1.2.1 Use of Site: Limit use of premises to work in areas indicated. Do not disturb portions of site beyond areas in which the Work is indicated.

1.2.1.1 Limits: Confine constructions operations to Limit of Work as shown in the Bridging Documents.

1.2.1.2 District Occupancy: Not Used.

1.2.1.3 Driveways, Entrances and Parking: Keep driveways, entrances and parking serving adjacent properties available for access and emergency vehicles at all times. Do not use these areas for parking or storage of materials.

1.2.1.3.1 Schedule deliveries to minimize impact to adjacent properties and projects.
1.2.1.3.2 Schedule deliveries to minimize space and time requirements for storage of materials and equipment on-site.

1.2.2 Use of Existing Building: Maintain existing building in a weather-tight condition throughout construction period. Immediately repair damage caused by construction operations. Protect building and its occupants during construction period.

1.3 OCCUPANCY REQUIREMENTS

1.3.1 Full District Occupancy: Cooperate with District during construction operations to minimize conflicts and facilitate District usage. Perform the Work so as not to interfere with District's operations.

1.3.2 Partial District Occupancy: District reserves the right to occupy and to place and install equipment in completed areas of building, before Substantial Completion, provided such occupancy does not interfere with completion of the Work. Such placement of equipment and partial occupancy shall not constitute acceptance of the total Work.

1.3.2.1 District will prepare a Certificate of Substantial Completion for each specific portion of the Work to be occupied before District occupancy.

1.3.2.2 Obtain a Certificate of Occupancy from authorities having jurisdiction before District occupancy.

1.3.2.3 Before partial District occupancy, mechanical and electrical systems shall be fully operational, and required tests and inspections shall be successfully completed. On occupancy, see Section 01 77 00 (Cleaning and Closeout Procedures) for requirements.

1.3.2.4 On occupancy, District will assume responsibility for maintenance and custodial service for occupied portions of building.

1.3.2.5 Prior to occupancy for each phase Design Builder shall satisfy all of the requirements as set forth in Section 01 77 00 (Cleaning and Closeout Procedures.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

PART 1 – GENERAL

ENVIRONMENTAL CONTROLS

1.1.1 Noise: All work shall be performed with a minimum of noise or disruption to normal activities in the surrounding areas. Design Builder will allow up to twenty-one (21) Calendar Day notice for any work to be done outside the hours of Work allowed by Peralta Community College District.

1.1.2 The following noise control procedures shall be employed:

1.1.2.1 Maximum increase in noise shall be limited to approximately 15db over ambient and shall not exceed regulatory standards for noise.

1.1.2.2 The on-site construction supervisor shall have the responsibility and authority to receive and resolve noise complaints. A clear appeal process shall be established prior to construction commencement that will allow for resolution of noise problems that cannot be immediately solved by the site supervisor.

1.1.2.3 All noise-producing project equipment and vehicles using internal combustion engines shall be equipped with mufflers, air-inlet silencers where appropriate, and any other shrouds, shields, or other noise-reducing features in good operating condition that meet or exceed original factory specification. Mobile or fixed "package" equipment (e.g., arc-welders, air compressors) shall be equipped with shrouds and noise control features that are readily available for that type of equipment.

1.1.2.4 All mobile or fixed noise-producing equipment used on the project, which is regulated for noise output by a local, state, or federal agency, shall comply with such regulation while in the course of project activity.

1.1.2.5 Electrically-powered equipment instead of pneumatic or internal combustion powered equipment shall be used, where feasible and needed to control excessive noise.

1.1.2.6 Material stockpiles and mobile equipment staging, parking, and maintenance areas shall be located as far as practicable from noise-sensitive receptors.

1.1.2.7 Construction site and access road speed limits shall be established and enforced during the construction period.

1.1.2.8 The hours of material transport shall be restricted to the periods and days permitted by both this contract and local noise or other applicable ordinance.

1.1.2.9 The use of noise producing signals, including horns, whistles, alarms, and bells shall be for safety warning purposes only.

1.1.2.10 No project related public address or music system shall be audible at any adjacent noise-sensitive receptor.

1.1.3 Dust: Dust control is a critical activity. The Design Builder shall prepare a submittal that identifies source air pollution and related pollution reduction measures. The following dust control measures shall be employed:

1.1.3.1 Implement fugitive dust control measures as provided in Bay Area Air Quality Management District (BAAQMD).

1.1.3.2 Develop a staging area, vehicle and truck routes, and a daily meeting to assure all applicable control measures are established for that particular workday.

1.1.3.3 Dust barriers shall be provided by the Design Builder as necessary to contain dust within the construction site.

1.1.3.4 If necessary, install a water misting system along fence perimeter or any other necessary area to prevent fugitive dust from creating a.

1.1.3.5 Reduce the use of diesel fuel powered equipment and use equipment with alternative fuel whenever practical to minimize diesel exhaust emissions in areas close proximity to the site.

1.1.3.6 Turn off equipment when not in use for long periods of time. No idling of diesel-fueled equipment for durations longer than five minutes.

1.1.3.7 Control fugitive dust at active soil grading/excavation areas, using water in a manner

that would not impact soil compaction. Continuous wet-down may be required in the area of construction activity.

1.1.3.8 Use ground-covering such as mulch, wood chips, straws, hydro-seeding, surfactants, or plastic sheeting to cover inactive exposed areas to minimize fugitive dust.

1.1.3.9 Provide drainage for erosion control measures.

1.1.3.10 Use sand bags, as necessary, along site perimeter to keep soil on site.

1.1.3.11 Provide gravel entry way into construction site entrance to reduce/eliminate mud and sediment carried off site by vehicles.

1.1.3.12 Cover top of haul trucks to eliminate wind-blown fugitive dust.

1.1.3.13 Schedule haul trucks and material delivery trucks to prevent traffic congestion. Set up truck queuing area and have staff communicate via cell phone for efficiency.

1.1.3.14 As necessary, use street sweepers along travel routes in general vicinity of project area.

1.1.3.15 All vehicle routes are to be watered for dust control. All existing roadway and parking surfaces impacted by construction activity are to be swept and kept free of debris and dust. All areas within the construction site are to be broom swept as required to keep dust and debris to a minimum.

1.1.3.16 Limit the number of haul trucks on site and establish a haul route. Install a gravel or base road on site for loading trucks. Haul route shall be reviewed and approved by District.

1.1.3.17 Place on-site portable toilets away from adjacent properties.

1.1.3.18 All stockpiles shall be kept moist throughout the day to minimize particulate matter emissions. Wet down stockpiles on a regular basis including prior to end of work day.

1.1.3.19 Haul roads shall be paved, lined with gravel or base material, or kept moist to minimize particulate matter emissions.

1.1.3.20 Where practical, use paddle-wheel scrapers instead of traditional scrapers to minimize fugitive dust and reduce exhaust emissions.

1.1.3.21 Handling of soil shall be kept to a minimum.

1.1.3.22 Provide a boundary/zone where equipment shall not enter and if necessary, equipment shall operate on alternative fuel to reduce diesel particulate matter.

1.1.4 Odors: When odors are a concern, arrangements shall be made by the Design Builder for their containment or control. Where this is not feasible, specific arrangements should be made to minimize disturbance to surrounding properties. Where controllable, fumes and odors shall not be allowed to migrate. The Design Builder shall immediately notify the District's Representative of any migrating odors.

1.1.5 Vibrations: The impacts of vibration activities will be limited. If vibration becomes an impact to surrounding properties, the Design Builder shall stop operations, reschedule and/or implement the following with the approval of the District Representative:

1.1.5.1 Route heavily loaded trucks and equipment away from surrounding residential properties if possible.

1.1.5.2 Phase earthmoving and ground-impacting operations so as not to occur in the same time period, to the extent practicable. The total vibration level produced could be less when each vibration source operates separately.

1.1.5.3 Avoid vibratory rollers and packers near vibration-sensitive areas.

1.1.6 Environmental Mitigation Measures: Design Builder shall become familiar with the full text of the project's Environmental Impact Report/Negative Declaration Report and take responsibility for implementation of applicable mitigation measures. Questions about which items are applicable to the Design Builder shall be directed to the District's Representative.

1.2 SHIPMENTS AND MATERIALS

1.2.1 Equipment and materials shall not be shipped to the site unless specific arrangements are made for receipt and acceptance of these items. When

such shipments are authorized, they are the total responsibility of the Design Builder. The District accepts no responsibility for the receipt, storage, or protection of the Design Builder's materials and equipment.

1.3 SALVAGE AND DISPOSAL

1.3.1 All existing property of the District that is removed from the construction site and has been identified to be salvaged by the District shall be delivered to a secure site as specified by the District's Representative.

1.3.2 Construction debris, or material that has no redeemable value, is to be placed in Design Builder-furnished refuse bins for safe and legal removal from the premises. District refuse bins may not be utilized unless so authorized by the District.

1.4 PARKING

1.4.1 The District's Representative will meet with the Design Builder to determine parking requirements.

1.4.2 The primary parking and storage areas shall be designated.

1.4.3 Design Builder and related personnel shall park in authorized areas only.

1.5 SANITARY

1,5,1 Design Builder shall provide temporary toilet facilities adjacent to areas of Work. The Design Builder will not be allowed to use project site restroom facilities being constructed.

1.5.2 Design Builder shall submit proposed location of temporary toilet(s) to the District's Representative for approval.

1.5.3 Construction personnel will not be allowed to use restroom facilities being constructed for personal or equipment clean-up.

1.5.4 Sanitary Facilities shall be in accordance with OSHA regulations.

1.6 FOOD

1.6.1 Construction personnel shall police their own areas during breaks. All cups, cans, paper, wrappers, and discarded food must be placed in trash receptacles at the end of each break.

1.6.2 Design Builder shall submit the proposed location of any break and eating areas to the District's Representative for approval.

1.6.3 Construction personnel are not allowed to have food within the project, whether those facilities exist or are under construction.

1.7 ITEMS to be included in DBE lump sum General Conditions in RFP Proposal shall include, but are not limited to the following:

1.7.1 Offsite parking for DBE administrative, management and Supervisory staff, craft labor included in general conditions (ie clean-up and safety workers).

1.7.2 Temporary toilets and hand wash stations, compliant with all COVID-19 requirements.

1.7.2.1 Refer section 01 52 00 for further detail on items to be inlcuded

1.7.3 Temporary barricades, fencing, gates to protect all students, faculty, staff and general public from construction activities. Barricades shall be lit as necessary for safety and security and shall be continuously maintained.

1.7.4 General clean-up of construction site on a daily basis, including debris boxes and off-site removal of trash.

1.7.5 Final clean-up – removal of all debris, construction related items, packaging, scraps etc., clean all surfaces of construction dust, materials.

1.7.6 COVID-19 costs, as required by AHJ, for temperature taking, reporting, sign-n sheets, sanitization of work areas, tools etc..

1.8 SMOKING AND TOBACCO

1.8.1 Smoking, and chewing tobacco are not permitted on the Project site.

1.8.2 Smoking and chewing tobacco are not permitted within the facilities during or after construction.

1.9 SECURITY

1.9.1 Comply with requirements of Article 14 of Section 00 50 00 (Form of Agreement).

1.9.2 All personnel must obey and act immediately upon any request by District security or law enforcement personnel.

1.9.3 A list of emergency phone numbers will be provided by the District Representative.

1.10 SAFETY

1.10.1 General

1.10.1.1 Watch for guests, invitees, and unauthorized personnel at all times.

1.10.1.2 Work only where there is a positive barrier separation, with “green screen” between construction activities and others.

1.10.1.3 Clean up all areas immediately in occupied areas.

1.10.1.4 Do not drape cords across corridors. All cords must be attached to the ceiling or taped to the floor (use tape with non-marring adhesive).

1.10.1.5 Maintain a minimum of 8’-0” clear within all corridors.

1.10.1.6 Do not leave materials or equipment in the corridor.

1.10.2 Safety equipment and consideration should include, but are not limited to:

1.10.2.1 Anyone known to be under the influence of alcohol or drugs shall be dismissed from the Project at once and not be allowed to return.

1.10.2.2 Offensive language is not permitted in any area where it may be overheard by surrounding properties.

1.10.2.3 Provide adequate emergency first aid equipment.

1.10.2.4 Post location and emergency phone numbers for local medical care.

1.10.2.5 Monitor safe ladder usage.

1.10.2.6 Provide exhaust controls for equipment.

1.10.2.7 Monitor noise levels and establish safe limitations.

1.10.2.8 Ensure adequate ventilation for air contaminants.

1.10.2.9 Insist on personal protective equipment, such as hard hats, safety shoes, and eye, ear, and face protection equipment.

1.10.2.10 Safety nets, belts, and lifelines shall be used, as appropriate.

1.10.2.11 Provide adequate emergency fire protection equipment.

1.10.2.12 Post location and emergency phone numbers for local fire departments.

1.10.2.13 Provide safe storage for all flammable and combustible materials.

1.10.2.14 Insist on safe and proper use of hand power tools and electrical drop cords.

1.10.2.15 Operation of cranes, derricks, and hoists should be in accordance with manufacturer's recommendations and appropriate ANSI and CAL-OSHA regulations.

1.10.2.16 All construction operations and personnel are subject to CAL-OSHA and applicable District Environmental Health & Safety regulations.

1.10.2.17 Provide adequate barricades and safety lighting at all open trenches adjacent to public access.

1.10.2.18 Properly fence entire confines of project site so as to avoid public access or unauthorized personnel.

1.10.2.19 All wall, floor, and ceiling penetrations shall be sealed to maintain fire and smoke ratings in accordance with CBC, NFPA 99 and Life Safety Code.

1.10.2.20 All emergency exit passages must be maintained free of obstructions.

1.10.2.21 Provide barricades and fencing in accordance with Section 00 50 00 (Agreement) or applicable law.

1.10.3 Fire Prevention During Welding, Cutting, and Other Hot Work

1.10.3.1 All hot work shall be in accordance with industry standards and CAL-OSHA requirements.

1.10.3.2 Hot work includes welding, heat treating grinding, thawing pipe, powder-driven fasteners, hot riveting, and similar applications producing a spark, flame, or heat.

1.10.3.3 The Design Builder shall ensure that only approved apparatus, such as torches, manifolds, regulators, or pressure-reducing valves, and acetylene generators, are used.

1.10.3.4 The Design Builder shall ensure that all individuals involved in hot work are:

1.10.3.5 Trained in the safe operation of their equipment and the safe use of the process.

1.10.3.6 Have an awareness of the inherent risks involved and understand the emergency procedures in the event of a fire.

1.10.3.7 Are aware if any special risks, such as flammable materials or hazardous conditions at the hot work site.

1.10.4 Project Inspector

1.10.4.1 Provision of inspectors by the District, if any, pursuant to provisions of this section shall be subject to following:

1.10.4.1.1 Design Builder shall allow inspectors full access to project at all times Work is in progress.

1.10.4.1.2 Design Builder shall not take any direction, approvals or disapprovals from inspectors.

1.10.4.1.3 Design Builder shall not rely on inspectors to ensure Work is completed in accordance with Contract documents.

1.10.4.2 Acts or omissions of any inspector (including, without limitation, inspector's failure to observe or report deficiencies in Design Builder's Work) shall not relieve Design Builder from its responsibility to complete Work in accordance with Contract documents.

1.10.5 Directory For Assistance: A list of emergency phone numbers will be provided by the Engineering Department Service Center or the District's Representative.

1.11 PCCD COVID-19 Protocol

1.11.1 DBE and all vendors (firm/company/contractor) should follow the Alameda County Health Department's mandated COVID-19 workplace safety and health guidelines. Workers working under the Contract shall comply with all applicable laws, ordinances, rules, regulations and lawful orders of public authorities bearing on the safety of persons or property, or their protection from damage, injury or loss. Vendors shall be solely responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the performance of the Work.

DBE shall include all costs from said COVID-19 compliance in their RFP General Conditions proposal and in subsequent trade bid packages, including all direct cost impacts as well as indirect impacts such as loss of efficiency, vertical transportation, social distancing, sanitizing of tools, equipment and work areas, personal protective equipment, temperature taking, sign-in sheets, tool box meetings, reporting, documentation etc..

Refer https://safe.peralta.edu/ for the most up-to-date District information and resources regarding COVID-19 for students, faculty/staff, and the community.

PART 2 – PRODUCTS (Not Used)

PART 3 – EXECUTION (Not Used)

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes administrative, procedural, and technical requirements for bid Alternates. An Alternate is an amount proposed by bidders and stated on the Bid Form for certain work defined in the bidding requirements that may be added to or deducted from the base bid amount if the Owner decides to accept a corresponding change either in the amount of construction to be completed or in the products, materials, equipment, systems, or installation methods described in the Contract Documents.

1. Alternates described in this Section are part of the Work only if established in the Agreement.

2. The cost or credit for each alternate is the net addition to or deduction from the Contract Sum to incorporate alternates into the Work. No other adjustments are made to the Contract Sum. Except as specifically indicated, the Work described in Alternates shall be completed with no increase in Contract Time.

3. This Section includes only the non-technical descriptions of the Alternates. Refer to the specific Sections of the Specifications for the technical description of the Alternates.

1.2 PROCEDURES

A. Part 3 of this Section identifies each Alternate by number and describes basic changes to be incorporated into the Work, only when that Alternate is made a part of the Work by specific provisions in the General Conditions and/or Division 1.

B. Location of each Alternate Bid is indicated on the Drawings.

C. Scope: Base Bid and Alternates shall include cost of all supporting elements required, so that no matter what combination of Base Bid and Alternates are accepted, that portion shall be a complete entity in itself. Scope of Work for all Alternates shall be in accordance with applicable Drawings and Specifications. Drawings specified herein are not all inclusive but are listed for guidance in the location of each Alternate. Include, as part of each alternate, miscellaneous devices, accessory objects, and similar items incidental to or required for a complete installation, whether or not indicated as part of alternate.

D. Notification: Immediately following award of Contract, prepare and distribute to each party involved, notification of status of each Alternate. Indicate whether Alternates have been accepted, rejected or deferred for consideration at a later date. Include a complete description of negotiated modifications to Alternates.

E. Execute accepted alternates under the same conditions as other Work of the Contract. Revise or adjust affected adjacent work as necessary to completely integrate work of the alternate into Project.

PART 2 - PRODUCTS (NOT USED)

PART 3 – EXECUTION

3.1 SCHEDULE OF ALTERNATES

A. General: The bid alternates itemized below are listed in their order of priority, from highest to lowest.

1. Alternate No. 1 – Classroom Resilient Flooring Alternate.
    a. Base Bid: Resilient flooring finish in classroom spaces as indicated in Drawings and as specified.
    b. Alternate: Propose Value Alternate flooring finish product in classroom spaces.
2. Alternate No. 2 – Classroom Resilient Flooring Removal.
    a. Base Bid: Resilient flooring finish in classroom spaces as indicated in Drawings and as specified.
    b. Alternate: Polished concrete floor in classroom spaces.
3. Alternate No. 3 – Exposed Concrete.
    a. Base Bid: Sack and patch exposed concrete as specified.
    b. Alternate: Remove sack and patch concrete requirement. All concrete walls Class 2 per specification only.
4. Alternate No. 4 – Benches.
    a. Base Bid: Built-in custom benches located at Floors 2-6 corridors, as indicated in Drawings and specified.
    b. Alternate: Propose Value Alternate to modify/simplify fabrication and/or installation.
5. Alternate No. 5 – Steel Picket Fencing.
    a. Base Bid: Decorative steel picket fencing as specified.
    b. Alternate: Propose value alternate.
6. Alternate No. 6 – Telecommunications Cable.
    a. Base Bid: Category 6A (CAT6A) cable standard as indicated in Drawings and as specified.
    b. Alternate: Category 6 (CAT6) cable standard where CAT6A is indicated in Drawings and specified.

7. Alternate No. 7 – Roof Deck Shade Structure.
   a. Base Bid: No shade structure. Include light fixtures on north wall of terrace per Drawings.
   b. Alternate: Add shade structure at roof deck as shown on A-113 & associated details, inclusive of sprinklers and lighting as indicated.
8. Alternate No. 8 – Corridor Wall Wash Fixtures.
   a. Base Bid: Lighting as shown on Drawings and specified.
   b. Alternate: Add Wall Wash F3 type fixtures to Main Corridor, Floors 1-3, 5-6.
9. Alternate No. 9 – Marquee LED Lighting.
   a. Base Bid: Marquee lighting as shown on Drawings and specified.
   b. Alternate: Add RGBW LED Lighting at Column A-X2, Floors 1-5.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

1.1.1 This section describes requirements for job site administration, including:

1.1.1.1 District's Representative
1.1.1.2 Design Builder's Project Management Team.

1.1.2 Related Sections.

1.1.2.1 Section 00 50 00 (Form of Agreement)
1.1.2.2 Section 01 11 13 (Work Covered by Contract Documents)
1.1.2.3 Section 01 33 00 (Submittal Procedures)
1.1.2.4 Section 01 70 00 (Execution and Closeout Procedures)

1.2 DISTRICT'S MANAGEMENT TEAM

1.2.1 The District shall be represented on this Contract by Atheria Smith serving as District's Representative, who will act personally or through authorized designees. The District has designated Keith Kajiya, AECOM PCCD Bond Program Manager to represent the District in carrying out the duties of District. The District may delegate all or a portion of the District's Representative's duties to a Construction Manager, Bob Parks, Kitchell CEM or other District Representative, which shall then perform all or a portion of the District's Representative's duties specified herein.

1.2.2 Functions of the District's Representative include, but are not limited to, the following:

1.2.2.1 The District's Representative functions as the primary point of contact with the Design Builder in all matters concerning the Contract, monitoring the Design Builder's performance in all respects to ascertain that the Work is performed in accordance with all of the requirements of the Contract.

1.2.2.2 The District's Representative is the focal point of contact with the Design Builder regarding clarification of discrepancies and resolution of questions of fact that arise during performance of the Work under the Contract. The District's Representative also performs this role with regard to all agency and utility construction interfaces with the Work under this Contract.

1.2.2.3 The Design Builder is required by the Contract to provide formal notice of any and all potential claims arising during the performance of the Work. The District's Representative will administer the processing and resolution of any such claims in accordance with the requirements of the Contract.

1.2.2.4 All contractual correspondence, including submittals, shall be directed and processed through the District's Representative unless otherwise specifically directed in the Contract. Any required or requested communications between the Design Builder and District, the District's Representative, or any other representative of District, will be coordinated by the District's Representative.

1.3 DESIGN BUILDER'S PROJECT MANAGEMENT TEAM

1.3.1 The Design Builder shall staff the Project with a management team qualified and experienced in construction of a public works project of this value, nature and complexity including the individuals identified by Design Builder in its Proposal. This team shall possess the competency, skills and authority specified in Section 00 50 00 (Agreement).

1.3.1.1 The Design Builder shall submit to the District prior to Notice to Proceed, the names, detailed project experience, references, and proposed project position for each team member. Key team members shall have appropriate experience in the proposed position.

1.3.1.2 The Design Builder shall not replace members of the Design Builder's management team without prior written approval of the District. If, during the course of the Project, the Design Builder finds it necessary to replace a member of the Project Management Team, the name, qualifications, and experience of the proposed replacement shall be submitted to District for approval.

1.3.2 The Project Management Team shall be composed of members with the necessary skills and be sufficient in number to handle all duties normal to a project of this scale and complexity. Special attention shall be given to the responsibility of the Project Management Team for coordination and scheduling.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

1.1.1 This section describes the required project meetings for this work. These meetings include:

1.1.1.1 Collaboration, Design and Preconstruction Conferences.
1.1.1.2 Coordination Meetings
1.1.1.3 Progress Meetings
1.1.1.4 Scheduling Meetings.
1.1.1.5 Quality Control Meetings
1.1.1.6 Special Meetings.

1.1.2 Related Sections.

1.1.2.1 Section 00 50 00 (Form of Agreement)
1.1.2.2 Section 01 11 00 (Work Covered by Contract Documents)
1.1.2.3 Section 01 11 20 (Design Services and Deliverables)
1.1.2.4 Section 01 33 00 (Submittal Procedures)

1.2 DESIGN & PRECONSTRUCTION CONFERENCE

1.2.1 District will call for and administer Collaboration, Design and Preconstruction Conferences at times and places to be announced. A Design Confirmation Conference will occur as soon after issuance of the Notice to Proceed as can be reasonably scheduled. Preconstruction Conferences will be scheduled no later than 30 days prior to the start of construction of the Work.

1.2.2 Design Builder, all Subconsultants and major suppliers shall attend the Design Confirmation Conference(s). Agenda will include, without limitation, the following items:

1.2.2.1 Design Builder and District Coordination and Meeting Procedures
1.2.2.2 Design Builder's Design Confirmation Plan with Subconsultants
1.2.2.3 Design Builder's Initial CPM Schedule for Design and Construction
1.2.2.4 Design Builder's Schedule of Values (including design activities)
1.2.2.5 Design Builder's Schedule of Deliverables and Agency Submittals

1.2.3 Design Builder, all Subcontractors, and all major suppliers shall attend the Preconstruction Conference(s). Agenda will include, without limitation, the following items:

1.2.3.1 Schedules
1.2.3.2 Personnel and vehicle permit procedures
1.2.3.3 Use of premises/Limits of Work
1.2.3.4 Location of the Design Builder's on-site facilities
1.2.3.5 Security
1.2.3.6 Site specific safety plan

1.2.3.7 Housekeeping
1.2.3.8 Design Builder's Quality Control Program
1.2.3.9 Submittals
1.2.3.10 Inspection and testing procedures, on-site and off-site
1.2.3.11 Utility shutdown procedures
1.2.3.12 Control and reference point survey procedures
1.2.3.13 Injury and Illness Prevention Program
1.2.3.14 Design Builder's Updated CPM Schedule
1.2.3.15 Design Builder's Schedule of Values
1.2.3.16 Design Builder's Schedule of Submittals

1.2.4 District will distribute copies of minutes to attendees. Attendees shall have five (5) Business Days to submit comments or additions to minutes. Minutes will constitute final project record of results of any conference.

1.3 COORDINATION MEETINGS

1.3.1 Collaboration and Design Phase Coordination

1.3.1.1 District will be available to participate in Design Confirmation meetings or workshops as deemed necessary by the Design Builder.

1.3.1.2 Design Builder shall conduct at least weekly design coordination meetings with all subconsultants employed by the Design Builder. Design Builder shall invite the District or its representative to participate in these meetings.

1.3.2 Construction Phase Coordination

1.3.2.1 District will be available as necessary to participate in Construction Phase Coordination Meetings.

1.3.2.2 Design Builder Construction Phase Coordination shall be integrated with the Design Builder's Quality Control Program, see Section 01 45 00 (Quality Control).

1.3.2.3 Design Builder shall conduct at least monthly Construction Phase Coordination Meetings with all Subcontractors employed by Design Builder. Design Builder shall invite District's representative to attend these meetings. Design Builder shall invite District to attend Design Builder's Quality Control Meetings.

1.4 PROGRESS MEETINGS

1.4.1 District will schedule and administer Progress Meetings throughout the duration of Design and Construction Work. Progress meetings will be held weekly unless otherwise directed by District.

1.4.1.1 Design Phase Progress Meetings shall be held at the offices of the Design Builder's Architect or at the Office of the District as is mutually

agreed upon in advance by Design Builder and District Representative to be most advantageous for completing the Work.

1.4.1.2 Construction Phase Meetings shall be held at the Design Builder's Site office unless otherwise agreed between Design Builder and the District.

1.4.1.3 District will prepare an agenda and distribute it to the Design Builder and any Inspector in advance of the meeting.

1.4.1.4 District will preside at and conduct the meeting.

1.4.1.5 District will record and distribute minutes to the Design Builder, Inspectors, all other participants, and those affected by decisions made at a meeting, within five (5) Business Days after each meeting. Attendees shall have five (5) Business Days to submit comments or additions to the minutes. Minutes will constitute final project record of results of meeting.

1.5 SCHEDULING MEETINGS

1.5.1 Initial Schedule Review

1.5.1.1 Design Builder shall meet with the District and conduct initial review of the Design Builder's draft: Design Schedule, Design Deliverables Schedule, Shop Drawing and Sample Submittal Schedule, Schedule of Values, and Progress Schedule.

1.5.1.2 An authorized representative in the Design Builder's organization, designated in writing and who will be responsible for working and coordinating with District relative to preparation and maintenance of Progress Schedule, shall attend the initial review meeting.

1.5.2 Schedule Update Meetings

1.5.2.1 District will administer scheduling update meetings monthly and will distribute minutes of scheduling meetings to attendees. Details for Schedule Update Meetings shall conform to the description provided in Section 00 50 00 (Agreement).

1.6 QUALITY CONTROL MEETINGS

1.6.1 Design Builder shall conduct at a minimum weekly Quality Control Meetings as part of the Design Builder's Quality Control Program, see Section 01 45 00 (Quality Control).

1.6.2 Design Builder's attendees at Quality Control Meetings shall at a minimum include:

1.6.2.1 Design Builder's Quality Control Manager

1.6.2.2 Design Builder's Commissioning Coordinator; as required
1.6.2.3 Design Builder's Safety Officer
1.6.2.4 Subcontractors actively working on Site or preparing to mobilize.
1.6.2.5 Representatives of manufacturers and fabricators; as required
1.6.2.6 Design Builder's Architect
1.6.2.7 Subconsultant Engineers as activities dictate.

1.6.3 District's attendees at Quality Control Meetings shall at a minimum include:

1.6.3.1 District's Representative
1.6.3.2 District's Inspector of Record

1.6.4 Quality Control Meetings agendas shall include at a minimum:

1.6.4.1 Submittal Review, including approval status and schedule

1.6.4.1.1 Product Data and Material Safety Data Sheets (MSDS)
1.6.4.1.2 Shop Drawings & Coordination Documents
1.6.4.1.3 Substitutions and Modifications Requests
1.6.4.1.4 Manufacturer's Installation Requirements & Instructions
1.6.4.1.5 Manufacturer's Operating Requirements & Instructions

1.6.4.2 Distribution of Testing and Inspection Reports

1.6.4.3 Review of In-progress activities for compliance and timeliness.

1.6.4.4 Coordination of Upcoming Testing, Inspection and Observation Procedures & Requirements

1.6.4.5 Summary of activity successes, deficiencies, and corrective measures

1.7 SPECIAL MEETINGS

1.7.1 Preparatory Meetings as activities dictate for Testing, Inspection and Observation.

1.7.2 Commissioning Meetings per approved Commissioning Plan and Schedule.

1.7.2.1 Pre-Commissioning Planning
1.7.2.2 Commissioning Plan Review
1.7.2.3 Commissioning Scheduling and Procedures

1.7.3 Community Meetings as directed by District.

1.7.4 Ad Hoc Meetings as directed by District.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

1.1.1 All Contract Documents apply to the work of this section.

1.1.2 This section contains general information that applies to all work performed under the Contract, and is made inherently a part of each specification section.

1.2 GENERAL PROJECT MANAGEMENT

1.2.1 The District hereby directs Design Builder to use the Project's Internet/Web-based project management software to track and manage the Project.

1.2.2 Use of this project management software will not replace or change any contractual responsibilities of the project team members.

1.2.3 Each Project Team Member of the Design Builder: Superintendent, Project Engineer, Scheduler, and Project Manager, etc., shall have access to the Internet and an Internet e-mail address in order to communicate with various project team members. The Design Builder shall provide immediately upon receipt of the Notice to Proceed confirmation of these conditions and the names, positions, and e-mail addresses to the District.

1.3 SOFTWARE AND HARDWARE REQUIREMENTS

1.3.1 The Design Builder is required to provide at both the field office and home office locations from where this project is managed, the computer hardware, software and high speed Internet access that meet the requirements of the Web- Based project management software. This Software is intended to be a web-based application that does not require the Design Builder to purchase. The Design Builder will be given the ability to create additional user logins so that it may give access to those it determines to be necessary at no additional cost. Design Builder's access to the Locker Room Renovation Project Web-Based database will be limited to in accordance with permission levels configured by the District.

1.3.2 The District shall provide the Design Builder with Web-Based software training (if required). The anticipated training will take place after the Notice to Proceed has been issued and will be held in Oakland, California. The District will pay for the training course only for up to twenty (20) Design Builder staff members. Training for Design Builder is expected to be completed in up to two separate half day sessions. Training for additional staff can be arranged directly with Web-Based Software team at additional cost to the Design Builder.

1.3.3 The administrator for this project is the District's Representative or authorized designee.

1.3.4 The Design Builder shall provide an adequate number of trained users to properly manage the Project in accordance with the Project schedule. The Design Builder shall have Internet access through an Internet service provider of

its choice at its cost.

1.3.5 Software requirements are as follows:

1.3.5.1 A 32-bit operating system such as Windows XP or above with Service Pack 2 or above
1.3.5.2 Internet Explorer Version 7.0 or above

1.3.6 Hardware requirements are as follows:

1.3.6.1 Pentium based (or equivalent) workstation or laptop
1.3.6.2 32 megs of RAM minimum; ideally 128 megs of RAM or above
1.3.6.3 A connection to the Internet (128 kb/s or above)

1.3.7 More information on Web-Based Project Management software information will provide later in design phase.

1.4 SYSTEM MANAGEMENT AND USE

1.4.1 The District's Representative will administer the Web-Based Project Management Software user account.

1.4.2 All costs associated with using this system, including computer hardware and internet service are the responsibility of the Design Builder.

1. 5 USE BY SUBCONTRACTORS

1.5.1 The District encourages the Design Builder to utilize Web-Based project management software for communicating with its Subcontractors. The Design Builder shall inform all Subcontractors of the purpose of the project management system and how it can assist them in obtaining information for the project.

1.6 COMMUNICATION PROCESS

1.6.1 The District's Representative will outline and detail communication, correspondence and coordination procedures at the initial Project Team meeting.

1.6.2 Most Project communication will take place in the Web-Based project management system by creating and distributing documents directly within the system, or by entering manually in the system dates and descriptions of items to track over time. All documents requiring formal signatures will be printed, and their hard copies signed and distributed.

1.6.3 The official submittal log will be maintained within Web-Based project management system. The Design Builder will use the Web-Based project management transmittal format for each submittal transmittal; however, the Design Builder will distribute prints, documents, reports, samples, etc. in the traditional manner, outside the system. TheWeb-Based project management system will be used to track and expedite processing of these items.

1.6.4 Design Builder will be required to maintain all current drawings within Web-

Based project management system, including but not limited to the Program Verification and Design Development process as well as the development of the Construction Documents. The Design Builder will be able to control administration of the drawings which includes but is not limited to: the ability to create a custom folder structure; folder-level permissions; auto-notifications for certain events (e.g., delete, check out) using Web-Based project management messaging system and the user's email address; auto-detection and uploading of a drawing's reference files; detailed history for a document, including revisions and access logs; check-in and check-out capabilities; view and markup capabilities.

1.6.5 Design Builder will be required to utilize modules including but not limited to: daily reports; meeting minutes; punch lists; requests for information (RFI); change items; cost events; and owner change order within the Web-Based project management system. The Design Builder can enter a RFI and the Architect/Engineer respond to the RFI completely within the Web-Based project management system without creating a hard copy. Support documentation in hard copy format for any document in Web-Based system may be scanned into an electronic file and attached in Web-Based system to documents.

1.6.6 Design Builder is required to use a digital camera in order to photo-document job progress and upload the associated images taken on a regular basis to the Web-Based system. Each report required under Section 00 50 00 (Agreement) should be accompanied by progress photograph(s). Cost for digital camera to be borne by Design Builder.

1.7 ARCHIVING

1.7.1 District may, at its cost and expense, obtain backups (on CDs or otherwise) of documents in Web-Based system. In the event of any dispute as to what items are the true and correct project records, items contained on the backups will control.

PART 2 - PRODUCTS

Not Used.

PART 3 - EXECUTION

3.1 Project Management Application is an Internet-Accessed Centralized Database of project information and consists of several separate modules or master file divisions for ease of organization. Available file divisions include but are not limited to: Correspondence, Daily Reports, RFI's, Transmittals, Submittals, Meetings, Documents, Drawings, Specifications, Punch Lists, Reports, Project Photos, Project Team, Schedule of Values, change items, cost events, owner change orders, owner request for proposals, etc.

3.2 The District shall provide the Design Builder with access to the BCC West Project in Web-Based software described in paragraph 1.3.1 above. Each major team member for the Design Builder (i.e. project manager, superintendent, architect, etc.) must have

access to Web-Based software and the required training to access the system. The Design Builder shall insure that all major team members on this project have Internet access available and access to Web-Based system during the duration of this Project.

3.3 Major Subcontractors are encouraged to utilize Web-Based project management software for the duration of their scope of work from commencement to completion of their scope of work. Major Subcontractors as a minimum shall be defined as sitework, mechanical, electrical, plumbing, structural, civil, landscape, telecommunications, concrete/masonry, security, storefront/windows, metal panels, drywall, roofing, and others deemed beneficial by the Design Builder.

All other Subcontractors and suppliers shall utilize email or fax for submission of documents to the Design Builder.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

Design Builder and District will jointly develop a list of submittals and shop drawings that are to be submitted to the District. Upon completion of the list, Design Builder will provide District with a preliminary schedule of shop drawings and submittals, which will list each submittal in order by specification section and the times for submitting, reviewing, and processing such submittal.

1.1.1 This section describes general requirements for submittals for the Construction Phase of the Work :

1.1.1.1 Procedures
1.1.1.2 Schedule of Shop Drawing and Sample Submittals
1.1.1.3 Safety Plan
1.1.1.4 Progress Schedule
1.1.1.5 Product Data
1.1.1.6 Shop Drawings
1.1.1.7 Samples
1.1.1.8 Quality Control Submittals
1.1.1.8.1 Engineering Data
1.1.1.8.2 Test Reports
1.1.1.8.3 Certificates
1.1.1.8.4 Manufacturers' Instructions
1.1.1.9 Machine Inventory Sheets
1.1.1.10 Operations and Maintenance Manuals
1.1.1.11 Computer Programs
1.1.1.12 Project Record Documents
1.1.1.13 Delay of Submittals

1.1.2 Related Sections

1.1.2.1 Section 00 50 00 (Agreement)
1.1.2.2 Section 01 11 13 (Work Covered by Contract Documents)
1.1.2.3 Section 01 11 20 (Design Services and Deliverables)
1.1.2.4 Section 01 31 91 (Project Meetings)
1.1.2.5 Section 01 45 00 (Quality Control)
1.1.2.6 Section 01 60 00 (Product Requirements)
1.1.2.7 Section 01 77 00 (Cleaning and Closeout Procedures)
1.1.2.8 Section 01 91 00 (Commissioning Requirements)

1.1.3 For Design Phase Deliverable Requirements, see Section 01 11 20 (Design Services and Deliverables).

1.2 PROCEDURES

1.2.1 Submit five (5) sets in addition to required quantities for Design Builder team members, Schedule of Shop Drawing and Sample Submittals, Safety Plans, Progress Schedule, Product Data, Shop Drawings, Samples, Quality Control Data, Machine Inventory Sheets, Operations and Maintenance Manuals,

Computer Programs, and Project Record Documents required by the Contract Documents. In lieu of physical copies of paper submittals, the Design Builder may request to submit electronic copies.

1.2.2 Transmit each item with a standard letter of transmittal in form approved by District. Address to both District's Representative and Inspector of Record. One copy will be returned to Design Builder only when District action is required, generally where variations to the approved Contract Documents are desired.

1.2.3 Identify Design Builder, Subcontractor, subconsultant, major supplier, pertinent drawing sheet and detail number, and specification section number as appropriate. Provide space for District approval.

1.2.4 Where manufacturers' standard drawings or data sheets are used, they shall be marked clearly to show those portions of the data which are applicable to this Project.

1.2.5 Submit Shop Drawings, Samples, Product Data and other submittals (collectively, "Submittals") to District for review and action in accordance with accepted Schedule of Submittals. Also see Section 01 45 00 (Quality Control). It is the intent that during the construction phase routing of Submittals to the District is informational for purposes of coordination and communication to the District's Representatives and Inspector of Record, except where such submittals represent deviations or substitutions from the approved construction documents then requiring District's review and approval.

1.2.6 The data shown on all Submittals shall be complete with respect to quantities, dimensions, specified performance and design criteria, materials and similar data to show District the materials and equipment Design Builder proposes to provide and to enable District to review the information for the limited purposes specified below. Samples shall be identified clearly as to material, supplier, pertinent data such as catalog numbers and the use for which it is intended and otherwise as District may require to enable District to review the submittal. The number of each Sample to be submitted will be as specified in the Specifications.

1.2.7 At the time of each submission, Design Builder shall give District specific written notice of all variations, if any, that the Submittal may have from the requirements of the approved Contract Documents, and the reasons therefore. This written notice shall be in a written communication separate from the Submittal. In addition, Design Builder shall cause a specific notation to be made on each Submittal submitted to District for review and approval of each such variation.

1.2.8 If District accepts such variation, it shall issue an appropriate Contract Modification with return to Design Builder of a reviewed set of the Submittal.

1.2.9 Submittal coordination and verification is the responsibility of Design Builder and its Subcontractors. Before submitting each Submittal, Design Builder and its Subcontractors shall have determined and verified:

1.2.9.1 All field measurements (where possible), quantities, dimensions, specified performance criteria, installation requirements, materials, catalog numbers and similar information with respect thereto;

1.2.9.2 All materials with respect to intended use, fabrication, shipping, handling, storage, assembly and installation pertaining to the performance of the Work; and

1.2.9.3 All information relative to Design Builder's sole responsibilities and of design and means, methods, techniques, sequences and procedures of construction and safety precautions and programs incident thereto.

1.2.10 Design Builder shall also have reviewed and coordinated each Submittal with other Submittals and with the requirements of the Work and the Contract Documents.

1.2.11 Design Builder's submission to District of a Submittal will constitute Design Builder's representation that it has satisfied its obligations under the Contract Documents, and as set forth immediately above, with respect to Design Builder's review and approval of that Submittal.

1.2.12 Designation of work "by others", if shown in Submittals prepared by a Subcontractor, subconsultant or supplier, shall mean that work will be the responsibility of the Design Builder or another Subcontractor rather than the Subcontractor, subconsultant or supplier that has prepared submittals.

1.2.13 Prior to submitting to District, each of Design Builder's Submittals must be reviewed by the Design Build Architect and/or its Subconsultants and marked with actions defined as follows:

1.2.13.1 NO EXCEPTIONS TAKEN - Accepted subject to its compatibility with future Submittals and additional partial Submittals for portions of the Work not covered in this Submittal. Does not constitute approval or deletion of specified or required items not shown on the Submittal.

1.2.13.2 MAKE CORRECTIONS NOTED (NO RESUBMISSIONS REQUIRED) - Same as 1. above, except that minor corrections as noted shall be made by Design Builder.

1.2.13.3 AMEND AND RESUBMIT - Rejected because of major inconsistencies or errors that must be resolved or corrected by Design Builder prior to subsequent review by District.

1.2.13.4 REJECTED - RESUBMIT - Submitted material does not conform to Drawings and Specifications in major respects, e.g., wrong size, model, capacity, or material.

1.2.13.5 NOT REVIEWED - Submitted material has not been reviewed and is being returned to be acted upon by Design Builder without review by District.

1.2.13.6 DISTRICT REVIEW & ACCEPTANCE REQUIRED - Submitted material meets Design Builder's general acceptance but, constitutes a variation from the approved Contract Documents thus requiring District-specific review and acceptance. District's reviewed submittal will be returned to Design Builder with actions as defined in 1 through 5 above.

1.2.14 It shall be Design Builder's responsibility to copy, conform and distribute reviewed Submittals in sufficient numbers for Design Builder's files, Subcontractors and vendors.

1.2.15 After District's review of a Submittal, revise and resubmit as required. Identify changes made since previous Submittal.

1.2.15.1 Begin no fabrication or work that requires Submittals until return of Submittals not requiring re-submittal.

1.2.15.2 Normally, Submittals will be processed and returned to Design Builder within fifteen (15) Business Days of receipt and shall be processed by District so as not to delay Design Builder's performance.

1.2.16 Distribute copies of reviewed Submittals to concerned persons. Instruct recipients to promptly report any inability to comply with Submittals.

1.3 SCHEDULE OF SHOP DRAWING AND SAMPLE SUBMITTALS

1.3.1 Submit preliminary Schedule of Shop Drawing and Sample Submittals as required by Section 00 50 00 (Agreement).

1.3.2 The Schedule of Shop Drawing and Sample Submittals will be used by District to schedule activities relating to review of submittals that may need District approval. District will review any shop drawing or submittal that constitutes substitution of products, systems or other deviation from approved Construction Documents. Schedule of Shop Drawing and Sample Submittals shall indicate a spreading out of Submittals and early Submittals of long lead-time items and of items that require extensive review.

1.3.3 Schedule of Shop Drawing and Sample Submittals shall be reviewed by District and shall be revised and resubmitted until accepted by District.

1.4 SAFETY PLAN

1.4.1 Submit five (5) copies of a Safety Plan, compliant with Article 11 of Section 00 50 00 (Agreement), specific to this Contract to District no later than thirty (30) Days after District's approval of completed Construction Documents for either the

entire Project or the first accepted phase of work as may be defined by Design Builder.

1.4.2 One (1) copy of the accepted Safety Plan will be returned to Design Builder.

1.4.3 No on-site work shall commence until the Safety Plan has been reviewed and accepted by District. Acceptance of the Safety Plan shall not affect Design Builder's responsibilities for maintaining a safe working place and instituting safety programs in connection with project. Neither the District nor any of its representatives assume any responsibility for Design Builder's safety related obligations. Design Builder shall have sole responsibility for safety on and off the Site.

1.5 PROGRESS SCHEDULE

1.5.1 See Section 00 50 00 (Agreement) for schedule and report requirements.

1.5.2 Submit one (1) operating electronic version on compact disk and five (5) print copies of the schedule at each of the following times:

1.5.2.1 Original Project Master Schedule at least five (5) Days prior to the Design Conference or within fourteen (14) Days of Notice to Proceed, whichever is earliest.

1.5.2.2 Detailed Design Schedule at least five (5) Days prior to the Design Conference or within fourteen (14) Days of Notice to Proceed, whichever is earliest.

1.5.2.3 Detailed Construction Schedule a minimum of ten (10) Days prior to the Pre-Construction Conference outlined in Section 01 31 00 (Project Meetings) or within forty (40) Days prior to start of construction, whichever is earliest.

1.5.2.4 Construction Progress Schedule updates monthly, submitted with each Pay Application.

1.5.3 Submit copies of the reports as required by Section 00 50 00 (Agreement).

1.6 PRODUCT DATA

1.6.1 Within sixty (60) Days after District's approval of completed Construction Documents for the Project submit five (5) hard copies and one (1) electronic copy of the complete list of major products proposed for use, with name of the manufacturer, trade name, and model number for each product.

1.6.2 For products specified only by reference standards, give manufacturer, trade name, model or catalog designation, and reference standards.

1.6.3 Tabulate products by specification section number.

1.6.4 Supplemental Data:

1.6.4.1 Submit number of copies that Design Builder requires, plus five (5) hardcopies and one (1) electronic copy that will be retained by District.

1.6.4.2 Mark each copy to identify applicable products, models, options, and other data. Supplement manufacturers' standard data to provide information unique to the Project.

1.6.5 Provide copies for Project Record Documents described in Section 01 77 00 (Cleaning and Closeout Procedures).

1.7 SHOP DRAWINGS

1.7.1 Submit electronically or in hardcopy format as approved by District. Minimum Sheet Size: 8-1/2 inches by 11 inches. All others: Multiples of 8-1/2 inches by 11 inches, 34 inches by 44 inches maximum.

1.7.2 For Shop Drawings submitted in hardcopy format, submit the number of copies which Design Builder requires, plus five (5) copies which will be retained by District.

1.7.3 For Shop Drawings submitted in hardcopy format, the original sheet will be marked with District's review comments and returned to Design Builder when required as outlined in paragraph 1.2 above.

1.7.4 Mark each copy to identify applicable products, models, options, and other data; supplement manufacturers' standard data to provide information unique to the Work.

1.7.5 Include manufacturers' installation instructions when required by Specification section.

1.8 SAMPLES

1.8.1 Submit full range of manufacturers' standard colors, textures, and patterns when District's selection is required as outlined in paragraph 1.2 above.

1.8.2 Submit samples to illustrate functional and aesthetic characteristics of each product, with integral parts and attachment devices. Coordinate Submittal of different categories for interfacing work.

1.8.3 Include identification on each sample, giving full information.

1.8.4 Submit five (5) samples unless otherwise specified.

1.8.5 Sizes: Unless otherwise specified, provide the following:

1.8.5.1 Paint Chips: Manufacturers' standard
1.8.5.2 Flat or Sheet Products: Minimum 6 inches square, maximum 12 inches square
1.8.5.3 Linear Products: Minimum 6 inches, maximum 12 inches long
1.8.5.4 Bulk Products: Minimum 1 pint, maximum 1 gallon

1.8.6 Full size samples may be used in the Work upon approval.

1.9 QUALITY CONTROL SUBMITTALS

1.9.1 Design Data: Submit electronically or in hardcopy format as approved by District. When submitted in hardcopy format, submit five (5) copies. One (1) copy shall be marked with District's review comments and returned to Design Builder when required as outlined in paragraph 1.2 above.

1.9.1.1 Indicate that the design data conforms to or exceeds the requirements of the Contract Documents.

1.9.1.2 Submit supporting reference data, affidavits, and certifications as appropriate.

1.9.1.3 Identify conflicts with test reports, certificates, manufacturer's instructions or specific aspect(s) of the Contract Documents.

1.9.2 Test Reports: Submit electronically or in hardcopy format as approved by District. When submitted in hardcopy format, submit five (5) copies. One (1) copy will be marked with District's review comments and returned to Design Builder when required as outlined in paragraph 1.2 above.

1.9.2.1 Indicate that the material or product conforms to or exceeds specified requirements.

1.9.2.2 Reports may be from recent or previous tests on material or product, but must be acceptable to District. Comply with requirements of each individual Specification.

1.9.3 Certificates: Submit electronically or in hardcopy format as approved by District. When submitted in hardcopy format, submit five (5) copies. One (1) copy will be marked with District's review comments and returned to Design Builder when required as outlined in paragraph 1.2 above.

1.9.3.1 Indicate that the material or product conforms to or exceeds specified requirements.

1.9.3.2 Submit supporting reference data, affidavits, and certifications as appropriate.

1.9.3.3 Certificates may be recent or from previous test results on material or product, but must be acceptable to District.

1.9.4 Manufacturers' Instructions: Submit electronically or in hardcopy format as approved by District. When submitted in hardcopy format, submit five (5) copies. One (1) copy will be marked with District's review comments and returned to Design Builder when required as outlined in paragraph 1.2 above.

1.9.4.1 Include manufacturers' printed instructions for delivery, storage, assembly, installation, startup, adjusting, and finishing.

1.9.4.2 Identify conflicts between manufacturers' instructions and Contract Documents.

1.10 MACHINE INVENTORY SHEETS

1.10.1 Not applicable.

1.11 OPERATIONS AND MAINTENANCE MANUALS

1.11.1 Refer to Section 01 77 00 (Cleaning and Closeout Procedures) for Operation and Maintenance Manual submittal requirements.

1.12 COMPUTER PROGRAMS

1.12.1 When any equipment requires operation by computer program(s), submit a copy of the program on appropriate compact disc plus all user manuals and guides for operating the programs and making changes in the programs for upgrading and expanding the databases. Programs must be Windows XP compatible, or newer, or in a form otherwise acceptable to District. Provide required licenses to District at no additional cost.

1.13 PROJECT RECORD DOCUMENTS

1.13.1 Submit one (1) copy of each of the Project Record Documents listed in Section 01 77 00 (Cleaning and Closeout Procedures).

1.14 DELAY OF SUBMITTALS

1.14.1 Delay of Submittals by Design Builder is considered avoidable delay and Design Builder will not be entitled to an adjustment of the Contract Time due to delays attributed to late Submittals. Liquidated damages incurred because of late Submittals will be assessed to Design Builder.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

1.1 SUMMARY

1.1.1 This section includes regulatory requirements applicable to the Project.

1.1.2 Specific reference in the specifications to codes and regulations or requirements of regulatory agencies shall mean the latest printed edition of each adopted by the regulatory agency in effect at the date of award of the Design/Build Agreement, even if an earlier version was used in development of, and/or specified elsewhere in the Contract Documents, Request for Proposals or Criteria Documents.

1.1.3 Should any conditions develop not covered by the Contract Documents wherein the finished work will not comply with current codes, Design Builder shall address such conditions so that the finished work conforms to current codes.

1.2 REFERENCES TO REGULATORY REQUIREMENTS

1.2.1 Codes, laws, ordinances, rules and regulations referred to in the Contract Documents shall have full force and effect as though printed in full in these specifications. Codes, laws, ordinances, rules and regulations are not furnished to the Design Builder, because the Design Builder is assumed to be familiar with their requirements. The listing herein of applicable codes, laws and regulations, including those for hazardous waste abatement work, in the Contract Documents is supplied to the Design Builder as a courtesy and shall not limit the Design Builder's responsibility for complying with all applicable laws, regulations or ordinances applicable to the Work. Where conflict among the requirements or with these specifications exists, the most stringent requirements shall be used.

1.2.2 All of the Work shall conform to all applicable Federal, State, and local codes, laws, ordinances, rules and regulations.

1.2.3 Precedence:

1.2.3.1 Where specified requirements differ from the requirements of applicable codes, ordinances and standards, the more stringent requirements shall take precedence.

1.2.3.2 Where the Drawings, Plans or Specifications require or describe products or execution of better quality, higher standard or greater size than required by applicable codes, ordinances and standards, the Drawings, Plans and Specifications shall take precedence so long as such increase is legal.

1.2.3.3 Where no requirements are identified in the Drawings, Plans or Specifications, Design Builder shall comply with all requirements of

applicable codes, ordinances and standards of governing authorities having jurisdiction.

1.2.3.4 The Project shall be governed by applicable regulations, including, without limitation, the State of California's Administrative Regulations for the Division of the State Architect - Structural Safety (DSA/SS), Chapter 4, Part 1, Title 24, CCR, and the most current version on the date the proposals are opened and as it pertains to school construction including, without limitation:

1.2.3.4.1 Test and testing laboratory per section 4-335.

1.2.3.4.2 Special inspections per section 4-333 ©

1.2.3.4.3 Verified reports per section 4-365 & 4-343 ©

1.2.3.4.4 Duties of the Architect and Engineers shall be per section 4-333 (a) and 4-341.

1.2.3.4.5 Duties of the Design Builder shall be per section 4-343.

1.2.3.4.6 Addenda and Change Orders per section 4-338.

1.3 CODES

1.3.1 Codes which apply to the Contract Documents include, but are not limited to, the following:

1.3.1.1 California Building Code (Title 15, Part 2, Title 24, C.C.R., including, without means of limitation, sections 16A, 102A.23, 308, 420A, 504-506, 904.2.6, 1019 and 1604)

1.3.1.2 California Electrical Code (Part 5, Title 24, C.C.R.)
1.3.1.3 California Mechanical Code (Part 3, Title 24, C.C.R.)
1.3.1.4 California Plumbing Code (Part 4, Title 24, C.C.R)
1.3.1.5 California Elevator Safety Regulations (Part 7, Title 24, C.C.R.)
1.3.1.6 International Building Code
1.3.1.7 Uniform Plumbing Code
1.3.1.8 Uniform Mechanical Code
1.3.1.9 National Electrical Code
1.3.1.10 California Energy Code
1.3.1.11 California Fire Code

1.3.1.12 1.3.1.12 CALGreen Code

1.4 LAWS, ORDINANCES, RULES AND REGULATIONS

1.4.1 During prosecution of Work to be done under the Contract Documents, comply with applicable laws, ordinances, rules and regulations, including, but not limited to, the following:

1.4.2 Federal

1.4.2.1 Americans With Disabilities Act of 1990 CADAI
1.4.2.2 29 CFR, Section 1910.1001, Asbestos
1.4.2.3 40 CFR, Subpart M, National Emission Standards for Asbestos
1.4.2.4 Executive Order 11246
1.4.2.5 Federal Endangered Species Act
1.4.2.6 Clean Water Act
1.4.2.7 Federal Occupational Safety & Health Administration Act

1.4.3 State of California

1.4.3.1 California Code of Regulations, Titles 5, 8, 12, 13, 15, 17, 19, 20, 21, 22, 23 24 and 25

1.4.3.2 California Public Contract Code

1.4.3.3 California Health and Safety Code

1.4.3.4 California Government Code

1.4.3.5 California Labor Code

1.4.3.6 California Civil Code

1.4.3.7 California Code of Civil Procedure

1.4.3.8 CPUC General Order 95, Rules for Overhead Electric Line Construction

1.4.3.9 CPUC General Order 128, Rules for Construction of Underground Electric Supply and Communications Systems

1.4.3.10 California Occupational Safety and Health Administration (Cal OSHA)

1.4.3.11 Occupational Safety and Health Administration (OSHA): Hazard Communications Standards

1.4.3.12 California Endangered Species Act

1.4.3.13 Water Code

1.4.3.14 Fish and Game Code

1.4.3.15 California Education Code

1.4.4 State of California Agencies

1.4.4.1 State and Consumer Services Agency
1.4.4.2 Office of the State Fire Marshal
1.4.4.3 CalTrans

1.4.4.4 Department of Fish and Game
1.4.4.5 Division of the State Architect
1.4.4.6 Office of Public School Construction
1.4.4.7 State Allocation Board
1.4.4.8 California Department of Education

1.4.5 Local Agencies:

1.4.5.1 City of Oakland
1.4.5.2 City of Oakland Fire Marshal
1.4.5.3 Bay Area Air Quality Management District
1.4.5.4 EBMUD – East Bay Municipal Utility District

1.4.6 Other Requirements:

1.4.6.1 National Fire Protec tion Association (NFPA): Pamphlet 101, Life Safety.

1.4.6.2 The following NFPA Standards apply (latest edition):

NFPA Standard
13 Installation of Sprinkler Systems
14 Installation of Standpipes and Hose Systems
20 Installation of Centrifugal Fire Pumps
24 Installation of Private Fire Service Mains
50 Bulk Oxygen Systems
72 National Fire Alarm Code (as amended)
80 Fire Doors and Fire Windows
92A Smoke Control Systems
2001 Clean Agent Fire Extinguishing Systems

1.4.6.3 The Design Builder shall comply with Standard Specifications such as California Standard Specification, ASTM, ANSI, AASHTO, AISC, Commercial Standards, Federal Specifications, NFPA, NEMA, AWWA, UL, and the like.

1.4.6.4 References on the Drawings Plans or in the Specifications to “code” or “building code” not otherwise identified shall mean the codes specified in this Section 01 41 00 together with all additions, amendments, changes, and interpretations adopted by code authorities of the jurisdiction.

1.4.7 Design Builder shall provide access to all of the foregoing within twenty-four (24) hours and maintain a copy of each of the above documents in the Design Builder’s field office.

1.4.8 It shall be understood that manufacturers, producers, and their agents of materials are required either to have such specifications available for reference or to be fully familiar with their requirements as pertains to their project or material

1.4.9 Other Applicable Laws, Ordinances and Regulations:

1.4.9.1 Work shall be accomplished in conformance with all applicable laws, ordinances, rules and regulations of Federal, State and local governmental agencies and jurisdictions having authority over the Project.

1.4.9.2 Work shall be accomplished in conformance with all rules and regulations of public utilities and utility districts.

1.4.9.3 Where such laws, ordinances rules and regulations require more care or greater time to accomplish Work, or require better quality, higher standards or greater size of products, Work shall be accomplished in conformance to such requirements with no change to the Contract Time and Stipulated Sum.

1.4.10 Change Orders and Claims:

1.4.10.1 The Public Contract Code, including but not limited to § 7105(d)(2), and Government Code § 930.2 *et seq*., apply to all contract procedures for changes, time extensions, change orders (time or compensation) and claims.

1.4.10.2 Any change, waiver, or omission to implement contract change order and claim procedures shall have no legal effect unless expressly authorized in a fully executed change order approved by District.

1.5 DEFERRED APPROVAL

1.5.1 Where noted in technical Specification sections, certain items of material may require deferred approval pending submittal of shop drawings. It is the District's intent to minimize the number of deferred submittals for this project. For these items, Contractor shall submit details and structural calculations for anchorage, to comply with State of California Code of Regulations Title 24, including Table 16-B. Calculations shall be made by a Structural Engineer registered in the State of California.

1.6 CONFLICTS

1.6.1 Between referenced regulatory requirements: Comply with the one establishing the more stringent requirement.

1.6.2 Between referenced regulatory requirements and the Contract Documents: Comply with the one establishing the more stringent requirement.

1.7 COMPLIANCE WITH AMERICANS WITH DISABILITIES ACT

1.7.1 The Design Builder acknowledges that, pursuant to the Americans with Disabilities Act (ADA), programs, services and other activities provided by a public entity to the public, whether directly or through a Design Builder, must be

accessible to the disabled public. The Design Builder shall provide the services specified in this Agreement in a manner that complies with the ADA and any and all other applicable federal, state and local disability rights legislation. The Design Builder shall not discriminate against disabled persons in the provision of services, benefits or activities provided under this Agreement and further agrees that any violation of this prohibition on the part of the Design Builder, its employees, agents or assigns shall constitute a material breach of this Agreement.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

1.1 SUMMARY

1.1.1 This section includes reference standards, abbreviations, symbols and definitions used in the Contract Documents.

1.1.2 Material and workmanship specified by reference to number, symbol, or title of specific standard such as state standard, commercial standard, federal specifications, technical society, or trade association standard, or other similar standard shall comply with requirements of standards except when more rigid requirements are specified or required by applicable codes.

1.1.3 Standards referred to, except as modified herein, shall have full force and effect as though printed in the Contract Documents. Standards are not furnished to the Design Builder, since manufacturers and trades involved are assumed to be familiar with their requirements.

1.2 REFERENCE TO STANDARDS AND SPECIFICATIONS OF TECHNICAL SOCIETIES; REPORTING AND RESOLVING DISCREPANCIES

1.2.1 References to standards, specifications, manuals, or codes of any technical society, organization, or association, or to the laws or regulations of any governmental authority, whether such reference be specific or by implication, shall mean the latest standard, specification, manual, code, or laws or regulations in effect at the time of opening of Proposals, except as may be otherwise specifically stated in the Contract Documents.

1.2.2 If during the performance of the Work, Design Builder discovers any conflict, error, ambiguity, or discrepancy within the Contract Documents or between the Contract Documents and any provision of any such law or regulation applicable to the performance of the Work or of any such standard, specification, manual, or code or of any instruction of any supplier, report it in writing at once by submitting an RFI to District, and await District's instructions before proceeding.

1.2.3 Except as otherwise specifically stated in the Contract Documents or as may be provided by Change Order, RFP, CCD, or Supplemental Instruction, the provisions of the Contract Documents shall take precedence in resolving any conflict, error, ambiguity, or discrepancy between the provisions of the Contract Documents and:

1.2.3.1 The provisions of any such standard, specification, manual, code, or instruction (whether or not specifically incorporated by reference in the Contract Documents); or

1.2.3.2 The provisions of any such laws or regulations applicable to the performance of the Work (unless such an interpretation of the provisions of the Contract Documents would result in violation of such law or regulation).

1.2.4 No provision of any such standard, specification, manual, code, or instruction shall be effective to change the duties and responsibilities of District or Design Builder or any of Design Builder's consultants, agents, or employees, from those set forth in the Contract Documents, nor shall it be effective to assign to District or any of its consultants, agents, representatives or employees any duty or authority to supervise or direct the furnishing or performance of the Work or any duty or authority to undertake responsibility inconsistent with the provisions of the Contract Documents.

1.2.5 Comply with the applicable portions of standards and specifications published by the technical societies, institutions, associations, and governmental agencies referred to in the Contract Documents.

1.2.5.1 Comply with referenced standards and specifications; latest revision in effect at the time of opening of Proposals, unless otherwise identified by date.

1.2.5.1.1 Exception: Comply with issues in effect as listed in governing legal requirements.

1.2.6 Referenced Grades, Classes, and Types: Where an alternative or optional grade, class, or type of product or execution is included in a reference but is not identified in Drawings or in Specifications, provide the highest, best, and greatest of the alternatives or options for the intended use and prevailing conditions.

1.2.7 Jobsite Copies:

1.2.7.1 Obtain and maintain at the Site copies of reference standards identified on Drawings and in Specifications in order to properly execute the Work.

1.2.7.2 At a minimum, the following shall be readily available at the Site:

1.2.7.2.1 Safety Codes: State of California, Division of Industrial Safety regulations.

1.2.8 Edition Date of References:

1.2.8.1 When an edition or effective date of a reference is not given, it shall be understood to be the current edition or latest revision published as of the date of opening Proposals.

1.2.8.2 All amendments, changes, errata and supplements as of the effective date shall be included.

1.2.9 ASTM and ANSI References: Specifications and Standards of the American Society for Testing and Materials (ASTM) and the American National Standards Institute (ANSI) are identified in the Drawings and Specifications by abbreviation and number only and may not be further identified by title, date, revision, or

amendment. It is presumed that Design Builder is familiar with and has access to these nationally- and industry-recognized specifications and standards.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

1.1 SUMMARY

1.1.1 This section includes reference standards, abbreviations, symbols and definitions used in the Contract Documents.

1.1.2 Material and workmanship specified by reference to number, symbol, or title of specific standard such as state standard, commercial standard, federal specifications, technical society, or trade association standard, or other similar standard shall comply with requirements of standards except when more rigid requirements are specified or required by applicable codes.

1.1.3 Standards referred to, except as modified herein, shall have full force and effect as though printed in the Contract Documents. Standards are not furnished to the Design Builder, since manufacturers and trades involved are assumed to be familiar with their requirements.

1.2 REFERENCE TO STANDARDS AND SPECIFICATIONS OF TECHNICAL SOCIETIES; REPORTING AND RESOLVING DISCREPANCIES

1.2.1 References to standards, specifications, manuals, or codes of any technical society, organization, or association, or to the laws or regulations of any governmental authority, whether such reference be specific or by implication, shall mean the latest standard, specification, manual, code, or laws or regulations in effect at the time of opening of Proposals, except as may be otherwise specifically stated in the Contract Documents.

1.2.2 If during the performance of the Work, Design Builder discovers any conflict, error, ambiguity, or discrepancy within the Contract Documents or between the Contract Documents and any provision of any such law or regulation applicable to the performance of the Work or of any such standard, specification, manual, or code or of any instruction of any supplier, report it in writing at once by submitting an RFI to District, and await District's instructions before proceeding.

1.2.3 Except as otherwise specifically stated in the Contract Documents or as may be provided by Change Order, RFP, CCD, or Supplemental Instruction, the provisions of the Contract Documents shall take precedence in resolving any conflict, error, ambiguity, or discrepancy between the provisions of the Contract Documents and:

1.2.3.1 The provisions of any such standard, specification, manual, code, or instruction (whether or not specifically incorporated by reference in the Contract Documents); or

1.2.3.2 The provisions of any such laws or regulations applicable to the performance of the Work (unless such an interpretation of the provisions of the Contract Documents would result in violation of such law or regulation).

1.2.4 No provision of any such standard, specification, manual, code, or instruction shall be effective to change the duties and responsibilities of District or Design Builder or any of Design Builder's consultants, agents, or employees, from those set forth in the Contract Documents, nor shall it be effective to assign to District or any of its consultants, agents, representatives or employees any duty or authority to supervise or direct the furnishing or performance of the Work or any duty or authority to undertake responsibility inconsistent with the provisions of the Contract Documents.

1.2.5 Comply with the applicable portions of standards and specifications published by the technical societies, institutions, associations, and governmental agencies referred to in the Contract Documents.

1.2.5.1 Comply with referenced standards and specifications; latest revision in effect at the time of opening of Proposals, unless otherwise identified by date.

1.2.5.1.1 Exception: Comply with issues in effect as listed in governing legal requirements.

1.2.6 Referenced Grades, Classes, and Types: Where an alternative or optional grade, class, or type of product or execution is included in a reference but is not identified in Drawings or in Specifications, provide the highest, best, and greatest of the alternatives or options for the intended use and prevailing conditions.

1.2.7 Jobsite Copies:

1.2.7.1 Obtain and maintain at the Site copies of reference standards identified on Drawings and in Specifications in order to properly execute the Work.

1.2.7.2 At a minimum, the following shall be readily available at the Site:

1.2.7.2.1 Safety Codes: State of California, Division of Industrial Safety regulations.

1.2.8 Edition Date of References:

1.2.8.1 When an edition or effective date of a reference is not given, it shall be understood to be the current edition or latest revision published as of the date of opening Proposals.

1.2.8.2 All amendments, changes, errata and supplements as of the effective date shall be included.

1.2.9 ASTM and ANSI References: Specifications and Standards of the American Society for Testing and Materials (ASTM) and the American National Standards Institute (ANSI) are identified in the Drawings and Specifications by abbreviation and number only and may not be further identified by title, date, revision, or

amendment. It is presumed that Design Builder is familiar with and has access to these nationally- and industry-recognized specifications and standards.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

1.1.1 This Section includes administrative and procedural requirements for the following:

1.1.1.1 Quality assurance and quality control.

1.1.1.2 Quality Control Plan.

1.1.1.3 Special testing and inspection.

1.1.2 Materials to be furnished under the Contract Documents are subject to testing and inspection for compliance with the Drawings and Specifications. Testing and inspecting services are required to verify compliance with requirements specified or indicated. These services do not relieve Design Builder of responsibility for compliance with the Contract Document requirements.

1.1.2.1 Specific quality assurance and control requirements for individual construction activities are specified in the Sections that specify those activities. Requirements in those Sections may also cover production of standard products.

1.1.2.2 Specified tests, inspections, and related actions do not limit Design Builder's other quality assurance and control procedures that facilitate compliance with the Contract Document requirements.

1.1.2.3 Requirements for Design Builder to provide quality assurance and control services required by District are not limited by provisions of this Section.

1.1.3 Related Sections include the following:

1.1.3.1 Section 00 50 00 (Agreement) for developing a schedule of required tests and inspections.

1.1.3.2 Section 01 43 39 (Mock-Ups) for the specific quality requirements associated with the construction and inspection of mock-ups.

1.1.3.3 Section 01 73 29 (Cutting and Patching) for repair and restoration of construction disturbed by testing and inspecting activities.

1.1.3.4 Divisions 2 through 33 Sections for specific test and inspection requirements.

1.2 DEFINITIONS

1.2.1 Quality Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.

1.2.2 Quality Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the Work and completed construction comply with requirements. Services do not include contract enforcement activities performed by District's Representative.

1.2.3 NRTL: A nationally recognized testing laboratory according to 29 CFR 1910.7.

1.2.4 NVLAP: A testing agency accredited according to the National Institute of Standards and Technology's (NIST's) National Voluntary Laboratory Accreditation Program.

1.2.5 Preconstruction Testing: Tests and inspections that are performed specifically for the Project before products and materials are incorporated into the Work to verify performance or compliance with specified criteria.

1.2.6 Product Testing: Tests and inspections that are performed by an NRTL, an NVLAP, or a testing agency qualified to conduct product testing and acceptable to District's Representative, to establish product performance and compliance with industry standards.

1.2.7 Source Quality Control Testing: Tests and inspections that are performed at the source (i.e., a plant, mill, factory, or shop).

1.2.8 Field Quality Control Testing: Tests and inspections that are performed on-site for installation of the Work and for completed Work.

1.2.9 Testing Agency: An entity engaged to perform specific tests, inspections, or both that is certified as meeting the requirements applicable to the Work. Testing laboratory shall mean the same as testing agency.

1.2.10 Testing, Inspection and Observation (TIO) Program: A program prepared for approval prior to issuance of the building permit that identifies the materials and tests to be performed on a project and the firm(s) and/or individual(s) responsible for performing those tests including, at a minimum, those required by applicable sections of the California Building Standards Code.

1.2.11 Installer/Applicator/Erector: Design Builder or another entity engaged by Design Builder as an employee or Subcontractor of any tier to perform a particular construction operation, including installation, erection, application, and similar operations.

1.2.12 Experienced: As used herein, an individual or entity that has successfully completed a minimum of five previous projects similar in size and scope to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction to work in California.

1.3 CONFLICTING REQUIREMENTS

1.3.1 General: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer uncertainties and requirements that are different, but apparently equal, to District's Representative for a decision before proceeding.

1.3.2 Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to District's Representative for a decision before proceeding.

1.4 QUALITY CONTROL PERSONNEL

1.4.1 Quality Control Manager: Provide a Quality Control Manager at the Site to manage and implement the Quality Control Plan. The duties and responsibilities of the Quality Control Manager will be to manage and implement the Quality Control Plan. The Quality Control Manager's duties and responsibilities include, but are not limited to:

1.4.1.1 Attending the Coordination and Detailing Activity (CDA) meetings, Weekly Construction Progress Meetings, Pre-installation Meetings, and Commissioning Meetings.

1.4.1.2 Conducting Quality Control meetings, as necessary.

1.4.1.3 Reviewing submittals.

1.4.1.4 Preparing, monitoring and following through on Requests for Information, Change Orders, and Deferred Approvals.

1.4.1.5 Preparing, coordinating and following through on Requests for Inspection.

1.4.1.6 Ensuring testing is performed.

1.4.1.7 Preparing required Quality Control certifications and documentation.

No Work or testing may be performed unless the Quality Control Manager or a Designated Alternate Quality Control Manager is on the Site. The Quality Control Manager shall report directly to an officer of the Design Build firm who shall not be the same individual as, nor be subordinate to, the Project Manager or Superintendent.

1.4.2 Qualifications: The Quality Control Manager must be a graduate of a four year accredited college program in one of the following disciplines: engineering,

architecture, construction management, engineering technology, building construction, or building science with a minimum of ten (10) years' experience as a superintendent, inspector, Quality Control Manager, project manager, or construction manager on major and complex projects.

1.4.3 Other Quality Control Personnel: Provide additional quality control personnel (e.g., Quality Control Specialists, administrative support staff) as described in the Quality Control Plan and as required to implement the Quality Control Plan. The District, at its sole discretion, may require the Design Builder to assign additional quality control personnel to the Project if the District believes the Design Builder's assigned personnel are not capable of implementing the Quality Control Plan to the District's satisfaction. The Design Builder shall provide any additional personnel required by the District at no additional cost. Other active members of the Quality Control Program shall include a minimum of a full time architectural and engineering coordinator, Contractor's LEED Coordinator as defined in Section 01 81 13 (Sustainable Design Requirements, and Contractor's Commissioning Coordinator as defined in Section 01 81 00 (Commissioning Requirements). The Quality Control Manager and supporting members' responsibility is to ensure compliance with Contract Documents and is a requirement of the Contractor Quality Control Program.

1.5 SUBMITTALS

1.5.1 Qualification Data: For testing agencies specified in Article 1.6 (Quality Assurance) below to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.

1.5.1.1 Testing, Inspection and Observation Program: Prepare according to the requirements contained in Section 7-141 of the California Building Standards Administrative Code (Part 1, Title 24, CCR). Submit to District Representative for approval prior to issuance of the building permit.

1.5.2 Reports: Reports of all tests made shall be provided regardless of whether test results indicate that the material tested is satisfactory or unsatisfactory. Samples taken but not tested shall also be reported. Prepare and submit certified written reports that include the following:

1.5.2.1 Date of issue.

1.5.2.2 District's Project title and number.

1.5.2.3 Name, address, and telephone number of testing agency.

1.5.2.4 Dates and locations of samples and tests or inspections.

1.5.2.5 Applicable Construction Drawing, detail, and Specification numbers.

1.5.2.6 Names of individuals making tests and inspections.

1.5.2.7 Description of the Work and test and inspection method.

1.5.2.8 Identification of product and Specification Section including specified design strength or other applicable criteria.

1.5.2.9 Complete test or inspection data.

1.5.2.10 Test and inspection results and an interpretation of test results.

1.5.2.11 Record of temperature and weather conditions at time of sample taking and testing and inspecting.

1.5.2.12 Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.

1.5.2.13 A statement that the material or materials were sampled and tested according to the requirements of the California Code of Regulations, Title 21 or 22 and 24.

1.5.2.14 Name and signature of laboratory inspector.

1.5.2.15 Recommendations on retesting and reinspecting, if any.

1.5.2.16 Reports shall be prepared according to the requirements of a Testing, Inspection, and Observation Program ("TIO") and sections 7-141 and 7-151 of the California Building Standards Code, Part 1, Title 24, CCR. Copies of each report shall be submitted as follows:

1.5.2.16.1 District Representative
1.5.2.16.2 Architect of Record
1.5.2.16.3 Structural Engineer of Record
1.5.2.16.4 Design Builder (2 copies)
1.5.2.16.5 Inspector of Record

1.5.3 Permits, Licenses, and Certificates: For District's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

1.5.4 Quality Control Plan: Prepare a plan describing procedures and methods the Design Builder will utilize to control the quality of the Work. At a minimum the Quality Control Plan shall include:

1.5.4.1 An organizational structure description, including Quality Control supervision, and inspection reporting structure. Delineate personnel training and qualification activities.

1.5.4.2 Plans and procedures for testing and inspections to verify attributes delineated in the Contract Documents, including those specified in

referenced Codes and standards. Include documents that identify individual inspection or testing points and acceptance criteria, and include provisions for recording results and the responsible inspection/test personnel. This documentation shall be traceable to the particular material, items, processes or systems evaluated, including notification requirements.

1.5.4.3 Procedures for identifying and contractually invoking the applicable technical and quality requirements delineated in the Specifications on vendors supplying materials, parts and services.

1.5.4.4 Plans and procedures for receiving, inspecting and accepting materials and items. These shall include examination of physical condition and compliance with purchasing requirements, including markings for class type and grade, and conformance with supplied documentation. These shall also include provisions for:

1.5.4.4.1 Identifying, controlling and processing non-conforming items, including notification to the District.

1.5.4.4.2 Inspection of materials for authenticity to preclude counterfeit parts, for items and attributes of concern identified by District.

1.5.4.4.3 Verifying for compliance and traceability, maintaining, and turnover to the District, certificates of conformance and mill certificates required by Contract Documents or codes or standards invoked, for materials received.

1.5.4.5 Provisions for identifying defective Work. Bring to District's attention, for consultation and possible relief, those cases where correction within the specified requirements may introduce a significant schedule penalty, personnel hazard, or compromise the quality of installed items, or is otherwise impractical.

1.5.4.6 Controls to assure that only the "Approved for Inspection" construction documents are utilized in the Work.

1.5.4.6.1 This includes provisions for removing superseded versions from the work area, except where explicitly and prominently marked "Void - For Information Only"; such as to retain annotated installation data.

1.5.4.7 Detailed formal procedures or instructions for the performance of special processes, such as welding or concrete placement. These procedures/instructions and personnel performing special processes shall be qualified and certified as required by codes and standards invoked in the Contract Documents.

1.5.4.8 Controls providing for periodic calibration of testing and measurement equipment, including unique equipment identification and calibration tracking.

1.5.4.9 Maintain records documenting the implementation of the above activities, including tests, inspections, special process qualification and execution, vendor documentation and defective Work resolution. These records shall be indexed, protected and retrievable for final submission to District.

1.5.4.10 Identify all tests and inspections that Design Builder proposes to be conducted by the District.

1.5.4.11 Approval: The Quality Control Plan must be approved before the start of construction and shall reflect the requirements of the approved Testing, Inspection and Observation Program. The District reserves the right to require revisions to the Quality Control Plan that are necessary to ensure the specified quality of the Work. The District may interview Quality Control personnel at any time to verify their submitted qualifications.

1.5.4.12 Changes: The Design Builder shall submit any requested changes to the Quality Control Plan, including changes in personnel, to the District in writing. Proposed changes must be submitted at least seven (7) Days in advance of the desired effective date of the change. No change in the Quality Control Plan shall be implemented without the District Representative's written approval.

1.6 QUALITY ASSURANCE

1.6.1 General: Qualifications paragraphs in this Article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.

1.6.2 Installer Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance. Installers shall be qualified by the product or equipment manufacturer, if required for warranty or other performance guarantees.

1.6.3 Manufacturer Qualifications: A firm experienced in fabricating products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units as required to meet the Project schedule.

1.6.4 Fabricator Qualifications: A firm experienced in procuring and fabricating products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units as required to meet the Project schedule.

1.6.5 Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in California and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of systems, assemblies, or products that are similar to those indicated for this Project in material, design, and extent.

1.6.6 Specialists: Certain sections of the Specifications require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.

1.6.6.1 Requirement for specialists shall not supersede building codes and regulations governing the Work.

1.6.7 Testing Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspecting indicated, including the requirements of ASTM D3666, D3740, E329, E543, and E548 as applicable; and with additional qualifications specified in individual Sections; and that is acceptable to District. All testing shall be performed under the supervision and control of a California registered professional engineer employed by the testing agency.

1.6.8 Factory-Authorized Service Representative Qualifications: An authorized representative of a manufacturer who is trained and approved by the manufacturer to inspect installation of the manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

1.6.9 Preconstruction Testing: Where a testing agency is indicated to perform preconstruction testing for compliance with specified requirements for performance and test methods, comply with the following:

1.6.9.1 Design Builder's responsibilities include the following:

1.6.9.1.1 Provide test specimens representative of proposed products and construction.

1.6.9.1.2 Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.

1.6.9.1.3 Provide sizes and configurations of test assemblies to adequately demonstrate capability of products to comply with performance requirements.

1.6.9.1.4 Build site-assembled test assemblies using installers who will perform same tasks for Project.

1.6.9.1.5 When testing is complete, remove test specimens and assemblies; do not reuse products on Project.

1.6.9.2 Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality assurance service to Design Builder, with a copy to the District. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.

1.7 QUALITY CONTROL

1.7.1 District Responsibilities: Where quality control services are indicated as District's responsibility, District will engage a qualified testing agency to perform these services.

1.7.1.1 Specified inspection and testing shall be performed in accordance with Part 1, Title 24, Article 4, Paragraph 7-149, California Code of Regulations.

1.7.1.2 District will furnish Design Builder with names, addresses, and telephone numbers of testing agencies engaged and a description of the types of testing and inspections they are engaged to perform.

1.7.1.3 Payment for these services will be by the District.

1.7.1.4 Costs for retesting and re-inspecting construction that replaces or is necessitated by work that failed to comply with the Contract Documents will be charged to Design Builder, and the Contract Sum will be adjusted by Change Order.

1.7.1.5 District's Project Inspector:

1.7.1.5.1 A Project Inspector employed by the District in accordance with the requirements of the California Building Code will be assigned to the work. The Project Inspector's duties are specifically defined in CCR Title 24 Part 1.

1.7.1.5.2 The Design Builder shall notify the Project Inspector a minimum of 2 working days in advance of execution of all Work that requires inspection.

1.7.1.5.3 The Work in all stages of progress shall be subject to the personal continuous observation of the Project Inspector. He or she shall have free and safe access to any or all parts of the work at any time. The Design Builder shall furnish the Project Inspector reasonable facilities for obtaining such information as may be necessary to keep him fully informed respecting the progress and manner of the work and the character of the materials. Inspection of the work shall not relieve the Design Builder from any obligation to fulfill this Contract.

1.7.2 Design Builder's Responsibilities: Tests and inspections not explicitly assigned to District are Design Builder's responsibility

1.7.2.1 Where services are indicated as Design Builder's responsibility, engage a qualified testing agency to perform these quality control services.

1.7.2.1.1 Design Builder shall not employ same entity engaged by District.

1.7.2.2 Notify testing agencies and the District Representative at least seventy-two (72) hours in advance of time when Work that requires testing or inspecting will be performed.

1.7.2.3 Where quality control services are indicated as Design Builder's responsibility, submit a certified written report, in duplicate, of each quality control service to the District Representative.

1.7.2.4 Testing and inspecting requested by Design Builder and not required by the Contract Documents are Design Builder's responsibility.

1.7.2.5 Submit additional copies of each written report directly to authorities having jurisdiction, when so directed by the District Representative.

1.7.2.6 Do not cover work before required tests and inspections are performed (refer to paragraphs 4.22 and 4.1 of section 00 50 00 (Agreement)).

1.7.3 Disqualified Material: Material shipped or delivered to the site by the Design Builder from the source of supply prior to satisfactorily passing required tests or inspections, or prior to the receipt of a notice from the District Representative that such testing or inspection is not required, shall not be incorporated into the Work.

1.7.4 Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Section 01 33 00 (Submittal Procedures).

1.7.5 Retesting/Reinspecting: Regardless of whether original tests or inspections were Design Builder's responsibility, provide quality control services, including retesting and reinspection, for construction that replaces Work that failed to comply with the Contract Documents (refer to paragraphs 4.22 of section 00 50 00 (Agreement)).

1.7.5.1 If such additional tests or inspections establish that such portion of the Work fails to comply with the Contract Documents, all costs of such additional tests and inspections, and all other costs resulting from such failure, including compensation for District Representative and District's consultants shall be deducted from the Contract Sum by Change Order.

1.7.5.2 In addition, the Design Builder shall pay for:

1.7.5.2.1 Additional costs, including compensation for travel and daily living expenses that are beyond normal inspection costs, when the District's Testing Laboratory is required to conduct inspections outside of the San Francisco Bay area.

1.7.5.2.2 Costs of retesting Work revised or replaced by Design Builder, where required tests were performed on original construction.

1.7.5.2.3 Costs of retesting construction used as temporary facilities by the Design Builder.

1.7.5.2.4 Costs of testing construction required by Design Builder's substitutions.

1.7.6 Testing Agency Responsibilities: Cooperate with District Representative and Design Builder in performance of duties. Provide qualified personnel to perform required tests and inspections:

1.7.6.1 Notify District Representative and Design Builder promptly of irregularities or deficiencies observed in the Work during performance of services.

1.7.6.2 Determine the location(s) from which test samples will be taken and in which in-situ tests are conducted.

1.7.6.3 Conduct and interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from requirements.

1.7.6.4 Submit a certified written report, in duplicate, of each test, inspection, and similar quality control service through Design Builder.

1.7.6.5 Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.

1.7.6.6 Do not perform any duties of Design Builder.

1.7.6.7 Submit two copies of a verified report to District Representative covering all tests and inspections that are required by the TIO Program during the progress of the Work. The report shall be furnished each time that the Work is suspended, covering the tests completed up to that time, at the completion of the Work, covering all tests, and as otherwise required by the TIO Program.

1.7.7 Associated Services: The Design Builder shall cooperate with agencies performing required tests, inspections, and similar quality control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:

1.7.7.1 Access to the Work.

1.7.7.2 Incidental labor and facilities necessary to facilitate tests and inspections.

1.7.7.3 Adequate quantities of representative samples of materials that require testing and inspecting. Assist agency in obtaining samples.

1.7.7.4 Facilities for storage and field curing of test samples.

1.7.7.5 Delivery of specified quantities of representative samples of materials proposed for use as specified to testing agencies.

1.7.7.6 Preliminary design mix proposed for use for material mixes that require control by testing agency.

1.7.7.7 Security and protection for samples and for testing and inspecting equipment at Site.

1.7.7.8 Pursuant to paragraph 13.2.2 of section 00 50 00 (Form of Agreement), the Design/Builder will be responsible for all inspection, review, and permit costs.

1.7.8 Coordination: Coordinate sequence of activities to accommodate required quality assurance and quality control services with a minimum of delay and to avoid the need to remove and replace construction to accommodate testing and inspecting.

1.7.8.1 Schedule times for tests, inspections, obtaining samples, and similar activities.

1.7.8.2 Do not cover any piping, wiring, ducts, or other installations until they have been inspected by the District's Inspector.

1.8 SPECIAL TESTS AND INSPECTIONS

1.8.1 Special Tests and Inspections: The District will engage a qualified special inspector to conduct special tests and inspections as required by law, or regulatory agencies having jurisdiction over the Work. The responsibilities of the Special Inspector are as follows:

1.8.2 Verifying that manufacturer maintains detailed fabrication and quality control procedures and reviewing the completeness and adequacy of those procedures to perform the Work.

1.8.3 Notifying County's Representative promptly of irregularities and deficiencies observed in the Work during performance of its services.

1.8.4 Submitting a certified written report of each test, inspection, and similar quality control service to County's Representative with copy to Design Builder.

1.8.5 Submitting a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.

1.8.6 Interpreting tests and inspections and stating in each report whether tested and inspected work complies with or deviates from the Contract Documents.

1.8.7 Retesting and re-inspecting corrected work, as needed.

PART 2 - PRODUCTS (Not used)

PART 3 - EXECUTION

3.1 INSPECTION

3.1.1 The Design Builder shall provide access to the Work, including the facilities where the Work is in preparation, at all times for the purpose of inspection. The Design Builder shall maintain proper facilities and provide safe access for such inspection at all times.

3.1.2 The District shall have the right to reject materials and workmanship that are defective, or to require their correction. Rejected workmanship shall be satisfactorily corrected and rejected materials shall be removed from the Site without charge to the District.

3.1.3 The District may make an examination of work already completed by requiring the Design Builder to remove or tear out such work at any time before final acceptance of the Work. Upon request, the Design Builder shall provide all facilities, labor and materials necessary to remove the portion of the Work designated by the District's Representative. If such work is found to be defective in any respect due to the fault of the Design Builder or its subcontractors, the Design Builder shall be responsible for all expenses of such examination and satisfactory reconstruction. If such work is found to meet the requirements of the Contract Documents, the additional cost of labor and materials involved in the examination shall be allowed to the Design Builder.

3.2 QUALITY CONTROL REPORTS

3.2.1 Frequency: Reports are required for each day that Work is performed, for every seven (7) consecutive Days of no work, and on the last day of a no-work period. Account for each day throughout the life of the Contract. The reporting of Work shall be identified by Specification number and title and terminology consistent with the Contract Schedule. Design Builder Quality Control Reports shall be prepared, signed and dated by the Quality Control Manager and shall contain the following information:

3.2.1.1 Identify the part or parts of the Work that is the subject of the report.

3.2.1.2 Indicate, as applicable, that for the portion of the Work, the drawings and specifications were reviewed, submittals were approved, materials comply with approved submittals, materials are stored properly,

preliminary work was done correctly, the testing plan was reviewed, and work methods and schedule were discussed.

3.2.1.3 Indicate, as applicable, that for this portion of the Work, the preliminary work was done correctly, samples have been prepared and approved, the workmanship is satisfactory, test results are acceptable, work is in compliance with the Contract Documents, and the required testing has been performed. Include a list of who performed the tests.

3.2.1.4 Results of off-site quality control work, if applicable, including actions taken.

3.2.1.5 List any rework items identified but not corrected by close of business.

3.2.1.6 List the rework items corrected from the rework items list along with the corrective action taken.

3.2.1.7 Include a "Comments" section in the report that contains pertinent information including directions received, quality control problem areas, deviations from the Quality Control Plan, construction deficiencies encountered, Quality Control meetings held, acknowledgement that as-built drawings have been updated, corrective direction given by the Quality Control Manager, and corrective action taken by the Design Builder.

3.3 TEST AND INSPECTION LOG

3.3.1 Prepare a sequentially numbered record of tests and inspection. Include the following:

3.3.1.1 Request for Inspection

3.3.1.2 Date test or inspection was conducted.

3.3.1.3 Description of the Work tested or inspected.

3.3.1.4 Applicable Construction Drawing and Specification numbers

3.3.1.5 Date test or inspection results were transmitted to District's Representative.

3.3.1.6 Identification of testing agency or special inspector conducting test or inspection.

3.3.2 Maintain log at Site. Post changes and modifications as they occur. Provide access to test and inspection log for District and its representatives' reference during normal working hours.

3.4 REPAIR AND PROTECTION

3.4.1 General: On completion of testing, inspecting, sample taking, and similar services, repair damaged construction and restore substrates and finishes.

3.4.1.1 Comply with the Contract Document requirements for Section 01 73 00 (Cutting and Patching).

3.4.2 Protect construction exposed by or for quality control service activities.

3.4.3 Repair and protection are Design Builder's responsibility, regardless of the assignment of responsibility for quality control services.

3.5 GEOTECHNICAL ENGINEERING

3.5.1 The Design Builder's geotechnical engineer or his representative will provide the following tests and inspections:

3.5.1.1 Continuous inspection of full placement

3.5.1.2 Evaluation of onsite and imported earth materials before placement.

3.5.1.3 Field test fill and earth backfill as placed and compacted.

3.5.1.4 Inspect excavations and subgrade before concrete is placed

3.5.1.5 Provide continuous inspection of pile boring.

3.5.1.6 Provide periodic inspection of open excavations, embankments, and other cuts or vertical surfaces of earth.

3.5.1.7 The Geotechnical Engineer will submit reports of tests and inspections. These reports will indicate compliance or noncompliance with the Contract Documents, results of compaction tests and that soil conditions encountered do or do not confirm anticipated conditions and support their design recommendations.

3.5.2 Design Builder shall remove unsatisfactory material, re-compact, adjust moisture, place new material, or in the case of excavations, provide proper protective measures, perform other operations necessary, as determined by the geotechnical engineer and directed by the District Representative, whose decisions and directions will be considered final.

3.5.3 Soils Test and Inspection Procedure

3.5.3.1 Allow sufficient time for testing and evaluation of results before material is needed. The Geotechnical Engineer will be the sole and final judge of suitability of all materials.

3.5.3.2 Laboratory compaction tests to be used will be in accordance with ASTM D 1557.

3.5.3.3 Field density tests will be made in accordance with ASTM D 1556.

3.5.3.4 The number of tests will be determined by the Geotechnical Engineer and District's Representative. Materials in question may not be used, pending test results.

3.5.3.5 The Geotechnical Engineer will visually or otherwise examine excavations and embankments.

3.6 CONCRETE TESTS AND INSPECTIONS

3.6.1 Tests

3.6.1.1 Notify Architect, District's Representative and testing agency of brand and type of cement and sources of aggregates in time for review, sampling and testing. Test cement in accordance with Title 24, 1928 B.1

3.6.1.2 Aggregate: The District's testing agency will test at least one sample for every two hundred (200) cubic yards of aggregate. Aggregates from a known source of supply that have shown by actual service to produce concrete of the required quality will be tested only for gradation and deleterious substances.

3.6.1.3 Obtain at least one set of samples for strength tests of each separate design mix of concrete placed each day. Frequency of sampling shall be not less than once per day, nor less than once for each fifty (50) cubic yards of concrete, nor less than once per 2,000 square feet of surface area for slabs or walls. Obtain one additional set of samples for testing at the start of concrete for each class of concrete, and whenever the mix or aggregate is changed.

3.6.1.4 One set of samples consists of four cylinders.

3.6.1.5 Cylinders will be taken so as to represent as nearly as possible the batch of concrete from which they are taken. Sampling procedures shall conform to ASTM C 172.

3.6.1.6 Test cylinders shall be made and cured in compliance with ASTM C 31, except as modified hereinafter. Tests will comply with ACI 301 for strength, slump, and air entrainment tests.

3.6.1.7 Test cylinders from respective batches, one at age of seven (7) Days, and two at age twenty-eight (28) Days. The fourth cylinder shall be held in reserve and tested only at the direction of the Architect or District's Representative. Cylinder testing procedures shall conform to ASTM C 39 for strength.

3.6.1.8 Slump tests shall be taken as required by Testing Laboratory to certify compliance with the Contract Documents. Slump shall be tested in accordance with ASTM C 143.

3.6.1.9 Minimum compressive strength of test cylinders, in pounds per square inch, shall not be less than the specified required design strength.

3.6.1.10 If minimum strengths of test cylinder fall below those specified, Architect or District's Representative may require test cores from hardened concrete to be taken and tested. Each core test, if taken shall consist of three cores. The cost of such cores and tests shall be borne by the Design Builder. Cores shall be taken in accordance with ASTM C 42, form locations selected by the Architect or District's Representative. The Design Builder shall repair core holes with a non-shrinking natural aggregate grout.

3.6.1.10.1 Concrete testing by coring shall be considered acceptable if the average strength of the three cores is equal to at least .85 of the minimum specified twenty-eight (28) day strength and if no single core strength is less than five hundred (500) psi below the twenty-eight (28) day strength.

3.6.2 Concrete Inspections

3.6.2.1 An authorized inspector from the testing agency shall be present at all times during placing of structural cast-in-place concrete. The inspector shall inspect and accept the accuracy of all reinforcing steel before concrete is placed. Concrete construction activities shall not proceed until inspections are complete and the inspected construction is approved.

3.6.3 Concrete Mix Designs

3.6.3.1 Refer to Volume 3 and 6, Division 3 (Concrete)

3.6.4 Concrete Plant Inspection

3.6.4.1 Structural concrete manufacturer(s) shall deliver a certificate in accordance with ASTM C 94, Section 15.1, and all items of Section 15.2 with the addition of type and brand of cement and admixtures, source and identification of aggregates to the Inspector with each mixer truck. Certificates shall be from a public weighmaster. The inspector shall not accept concrete that is not accompanied and identified by a certificate from a batch plant inspector.

3.6.4.2 Concrete shall be mixed at certified automatic concrete batch plants and shall have quality control as follows:

3.6.4.2.1 Laboratory designed mixes using adequate cement factors.

3.6.4.2.2 The testing agency shall perform continuous batch plant inspection.

3.6.4.2.3 Compliance with California Building Code (CBC) Standard 19-3.

3.6.4.2.4 Periodic inspection of quality of materials used may be made by testing laboratory, acceptable to Architect or District's Representative.

3.7 HIGH-STRENGTH GROUT

3.7.1 This Article applies to structural grout used below base plates and similar applications.

3.7.2 The placement of grout materials will be continuously inspected by the District's testing agency.

3.7.3 Grout compressive strength testing: The District will obtain a set of three samples from each batch. Samples will be tested at one (1) or three (3) days and seven (7) days following mixing. Compressive strengths shall exceed the manufacturer's published minimum strengths or eighty percent (80%) of their published typical compressive strengths.

3.8 EXPANSION ANCHOR BOLTS (TITLE 24, 1925 B.3.5)

3.8.1 Expansion type concrete anchor bolts shall be Hilti Kwik Bolt II or as indicated on the approved Construction Documents. Other brands of similar anchors will be acceptable with demonstration of equivalency. Submit manufacturer's specifications and ICBO reports. All anchors shall be installed with special inspection in accordance with the requirements of the Building Code.

3.8.2 Fifty percent of the anchors or alternate bolts in any group arrangement shall be proof tested in tension or torque, as specified on the drawings.

3.8.3 Testing Requirements:

3.8.3.1 Anchor diameter refers to the thread size.

3.8.3.2 Apply proof test loads to anchors without removing the nut, if possible. If not possible, remove nut and install a threaded coupler to the same tightness as the original nut using a torque wrench and apply load.

3.8.3.3 Reaction loads from test fixtures may be applied close to the anchor being tested, provided the anchor is not restrained form withdrawing by the fixture(s).

3.8.3.4 Test equipment is to be calibrated by an approved testing laboratory in accordance with standard recognized procedures.

3.8.3.5 The following criteria are applicable for the approval of installed anchors:

3.8.3.5.1 Hydraulic Ram Method: The anchor should have no observable movement at the applicable test load. For wedge and sleeve type anchors, a practical way to determine observable movement is that the washer under the nut becomes loose.

3.8.3.5.2 Torque Wrench Method: The applicable test torque must be reached within the following limits:

(a) One half (1/2) turn of the nut.

(b) One quarter (1/4) turn of the nut for the 3/8" sleeve anchor only.

3.8.3.5.3 Testing should occur a minimum of twenty-four (24) hours after installation of the subject anchors.

3.9 ADHESIVE ANCHORS

3.9.1 Installation Testing: Fifty percent of the anchors shall be pull-tested.

3.9.2 Proof Test Load: Pull test to twice the ICBO evaluation report design tension values or as indicated on the drawings.

3.9.3 Inspection: Installation of adhesive anchors will be continuously inspected in accordance with the requirements of the California Building Code, Section 1701, and the appropriate ICBO evaluation report.

3.10 EPOXY AND CEMENTITIOUS GROUTED DOWELS

3.10.1 Initial Testing: Install three anchors for each anchor size and installation position planned in allocation acceptable to the Architect or District's Representative. These anchors shall not be incorporated into the finished construction. The testing agency will pull-test these anchors at one hundred twenty-five percent (125%) of the values specified on the drawings.

3.10.2 Testing: The testing agency will pull-test fifty percent (50%) of the dowels in accordance with the schedule shown on the drawings. If any failures occur, the agency will pull-test one hundred percent (100%) of dowels in the vicinity or placed with the same batch of grout until at least twenty (20) tests demonstrate compliance. The Design Builder shall bear the cost of replacing failed dowels and re-inspection.

3.10.3 Inspection: Installation of epoxy grouted dowels will be continuously inspected in accordance with the California Building Code, Section 1701, and the appropriate ICBO evaluation report.

3.11 REINFORCING STEEL

3.11.1 Tests

3.11.1.1 Tests shall be performed before the delivery of steel to the Site. Steel that does not meet specifications shall not be shipped to the Project.

3.11.1.2 Testing procedure shall conform to ASTM A 615.

3.11.1.3 Sample at the place of distribution, before shipment. Make one tensile strength test and one bending test from samples out of 10 tons, or faction thereof, each size and kind of reinforcing steel, where taken from bundles as delivered from the mill and properly identified as to heat number. Mill analysis shall accompany report. Where identification number cannot be ascertained, or where random samples are taken, make one series of tests from each two and a half (2-1/2) tons, or fraction thereof, of each size and kind of reinforcing steel. Samples shall include not fewer than two pieces, each eighteen (18) inches long, of each size and kind of reinforcing steel.

3.11.1.4 Welds: Reinforcing bar welds shall be inspected. Tests of reinforcing bar welds shall be in accordance with ASTM E 709 and AWS D1.4. Chemical testing of reinforcing bars for welding shall conform to Title 24, 2603 B.5.2.

3.11.2 Inspector will inspect all reinforcement for concrete construction for size, dimensions, locations and proper placement. Special Inspector required for welding as required by Title 24, 1928 B.12. Inspector shall be present during welding of all reinforced steel.

3.11.3 Stone Veneer

3.11.3.1 All veneer shall be continuously inspected as required by the California Code or Regulations, Title 24, Part 2, Volume I, Section 1403 A.6.

3.12 STRUCTURAL STEEL INCLUDING MISCELLANEOUS STEEL

3.12.1 Mill certificates or affidavits and manufacturers' certifications shall be supplied to the inspector for verification of steel materials. Testing agency shall be notified at least three working days in advance of fabrication and supplied with the reports so that the inspector can make a shop inspection of the steel.

3.12.2 Inspection requests shall be based on Title 24, Part 2, California Building Code, Volume 2, Seismic Provisions for Structural Steel Buildings of the American Institute of Steel Construction, 2002.

3.12.3 Identify and mark steel in accordance with Section 2202B. Structural steel properly identifies need not be tested.

3.12.4 Tests of Steel Materials: If structural steel cannot be identified by heat or melt numbers, or if its source is questionable, not less than one tension test and one bend test will be made for each five tons or fractional part thereof. The cost of such testing will be borne by the Design Builder.

3.12.5 Testing and Inspection of Structural Steel:

3.12.5.1 Testing agency will visit the fabricator's plant to verify that materials used check with the mill tests, affidavits of test reports, and that fabrication and welding procedures meet specifications.

3.12.5.2 Testing agency shall visually check fabricated steel delivered to the Project against the working and reviewed shop drawings for compliance, and make physical tests and measurements as required to meet the Specifications.

3.12.5.3 Inspection of welding shall be in accordance with the requirements of section 2212 B.5.

3.12.5.4 Erection Inspection: Testing agency will visually inspect bolted and field welded connections, perform such additional tests and inspections of the field work as are required by the Architect or District's Representative and prepare test reports for the approval.

3.12.6 Ultrasonic Testing: All complete penetration multi-pass groove welds will be ultrasonically tested:

3.12.6.1 The District's testing agency will perform ultrasonic testing immediately after welding is complete. A second ultrasonic testing will be performed near the end of field welding for at least twenty-five percent (25%) of the field welded groove welds.

3.12.6.2 All defective welds shall be repaired and re-tested with ultrasonic equipment.

3.12.6.3 When ultrasonic indications arising from the weld root can be interpreted as either a weld defect or the backing strip itself, the backing strip shall be removed at the Design Builder's expense and, if no root defect is visible, the weld shall be retested. If no defect is indicated on this re-test, and no significant amount of the base and weld metal haven been removed, no further repair or welding is necessary. If a defect is indicated, it shall be repaired at the Design Builder's expense.

3.12.6.4 The ultrasonic instrumentation shall be calibrated by the technician to evaluate the quality of the welds in accordance with AWS D1.1.

3.12.6.5 Should defects appear in welds tested, repairs shall be similarly inspected at the Design Builder's expense and at the direction of the Architect or District's Representative until satisfactory performance is assured.

3.12.6.6 Other methods of inspection, for example, x-ray, gamma ray, magnetic particle, or dye penetrant, may be used on welds if deemed necessary by the Architect or District's Representative.

3.12.7 The testing laboratory will review welding procedure specifications and related documentation to verify compliance with AWS and the Contract Documents.

3.13 HIGH-STRENGTH BOLTS, NUTS AND WASHERS

3.13.1 Material Tests: High-strength bolts, nuts and washers will be sampled and tested in accordance with the requirements of the specification for High-Strength Bolts for Structural Steel Joints, including Suitable Nuts and Plain Hardened Washers, ASTM A325, or for Quenched and Tempered Alloy Steel Bolts for Structural Steel Joints, ASTM 490, latest editions, details of construction, and installation procedure.

3.13.2 Inspection of High-Strength bolt Installation: Inspection of high-strength bolt installations shall be made in accordance with Title 24, Section 2213B by an inspector specially approved for that purpose by District Representative. The inspector will check the materials, equipment, details of construction, and installation procedure. The inspector shall furnish the Architect or District's Representative with a report that the Work has been completed in every respect in compliance with the approved Drawings and Specifications.

END OF SECTION

PART 1 – GENERAL

RELATED DOCUMENTS

1.1. Drawings and general provisions of Section 00 50 00 (Form of Agreement), and other Division 1 Specification Sections, apply to this Section.

SUMMARY

1.2. This Section includes requirements for temporary facilities and controls, including temporary utilities, support facilities, and security and protection facilities.

1.3. Temporary utilities include, but are not limited to, the following:

A. Sewers and drainage.
B. Water service and distribution.
C. Sanitary facilities, including toilets, wash facilities, and drinking-water facilities.
D. Heating and cooling facilities.
E. Ventilation.
F. Electric power service.
G. Lighting.
H. Telephone service.
I. High-speed Internet service.

1.4. Support facilities include, but are not limited to, the following:

A. Temporary roads and paving.
B. Dewatering facilities and drains.
C. Project identification and temporary signs.
D. Waste disposal facilities.
E. Field offices.
F. District field office.
G. Storage and fabrication sheds.
H. Lifts and hoists.
I. Temporary elevator usage.
J. Temporary stairs.
K. Construction aids and miscellaneous services and facilities.

1.5. Security and protection of the Work shall comply with the requirements of Article 14 of Section 00 50 00 (Form of Agreement) and include, but are not limited to, the following:

A. Environmental protection.
B. Stormwater control.
C. Tree and plant protection.
D. Pest control.
E. Site enclosure fence.
F. Security enclosure and lockup.
G. Barricades, warning signs, and lights.

H. Covered walkways.
I. Temporary enclosures.
J. Temporary partitions.
K. Fire protection.

1.6. Related Sections include the following:

A. Section 00 50 00 (Form of Agreement) for progress cleaning requirements.
B. Section 01 77 00 (Cleaning and Closeout Procedures) for closeout, cleaning procedures.
C. Divisions 2 through 33 for temporary heat, ventilation, and humidity requirements for products in those Sections.

DEFINITIONS

1.7. Permanent Enclosure: As determined by District, permanent or temporary roofing is complete, insulated, and weathertight; exterior walls are insulated and weathertight; and all openings are closed with permanent construction or substantial temporary closures.

USE CHARGES

1.8. General: Allow other entities to use temporary services and facilities without cost, including, but not limited to, the following:

A. District's construction and management forces.
B. Architect and other design sub-consultants.
C. Testing agencies.
D. Inspection services.
E. Personnel of authorities having jurisdiction.

1.9. Sewer Service: Use District's existing sewer service without metering and without payment of use charges.

1.10. Water Service: Use water from District's existing water system without metering and without payment of use charges.

1.11. Electric Power Service: In existing structures use electric power from District's existing system without metering and without payment of use charges unless otherwise noted. For all new structures under construction and temporary facilities (including but not limited to all field offices and temporary construction facilities) Design Builder shall engage the appropriate local utility company to install temporary service. Pay electrical service use charges for all new structures under construction and temporary facilities.

1.12. Telephone and High-speed Internet Service: Design Builder shall install and pay for all telephone (voice and facsimile) and High-speed Internet service use and maintenance charges and insure that such utilities are available for use by all entities engaged in construction activities at Project site.

1.13. Standards: Comply with ANSI A10.6, NECA's "Temporary Electrical Facilities," and NFPA 241.

A. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.

B. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Design Builder to obtain required certifications and permits.

Material Safety Data Sheets (MSDS)

1.14. Design Builder is required to ensure Material Safety Data Sheets are available in a readily accessible place at the Work Site for any material requiring a Material Safety Data Sheet per the Federal “Hazard Communication” standard, or employees right to know law. The Design Builder is also required to ensure proper labeling on substances brought onto the job site and that any person working with the material or within the general area of the material is informed of the hazards of the substance and follows proper handling and protection procedures. Two additional copies of the Material Safety Data Sheets shall also be submitted directly to the District.

PROJECT CONDITIONS

1.15. Temporary Utilities: At the earliest feasible time, when acceptable to District, change over from use of temporary service to use of permanent service.

A. Temporary Use of Permanent Facilities: Installer of each permanent service shall assume responsibility for operation, maintenance, and protection of each permanent service during its use as a construction facility before District's acceptance, regardless of previously assigned responsibilities.

1.16. Conditions of Use: The following conditions apply to use of temporary services and facilities by all parties engaged in the Work:

A. Keep temporary services and facilities clean and neat.

B. Relocate temporary services and facilities as required by progress of the Work.

C. If power greater than that available at nearby convenience outlets is required, make arrangements for such service and pay all costs of wiring and current. Repair existing facilities to originally found conditions.

PART 2 - PRODUCTS

1. MATERIALS

1.1. General: Provide new materials. Undamaged, previously used materials in serviceable condition may be used if approved by District. Provide materials suitable for use intended.

1.2. Pavement: Comply with Division 2 [Section "Asphaltic Concrete Paving."] [Section "Portland Cement Concrete Paving."] [Pavement Sections.]

1.3. Portable and Temporary Chain-Link Fencing: Minimum 2-inch (50-mm) 9-gage, galvanized steel, chain-link fabric fencing; minimum 6 feet (1.8 m) high with galvanized steel pipe posts; minimum 2-3/8-inch- (60-mm-) OD line posts and 2-7/8-inch-(73-mm-) OD corner and pull posts, with 1-5/8-inch- (42-mm-) OD top and bottom rails.

1.3.1. For portable chain-link fencing, provide galvanized steel support bases for supporting posts. Use bolt clamp connections. No wire ties to secure between fence panels.

1.3.2. Provide gates in sizes and at locations necessary to accommodate delivery vehicles and other construction operations.

1.3.3. Maintain security by limiting number of keys and restricting distribution to authorized personnel. Provide District with three sets of keys.

1.3.4. Visual Barrier: Provide and install mesh screen with District approved connections to fencing for visual barrier

1.4. Lumber and Plywood: Comply with requirements in Division 6 Section Rough Carpentry."

1.5. Paint: Comply with requirements in Division 9 Section "Painting."

1.6. Tarpaulins: Fire-resistive labeled with flame-spread rating of 15 or less.

1.7. Water: Potable.

2. EQUIPMENT

2.1. General: Provide equipment suitable for use intended.

2.2. Field Office and District Field Office: Mobile units with lockable entrances, operable windows, and serviceable finishes; heated and air conditioned; on foundations adequate for normal loading. Windows and doors are to have security bars and operable shades.

2.3. Fire Extinguishers: Hand carried, portable, UL rated. Provide class and extinguishing agent as indicated or a combination of extinguishers of NFPA-recommended classes for exposures.

2.3.1. Comply with NFPA 10 and NFPA 241 for classification, extinguishing agent, and size required by location and class of fire exposure.

2.4. Self-Contained Toilet Units: Single-occupant units of chemical, aerated recirculation, or combustion type; vented; fully enclosed with a glass-fiber-reinforced polyester shell or similar nonabsorbent material.

2.5. Drinking-Water Fixtures: Containerized, tap-dispenser, bottled-water drinking-water units, including paper cup supply.

2.6. Heating Equipment: Unless District authorizes use of permanent heating system, provide vented, self-contained, liquid-propane-gas or fuel-oil heaters with individual space thermostatic control.

2.6.1. Heating Units: Listed and labeled, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use for type of fuel being consumed.

2.7. Electrical Outlets: Properly configured, NEMA-polarized outlets to prevent insertion of 110- to 120-V plugs into higher-voltage outlets; equipped with ground-fault circuit interrupters, reset button, and pilot light.

2.8. Power Distribution System Circuits: Where permitted and overhead and exposed for surveillance, wiring circuits, not exceeding 125-V ac, 20-A rating, and lighting circuits may be nonmetallic sheathed cable.

INSTALLATION, GENERAL

1.1. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required by the District. See Article 3.3..1

1.2. Provide each facility ready for use when needed to avoid delay. Maintain and modify as required. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities and approved by District.

2. TEMPORARY UTILITY INSTALLATION

2.1. General: Engage appropriate local utility company to install temporary service or connect to existing service. Where utility company provides only part of the service, provide the remainder with matching, compatible materials and equipment. Comply with utility company recommendations.

2.1.1. Arrange with utility company, District, and existing users for time when service can be interrupted, if necessary, to make connections for temporary services.

2.1.2. Provide adequate capacity at each stage of construction. Before temporary utility is available, provide trucked-in services.

2.1.3. Obtain easements to bring temporary utilities to Project site where District's easements cannot be used for that purpose.

2.2. Sewers and Drainage: If sewers are available, provide temporary connections to remove effluent that can be discharged lawfully. If sewers are not available or cannot be used, provide drainage ditches, dry wells, stabilization ponds, and similar facilities. If

neither sewers nor drainage facilities can be lawfully used for discharge of effluent, provide containers to remove and dispose of effluent off-site in a lawful manner.

2.2.1. Filter out excessive soil, construction debris, chemicals, oils, and similar contaminants that might clog sewers or pollute waterways before discharge.

2.2.2. Connect temporary sewers to municipal system as directed by sewer department officials.

2.2.3. Maintain temporary sewers and drainage facilities in a clean, sanitary condition. After heavy use, restore normal conditions promptly.

2.3. Water Service: Use of District's existing water service facilities will be permitted, as long as facilities are cleaned and maintained in a condition acceptable to District.

2.3.1. The Design Builder shall be responsible for undue wasting of water used on the Work.

2.3.2. Design Builder to furnish hoses and temporary piping placed where water connections are available.

2.3.3. Provide adequate fire protection for the duration of work in accordance with local codes, ordinances and the State Fire Marshal.

2.3.3.1. The Design Builder shall take necessary precautions to guard against and eliminate possible fire hazards and to prevent damage to construction work, building materials, equipment, and public property. The Design Builder shall be responsible for providing, maintaining and enforcing fire protection methods

2.3.4. here installation below an outlet might be damaged by spillage or leakage, provide a drip pan of suitable size to minimize water damage. Drain accumulated water promptly from pans.

2.4. Sanitary Facilities: Provide temporary toilets, wash facilities, and drinking-water fixtures. Comply with regulations and health codes for type, number, location, operation, and maintenance of fixtures and facilities.

2.4.1. Disposable Supplies: Provide toilet tissue, paper towels, paper cups, and similar disposable materials for each facility. Maintain adequate supply. Provide covered waste containers for disposal of used material.

2.4.2. Toilets: Install self-contained toilet units. Shield toilets to ensure privacy.

2.4.3. Wash Facilities: Install wash facilities supplied with potable water at convenient locations for personnel who handle materials that require wash up. Dispose of drainage properly. Supply cleaning compounds appropriate for each type of material handled.

2.4.4. Drinking-Water Facilities: Provide bottled-water, drinking-water units and paper cup supply.

2.5. Heating and Cooling: Provide temporary heating and cooling required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of low temperatures or high humidity. Select equipment from that specified that will not have a harmful effect on completed installations or elements being installed.

2.6. Ventilation and Humidity Control: Provide temporary ventilation required by construction activities for curing or drying of completed installations or for protecting installed construction from adverse effects of high humidity. Select equipment from that specified that will not have a harmful effect on completed installations or elements being installed. Coordinate ventilation requirements to produce ambient condition required and minimize energy consumption.

2.6.1. Unless the District Project Manager authorizes an alternate procedure in writing, in advance of the start of construction; continuously ventilate all construction work areas and spaces with 100% outdoor (fresh) air for at least 30 days prior to substantial completion of work. In areas, which make use of natural ventilation such as windows, install temporary fans sufficient to provide no less than three air changes per hour. In all cases make sure that air is exhausted from construction work areas directly to the outdoors; do not re-circulate air or ventilate to other enclosed areas either within the occupied school or the construction area itself. Continuously operate ventilation systems and/or temporary fans 24 hours per day, 7 days per week, providing all measures necessary to allow the operation of ventilation systems and fans while maintaining the security of the site.

2.6.1.1. When volatile organic compound, and/or odor generating activities are performed during the 30-day ventilation period provide temporary exhaust ventilation to capture emissions and exhaust them directly to the outdoors. Extend the building flush out for a minimum of four days after the completion of any such activities.

2.6.1.2. During ventilation, make necessary provisions to temper supply air or heat spaces sufficiently to prevent condensation, water damage, and/or mold growth. Do not attempt to speed the off gassing of materials and/or curing of finishes by increasing room temperatures above normal levels (“baking” the building and/or components)

a.

2.6.1.3. Additional Conditioning at Move-In: Continue to operate ventilation systems at 100% fresh air during occupant move-in and unpacking. Do not perform final balancing of the ventilation system until two weeks after the move-in.

2.7. Electric Power Service: Provide weatherproof, grounded electric power service and distribution system of sufficient size, capacity, and power characteristics during construction period. Include meters, transformers, overload-protected disconnecting means, automatic ground-fault interrupters, and main distribution switchgear.

2.7.1. Install power distribution wiring overhead and rise vertically where least exposed to damage.

2.8. Electric Power Service: Where approved by the District, use of District's existing electric power service will be permitted, as long as equipment is maintained in a condition acceptable to District.

2.9. Electric Distribution: Provide receptacle outlets adequate for connection of power tools and equipment.

2.9.1. Provide waterproof connectors to connect separate lengths of electrical power cords if single lengths will not reach areas where construction activities are in progress. Do not exceed safe length-voltage ratio.

2.10. Lighting: Provide temporary lighting, as required, with local switching that provides adequate illumination for construction operations and traffic conditions.

2.11. Equipment: Provide equipment throughout construction period for common-use facilities used by all personnel engaged in construction activities.

2.11.1. Provide the following at District Field office:

2.11.1.1. CM Office
2.11.1.1.1. One fax, copy, scan machine with one dedicated phone line.
2.11.1.2. IOR Office
2.11.1.2.1. One fax copy, scan machine with one dedicated phone line. Conference Room
2.11.1.2.2. One telephone with conference and speaker capability: Provide dedicated phone line.
2.11.1.2.3. Provide and install separate High-speed Internet service, modem, and two (2) four-port wireless router for networking hardware/software for use during construction as directed by District's representative.
2.11.1.2.4. Design Builder is responsible to maintain continuous High-speed Internet and telephone service throughout construction.
2.11.1.2.5. Provide an answering machine or voice mail service on all telephones in the District's field office.
2.11.1.2.6. Provide three (3) sets of keys for each door at the trailers.
2.11.1.2.7. District Office and Conference Rooms to have weekly (or more) Janitorial Services.
2.11.1.2.8. District Field Offices shall have one (1) Men's and one (1) Women's interior toilet facilities with hot/cold water. Bottled drinking water with cups shall be provide for the duration of the Project.

2.11.1.3. Provide the following at Design Builder Field office:
2.11.1.3.1. Provide minimum of one (1) Scan/Copy/Print machine.
2.11.1.3.2. Provide separate High-speed Internet service, modem, and four-port wireless router for networking hardware/software for use during construction.

2.11.1.3.3. Design Builder is responsible to maintain continuous High-speed Internet and telephone service throughout construction.

2.11.1.4. In the Field Office, post a list of important telephone numbers.

2.11.1.4.1. Police and fire departments.
2.11.1.4.2. Ambulance service.
2.11.1.4.3. Design Builder's home office.
2.11.1.4.4. Architect's office.
2.11.1.4.5. Engineers' offices.
2.11.1.4.6. District's office.
2.11.1.4.7. Principal sub-Design Builders' field and home offices.

2.11.1.5. Furnish superintendent with an electronic paging device or a portable two-way radio for use when away from field office.

2.11.1.6. Provide a portable cellular telephone for superintendent's use in making and receiving telephone calls when away from field office.

3. SUPPORT FACILITIES INSTALLATION

3.1. General: Comply with the following:

3.1.1. Locate field offices, storage sheds, sanitary facilities, and other temporary construction and support facilities in locations approved by the District.

3.1.2. Provide incombustible construction for offices, shops, and sheds located within construction area. Comply with NFPA 241.

3.1.3. Maintain support facilities until after project final completion and with approval of the District.

3.2. Temporary Roads and Paved Areas: Construct and maintain temporary roads and paved areas adequate to support loads and to withstand exposure to traffic during construction period. Locate temporary roads and paved areas, if required, as indicated on Drawings.

3.2.1. Provide a reasonably level, graded, well-drained subgrade of satisfactory soil material, compacted to not less than 95 percent of maximum dry density in the top 6 inches (150 mm).

3.2.2. Provide gravel paving course of subbase material not less than 6 inches (75 mm) thick; roller compacted to a level, smooth, dense surface.

3.2.3. Provide dust-control treatment that is nonpolluting and nontracking. Reapply treatment as required to minimize dust.

3.2.4. Extend temporary roads and paved areas, within construction limits indicated, as necessary for construction operations.

3.2.5. Coordinate elevations of temporary roads and paved areas with permanent roads and paved areas.

3.2.6. Prepare subgrade and install subbase and base for temporary roads and paved areas according to Division 2 Section "Earthwork."

3.2.7. Recondition base after temporary use, including removing contaminated material, regrading, proofrolling, compacting, and testing.

3.2.8. Delay installation of final course of permanent hot-mix asphalt pavement until immediately before Substantial Completion. Repair hot-mix asphalt base-course pavement before installation of final course according to Division 2 Section "Hot-Mix Asphalt Paving."

3.3. Traffic Controls: Provide temporary traffic controls at junction of temporary roads with public roads. Include warning signs for public traffic and "STOP" signs for entrance onto public roads. Comply with requirements of authorities having jurisdiction.

3.4. Dewatering Facilities and Drains: Comply with requirements in applicable Division 2 Sections for temporary drainage and dewatering facilities and operations not directly associated with construction activities included in individual Sections. Where feasible, use same facilities. Maintain Project site, excavations, and construction free of water.

3.4.1. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining property nor endanger permanent Work or temporary facilities.

3.4.2. Before connection and operation of permanent drainage piping system, provide temporary drainage where roofing or similar waterproof deck construction is completed.

3.5. Project Identification and Temporary Signs: Prepare a minimum of two (2) Project identification signs not less than 32 square feet in area. Install signs in locations approved by the District to inform public and persons seeking entrance to Project. Do not permit installation of unauthorized signs.

3.5.1. Engage an experienced sign painter to apply graphics for Project identification signs. Comply with details indicated. District to provide project information to be included on signage.

3.5.2. Prepare temporary signs to provide directional information to construction personnel and visitors.

3.5.3. Construct signs of exterior-type Grade B-B high-density concrete form overlay plywood. Support on posts or framing of preservative-treated wood or steel. Do not install signage on any fencing – temporary or permanent.

3.5.4. Paint sign panel and applied graphics with exterior-grade alkyd gloss enamel over exterior primer.

3.6. Waste Disposal Facilities: Provide waste-collection containers in sizes adequate to handle waste from construction operations. Containerize and clearly label hazardous, dangerous, or unsanitary waste materials separately from other waste. Comply with Division 1 Section "Execution Requirements" for progress cleaning requirements.

3.6.1. If required by authorities having jurisdiction, provide separate containers, clearly labeled, for each type of waste material to be deposited.

3.6.2. Develop a waste management plan for Work performed on Project. Indicate types of waste materials Project will produce and estimate quantities of each type. Provide detailed information for on-site waste storage and separation of recyclable materials. Provide information on destination of each type of waste material and means to be used to dispose of all waste materials.

3.7. Professional Cleaning Services: Provide professional cleaning services on a weekly basis for temporary offices, first-aid stations, toilets, and similar areas.

3.8. District Field Office: Provide an insulated, weathertight, air-conditioned field office for use as by the District, District's Representative, Inspector of Record, and Architect; of sufficient size to accommodate required office personnel. District field office to contain office for IOR, office for Construction Manager (CM), Project Manager (PM), Project Engineer (PE), Project Administrator (PA) and common meeting area as detailed below. Provide and maintain all new equipment below, including all ancillary supplies required to operate equipment provided under contract. (Such as; copier toner, copy paper, drinking cups, etc).

3.8.1. IOR Office Requirements as follows:
3.8.1.1. Provide a minimum 140 sq. ft. (13 sq. m) office with lockable door.
3.8.1.2. One desk and one ergonomic chair, two four-drawer file cabinets, a plan table, a plan rack, and one bookcase.
3.8.1.3. One plain paper fax, copier, scanner, copier model HP Laser Jet M1522n MFP or approved equal with capability to fax multiple pages at a time and print a confirmation page.

3.8.2. CM/PM Office Requirements as follows:
3.8.2.1. Provide a minimum 140 sq. ft. (13 sq. m) office with lockable door.
3.8.2.2. One desk and one ergonomic chair, two four-drawer file cabinets, a plan table, a plan rack, and one bookcase.
3.8.2.2.1.1. Provide one (1) new digital camera with minimum 1 gigabyte storage card.
3.8.2.2.1.1.1. One plain paper fax, copier, scanner, copier model HP Laser Jet M1522n MFP or approved equal with capability to fax multiple pages at a time and print a confirmation page.

3.8.3. PE/PA Office Requirements as follows:
3.8.3.1. Provide a minimum 64 sq. ft. (7.8 sq. m) workstation with overhead storage and task lighting.
3.8.3.2. One desk or worksurface and one ergonomic chair, two four-drawer file cabinets and pencil drawer (lockable), a plan table or worksurface, a plan rack, and one bookcase.

3.8.4. Common Meeting Area:

3.8.4.1. Provide a room of not less than 240 sq. ft. (22.5 sq. m) for Project meetings. Furnish room with conference table suitable for 14 people, 14 folding chairs, 4-foot-by-6-foot- tack board, and 4-foot-by-6-foot- white board.

3.8.4.2. One desk and one ergonomic chair, one four-drawer file cabinet.

3.8.4.3. Water cooler with hot and cold spigot.

3.8.4.4. DB team shall provide a scanner/printer/copier capable of printing B/W and in Color on 8-1/2" x 11" and 11" x 17" paper.

3.9. Storage and Fabrication Sheds: Provide sheds sized, furnished, and equipped to accommodate materials and equipment involved, including temporary utility services. Sheds may be open shelters or fully enclosed spaces within building or elsewhere on-site.

4. SECURITY AND PROTECTION FACILITIES INSTALLATION

4.1. General: Comply with the requirements of Article 14 of 00 50 00 (Agreement).

4.2. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction in ways and by methods that comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects. Avoid using tools and equipment that produce harmful noise. Restrict use of noisemaking tools and equipment to hours that will minimize complaints from surrounding properties. Design Builder shall perform all work in compliance with all applicable rules, regulations, laws, and local ordinances including, without limitation, all noise and light limitations.

4.3. Storm Water Control: Provide earthen embankments and similar barriers in and around excavations and subgrade construction, sufficient to prevent flooding by runoff of storm water from heavy rains.

4.4. Tree and Plant Protection: Install temporary fencing located as indicated or outside the drip line of trees (if identified for protection) to protect vegetation from construction damage. Protect tree root systems from damage, flooding, and erosion.

4.5. Pest Control: Before deep foundation work has been completed, retain a local exterminator or pest-control company to recommend practices to minimize attraction and harboring of rodents, roaches, and other pests. Engage this pest-control service to perform extermination and control procedures at regular intervals so Project will be free of pests and their residues at Substantial Completion. Obtain two-year extended warranty for District. Perform control operations lawfully, using environmentally safe materials approved by the District.

4.6. Security Enclosure and Lockup: Install substantial temporary enclosure around partially completed areas of construction. Provide lockable entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security. The Design Builder is required to secure all areas of work and set security alarms when leaving the site.

4.7. Barricades, Warning Signs, and Lights: Comply as required with local authorities and State safety ordinances, standards and code requirements for erecting structurally adequate barricades. Paint with appropriate colors, graphics, and warning signs to inform personnel and public of possible hazards. Where appropriate and needed, provide lighting, including flashing red or amber lights.

4.8. Temporary Enclosures: Provide temporary enclosures for protection of construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weathertight enclosure for building exterior.

4.8.1. Where heating or cooling is needed and permanent enclosure is not complete, provide insulated temporary enclosures. Coordinate enclosure with ventilating and material drying or curing requirements to avoid dangerous conditions and effects.

4.8.2. Vertical Openings: Close openings of 25 sq. ft. (2.3 sq. m) or less with plywood or similar materials.

4.8.3. Horizontal Openings: Close openings in floor or roof decks and horizontal surfaces with load-bearing, wood-framed construction.

4.8.4. Install tarpaulins security using fire retardant treated wood framing and other materials.

4.9. Temporary Partitions: Erect and maintain effective dustproof partitions and temporary enclosures to prevent dust and dirt migration into areas of completed construction and to separate areas from fumes, odors and noise. Construction of temporary barriers shall take into consideration existing hazardous materials present in building finishes.

4.9.1. Construct dustproof partitions of not less than nominal 4-inch (100-mm) studs, 5/8-inch (16-mm) gypsum wallboard with joints taped on occupied side, and 1/2-inch (13-mm) fire-retardant plywood on construction side.

4.9.2. Insulate partitions to provide noise protection to occupied areas.

4.9.3. Seal joints and perimeter. Equip partitions with dustproof doors and security locks.

4.9.4. Protect air-handling equipment.

4.9.5. Weatherstrip openings.

4.9.6. Where the heating, ventilating, and/or air conditioning (HVAC) system and ducting is shared between the construction and completed areas of the Project, either isolate the areas by duct capping or conduct construction operations with ventilation shut down and sealed after hours or weekends.

4.10. Temporary Fire Protection: Until fire-protection needs are supplied by permanent facilities, install and maintain temporary fire-protection facilities of types needed to

protect against reasonably predictable and controllable fire losses. Comply with NFPA 241.

4.10.1. Store combustible materials in containers in fire-safe locations.

4.10.2. Maintain unobstructed access to fire extinguishers, fire hydrants, temporary fire-protection facilities, stairways, and other access routes for firefighting. Prohibit smoking in hazardous fire-exposure areas.

4.10.3. Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition.

4.10.4. Permanent Fire Protection: At earliest feasible date in each area of Project, complete installation of permanent fire-protection facility, including connected services, and place into operation and use. Instruct key personnel on use of facilities.

4.10.5. Develop and supervise an overall fire-prevention and first-aid fire-protection program for personnel at Project site. Review needs with local fire department and establish procedures to be followed. Instruct personnel in methods and procedures. Post warnings and information.

4.10.6. Provide hoses for fire protection of sufficient length to reach construction areas. Hang hoses with a warning sign stating that hoses are for fire-protection purposes only and are not to be removed. Match hose size with outlet size and equip with suitable nozzles.

5. OPERATION, TERMINATION, AND REMOVAL

5.1. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.

5.2. Maintenance: Maintain facilities in good operating condition until removal. Protect from damage caused by freezing temperatures and similar elements.

5.2.1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.

5.2.2. Prevent water-filled piping from freezing. Maintain markers for underground lines. Protect from damage during excavation operations.

5.3. Temporary Facility Changeover: Except for using permanent fire protection as soon as available, do not change over from using temporary security and protection facilities to permanent facilities without District approval

5.4. Termination and Removal: Remove each temporary facility when authorized by the District. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.

5.4.1. Materials and facilities that constitute temporary facilities are the property of Design Builder. District reserves right to take possession of Project identification signs.

5.4.2. Remove temporary paving not intended for or acceptable for integration into permanent paving. Where area is intended for landscape development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil. Remove materials contaminated with road oil, asphalt and other petrochemical compounds, and other substances that might impair growth of plant materials or lawns. Repair or replace street paving, curbs, and sidewalks at temporary entrances, as required by authorities having jurisdiction.

5.4.3. At Substantial Completion, clean and renovate permanent facilities used during construction period. Comply with final cleaning requirements in Division 1 “Closeout Procedures”. If LBP was disturbed during renovation the final cleaning shall meet the minimum requirements of 40 CFR Part 745 in addition to Division 1 “Closeout Procedures”.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

1.1.1 This Section includes administrative and procedural requirements for selection of products for use in Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; and product substitutions.

1.1.2 Related Sections include the following:

1.1.2.1 Section 01 42 00 (References) for applicable industry standards for products specified.

1.1.2.2 Section 01 77 00 (Cleaning and Closeout Procedures) for submitting warranties for Contract closeout.

1.2 DEFINITIONS

1.2.1 Products: Items purchased for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.

1.2.1.1 Refer to District Standards and Criteria Documents for Sole Source Material or Equipment.

1.2.1.2 Named Products: Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature that is current as of date of the Contract Documents.

1.2.1.1 New Products: Items that have not previously been incorporated into another project or facility, except that products consisting of recycled-content materials are allowed, unless explicitly stated otherwise. Products salvaged or recycled from other projects are not considered new products.

1.2.2 Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Design Builder, as allowed in Section 00 10 00 (Request for Proposals).

1.2.2.1 The following are not considered substitutions:

1.2.2.1.1 Revisions to Contract Documents requested by the District's Representative.

1.2.2.1.2 Specified options of products and construction methods included in Contract Documents.

1.2.2.1.3 The Design Builder's determination of and compliance with governing regulations and orders issued by governing authorities.

1.2.2.2 Design Builder will be held responsible for: (a) all costs and claims arising from any cost or schedule impact resulting from the District's approval of a requested substitution and (b) all costs and claims arising from any cost or schedule impact resulting from any substitution not approved by the District.

1.3 SUBMITTALS

1.3.1 See Section 01 33 00 (Submittal Procedures).

1.3.2 Product List: Submit a list, in tabular from, showing specified products. Include generic names of products required. Include manufacturer's name and proprietary product names for each product.

1.3.2.1 Coordinate product list with Design Builder's Contract Schedule and the Submittals Schedule.

1.3.2.2 Form: Tabulate information for each product under the following column headings:

1.3.2.2.1 Specification Section number and title.

1.3.2.2.2 Generic name used in the Contract Documents.

1.3.2.2.3 Proprietary name, model number, and similar designations.

1.3.2.2.4 Manufacturer's name and address.

1.3.2.2.5 Supplier's name and address.

1.3.2.2.6 Installer's name and address.

1.3.2.2.7 Projected delivery date or time span of delivery period.

1.3.2.2.8 Identification number on Contract Schedule network.

1.3.2.2.9 Identification of items that require early submittal approval for scheduled delivery date.

1.3.2.3 Product List: Within sixty (60) Days after date of commencement of the Work, submit five (5) physical copies of product list and submit one (1) electronic copy. Include a written explanation for omissions of data and for variations from Contract requirements.

1.3.2.4 District's Action: District will respond in writing to Design Builder within fifteen (15) Days of receipt of each product list. District's

response will include a list of unacceptable product selections and a brief explanation of reasons for this action. District's response, or lack of response, does not constitute a waiver of requirement to comply with the Contract Documents.

1.3.3 QUALITY ASSURANCE

1.3.4 Source Limitations: To the fullest extent possible, provide products of the same kind, from a single source.

1.3.5 Compatibility of Options: If Design Builder is given option of selecting between two or more products for use on Project, product selected shall be compatible with products previously selected, even if previously selected products were also options.

1.3.6 Underwriter's Laboratories, Inc. ("UL") Label: Where laboratory standards have been established and label service is available, materials and equipment shall bear the appropriate UL, Warnock-Hersey, or Factory Mutual label.

1.3.7 Manufacturers' Trademarks and Names: District's Representative reserves the right to review and request the removal or redesign of manufacturers' trade marks and names on items of material and equipment that will be exposed to view in the completed Work. Such removal or redesign shall be completed with no adjustment to the Stipulated Sum.

1.4 PRODUCT DELIVERY, STORAGE, AND HANDLING

1.4.1 Deliver, store, and handle products using means and methods that will prevent damage, deterioration, and loss, including theft. Comply with manufacturer's written instructions.

1.4.2 Delivery and Handling:

1.4.2.1 Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.

1.4.2.2 Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.

1.4.2.3 Deliver products to Project site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.

1.4.2.4 Inspect products on delivery to ensure compliance with the Contract Documents and to ensure that products are undamaged and properly protected.

1.4.2.5 Reject delivery of damaged or defective items. Promptly remove damaged or defective products from the Project site and replace with new at no change to the Stipulated Sum.

1.4.3 Storage:

1.4.3.1 Store products to allow for inspection and measurement of quantity or counting of units.

1.4.3.2 Store materials in a manner that will not endanger Project structure.

1.4.3.3 Store products that are subject to damage by the elements under cover in a weather tight enclosure above ground, with ventilation adequate to prevent condensation.

1.4.3.4 Store cementitious products and materials on elevated platforms.

1.4.3.5 Store sand, rock, or aggregate materials in a well-drained area on solid surfaces to prevent mixing with foreign matter.

1.4.3.6 Store foam plastic from exposure to sunlight, except to extent necessary for period of installation and concealment.

1.4.3.7 Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather-protection requirements for storage.

1.4.3.8 Protect stored products from damage.

1.4.3.9 Periodically inspect stored products to assure that products are maintained under specified conditions and are free from damage and deterioration.

1.4.3.10 The use of mechanical or electrical rooms for storage of materials is prohibited.

1.4.4 Imported Materials and Products:

1.4.4.1 Imported materials and products require special handling in shipping crates. Document and examine materials at the following points:

1.4.4.1.1 At the origination point prior to crating.

1.4.4.1.2 At the port of embarkation (for damage to crates).

1.4.4.1.3 At the port of entry (for damage to crates).

1.4.4.1.4 Immediately following delivery to the Site.

1.4.4.2 If crates show signs of damage, open them and inspect materials and products.

1.4.4.3 Reject damaged or defective products or materials, and replace promptly.

1.4.4.4 Provide detailed Bill of Goods at each point listed above, indicating quantity and condition of each item. At port locations, Bill of Goods may be accepted unless damage is observed.

1.5 PRODUCT WARRANTIES

1.5.1 Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Design Builder of obligations under requirements of the Contract Documents.

1.5.1.1 Manufacturer's Warranty: Preprinted written warranty published by individual manufacturer for a particular product and specifically endorsed by manufacturer to District.

1.5.1.2 Special Warranty: Written warranty required by or incorporated into the Contract Documents, either to extend time limit provided by manufacturer's warranty or to provide more rights for District.

1.5.2 Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution. Submit a draft for approval before final execution.

1.5.2.1 Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.

1.5.2.2 Specified Form: When specified forms are included with the Specifications, prepare a written document using appropriate form properly executed.

1.5.3 Submittal Time: Comply with requirements in Section 01 77 00 (Closeout Procedures).

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION PROCEDURES

2.1.1 General Product Requirements: Provide products that comply with the Contract Documents, that are undamaged and, unless otherwise indicated, that are new at time of installation.

2.1.1.1 Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.

2.1.1.2 Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.

2.1.1.3 District reserves the right to limit selection to products with warranties not in conflict with requirements of the Contract Documents.

2.1.1.4 Where products are accompanied by the term “as selected,” District will make selection.

2.1.1.5 Where products are accompanied by the term “match sample,” sample to be matched is District’s.

2.1.1.6 Descriptive, performance, and reference standard requirements in the Specifications establish “salient characteristics” of products.

2.1.1.7 Or Equal: Where products are specified by manufacturer’s name and accompanied by the term “or equal,” comply with provisions in Article 2.2, Product Substitutions, to obtain approval for use of an unnamed product.

2.1.2 Product Selection Procedures:

2.1.2.1 Product: Where Specifications name a single product and manufacturer, and indicate “no known equal,” provide the named product that complies with requirements.

2.1.2.2 Manufacturer/Source: Where Specifications name a single manufacturer or source, and indicates “no known equal,” provide a product by the named manufacturer or source that complies with requirements.

2.1.2.3 Products: Where Specifications include a list of names of both products and manufacturers, provide one of the products listed that complies with requirements.

2.1.2.4 Manufacturers: Where Specifications include a list of manufacturers’ names, provide a product by one of the manufacturers listed that complies with requirements.

2.1.2.5 Visual Matching Specification: Where Specifications require matching an established Sample, select a product that complies with requirements and matches District’s sample. District’s decision on whether a proposed product matches will be final.

2.1.2.5.1 When approval of a color, pattern or texture sample match by the District is required, provide the best match that complies with the specification and also provide the two nearest in the selection range to either direction from the same manufacturer/supplier. Application examples are:

2.1.2.5.1.1 *Color* – shall have two color hues or shades darker and two color hues or shades lighter. Total of five selections available.

2.1.2.5.1.2 *Pattern* – shall have two patterns that are less dense (or smaller) and two patterns that are more dense (or larger). Total of five selections available.

2.1.2.5.1.3 *Texture* – shall have two textures that are less rough (or smaller) and two patterns that are more rough (or larger). Total of five selections available.

2.1.2.5.2 If no product available within specified category matches and complies with other specified requirements, comply with provisions in Article 2.2 (Product Substitutions) below for proposal of product.

2.1.2.6 Visual Selection Specification: Where Specifications include the phrase “as selected from manufacturer’s colors, patterns, textures” or a similar phrase, select a product that complies with other specified requirements.

2.1.2.6.1 Standard Range: Where Specifications include the phrase “standard range of colors, patterns, textures” or similar phrase, District will select color, pattern, density, or texture from manufacturer’s product line that does not include premium items.

2.1.2.6.2 Full Range: Where Specifications include the phrase “full range of colors, patterns, textures” or similar phrase, District will select color, pattern, density, or texture from manufacturer’s product line that includes both standard and premium items.

PART 3 - EXECUTION (Not Used)

END OF SECTION

PART 1 – GENERAL

1. SUMMARY

1.1. Section Includes: Administrative and procedural requirements for contract closeout, including but not limited to, the following:

1.1.1. Substantial Completion requirements.

1.1.2. Inspection (Punch List) procedures.

1.1.3. Final Completion requirements

1.1.4. Project Record Documents.

1.1.5. Operations and Maintenance Manuals

1.1.6. Spare parts/materials.

1.1.7. Warranties (Minimum 2 years unless manufacturer's warranty is greater.)

1.1.8. Two-year maintenance and service agreements.

1.1.9. Demonstration and Training of District's personnel.

1.1.10. Final Cleaning.

1.2. Related Sections:

1.2.1. Section 00 50 00 (Form of Agreement) for requirements for Project Completion and Final Payment.
1.2.2. The Conditions for the Contract and the other sections of Division 1 apply to this section as fully as if repeated herein.
1.2.3. Divisions 2 through 33 Sections for specific closeout and special cleaning requirements for products of those sections.

2. SUBSTANTIAL COMPLETION

2.1. Preliminary Procedures: Before requesting inspection for determining date of Substantial Completion by phase, complete the following. List items below that are incomplete in request.

2.1.1. Prepare a list of items to be completed and corrected (punch list), the value of items on the list and reasons why the Work is not complete.

2.1.2. For the final phase of the Project, advise the District of pending insurance changeover requirements.

2.1.3. For the final phase of the Project, submit specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.

2.1.4. Obtain and submit releases permitting District unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.

2.1.5. For the final phase of the Project, prepare, sign, and submit Project Record Documents, operation and maintenance manuals, Final Completion construction photographs (and photographic negatives or a disk with all digital files), damage or settlement surveys, property surveys, and similar final record information. Deliver operation and maintenance manuals and Project Record Documents at least two weeks (14 days) before training and request for Substantial Completion Inspection.

2.1.6. For the final phase of the Project, deliver all tools, spare parts, extra materials, and similar items that are a permanent part of the installed equipment, to the District. Label with manufacturer's name and model number where applicable.

2.1.7. All plumbing and mechanical equipment shall operate quietly and free from vibration. Properly adjust, repair, balance, or replace equipment producing objectionable noise or vibration. Provide additional brackets, bracing, or other methods to prevent objectionable noise or vibration. All systems shall operate without humming, surging, or rapid cycling.

2.1.8. Complete startup testing of systems.

2.1.9. Complete training of the District's staff per Part 3 of this section. Submit training logs and attendance sheets.

2.1.10. Submit test/adjust/balance records.

2.1.11. Properly mount and post all operating instructions.

2.1.12. Make final changeover of permanent locks and deliver properly marked keys to District. Advise District's personnel of changeover in security provisions.

2.1.13. For the final phase of the Project and as approved by the District, terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.

2.1.14. Advise District of changeover in heat and other utilities.

2.1.15. Submit changeover information related to District's occupancy, use, operation, and maintenance.

2.1.16. Complete final cleaning requirements per Paragraph 3.2, Final Cleaning.

2.1.17. Touch up and otherwise repair and restore marred and exposed finishes to eliminate visual defects.

2.1.18. Deliver evidence of compliance with any and all requirements of all applicable governmental regulatory agencies at all levels, including District, City, State (DSA and Emergency Planning Department) and Federal government and agencies.

2.1.19. Submit certificates of inspection for vertical transportation systems, and life safety systems.

2.1.20. Submit copies of the fire alarm certification.

2.1.21. Certificates: For the final phase of the Project, submit manufacturer's representative's certification that work has been installed in accordance with manufacturer's recommendations.

2.1.22. Complete all Testing requirements per Section 01 88 20 (Miscellaneous Hazardous Materials Requirements).

2.2. Inspection: After all requirements of the Substantial Completion preliminary procedures have been completed, submit a written request for inspection for Substantial Completion. Give notice at least 7 working days in advance from the time the final inspection is to be performed. District will either proceed with inspection or notify Design Builder of unfulfilled requirements. Refer to Paragraph 1.4, List of Incomplete Items (Punch List).

2.2.1. Initial Inspection (Punch List): The Design Builder or his principal superintendent, authorized to act on behalf of the Design Builder, is to assemble a list of unfinished work items and assign costs to each item.

2.2.2. Final Inspection (Punch List): The Design Builder or his principal superintendent, authorized to act on behalf of the Design Builder, shall accompany the District on the final inspection tour. Principal Subcontractors and Consultants that the District may request to be present will also attend. The District will verify the Design Builder's Initial Inspection and recommend any changes.

2.2.3. If the Work has been substantially completed in accordance with the Contract Documents, and only minor corrective measures are required, the District will conditionally accept the Work and will file for the Notice of Completion based upon the Design Builder's assurance that the corrective measures will be completed within the shortest practicable time period.

2.2.4. If the Work has not been substantially completed in accordance with the Contract Documents, and several corrective measures are still required, the District will not accept the Work or record the Notice of Completion. The Design Builder shall complete or correct the items listed on the Initial Inspection and the Final Inspection punch list and then call for a re-inspection, following the procedure outlined above.

2.2.5. Re-inspection: Request for re-inspection when the Work identified in previous inspections as incomplete is completed or corrected. More than one (1) request of the District to make a re-inspection shall be considered an additional service of

District, District's Representative, and/or Inspector of Record, and all subsequent costs will be deducted from the Design Builders final payment.

3. FINAL COMPLETION

3.1. Preliminary Procedures: Before determining the date of Final Completion, complete the following:

3.1.1. Submit a final Application for Payment according to Section 00 50 00 (Agreement).

3.1.2. Submit affidavit of payment of debts and claims.

3.1.3. Submit affidavit of release of liens.

3.1.4. Submit consent of Design Builder's surety to final payment,

3.1.5. Submit complete payroll certifications.

3.1.6. Submit certified copy of District's Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by the District's representative. The certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.

3.1.7. Submit evidence of final, continuing insurance coverage complying with insurance requirements.

3.1.8. Submit pest-control final inspection report and warranty.

3.1.9. Submit all guarantees and warranties. Refer to Paragraph 1.7, Warranties.

3.1.10. Submit all Material Safety Data sheets.

3.1.11. Submit copies of all Verified Reports.

3.1.12. Submit a list of all Subcontractors of every tier providing services and/or materials in connection with the Project, in a formal, adequately bound, cataloged form, which shall include the names, addresses, telephone numbers and fax numbers of such persons, and shall further include notices as to where pertinent persons can and may be reached for emergency service, inclusive of nights, weekends and holidays.

4. DESIGN BUILDER'S LIST OF INCOMPLETE ITEMS (PUNCH LIST)

4.1. Preparation: Submit ten copies of each list. Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by the Design Builder that are outside the limits of construction.

4.1.1. The list is to be in Microsoft Excel, electronic format. The format is available from the District for the Design Builder's use.

4.1.2. Organize the list of spaces in sequential order, starting with exterior areas first and proceeding from lowest floor to highest floor in each building in the project. Each line item is to have a unique number associated with the room number (do not re-number items once they have been assigned a number).

4.1.3. Organize items by space. Each outstanding item is to be based on the room number where the problem exists and individually numbered.

4.1.4. Include the flowing information at the top of each page:

4.1.4.1.1. Project name.

4.1.4.1.2. Date.

4.1.4.1.3. Name of District's Representative.

4.1.4.1.4. Name of Inspector or Record.

4.1.4.1.5. Name of Design Builder.

4.1.4.1.6. Page Number.

5. PROJECT RECORD DOCUMENTS

5.1. General: Do not use Project Record Documents for construction purposes. Protect Project Record Documents from deterioration and loss. Provide access to Project Record Documents for the District's representative and Inspector of Record's reference during normal working hours. Submit Record Documents as described in this Section 00 50 00 (Agreement) and 01 11 20 (Design Services and Deliverables).

5.2. Record Drawings: Maintain and submit one signed set of prints of Contract Drawings and Shop Drawings.

5.2.1. Mark Record drawings to show the actual installation where installation varies from that shown originally as well as construction added to the Contract that is not indicated on the Contract Drawings. Require individual or entity who obtained record data, where individual or entity is installer, Subcontractor, or similar entity, to prepare the marked-up Record Prints.

5.2.1.1. Keep Record Drawings current and legible, and available, on site, for inspection at all times by the Inspector of Record, and District's representative.

5.2.1.2. Give particular attention to information on concealed elements that cannot be readily identified and recorded later. Concealed shall mean construction installed underground or in an area which cannot be readily inspected by use of access panels, inspection plates or other removable features.

5.2.1.3. Accurately record information in an understandable drawing technique.

5.2.1.4. Record data as soon as possible after obtaining it. Record and check the markup before enclosing concealed installations.

5.2.1.5. Mark Contract Drawings or Shop Drawings, whichever is most capable of showing actual physical conditions, completely and accurately. Where Shop Drawings are marked, show cross-reference on Contract Drawings.

5.2.2. Mark record sets with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at the same location.

5.2.3. Mark important additional information that was either shown schematically or omitted from original drawings.

5.2.4. Note Construction Change Directive numbers, Change Order numbers, alternate numbers, RFI numbers, and similar identification where applicable.

5.2.5. Identify, sign and date each Record Drawing: include the designation "PROJECT RECORD DRAWING" in a prominent location. Organize into manageable sets; bind each set with durable cover sheets. Include identification on cover sheets.

5.3. Record Specifications: Submit one copy of Project's Specifications, including addenda and contract modifications. Mark copy to indicate the actual product installation.

5.3.1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.

5.3.2. Mark copy with proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.

5.3.3. Note related Change orders, Record Drawings, where applicable.

5.4. Record Product Data: Submit one copy of each Product Data submittal. Mark one set to indicate the actual product installation where installation varies substantially from that indicated in Product Data.

5.4.1. Include Material Safety Data Sheets.

5.4.2. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.

5.4.3. Include significant changes in the product delivered to Project site and changes in manufacturer's written instruction for installation.

5.4.4. Note related Change Orders, Record Drawings, where applicable.

6. OPERATIONS AND MAINTENANCE MANUALS

6.1. Assemble 3 copies of complete sets of operation and maintenance data indicating the operation and maintenance of each system, subsystem, and piece of equipment not part of a system. Include operation and maintenance data required in individual Specification Section and as follows:

6.1.1. Manufacturer's Manuals: Submit complete installation, operation, maintenance and service manuals, and printed instructions and parts lists for all materials and equipment where such printed matter is regularly available from the manufacturer. This includes, but is not limited to such service manuals as may be sold by the manufacturer covering the operation and maintenance of his items, and complete replacement parts lists sufficiently detailed for parts replacement ordering to manufacturer. Piping diagrams and wiring diagrams are to be included. Bound publications need not be assembled in binders.

6.1.1.1. Organize operation and maintenance manuals into suitable sets of manageable size. Bind and index data in heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, in thickness necessary to accommodate contents, with pocket inside the covers to receive folded oversized sheets. Identify each binder on front and spine with the printed title “OPERATION AND MAINTENANCE MANUAL,” Project name, and subject matter of contents.

6.1.2. Equipment Nameplate Data: Submit a typewritten list of all mechanical and electrical equipment showing exact equipment nameplate data. Identify equipment by means of names, symbols, and numbers used in the contract documents

6.1.3. System Operating Instructions: Submit typewritten instructions covering operation of the entire system as installed (not duplicating manufacturer's instructions for operating individual components). Include schematic flow and control diagrams as appropriate and show or list system valves, control elements, and equipment components using identification symbols and numbers, including operating standards. List rooms, area of equipment served, and show proper settings for valves, controls, and switches. Incorporate emergency instructions and procedures, startup and shutdown procedures, seasonal procedures and weekend operations.

6.1.4. System Maintenance Instructions: Submit typewritten instructions covering routine maintenance of system. List each item of equipment requiring inspection, lubrication, or service and briefly describe such maintenance, including types of lubricants and frequency of service. It is not intended that these instructions duplicate manufacturer's detailed instructions. Give name, address and phone number of nearest firm authorized or qualified to service equipment or provide parts

6.1.5. Wall Mounted Data: Frame one set of typewritten system instructions and diagrams as required under Paragraphs .3 and .4 above, covered with glass and mounted in locations as directed by the District. This set of instructions is in addition to the required herein.

7. WARRANTIES & GUARANTEES

7.1. All submitted Warranty and Guaranty forms will be on the Peralta Community College District's Warranty and Guaranty format. Original to be provided.

7.2. Warranties and guarantees for fire/life safety work such as fire alarm, sprinkler, emergency and exit lighting, and exiting pathway systems such as: Elevator, wheelchair lifts, etc. shall have specific language "in the event of our failure to respond and act within 3 hours after being notified in writing by the District, we authorize the District to proceed to have the defects repaired or replaced and made whole, together with any other adjacent work which may be displaced or damaged by so doing, at our expense, and we will honor and pay the costs and charges therefore upon demand. This work shall not invalidate any and all warranties and guarantees."

7.3. Submittal Time: Submit duplicate written warranties and guarantees on request of District for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated.

7.4. Partial Occupancy: Submit properly executed warranties and guarantees within 15 days of completion of designated portions of the Work that are completed and occupied or used by District during construction period by separate agreement with Design Builder.

7.5. Organize warranty and guarantee documents into an orderly sequence based on the table of contents of the Project Manual.

7.5.1. Bind warranties and guarantees in heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, in thickness necessary to receive 8-1/2-by-11-inch (115-by-280-mm) paper.

7.5.2. Provide heavy paper dividers with plastic-covered tabs for each separate warranty and guarantee. Mark tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.

7.6. Provide additional copies of each warranty and guarantee to include in operation and maintenance manuals.

PART 2 – PRODUCTS

1. MATERIALS

1.1. Cleaning Agents: Only use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished

surfaces. All cleaners shall be specifically designed for the purpose intended, safe for use on the intended object to be cleaned, and safe to pupils, staff and the public. Refer to the District's standards for cleaning products approved by the District.

1.2. Commercial floor wax stripper, Easterday Ammo-Strip or approved equal, capable of removing metal interlock water emulsion floor finish.

1.3. Floor finish shall be minimum 20% solids content high-gloss wax. Acceptable products:

1.3.1. Spartan Sunny-Side

1.3.2. Spotlight (Brulin Company-800-776-7149)

1.3.3. Champion Once-A-Year

1.4. Graffiti Remover (non-toxic): SO-SAFE BY DX, Inc., or approved equal.

1.5. Germicidal Cleaner must be E.P.A. registered germicidal cleaner and deodorizer appropriate for use in public school buildings. DB team should use PCCD approved COVID-19 Sanitizer.

PART 3 – EXECUTION

1. DEMONSTRATION AND TRAINING

1.1.1. Instruction: After Work under this contract is completed, tested, and before acceptance, and not less than 14 days after submittal of the operation and maintenance data required in Paragraph 1.6, Operations and Maintenance Manuals, operate all systems for a period of three 8-hour days during which time keep on the project competent personnel familiar with the items installed whose full-time assignment will be to instruct the District's maintenance personnel in the operation and maintenance of the equipment and systems.

1.1.2. Provide instructors experienced in operation and maintenance procedures.

1.1.3. Provide instruction at mutually agreed-upon times. For equipment that requires seasonal operation, provide similar instruction at the start of each season.

1.1.4. Schedule training with District, through District's representative, with at least seven days notice.

1.1.5. Coordinate instructors, including providing notification of dates, times, length of instruction, and course content.

1.1.6. Do not conduct this instruction period before completion of piping and equipment labeling.

1.2. Provide an instruction period sufficient to cover the training required. This instruction period shall be in addition and subsequent to any period of operation, test and adjustment called for elsewhere in this specification.

1.3. Program Structure: develop an instruction program that includes individual training modules for each system and equipment not part of a system, as required by individual Specification Sections. For each training module, develop a learning objective and teaching outline. Include instruction of the following:

1.3.1. System design and operational philosophy.

1.3.2. Review of documentation.

1.3.3. Operations.

1.3.4. Adjustments.

1.3.5. Troubleshooting.

1.3.6. Maintenance.

1.3.7. Repair.

2. FINAL AND END-OF-PHASE CLEANING

2.1. General: Provide final cleaning at the completion of each phase of the work and final project completion. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal, State and local environmental and antipollution regulations. If LBP was disturbed during renovation the final cleaning shall meet the minimum requirements of 40 CFR Part 745.

2.2. Cleaning: Employ professional cleaning service for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.

2.2.1. Complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for any phase of Project:

2.2.1.1. Clean Project site, yard, and grounds in areas disturbed by construction activities including landscape development areas, of rubbish, waste material, letter, and other foreign substances.

2.2.1.2. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.

2.2.1.3. Rake grounds that are neither planted nor paved to a smooth, even-textured surface.

2.2.1.4. Remove tools, construction equipment, machinery, and surplus material from Project site.

2.2.1.5. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.

2.2.1.6. Horizontal surfaces: All horizontal surfaces must be dusted and/or washed until free of dust and grime.

2.2.1.7. Furnishings and equipment:

2.2.1.7.1. Remove all gum and sticky substances from all surfaces. Wash all furniture and equipment with a neutral cleaner. Use specialized cleaner appropriate for wood and/or excessively dirty surfaces.

2.2.1.7.2. Dust all machinery and equipment located in any shop area.

2.2.1.7.3. Clean all chalkboards and chalk rails by washing with water and/or chalkboard cleaner. Re-chalk chalkboards after completing cleaning process.

2.2.1.7.4. Clean exterior of all closed lockers and interior of open ones.

2.2.1.7.5. Graffiti must be removed from all furnishings and equipment.

2.2.1.8. Walls: Wash all wall surfaces with detergent and water. Remove all graffiti. All restroom walls should be washed with a disinfectant cleaner.

2.2.1.9. Doors: Wash all doors, frames and hardware.

2.2.1.10. Floors:

2.2.1.10.1. Resilient Floors (except linoleum flooring) – Clean and refinish flooring, using appropriate procedures and finishes/sealers. Strip existing wax from all existing resilient flooring (using appropriate safety measures as recommended by the E.P.A. for any tile containing asbestos) and re-wax as follows:

2.2.1.10.1.1. Classrooms, offices and other rooms - three coats of wax.

2.2.1.10.1.2. Corridors - five coats of wax.

2.2.1.10.1.2.1.1. Newly installed resilient floors should have all surface mastic removed by Design Builder. New floors should be allowed to set for time recommended by manufacturer of mastic. These floors should be scrubbed with detergent -- not stripped. Seal as recommended by flooring manufacturer and re-wax as indicated above.

2.2.1.10.2. Linoleum Floors - Clean and refinish flooring, using appropriate procedures and finishes/sealers in accordance with manufacturers recommendations and finish as follows:

2.2.1.10.2.1.1.1. Newly installed linoleum floors should be allowed to set for time recommended by manufacturer of mastic. Existing and new floors should be scrubbed with a neutral pH (7-8.5) detergent/cleaner – do not strip factory finish. Apply the cleaning solution with a mop and bucket; allow the solution to remain on the floor, and then scrub with a rotary electric scrubber or automatic scrubber with a non-abrasive scrubbing pad. Do not over-saturate the floor. Rinse the entire floor surface with clean, cool water and allow the floor to dry thoroughly before allowing traffic. Apply two (2) coats of “Linobase” sealer,

manufactured by Johnson Diversey or as recommended by manufacturer, followed by three (3) coats of “Carefree” finish, manufactured by Johnson Diversey or as recommended by the manufacturer, per manufacturer’s instructions.

2.2.1.10.3. Concrete Floors - Scrub using water and detergent.

2.2.1.10.4. Ceramic Floors - Scrub using water and detergent.

2.2.1.10.5. Clean, screen and apply gym seal per manufacturer's recommendation. All gym seal to be approved by Custodial Services Department.

2.2.1.10.6. Carpeted Floors - Vacuum all carpets and clean by hot water extraction.

2.2.1.10.7. Other Floors - Marble, terrazzo and rubber floors should be cleaned and refinished using appropriate procedures and finishes/sealers.

2.2.1.11. STAIRS: All stairs to be scrubbed with detergent including walls, handrails and ledges. Finish not to be applied to stairs unless necessary and approved by the District (Custodial Services Department).

2.2.1.12. RESTROOMS AND LOCKER ROOMS: Thoroughly clean and disinfect all surfaces and fixtures. Remove all foreign objects from walls/ceilings and eliminate all graffiti. Specifications provided above for fixtures, walls and floors are applicable.

2.2.1.13. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.

2.2.1.14. Sweep concrete floors broom clean in unoccupied spaces.

2.2.1.15. Vacuum carpet and similar soft surfaces, removing debris and excess nap; shampoo if visible soil or stains remain.

2.2.1.16. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Replace chipped or broken glass and other damaged transparent materials. Polish mirrors and glass, taking care not to scratch surfaces.

2.2.1.17. Remove labels that are not permanent.

2.2.1.18. Touch up and otherwise repair and restore marred, exposed finishes and surfaces. Replace finishes and surfaces that cannot be satisfactorily repaired or restored or that already show evidence of repair or restoration.

2.2.1.18.1. Do not paint over “UL” and similar labels, including mechanical and electrical nameplates.

2.2.1.19. Wipe surfaces of mechanical and electrical equipment, elevator equipment, and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.

2.2.1.20. Replace parts subject to unusual operating conditions.

2.2.1.21. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.

2.2.1.22. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.

2.2.1.23. Clean ducts, blowers, and coils if units were operated without filters during construction.

2.2.1.24. Clean all new and existing light fixtures, lamps, globes, and reflectors to function with full efficiency. Replace burned-out bulbs, and those noticeably dimmed by hours of use, and defective and noisy starters in fluorescent and mercury vapor fixtures to comply with requirements for new fixtures.

2.2.1.25. Leave Project clean and ready for occupancy.

2.3. Pest Control: Engage an experienced, licensed exterminator to make a final inspection and rid the Project of rodents, insects, and other pests. Prepare a report.

2.4. Final Inspection: Any surface still exhibiting dirt, graffiti or dust shall be re-cleaned/re-stripped/refinished until free of dirt, graffiti or dust.

2.5. Comply with safety standards for cleaning. Do not burn waste materials. Do not bury debris or excess materials on District's property. Do not discharge volatile, harmful, or dangerous materials into drainage systems. Remove materials from Project site and dispose of lawfully.

END OF SECTION

PART 1 – GENERAL

1. SUMMARY

1.1. Section Includes: Administrative and procedural requirements for contract closeout, including but not limited to, the following:

1.1.1. Substantial Completion requirements.

1.1.2. Inspection (Punch List) procedures.

1.1.3. Final Completion requirements

1.1.4. Project Record Documents.

1.1.5. Operations and Maintenance Manuals

1.1.6. Spare parts/materials.

1.1.7. Warranties (Minimum 2 years unless manufacturer's warranty is greater.)

1.1.8. Two-year maintenance and service agreements.

1.1.9. Demonstration and Training of District's personnel.

1.1.10. Final Cleaning.

1.2. Related Sections:

1.2.1. Section 00 50 00 (Form of Agreement) for requirements for Project Completion and Final Payment.
1.2.2. The Conditions for the Contract and the other sections of Division 1 apply to this section as fully as if repeated herein.
1.2.3. Divisions 2 through 33 Sections for specific closeout and special cleaning requirements for products of those sections.

2. SUBSTANTIAL COMPLETION

2.1. Preliminary Procedures: Before requesting inspection for determining date of Substantial Completion by phase, complete the following. List items below that are incomplete in request.

2.1.1. Prepare a list of items to be completed and corrected (punch list), the value of items on the list and reasons why the Work is not complete.

2.1.2. For the final phase of the Project, advise the District of pending insurance changeover requirements.

2.1.3. For the final phase of the Project, submit specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.

2.1.4. Obtain and submit releases permitting District unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.

2.1.5. For the final phase of the Project, prepare, sign, and submit Project Record Documents, operation and maintenance manuals, Final Completion construction photographs (and photographic negatives or a disk with all digital files), damage or settlement surveys, property surveys, and similar final record information. Deliver operation and maintenance manuals and Project Record Documents at least two weeks (14 days) before training and request for Substantial Completion Inspection.

2.1.6. For the final phase of the Project, deliver all tools, spare parts, extra materials, and similar items that are a permanent part of the installed equipment, to the District. Label with manufacturer's name and model number where applicable.

2.1.7. All plumbing and mechanical equipment shall operate quietly and free from vibration. Properly adjust, repair, balance, or replace equipment producing objectionable noise or vibration. Provide additional brackets, bracing, or other methods to prevent objectionable noise or vibration. All systems shall operate without humming, surging, or rapid cycling.

2.1.8. Complete startup testing of systems.

2.1.9. Complete training of the District's staff per Part 3 of this section. Submit training logs and attendance sheets.

2.1.10. Submit test/adjust/balance records.

2.1.11. Properly mount and post all operating instructions.

2.1.12. Make final changeover of permanent locks and deliver properly marked keys to District. Advise District's personnel of changeover in security provisions.

2.1.13. For the final phase of the Project and as approved by the District, terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.

2.1.14. Advise District of changeover in heat and other utilities.

2.1.15. Submit changeover information related to District's occupancy, use, operation, and maintenance.

2.1.16. Complete final cleaning requirements per Paragraph 3.2, Final Cleaning.

2.1.17. Touch up and otherwise repair and restore marred and exposed finishes to eliminate visual defects.

2.1.18. Deliver evidence of compliance with any and all requirements of all applicable governmental regulatory agencies at all levels, including District, City, State (DSA and Emergency Planning Department) and Federal government and agencies.

2.1.19. Submit certificates of inspection for vertical transportation systems, and life safety systems.

2.1.20. Submit copies of the fire alarm certification.

2.1.21. Certificates: For the final phase of the Project, submit manufacturer's representative's certification that work has been installed in accordance with manufacturer's recommendations.

2.1.22. Complete all Testing requirements per Section 01 88 20 (Miscellaneous Hazardous Materials Requirements).

2.2. Inspection: After all requirements of the Substantial Completion preliminary procedures have been completed, submit a written request for inspection for Substantial Completion. Give notice at least 7 working days in advance from the time the final inspection is to be performed. District will either proceed with inspection or notify Design Builder of unfulfilled requirements. Refer to Paragraph 1.4, List of Incomplete Items (Punch List).

2.2.1. Initial Inspection (Punch List): The Design Builder or his principal superintendent, authorized to act on behalf of the Design Builder, is to assemble a list of unfinished work items and assign costs to each item.

2.2.2. Final Inspection (Punch List): The Design Builder or his principal superintendent, authorized to act on behalf of the Design Builder, shall accompany the District on the final inspection tour. Principal Subcontractors and Consultants that the District may request to be present will also attend. The District will verify the Design Builder's Initial Inspection and recommend any changes.

2.2.3. If the Work has been substantially completed in accordance with the Contract Documents, and only minor corrective measures are required, the District will conditionally accept the Work and will file for the Notice of Completion based upon the Design Builder's assurance that the corrective measures will be completed within the shortest practicable time period.

2.2.4. If the Work has not been substantially completed in accordance with the Contract Documents, and several corrective measures are still required, the District will not accept the Work or record the Notice of Completion. The Design Builder shall complete or correct the items listed on the Initial Inspection and the Final Inspection punch list and then call for a re-inspection, following the procedure outlined above.

2.2.5. Re-inspection: Request for re-inspection when the Work identified in previous inspections as incomplete is completed or corrected. More than one (1) request of the District to make a re-inspection shall be considered an additional service of

District, District's Representative, and/or Inspector of Record, and all subsequent costs will be deducted from the Design Builders final payment.

3. FINAL COMPLETION

3.1. Preliminary Procedures: Before determining the date of Final Completion, complete the following:

3.1.1. Submit a final Application for Payment according to Section 00 50 00 (Agreement).

3.1.2. Submit affidavit of payment of debts and claims.

3.1.3. Submit affidavit of release of liens.

3.1.4. Submit consent of Design Builder's surety to final payment,

3.1.5. Submit complete payroll certifications.

3.1.6. Submit certified copy of District's Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by the District's representative. The certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.

3.1.7. Submit evidence of final, continuing insurance coverage complying with insurance requirements.

3.1.8. Submit pest-control final inspection report and warranty.

3.1.9. Submit all guarantees and warranties. Refer to Paragraph 1.7, Warranties.

3.1.10. Submit all Material Safety Data sheets.

3.1.11. Submit copies of all Verified Reports.

3.1.12. Submit a list of all Subcontractors of every tier providing services and/or materials in connection with the Project, in a formal, adequately bound, cataloged form, which shall include the names, addresses, telephone numbers and fax numbers of such persons, and shall further include notices as to where pertinent persons can and may be reached for emergency service, inclusive of nights, weekends and holidays.

4. DESIGN BUILDER'S LIST OF INCOMPLETE ITEMS (PUNCH LIST)

4.1. Preparation: Submit ten copies of each list. Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by the Design Builder that are outside the limits of construction.

4.1.1. The list is to be in Microsoft Excel, electronic format. The format is available from the District for the Design Builder's use.

4.1.2. Organize the list of spaces in sequential order, starting with exterior areas first and proceeding from lowest floor to highest floor in each building in the project. Each line item is to have a unique number associated with the room number (do not re-number items once they have been assigned a number).

4.1.3. Organize items by space. Each outstanding item is to be based on the room number where the problem exists and individually numbered.

4.1.4. Include the flowing information at the top of each page:

4.1.4.1.1. Project name.

4.1.4.1.2. Date.

4.1.4.1.3. Name of District's Representative.

4.1.4.1.4. Name of Inspector or Record.

4.1.4.1.5. Name of Design Builder.

4.1.4.1.6. Page Number.

5. PROJECT RECORD DOCUMENTS

5.1. General: Do not use Project Record Documents for construction purposes. Protect Project Record Documents from deterioration and loss. Provide access to Project Record Documents for the District's representative and Inspector of Record's reference during normal working hours. Submit Record Documents as described in this Section 00 50 00 (Agreement) and 01 11 20 (Design Services and Deliverables).

5.2. Record Drawings: Maintain and submit one signed set of prints of Contract Drawings and Shop Drawings.

5.2.1. Mark Record drawings to show the actual installation where installation varies from that shown originally as well as construction added to the Contract that is not indicated on the Contract Drawings. Require individual or entity who obtained record data, where individual or entity is installer, Subcontractor, or similar entity, to prepare the marked-up Record Prints.

5.2.1.1. Keep Record Drawings current and legible, and available, on site, for inspection at all times by the Inspector of Record, and District's representative.

5.2.1.2. Give particular attention to information on concealed elements that cannot be readily identified and recorded later. Concealed shall mean construction installed underground or in an area which cannot be readily inspected by use of access panels, inspection plates or other removable features.

5.2.1.3. Accurately record information in an understandable drawing technique.

5.2.1.4. Record data as soon as possible after obtaining it. Record and check the markup before enclosing concealed installations.

5.2.1.5. Mark Contract Drawings or Shop Drawings, whichever is most capable of showing actual physical conditions, completely and accurately. Where Shop Drawings are marked, show cross-reference on Contract Drawings.

5.2.2. Mark record sets with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at the same location.

5.2.3. Mark important additional information that was either shown schematically or omitted from original drawings.

5.2.4. Note Construction Change Directive numbers, Change Order numbers, alternate numbers, RFI numbers, and similar identification where applicable.

5.2.5. Identify, sign and date each Record Drawing: include the designation "PROJECT RECORD DRAWING" in a prominent location. Organize into manageable sets; bind each set with durable cover sheets. Include identification on cover sheets.

5.3. Record Specifications: Submit one copy of Project's Specifications, including addenda and contract modifications. Mark copy to indicate the actual product installation.

5.3.1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.

5.3.2. Mark copy with proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.

5.3.3. Note related Change orders, Record Drawings, where applicable.

5.4. Record Product Data: Submit one copy of each Product Data submittal. Mark one set to indicate the actual product installation where installation varies substantially from that indicated in Product Data.

5.4.1. Include Material Safety Data Sheets.

5.4.2. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.

5.4.3. Include significant changes in the product delivered to Project site and changes in manufacturer's written instruction for installation.

5.4.4. Note related Change Orders, Record Drawings, where applicable.

6. OPERATIONS AND MAINTENANCE MANUALS

6.1. Assemble 3 copies of complete sets of operation and maintenance data indicating the operation and maintenance of each system, subsystem, and piece of equipment not part of a system. Include operation and maintenance data required in individual Specification Section and as follows:

6.1.1. Manufacturer's Manuals: Submit complete installation, operation, maintenance and service manuals, and printed instructions and parts lists for all materials and equipment where such printed matter is regularly available from the manufacturer. This includes, but is not limited to such service manuals as may be sold by the manufacturer covering the operation and maintenance of his items, and complete replacement parts lists sufficiently detailed for parts replacement ordering to manufacturer. Piping diagrams and wiring diagrams are to be included. Bound publications need not be assembled in binders.

6.1.1.1. Organize operation and maintenance manuals into suitable sets of manageable size. Bind and index data in heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, in thickness necessary to accommodate contents, with pocket inside the covers to receive folded oversized sheets. Identify each binder on front and spine with the printed title “OPERATION AND MAINTENANCE MANUAL,” Project name, and subject matter of contents.

6.1.2. Equipment Nameplate Data: Submit a typewritten list of all mechanical and electrical equipment showing exact equipment nameplate data. Identify equipment by means of names, symbols, and numbers used in the contract documents

6.1.3. System Operating Instructions: Submit typewritten instructions covering operation of the entire system as installed (not duplicating manufacturer's instructions for operating individual components). Include schematic flow and control diagrams as appropriate and show or list system valves, control elements, and equipment components using identification symbols and numbers, including operating standards. List rooms, area of equipment served, and show proper settings for valves, controls, and switches. Incorporate emergency instructions and procedures, startup and shutdown procedures, seasonal procedures and weekend operations.

6.1.4. System Maintenance Instructions: Submit typewritten instructions covering routine maintenance of system. List each item of equipment requiring inspection, lubrication, or service and briefly describe such maintenance, including types of lubricants and frequency of service. It is not intended that these instructions duplicate manufacturer's detailed instructions. Give name, address and phone number of nearest firm authorized or qualified to service equipment or provide parts

6.1.5. Wall Mounted Data: Frame one set of typewritten system instructions and diagrams as required under Paragraphs .3 and .4 above, covered with glass and mounted in locations as directed by the District. This set of instructions is in addition to the required herein.

7. WARRANTIES & GUARANTEES

7.1. All submitted Warranty and Guaranty forms will be on the Peralta Community College District's Warranty and Guaranty format. Original to be provided.

7.2. Warranties and guarantees for fire/life safety work such as fire alarm, sprinkler, emergency and exit lighting, and exiting pathway systems such as: Elevator, wheelchair lifts, etc. shall have specific language "in the event of our failure to respond and act within 3 hours after being notified in writing by the District, we authorize the District to proceed to have the defects repaired or replaced and made whole, together with any other adjacent work which may be displaced or damaged by so doing, at our expense, and we will honor and pay the costs and charges therefore upon demand. This work shall not invalidate any and all warranties and guarantees."

7.3. Submittal Time: Submit duplicate written warranties and guarantees on request of District for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated.

7.4. Partial Occupancy: Submit properly executed warranties and guarantees within 15 days of completion of designated portions of the Work that are completed and occupied or used by District during construction period by separate agreement with Design Builder.

7.5. Organize warranty and guarantee documents into an orderly sequence based on the table of contents of the Project Manual.

7.5.1. Bind warranties and guarantees in heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, in thickness necessary to receive 8-1/2-by-11-inch (115-by-280-mm) paper.

7.5.2. Provide heavy paper dividers with plastic-covered tabs for each separate warranty and guarantee. Mark tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.

7.6. Provide additional copies of each warranty and guarantee to include in operation and maintenance manuals.

PART 2 – PRODUCTS

1. MATERIALS

1.1. Cleaning Agents: Only use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished

surfaces. All cleaners shall be specifically designed for the purpose intended, safe for use on the intended object to be cleaned, and safe to pupils, staff and the public. Refer to the District's standards for cleaning products approved by the District.

1.2. Commercial floor wax stripper, Easterday Ammo-Strip or approved equal, capable of removing metal interlock water emulsion floor finish.

1.3. Floor finish shall be minimum 20% solids content high-gloss wax. Acceptable products:

1.3.1. Spartan Sunny-Side

1.3.2. Spotlight (Brulin Company-800-776-7149)

1.3.3. Champion Once-A-Year

1.4. Graffiti Remover (non-toxic): SO-SAFE BY DX, Inc., or approved equal.

1.5. Germicidal Cleaner must be E.P.A. registered germicidal cleaner and deodorizer appropriate for use in public school buildings. DB team should use PCCD approved COVID-19 Sanitizer.

PART 3 – EXECUTION

1. DEMONSTRATION AND TRAINING

1.1.1. Instruction: After Work under this contract is completed, tested, and before acceptance, and not less than 14 days after submittal of the operation and maintenance data required in Paragraph 1.6, Operations and Maintenance Manuals, operate all systems for a period of three 8-hour days during which time keep on the project competent personnel familiar with the items installed whose full-time assignment will be to instruct the District's maintenance personnel in the operation and maintenance of the equipment and systems.

1.1.2. Provide instructors experienced in operation and maintenance procedures.

1.1.3. Provide instruction at mutually agreed-upon times. For equipment that requires seasonal operation, provide similar instruction at the start of each season.

1.1.4. Schedule training with District, through District's representative, with at least seven days notice.

1.1.5. Coordinate instructors, including providing notification of dates, times, length of instruction, and course content.

1.1.6. Do not conduct this instruction period before completion of piping and equipment labeling.

1.2. Provide an instruction period sufficient to cover the training required. This instruction period shall be in addition and subsequent to any period of operation, test and adjustment called for elsewhere in this specification.

1.3. Program Structure: develop an instruction program that includes individual training modules for each system and equipment not part of a system, as required by individual Specification Sections. For each training module, develop a learning objective and teaching outline. Include instruction of the following:

1.3.1. System design and operational philosophy.

1.3.2. Review of documentation.

1.3.3. Operations.

1.3.4. Adjustments.

1.3.5. Troubleshooting.

1.3.6. Maintenance.

1.3.7. Repair.

2. FINAL AND END-OF-PHASE CLEANING

2.1. General: Provide final cleaning at the completion of each phase of the work and final project completion. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal, State and local environmental and antipollution regulations. If LBP was disturbed during renovation the final cleaning shall meet the minimum requirements of 40 CFR Part 745.

2.2. Cleaning: Employ professional cleaning service for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.

2.2.1. Complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for any phase of Project:

2.2.1.1. Clean Project site, yard, and grounds in areas disturbed by construction activities including landscape development areas, of rubbish, waste material, letter, and other foreign substances.

2.2.1.2. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.

2.2.1.3. Rake grounds that are neither planted nor paved to a smooth, even-textured surface.

2.2.1.4. Remove tools, construction equipment, machinery, and surplus material from Project site.

2.2.1.5. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.

2.2.1.6. Horizontal surfaces: All horizontal surfaces must be dusted and/or washed until free of dust and grime.

2.2.1.7. Furnishings and equipment:

2.2.1.7.1. Remove all gum and sticky substances from all surfaces. Wash all furniture and equipment with a neutral cleaner. Use specialized cleaner appropriate for wood and/or excessively dirty surfaces.

2.2.1.7.2. Dust all machinery and equipment located in any shop area.

2.2.1.7.3. Clean all chalkboards and chalk rails by washing with water and/or chalkboard cleaner. Re-chalk chalkboards after completing cleaning process.

2.2.1.7.4. Clean exterior of all closed lockers and interior of open ones.

2.2.1.7.5. Graffiti must be removed from all furnishings and equipment.

2.2.1.8. Walls: Wash all wall surfaces with detergent and water. Remove all graffiti. All restroom walls should be washed with a disinfectant cleaner.

2.2.1.9. Doors: Wash all doors, frames and hardware.

2.2.1.10. Floors:

2.2.1.10.1. Resilient Floors (except linoleum flooring) – Clean and refinish flooring, using appropriate procedures and finishes/sealers. Strip existing wax from all existing resilient flooring (using appropriate safety measures as recommended by the E.P.A. for any tile containing asbestos) and re-wax as follows:

2.2.1.10.1.1. Classrooms, offices and other rooms - three coats of wax.

2.2.1.10.1.2. Corridors - five coats of wax.

2.2.1.10.1.2.1.1. Newly installed resilient floors should have all surface mastic removed by Design Builder. New floors should be allowed to set for time recommended by manufacturer of mastic. These floors should be scrubbed with detergent -- not stripped. Seal as recommended by flooring manufacturer and re-wax as indicated above.

2.2.1.10.2. Linoleum Floors - Clean and refinish flooring, using appropriate procedures and finishes/sealers in accordance with manufacturers recommendations and finish as follows:

2.2.1.10.2.1.1.1. Newly installed linoleum floors should be allowed to set for time recommended by manufacturer of mastic. Existing and new floors should be scrubbed with a neutral pH (7-8.5) detergent/cleaner – do not strip factory finish. Apply the cleaning solution with a mop and bucket; allow the solution to remain on the floor, and then scrub with a rotary electric scrubber or automatic scrubber with a non-abrasive scrubbing pad. Do not over-saturate the floor. Rinse the entire floor surface with clean, cool water and allow the floor to dry thoroughly before allowing traffic. Apply two (2) coats of “Linobase” sealer,

manufactured by Johnson Diversey or as recommended by manufacturer, followed by three (3) coats of “Carefree” finish, manufactured by Johnson Diversey or as recommended by the manufacturer, per manufacturer’s instructions.

2.2.1.10.3. Concrete Floors - Scrub using water and detergent.

2.2.1.10.4. Ceramic Floors - Scrub using water and detergent.

2.2.1.10.5. Clean, screen and apply gym seal per manufacturer's recommendation. All gym seal to be approved by Custodial Services Department.

2.2.1.10.6. Carpeted Floors - Vacuum all carpets and clean by hot water extraction.

2.2.1.10.7. Other Floors - Marble, terrazzo and rubber floors should be cleaned and refinished using appropriate procedures and finishes/sealers.

2.2.1.11. STAIRS: All stairs to be scrubbed with detergent including walls, handrails and ledges. Finish not to be applied to stairs unless necessary and approved by the District (Custodial Services Department).

2.2.1.12. RESTROOMS AND LOCKER ROOMS: Thoroughly clean and disinfect all surfaces and fixtures. Remove all foreign objects from walls/ceilings and eliminate all graffiti. Specifications provided above for fixtures, walls and floors are applicable.

2.2.1.13. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.

2.2.1.14. Sweep concrete floors broom clean in unoccupied spaces.

2.2.1.15. Vacuum carpet and similar soft surfaces, removing debris and excess nap; shampoo if visible soil or stains remain.

2.2.1.16. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Replace chipped or broken glass and other damaged transparent materials. Polish mirrors and glass, taking care not to scratch surfaces.

2.2.1.17. Remove labels that are not permanent.

2.2.1.18. Touch up and otherwise repair and restore marred, exposed finishes and surfaces. Replace finishes and surfaces that cannot be satisfactorily repaired or restored or that already show evidence of repair or restoration.

2.2.1.18.1. Do not paint over “UL” and similar labels, including mechanical and electrical nameplates.

2.2.1.19. Wipe surfaces of mechanical and electrical equipment, elevator equipment, and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.

2.2.1.20. Replace parts subject to unusual operating conditions.

2.2.1.21. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.

2.2.1.22. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.

2.2.1.23. Clean ducts, blowers, and coils if units were operated without filters during construction.

2.2.1.24. Clean all new and existing light fixtures, lamps, globes, and reflectors to function with full efficiency. Replace burned-out bulbs, and those noticeably dimmed by hours of use, and defective and noisy starters in fluorescent and mercury vapor fixtures to comply with requirements for new fixtures.

2.2.1.25. Leave Project clean and ready for occupancy.

2.3. Pest Control: Engage an experienced, licensed exterminator to make a final inspection and rid the Project of rodents, insects, and other pests. Prepare a report.

2.4. Final Inspection: Any surface still exhibiting dirt, graffiti or dust shall be re-cleaned/re-stripped/refinished until free of dirt, graffiti or dust.

2.5. Comply with safety standards for cleaning. Do not burn waste materials. Do not bury debris or excess materials on District's property. Do not discharge volatile, harmful, or dangerous materials into drainage systems. Remove materials from Project site and dispose of lawfully.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

1.1.1 This section describes field engineering services to be performed by Design Builder and by District, and procedures to accomplish these services.

1.1.2 Related Documents.

1.1.2.1 Document 00 33 50 Existing Site Conditions.

1.1.3 Related Sections.

1.1.3.1 Section 01 11 13 (Work Covered by Contract Documents).

1.1.3.2 Section 01 11 20 (Design Services and Deliverables).

1.1.3.3 Section 01 31 19 (Project Meetings).

1.2 RESPONSIBILITIES

1.2.1 Design Builder shall provide field engineering services; establish grades, lines, and levels for Work by use of recognized engineering survey practices.

1.2.2 Design Builder shall employ California licensed civil engineer or land surveyor for horizontal and vertical control.

1.2.3 District will provide reference points for horizontal and vertical control and shall provide starting points for the Work.

1.3 PROCEDURES

1.3.1 Design Builder shall request assistance from District two (2) Business Days prior to date assistance is required.

PART 2 - PRODUCTS (Not used)

PART 3 - EXECUTION (Not used)

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

1.1.1 This Section includes general procedural requirements governing execution of the Work including, but not limited to, the following:

1.1.1.1 Construction layout.

1.1.1.2 Field engineering and surveying.

1.1.1.3 General installation of products.

1.1.1.4 Coordination of District-installed products.

1.1.1.5 Progress cleaning.

1.1.1.6 Starting and adjusting.

1.1.1.7 Protection of installed construction.

1.1.1.8 Correction of the Work.

1.1.2 Related Sections include the following:

1.1.2.1 Section 00 33 50 (Existing Site Conditions).

1.1.2.2 Section 01 11 13 (Work Covered by Contract Documents).

1.1.2.3 Section 01 14 00 (Work Restrictions) regarding measures for noise, dust and infection control.

1.1.2.4 Section 01 31 00 (Project Management and Coordination) for procedures for coordinating field engineering with other construction activities.

1.1.2.5 Section 01 31 19 (Project Meetings).

1.1.2.6 Section 01 33 00 (Submittal Procedures) for submitting surveys.

1.1.2.7 Section 01 73 29 (Cutting and Patching) for procedural requirements for cutting and patching necessary for the installation or performance of other components of the Work.

1.1.2.8 Section 01 77 00 (Cleaning and Closeout Procedures) for submitting final property survey with Project Record Documents, recording of District-accepted deviations from indicated lines and levels, and final cleaning.

1.2 SUBMITTALS

1.2.1 Qualification Data: For land surveyor or professional engineer.

1.2.2 Certificates: Submit certificate signed by land surveyor or professional engineer certifying that location and elevation of improvements comply with requirements.

1.2.3 Certified Surveys: Submit three copies signed by land surveyor or professional engineer and one AutoCad electronic file of survey complying with District CAD Standards on CD-R.

1.2.4 Final Property Survey: Submit three copies showing the Work performed and record survey data and one AutoCad electronic file of survey complying with District CAD Standards on CD-R.

1.2.5 Contingency Plan: Submit six copies within sixty (60) Days of Notice to Proceed for emergency plan(s) should an existing utility be damaged.

1.3 QUALITY ASSURANCE

1.3.1 Land Surveyor Qualifications: A professional land surveyor who is legally qualified to practice in California and who is experienced in providing land-surveying services of the kind indicated.

1.3.2 Installer Qualifications.

1.3.2.1 Experienced Installers: Installers shall have a minimum of five (5) years successful experience installing items similar to those required for Project, except for individuals in training under the direct supervision of an experienced installer.

1.3.3 If cleaning and protection is not performed to the satisfaction of the District's Representative, the District reserves the right to have cleaning performed by others at the Design Builder's expense.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

3.1.1 Existing Utilities: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and locations of underground utilities and other construction affecting the Work.

3.1.1.1 Before construction, verify the locations and invert elevations at points of connection of sanitary sewer, storm sewer, and water-service piping; and underground electrical services.

3.1.1.2 Furnish location data for work related to Project that must be performed by public utilities serving Project site.

3.1.1.3 Locate all known existing utilities and shut-off devices before proceeding with construction operations that may cause damage to such installations. Existing utilities shall be kept in service where possible and damage to them shall be repaired with no adjustment to the Stipulated Sum.

3.1.1.4 If any other structures or utilities are encountered, request District's Representative to provide direction on how to proceed with the Work.

3.1.1.5 If any structure or utility is damaged, take appropriate action to ensure the safety of persons and property.

3.1.1.6 Submit a contingency plan for emergency repair of all utilities to District's Representative for approval prior to commencing Work.

3.1.2 Acceptance of Conditions: Examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.

3.1.2.1 Written Report: Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:

3.1.2.1.1 Description of the Work.

3.1.2.1.2 List of detrimental conditions, including substrates.

3.1.2.1.3 List of unacceptable installation tolerances.

3.1.2.1.4 Recommended corrections.

3.1.2.2 Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

3.1.2.3 Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.

3.1.2.4 Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.

3.1.2.5 Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

3.2 MANUFACTURERS' INSTRUCTIONS

3.2.1 Manufacturer's Recommendations: When work is specified to comply with manufacturers' recommendations or instructions, distribute copies to persons involved, and maintain one set in field office.

3.2.1.1 Conform with requirements specified in Section 01 33 00 (Submittal Procedures) for submittal of recommendations or instructions to District; submit to District only where specified or where specifically requested.

3.2.2 Perform work in accordance with details of recommendations and instructions and specified requirements.

3.2.2.1 Should a conflict exist between Specifications and recommendations or instructions consult with District.

3.2.3 Where manufacturer's information notes special recommendations in addition to installation instructions, comply with both recommendations and instructions.

3.3 PREPARATION

3.3.1 Existing Utility Information: Furnish public utilities with information that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with District's Representative.

3.3.2 Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

3.3.2.1 Where portions of Work are to fit to other construction, verify dimensions of other construction by field measurements before fabrication; allow for cutting and patching to avoid delaying Work.

3.3.3 Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.

3.3.4 Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents, submit a request for information to District's Representative. Include a detailed description of problem encountered, together with recommendations for changing the Contract Documents. Submit requests on Form, "Request for Information."

3.4 CONSTRUCTION LAYOUT

3.4.1 Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to the property survey and existing benchmarks. If discrepancies are discovered, notify District's Representative promptly.

3.4.2 General: Engage a land surveyor or professional engineer to lay out the Work using accepted surveying practices.

3.4.2.1 Establish benchmarks and control points to set lines and levels at each story of construction and elsewhere as needed to locate each element of Project.

3.4.2.2 Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.

3.4.2.3 Inform installers of lines and levels to which they must comply.

3.4.2.4 Check the location, level, and plumb of every major element as the Work progresses.

3.4.2.5 Notify District's Representative when deviations from required lines and levels exceed allowable tolerances.

3.4.2.6 Close site surveys with an error of closure equal to or less than the standard established by authorities having jurisdiction.

3.4.3 Site Improvements: Locate and lay out site improvements, including pavements, grading, fill and topsoil placement, utility slopes, and invert elevations.

3.4.4 Building Lines and Levels: Locate and lay out control lines and levels for structures, building foundations, column grids, and floor levels, including those required for mechanical and electrical work. Transfer survey markings and elevations for use with control lines and levels. Level foundations and piers from two or more locations.

3.4.5 Record Log: Maintain a log of layout control work. Record deviations from required lines and levels. Include beginning and ending dates and times of surveys, weather conditions, name and duty of each survey party member, and types of instruments and tapes used. Make the log available for reference by District's Representative.

3.5 FIELD ENGINEERING

3.5.1 Identification: District will provide reference points for horizontal and vertical control and shall provide starting points for the Work.

3.5.2 47Reference Points: Locate existing permanent benchmarks, control points, and similar reference points before beginning the Work. Preserve and protect permanent benchmarks and control points during construction operations.

3.5.2.1 Do not change or relocate existing benchmarks or control points without prior written approval of District's Representative. Report lost or destroyed permanent benchmarks or control points promptly. Report the need to relocate permanent benchmarks or control points to District's Representative before proceeding.

3.5.2.2 Replace lost or destroyed permanent benchmarks and control points promptly. Base replacements on the original survey control points.

3.5.3 Benchmarks: Establish and maintain a minimum of two permanent benchmarks on Project site, referenced to data established by survey control points. Comply with authorities having jurisdiction for type and size of benchmark.

3.5.3.1 Record benchmark locations, with horizontal and vertical data, on Project Record Documents.

3.5.3.2 Where the actual location or elevation of layout points cannot be marked, provide temporary reference points sufficient to locate the Work.

3.5.3.3 Remove temporary reference points when no longer needed. Restore marked construction to its original condition.

3.5.4 Certified Survey: On completion of foundation walls, major site improvements, and other work requiring field-engineering services, prepare a certified survey showing dimensions, locations, angles, and elevations of construction and sitework.

3.5.5 Final Property Survey: Prepare a final property survey showing significant features (real property) for Project. Include on the survey a certification, signed by land surveyor or professional engineer, that principal metes, bounds, lines, and levels of Project are accurately positioned as shown on the survey.

3.5.5.1 Show boundary lines, monuments, streets, site improvements and utilities, existing improvements and significant vegetation, adjoining properties, acreage, grade contours, and the distance and bearing from a site corner to a legal point.

3.5.5.2 At Substantial Completion, have the final property survey recorded by or with authorities having jurisdiction as the official "property survey."

3.6 INSTALLATION

3.6.1 Pre-Installation Meetings: Installers and suppliers are to attend pre-installation meetings scheduled by Design Builder.

3.6.2 General: Locate the Work and components of the Work accurately, in correct alignment and elevation.

3.6.2.1 Make vertical work plumb and make horizontal work level.

3.6.2.2 Install components to maximize space available for maintenance and ease of removal for replacement.

3.6.2.3 Conceal pipes, ducts, and wiring in finished areas, unless otherwise indicated.

3.6.2.4 Doors and access panels shall be kept clear.

3.6.2.5 Before beginning any installation, make provisions to avoid interference.

3.6.2.6 Relocate installed work that does not provide adequate accessibility.

3.6.2.7 Maintain minimum headroom clearance of eight (8) feet in spaces without a suspended ceiling.

3.6.2.8 Do not obstruct spaces and installations that are required to be clear by California Building Code requirements.

3.6.3 Precedence of Installation Requirements:

3.6.3.1 Descriptive specification.

3.6.3.2 Product listing, classification or certification.

3.6.3.3 Manufacturer's installation instructions.

3.6.3.4 Trade association or referenced standards.

3.6.3.5 Most common trade practice.

3.6.4 Comply with manufacturer's written instructions and recommendations for installing products in applications indicated unless more explicit or stringent requirements are contained in Contract Documents.

3.6.5 Install products at the time and under conditions that will ensure the best possible results. Maintain conditions required for product performance until Substantial Completion.

3.6.6 Allow for building movement including thermal expansion and contraction.

3.6.7 Conduct construction operations so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy.

3.6.8 Tools and Equipment: Do not use tools or equipment that produce harmful noise levels.

3.6.8.1 Maximum noise level for trenchers, graders, and trucks shall not exceed ninety (90) dBA at fifty (50) feet as measured under the

noisiest operating conditions. For other equipment, noise levels shall not exceed eighty-five (85) dBA at fifty (50) feet.

3.6.8.2 Jackhammers shall be equipped with exhaust mufflers and steel muffing sleeves. Air compressors should be of a quiet type such as a "whisperized" compressor.

3.6.8.3 Machines and equipment shall not be left idling.

3.6.8.4 Where commercially feasible, electric power shall be used in lieu of internal combustion engine power wherever possible.

3.6.8.5 Schedule noisy operations so as to minimize their duration at any given location

3.6.8.6 Equipment shall be properly maintained to reduce noise from excessive vibration, faulty mufflers, or other sources.

3.6.8.7 Provide noise barriers to comply with above criteria.

3.6.8.8 Refer to Section 01 14 00 (Work Restrictions), for additional noise control requirements.

3.6.9 Templates: Obtain and distribute to the parties involved templates for work specified to be factory prepared and field installed. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.

3.6.10 Anchors and Fasteners: Provide anchors and fasteners as required to anchor each component securely in place, accurately located and aligned with other portions of the Work.

3.6.10.1 Mounting Heights: Where mounting heights are not indicated, install individual components at standard mounting heights recognized within the industry for the particular application and as required by applicable Code requirements for accessibility. Refer questionable mounting height decisions to the District's Representative for final decision.

3.6.10.2 Allow for building movement, including thermal expansion and contraction.

3.6.10.3 Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

3.6.10.4 Comply with the California Building Code requirements for earthquake Seismic Zone 4.

3.6.11 Joints: Make joints of uniform width. Where joint locations in exposed work are not indicated, produce sketch to arrange joints for the best visual effect and submit to the District's Representative for review. Fit exposed connections together to form hairline joints.

3.6.12 Hazardous Materials: Use products, cleaners, and installation materials that are not considered hazardous.

3.6.13 Isolate each part of the completed construction from incompatible material to prevent deterioration.

3.7 DISTRICT-INSTALLED PRODUCTS

3.7.1 Site Access: Provide access to Project Site for District's construction forces.

3.7.2 Coordination: Coordinate construction and operations of the Work with work performed by District's construction forces.

3.7.2.1 Contract Schedule: Inform District of Design Builder's preferred contract Schedule for District's portion of the Work. Adjust Contract Schedule based on a mutually agreeable timetable. Notify District if changes to schedule are required due to differences in actual construction progress.

3.7.2.2 Preinstallation Conferences: Include District's construction forces at preinstallation conferences covering portions of the Work that are to receive District's work. Attend preinstallation conferences conducted by District's construction forces if portions of the Work depend on District's construction.

3.8 PROGRESS CLEANING

3.8.1 General: Clean Project site and work areas at frequent intervals, including common areas. Coordinate progress cleaning for joint-use areas where more than one installer has worked. Enforce requirements strictly. Dispose of materials lawfully. Comply with the requirements of Section 01 77 00 (Cleaning and Closeout Procedures).

3.8.1.1 Comply with requirements in CFC Article 87 for removal of combustible waste materials and debris.

3.8.1.2 Do not hold materials more than seven (7) days during normal weather or three (3) Days if the temperature is expected to rise above eighty degrees Fahrenheit (80°F).

3.8.1.3 Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.

3.8.2 Site: Maintain Project site free of waste materials and debris.

3.8.3 Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the Work.

3.8.3.1 Remove liquid spills promptly.

3.8.3.2 Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate. Refer to Section 01140 (Work Restrictions) regarding dust and infection control requirements.

3.8.4 Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.

3.8.5 Concealed Spaces: Remove debris from concealed spaces before enclosing the space.

3.8.6 Exposed Surfaces in Finished Areas: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.

3.8.7 Waste Disposal: Burying or burning waste materials on-site will not be permitted. Washing waste materials down sewers or into waterways will not be permitted.

3.8.8 During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.

3.8.9 Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

3.8.10 Limiting Exposures: Supervise construction operations to assure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period. Where applicable, such exposures include, but are not limited to, the following:

3.8.10.1 Excessive static or dynamic loading.

3.8.10.2 Excessive internal or external pressures.

3.8.10.3 Excessively high or low temperatures.

3.8.10.4 Thermal shock.

3.8.10.5 Excessively high or low humidity.

3.8.10.6 Air contamination or pollution.

3.8.10.7 Water or ice.

3.8.10.8 Solvents.

3.8.10.9 Chemicals.

3.8.10.10 Light.

3.8.10.11 Puncture.

3.8.10.12 Abrasion.

3.8.10.13 Heavy traffic.

3.8.10.14 Soiling, staining and corrosion.

3.8.10.15 Bacteria.

3.8.10.16 Rodent and insect infestation.

3.8.10.17 Combustion.

3.8.10.18 Electrical current.

3.8.10.19 High speed operation.

3.8.10.20 Improper lubrication.

3.8.10.21 Unusual wear or other misuse.

3.8.10.22 Contact between incompatible materials.

3.8.10.23 Destructive testing.

3.8.10.24 Misalignment.

3.8.10.25 Excessive weathering.

3.8.10.26 Unprotected storage.

3.8.10.27 Improper shipping or handling.

3.8.10.28 Theft.

3.8.10.29 Vandalism.

3.9 STARTING AND ADJUSTING

3.9.1 Following are minimum starting and adjusting requirements. Design Builder is to perform starting and adjusting per manufacturer's recommendations. If more

stringent requirements are described in the Contract Documents, the more stringent shall apply

3.9.1.1 Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.

3.9.1.2 Adjust operating components for proper operation without binding. Adjust equipment for proper operation.

3.9.1.3 Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.9.1.4 Manufacturer's Field Service: If a factory-authorized service representative is required to inspect field-assembled components and equipment installation, comply with qualification requirements in Section 01 45 00 (Quality Control).

3.10 PROTECTION OF INSTALLED CONSTRUCTION

3.10.1 Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.

3.10.1.1 Cover products subject to deterioration with impervious cover; provide ventilation to avoid condensation and trapping water.

3.10.1.2 Take care to use protective covering and blocking materials that do not soil, stain, or damage materials being protected.

3.10.1.3 After installation, provide coverings to protect products from damage from traffic and construction operations, remove when no longer needed.

3.10.2 Comply with manufacturer's written instructions for temperature and relative humidity.

3.10.3 Protect interior materials from water damage; immediately remove wet materials from site to prevent growth of mold and mildew on site.

3.10.4 Coordinate temporary enclosures with required inspections and tests, to minimize the necessity of uncovering completed construction for that purpose.

3.11 CORRECTION OF THE WORK

3.11.1 Repair or remove and replace defective construction. Restore damaged substrates and finishes. Comply with requirements in Section 01 73 29 (Cutting and Patching).

3.11.1.1 Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment.

3.11.2 Restore permanent facilities used during construction to their specified condition.

3.11.3 Remove and replace damaged surfaces that are exposed to view if surfaces cannot be repaired without visible evidence of repair.

3.11.4 Repair components that do not operate properly. Remove and replace operating components that cannot be repaired.

3.11.5 Remove and replace chipped, scratched, and broken glass or reflective surfaces.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

1.1.1 This Section includes general procedural requirements governing execution of the Work including, but not limited to, the following:

1.1.1.1 Construction layout.

1.1.1.2 Field engineering and surveying.

1.1.1.3 General installation of products.

1.1.1.4 Coordination of District-installed products.

1.1.1.5 Progress cleaning.

1.1.1.6 Starting and adjusting.

1.1.1.7 Protection of installed construction.

1.1.1.8 Correction of the Work.

1.1.2 Related Sections include the following:

1.1.2.1 Section 00 33 50 (Existing Site Conditions).

1.1.2.2 Section 01 11 13 (Work Covered by Contract Documents).

1.1.2.3 Section 01 14 00 (Work Restrictions) regarding measures for noise, dust and infection control.

1.1.2.4 Section 01 31 00 (Project Management and Coordination) for procedures for coordinating field engineering with other construction activities.

1.1.2.5 Section 01 31 19 (Project Meetings).

1.1.2.6 Section 01 33 00 (Submittal Procedures) for submitting surveys.

1.1.2.7 Section 01 73 29 (Cutting and Patching) for procedural requirements for cutting and patching necessary for the installation or performance of other components of the Work.

1.1.2.8 Section 01 77 00 (Cleaning and Closeout Procedures) for submitting final property survey with Project Record Documents, recording of District-accepted deviations from indicated lines and levels, and final cleaning.

1.2 SUBMITTALS

1.2.1 Qualification Data: For land surveyor or professional engineer.

1.2.2 Certificates: Submit certificate signed by land surveyor or professional engineer certifying that location and elevation of improvements comply with requirements.

1.2.3 Certified Surveys: Submit three copies signed by land surveyor or professional engineer and one AutoCad electronic file of survey complying with District CAD Standards on CD-R.

1.2.4 Final Property Survey: Submit three copies showing the Work performed and record survey data and one AutoCad electronic file of survey complying with District CAD Standards on CD-R.

1.2.5 Contingency Plan: Submit six copies within sixty (60) Days of Notice to Proceed for emergency plan(s) should an existing utility be damaged.

1.3 QUALITY ASSURANCE

1.3.1 Land Surveyor Qualifications: A professional land surveyor who is legally qualified to practice in California and who is experienced in providing land-surveying services of the kind indicated.

1.3.2 Installer Qualifications.

1.3.2.1 Experienced Installers: Installers shall have a minimum of five (5) years successful experience installing items similar to those required for Project, except for individuals in training under the direct supervision of an experienced installer.

1.3.3 If cleaning and protection is not performed to the satisfaction of the District's Representative, the District reserves the right to have cleaning performed by others at the Design Builder's expense.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

3.1.1 Existing Utilities: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and locations of underground utilities and other construction affecting the Work.

3.1.1.1 Before construction, verify the locations and invert elevations at points of connection of sanitary sewer, storm sewer, and water-service piping; and underground electrical services.

3.1.1.2 Furnish location data for work related to Project that must be performed by public utilities serving Project site.

3.1.1.3 Locate all known existing utilities and shut-off devices before proceeding with construction operations that may cause damage to such installations. Existing utilities shall be kept in service where possible and damage to them shall be repaired with no adjustment to the Stipulated Sum.

3.1.1.4 If any other structures or utilities are encountered, request District's Representative to provide direction on how to proceed with the Work.

3.1.1.5 If any structure or utility is damaged, take appropriate action to ensure the safety of persons and property.

3.1.1.6 Submit a contingency plan for emergency repair of all utilities to District's Representative for approval prior to commencing Work.

3.1.2 Acceptance of Conditions: Examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.

3.1.2.1 Written Report: Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:

3.1.2.1.1 Description of the Work.

3.1.2.1.2 List of detrimental conditions, including substrates.

3.1.2.1.3 List of unacceptable installation tolerances.

3.1.2.1.4 Recommended corrections.

3.1.2.2 Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

3.1.2.3 Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.

3.1.2.4 Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.

3.1.2.5 Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

3.2 MANUFACTURERS' INSTRUCTIONS

3.2.1 Manufacturer's Recommendations: When work is specified to comply with manufacturers' recommendations or instructions, distribute copies to persons involved, and maintain one set in field office.

3.2.1.1 Conform with requirements specified in Section 01 33 00 (Submittal Procedures) for submittal of recommendations or instructions to District; submit to District only where specified or where specifically requested.

3.2.2 Perform work in accordance with details of recommendations and instructions and specified requirements.

3.2.2.1 Should a conflict exist between Specifications and recommendations or instructions consult with District.

3.2.3 Where manufacturer's information notes special recommendations in addition to installation instructions, comply with both recommendations and instructions.

3.3 PREPARATION

3.3.1 Existing Utility Information: Furnish public utilities with information that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with District's Representative.

3.3.2 Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

3.3.2.1 Where portions of Work are to fit to other construction, verify dimensions of other construction by field measurements before fabrication; allow for cutting and patching to avoid delaying Work.

3.3.3 Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.

3.3.4 Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents, submit a request for information to District's Representative. Include a detailed description of problem encountered, together with recommendations for changing the Contract Documents. Submit requests on Form, "Request for Information."

3.4 CONSTRUCTION LAYOUT

3.4.1 Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to the property survey and existing benchmarks. If discrepancies are discovered, notify District's Representative promptly.

3.4.2 General: Engage a land surveyor or professional engineer to lay out the Work using accepted surveying practices.

3.4.2.1 Establish benchmarks and control points to set lines and levels at each story of construction and elsewhere as needed to locate each element of Project.

3.4.2.2 Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.

3.4.2.3 Inform installers of lines and levels to which they must comply.

3.4.2.4 Check the location, level, and plumb of every major element as the Work progresses.

3.4.2.5 Notify District's Representative when deviations from required lines and levels exceed allowable tolerances.

3.4.2.6 Close site surveys with an error of closure equal to or less than the standard established by authorities having jurisdiction.

3.4.3 Site Improvements: Locate and lay out site improvements, including pavements, grading, fill and topsoil placement, utility slopes, and invert elevations.

3.4.4 Building Lines and Levels: Locate and lay out control lines and levels for structures, building foundations, column grids, and floor levels, including those required for mechanical and electrical work. Transfer survey markings and elevations for use with control lines and levels. Level foundations and piers from two or more locations.

3.4.5 Record Log: Maintain a log of layout control work. Record deviations from required lines and levels. Include beginning and ending dates and times of surveys, weather conditions, name and duty of each survey party member, and types of instruments and tapes used. Make the log available for reference by District's Representative.

3.5 FIELD ENGINEERING

3.5.1 Identification: District will provide reference points for horizontal and vertical control and shall provide starting points for the Work.

3.5.2 Reference Points: Locate existing permanent benchmarks, control points, and similar reference points before beginning the Work. Preserve and protect permanent benchmarks and control points during construction operations.

3.5.2.1 Do not change or relocate existing benchmarks or control points without prior written approval of District's Representative. Report lost or destroyed permanent benchmarks or control points promptly. Report the need to relocate permanent benchmarks or control points to District's Representative before proceeding.

3.5.2.2 Replace lost or destroyed permanent benchmarks and control points promptly. Base replacements on the original survey control points.

3.5.3 Benchmarks: Establish and maintain a minimum of two permanent benchmarks on Project site, referenced to data established by survey control points. Comply with authorities having jurisdiction for type and size of benchmark.

3.5.3.1 Record benchmark locations, with horizontal and vertical data, on Project Record Documents.

3.5.3.2 Where the actual location or elevation of layout points cannot be marked, provide temporary reference points sufficient to locate the Work.

3.5.3.3 Remove temporary reference points when no longer needed. Restore marked construction to its original condition.

3.5.4 Certified Survey: On completion of foundation walls, major site improvements, and other work requiring field-engineering services, prepare a certified survey showing dimensions, locations, angles, and elevations of construction and sitework.

3.5.5 Final Property Survey: Prepare a final property survey showing significant features (real property) for Project. Include on the survey a certification, signed by land surveyor or professional engineer, that principal metes, bounds, lines, and levels of Project are accurately positioned as shown on the survey.

3.5.5.1 Show boundary lines, monuments, streets, site improvements and utilities, existing improvements and significant vegetation, adjoining properties, acreage, grade contours, and the distance and bearing from a site corner to a legal point.

3.5.5.2 At Substantial Completion, have the final property survey recorded by or with authorities having jurisdiction as the official "property survey."

3.6 INSTALLATION

3.6.1 Pre-Installation Meetings: Installers and suppliers are to attend pre-installation meetings scheduled by Design Builder.

3.6.2 General: Locate the Work and components of the Work accurately, in correct alignment and elevation.

3.6.2.1 Make vertical work plumb and make horizontal work level.

3.6.2.2 Install components to maximize space available for maintenance and ease of removal for replacement.

3.6.2.3 Conceal pipes, ducts, and wiring in finished areas, unless otherwise indicated.

3.6.2.4 Doors and access panels shall be kept clear.

3.6.2.5 Before beginning any installation, make provisions to avoid interference.

3.6.2.6 Relocate installed work that does not provide adequate accessibility.

3.6.2.7 Maintain minimum headroom clearance of eight (8) feet in spaces without a suspended ceiling.

3.6.2.8 Do not obstruct spaces and installations that are required to be clear by California Building Code requirements.

3.6.3 Precedence of Installation Requirements:

3.6.3.1 Descriptive specification.

3.6.3.2 Product listing, classification or certification.

3.6.3.3 Manufacturer's installation instructions.

3.6.3.4 Trade association or referenced standards.

3.6.3.5 Most common trade practice.

3.6.4 Comply with manufacturer's written instructions and recommendations for installing products in applications indicated unless more explicit or stringent requirements are contained in Contract Documents.

3.6.5 Install products at the time and under conditions that will ensure the best possible results. Maintain conditions required for product performance until Substantial Completion.

3.6.6 Allow for building movement including thermal expansion and contraction.

3.6.7 Conduct construction operations so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy.

3.6.8 Tools and Equipment: Do not use tools or equipment that produce harmful noise levels.

3.6.8.1 Maximum noise level for trenchers, graders, and trucks shall not exceed ninety (90) dBA at fifty (50) feet as measured under the

noisiest operating conditions. For other equipment, noise levels shall not exceed eighty-five (85) dBA at fifty (50) feet.

3.6.8.2 Jackhammers shall be equipped with exhaust mufflers and steel muffing sleeves. Air compressors should be of a quiet type such as a "whisperized" compressor.

3.6.8.3 Machines and equipment shall not be left idling.

3.6.8.4 Where commercially feasible, electric power shall be used in lieu of internal combustion engine power wherever possible.

3.6.8.5 Schedule noisy operations so as to minimize their duration at any given location

3.6.8.6 Equipment shall be properly maintained to reduce noise from excessive vibration, faulty mufflers, or other sources.

3.6.8.7 Provide noise barriers to comply with above criteria.

3.6.8.8 Refer to Section 01 14 00 (Work Restrictions), for additional noise control requirements.

3.6.9 Templates: Obtain and distribute to the parties involved templates for work specified to be factory prepared and field installed. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.

3.6.10 Anchors and Fasteners: Provide anchors and fasteners as required to anchor each component securely in place, accurately located and aligned with other portions of the Work.

3.6.10.1 Mounting Heights: Where mounting heights are not indicated, install individual components at standard mounting heights recognized within the industry for the particular application and as required by applicable Code requirements for accessibility. Refer questionable mounting height decisions to the District's Representative for final decision.

3.6.10.2 Allow for building movement, including thermal expansion and contraction.

3.6.10.3 Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

3.6.10.4 Comply with the California Building Code requirements for earthquake Seismic Zone 4.

3.6.11 Joints: Make joints of uniform width. Where joint locations in exposed work are not indicated, produce sketch to arrange joints for the best visual effect and submit to the District's Representative for review. Fit exposed connections together to form hairline joints.

3.6.12 Hazardous Materials: Use products, cleaners, and installation materials that are not considered hazardous.

3.6.13 Isolate each part of the completed construction from incompatible material to prevent deterioration.

3.7 DISTRICT-INSTALLED PRODUCTS

3.7.1 Site Access: Provide access to Project Site for District's construction forces.

3.7.2 Coordination: Coordinate construction and operations of the Work with work performed by District's construction forces.

3.7.2.1 Contract Schedule: Inform District of Design Builder's preferred contract Schedule for District's portion of the Work. Adjust Contract Schedule based on a mutually agreeable timetable. Notify District if changes to schedule are required due to differences in actual construction progress.

3.7.2.2 Preinstallation Conferences: Include District's construction forces at preinstallation conferences covering portions of the Work that are to receive District's work. Attend preinstallation conferences conducted by District's construction forces if portions of the Work depend on District's construction.

3.8 PROGRESS CLEANING

3.8.1 General: Clean Project site and work areas at frequent intervals, including common areas. Coordinate progress cleaning for joint-use areas where more than one installer has worked. Enforce requirements strictly. Dispose of materials lawfully. Comply with the requirements of Section 01 77 00 (Cleaning and Closeout Procedures).

3.8.1.1 Comply with requirements in CFC Article 87 for removal of combustible waste materials and debris.

3.8.1.2 Do not hold materials more than seven (7) days during normal weather or three (3) Days if the temperature is expected to rise above eighty degrees Fahrenheit (80°F).

3.8.1.3 Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.

3.8.2 Site: Maintain Project site free of waste materials and debris.

3.8.3 Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the Work.

3.8.3.1 Remove liquid spills promptly.

3.8.3.2 Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate. Refer to Section 01140 (Work Restrictions) regarding dust and infection control requirements.

3.8.4 Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.

3.8.5 Concealed Spaces: Remove debris from concealed spaces before enclosing the space.

3.8.6 Exposed Surfaces in Finished Areas: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.

3.8.7 Waste Disposal: Burying or burning waste materials on-site will not be permitted. Washing waste materials down sewers or into waterways will not be permitted.

3.8.8 During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.

3.8.9 Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

3.8.10 Limiting Exposures: Supervise construction operations to assure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period. Where applicable, such exposures include, but are not limited to, the following:

3.8.10.1 Excessive static or dynamic loading.

3.8.10.2 Excessive internal or external pressures.

3.8.10.3 Excessively high or low temperatures.

3.8.10.4 Thermal shock.

3.8.10.5 Excessively high or low humidity.

3.8.10.6 Air contamination or pollution.

3.8.10.7 Water or ice.

3.8.10.8 Solvents.

3.8.10.9 Chemicals.

3.8.10.10 Light.

3.8.10.11 Puncture.

3.8.10.12 Abrasion.

3.8.10.13 Heavy traffic.

3.8.10.14 Soiling, staining and corrosion.

3.8.10.15 Bacteria.

3.8.10.16 Rodent and insect infestation.

3.8.10.17 Combustion.

3.8.10.18 Electrical current.

3.8.10.19 High speed operation.

3.8.10.20 Improper lubrication.

3.8.10.21 Unusual wear or other misuse.

3.8.10.22 Contact between incompatible materials.

3.8.10.23 Destructive testing.

3.8.10.24 Misalignment.

3.8.10.25 Excessive weathering.

3.8.10.26 Unprotected storage.

3.8.10.27 Improper shipping or handling.

3.8.10.28 Theft.

3.8.10.29 Vandalism.

3.9 STARTING AND ADJUSTING

3.9.1 Following are minimum starting and adjusting requirements. Design Builder is to perform starting and adjusting per manufacturer's recommendations. If more

stringent requirements are described in the Contract Documents, the more stringent shall apply

3.9.1.1 Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.

3.9.1.2 Adjust operating components for proper operation without binding. Adjust equipment for proper operation.

3.9.1.3 Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.9.1.4 Manufacturer's Field Service: If a factory-authorized service representative is required to inspect field-assembled components and equipment installation, comply with qualification requirements in Section 01 45 00 (Quality Control).

3.10 PROTECTION OF INSTALLED CONSTRUCTION

3.10.1 Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.

3.10.1.1 Cover products subject to deterioration with impervious cover; provide ventilation to avoid condensation and trapping water.

3.10.1.2 Take care to use protective covering and blocking materials that do not soil, stain, or damage materials being protected.

3.10.1.3 After installation, provide coverings to protect products from damage from traffic and construction operations, remove when no longer needed.

3.10.2 Comply with manufacturer's written instructions for temperature and relative humidity.

3.10.3 Protect interior materials from water damage; immediately remove wet materials from site to prevent growth of mold and mildew on site.

3.10.4 Coordinate temporary enclosures with required inspections and tests, to minimize the necessity of uncovering completed construction for that purpose.

3.11 CORRECTION OF THE WORK

3.11.1 Repair or remove and replace defective construction. Restore damaged substrates and finishes. Comply with requirements in Section 01 73 29 (Cutting and Patching).

3.11.1.1 Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment.

3.11.2 Restore permanent facilities used during construction to their specified condition.

3.11.3 Remove and replace damaged surfaces that are exposed to view if surfaces cannot be repaired without visible evidence of repair.

3.11.4 Repair components that do not operate properly. Remove and replace operating components that cannot be repaired.

3.11.5 Remove and replace chipped, scratched, and broken glass or reflective surfaces.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes administrative and procedural requirements for salvaging, recycling and disposing of nonhazardous demolition and construction waste.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements
2. Section 02 41 16 Structure Demolition
3. Section 02 41 19 Selective Demolition
4. Division 31 – Site Clearing

1.2 DEFINITIONS

A. Construction Waste: Building, structure, and site improvement materials and other solid waste resulting from construction, remodeling, renovation, or repair operations. Construction waste includes packaging.

B. Demolition Waste: Building, structure, and site improvement materials resulting from demolition operations.

C. Disposal: Removal of demolition or construction waste and subsequent salvage, sale, recycling, or deposit in landfill, incinerator acceptable to authorities having jurisdiction, or designated spoil areas on Owner's property.

D. Recycle: Recovery of demolition or construction waste for subsequent processing in preparation for reuse.

E. Salvage: Recovery of demolition or construction waste and subsequent sale or reuse in another facility.

F. Salvage and Reuse: Recovery of demolition or construction waste and subsequent incorporation into the Work.

G. USGBC: United States Green Building Council.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Comply with Section 01 81 13 – Sustainable Design Requirements.

B. Unless otherwise indicated, demolition and construction waste becomes the property of Contractor.

C. Any items identified in other Sections, historic items, relics, antiques, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, and other items of interest or value to Owner that may be uncovered during

demolition remain the property of Owner. Carefully salvage in a manner to prevent damage and promptly return to Owner.

1.4 PERFORMANCE REQUIREMENTS

A. Achieve end-of-Project rates for salvage/recycling of 75 percent by weight of total nonhazardous solid waste generated by the Work. Practice efficient waste management in the use of materials in the course of the Work. Use all reasonable means to divert construction and demolition waste from landfills and incinerators. Facilitate recycling and salvage of materials, including the following:

1. Construction Waste:
    a. Masonry.
    b. Lumber.
    c. Wood sheet materials.
    d. Wood trim.
    e. Metals.
    f. Roofing.
    g. Insulation.
    h. Carpet and pad.
    i. Gypsum board.
    j. Piping.
    k. Electrical conduit.
    l. Packaging: Regardless of salvage/recycle goal indicated in "General" Paragraph above, salvage or recycle 100 percent of the following uncontaminated packaging materials:
        i. Paper.
        ii. Cardboard.
        iii. Boxes.
        iv. Plastic sheet and film.
        v. Polystyrene packaging.
        vi. Wood crates.
        vii. Wood pallets.
        viii. Plastic pails.
2. Demolition Waste:
    a. Asphalt paving.
    b. Concrete and Concrete Masonry Units.
    c. Concrete reinforcing steel.

d. Brick.
e. Concrete masonry units.
f. Wood studs.
g. Wood joists.
h. Plywood and oriented strand board.
i. Wood paneling.
j. Wood trim.
k. Structural and miscellaneous steel.
l. Rough hardware.
m. Roofing.
n. Insulation.
o. Doors and frames.
p. Door hardware.
q. Windows.
r. Glazing.
s. Metal studs.
t. Gypsum board.
u. Acoustical tile and panels.
v. Carpet.
w. Carpet pad.
x. Demountable partitions.
y. Equipment.
z. Cabinets.
aa. Plumbing fixtures.
bb. Piping.
cc. Supports and hangers.
dd. Valves.
ee. Sprinklers.
ff. Mechanical equipment.
gg. Refrigerants.
hh. Electrical conduit.
ii. Copper wiring.
jj. Lighting fixtures.
kk. Lamps.

ll. Ballasts.

mm. Electrical devices.

nn. Switchgear and panelboards.

oo. Transformers.

1.4 SUBMITTALS

A. Waste Management Plan: Submit plan in compliance with Section 01 81 13.

B. Waste Reduction Progress Reports: Concurrent with each Application for Payment, submit report. Use forms necessary to clearly provide the following information:

1. Material category.
2. Generation point of waste.
3. Total quantity of waste in tons.
4. Quantity of waste salvaged, both estimated and actual in tons.
5. Quantity of waste recycled, both estimated and actual in tons.
6. Total quantity of waste recovered (salvaged plus recycled) in tons.
7. Total quantity of waste recovered (salvaged plus recycled) as a percentage of total waste.

C. Substantial Completion: Before request for Substantial Completion, submit calculated end-of-Project rates for salvage, recycling, and disposal as a percentage of total waste generated by the Work.

1. When specified in other Sections, upload submission directly to USGBC online project site.
2. Maintain records of the following:

a. Records of Donations: Indicate receipt and acceptance of salvageable waste donated to individuals and organizations. Indicate whether organization is tax exempt.

b. Records of Sales: Indicate receipt and acceptance of salvageable waste sold to individuals and organizations. Indicate whether organization is tax exempt.

c. Recycling and Processing Facility Records: Indicate receipt and acceptance of recyclable waste by recycling and processing facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.

d. Landfill and Incinerator Disposal Records: Indicate receipt and acceptance of waste by landfills and incinerator facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.

D. Refrigerant Recovery: Comply with requirements in Section 02 41 16 – Structure Demolition.

1.5 QUALITY ASSURANCE

A. Waste Management Coordinator Qualifications: Experienced firm, or individual employed and assigned by General Contractor, with a record of successful waste management coordination of projects with similar requirements.

B. Regulatory Requirements: Comply with transportation and disposal regulations of authorities having jurisdiction.

1.6 WASTE MANAGEMENT PLAN

A. General: Develop a waste management plan according to requirements in this Section. Plan shall consist of waste identification, waste reduction work plan, and cost/revenue analysis. Distinguish between demolition and construction waste. Indicate quantities by weight or volume, but use same units of measure throughout waste management plan.

B. Waste Identification: Indicate anticipated types and quantities of demolition and construction waste generated by the Work. Include estimated quantities and assumptions for estimates.

C. Waste Reduction Work Plan: List each type of waste and whether it will be salvaged, recycled, or disposed of in landfill or incinerator. Include points of waste generation, total quantity of each type of waste, quantity for each means of recovery, and handling and transportation procedures.

1. Salvaged Materials for Reuse: For materials that will be salvaged and reused in this Project, describe methods for preparing salvaged materials before incorporation into the Work in compliance with Section 02 41 16 - Structure Demolition.

2. Salvaged Materials for Sale: For materials that will be sold to individuals and organizations, include list of their names, addresses, and telephone numbers.

3. Salvaged Materials for Donation: For materials that will be donated to individuals and organizations, include list of their names, addresses, and telephone numbers.

4. Recycled Materials: Include list of local receivers and processors and type of recycled materials each will accept. Include names, addresses, and telephone numbers.

5. Disposed Materials: Indicate how and where materials will be disposed of. Include name, address, and telephone number of each landfill and incinerator facility.

6. Handling and Transportation Procedures: Include method that will be used for separating recyclable waste including sizes of containers, container labeling, and designated location where materials separation will be performed.

PART 2 – PRODUCTS – NOT USED

PART 3 – EXECUTION

3.1 PLAN IMPLEMENTATION

A. Implement approved waste management plan. Provide specific areas for separating materials that are to be salvaged and recycled, containers, storage, signage, transportation, and other items as required to implement waste management plan during the entire duration of the Contract. Comply with Division 1 – Temporary Facilities and Controls.

B. Train workers, subcontractors, and suppliers on proper waste management procedures, as appropriate for the Work.

C. Conduct waste management operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.

3.2 SALVAGING AND RECYCLING DEMOLITION WASTE

A. Comply with requirements in Section 02 41 16 - Structure Demolition.

3.3 RECYCLING CONSTRUCTION WASTE

A. Recycle paper and beverage containers used by on-site workers.

B. Recycling Incentives: Revenues, savings, rebates, tax credits, and other incentives received for recycling waste materials shall accrue to Contractor.

C. Preparation of Waste: Prepare and maintain recyclable waste materials according to recycling or reuse facility requirements. Maintain materials free of dirt, adhesives, solvents, petroleum contamination, and other substances deleterious to the recycling process.

D. Procedures: Separate recyclable waste from other waste materials, trash, and debris. Separate recyclable waste by type at Project site to the maximum extent practical according to approved construction waste management plan.

1. Provide appropriately marked containers or bins for controlling recyclable waste until removed from Project site. Include list of acceptable and unacceptable materials at each container and bin. Remove any contaminated materials found in bins.

2. Stockpile processed materials on-site without intermixing with other materials. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.

3. Store components off the ground and protect from the weather.

4. Remove recyclable waste from Owner's property and transport to recycling receiver or processor as often as required to prevent overfilling bins.

E. Package Recycling:

1. Cardboard and Boxes: Break down packaging into flat sheets. Bundle and store in a dry location.

2. Polystyrene Packaging: Separate and bag materials.

3. Pallets: As much as possible, require deliveries using pallets to remove pallets from Project site. For pallets that remain on-site, break down pallets into component wood pieces and comply with requirements for recycling wood.

4. Crates: Break down crates into component wood pieces and comply with requirements for recycling wood.

F. Wood Material Recycling:

1. Clean Cut-Offs of Lumber: Grind or chip into small pieces.

2. Clean Sawdust: Bag sawdust that does not contain painted or treated wood.

G. Gypsum Board: Stack large clean pieces on wood pallets or in container and store in a dry location.

H. Paint: Seal containers and store by type.

3.4 DISPOSAL OF WASTE

A. Except for items or materials to be salvaged or recycled, remove waste materials from Project site and legally dispose of them in a landfill or incinerator acceptable to authorities having jurisdiction.

1. Except as otherwise specified, do not allow waste materials that are to be disposed of accumulate on-site.

2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.

B. Burning: Do not burn waste materials.

END OF SECTION

PART 1 – GENERAL

1. SUMMARY

1.1. Section Includes: Administrative and procedural requirements for contract closeout, including but not limited to, the following:

1.1.1. Substantial Completion requirements.

1.1.2. Inspection (Punch List) procedures.

1.1.3. Final Completion requirements

1.1.4. Project Record Documents.

1.1.5. Operations and Maintenance Manuals

1.1.6. Spare parts/materials.

1.1.7. Warranties (Minimum 2 years unless manufacturer's warranty is greater.)

1.1.8. Two-year maintenance and service agreements.

1.1.9. Demonstration and Training of District's personnel.

1.1.10. Final Cleaning.

1.2. Related Sections:

1.2.1. Section 00 50 00 (Form of Agreement) for requirements for Project Completion and Final Payment.
1.2.2. The Conditions for the Contract and the other sections of Division 1 apply to this section as fully as if repeated herein.
1.2.3. Divisions 2 through 33 Sections for specific closeout and special cleaning requirements for products of those sections.

2. SUBSTANTIAL COMPLETION

2.1. Preliminary Procedures: Before requesting inspection for determining date of Substantial Completion by phase, complete the following. List items below that are incomplete in request.

2.1.1. Prepare a list of items to be completed and corrected (punch list), the value of items on the list and reasons why the Work is not complete.

2.1.2. For the final phase of the Project, advise the District of pending insurance changeover requirements.

2.1.3. For the final phase of the Project, submit specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.

2.1.4. Obtain and submit releases permitting District unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.

2.1.5. For the final phase of the Project, prepare, sign, and submit Project Record Documents, operation and maintenance manuals, Final Completion construction photographs (and photographic negatives or a disk with all digital files), damage or settlement surveys, property surveys, and similar final record information. Deliver operation and maintenance manuals and Project Record Documents at least two weeks (14 days) before training and request for Substantial Completion Inspection.

2.1.6. For the final phase of the Project, deliver all tools, spare parts, extra materials, and similar items that are a permanent part of the installed equipment, to the District. Label with manufacturer's name and model number where applicable.

2.1.7. All plumbing and mechanical equipment shall operate quietly and free from vibration. Properly adjust, repair, balance, or replace equipment producing objectionable noise or vibration. Provide additional brackets, bracing, or other methods to prevent objectionable noise or vibration. All systems shall operate without humming, surging, or rapid cycling.

2.1.8. Complete startup testing of systems.

2.1.9. Complete training of the District's staff per Part 3 of this section. Submit training logs and attendance sheets.

2.1.10. Submit test/adjust/balance records.

2.1.11. Properly mount and post all operating instructions.

2.1.12. Make final changeover of permanent locks and deliver properly marked keys to District. Advise District 's personnel of changeover in security provisions.

2.1.13. For the final phase of the Project and as approved by the District, terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.

2.1.14. Advise District of changeover in heat and other utilities.

2.1.15. Submit changeover information related to District's occupancy, use, operation, and maintenance.

2.1.16. Complete final cleaning requirements per Paragraph 3.2, Final Cleaning.

2.1.17. Touch up and otherwise repair and restore marred and exposed finishes to eliminate visual defects.

2.1.18. Deliver evidence of compliance with any and all requirements of all applicable governmental regulatory agencies at all levels, including District, City, State (DSA and Emergency Planning Department) and Federal government and agencies.

2.1.19. Submit certificates of inspection for vertical transportation systems, and life safety systems.

2.1.20. Submit copies of the fire alarm certification.

2.1.21. Certificates: For the final phase of the Project, submit manufacturer's representative's certification that work has been installed in accordance with manufacturer's recommendations.

2.1.22. Complete all Testing requirements per Section 01 88 20 (Miscellaneous Hazardous Materials Requirements).

2.2. Inspection: After all requirements of the Substantial Completion preliminary procedures have been completed, submit a written request for inspection for Substantial Completion. Give notice at least 7 working days in advance from the time the final inspection is to be performed. District will either proceed with inspection or notify Design Builder of unfulfilled requirements. Refer to Paragraph 1.4, List of Incomplete Items (Punch List).

2.2.1. Initial Inspection (Punch List): The Design Builder or his principal superintendent, authorized to act on behalf of the Design Builder, is to assemble a list of unfinished work items and assign costs to each item.

2.2.2. Final Inspection (Punch List): The Design Builder or his principal superintendent, authorized to act on behalf of the Design Builder, shall accompany the District on the final inspection tour. Principal Subcontractors and Consultants that the District may request to be present will also attend. The District will verify the Design Builder's Initial Inspection and recommend any changes.

2.2.3. If the Work has been substantially completed in accordance with the Contract Documents, and only minor corrective measures are required, the District will conditionally accept the Work and will file for the Notice of Completion based upon the Design Builder's assurance that the corrective measures will be completed within the shortest practicable time period.

2.2.4. If the Work has not been substantially completed in accordance with the Contract Documents, and several corrective measures are still required, the District will not accept the Work or record the Notice of Completion. The Design Builder shall complete or correct the items listed on the Initial Inspection and the Final Inspection punch list and then call for a re-inspection, following the procedure outlined above.

2.2.5. Re-inspection: Request for re-inspection when the Work identified in previous inspections as incomplete is completed or corrected. More than

one (1) request of the District to make a re-inspection shall be considered an additional service of District, District's Representative, and/or Inspector of Record, and all subsequent costs will be deducted from the Design Builders final payment.

3. FINAL COMPLETION

3.1. Preliminary Procedures: Before determining the date of Final Completion, complete the following:

3.1.1. Submit a final Application for Payment according to Section 00 50 00 (Form of Agreement).

3.1.2. Submit affidavit of payment of debts and claims.

3.1.3. Submit affidavit of release of liens.

3.1.4. Submit consent of Design Builder's surety to final payment,

3.1.5. Submit complete payroll certifications.

3.1.6. Submit certified copy of District's Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by the District's representative. The certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.

3.1.7. Submit evidence of final, continuing insurance coverage complying with insurance requirements.

3.1.8. Submit pest-control final inspection report and warranty.

3.1.9. Submit all guarantees and warranties. Refer to Paragraph 1.7, Warranties.

3.1.10. Submit all Material Safety Data sheets.

3.1.11. Submit copies of all Verified Reports.

3.1.12. Submit a list of all Subcontractors of every tier providing services and/or materials in connection with the Project, in a formal, adequately bound, cataloged form, which shall include the names, addresses, telephone numbers and fax numbers of such persons, and shall further include notices as to where pertinent persons can and may be reached for emergency service, inclusive of nights, weekends and holidays.

4. DESIGN BUILDER'S LIST OF INCOMPLETE ITEMS (PUNCH LIST)

4.1. Preparation: Submit ten copies of each list. Include name and identification of each space and area affected by construction operations for incomplete items and items

needing correction including, if necessary, areas disturbed by the Design Builder that are outside the limits of construction.

4.1.1. The list is to be in Microsoft Excel, electronic format. The format is available from the District for the Design Builder's use.

4.1.2. Organize the list of spaces in sequential order, starting with exterior areas first and proceeding from lowest floor to highest floor in each building in the project. Each line item is to have a unique number associated with the room number (do not re-number items once they have been assigned a number).

4.1.3. Organize items by space. Each outstanding item is to be based on the room number where the problem exists and individually numbered.

4.1.4 Include the flowing information at the top of each page:

4.1.3.1.1. Project name.

4.1.3.1.2. Date.

4.1.3.1.3. Name of District's Representative.

4.1.3.1.4. Name of Inspector or Record.

4.1.3.1.5. Name of Design Builder.

4.1.3.1.6. Page Number.

5. PROJECT RECORD DOCUMENTS

5.1. General: Do not use Project Record Documents for construction purposes. Protect Project Record Documents from deterioration and loss. Provide access to Project Record Documents for the District's representative and Inspector of Record's reference during normal working hours. Submit Record Documents as described in this Section 00 50 00 (Form of Agreement) and 01 11 20 (Design Services and Deliverables).

5.2. Record Drawings: Maintain and submit one signed set of prints of Contract Drawings and Shop Drawings.

5.2.1. Mark Record drawings to show the actual installation where installation varies from that shown originally as well as construction added to the Contract that is not indicated on the Contract Drawings. Require individual or entity who obtained record data, where individual or entity is installer, Subcontractor, or similar entity, to prepare the marked-up Record Prints.

5.2.1.1. Keep Record Drawings current and legible, and available, on site, for inspection at all times by the Inspector of Record, and District's representative.

5.2.1.2. Give particular attention to information on concealed elements that cannot be readily identified and recorded later. Concealed shall mean construction installed underground or in an area which cannot be readily inspected by use of access panels, inspection plates or other removable features.

5.2.1.3. Accurately record information in an understandable drawing technique.

5.2.1.4. Record data as soon as possible after obtaining it. Record and check the markup before enclosing concealed installations.

5.2.1.5. Mark Contract Drawings or Shop Drawings, whichever is most capable of showing actual physical conditions, completely and accurately. Where Shop Drawings are marked, show cross-reference on Contract Drawings.

5.2.2. Mark record sets with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at the same location.

5.2.3. Mark important additional information that was either shown schematically or omitted from original drawings.

5.2.4. Note Construction Change Directive numbers, Change Order numbers, alternate numbers, RFI numbers, and similar identification where applicable.

5.2.5. Identify, sign and date each Record Drawing: include the designation “PROJECT RECORD DRAWING” in a prominent location. Organize into manageable sets; bind each set with durable cover sheets. Include identification on cover sheets.

5.3. Record Specifications: Submit one copy of Project’s Specifications, including addenda and contract modifications. Mark copy to indicate the actual product installation.

5.3.1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.

5.3.2. Mark copy with proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.

5.3.3. Note related Change orders, Record Drawings, where applicable.

5.4. Record Product Data: Submit one copy of each Product Data submittal. Mark one set to indicate the actual product installation where installation varies substantially from that indicated in Product Data.

5.4.1. Include Material Safety Data Sheets.

5.4.2. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.

5.4.3. Include significant changes in the product delivered to Project site and changes in manufacturer's written instruction for installation.

5.4.4. Note related Change Orders, Record Drawings, where applicable.

6. OPERATIONS AND MAINTENANCE MANUALS

6.1. Assemble 3 copies of complete sets of operation and maintenance data indicating the operation and maintenance of each system, subsystem, and piece of equipment not part of a system. Include operation and maintenance data required in individual Specification Section and as follows:

6.1.1. Manufacturer's Manuals: Submit complete installation, operation, maintenance and service manuals, and printed instructions and parts lists for all materials and equipment where such printed matter is regularly available from the manufacturer. This includes, but is not limited to such service manuals as may be sold by the manufacturer covering the operation and maintenance of his items, and complete replacement parts lists sufficiently detailed for parts replacement ordering to manufacturer. Piping diagrams and wiring diagrams are to be included. Bound publications need not be assembled in binders.

6.1.1.1. Organize operation and maintenance manuals into suitable sets of manageable size. Bind and index data in heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, in thickness necessary to accommodate contents, with pocket inside the covers to receive folded oversized sheets. Identify each binder on front and spine with the printed title "OPERATION AND MAINTENANCE MANUAL," Project name, and subject matter of contents.

6.1.2. Equipment Nameplate Data: Submit a typewritten list of all mechanical and electrical equipment showing exact equipment nameplate data. Identify equipment by means of names, symbols, and numbers used in the contract documents

6.1.3. System Operating Instructions: Submit typewritten instructions covering operation of the entire system as installed (not duplicating manufacturer's instructions for operating individual components). Include schematic flow and control diagrams as appropriate and show or list system valves, control elements, and equipment components using identification symbols and numbers, including operating standards. List rooms, area of equipment served, and show proper settings for valves, controls, and switches. Incorporate emergency instructions and procedures, startup and shutdown procedures, seasonal procedures and weekend operations.

6.1.4. System Maintenance Instructions: Submit typewritten instructions covering routine maintenance of system. List each item of equipment

requiring inspection, lubrication, or service and briefly describe such maintenance, including types of lubricants and frequency of service. It is not intended that these instructions duplicate manufacturer's detailed instructions. Give name, address and phone number of nearest firm authorized or qualified to service equipment or provide parts

6.1.5. Wall Mounted Data: Frame one set of typewritten system instructions and diagrams as required under Paragraphs .3 and .4 above, covered with glass and mounted in locations as directed by the District. This set of instructions is in addition to the required herein.

7. WARRANTIES & GUARANTEES

7.1. See Section 00 62 00 (Guaranty) form and 00 62 50 (Certificate of Warranty) for warranty form. All submitted Warranty and Guaranty forms will be on the Peralta Community College District's Warranty and Guaranty format. Originals to be provided.

7.2. Warranties and guarantees for fire/life safety work such as fire alarm, sprinkler, emergency and exit lighting, and exiting pathway systems such as: Elevator, wheelchair lifts, etc. shall have specific language "in the event of our failure to respond and act within 3 hours after being notified in writing by the District, we authorize the District to proceed to have the defects repaired or replaced and made whole, together with any other adjacent work which may be displaced or damaged by so doing, at our expense, and we will honor and pay the costs and charges therefore upon demand. This work shall not invalidate any and all warranties and guarantees."

7.3. Submittal Time: Submit duplicate written warranties and guarantees on request of District for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated.

7.4. Partial Occupancy: Submit properly executed warranties and guarantees within 15 days of completion of designated portions of the Work that are completed and occupied or used by District during construction period by separate agreement with Design Builder.

7.5. Organize warranty and guarantee documents into an orderly sequence based on the table of contents of the Project Manual.

7.5.1. Bind warranties and guarantees in heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, in thickness necessary to receive 8-1/2-by-11-inch (115-by-280-mm) paper.

7.5.2. Provide heavy paper dividers with plastic-covered tabs for each separate warranty and guarantee. Mark tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.

7.6. Provide additional copies of each warranty and guarantee to include in operation and maintenance manuals.

PART 2 – PRODUCTS

2.1 MATERIALS

A. Cleaning Agents: Only use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces. All cleaners shall be specifically designed for the purpose intended, safe for use on the intended object to be cleaned, and safe to pupils, staff and the public. Refer to the District's standards for cleaning products approved by the District.

B. Commercial floor wax stripper, Easterday Ammo-Strip or approved equal, capable of removing metal interlock water emulsion floor finish.

C. Floor finish shall be minimum 20% solids content high-gloss wax. Acceptable products:

1. Spartan Sunny-Side

2. Spotlight (Brulin Company-800-776-7149)

3. Champion Once-A-Year

Graffiti Remover (non-toxic): SO-SAFE BY DX, Inc., or approved equal.

D. Germicidal Cleaner must be E.P.A. registered germicidal cleaner and deodorizer appropriate for use in public school buildings.

PART 3 – EXECUTION

DEMONSTRATION AND TRAINING

A. Instruction: After Work under this contract is completed, tested, and before acceptance, and not less than 14 days after submittal of the operation and maintenance data required in Paragraph 1.6, Operations and Maintenance Manuals, operate all systems for a period of three 8-hour days during which time keep on the project competent personnel familiar with the items installed whose full-time

assignment will be to instruct the District's maintenance personnel in the operation and maintenance of the equipment and systems.

1. Provide instructors experienced in operation and maintenance procedures.

2. Provide instruction at mutually agreed-upon times. For equipment that requires seasonal operation, provide similar instruction at the start of each season.

3. Schedule training with District, through District's representative, with at least seven days notice.

4. Coordinate instructors, including providing notification of dates, times, length of instruction, and course content.

5. Do not conduct this instruction period before completion of piping and equipment labeling.

B. Provide an instruction period sufficient to cover the training required. This instruction period shall be in addition and subsequent to any period of operation, test and adjustment called for elsewhere in this specification.

C. Program Structure: develop an instruction program that includes individual training modules for each system and equipment not part of a system, as required by individual Specification Sections. For each training module, develop a learning objective and teaching outline. Include instruction of the following:

1. System design and operational philosophy.

2. Review of documentation.

3. Operations.

4. Adjustments.

5. Troubleshooting.

6. Maintenance.

7. Repair.

3.2 FINAL AND END-OF-PHASE CLEANING

A. General: Provide final cleaning at the completion of each phase of the work and final project completion. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal, State and local environmental and antipollution regulations. If LBP was disturbed during renovation the final cleaning shall meet the minimum requirements of 40 CFR Part 745.

B. Cleaning: Employ professional cleaning service for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.

1. Complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for any phase of Project:

    a. Clean Project site, yard, and grounds in areas disturbed by construction activities including landscape development areas, of rubbish, waste material, letter, and other foreign substances.

    b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.

    c. Rake grounds that are neither planted nor paved to a smooth, even-textured surface.

    d. Remove tools, construction equipment, machinery, and surplus material from Project site.

    e. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.

    f. Horizontal surfaces: All horizontal surfaces must be dusted and/or washed until free of dust and grime.

    g. Furnishings and equipment:

        1) Remove all gum and sticky substances from all surfaces. Wash all furniture and equipment with a neutral cleaner. Use specialized cleaner appropriate for wood and/or excessively dirty surfaces.

        2) Dust all machinery and equipment located in any shop area.

        3) Clean all dry-erase boards and marker rails by washing with water and/or dry-erase board cleaner.

        4) Clean exterior of all closed lockers and interior of open ones.

        5) Graffiti must be removed from all furnishings and equipment.

    h. Walls: Wash all wall surfaces with detergent and water. Remove all graffiti. All restroom walls should be washed with a disinfectant cleaner.

    i. Doors: Wash all doors, frames and hardware.

    j. Floors:

        1) Resilient Floors (except linoleum flooring) – Clean and refinish flooring, using appropriate procedures and finishes/sealers. Strip existing wax from all existing resilient flooring (using appropriate safety measures as recommended by the E.P.A. for any tile containing asbestos) and re-wax as follows:

- Classrooms, offices and other rooms - three coats of wax.
- Corridors - five coats of wax.

Newly installed resilient floors should have all surface mastic removed by Design Builder. New floors should be allowed to set for time recommended by manufacturer of mastic. These floors should be scrubbed with detergent -- not stripped. Seal as recommended by flooring manufacturer and re-wax as indicated above.

2) Linoleum Floors - Clean and refinish flooring, using appropriate procedures and finishes/sealers in accordance with manufacturers recommendations and finish as follows:

Newly installed linoleum floors should be allowed to set for time recommended by manufacturer of mastic. Existing and new floors should be scrubbed with a neutral pH (7-8.5) detergent/cleaner – do not strip factory finish. Apply the cleaning solution with a mop and bucket; allow the solution to remain on the floor, and then scrub with a rotary electric scrubber or automatic scrubber with a non-abrasive scrubbing pad. Do not over-saturate the floor. Rinse the entire floor surface with clean, cool water and allow the floor to dry thoroughly before allowing traffic. Apply two (2) coats of “Linobase” sealer, manufactured by Johnson Diversey or as recommended by manufacturer, followed by three (3) coats of “Carefree” finish, manufactured by Johnson Diversey or as recommended by the manufacturer, per manufacturer’s instructions.

3) Concrete Floors - Scrub using water and detergent.

4) Ceramic Floors - Scrub using water and detergent.

5) Carpeted Floors - Vacuum all carpets and clean by hot water extraction.

6) Other Floors - Marble, terrazzo and rubber floors should be cleaned and refinished using appropriate procedures and finishes/sealers.

k. STAIRS: All stairs to be scrubbed with detergent including walls, handrails and ledges. Finish not to be applied to stairs unless necessary and approved by the District (Custodial Services Department).

l. RESTROOMS AND LOCKER ROOMS: Thoroughly clean and disinfect all surfaces and fixtures. Remove all foreign objects from walls/ceilings and eliminate all graffiti. Specifications provided above for fixtures, walls and floors are applicable.

m. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.

n. Sweep concrete floors broom clean in unoccupied spaces.

o. Vacuum carpet and similar soft surfaces, removing debris and excess nap; shampoo if visible soil or stains remain.

p. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Replace chipped or broken glass and other damaged transparent materials. Polish mirrors and glass, taking care not to scratch surfaces.

q. Remove labels that are not permanent.

r. Touch up and otherwise repair and restore marred, exposed finishes and surfaces. Replace finishes and surfaces that cannot be satisfactorily repaired or restored or that already show evidence of repair or restoration.

1) Do not paint over “UL” and similar labels, including mechanical and electrical nameplates.

s. Wipe surfaces of mechanical and electrical equipment, elevator equipment, and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.

t. Replace parts subject to unusual operating conditions.

u. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.

v. Clean plumbing fixtures to a sanitary condition, fee of stains, including stains resulting from water exposure.

w. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.

x. Clean ducts, blowers, and coils if units were operated without filters during construction.

y. Clean all new and existing light fixtures, lamps, globes, and reflectors to function with full efficiency. Replace burned-out bulbs, and those noticeably dimmed by hours of use, and defective and noisy starters in fluorescent and mercury vapor fixtures to comply with requirements for new fixtures.

z. Leave Project clean and ready for occupancy.

C. Pest Control: Engage an experienced, licensed exterminator to make a final inspection and rid the Project of rodents, insects, and other pests. Prepare a report.

D. Final Inspection: Any surface still exhibiting dirt, graffiti or dust shall be re-cleaned/re-stripped/refinished until free of dirt, graffiti or dust.

E. Comply with safety standards for cleaning. Do not burn waste materials. Do not bury debris or excess materials on District’s property. Do not discharge volatile, harmful, or dangerous materials into drainage systems. Remove materials from Project site and dispose of lawfully.

END OF SECTION

1.1 SUMMARY

1.1.1 The Design Builder shall utilize a Building Information Modeling (BIM) system to submit Design Development and Construction Documents in the form of a BIM Model of the Project buildings and Site in a parametric 3D format in order to maximize design and construction coordination of the facility through interference checking (clash detection) and code compliance studies within that electronic format. As is technically feasible, the Design Builder shall also test and modify the proposed construction schedule and the project cost model to optimize the project delivery options for the best overall value and performance by coordinating the BIM Model with the schedule (4D) and using the BIM Model to support cost (5D).

1.1.1.1 The BIM Model and individual system models are the property of the District. The Design Builder shall provide the District with access to the models at any time throughout the project. Submittals are outlined in Section 01 11 20 Design Services and Deliverables.

1.1.1.2 Supplemental BIM requirements for this project are given in the "BIM Standards for the 2118 Milvia Street Project at Berkeley City College" document, which will be included – Reference Documents - portion of the Project Manual by way of future addendum. In the event of a discrepancy between this Section (01 81 00) and the BIM Standards document, this specification takes precedence.

1.1.1.3 Design Builder shall:

1.1.1.3.1 Use the BIM Model and associated model aggregation platform to facilitate the construction methods and means.

1.1.1.3.2 Update the BIM Model and associated model aggregation platform progressively throughout the design and construction period to incorporate all Subcontractor information and approved changes.

1.1.1.3.3 Provide a final "as-built" BIM Model to the District for the District's unrestricted use in operating and managing the facility.

1.1.1.3.4 Engage in regular BIM management meetings with the District and Design Build team participants to discuss and evolve the scope of work described through this section. Discussion topics will include element modeling responsibilities, software interoperability, 2.5d modeling scope, best practices and technical feasibility in the context of rapidly evolving BIM technology.

1.2 USE OF THE BIM/VIRTUAL CONSTRUCTION MODEL

1.2.1 Intent of the BIM Model and Aggregate Platform: The BIM Model and aggregate platform shall be developed for coordination, communication and collaboration purposes during design and construction. At the completion of the Work, the BIM Model shall be turned over to the District. The District shall have exclusive rights to the model for its use in operating and managing the facility.

1.2.2 Basis of Information for Modeling: The Contract Documents and Reference Documents shall be the basis of information for the BIM Model described herein. The Criteria Architect's Architectural Drawings are available in AutoCAD for use by the Design Builder in developing the BIM Model; however, such usage shall be for convenience only and shall not carry contractual implication and subject to DBE executing agreement with Criteria Architect .

1.2.3 Relation of BIM to other Contract Documents: The BIM may be used by the Design Builder as a tool to plan the Work and produce Construction Documents. Hardcopy documentation shall be used as the basis of construction. Not all building components required by the contract documents will be included in the BIM.

1.3 DEFINITIONS

1.3.1 BIM: Building Information Modeling, a process of constructing electronic models of facility's buildings and site.

1.3.2 BIM or Virtual Construction (VC) Model: A Virtual Construction Model using 3-D Building Information Modeling (BIM) technologies to convey the design and construction elements of the Work. The Virtual Model will consist of a minimum of seven system models: Civil, Architectural, Structural, Mechanical, Electrical, Fire Protection and Equipment.

1.3.3 Model Aggregation Platform: The VC system models shall be use Autodesk® Navisworks 2011 software or later.

1.4 MINIMUM REQUIREMENTS

1.4.1 General: The BIM Model shall be developed to include parametric components of major building and site elements as defined by Part 2 of this section.

1.4.2 Accuracy of the Models: The BIM Model and each of its system models shall be developed to within a tolerance of ¼" plus or minus.

1.4.3 Parametric Data: The BIM Model may vary in level of detail for individual elements, but at a minimum shall include sufficient parametric data to support use and analysis of:

1.4.3.1 Functional and visual representation of all spaces.

1.4.3.2 Review of Design Builder's Construction Documents at all times during the Design and Construction phases.

1.4.3.3 Clash detection and correction of all major systems.

1.4.3.4 Construction methods and means.

1.4.3.5 Construction scheduling.

1.4.3.6 Cost estimating.

1.4.3.7 As-built documentation and modeling.

1.4.4 File Format: Revit or any file format (BIM application(s) or software(s)) approved by the District's Project Manager may be used for development of the BIM Model providing that it is a true parametric, data-based application. The District will give preference to a file format that allows direct linking and interoperability. The Design Builder shall maintain a matrix that summarizes BIM software tools used on the project by all participants.

1.4.5 Level of Detail: The BIM Model shall be developed and detailed sufficiently to meet the requirements of the Request for Proposal and the Contract Documents. The two levels of detail are Generic-model(ed) and Project-model(ed), as defined below. All elements listed under Part 2 Products shall be Project-model(ed). All other elements may be Generic-model(ed). The level of detail described by Part 2: Products shall be subject to further discussion, clarification, and evolution through BIM management meetings. The Design Builder will maintain a building component matrix that documents the BIM scope and clarifies responsibilities and level of detail. This matrix shall be subject to District approval.

1.4.5.1 "Generic-model(ed)": the model and its elements may be based upon the standard objects available from the modeling software without project-specific customization. In addition, generic components may be used early in the BIM development process as "placeholders" for "project modeled" components.

1.4.5.2 "Project-model(ed)": the model and/or a specific element must be customized to reflect project-specific configuration.

1.4.5.3 "2.5D Elements": Model management may require use of 2.5D components. This type of component includes parametric, plan and elevation information but does not include 3D data. The scope of use for 2.5D elements shall be determined through discussions held at BIM management meetings.

1.4.6 OmniClass: The OmniClass Construction Classification System (known as OmniClass or OCCS) is a new classification system for the construction industry developed by the Construction Specification Institute (CSI). It builds upon MasterFormat for work results, UniFormat for elements and EPCI (Electronic Product Information Cooperation) for structuring products. OmniClass is a

reference library that will serve as the foundation upon which information is transferred between the construction and operations phases via the BIM Model. The Design Builder shall include the appropriate OmniClass classification in the list of attributes that is assigned to the building elements that will be Project-model(ed).

PART 2 - PRODUCTS

2.1 SYSTEM MODELS

2.1.1 Civil Systems: The Civil Systems Model shall be a sub-system model linked to the architectural system model. The Civil Systems model shall serve as the basis for project shared coordinates through which the position of building elements on the site will be coordinated. Except as noted, provide project-model(ed) elements of:

2.1.1.1 Topography: 1) existing natural and/or graded contours, and 2) new grades and finish contours.

2.1.1.2 Planting: 1) existing major landscaped areas, 2) existing trees to remain, 3) new landscaped areas, 4) new trees, and 5) irrigation lines over 2” diameter. Planting may be generic-model(ed).

2.1.1.3 Surface Improvements: 1) pavements, 2) curbs and gutters, 3) retaining walls, and 4) exterior non-building structures such as pools, shade structures etc.

2.1.1.4 Existing Structures: 1) all buildings within the project area intended to remain, 2) buildings intended to be demolished. All existing structures may be generic-model(ed) exterior surface only; interior elements are not required.

2.1.1.5 Storm Water and Sanitary Sewers: 1) existing lines (over 3” diameter), boxes and structures within project area, 2) all new lines, boxes and structures, and 3) existing public lines, boxes and structures beyond the project area but serving as points of connection for the project. Storm Water and Sanitary Sewers outside the buildings may be generic-model(ed).

2.1.1.6 Utilities: 1) existing domestic and fire water main and branch lines (2” and larger diameter) within project area, 2) all new domestic and fire water lines, 3) existing electrical overhead and underground lines within project area, all new electrical lines outside buildings, 4) existing telephone and data lines within project area, 5) all new telephone and data lines outside buildings, 6) existing gas lines within project area, and 7) all new gas lines outside buildings. Utilities outside buildings may be generic-model(ed).

2.1.1.7 Other requirements:

2.1.1.7.1 Quantities: data to reflect accurate quantities of the above elements.

2.1.1.7.2 Schedules: data for installation of the above elements.

2.1.2 Architectural Systems: The Architectural Systems Model shall be the primary model to which others are linked. Except as noted, provide project-model(ed) elements of:

2.1.2.1 Spaces: 1) net square footage of all occupied spaces, 2) gross constructed floor area, 3) room names and numbers, and 4) floor, base, wall, and ceiling finishes.

2.1.2.2 Exterior Walls and Curtain Walls: 1) type and composition, 2) height, length, and width, and 3) thermal, acoustic, fire, and security ratings.

2.1.2.3 Partitions: 1) type and composition, 2) height, length, and width, and 3) thermal, acoustic, fire, and security ratings.

2.1.2.4 Floors: 1) type and material, 2) thickness, and 3) finishes with manufacturer's name and product numbers. Link floor structure to the Structural Systems Model.

2.1.2.5 Ceilings: 1) type and composition, 2) height, length, and width, and 3) thermal, acoustic, fire, and security ratings.

2.1.2.6 Roof Coverings and Openings: 1) configuration, 2) drainage system, and 3) penetrations for modeled building components.

2.1.2.7 Exterior Doors, Windows, and Louvers: 1) type and material, 2) height, width, and thickness, 3) thermal, acoustic, fire, and security rating, 4) location, and 5) hardware elements or group.

2.1.2.8 Interior Doors, Windows, and Louvers: 1) type and material, 2) height, width, and thickness, 3) thermal, acoustic, fire, and security rating, 4) location, and 5) hardware elements or group.

2.1.2.9 Stairs and Ramps: 1) stairs and railings, 2) ramps and railings, and 3) handrails and guardrails.

2.1.2.10 Elevators and Escalators: 1) elevator cabs and doors, 2) elevator hoist-way doors and trim, 3) elevator machinery and equipment, 4) escalator belts and railings, and 5) escalator machinery and equipment.

2.1.2.11 Casework and Counters: 1) type and material, 2) height, width, and depth, 3) location, and 4) hardware.

2.1.2.12 Plumbing Fixtures: 1) type and material, 2) location, 3) trim, and 4) finishes. Link fixtures and trim to the Mechanical Systems Model.

2.1.2.13 HVAC Grills and Registers: 1) type and material, 2) location, 3) trim, and 4) finishes. Link fixtures and trim to the Mechanical Systems Model.

2.1.2.14 Electrical Fixtures: 1) type and material, 2) bulb type and wattage, 3) location, 4) trim, and 5) finishes. Link fixtures and trim to the Electrical Systems Model.

2.1.2.15 Miscellaneous Fittings: 1) toilet partitions, 2) toilet room accessories, 3) grab bars, 4) personal storage lockers, 5) display cases, and 6) other surface applied quasi-permanent items such as mirrors etc.

2.1.2.16 Other requirements:

2.1.2.16.1 Quantities: data to reflect accurate quantities of the above elements.

2.1.2.16.2 Schedules: data for installation of the above elements.

2.1.3 Structural Systems: The Structural Systems Model shall be a sub-system model linked to the architectural system model. Except as noted provide project-model(ed) elements of:

2.1.3.1 Foundations and footings: 1) type and configuration, and 2) depth, length, and width.

2.1.3.2 Slab(s) on-grade: 1) type and configuration, 2) under-slab base and waterproofing, 3) recesses, curbs, pads, closure pours, and 4) major penetrations.

2.1.3.3 Basement Walls: 1) type and composition, 2) height, length, and width, and 3) thermal, acoustic, fire, and security ratings.

2.1.3.4 Elevated Floors: 1) columns and beams, 2) primary and secondary framing members, 3) bracing, 4) connections, and 5) framed, composite, and/or slab decks.

2.1.3.5 Roofs: 1) columns and beams, 2) primary and secondary framing members, 3) bracing, 4) connections, and 5) framed, composite, and/or slab decks.

2.1.3.6 Joints: 1) expansion and/or contraction, and 2) seismic.

2.1.3.7 Stairs and Ramps: 1) openings and framing, and 2) railing supports.

2.1.3.8 Shafts and Pits: 1) openings and framing, and 2) railing supports.

2.1.3.9 Other requirements:

2.1.3.9.1 Quantities: include data to reflect accurate quantities of the above elements.

2.1.3.9.2 Schedules: data for installation of the above elements.

2.1.3.9.3 Fireproofing: Fireproofing is not to be included in the BIM but clash detection studies shall include definition of tolerances for conflict detection.

2.1.3.9.4 Color Code: color code structural steel from other elements.

2.1.4 Mechanical: The Mechanical Systems Model shall be a sub-system model linked to the architectural system model. Except as noted provide project-model(ed) elements of:

2.1.4.1 Heating, Ventilating, and Air Conditioning: 1) all heating, ventilating, air-conditioning, exhaust fans, and specialty equipment, 2) air supply, return, ventilation and exhaust ducts, including space-consuming elbows and transitions, 3) fire dampers with ratings, 4) mechanical piping, and 5) registers, diffusers, grills and hydronic baseboards. Coordinate and link fixtures and trim to the Architectural Systems Model.

2.1.4.2 Plumbing: 1) all domestic plumbing piping and fixtures, 2) floor and area drains, and 3) related equipment.

2.1.4.2.1 Piping larger than 1 .5" diameter shall be modeled.

2.1.4.3 Roof Drainage: 1) all piping and fixtures, and 2) related equipment.

2.1.4.3.1 Piping larger than 1 .5" diameter shall be modeled.

2.1.4.4 Other requirements:

2.1.4.4.1 Quantities: data to reflect accurate quantities of the above elements.

2.1.4.4.2 Schedules: schedule data for installation of the above elements.

2.1.4.4.3 Equipment Clearances: Clearances for major equipment and all M/E/P Equipment and Architecturally Significant Equipment, as model objects for conflict detection and maintenance access requirements.

2.1.4.4.4 Color Code: separate color code for each type element.

2.1.5 Electrical: The Electrical Systems Model shall be a sub-system model linked to the architectural system model. Except as noted provide project-model(ed) elements of:

2.1.5.1 Interior Electrical Power and Lighting: 1) all interior electrical components, 2) lighting, receptacles, special and general purpose

power receptacles, 3) lighting fixtures, 4) panel-boards and control systems, and 5) conduit and cable trays.

2.1.5.1.1 Individual conduit larger than 1 .5" diameter shall be modeled.

2.1.5.1.2 Groups or clusters runs of conduit of all sizes shall be modeled.

2.1.5.2 Exterior Building Lighting: 1) all exterior electrical components, 2) lighting, receptacles, special and general purpose power receptacles, 3) lighting fixtures, 4) panel-boards and control systems, and transformers, and 5) utility connection and equipment.

2.1.5.2.1 Individual conduit larger than 1 .5" diameter shall be modeled.

2.1.5.2.2 Grouped or clustered runs of conduit of all sizes shall be modeled.

2.1.5.3 Telephone, Data, Television, and Other Low Voltage: 1) all interior low voltage components, 2) outlets, receptacles, special and controls, 3) fixtures, 4) panel-boards, equipment racks, and control systems, and 5) conduit and cable trays.

2.1.5.3.1 Individual conduit larger than 1 .5" diameter shall be modeled.

2.1.5.3.2 Groups or clusters runs of conduit of all sizes shall be modeled.

2.1.5.4 Other requirements:

2.1.5.4.1 Quantities: data to reflect accurate quantities of the above elements.

2.1.5.4.2 Schedules: schedule data for installation of the above elements.

2.1.5.4.3 Equipment Clearances: Clearances for major as model objects for conflict detection and maintenance access requirements.

2.1.5.4.4 Color Code: separate color code for each type element.

2.1.6 Fire Suppression: The Fire Suppression Systems Model shall be a sub-system model linked to the architectural system model. Except as noted provide Project-model(ed) elements of:

2.1.6.1 Fire Suppression System: 1) valves and risers, 2) all main, branch, and drains lines, 3) sprinkler heads, and fittings, 4) pumps.

2.1.6.2 Fire Alarms: 1) alarm and notification devices, and 2) detection systems.

2.1.6.3 Other requirements:

2.1.6.3.1 Quantities: data to reflect accurate quantities of the above elements.

2.1.6.3.2 Schedules: schedule data for installation of the above elements.

2.1.6.3.3 Equipment Clearances: Clearances for major equipment as model objects for conflict detection and maintenance access requirements.

2.1.6.3.4 Color Code: separate color code for each type element.

2.1.7 Equipment: The Equipment Model shall be a sub-system model linked to the architectural model. Except as noted provide Project-model(ed) elements of:

2.1.7.1 Equipment: related security, mechanical, plumbing, and electrical requirements.

2.1.7.1.1 Quantities: data to reflect accurate quantities of the above elements.

2.1.7.1.2 Schedules: schedule data for installation of the above elements.

2.1.7.1.3 Equipment Clearances: equipment clearances as model objects for conflict detection and maintenance access requirements.

2.2 MODEL SOFTWARE REQUIREMENTS

2.2.1 The Design Builder's selected BIM application(s) and software(s) for the BIM Model shall:

2.2.1.1 Have maximum interoperability between systems models, and shall be fully compatible with Autodesk® Navisworks 2011 software and later.

2.2.1.2 Be provided in a format that is compatible with a free software download for viewing the Design Builder’s models with the ability to save and track user annotations and notes.

2.2.1.3 Contain reports/logs of:

2.2.1.3.1 Discrepancies and/or clarifications in the Contract Documents or Construction Documents identified during the modeling process.

2.2.1.3.2 Conflicts between location and alignment of model elements with resolutions developed by the Design Builder.

2.2.1.3.3 Quantities of modeled building element.

2.2.1.3.4 Schedule for each building element.

2.2.1.4 For any additional electronic model information that is not supported by the Revit or the primary software solution approved by Program Manager, and for constructing 4D models, the Design Builder shall utilize AutoDesk® Navisworks software (Manage, Review, Simulate and Freedom) to create and utilize .nwd files.

2.2.1.5 Be provided in a format that links with cost and scheduling software utilities.

PART 3 - EXECUTION

3.1 DEVELOPMENT AND SUBMITTAL OF THE MODELS

3.1.1 The Design Builder shall develop the BIM Model and its systems models in compliance with the Contract Documents and the following:

3.1.1.1 Develop and submit all of the systems models concurrently. Note: if any of the systems models qualify as deferred approvals, they may be submitted separately.

3.1.1.2 Submit models with generic-model(ed) information as required to satisfy the requirements of the Request for Proposal.

3.1.1.3 Submit partially completed models during the Design Development and Construction Documents Phase submittals outlined in Section 01 11 20 (Design Services and Submittals), for review and coordination.

3.1.1.4 Submit partially complete models at any time when the District requests changes and/or clarifications or Design Builder proposes changes.

3.1.1.5 Submit fully completed BIM Model and its systems models, prior to construction.

3.1.1.6 Submit updated systems models complying with final approved shop drawing submittals.

3.1.1.7 Submit the “as-built” BIM Model and its systems models as part of the close-out process.

3.2 UPDATING THE MODELS DURING CONSTRUCTION

3.2.1 The BIM Model shall be updated/revised to keep it current with construction activity as follows:

3.2.1.1 Updating: issue the BIM Model and its systems models one week before each regularly scheduled Construction Phase Coordination meeting as defined in Section 01 31 19 (Project Meetings).

3.2.1.2 Revising: issue the revised BIM Model and/or its systems models immediately after each meeting or other activity where revisions have been made. Include a report that indicates every change.

3.2.2 Submit the updates and revisions to the District.

3.3 DELIVERY OF FINAL AS-BUILT MODELS

3.3.1 The final updated and revised BIM Model and all its systems models shall be submitted to the District as part of the close-out submittals.

3.3.2 The BIM Model and all its systems models will be:

3.3.2.1 Editable for future expansion or remodel projects.

3.3.2.2 Functioning for use with 3-D Facilities Management Software.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes general requirements and procedures for achieving Project goal of United States Green Building Council (USGBC) Leadership in Energy and Environmental Design (LEED™) Silver-level certification. The team is Considering pursuing LEED Gold. Additional requirements for LEED Gold have been noted.

1. Rating System: LEED v4.1 for Building Design and Construction.

2. Product submissions and contracting procedures will be evaluated based upon credits required to achieve specified level of certification. Contributions to achieve a higher level of certification are encouraged.

3. A copy of the LEED Project Checklist is attached at end of this Section for reference.

4. Some LEED prerequisites and credits are required to obtain the LEED certification indicated depend on the Architect's design and are not part of the Contractor's Work. Contractor's responsibilities are specified in this section and throughout the technical specification sections.

B. Related Sections:

1.. Specific material requirements identified as "Sustainable Design Requirements" located in other Sections, which may refer to criteria in this Section.

1.2 REFERENCES

A. American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE):

1. ASHRAE 52.2-2017 - Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size.

2. ASHRAE 90.1-2016 Energy Standard

3. ASHRAE 62.1-2016 Min Standards for Indoor Air Quality Sections 4, 5, 6.2, 6.5 and 7

4. ASHRAE 55-2017 Thermal comfort conditions for Human Occupancy

B. Sheet Metal and Air Conditioning Society of North America (SMACNA):

1. IAQ Guidelines for Occupied Buildings Under Construction, 2nd Edition, 2007, ANSI/SMACNA 008-2008, Chapter 3.

C. United States Green Building Council (USGBC):

1. LEED v4.1 Building Design and Construction (BD+C) Guide.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Designate a Representative that is LEED Accredited by the USGBC. Contractor's LEED Representative shall oversee the environmental goals for the project, coordinate with the Architect, shall instruct workers concerning these goals, and shall be present on site when Work is in progress.

B. For LEED prerequisites and credits that are Contractor's responsibility, submit documentation to USGBC using online USGBC online platform. Assist Architect and/or owner with responses to questions and requests from USGBC that depend on product selection or product qualities, or that depend on Contractor's procedures, until USGBC has made its determination on Project's LEED certification application.

1.4 SUBSTITUTIONS

A. Comply with substitution criteria identified in Division 1 - "Product Requirements".

B. To substitute products that affect LEED certification, propose products that offer equivalent or increased environmental sensitivity and meet the intent of the Contract Documents. Substitutions that may affect LEED certification, products or criteria shall be clearly identified as defined in technical specification.

1.5 SUBMITTALS

A. Subcontractor Responsibility Matrix: Contractor shall prepare and submit for review a responsibility matrix identifying which subcontractors are responsible for providing specific information to the Contractor for LEED documentation.

1. Contractor is responsible for preparing and tracking all LEED strategies agreed to by the subcontractors and for gathering all information required to document and submit to USGBC for LEED certification.

B. Total Project Materials Cost Data: Provide statement indicating total cost for materials used for Project. Costs exclude labor, overhead, and profit. Apply these values consistently to various Sustainability submittals requiring calculations based upon material cost data.

1. Include breakout of costs for the following categories of items:

a. Fire Suppression (Division 21).

b. Plumbing (Division 22).

c. Mechanical/HVAC (Division 23).

d. Electrical (Division 26).

e. Communications (Division 27).

f. Electronic Safety and Security (Division 28).

g. Specialty items such as Conveying Equipment (Section 14 21 50) and equipment (Exclude mechanical, plumbing and electrical equipment).

h. Wood-based construction materials (Section 06 10 53 and 06 41 00).

2. Provide the following with final project submittals:

    a. Final Summary of Solid Waste Disposal and Diversion (Section 01 74 19)

    b. All approved Substitution Request Forms related to this section.

C. Sustainable Design Action Plans: Within 30 days of Contract Award, submit Action Plans indicating how LEED credits related to the following will be met:

1. MR Credit - Construction and Demolition Waste Management Plan complying with Section 01 74 19 “Construction Waste Management and Disposal”.

2. EQ Credit - Construction Indoor Air Quality Management Plan and Indoor Air Quality Assessment Plan.

D. Sustainable Design Progress Reports: Concurrent with each Application for Payment, submit reports comparing actual construction and purchasing activities with Sustainable Design Action plans for the following:

1. MR Credit – Construction and Demolition Waste Management: Waste reduction progress reports complying with Section 01 74 19 “Construction Waste Management and Disposal”.

2. MR Credit – Sourcing of Raw Materials: Recycled content. (LEED Gold only)

3. MR Credit – Sourcing of Raw Materials: Regionally manufactured materials. (LEED Gold only)

4. MR Credit – Sourcing of Raw Materials: Certified wood products. (LEED Gold only)

5. EQ Credit – Construction Indoor Air Quality Management Plan: Construction Indoor Air Quality (IAQ) Management plan: During Construction.

6. EQ Credit – Indoor Air Quality Assessment: Indoor Air Quality (IAQ) Assessment plan: Before Occupancy or Aire Testing.

E. Sustainable Design Documentation Submittals: Additional Sustainable Design submittal requirements are identified in other Sections. Submit documentation for LEED prerequisites and credits in the format required by the USGBC“LEED BD+C Guide” . Contractor shall include Sustainable Design data simultaneously with other submittals required. This data may include the following:

1. Documentation complying with Section 01 74 19 Construction Waste Management and Disposal.

2. Total Project Materials Cost Data.

3. Environmental Product Declarations (EPD’s) complying with LEED requirements. (LEED Gold only)

4. Documentation for products that comply with LEED requirements for multi-attribute optimization. (LEED Gold only)

5. Sustainability reports for products that comply with LEED requirements for sourcing of raw materials.

6. Material ingredient reports for products that comply with LEED requirements for material ingredient reporting. (LEED Gold only)

7. Documentation for products that comply with LEED requirements for material ingredient optimization. (LEED Gold only)

8. Product data for adhesives and sealants used inside the weatherproofing system, indicating VOC content and laboratory test reports showing compliance with requirements for low-emitting materials.

9. Product data for paints and coatings used inside the weatherproofing system, indicating VOC content and laboratory test reports showing compliance with requirements for low-emitting materials.

10. Laboratory test reports for flooring, indicating compliance with requirements for low-emitting materials. (LEED Gold only)

12. Laboratory test reports for ceilings, indicating compliance with requirements for low-emitting materials.

14. Laboratory test reports for furniture, indicating compliance with requirements for low-emitting materials.

15. Laboratory test reports for products containing composite wood or agrifiber products or wood glues, indicating compliance with requirements for low-emitting materials. (LEED Gold only)

16. Requirements of Plumbing submittal packages.

17. Requirements of Mechanical submittal packages.

18. Construction Indoor Air Quality (IAQ) Management:

    a. Construction IAQ management plan.

    b. Product data for temporary filtration media.

    c. Product data for filtration media used during occupancy.

    d. Construction Documentation: Six photographs at three different times during construction period, along with a brief description of SMACNA approach employed, documenting implementation of IAQ management measures, including protection of ducts and on-site stored or installed absorptive materials.

1.6 QUALITY CONTROL

A. LEED Certification Meetings: Schedule and conduct LEED Certification meetings on a regular basis, but not less than quarterly, or as agreed between the Contractor's LEED Representative and the Architect. Meeting attendees shall include at least the following: Owner's Representative, Architect, Contractor's Project Manager, Contractor's LEED Representative, and Sub-Contractor Representatives as appropriate to stage of Work. Discuss LEED Certification at preconstruction and regular job site meetings. Discuss LEED Certification goals and challenges at the following meetings:

B. Provide environmental training for workers performing Work on the Project site. Training shall include the relevant requirements for this project.

C. Regulatory Requirements: Comply with applicable requirements of laws, codes, ordinances and regulations of Federal, State and Municipal authorities having jurisdiction. Obtain necessary approvals from authorities having jurisdiction.

PART 2 – PRODUCTS

2.1 MATERIALS

A. Provide products and procedures necessary to obtain LEED credits indicated as Contractor's responsibility. Although other Sections may specify some requirements that contribute to these LEED credits, Contractor provides additional materials and procedures necessary to obtain LEED credits indicated.

2.2 LOW-EMITTING MATERIALS

A. Comply with specified emissions criteria of individual material specifications. In certain cases, this emissions criteria for materials located inside of the waterproofing membrane may be waived if the following standards are met:

1. Paints and Coatings: 75 percent of paints and coatings must meet the CDPH V1.2-2017 VOC emissions evaluation and 100 percent must meet the VOC content requirements per SCAQMD 1113.

2. Adhesives and Sealants: Meet CALGreen requirements for adhesives and sealants.

3. Flooring: A minimum of 90 percent of flooring products must meet the VOC emissions evaluation or inherently non-emitting sources criteria or salvaged and reused materials criteria. Subflooring is excluded. (LEED Gold only)

4. Ceilings: A minimum of 90 percent of ceilings must meet the VOC emissions evaluation or inherently non-emitting sources criteria or salvaged and reused materials criteria. Ceiling products include ceiling panels, ceiling tile, surface ceiling structures, suspended systems, and glazed skylights. Overhead structural elements are excluded.

6. Composite Wood: Meet CARB Phase II per CALGreen

7. Furniture (when submitted by Contractor): A minimum of 75 percent of furniture must meet the furniture emissions evaluation or inherently non-emitting sources or salvaged and reused materials criteria. All standalone furniture is included.

PART 3 – EXECUTION

3.1 GENERAL

A. The contractor is responsible for ensuring proper field execution of all LEED prerequisites, credits, and submittal requirements; communication with sub-contractors of all requirements; and submission of all documentation in a timely manner.

B. Contractor shall notify Owner immediately of failure to meet any stated LEED pre-requisite or credit requirement.

C. Smoking is not permitted within the building or within 25 feet of entrances, operable windows, or outdoor-air intakes.

3.2 CONSTRUCTION WASTE MANAGEMENT

A. Comply with Section 01 74 19 “Construction Waste Management and Disposal” to meet identified MR credit.

3.3 CONSTRUCTION INDOOR AIR QUALITY (IAQ) MANAGEMENT

A. Comply with SMACNA “IAQ Guideline for Occupied Buildings under Construction" to meet identified EQ credit.

1. If Owner authorizes use of permanent heating, cooling, and ventilating systems during construction period as specified in Division 1, install MERV 8 filter media in accordance with ASHRAE 52.2 at each return-air inlet for the air-handling system used during construction.

2. Replace air filters immediately prior to occupancy with new filters specified in Division 23.

3.4 INDOOR AIR QUALITY (IAQ) ASSESSMENT

A. Comply with USGBC “Guide” to meet identified EQ credit.

1. For the purpose of this requirement, “interior finishes” shall include millwork, doors, paint, carpet and acoustical tiles. The presence of nonfixed furnishings such as workstations and partitions is not required but is encouraged.

B. Option 1 - Provide one of the following building flush-out methodologies:

1. Construction complete; interior finishes installed; building unoccupied throughout flush-out: Perform building flush-out by supplying a total volume of 14,000 cubic feet of outdoor air per square foot of floor area while maintaining an internal temperature of at least 60 degrees F and a relative humidity no higher than 60 percent.

2. Construction complete; interior finishes installed; building occupied prior to flush-out completion: The space may be occupied following delivery to the space of a minimum of 3500 cubic feet of outdoor air per square foot of floor area. Once a space is occupied, it is ventilated at a minimum rate of 0.30 cfm per square foot of outside air or the design minimum outside-air rate prerequisite, whichever is greater. During each day of the flush-out period, ventilation begins a minimum of three hours prior to occupancy and continues during occupancy. These conditions are maintained until a total of 14,000 cubic feet per square foot of outside air has been delivered to the space.

B. Option 2 - Provide Air Quality Testing:

1. Construction complete; interior finishes installed; ventilation conditions typical for occupancy; prior to occupancy: Conduct baseline IAQ testing in occupied spaces for particulate matter, inorganic gases and volatile organic compounds in accordance with LEED BD+C Guide.

2. Demonstrate that contaminant maximum concentrations listed below are not exceeded:

    a. Carbon Monoxide: 9 ppm and no greater than 2 ppm above outdoor levels.

    b. Particulates (PM10): 50 mcg/cu. m.

    c. Particulates (PM2.5): 12 mcg/cu. m.

    d. Ozone: 0.07 ppm, in accordance with ASTM D5149.

    e. Formaldehyde: 20 mcg/cu. m.

    f. Acetaldehyde: 140 mcg/cu. m.

    g. Benzene: 3 mcg/cu. m.

    h. Hexane: 7000 mcg/cu. m.

    i. Naphthalene: 9 mcg/cu. m.

    j. Phenol: 200 mcg/cu. m.

    k. Styrene: 900 mcg/cu. m.

    l. Tetrachloroethylene: 35 mcg/cu. m.

    m. Toluene: 300 mcg/cu. m.

    n. Vinyl Acetate: 200 mcg/cu. m.

    o. Dichlorobenzene: 800 mcg/cu. m.

    p. Xylenes - Total: 700 mcg/cu. m.

3. For each sampling point where the maximum concentration limits are exceeded, take corrective action until requirements have been met.

4. Air sample testing to be conducted as follows:

    a. All measurements to be conducted prior to occupancy but during normal occupied hours, and with building ventilation system starting at the normal daily start time and operated at the minimum outside-airflow rate for the occupied mode throughout the duration of the air testing.

    b. Number of sampling locations varies depending on the size of building and number of ventilation systems. For each portion of building served by a separate ventilation system, the number of sampling points to not be less than one per 5000 square feet. For large open spaces, one sampling point per 50,000 square feet may be used.

    c. Air samples to be collected between 3 and 6 feet from the floor to represent the breathing zone of occupants, and over a minimum four-hour period.

3.5 PROTECTION

A. Protect stored on-site and installed absorptive materials from moisture damage. Where absorptive materials not intended for wet applications are exposed to moisture, immediately remove from site and dispose of properly.

B. Protect installed materials using methods that do not support growth of molds and mildews.

1. Immediately remove from site and properly dispose of materials showing signs of mold and signs of mildew, including materials with moisture stains.

END OF SECTION

1.1 SUMMARY

1.1.1 Scope of Work: The Design Builder shall hire a competent Hazardous Materials Consultant to investigate, survey and report on Hazardous Materials discovered at the site. Except as otherwise expressly specified herein, the Design Builder's Hazardous Substances Removal Contractor ("Contractor") will supply all labor, supervision, materials, equipment, tools, services, insurance and each and every item of expense necessary for the removal, handling, management, packaging, transportation and disposal of miscellaneous hazardous materials, herein called the "Work."

1.1.2 Applicability: Except as otherwise may be provided for, the requirements of the Contractor will apply to the Design Builder and, by extension, to all subcontractors engaged in the removal or handling of the miscellaneous hazardous materials designated herein. To the extent allowable by law, the District will be the sole and final arbiter of which contractor(s) or subcontractor(s) qualify to remove Hazardous Materials at the Project Site.

1.1.3 Miscellaneous Hazardous Materials: The Contractor shall notify the District of the presence of any items identified in specification 4.11 of Section 00 50 00 (Form of Agreement) within 24 hours of its discovery at the Project site.

1.1.4 Limitation of Responsibility: The role of the Design Builder's Industrial Hygiene Consultant (hereinafter referred to as the "Project IH Consultant") in this project is to provide independent, third-party industrial hygiene/hazardous materials consulting services on behalf of the District. Such services may or may not include conducting on-site work observations, materials or environmental testing, and/or consulting with the District. It is not the responsibility of the Project IH Consultant to supervise the Contractor; nor to direct the Contractor's work effort; nor to assume the management of, or responsibility for, the Contractor's health and/or safety practices, nor its waste management, nor its regulatory compliance. At all times, the Contractor is solely responsible for the quality and execution of all phases and aspects of the Work.

1.2 SUBMITTALS

1.2.1 General:

1.2.1.1 In addition to any other contractual submittals required of the Contractor, the Contractor will provide the submittals described in this Section. Submittals will be reviewed by both the District and the Project IH Consultant for acceptability. The Project IH Consultant will either recommend submittals to the District for acceptance, or will return them as deficient, with notations for correction and re-submission. The Project IH Consultant does not have authority to "approve" submittals.

1.2.2 Schedule And Format:

1.2.2.1 Delivery: Submittals listed in this section must be delivered to the District for conveyance to the Project IH Consultant.

1.2.2.2 Quantity: Five (5) identical, legible copies and one complete pdf of each submittal listed in this section shall be delivered in an organized fashion suitable to the District for review. One (1) copy will be conveyed by the District to the Project IH Consultant for review.

1.2.2.3 Work Commencement: No portion of the Work that is dependent upon submittal acceptance shall be commenced by the Contractor until the submittals are reviewed and accepted by the District or its designated representative.

1.2.2.4 Delays: Delays to the Work resulting from the submittal of deficient or illegible documentation, or from the untimely submittal of potentially acceptable documentation, shall be the sole responsibility of the Design-Builder. Except as otherwise granted by the District, no extensions will be made to the awarded contract schedule or budget to accommodate such delays.

1.2.2.5 Format: Submittals will be provided in 8-1/2" x 11" format, organized in a standard 3-ring binder, with sections separated by numbered tabs indexed to a printed Table of Contents. Illegible submittals will be considered deficient and returned to the Design/Builder for correction.

1.2.2.6 Pre-work Submittals: Pre-work submittals shall be delivered to the District not less than ten (10) Business Days prior to the Contractor's mobilization onto the work site. Deficient submittals must be resubmitted by the Design-Builder within five (5) Business Days after return of review copy. Once accepted, the reviewed copy will be returned to the Design-Builder, who must maintain a copy of the reviewed submittal at the job site. The following is to be submitted:

1.2.2.6.1 Worker Qualifications: Name and qualifications of each employee to be engaged in handling or removal of materials specified in this Section.

1.2.2.6.2 Technician Certification: The U.S. EPA requires that individuals who perform maintenance, service, repair, or disposal of ODCs be certified in accordance with Section 608 of the Clean Air Act, as amended (Section 608). The Contractor will submit documentation of certification for any technician or subcontractor to be in engaged in work covered by Section 608.

1.2.2.6.3 Worker Training: The Contractor shall provide current (within previous 12 months) valid documentation of worker training in accordance with Cal/OSHA Hazardous Waste

Operations and Emergency Response (8 CCR §5192, "HAZWOPER") for any workers or subcontractors engaged in work specified in this Section. An exception to this training requirement will be made for workers or subcontractors engaged solely in work involving handling or disposal of ODCs.

1.2.2.6.4 Permits/Licenses: The Design-Builder is responsible for obtaining any permits or licenses and for making any regulatory notifications required to perform the work of this Section. The Design-Builder will deliver one (1) copy of all permits, approvals and notifications to the District at least five (5) Business Days before beginning the Work of this Section.

1.2.2.6.5 Subcontractors: Submit qualifications and twenty-four (24) hour contact information for each subcontractor to be used. This shall include two (2) legible copies of federal, state, and/or local business or operating permits, as well as State and/or EPA identification numbers for the waste transporters and disposal facilities to be used.

1.2.2.6.6 Waste Hauling Qualifications: Submit proof of hazardous waste transporter's registration and the vehicle operator training. Submittals shall include, but not necessarily be limited to: business name, address (mailing address and physical location), and business telephone number of the company; primary contact name and emergency contact (24-hour) telephone number; documentation of current State and/or EPA authorization to operate; and insurance coverage.

1.2.2.6.7 Waste Disposal Facility Qualifications: Submit documentation of the California State and/or EPA-approved waste recycling, disposal, and/or treatment facilities designated to receive shipments of hazardous and universal wastes generated during this project. Such information will include, but not necessarily be limited to: business name, address (mailing address and physical location), and business telephone number of the facility; primary contact name and emergency contact (24-hour) telephone number; documentation of current State and/or EPA authorization to operate; operator's facility I. D. number; classification and/or types of waste(s) accepted; name, business address and telephone number of insurance provider; documentation of insurance type(s), coverage amounts, and any limitations on liability; and any regulatory agency information pertaining to known citations issued, notices of violations issued, corrective actions

ordered, Records of Decisions rendered, or on-going environmental investigations or known liabilities.

1.2.2.7 Post-work Submittals: The Design-Builder will, within twenty (20) Business Days of Contractor's demobilization from the Project Site, submit two (2) copies of all waste disposal documentation (waste manifests, recycler's or reclaimer's receipts, or other applicable documentation) to demonstrate appropriate material management and disposal. If the Project IH Consultant or District determines that the Post-work Submittals are inadequate and/or require additional unanticipated review time, the Contractor will be required to correct the deficiencies and re-submit them for additional review. Any additional cost for the Project IH Consultant's time to perform a subsequent review(s) of Post-work Submittals will be borne by the Design-Builder.

1.3 QUALITY REQUIREMENTS

1.3.1 Reference Standards:

1.3.1.1 Regulations: Applicable regulations pertaining to this work include, but are not limited to, the following:

1.3.1.1.1 California Department of Occupational Safety and Health (Cal-OSHA) – General Industry Safety Orders Hazardous Waste Operations and Emergency Response (8 CCR §5192 et seq.).

1.3.1.1.2 California Health & Safety Code Section 25163(c).

1.3.1.1.3 Title 22, California Code of Regulations, Section 66261.24 et seq.

1.3.1.1.4 Title 22, California Code of Regulations, Section 66268.7(a)(4) et seq.

1.3.1.1.5 Title 22, California Code of Regulations, Section 66268.114 et seq.

1.3.1.1.6 California Safe Drinking Water and Toxic Enforcement Act of 1986 (Prop. 65).

1.3.1.1.7 Title 22, California Code of Regulations, Division 4.5, Chapter 23 – Universal Waste Rule - California Department of Toxic Substances Control (DTSC).

1.3.1.1.8 Title 40, Code of Federal Regulations, Part 61, Subpart M, National Emission Standards for Hazardous Air Pollutants (NESHAP) (U.S. EPA).

1.3.1.1.9 Title 40, Code of Federal Regulations, Part 82 et seq., Protection of Stratospheric Ozone. U.S. Environmental Protection Agency (U.S. EPA).

1.3.1.1.10 Title 40, Code of Federal Regulations, Part 761, et seq., Polychlorinated Biphenyl (PCBs) Manufacturing, Processing, Distribution in Commerce and Use Prohibitions. U.S. Environmental Protection Agency (U.S. EPA).

1.3.1.1.11 Title 49, Code of Federal Regulations, Part 172, U.S. Department of Transportation.

1.3.1.1.12 All other applicable Federal, State, and/or Local regulations, codes, and ordinances.

1.3.1.2 Applicability. The most current version of each document shall apply. Where conflicts among these specifications exist, the more strict or stringent requirement or interpretation shall apply.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 PREPARATION

3.1.1 Examination of Conditions: The Design/Builder must carefully examine the work site before beginning work and report any previously undisclosed or special conditions to the District. Except as may be otherwise stipulated elsewhere in the Contract Documents, starting the Work shall be interpreted as implied acceptance of conditions as they exist.

3.1.2 Responsibility for Work: By commencing the Work, Design/Builder acknowledges and agrees that it has sole and primary responsibility and obligation to the District to make inspections of its own work at all stages of the Work. This includes acknowledging and agreeing that it has sole responsibility to supervise or superintend the performance of the Work, and that said work will be in strict adherence to, and in compliance with, all applicable methods, materials, regulations, and required standards whether or not specified herein. Where conflicts arise between standards or regulations, the more stringent will apply.

3.1.3 Coordination of Work: The Design-Builder is responsible to coordinate all scheduling, phasing, and completion of the Work with the District and all other employers working on the job site.

3.1.4 Measurements and Quantities: The Design-Builder is responsible to field verify all measurements, dimensions and quantities before starting the Work. Discrepancies between plan and field dimensions or quantities must be reported to the District as soon as discovered.

3.2 WASTE MANAGEMENT AND DISPOSAL

3.2.1 General: The Design-Builder is responsible for the safe handling, storage and transportation of all hazardous waste generated by the Work. By commencing this work, the Design-Builder implicitly agrees to bear all costs arising from any claims, damages, losses, and/or clean-up expenses incurred which, as a result of the Design-Builder's negligence, result from a hazardous waste spill(s) or release(s) on the Project site and/or while hazardous waste is in transport to a waste disposal facility. The Design-Builder or its designated subcontractor waste hauler will deliver all waste materials to an appropriately designated waste disposal facility that is acceptable to the District and which is permitted in accordance with applicable regulations.

3.2.2 Storage Facilities: The Design-Builder will assure that all waste (hazardous and non-hazardous) generated by the Work is stored in a secured manner until received at the waste disposal facility. Debris bins, storage enclosures, etc. will be locked overnight and whenever the Design-Builder is off-site or unable to directly monitor the contents. The Design-Builder will ensure that the appropriate and required warning signs are posted on waste storage locations. The Design-Builder will be responsible to maintain the waste storage facilities in an orderly and well-kept condition at all times. The Design-Builder will conduct routine waste storage area inspections to assure that appropriate storage conditions are maintained. Waste is not to be co-mingled with stored non-waste material or equipment.

3.2.3 Off-site Shipment of Wastes: The Design-Builder shall notify the District or its Representative in advance, whenever hazardous waste must be removed from the site. A copy of the Uniform Hazardous Waste Manifest or any other documents required by Federal, State, or Local agencies shall be completed by the Design-Builder and submitted to the District or its Representative for review and signature prior to transporting hazardous waste materials to a disposal facility. The Design-Builder shall provide the District or its Representative with sufficient advance notice of the need to obtain manifest signatures, so as to not delay waste shipment or otherwise impede the Project Schedule. Only the District or its Representative has authority to sign or approve waste shipping documents. It is the Design-Builder's responsibility to obtain the necessary authorized signatures to ship wastes off-site. Delays or expenses resulting from the untimely waste document coordination shall be borne by the Design-Builder.

3.2.4 Waste Shipment Documentation: EPA Uniform Hazardous Waste Manifest form or such other form or forms required by law or regulation shall be used for all waste transported off-site for hazardous waste disposal. A non-hazardous waste Bill of Lading will be used for all waste transported off-site for disposal or recycling as non-hazardous waste. All waste loads removed from the Project Site will be weighed by a Certified Weighmaster prior to delivery to the disposal facility. Certified weight tickets shall be submitted by the Design-Builder as a part of the Post-job Submittals. At the conclusion of the Work, the Design-Builder will provide documentation that the hazardous waste was disposed of at an appropriate EPA-approved waste disposal facility. The documentation will be submitted as part of the Post-Job Submittals.

3.2.5 Shipment Containers: All waste shipping containers must be individually labeled with appropriate signage and warnings, as required by applicable regulations, codes and ordinances.

END OF SECTION

PART 1 – GENERAL

1.1 GENERAL REQUIREMENTS

1.1.1 The Criteria Documents indicate site development design intent for the 2118 Milvia Street Project at Berkeley City College, consistent with applicable building codes and standards.

1.1.2 The Criteria Documents show conceptual layout and design, with approximate quantities only. The specifications identify minimum levels of quality, materials and workmanship. If there are differences between this Section and the Criteria Documents submit RFI prior to submittal of Proposal for clarification.

1.2 SITE UTILITIES

1.2.1 General: The Design Builder shall prepare final plans and documents to the applicable codes and standards, obtain the necessary permits and local jurisdiction approvals, and coordinate all systems with final Construction Documents and the District.

1.2.2 Temporary Connections: Various utilities identified on the Criteria Documents requiring relocation may interrupt service to neighboring buildings that are intended to remain in operation. Sequence of construction operations shall be scheduled to minimize time of interrupted service. In some cases, temporary services to these buildings shall be required and shall be provided. Refer to the Criteria Documents for details.

1.2.3 Water: Complete existing and proposed water and fire water system descriptions and design criteria are provided in the Criteria Documents.

1.2.4 Sanitary Sewer: Criteria to be followed when designing the on-site and off-site sanitary sewer systems and descriptions of the existing and proposed sanitary sewer systems are provided in the Criteria Documents.

1.2.5 Electrical: Criteria Documents indicate relocation of existing electrical lines throughout the site. Criteria for equipment, pipe materials, and other requirements can be found in the Criteria Documents. The Design Builder shall prepare final plans and coordinate final design and equipment selection with the electrical vendors, PG&E and the District Representative.

1.2.6 Telecommunications, Fire Alarm, etc. Systems: Criteria Documents indicate routing of new communications utilities and relocation of existing communications utilities throughout the site. Criteria for equipment, pipe materials, and other requirements can be found in the District Standards.

1.3 GRADING AND EROSION CONTROL

1.3.1 The Design Builder shall produce and obtain approval of the site Storm Water Pollution Prevention Plan (SWPPP). Design Builder is responsible for obtaining the NPDES Notice of Intent and Notice of Termination from the State Water Resources Control Board and the District. Design Builder is responsible for implementing all Best Management Practices (BMPs) for preconstruction, construction and post-construction as recommended by the SWPPP document, which is an integral part of the final construction documents. Provide a copy of all such documents to the District Representative for approval.

1.3.2 Erosion control materials shall be stored onsite by the Design Builder and made available for immediate use. BMPs, including the placement of erosion control materials on or near the limits of work, shall be implemented as shown on the final approved SWPPP. Prevention and control measures shall be adjusted as the site conditions change with the phasing of the various areas of construction. All prevention and control measures required by the District, and the State Water Quality Act and incorporated into the SWPPP and BMPs shall be in place at the end of every workday.

1.3.3 Dirt and debris on the Project site and impacts to the neighboring communities is a major concern. Water shall be provided on-site to control dust during construction operations.

1.3.4 Permanent erosion control measures shall be provided as required by the Criteria Documents.

1.4 SITE DEVELOPMENT

1.4.1 Hardscape

1.4.1.1 Paving:

1.4.1.1.1 Primary pedestrian sidewalks are poured-in-place and colored and textured to match the design documents.

1.4.1.1.2 Vehicular traffic and traffic parking areas are generally asphaltic concrete with concrete curbs or curbs and gutters.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

PART 1 – GENERAL

RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Owner's Project Requirements (OPR) and Basis of Design Document (BOD) are included by reference for information only.

SUMMARY

Section Includes:

1. General requirements for coordinating and scheduling commissioning activities.
2. Commissioning meetings.
3. Commissioning reports.
4. Use of commissioning process test equipment, instrumentation, and tools.
5. Construction checklists, including, but not limited to, installation checks, startup, performance tests, and performance test demonstration.
6. Commissioning tests and commissioning test demonstration.
7. Adjusting, verifying, and documenting identified systems and assemblies.

As applied to the commissioning requirements for building enclosure (BECx), mechanical (including building automation system), electrical, plumbing (MEPCx), metering systems, security systems, renewable energy and irrigation controls.

Commissioning is a systematic process of verifying that the building systems perform interactively according to the construction documents and the Owner's operational needs. The commissioning process shall encompass and coordinate the system documentation, equipment startup, control system calibration, testing and balancing, performance testing and training. Commissioning during the construction and post-occupancy phases is intended to achieve the following specific objectives according to the contract documents:

8. Verify that the applicable equipment and systems are installed in accordance with the contact documents and according to the manufacturer's recommendations.
9. Verify and document proper integrated performance of equipment and systems.
10. Verify that Operations & Maintenance documentation is complete.
11. Verify that all components requiring servicing can be accessed, serviced and removed without disturbing nearby components including ducts, piping, cabling or wiring.

12. Verify that the Owner's operating personnel are adequately trained to enable them to operate, monitor, adjust, maintain, and repair building systems in an effective and energy-efficient manner.

13. Document the successful achievement of the commissioning objectives listed above.

Various sections of the project specifications require equipment startup, testing, and adjusting services. Requirements for startup, testing, and adjusting services specified in the technical sections of these specifications are intended to be provided in coordination with the commissioning services and are not intended to duplicate services. The DBE shall coordinate the work required by individual specification sections with the commissioning services requirements specified herein.

The commissioning process does not take away from or reduce the responsibility of the DBE to provide a finished and fully functioning product.

Related Requirements:

14. SECTION 01 11 00: SUMMARY OF WORK
15. SECTION 01 11 13: WORK COVERED BY CONSTRUCTION DOUCMENTS
16. SECTION 01 11 20: DESIGN SERVICES AND DELIVERABLES
17. SECTION 01 14 10: CONSTRUCTION MANAGEMENT PLAN
18. SECTION 01 33 50: SUBMITTALS
19. SECTION 01 35 00: CAL GREEN ENVIRONMENTAL REQUIREMENTS
20. SECTION 01 45 00: QUALITY CONTROL
21. SECTION 01 60 00: PRODUCT REQUIREMENTS
22. SECTION 01 70 00: EXECUTION AND CLOSEOUT REQUIREMENTS / DEMONSTRATION AND TRAINING
23. SECTION 01 73 00: EXECUTION
24. SECTION 01 77 00: CLEANING AND CLOSEOUT REQUIREMENTS

DEFINITIONS

Acceptance Criteria: Threshold of acceptable work quality or performance specified for a commissioning activity, including, but not limited to, construction checklists, performance tests, performance test demonstrations, commissioning tests, and commissioning test demonstrations.

Acceptance Phase: Phase of construction after startup and initial checkout when functional performance tests, O&M documentation review and training occurs.

Approval: Acceptance that a piece of equipment or system has been properly installed and is functioning in the tested modes according to the Contract Documents.

Architect/Engineer (A/E): The prime consultant (architect) and sub-consultants who comprise the design team. As it pertains to commissioning, the A/E is the design professional responsible for the design of the portion of the project being commissioned.

Basis of Design (BoD) document: A document that records concepts, calculations, decisions, and product selections used to meet the OPR and to satisfy applicable regulatory requirements, standards, and guidelines. The document includes both narrative descriptions and lists of individual items that support the design process.

Building Automation System (BAS): The central building control system and energy management system. Also referred to as a Controls System.

Building Management System (BMS): In general practice, this is just a different name for the BAS.

Building Envelope and Enclosure: The terms “building envelope and “building enclosure” as they refer collectively to all materials, components, systems, and assemblies intended to provide shelter and environmental separation between interior and exterior, or between two or more environmentally distinct interior spaces in a building or a structure.

b. Building Envelope Commissioning (BECx): The process that begins with the establishment of the OPR and endeavors to ensure that the exterior envelope and those elements intended to provide elemental separation within a building or structure meet or exceed the expectations of the Owner as defined in the OPR.

c. Building Envelope Commissioning (BECx) Construction Checklists: A form used by the DBE / subcontractor to verify that appropriate components are onsite, ready for installation, correctly installed, and functional.

d. Building Envelope Testing Matrix: A matrix table developed by the CxA outlining all project specific specified building envelope required testing. Identifying the required test (AAMA and or ASTM or other) to be performed including limits and responsibilities for performing and witnessing of the tests.

Construction-Operations Building Information Exchange (COBie): A performance specification that typically includes documentation from the Operations and Maintenance Data, in addition to other asset identification attributes.

Commissioning (Cx): - A quality-focused process for enhancing the delivery of a project. The process focuses upon verifying and documenting that the facility and all of its systems and assemblies are planned, designed, installed, tested, operated and maintained to meet the Owner's Project Requirements.

Commissioning Activity Schedule: A commissioning schedule designed to provide team members with a descriptive overview of commissioning activities as they relate to parallel construction activities regardless of changes to the construction schedule. (See Exhibit B this specification and Cx Plan)

Commissioning Authority (CxA): An entity identified by the Owner who leads, plans, schedules, and coordinates the commissioning team to implement the Commissioning Process. This role is also responsible for commissioning building enclosure systems. The CxA reports directly to the Owner without assuming oversight responsibilities.

Commissioning Coordinator (CxC): A person or entity employed by the DBE to manage, schedule and coordinate the commissioning process.

Commissioning Plan (Cx Plan): A document that outlines the organization, schedule, allocation of resources, and documentation requirements of the Commissioning Process. The Cx Plan, where applicable, may include appendices for the BECx Plan and MBCx Plans for one comprehensive commissioning plan document.

Construction Manager (CM): Owner's on-site representative in day-to-day activities, including supervision and management of construction activities.

Contract Documents: They include a wide range of documents that will vary from project to project and with the Owner's needs and regulations, laws, and countries, construction management process, subcontractor agreements or requirements, requirements and procedures for submittals, changes, and other construction requirements, timeline for completion, and other Construction Documents.

Contractor (C) or General Contractor (GC): The person or entity under contract with the Owner pursuant to the Construction Contract to serve as the General Contractor for the construction work. (this project is not using General contractor – rather DBE)

Control System: A component of environmental, HVAC, security and fire systems for reporting, monitoring and issuing of commands.

Computerized Maintenance Management System (CMMS): CMMS is a software toll used to schedule and record the operation and preventative maintenance schedule associated with equipment utilized in the facility.

DBE: Acronym for Design Build Entity. The person or entity under contract with the Owner pursuant to the Construction Contract to serve as the Design Building for the construction work.

Data Logging: Monitoring flows, currents, status, pressures, etc. of equipment using stand-alone data loggers separate from the control system.

DDC: Acronym for Direct Digital Controls. This is the most typical controls platform for BAS' / BMS'.

Deferred Functional Tests: Functional Tests that are performed later, after substantial completion, equipment, seasonal requirements, design, or other site conditions that disallow tests from being performed.

Deficiency or Commissioning Issue: A condition identified by the Commissioning Agent or other member of the Commissioning Team that adversely affects the commissionability, operability, maintainability, or functionality of a system, equipment, or component. A condition that is in conflict with the Contract Documents and/or performance requirements of the installed systems and components.

Factory Testing: Testing of equipment on-site or at the factory, by factory personnel with District's representative present.

Facilities Manager (FM): The Owner representative responsible for the operation and maintenance of the physical facilities and grounds.

Functional Performance Test (FPT): Test of the dynamic function and operation of equipment and systems using, simulations, manual (direct observation) and/or monitoring methods. Systems are tested under various modes. The systems are run through all the control system's sequences of operation and components are verified to be responding as intended per the specified sequence of operations. FPTs are performed after pre-functional checklists and startup is complete and are performed by the DBE / subcontractor and witnessed by the CxA.

Installation Verification: Observations or inspections that confirm the system or component has been installed in accordance with the contract documents and to industry accepted best practices.

Integrated System Testing: Integrated Systems Testing procedures entail testing of multiple integrated system's performance to verify proper functional interface between systems. Typical Integrated Systems Testing includes verifying that building systems respond properly to loss of utility, transfer to emergency power sources, re-transfer from emergency power source to normal utility source; interface between HVAC controls and Fire Alarm systems for equipment shutdown, interface between Fire Alarm system and elevator control systems for elevator recall and shutdown; interface

between Fire Alarm System and Security Access Control Systems to control access to spaces during fire alarm conditions; and other similar tests as determined for each specific project.

Issues Log: A formal and ongoing record of problems or concerns and their resolution that have been raised by members of the commissioning team during the course of the commissioning process. Maintained by the CxA.

Monitoring: The recording of equipment operation parameters (flow, current, status, pressure, etc.) using data loggers or the trending capabilities of control systems.

Monitoring Based Commissioning (MBCx): A subset of commissioning that verifies the presence and adequate performance of the metering in a building, in addition to the process of performing monitoring algorithms on a building automation system for predictive maintenance and monitoring.

Owner's Project Requirements (OPR): A collection of documents that details the functional requirements of Project and expectations of how it will be used and operated. This document includes Project and design goals, measurable performance criteria, budgets, schedules, success criteria, and supporting information.

Owner: Project Owner or designated representative.

Owner-Contracted Tests: Tests paid for by the Owner outside the Contract and for which the CxA does not oversee. These tests will not be repeated during functional tests if properly documented.

Overwritten Value: Writing over a sensor value in the control system to see the response of a system (e.g., changing the outside air temperature value from 50ºF to 75ºF to verify economizer operation). See also "Simulated Signal."

Phased Commissioning: Commissioning that is completed in phases (by floors, for example) due to the size of the structure or other scheduling issues, in order minimize the total construction time.

Pre-functional Checklists (PFC): Checklists prepared by the CxA, in conjunction with the Subs, and provided to the DBE / subcontractor to document the complete installation of equipment or systems. These checklists are essentially elementary component tests to verify proper installation of equipment and are primarily static inspections and procedures to prepare the equipment or system for initial operation (e.g., belt tension, oil levels OK, labels affixed, gages in place, sensors calibrated, amp readings, etc.) Pre-functional checklists are completed by the DBE / subcontractors prior to or along with the manufacturer's start-up procedure and checklist.

Pre-Functional Test (PFT): An inspection or test that is done before functional testing. PFT's include installation verification and system and component start up tests.

Sampling: Functionally testing only a fraction of the total number of identical or near identical pieces of equipment.

Seasonal Performance Tests: Functional Tests that are deferred until the system(s) will experience conditions closer to their design conditions.

Site Observation Visit: On-site inspections and observations made by the Commissioning Agent for the purpose of verifying component, equipment, and system installation, to observe DBE / subcontractor testing, equipment start-up procedures, or other purposes.

Start-up: The initial starting or activating of dynamic equipment or the initial energization and programming of control systems.

Systems, Subsystems, and Equipment: Where these terms are used together or separately, they shall mean "as-built" systems, subsystems, and equipment.

Test, Adjust, Balance (TAB): A systematic process or service applied to heating, ventilating and air-conditioning (HVAC) systems and other environmental systems to achieve and document air and hydronic flow rates. The standards and procedures for providing these services are referred to as “Testing, Adjusting, and Balancing” and are described in the Procedural Standards for the Testing, Adjusting and Balancing of Environmental Systems, published by NEBB or AABC.

Test Procedures: Written details developed by the CxA, and included in the FPTs, that details the expectations for tests conducted on components, equipment, assemblies, systems, and interfaces among systems.

Thermal Scans: Thermographic pictures taken with an Infrared Thermographic Camera. Thermographic pictures show the relative temperatures of objects and surfaces and are used to identify leaks, thermal bridging, thermal intrusion, electrical overload conditions, moisture containment, and insulation failure.

Trends / Trending: Recordings of control point value history or monitoring value history over time. Trends are automatically recorded by the building automation system or other electronic data gathering equipment. Trend data gathered over a period of time is often used to analyze and verify proper performance of equipment, systems, or sequence of operations.

Training Plan: A written document that details the expectations, schedule and deliverables of commissioning process activities related to training of project operating and maintenance personnel, users and occupants.

Trending: The monitoring by a building management system or other electronic data gathering equipment and analyzing of the data gathered over a period of time to verify proper equipment or systems sequence of operations.

Warranty Phase Commissioning: Commissioning efforts executed after a project has been completed and accepted by the Owner. Warranty Phase Commissioning includes follow-up on verification of system performance, measurement and verification tasks and assistance in identifying warranty issues and enforcing warranty provisions of the construction contract.

Warranty Visit: A commissioning meeting and site review where all outstanding warranty issues and deferred testing is reviewed and discussed.

COMMISSIONING TEAM INTERACTION & PROCESS

A project team will be created to coordinate the commissioning effort. This team will coordinate and communicate with the rest of the project team, attend meetings, and solve problems. This team includes representatives from the DBE, subcontractors, and owner.

The DBE shall in addition to their representative also appoint a representative from each subcontractor involved in commissioned systems including mechanical, electrical, controls, test adjust balance, plumbing, building envelope, and security systems.

With these fundamental practices in mind, the commissioning process described herein has been developed to recognize that, in the execution of the Commissioning Process, the Commissioning Agent must develop effective methods to communicate with every member of the construction team involved in delivering commissioned systems while simultaneously respecting the exclusive contract authority of the Construction Project Manager (CM). Thus, the procedures outlined in this specification must be executed within the following limitations:

1. No communications (verbal or written) from the Commissioning Agent shall be deemed to constitute direction that modifies the terms of any contract between the Owner and the DBE.
2. Commissioning Issues identified by the Commissioning Agent will be delivered to the Construction Manager and copied to the designated Commissioning Representatives for the DBE and subcontractors on the Commissioning Team for information only in order to expedite the communication process. These issues must be understood as the professional opinion of the Commissioning Agent and as suggestions for resolution.
3. In the event that any Commissioning Issues and suggested resolutions are deemed by the Construction Manager to require either an official interpretation of the construction documents or require a modification of the contract documents, the Construction Manager will issue an official directive to this effect.
4. All parties to the Commissioning Process shall be individually responsible for alerting the Construction Manager of any issues that they deem to constitute a potential contract change prior to acting on these issues.
5. Authority for resolution or modification of design and construction issues rests solely with the Construction Manager, with appropriate technical guidance from the Architect/Engineer and/or Commissioning Agent.

OWNER'S RESPONSIBILITIES

Participate in resolution of issues that may occur as a result of the commissioning process.

Assign operation and maintenance personnel and schedule them to participate in commissioning team activities including, but not limited to, the following:

6. Coordination meetings.
7. Training in operation and maintenance of systems, subsystems, and equipment.
8. Testing meetings.
9. Demonstration of operation of systems, subsystems, and equipment.
10. Provide feedback to Cx for the project warranty phase testing and review, as well as access to the site and controls system during the warranty test.

COMMISSIONING COORDINATION RESPONSIBILITIES

Design Build Entity (DBE) Responsibilities

11. Provide utility services required for the commissioning process.
12. DBE is responsible for construction means, methods, job safety, or management function related to commissioning on the job site.
13. DBE shall assign representatives with expertise and authority to act on behalf of the DBE and schedule them to participate in and perform commissioning team activities including, but not limited to, the following:
    1. Participate in construction-phase commissioning meetings including controls coordination meeting to review and resolve any issues with the sequence of operations.
    2. Participate in maintenance orientation and inspection.
    3. Participate in operation and maintenance training sessions.
    4. Certify that Work is complete and systems are operational according to the Contract Documents, including calibration of instrumentation and controls.
    5. Perform quality control of all work and certify it is complete prior to request for inspection.
    6. Evaluate performance deficiencies identified in test reports and, in collaboration with entity responsible for system and equipment installation, recommend corrective action.
14. DBE shall integrate all commissioning activities into DBE’s master construction schedule.
15. DBE shall provide a means to effectively commission the BMS system including the following at minimum:
    1. Schedule the controls DBE that was an integral part of programming the building BMS to run the tests
    2. Provide a table with chairs

3. Provide a 17” 1080p monitor with 10' cables for connection to the controls DBE’s laptop.

16. DBE or Subcontractors shall provide a COBie information or delivery plan acceptable to the scope of work described in Specification Sections: 01 33 00, 01 60 00, 01 70 00, 01 73 00, 01 77 00, and 01 81 13.

17. Subcontractors shall assign representatives with expertise and authority to act on behalf of subcontractors and schedule them to participate in and perform commissioning team activities including, but not limited to, the following:

    1. Participate in construction-phase coordination meetings.

    2. Participate in maintenance orientation and inspection.

    3. Complete pre-functional checklists for all equipment. Submit completed forms with start-up reports immediately after start up.

    4. Complete building enclosure construction checklists as required throughout the installation of building enclosure systems as identified. Submit completed forms upon installation completion of each building enclosure system.

    5. Schedule and perform building enclosure testing as specified in the technical specification sections with CxA as witness.

    6. Schedule and perform duct air leakage testing as specified in the technical specification sections with CxA as witness.

    7. Provide flushing plans, disinfection reports and water treatment reports to the CxA for review.

    8. Participate in pre-TAB meeting and jobsite inspections to verify TAB readiness.

    9. Provide draft completed TAB report to CxA for review. CxA will identify up to 20% of TAB report for TAB subcontractor to demonstrate compliance to the completed TAB report.

    10. Participate in procedures meeting for testing.

    11. Perform point-to-point, calibration and checkout of the building automation system and provide completed report to the CxA for review.

    12. Participate in final review at acceptance meeting.

    13. Provide schedule for operation and maintenance data submittals, equipment startup, and testing to CxA for incorporation into the commissioning plan. Update schedule on a weekly basis throughout the construction period.

    14. Provide information to the CxA for developing construction-phase commissioning plan.

15. Participate in training sessions for operation and maintenance personnel.
16. Verify that all systems function correctly by testing each mode of operation, alarm and system function.
17. Gather and submit operation and maintenance data for systems, subsystems, and equipment to the CxA, as specified.
18. Perform quality control of all work and certify it is complete prior to request for inspection.
19. Complete and sign Systems Functional Testing Readiness Certification and Notification Letter for Commissioning and provide to CxA (See EXHIBIT A of this specification section).
20. Provide technicians who are familiar with the construction and operation of installed systems and who shall develop specific test procedures and participate in testing of installed systems, subsystems, and equipment.
21. DBE to provide to the CxA control point history trend reports of energy and water meter data aggregated by monthly usage for each meter and any related calculated metering trends. Provide these trends for a full year of data once meters have been confirmed to be reporting correctly.
22. DBE to provide to the CxA control point history trend reports of all systems operation at startup and post occupancy.
23. DBE to provide to the CxA the design lighting levels per each space.
24. DBE to provide to the CxA the building occupancy schedules and equipment run time schedules for the “as-built” condition(s).
25. DBE to provide to the CxA the As-Built drawings / documents. Including the BoD, and as-programmed setpoints and minimum outside air requirements for each system.
26. Perform seasonal testing, at the direction of the CxA, to prove functional performance of the HVAC and controls in the opposite season.
27. Perform 10-month Cx warranty review. Intent is to review the operation of the commissioned systems onsite prior to the expiration of warranty. DBE should be prepared to review open Cx Master Issues Log items for completion, warranty log issue review, as well assessment of the functionality and operation of the commissioned building systems. Input will be solicited from building owners on operation and performance of the building systems.

Architect and Design Engineer Responsibilities

18. Responsible for developing the construction contract documents and clarifying the design intent during the construction phase of the project.

19. Performs construction observation.
20. Contracted to DBE.
21. Coordinate with the CxA specified building enclosure test plans developed by the architect and or CxA.

CxA's Responsibilities

22. Organize and lead the commissioning team.
23. Prepare a Commissioning Plan. Collaborate with design team, owner, DBE and subcontractors to develop test and inspection procedures. Identify commissioning team member responsibilities, by name, firm, and trade specialty, for performance of each commissioning task.
24. Work with the DBE to schedule commissioning activities. The DBE shall integrate all commissioning activities into the master construction schedule. All parties will address scheduling issues in a timely manner in order to expedite the commissioning process.
25. Review and comment on submittals for compliance with the approved project documents and identify any potential conflicts.
26. Conduct commissioning team meetings for the purpose of coordination, communication, and conflict resolution; discuss progress of the commissioning processes. The CxA shall prepare and distribute minutes to commissioning team members and attendees within five (5) workdays of the commissioning meeting.
27. At the beginning of the construction phase, conduct an initial construction-phase coordination meeting for the purpose of reviewing the commissioning activities and establishing tentative schedules for permanent power; operation and maintenance data submittals; operation and maintenance training sessions; TAB Work; and Project completion.
28. Periodically observe and inspect construction and report progress and deficiencies. In addition to compliance with the Contract Documents, inspect systems and equipment installation for adequate accessibility for maintenance and component replacement or repair.
29. Prepare Project-specific pre-functional checklists, functional test procedures checklists, and building enclosure construction checklists.
30. Compile test data, inspection reports, and certificates and include them in the systems manual and commissioning report.
31. Review and comment on operation and maintenance documentation for compliance with the Contract Documents. Operation and maintenance documentation requirements are specified in Division 01 Section "Operation and Maintenance Data."

32. Review DBE's operation and maintenance training program. Operation and maintenance training is specified in Division 01 Section "Demonstration and Training."
33. Prepare commissioning status reports.
34. Perform and direct warranty functional testing and site review at a point in time 10 months after the start of warranty.
35. Assemble the final commissioning documentation, including the Commissioning Report including applicable Project Record Documents.

COMMISSIONING DOCUMENTATION

Commissioning Plan: A document, prepared by CxA, that outlines the process, schedule, allocation of resources, and documentation requirements of the commissioning effort, and shall include, but is not limited to the following:

36. Description of the organization, layout, and content of commissioning documentation to be provided along with identification of responsible parties.
37. Identification of systems and equipment to be commissioned.
38. Description of the level of commissioning for each system
39. Description of schedules for testing procedures along with identification of parties involved in performing and verifying tests.
40. Identification of items that must be completed before the next operation can proceed.
41. Description of responsibilities of commissioning team members.
42. Description of observations to be made.
43. Description of requirements for operation and maintenance training, including required training materials.
44. Provide a schedule for commissioning activities with specific dates coordinated with overall construction schedule.
45. Define the process for completing pre-functional and startup checklists for systems, subsystems, and list of specific equipment requiring these checklists.
46. Include Step-by-Step procedures for Functional Testing of systems, subsystems, and equipment with descriptions for methods of verifying relevant data, recording the results obtained, and listing parties involved in performing and verifying tests.

Pre-Functional Checklists: CxA shall develop pre-functional checklists for all equipment to be commissioned. Pre-Functional Checklists shall be completed and signed by the DBE / subcontractor, verifying that systems, subsystems, equipment, and associated controls are ready for testing. The Commissioning Agent may spot check Pre-Functional Checklists to verify accuracy and readiness for testing. Inaccurate or

incomplete Pre-Functional Checklists shall be returned to the DBE / subcontractor for correction and resubmission.

Site Visit Reports: CxA shall record test data, observations, and measurements on site visit forms. Updated Issues Log, photographs and other means appropriate for the application shall be included with Report.

Start-Up Reports: Subcontractor/Manufacturer created forms that document that factory start-up procedures have been followed for all equipment and systems to be commissioned. Provided by subcontractors.

Functional Performance Testing: CxA shall develop functional performance test procedures for all equipment and systems to be commissioned. Site Visit Reports: CxA shall record test data, observations, and measurements on site visit forms. Photographs and other means appropriate for the application shall be included with data.

Building Enclosure Construction Checklists: CxA shall develop BECx checklists for the installation and verification of procedures.

Test and Inspection Reports: CxA shall compile test and inspection reports and test and inspection certificates and include them in Systems Manual and commissioning report.

Commissioning Schedule: CxA shall review and provide input to the master project and construction schedules for commissioning activities.

Issues Log: CxA shall prepare and maintain an issues log that describes installation, and performance issues that are at variance with the Contract Documents. CxA will identify and track issues as they are encountered, documenting the status of unresolved and resolved issues.

47. Creating an Issues Log Entry:
    1. Identify the issue with unique numeric or alphanumeric identifier by which the issue may be tracked.
    2. Assign a descriptive title of the issue.
    3. Identify issue date.
    4. Include information that may be helpful in diagnosing or evaluating the issue.
    5. Note recommended corrective action.
    6. Identify commissioning team member responsible for corrective action.
    7. Identify person documenting the issue.
48. Documenting Issue Resolution:
    1. Log date correction is completed or the issue is resolved.
    2. Collect descriptions from contracting team.

a. of corrective action or resolution taken
b. description of diagnostic steps taken to determine root cause of the issue, if any.
c. Statement that the correction was completed and system, subsystem, and equipment are ready for retest, if applicable.

Commissioning Report: CxA shall document results of the commissioning process including performance of systems, subsystems, equipment and issues. The commissioning report shall indicate whether systems, subsystems, and equipment have been completed and are performing according to the OPR, BoD and Contract Documents. The commissioning report shall include, but is not limited to, the following:

49. Discussion of performance of commissioned systems including any variance from OPR, BOD and the Contract Documents; record of conditions; and, if appropriate, recommendations for resolution. This report shall be used to evaluate systems, subsystems, and equipment and shall serve as a future reference document during OWNER occupancy and operation. It may also include a recommendation for accepting or rejecting systems, subsystems, and equipment.
50. Commissioning Plan.
51. Testing plans and reports.
52. Issues log.
53. Completed test checklists.
54. Listing of off-season test(s) not performed and a schedule for their completion.

Systems Manual: CxA shall gather required information and compile Systems Manual. Systems manual shall include, but is not limited to, the following:

55. As-built system narratives, schematics, and list of installed equipment
56. Operation and maintenance data

CXA SUBMITTALS

Commissioning Plan: CxA shall submit a draft commissioning plan. Deliver one copy to DBE and one to OWNER. Present submittal in sufficient detail to evaluate data collection and arrangement process. One copy, with review comments, will be returned to the CxA for preparation of the final commissioning plan.

Pre-functional Checklists: CxA shall submit sample checklists and forms to DBE and subcontractors for review, comment and approval. DBE / subcontractor completed pre-functional checklists are required to be submitted for review and approved prior to proceeding with functional performance testing.

Functional Test Plan: CxA shall submit draft Functional Test Plan and checklists for comment. The final Functional Test Plan will be submitted and used for functional testing.

Site visit reports: CxA shall submit site visit reports as they are created.

Final Commissioning Report: CxA shall submit the draft commissioning report. One copy, with review comments, will be returned to the CxA for preparation of final submittal. The final report submittal must address previous review comments.

The CxA will provide appropriate DBE / subcontractors with a specific request for the type of submittal documentation the CxA requires facilitating the commissioning work. These requests will be integrated into the normal submittal process and protocol of the construction team. At minimum the request will include the manufacturer and model number, the manufacturer printed installation and detailed start-up procedures, sequences of operation, O&M data, performance data, any performance test procedures, control drawings and details. In addition, the factory checkout sheets or field technicians shall be submitted for review

COORDINATION

Scheduling: The DBE shall work with the Commissioning Agent to incorporate the commissioning activities into the construction schedule. The Commissioning Agent will provide sufficient information (including, but not limited to, tasks, durations and predecessors) on commissioning activities to allow the DBE to schedule commissioning activities. All parties shall address scheduling issues and make necessary notifications in a timely manner in order to expedite the project and the commissioning process. The DBE shall update the Master Construction schedule as directed by the Owner.

Coordinating Meetings: CxA shall conduct coordination meetings of the commissioning team as needed to review progress on the commissioning plan, to discuss scheduling conflicts, and to discuss upcoming commissioning process activities.

Pretesting Meetings: CxA shall conduct pretest meetings with the commissioning team to review startup reports, coordinate controls sequence of operations, review pretest inspection results, review testing and balancing procedures, review testing personnel and instrumentation requirements, and manufacturers' authorized service representative services for each system, subsystem, equipment, and component to be tested.

Testing Coordination: CxA shall coordinate with the Owner representative and DBE to plan the sequence of testing activities to accommodate required quality-assurance and -control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.

57. Schedule times for tests, inspections, obtaining samples, and similar activities.

e. The Subcontractors shall provide sufficient notice to the CxA (2 weeks minimum) regarding their completion schedule for the pre-functional checklists and startup of all equipment and systems. The DBE / subcontractor(s) will use the Readiness Letter in EXHIBIT A to notify the CxA that the systems are ready.

General

1. Functional testing is conducted after pre-functional testing and startup has been satisfactorily completed.
2. The BAS is sufficiently tested and approved by the CxA before it is used for TAB or to verify performance of other components or systems.
3. The air and water balancing is completed and approved before functional testing of air-related or water-related equipment or systems.
4. Testing proceeds from components to subsystems to systems.
5. When the proper performance of all interacting, individual systems has been achieved, the interface or coordinated responses between systems is checked.

PRODUCTS (Not Used)

EXECUTION

BUILDING ENCLOSURE CONSTRUCTION CHECKLISTS

Building Enclosure Construction Checklists are developed by the CxA and completed by the appropriate installing subcontractors for all major building enclosure systems being commissioned. The checklists are to be completed during the installation phase of each system. These checklists are to ensure that each building enclosure system is being installed according to the specified installation standards. The building enclosure checklists are in addition to the manufacturer's installation checklists and DO NOT replace the manufacturer's installation checklists. The Subcontractor and vendors shall also execute manufacturer's installation checklists and provide CxA with a copy of the signed and dated completed checklists which will be submitted with the Building Enclosure Construction Checklists.

Execution of Building Enclosure Construction Checklists

6. Construction checklists will be provided to the CM and DBE by the CxA.
7. The DBE shall maintain a master copy of signed checklists.
8. The installing subcontractors shall update the checklists as work is completed. Only individuals that have direct knowledge and witnessed that a line-item task on the pre-functional checklist was actually performed shall initial or check that item off.
9. The CxA will periodically review the checklists for completeness and report on progress at the Cx meetings.

SUBMITTALS

The CxA shall provide the Design Builder with a specific request for the type of submittal documentation required to facilitate the commissioning work. These requests shall be integrated into the submittal process and protocol of the project.

The submittal shall be reviewed and approved by the Design Builder's design team prior to being submittal to the CxA.

At minimum, the submittal request shall include:

10. Equipment manufacturer and model number.
11. Selection and operating data (Example: Flows, pressures, temperatures, fan curves, etc.).
12. The manufacturer's printed installation and detailed start-up procedures.
13. Full sequences of operation and control drawings.
14. O&M data, performance data, performance test procedures, details, and results of owner-contracted tests.
15. Installation and checkout materials that are shipped inside the equipment and the manufacturer field checkout sheet forms to be used by the factory or field technicians.

The CxA shall review and approve submittals related to the commissioned equipment for conformance to the Owner Project Requirements, Design documents and as it relates to the commissioning process, the functional performance of the equipment, completeness and adequacy for developing test procedures.

The CxA's review is intended to aid in the development of functional testing procedures and to verify compliance with equipment specifications. The Commissioning authority shall notify the Owner and the DB of items missing or areas that are not in conformance with contract documents or Owner Project Requirements and which require resubmission.

The CxA may request additional design narrative from the A/E and Controls Subcontractor, depending on the completeness of the basis of design documentation and sequences provided with the design document Specifications.

These submittals to the CxA do not constitute compliance for O&M manual documentation. The O&M manuals are the responsibility of the Design Builder, though the CxA will review and approve them.

PRE-FUNCTIONAL CHECKLISTS AND FACTORY START UP REPORTS

The following procedures apply to all equipment to be commissioned.

Pre-functional Checklists are developed by the CxA and completed by the appropriate installing DBE / subcontractors for all major equipment and systems being

commissioned before functional testing can begin. The checklist captures equipment nameplate and characteristics data, confirming the as-built status of the equipment or system. These checklists also ensure that the systems are complete and operational, so that the functional performance testing can be scheduled. The Subcontractors and vendors shall execute factory startup and provide the CxA with a copy of the signed and dated completed start-up checklists which will be submitted with the Pre-Functional checklists.

Startup and Initial Checkout Plan: The Subcontractor shall develop detailed startup plans for all equipment. The primary role of the DBE / subcontractor in this process is to ensure that there is written documentation that each of the manufacturer recommended procedures have been followed and completed. Parties responsible for startup shall be identified in the Startup Plan and in the checklist forms.

16. The full startup plan shall at a minimum consist of the following items:
    1. The Pre-Functional Checklists.
    2. The manufacturer's standard written startup procedures copied from the installation manuals with check boxes by each procedure and a signature block added by hand at the end.
    3. The manufacturer's normally used field checkout sheets.

The Commissioning Agent will review/approve the full start-up plan.

Execution of Pre-functional Checklists and Startup.

17. Pre-Functional checklists will be provided to the project site by the CxA.
18. The DBE shall maintain a master copy of signed checklists.
19. The installing subcontractors shall update the checklists as work is completed. Only individuals that have direct knowledge and witnessed that a line-item task on the pre-functional checklist was actually performed shall initial or check that item off.
20. The CxA will periodically review the checklists for completeness and report on progress at the Cx meetings.
21. DBE will provide electronic copies of completed checklists to the CxA.

BAS Startup Testing, Adjusting, and Calibration

22. Work and/or systems installed under this Division shall be fully functioning prior to Demonstration and Acceptance Phase. DBE / Subcontractor shall start, test, adjust, and calibrate all work and/or systems under this Contract, as described below:
    1. Inspect the installation of all devices. Review the manufacturer’s installation instructions and validate that the device is installed in accordance.

2. Verify proper electrical voltages and amperages, and verify that all circuits are free from faults.

3. Verify integrity/safety of all electrical connections.

4. Coordinate with TAB subcontractor to fine tune control settings that are determined from balancing and testing procedures. Record the following control settings as obtained from TAB subcontractor, and note any TAB deficiencies in the BAS, Pre-functional checklists and initiate an associated Action Item:

    a. Optimum duct static pressure setpoints for VAV air handling units.

    b. Minimum outside air damper settings for air handling units.

    c. Optimum differential pressure setpoints for variable speed pumping systems.

    d. Calibration parameters for flow control devices such as VAV boxes and flow measuring stations.

    e. BAS subcontractor shall provide access to the front-end Building Automation System as a minimum to the TAB and CxA to facilitate calibration. Connection for any given device shall local to it (i.e: at the VAV box or at the thermostat). Shall be made at front end and shall allow querying and editing of parameters required for proper calibration and start up.

5. Test, calibrate, and set all digital and analog sensing, and actuating devices. Calibrate each instrumentation device by making a comparison between the BAS display and the reading at the device, using an instrument traceable to the National Bureau of Standards, which shall be at least twice as accurate as the device to be calibrated (e.g., if field device is +/-0.5% accurate, test equipment shall be +/-0.25% accurate over same range). Record the measured value and displayed value for each device in the BAS Pre-functional Report.

6. Check each digital control point by making a comparison between the control command at the controller and the status of the controlled device. Check each digital input point by making a comparison of the state of the sensing device and the OI display. Record the results for each device in the BAS Pre-functional checklists.

7. Verify proper sequences by using the approved checklists to record results and submit with BAS Pre-functional checklists. Verify proper sequence and operation of all specified functions. There is inherent duplication between the functional performance testing of the Testing Subcontractor, and the thorough checking testing of the sequences by the BAS. Generally, the sequence checkouts indicated as the responsibility of the

Testing Subcontractor under functional testing, must first be tested by the BAS under pre-functional testing.

8. Verify proper systems operation under emergency power. Cooperate and coordinate with Testing Subcontractor and CxA for comprehensive building power outage tests.
9. Verify all safety devices trip at appropriate conditions. Adjust setpoints accordingly.
10. Verify that all alarm thresholds for all analog devices are entered. Request direction from Owner as to alarm threshold parameters.
11. Tune all control loops to obtain the fastest stable response without hunting, offset or overshoot.

For interface and DDC control panels:

23. Ensure devices are properly installed with adequate clearance for maintenance and clearly labeled in accordance with the record drawings
24. Ensure terminations are safe, secure and labeled in accordance with the record drawings
25. Check power supplies for proper voltage ranges and loading.
26. Ensure wiring and tubing are run in a neat and workman-like manner, either bound or enclosed in trough.
27. Check for adequate signal strength on communication networks.
28. Check for stand-alone performance of controllers by disconnecting the controller from the LAN. Verify the event is enunciated at OIs. Verify that the controlling LAN reconfigures as specified in the event of a LAN disconnection.
29. Ensure that controller memory and control network through-put are adequate to support the extensive trending requirements. Reconfigure the system to provide a reliable and robust system as necessary.
30. Ensure all outputs and devices fail to their proper positions/states.
31. Ensure buffered and/ or volatile information is held through power outage.
32. With all system and communications operating normally, sample and record update/enunciation times for critical alarms fed from the panel to the OI.
33. Check for adequate grounding of all DDC panels and devices.

Meters

34. All meters (Electric, Gas, Water) calibration will be verified in the field after installation.

35. All Meters will be verified by the DBE / subcontractor to be reporting correctly; including – correct units, intervals, and trending back to the DDC controls system operator workstation graphics.

For Operator Interfaces:

36. Verify all elements on the graphics are functional and properly bound to physical devices and/or virtual points and that hot links or page jumps are functional and logical.
37. Output all specified system reports for review and approval.
38. Verify the alarm printing and logging is functional and per requirements
39. Verify trend archiving to disk and provide a sample to the CxA for review.
40. Verify paging/dial out alarm enunciation is functional.
41. Verify functionality of remote OIs and that a robust connection can be established consistently.
42. Verify that required third party software applications required with the bid are installed and functional.
43. Verify proper interface with fire alarm system.

Submit Start-Up Test Report. Report shall be completed, submitted and approved prior to functional testing.

Deficiencies, Non-Conformance and Approval in Checklists and Startup.

44. The DBE / Subcontractor shall clearly list any outstanding items of the initial start-up and pre-functional procedures that were not completed successfully, at the bottom of the procedures form or on an attached sheet. The procedures form and any outstanding deficiencies are provided to the CxA within two days of test completion.
45. The CxA reviews the report and reports to the Owner Representative. The CxA shall work with the DBE / subcontractor and vendors to correct and retest deficiencies or uncompleted items.

FUNCTIONAL PERFORMANCE TESTING

Common Elements for All Systems

46. Have the required submitted documentation convenient to testing area. Validate that all required documentation has been submitted and is per the contract requirements (very cursory review). CxA shall review the content of the documentation and validate that it is per contract documents.
47. CxA shall review the startup documentation at the start of functional performance testing. Review the startup tests and checklist documentation. CxA shall validate that startup is acceptably executed and complete. CxA shall ensure that any

items indicated as outstanding in the checklists is entered as an Action Item and enter one if it is not. The checklists and start up tests/measurements shall be spot checked at the beginning of FPT to ensure accuracy. CxA shall complete a test that indicates he has reviewed the pre-functional checklists and finds them acceptable and note any outstanding items.

48. CxA shall check for and as applicable direct DBE / subontractor to demonstrate that access is sufficient to perform required maintenance.
49. CxA shall validate that all prerequisite work is complete and confirm via a test record that the CxA feels it is.
50. Specifically check labeling and ensure conformance to contract requirements.
51. Check proof indication, alarming on failure and restart/acknowledgement as applicable.
52. CxA shall observe operating conditions encountered at the start of FPT. CxA shall examine for normal functionality and record parameters as a test.
53. All dynamic systems powered by electricity shall be tested to simulate a power outage to ensure proper sequencing. Those on emergency power or uninterruptible power shall be tested on all sources.
54. CxA shall inspect the installation and compare it to contract requirements. Record the inspection as a test.
55. Capacities and adjusted and balanced conditions as applicable will generally be checked.
56. Verify all sequence modes and sequences of operation. CxA must initiate all modes and may not refer to or rely on a pre-functional test done by the BAS. Some examples of generic modes that apply to most systems include:
    1. Off Mode
    2. Failed Mode: Proof, safeties, power outage etc. See below for stress testing.
    3. Start Sequence in various modes
    4. Stop sequences in various modes
57. All adjusted, balanced, controlled systems shall be assessed to determine the optimal setting for the system as applicable. The optimal settings should be determined to establish reliable, efficient, safe and stable operation.
58. Dynamic Graphics: The graphic for all components, systems, and areas sampled and required to be represented by a graphic shall be checked for adequacy and accuracy. Furthermore, when setpoints are required to be adjustable, verify that they can be adjusted directly from the graphic screen.

59. All interfaces between two systems or equipment of different manufacturers must be checked for accuracy and functionality.

60. “Stress Testing”: CxA shall analyze systems to identify possible conditions where functionality may be compromised. CxA shall design non-destructive tests that will demonstrate either the automated response to the conditions or so that team can identify the best method for responding or fixing the condition. All tests and finding shall be documented.

61. COBie Data: The Construction-Operations Building Information Exchange (COBie) for each piece of equipment is to be provided during the submittal phase. Information included in the COBie submittal should contain at minimum the manufactures O&M manuals, physical location, asset information including, but not limited to the manufacture’s serial and model numbers, the owner’s equipment identification tag, and installation date. Since COBie Data is available in many different formats, a compatible format is to be provided that will work with the owners Computerized Maintenance Management Software (CMMS). In general, information pertinent to Specification 01 78 00 shall be included in the COBie.

Objectives and Scope. The objective of functional performance testing is to demonstrate that each system is operating according to the Contract Documents. Each system will be tested to verify that the system response is as designed. HVAC systems will be checked for conformance to the design sequences of operation and stable control, lighting control will be checked in each type of lighting area, security system cameras will be verified functional and able to see the correct areas. Proper system responses to such conditions as power failure, out of limit condition, equipment failure, etc. shall also be tested.

Early duct air leakage tests shall be performed to ensure green and building code compliance. Point-to-point testing will be performed by controls subcontractor on all applicable systems, with results given to CxA prior to functional performance testing.

Development of Test Procedures: The test procedures are written by the CxA based upon the final operational sequences from available project documentation. The CxA shall develop specific test procedures and forms to verify and document proper operation of each system. Prior to execution, the CxA shall provide a copy of the test procedures to the DBE / subcontractor who shall review the tests for feasibility, safety, equipment and warranty protection. The test procedure checklists developed by the CxA shall include the following information:

62. System and equipment or component name(s).

63. Equipment location and ID number.

64. Date.

65. Project name.

66. Participating parties.
67. Reference to the specification section describing the test requirements, if applicable.
68. A copy of the specific sequence of operations.
69. Prerequisites for the test.
70. Special cautions, alarm limits, etc.
71. Specific step-by-step procedures to execute the test.
72. Acceptance criteria of proper performance with a Yes / No/NA check box.
73. A section for comments.

Test Methods.

74. Systems Functional Performance Testing shall be achieved by manual testing (i.e., persons manipulate the equipment and observe performance) and/or by monitoring the performance and analyzing the results using the control system's trend log capabilities or by standalone data loggers. The DBE / Subcontractor and Commissioning Agent shall determine which method is most appropriate for tests that do not have a method specified.
    1. Simulated Conditions: Simulating conditions (not by an overwritten value) shall be allowed, although timing the testing to experience actual conditions is encouraged wherever practical.
    2. Overwritten Values: Overwriting sensor values to simulate a condition, such as overwriting the outside air temperature reading in a control system to be something other than it really is, shall be allowed, but shall be used with caution and avoided when possible. Such testing methods often can only test a part of a system, as the interactions and responses of other systems will be erroneous or not applicable. Simulating a condition is preferable. e.g., for the above case, by heating the outside air sensor with a hair blower rather than overwriting the value or by altering the appropriate setpoint to see the desired response. Before simulating conditions or overwriting values, sensors, transducers and devices shall have been calibrated.
    3. Simulated Signals: Using a signal generator which creates a simulated signal to test and calibrate transducers and DDC constants is generally recommended over using the sensor to act as the signal generator via simulated conditions or overwritten values.
    4. Altering Setpoints: Rather than overwriting sensor values, and when simulating conditions is difficult, altering setpoints to test a sequence is acceptable. For example, to see the Air Conditioning compressor lockout initiate at an outside air temperature below 54 F (12 C), when the outside

air temperature is above 54 F (12 C), temporarily change the lockout setpoint to be 4 F (2 C) above the current outside air temperature.

5. Indirect Indicators: Relying on indirect indicators for responses or performance shall be allowed only after visually and directly verifying and documenting, over the range of the tested parameters, that the indirect readings through the control system represent actual conditions and responses. Much of this verification shall be completed during systems startup and initial checkout

75. Functional testing is performed by the subcontractors with the method and degree of testing as defined in this specification for each system. Each function and test shall be performed under conditions that simulate actual conditions as close as is practically possible. The Subcontractor executing the test shall provide all necessary materials, system modifications, etc. to produce the necessary flows, pressures, temperatures, etc. necessary to execute the test according to the specified conditions. At completion of the test, the Subcontractor shall return all affected building equipment and systems to their pre-test condition.

76. Multiple identical pieces of equipment may be functionally tested using a sampling strategy. The sampling strategy will be defined in these specifications with the commissioned systems list.

f. Coordination and Scheduling: See the *COORDINATION* section for coordination and scheduling details.

g. Problem Solving: The CxA will recommend solutions to problems found; however, the burden of responsibility to solve, correct and retest problems is with the DBE / Subcontractor and Owner's consultants.

FUNCTIONAL PERFORMANCE TESTING OF METERING

Objectives and Scope. The objective of metering functional performance testing is to demonstrate that each meter is operating according to the Contract Documents and tested to verify that the system performance is as designed.

Problem Solving: The CxA will recommend solutions to problems found; however, the burden of responsibility to solve, correct and retest problems is with the DBE / Subcontractor and Owner's consultants.

Coordination and Scheduling: See the *COORDINATION* section for coordination and scheduling details.

FUNCTIONAL PERFORMANCE TESTING OF BUILDING ENCLOSURE SYSTEMS

Objectives and Scope: The objective of functional performance testing of building enclosure systems is to help ensure that each enclosure system is installed and functions according to Facility Design Standards and the Contract Documents. Various building

enclosure systems will be selected for testing which will be performed on the mock-up and or in-situ testing. Testing will be performed in accordance with ASTM and or AAMA testing standards as specified in each applicable section of these specifications and or as defined by the Building Enclosure Test Plan as provided by the architect.

Coordination and Scheduling (BECx)

1. Conduct building enclosure testing before installation of insulation and interior closure of the wall. The exterior sections of the building envelope assemblies shall be completed with discrepancies and problems remedied before testing of the exterior wall system or mock-up assemblies.

2. Building enclosure subcontractors will provide installation foremen to witness execution of building enclosure tests conducted on the mock-up assemblies to resolve installation issues and establish future installation practices necessary to correct deficiencies observed prior to commencing with installation of the exterior wall systems. DBE / subcontractors will ensure that the installation foremen are available and present during the agreed upon schedules and for sufficient duration to complete the necessary tests, adjustments and problem solving.

3. The CxA will witness DBE / subcontractor performed building enclosure testing. The DBE / subcontractor will be responsible to provide 14 days' notice to the CxA regarding their testing schedule for DBE / subcontractor performed building enclosure testing. The DBE / subcontractor will use the Testing Readiness letter in EXHIBIT A to notify the CxA that the systems are ready.

Deficiencies, Non-Conformance (BECx)

4. The CxA will record the results of building enclosure functional test on a Testing Report. All deficiencies or non-conformance issues shall be noted on the Cx Master Issues Log and reported to the DBE.

5. Corrections of minor deficiencies identified may be made during the tests at the discretion of the CxA. In such cases the deficiency and resolution will be documented on the Testing Report.

6. Every effort will be made to expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the procedures. However, the CxA will not be pressured into overlooking deficient work or loosing acceptance criteria to satisfy scheduling or cost.

7. A complete round of tests will be performed, with results and deficiencies reported to the DBE and subcontractors. The responsible subcontractors will then have and the opportunity to correct the deficiencies and schedule re-testing. One CxA retest witnessing of failed test area will be provided by CxA at no additional charge. Cost of additional CxA re-test witnessing is outlined by the next section.

8. If there is a dispute about a deficiency the deficiency shall be documented on the Cx Master Issues Log with the DBE / subcontractor's response. The final interpretive authority is the AOR.

OPERATION AND MAINTENANCE TRAINING REQUIREMENTS

Before the operation and maintenance training, CxA shall review training preparation for compliance with project documents.

Training is required per contract specifications. At a minimum, training is required for Mechanical systems, Lighting, and Controls systems.

The CxA requires submission of training records including attendance lists to verify appropriate people received the training.

GENERAL WARRANTY AND SEASONAL TESTING REQUIREMENTS

h. Coordinate MEP and Building Enclosure Subcontractor Call-back and Warranty Enforcement.

1. Perform review of commissioned systems:

1. Timed at approximately 2 months prior to the expiration of the project warranty period.
2. Project warranties have a typical duration of 12 months. Verify for this project.
3. The Warranty Period walk through inspection for the commissioned systems and building enclosure would then be typically scheduled at 10 months and should include representatives from the Owner, A/E, Facilities Management, CM, GC, subcontractors and manufacturers.

MEP Cx WARRANTY AND SEASONAL TESTING REQUIREMENTS

The Warranty Phase of a project can incorporate one or both of these two complimentary activities:

2. Seasonal Testing: Seasonal variation in operations or control strategies may require additional testing during peak cooling and heating seasons to verify systems performance. If the project finishes in the summer, testing of the heating systems may not be effective or conclusive, and can be postponed to colder weather if seasonal testing is included in the scope. The CxA coordinates this activity. Tests are executed and deficiencies corrected by the appropriate subcontractors, witnessed by Owner's staff and the CxA.

3. Warranty Testing: The CxA will perform an evaluation of the systems in the Cx scope to provide additional experienced review of operation prior to the expiration the warranty. The CxA will request input from the Owner's operations staff and occupants about the performance of the building systems, as well as perform targeted evaluation of systems and controls. Additionally, open items on

the Master Issues Log are often reviewed for completion, or significant issues observed during previous phases are evaluated to ensure they are still in a corrected state. A warranty walk review typically is performed onsite. However, videoconference and BMS remote review by the CxA may be arranged in place of the onsite warranty walk.

These two activities often have overlapping scope and intent and will be performed during the same site evaluation(s), where possible.

The warranty period typically begins at the project's Substantial Completion or shortly thereafter.

BECx WARRANTY TESTING REQUIREMENTS

Building Enclosure warranty activities align with NIBS Guideline 3-2012 Building Enclosure Commissioning Process BECx and include the following additional activities:

4. CxA will coordinate with the Owner, CM, GC to arrange a building enclosure warranty walk.
5. The warranty walk review is generally performed onsite. However, a videoconference review by the BECxA may be arranged in place of the onsite warranty walk.
6. The Cx Master Issues log will be distributed by the CxA highlighting any unresolved "open" issues discovered during the construction phase.
7. Participation by the Owner's operations staff is required.
8. A report will be issued summarizing the warranty walk process, findings and open issues needing to be addressed by the GC.

COSTS OF COMMISSIONING WORK (MEPCx, BECx)

The cost to the DBE and Subcontractors to comply with the specified requirements and to support the work of the CxA shall be included in the DBE's and Subcontractor's bid price.

It is the DBE / subcontractor's responsibility to QC and pre-test all building equipment and systems. The CxA shall confirm function of each system. If a device, piece of equipment, sequence, or system fails a test, corrections shall be made immediately and retested.

If at any point in the Commissioning Functional Testing Process, should an issue or failure arise that requires significant time to correct or cannot be corrected immediately during the testing process, that results in a delay or prevents the CxA from completion of the functional testing, incurred costs shall be reimbursed by the DBE. The associated costs of re-testing are defined in Exhibit A - Readiness Letter (FTRL).

END OF SECTION

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Specifications for the demolition and removal of pavement sections, sidewalks, curbs and gutters, trees, and utilities as indicated.

B. Extent of demolition work shall be as follows: Removal and disposition of existing pavement sections, curbs and gutters, sidewalks, trees, utilities, and site improvements which interfere with construction

C. Restoration and adjustment of existing structures and facilities to remain in place which are damaged by demolition and removal operations.

1.2 RELATED SECTIONS

A. Section 01 50 00 - Temporary Facilities and Controls

1.3 REFERENCES

A. American National Standards Institute (ANSI)
ANSI A10.6 Safety Requirements for Demolition Operations

B. California Code of Regulations (CCR)

CCR Title 8, Chapter 4, Subchapter 4 – Construction Safety Orders
CCR Title 24, Part 2, California Building Code, Chapter 33, Section 3303, Protection of Pedestrians during Construction or Demolition

1.4 PERMITS

A. Obtain all special permits and licenses and give all notices required for performance and completion of the demolition and removal work, hauling, and disposal of debris.

1.5 SUBMITTALS

A. Demolition Plan

1. Submit a comprehensive demolition plan, describing the proposed sequence, methods, and equipment for demolition, removal, and disposal of structure(s); include salvage if required. Do not proceed with demolition until the designated approval authority has approved the demolition plan.

B. Permits

1. City of Berkeley Encroachment permit. Contractor shall obtain an encroachment permit for all work within the public right-of-way, as indicated.

2. Contractor shall submit copies of demolition, hauling, and debris disposal permits and notices for record purposes. Include description of proposed haul routes.

1.6 SITE CONDITIONS

A. Erect and maintain temporary bracing, shoring, lights, barricades, signs, and other measures as necessary to protect the public, workers, and adjoining property from damage from demolition work, all in accordance with applicable codes and regulations.

B. Open depressions and excavations occurring as part of this work shall be barricaded and posted with warning lights when accessible through adjacent property or through public access. Operate warning lights during hours from dusk to dawn each day and as otherwise required.

C. Protect utilities, pavements, and facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by demolition operations.

D. Protection of Utilities: Protect active sewer, water, gas, electric, and other utilities; and drainage and irrigation lines indicated or, when not indicated, found or otherwise made known to the Contractor before or during demolition work.

E. Maintain existing utilities and protect from damage as necessary to satisfy the requirements of jurisdictional utility companies and related codes and regulations.

F. Make arrangements with affected utility companies and Owners to provide the information and services necessary to coordinate and complete the Work.

G. Do not disconnect or shut down any part of the existing utilities and services, except by permission of authorities having jurisdiction. Submit schedule of estimated shut-down time in order to obtain such permission, and notify all interested parties, utilities, and municipal and county authorities, as required.

H. Utilities to be removed shall not be removed until shut-down time can be kept to a minimum. Do not remove an existing utility line or service until the replacement line, crossover, or capping is ready to be performed.

I. Notify the Engineer and utility owners 72 hours before performing any excavation work. Notify affected utilities by calling Underground Service Alert (USA) at 1-800-227-2600. Contact utility owners not covered by USA, by calling the affected utility owners directly.

J. Protect active underground utilities from damage. If underground utilities are damaged in any way, notify the Engineer and affected utilities immediately for corrective action.

K. Noise and Dust Abatement: Comply with requirements specified in Section 01 50 00 - Temporary Facilities and Controls. In addition, provide continuous noise and dust abatement as required to prevent disturbance and nuisance to the public and workers and to the occupants of adjacent premises and surrounding areas. Dampen or cover areas affected by demolition operations as necessary to prevent dust nuisance.

L. The Contract Drawings and related documents may not represent all surface conditions at the site and adjoining areas. The known surface conditions are as indicated, and shall be compared with actual conditions before commencement of work.

M. Existing utilities and drainage systems below grade are located from existing documents and from surface facilities such as manholes, valve boxes, area drains, and other such surface fixtures.

N. If existing active services encountered are not indicated or otherwise made known to the Contractor and interfere with the permanent facilities under construction, notify the Engineer in writing, requesting instructions on their disposition. Take immediate steps to ensure that the service provided is not interrupted, and do not proceed with the work until written instructions are received from the Engineer.

O. Thicknesses of existing pavements are unknown. Remove pavement of whatever thickness as required.

P. Remove Tree (Grind Roots). Contractor shall remove and dispose of trees and other plant material where shown on Contract Plans and as directed by the Engineer. Tree removal shall include the removal of any roots or trunks in conflict with the work to a depth of fifteen (15) inches below existing grade, or as directed by the Engineer. All resulting tree, shrub, and other excavation material shall be disposed of outside the street right-of-way as required in Section 7-1.13 of the Standard Specifications.

PART 2 - PRODUCTS

2.1 MATERIALS, EQUIPMENT, AND FACILITIES

A. Furnish all materials, tools, equipment, devices, appurtenances, facilities, and services as required for performing the demolition and removal work.

PART 3 - EXECUTION

3.1 PRESERVATION OF REFERENCE MARKERS

A. Record the locations and designation of survey markers and monuments prior to their removal. Provide three reference points for each survey marker and monument removed, established by a licensed civil engineer or land surveyor currently registered in the State of California.

B. Store removed markers and monuments during demolition work, and replace them upon completion of the work. Re-establish survey markers and monuments in conformance with the recorded reference points. Forward to the Engineer a letter verifying re-establishment of survey markers and monuments, signed by a licensed civil engineer or land surveyor currently registered in the State of California.

3.2 DEMOLITION

A. Perform demolition in accordance with the approved Demolition Plan.

B. Operational procedures shall be in accordance with the approved Demolition Plan.

C. Demolish concrete and masonry in small sections. Perform demolition with small tools as much as possible. Blasting will not be permitted.

D. Cap and plug pipe and other conduits abandoned due to demolition, with approved type caps and plugs as required by the utility owners.

E. Backfill and compact depressions caused by excavations, demolition, and removal in accordance with the requirements of Section 31 20 00 - Earth Moving.

3.3 RESTORATION OF EXISTING STRUCTURES AND FACILITIES

A. All damage to existing structures and facilities, including utilities, which are to remain in place, shall be repaired to a condition equal to that existing prior to the beginning of demolition and removal operations. The cost of repairing existing structures and facilities damaged by the Contractor's operations shall be at the Contractor's expense.

3.4 CLEANUP

A. Provide a clean and orderly site. Restore surrounding area to match existing.

END OF SECTION

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Formwork for cast-in-place concrete, with shoring, bracing and anchorage.

B. Form accessories.

C. Form stripping.

1.2 SCOPE

A. Provide and install forms for all concrete, including but not limited to slabs-on-grade, foundations, retaining walls, elevated slabs, walls, mechanical and electrical items, such as cleanouts, valve access boxes and pads.

B. Install all bolts, anchors, sleeves, slots and inserts furnished under other sections, except that embedded items for mechanical items are to be installed by trade involved.

C. Coordinate with all trades to ensure proper placement of all items in forms and to provide proper blockouts wherever required.

D. Omission of Forms: Concrete foundations which are to permanently remain below grade may be formed against earth banks. Earth banks shall be sufficiently stable to maintain shape and width of footing shall be increased by 2". When this condition applies, form top edges to prevent sloughing of earth into footings.

1.3 RELATED REQUIREMENTS

A. Section 03 20 00 - Concrete Reinforcement.

B. Section 03 30 00 - Cast-In-Place Concrete.

C. Section 03 37 13 - Shotcrete.

D. Section 03 38 00 - Post-Tensioned Concrete.

E. Section 04 29 00 - Reinforced Unit Masonry.

F. Section 05 12 00 - Structural Steel Framing.

1.4 QUALITY ASSURANCE

A. Use only new materials and products, unless existing materials or products are specifically shown otherwise on the Drawings to be salvaged and re-used.

B. Use materials and products of one manufacturer whenever possible.

C. All materials, components, assemblies, workmanship and installation are to be observed by the Owner's Project Inspector. Work not so inspected is subject to uncovering and replacement.

1. Design, erect, support, brace and maintain formwork and shoring to safely support all vertical and lateral loads that might be applied until such loads can be carried by concrete.

2. Notify Inspector, Architect, Structural Engineer and DSA at least 48 hours prior to placing of concrete.

1.5 REFERENCE STANDARDS

A. ACI 117 - Specifications for Tolerances for Concrete Construction and Materials; 2010 (Reapproved 2015).

B. ACI 301 - Specifications for Structural Concrete; 2016.

C. ACI 318 - Building Code Requirements for Structural Concrete and Commentary; 2014 (Errata 2018).

D. ACI 347R - Guide to Formwork for Concrete; 2014, with Errata (2017).

E. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation; 2019.

F. American Plywood Association (APA).

G. West Coast Lumberman's Association (WCLA).

H. PS 1 - Structural Plywood; 2009 (Revised 2019).

1.6 SUBMITTALS

A. See Division 1 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on materials including pre-manufactured forms, plywood form board, lumber for bracing and strongbacks, anchorage devices, form ties, chamfer and reveal strips, and form release agent. Provide data on void form materials and installation requirements.

C. Shop Drawings: Indicate pertinent dimensions, materials, bracing, blockouts, locations of chamfer and reveal strips, locations of pour pockets, locations and methods for supporting other structural work, proposed construction joint locations, and arrangement of joints and ties.

1. Drawings are to be prepared by, signed and sealed by a Professional Engineer registered in the State of California.

D. Shoring Drawings: All shoring and re-shoring drawings are to be prepared by, signed and sealed by a Professional Engineer registered in the State of California.

Ratcliff Project 21415.00 DSA Submittal **July 18, 2022**

1.7 QUALITY ASSURANCE

A. Designer Qualifications: Design formwork and shoring under direct supervision of a Professional Engineer experienced in design of concrete formwork and shoring and licensed in California.

PART 2 - PRODUCTS

2.1 FORMWORK - GENERAL

A. Provide concrete forms, accessories, shoring, and bracing as required to accomplish cast-in-place concrete work.

B. Design and construct concrete that complies with design with respect to shape, lines, and dimensions.

C. Chamfer outside corners of beams, joists, columns, and walls, unless otherwise indicated on drawings.

D. Comply with applicable State and local codes with respect to design, fabrication, erection, and removal of formwork.

E. Comply with relevant portions of ACI 347R, ACI 301, and ACI 318.

2.2 WOOD FORM MATERIALS

A. Form Materials: At the discretion of the Contractor.

2.3 PERMANENT FOAM FORMWORK

A. Expanded Polystyrene (EPS) or Extruded Polystyrene (XPS) Foam Board: ASTM C578, Type VII or Type XV.

1. Density: 2.85 lb/cu ft.

2. Compressive Resistance at 10% Deformation: 60 psi.

2.4 FORMWORK ACCESSORIES

A. Form Ties: Snap-off type, galvanized metal, fixed length, cone type, with waterproofing washer, 1-1/2 inch back break dimension, free of defects that could leave holes, fractures, spalls, or other surface defects larger than 1 inch in concrete surface.

B. Form Release Agent: Capable of releasing forms from hardened concrete without staining or discoloring concrete or forming bugholes and other surface defects, compatible with concrete and form materials, and not requiring removal for satisfactory bonding of coatings to be applied.

1. Composition: Colorless reactive, mineral oil-based, soy-based, or vegetable-oil based compound.

2. Do not use materials containing diesel oil or petroleum-based compounds.

Ratcliff Project 21415.00 DSA Submittal **July 18, 2022**

3. VOC Content: In compliance with applicable local, State, and federal regulations.

C. Filler Strips for Chamfered Corners: Rigid Plastic or Wood Strip type; 3/4" X 3/4" inch size; maximum possible lengths.

D. Nails, Spikes, Lag Bolts, Through Bolts, Anchorages: Sized as required, of sufficient strength and character to maintain formwork in place while placing concrete.

E. Embedded Anchor Shapes, Plates, Angles and Bars: As specified in Section 05 12 00.

F. Foam Tape: 1/8 inch thick adhesive backed closed cell PVC foam tape with tape width corresponding to edge thickness of plywood.

G. Waterstops: Preformed mineral colloid strips, 3/4 inch thick, moisture expanding.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify lines, levels and centers before proceeding with formwork. Ensure that dimensions agree with drawings.

3.2 EARTH FORMS

A. Hand trim sides and bottom of earth forms. Remove loose soil prior to placing concrete.

3.3 ERECTION - FORMWORK

A. Erect formwork, shoring and bracing to achieve design requirements, in accordance with requirements of ACI 301.

B. Provide bracing to ensure stability of formwork. Shore or strengthen formwork subject to overstressing by construction loads.

C. Arrange and assemble formwork to permit dismantling and stripping. Do not damage concrete during stripping. Permit removal of remaining principal shores.

D. Align joints and make watertight. Keep form joints to a minimum.

E. Obtain approval before framing openings in structural members that are not indicated on drawings.

F. Coordinate this section with other sections of work that require attachment of components to formwork.

G. Do not reuse formwork with patches or repairs that would result in adverse effects to exposed concrete.

Ratcliff Project 21415.00 DSA Submittal **July 18, 2022**

H. Verify that reinforcing steel has specified concrete cover over reinforcement and has been inspected prior to concealing with formwork.

3.4 APPLICATION - FORM RELEASE AGENT

A. Apply form release agent on formwork in accordance with manufacturer's recommendations.

B. Apply prior to placement of reinforcing steel, anchoring devices, and embedded items.

C. Do not apply form release agent where concrete surfaces will receive special finishes or applied coverings that are affected by agent. Soak inside surfaces of untreated forms with clean water. Keep surfaces coated prior to placement of concrete.

3.5 INSERTS, EMBEDDED PARTS, AND OPENINGS

A. Locate and set in place items that will be cast directly into concrete.

B. Coordinate with work of other sections in forming and placing openings, slots, reglets, recesses, sleeves, bolts, anchors, other inserts, and components of other work.

C. Install accessories in accordance with manufacturer's instructions, so they are straight, level, and plumb. Ensure items are not disturbed during concrete placement.

D. Install waterstops where indicated on architectural drawings in accordance with manufacturer's instructions, so they are continuous without displacing reinforcement.

E. Provide temporary ports or openings in formwork where required to facilitate cleaning and inspection. Locate openings at bottom of forms to allow flushing water to drain.

F. Close temporary openings with tight fitting panels, flush with inside face of forms, and neatly fitted so joints will not be apparent in exposed concrete surfaces.

3.6 FORM CLEANING

A. Clean forms as erection proceeds, to remove foreign matter within forms.

B. Clean and protect permanent insulated concrete foam panel formwork per manufacturer's recommendations.

C. Clean formed cavities of debris prior to placing concrete.

1. Flush with water or use compressed air to remove remaining foreign matter. Ensure that water and debris drain to exterior through clean-out ports.

3.7 FORMWORK TOLERANCES

A. Construct formwork to maintain tolerances required by ACI 117, unless otherwise indicated.

Ratcliff Project 21415.00 DSA Submittal **July 18, 2022**

B. Construct permanent insulated foam panel formwork to maintain tolerances required by ACI 301.

3.8 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control inspection, as specified in Division 1.

B. Inspect erected formwork, shoring, and bracing to ensure that work is in accordance with formwork design, and to verify that supports, fastenings, wedges, ties, and items are secure.

3.9 FORM REMOVAL

A. Do not remove forms or bracing until concrete has gained sufficient strength to carry its own weight and imposed loads, no sooner than the following:

1. Bottom forms for mildly reinforced girders: 7 days and f'c=3,500 psi.
2. Side forms for girders: 3 days
3. Forms for columns and walls: 3 days **or f'c=3,500 psi. A reduced form removal time is acceptable upon review and approval of a formwork removal plan submittal prepared and stamped by a CA licensed shoring engineer.**
4. Forms for mat foundation: 2 days
5. Post tensioned slabs: 72 hours, f'c=3,500 psi and after post-tensioning.

B. Loosen forms carefully. Do not wedge pry bars, hammers, or tools against finish concrete surfaces scheduled for exposure to view.

C. Store removed forms to prevent damage to form materials or to fresh concrete. Discard damaged forms.

END OF SECTION

Ratcliff Project 21415.00 DSA Submittal **July 18, 2022**

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Reinforcing steel for cast-in-place concrete.

B. Reinforcing steel for shotcrete.

C. Reinforcing steel for masonry.

D. Supports and accessories for steel reinforcement.

1.2 RELATED REQUIREMENTS

A. Section 03 10 00 - Concrete Forms and Accessories.

B. Section 03 30 00 - Cast-In-Place Concrete.

C. Section 03 37 13 - Shotcrete.

D. Section 03 38 00 - Post-Tensioned Concrete.

E. Section 04 29 00 - Reinforced Unit Masonry.

1.3 REFERENCE STANDARDS

A. ACI 301 - Specifications for Structural Concrete; 2016.

B. ACI 318 - Building Code Requirements for Structural Concrete and Commentary; 2014 (Errata 2018).

C. ACI SP-66 - ACI Detailing Manual; 2004.

D. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement; 2020.

E. ASTM A706/A706M - Standard Specification for Deformed and Plain Low-Alloy Steel Bars for Concrete Reinforcement; 2016.

F. ASTM A1064/A1064M - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete; 2018a.

G. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification; 2014 (Amended 2015).

H. AWS D1.4/D1.4M - Structural Welding Code - Reinforcing Steel; 2018.

I. CRSI (DA4) - Manual of Standard Practice; 2009.

J. CRSI (P1) - Placing Reinforcing Bars; 2011.

1.4 SUBMITTALS

A. See Division 1 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Comply with requirements of ACI SP-66. Include bar sizes and material types, lengths, spacings and locations, and quantities of reinforcing steel; bar schedules, stirrup spacing, shapes of bent bars, spacing of bars, and types and location of splices. Include special reinforcement required at openings and flat slab shear reinforcing.

1. Coordinate placement of embedded items with rebar placement.

2. Coordinate and indicate provisions for construction access.

3. Do not reproduce construction documents for shop drawings.

C. Manufacturer's Certificate: Submit to the special inspector certificates that reinforcing steel and accessories supplied for this project meet or exceed specified requirements.

D. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before start of scheduled welding work.

E. Product Data: Submit for bar supports, chairs, rebar couplers, and flat slab shear reinforcing.

F. Reports: Submit to the special inspector certified copies of mill test report of reinforcement materials analysis.

1.5 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Store reinforcement in a manner that will prevent rusting or coating with grease, oil, dirt, and other objectionable materials.

B. Deliver reinforcement to the job site bundled, tagged and marked, using metal tags.

1.6 QUALITY ASSURANCE

A. Perform work of this section in accordance with CRSI (DA4), CRSI (P1), ACI 301, ACI SP-66, and ACI 318 in addition to applicable building code.

1. Maintain one copy of each document on project site.

B. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.4/D1.4M and no more than 12 months before start of scheduled welding work.

PART 2 - PRODUCTS

2.1 REINFORCEMENT

A. Reinforcing Steel: ASTM A 615/A 615M Grade 60 (420) for #7 and smaller bars.

1. Deformed billet-steel bars.

2. Unfinished.

B. Reinforcing Steel: ASTM A 706/A 706M, Grade 60 (420) for #8 and larger bars and all bars to be welded. Permitted for bars #7 and smaller.

1. Deformed low-alloy steel bars

2. Unfinished.

C. High Strength Reinforcing Steel: ASTM A 706/A 706M, Grade 80, where noted on drawings.

1. Deformed low-alloy steel bars.

2. Unfinished.

D. Reinforcing Steel: Deformed bar anchors, ASTM A496, Grade 70.

E. Steel Welded Wire Reinforcement (WWR): Galvanized, deformed type; ASTM A1064/A1064M.

1. WWR Style: 4 x 8-W6 x W10.

2.2 REINFORCEMENT ACCESSORIES:

A. Tie Wire: Annealed, minimum 16 gauge, 0.0508 inch.

B. Chairs, Bolsters, Bar Supports, Spacers: Sized and shaped for adequate support of reinforcement during concrete placement.

C. Bar Supports placed against ground: Precast concrete blocks not less than 3 inches square with embedded wires.

D. Mechanical Couplers: Type 2 per ACI-318 with current ICC or IAPMO evaluation report.

1. Manufacturers:

a. Headed Reinforcement Corporation (HRC); www.hrc-usa.com.

b. Erico; www.erico.com.

c. Dayton Superior; www.daytonsuperior.com.

d. Or approved equivalent.

E. T-Headed Reinforcement: In compliance with ACI 318, Section 12.6 and with current ICC or IAPMO evaluation report.

1. Manufacturers:

a. Headed Reinforcement Corporation (HRC); www.hrc-usa.com.

b. Erico; Product: www.erico.com.

c. Or approved equivalent.

F. Flat Slab Shear Reinforcement:

1. Manufacturers:

a. Decon USA, Inc.; Product: Studrails: www.studrails.com

b. Or approved equivalent.

2.3 FABRICATION

A. Fabricate concrete reinforcing in accordance with CRSI (DA4) - Manual of Standard Practice, ACI SP-66 - ACI Detailing Manual, ACI 318, and ACI 301.

B. Mechanical couplers may be substituted for contact lap splices provided concrete cover and bar spacing requirements are met and when approved by SEOR.

C. Locate reinforcing splices not indicated on drawings at point of minimum stress.

1. Stagger splice locations so that no more than 50% of the bars are spliced at a section.

2. Locations of splices subject to approval by Architect.

2.4 SOURCE QUALITY CONTROL

A. An independent testing agency will perform source quality control review, as specified in Division 1.

B. Review mill test reports containing tensile and bend tests for type and grade of reinforcing steel.

PART 3 - EXECUTION

3.1 PLACEMENT

A. Place, support and secure reinforcement against displacement. Do not deviate from required position by more than the tolerances set forth in ACI 301.

B. Do not displace or damage vapor barrier or water proofing membrane.

C. Accommodate placement of formed openings.

D. Maintain concrete cover around reinforcing as indicated on drawings.

E. Clean reinforcement of loose rust and mill scale, oil, grease, earth, ice, cement splatter and other materials which reduce or prevent bond with concrete.

F. Set wire ties so ends are directed into concrete, away from concrete surfaces.

G. Welding:

1. Welding of crossing bars is not permitted.

H. Avoid bending or realigning reinforcement after being embedded in hardened concrete.

1. #6 and smaller bars accidentally bent may be realigned in field once.

a. If bent greater than 15 degrees, provide testing as required by the Field Quality Control section.

2. Obtain approval from SEOR for bar repairs.

3.2 FIELD QUALITY CONTROL

A. An independent testing agency, as specified in Division 1, will inspect installed reinforcement for conformance to contract documents before concrete placement.

B. Visually Inspect 100 percent of mechanical coupler installations.

C. Provide magnetic particle testing of reinforcing bars realigned or re-bent over 15 degrees.

D. Inspect placement, location, splices, spacing, size, cover and type of reinforcement for conformance with the contract documents.

END OF SECTION

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Elevated concrete slabs.

B. Floors and slabs-on-grade.

C. Concrete foundations.

D. Concrete walls, columns and beams.

E. Concrete Drilled Piers.

F. Joint devices associated with concrete work.

G. Miscellaneous concrete elements, including equipment pads.

H. Concrete curing.

1.2 RELATED REQUIREMENTS

A. Section 03 10 00 - Concrete Forms and Accessories: Forms and accessories for formwork.

B. Section 03 20 00 - Concrete Reinforcement.

C. Section 03 35 00 - Decorative Concrete Finishing.

D. Section 07 95 13 - Expansion Joint Cover Assemblies.

E. Section 31 63 29 - Drilled Concrete Piers and Shafts.

1.3 REFERENCE STANDARDS

A. ACI 211.1 - Standard Practice for Selecting Proportions for Normal, Heavyweight, and Mass Concrete; 1991 (Reapproved 2009).

B. ACI 301 - Specifications for Structural Concrete; 2016.

C. ACI 302.1R - Guide to Concrete Floor and Slab Construction; 2015.

U. ASTM C260/C260M - Standard Specification for Air-Entraining Admixtures for Concrete; 2010a (Reapproved 2016).

V. ASTM C472 - Standard Test Methods for Physical Testing of Gypsum, Gypsum Plasters and Gypsum Concrete; 2020.

W. ASTM C494/C494M - Standard Specification for Chemical Admixtures for Concrete; 2019.

X. ASTM C618 - Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use in Concrete; 2019.

Y. ASTM C685/C685M - Standard Specification for Concrete Made by Volumetric Batching and Continuous Mixing; 2017.

Z. ASTM C979/C979M - Standard Specification for Pigments for Integrally Colored Concrete; 2016.

AA. ASTM C989/C989M - Standard Specification for Slag Cement for Use in Concrete and Mortars; 2014.

AB. ASTM C 1077 - Standard Practice for Agencies Testing Concrete and Concrete Aggregates for Use in Construction and Criteria for Testing Agency Evaluation.

AC. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink); 2017.

AD. ASTM C1240 - Standard Specification for Silica Fume Used in Cementitious Mixtures; 2020.

AE. ASTM C1602/C1602M - Standard Specification for Mixing Water Used in the Production of Hydraulic Cement Concrete; 2012.

AF. ASTM D2103 - Standard Specification for Polyethylene Film and Sheeting; 2015.

AG. ASTM E 329 - Standard Specification for Agencies Engaged in Construction Inspection, Testing or Special Inspection.

AH. ASTM E1155 - Standard Test Method for Determining FF Floor Flatness and FL Floor Levelness Numbers; 2020.

AI. ASTM E1155M - Standard Test Method for Determining F(F) Floor Flatness and F(L) Floor Levelness Numbers (Metric); 2014.

AJ. ASTM E1745 - Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs; 2017.

1.4 SUBMITTALS

A. See Division 1 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit manufacturer's data on manufactured products, curing material, slab treatments, evaporation reducing compound and joint fillers showing compliance with specified requirements.

1. For curing compounds, provide data on method of removal in the event of incompatibility with floor covering adhesives.

C. Certified Mix Design: Submit for each type and strength of concrete, at least 4 weeks prior to placement in accordance with CBC Chapter 19A.

1. Indicate proposed mix design complies with requirements of ACI 301, Section 4 - Concrete Mixtures.

2. Indicate proposed mix design complies with requirements of ACI 318, Chapter 5 - Concrete Quality, Mixing and Placing.

3. Include results of testing or test data used to establish mix proportions. This is to include unit weight, slump and tolerance, shrinkage, and compression test reports. Mix designs to be prepared, stamped and signed by a Professional Engineer registered in the State of California.

4. Submit certificates of compliance for materials of mix.

D. Test Reports: Submit report for each test or series of tests specified.

E. Coordination Drawings: Submit drawings showing size and location of all penetrations and embedded items in cast-in-place structural elements.

F. Construction Joint Layout: Submit drawings showing proposed construction joint locations.

G. Control Joint Layout: Submit drawings showing control joints locations in slab on grade.

H. Transit-Mix Delivery Slips

1. Keep a record at the job site showing time and place of each pour of concrete, together with transit-mix delivery slip certifying contents of the pour in accordance with the CBC Section 1705A.3.

2. Make all records available to the Architect and Division of the State Architect for their inspection upon request.

3. Upon completion of this portion of the work, deliver all records and the delivery slips to the Architect.

4. Batch Plant Certificates: Include with delivery of each load of concrete. Provide certificates to the Testing Agency and the Architect/Engineer as separate submittals. Concrete delivered to the site without such certificate shall be rejected and returned to the plant.

1.5 QUALITY ASSURANCE

A. Perform work of this section in accordance with ACI 301 and ACI 318.

1. Maintain one copy of each document on site.

B. Manufacturer Qualifications:

1. A firm experienced in manufacturing ready mixed concrete products complying with ASTM C94/C94M and requirements for production facilities and equipment.

2. Manufacturer to be certified according to the National Ready Mixed Concrete Association certification for ready mixed concrete production facilities.

C. Placement and Finishing contractor to have a minimum of five years experience with similar types of projects.

D. Pre-Installation Meeting

1. Hold a pre-installation conference two weeks prior to the start of concrete pour at elevated concrete decks. Attendees shall include Contractor, Architect, Structural Engineer, and Project Inspector.

2. Review Contractor's intended method of pour, including lines and levels, and Architect's expectations related to floor flatness, inspection, self-leveling concrete floor underlayment, installation of casework and other related topics.

PART 2 - PRODUCTS

2.1 FORMWORK

A. Comply with requirements of Section 03 10 00.

2.2 REINFORCEMENT MATERIALS

A. Comply with requirements of Section 03 20 00.

2.3 CONCRETE MATERIALS

A. Cement: ASTM C 150, Type I - Normal or Type II - Moderate Portland type.

1. Acquire cement for entire project from same source.

B. Fine and Coarse Aggregates: ASTM C 33 and as modified below.

1. Coarse Aggregates: Cleanness Value of not less than 75 as tested per California Test Method 227.

2. Fine Aggregates: Sand Equivalent of not less than 75 as tested per California Test Method 217.

3. Acquire all aggregates for entire project from same source.

C. Fly Ash: ASTM C618, Class F, 25% max, and per CBC Section 1903A.6.

D. Raw or Calcined Natural Pozzolan: ASTM C618, Class N, 25% max per CBC Section 1903A.6.

E. Silica Fume: ASTM C1240, proportioned in accordance with ACI 211.1. 10% max per CBC Section 1903A.6.

F. Ground Granulated Blast-Furnace Slag: ASTM C989. 50% max per CBC Section 1903A.6.

G. Color Additives: Pure, concentrated mineral pigments specifically intended for mixing into concrete and complying with ASTM C979/C979M.

1. Color(s): To match Architect's sample(s) when incorporated into specified mix design(s).

H. Water: ASTM C1602/C1602M; clean, potable, and not detrimental to concrete.

2.4 ADMIXTURES

A. Do not use chemicals that will result in soluble chloride ions in excess of 0.1 percent by weight of cement.

B. Admixtures to be compatible with all other components in the mix.

C. Admixtures are to be included in the mix used to establish the mix design.

D. Air Entrainment Admixture: ASTM C260/C260M and CBC Section 1904A.1.

1. Not acceptable for use in concrete mixes for interior floor slabs that will not be subject to freeze-thaw cycles.

E. High Range Water Reducing Admixture: ASTM C494/C494M Type F.

F. Water Reducing Admixture: ASTM C494/C494M Type A.

G. Shrinkage Reducing Admixture:

1. ASTM C494/C494M, Type S.

2. Manufacturers:

a. Grace Construction Products; Eclipse 4500: www.na.graceconstruction.com.

b. Substitutions: See Section 01 60 00 - Product Requirements.

2.5 ACCESSORY MATERIALS

A. Underslab Vapor Barrier: Multi-layer plastic extrusion or equivalent, complying with ASTM E 1745, Class A, 0.38mm (15mil) or greater; stated by manufacturer as suitable for installation in contact with soil or granular fill under concrete slabs. Single ply polyethylene is prohibited.

1. Permeance: 0.01 perms [grains/(ft2 x hr x inHg)] maximum as tested in accordance with ASTM E 1745 Section 7. Provide independent testing data showing compliance.

2. Accessory Products: Vapor retarder manufacturer's recommended tape, adhesive, mastic, prefabricated boots, etc., for sealing seams and penetrations.

3. Manufacturers:

a. Fortifiber Building Systems Group: www.fortifiber.com/#sle.

b. Stego Industries, LLC: www.stegoindustries.com/#sle.

B. Non-Shrink Cementitious Grout: Premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents.

1. Grout: Comply with ASTM C1107/C1107M.
2. Minimum Compressive Strength at 48 Hours, ASTM C109/C109M: 2,000 pounds per square inch.
3. Minimum Compressive Strength at 28 Days, ASTM C109/C109M: 7,000 pounds per square inch.

C. Architectural Concrete Floor Topping:

1. Compressive Strength: Minimum 4000 pounds per square inch, tested per ASTM C472.

2.6 BONDING AND JOINTING PRODUCTS

A. Waterstops: Bentonite and butyl rubber.

1. Configuration: As indicated on drawings.
2. Size: As indicated on drawings.
3. Products:
   a. CETCO, a division of Minerals Technologies Inc; WATERSTOP RX: www.mineralstech.com/#sle.

2.7 CURING MATERIALS

A. Curing Compound, Naturally Dissipating: Clear, water-based, liquid membrane-forming compound; complying with ASTM C309.

B. Moisture-Retaining Sheet: ASTM C171.

1. Curing paper, regular.
2. Polyethylene film, white opaque, minimum nominal thickness of 4 mil, 0.004 inch.
3. White-burlap-polyethylene sheet, weighing not less than 3.8 ounces per square yard.

C. Polyethylene Film: ASTM D2103, 4 mil, 0.004 inch thick, clear.

D. Water: Potable, not detrimental to concrete.

2.8 CONCRETE MIX DESIGN

A. Proportioning Normal Weight Concrete: Comply with CBC Chapter 19A and ACI 211.1 recommendations.

1. Use admixtures as necessary to produce concrete of a consistency that will allow thorough compaction of the concrete into corners and around reinforcing without excessive puddling, spading or vibration, and without permitting the materials to segregate or free water to collect on the surface. Produce dense and uniform concrete free from rock pockets, honeycomb and other irregularities.

2. Contractor to review and approve the proposed concrete mix designs for compatibility with placing requirements to ensure that the concrete as designed can be placed in accordance with the Drawings and Specifications.

B. Concrete Strength: Establish required average strength for each type of concrete on the basis of field experience or trial mixtures, as specified in ACI 301. Mix design to be prepared by a licensed Professional Engineer.

1. For trial mixtures method, employ independent testing agency acceptable to Architect for preparing and reporting proposed mix designs.

C. Admixtures: Add acceptable admixtures as recommended in ACI 211.1 and at rates recommended or required by manufacturer.

D. Cements and aggregates to have a proven history of successful use together. Alternatively submit evidence satisfactory to Architect that aggregate will not react harmfully in presence of alkalis in cement.

E. Normal Weight Concrete:

1. Compressive Strength, when tested in accordance with ASTM C39/C39M at 28 days: As indicated on drawings.

2. Cement Replacement Requirements: Conform to CBC Section 1903A.6 and ACI 318 Table 26.4.2.2(b).

3. Fly Ash Content: Maximum 15 percent of cementitious materials by weight.

4. Ground Granulated Blast-Furnace Slag: Maximum 50 percent of cementitious materials by weight.

5. Calcined Pozzolan Content: Maximum 25 percent of cementitious materials by weight.

6. Silica Fume Content: Maximum 10 percent of cementitious materials by weight.

7. Water-Cement Ratio: Maximum 45 percent by weight.

8. Dry Unit Weight: Minimum 144 lbs per cubic foot and maximum of 150 lbs per cubic foot.

9. Total Air Content: 3 percent maximum at point of placement, determined in accordance with ASTM C173/C173M.

10. Maximum Slump: 8 inches.

11. Maximum Aggregate Size: 1 inch.

12. Drying Shrinkage: Test per ASTM C192 and ASTM C157, measured at 28 days air dry age.

a. Typical: Maximum 0.050 percent unless otherwise indicated.

b. Suspended Slabs: Maximum 0.045 percent.

c. Slabs-on-Grade: Maximum 0.040 percent.

d. Shrinkage Reducing Admixture: Provide as required to attain maximum drying shrinkage when adequate shrinkage data for concrete mix design is not available.

F. Concrete Exposure Classes: All concrete to be exposure class F0, S0, W0 and C0 per ACI 318 unless otherwise noted. Concrete mixtures to additionally comply with ACI 318 tables 19.3.2.1 and 19.3.3.1.

G. Patching Mortar: Mix in proportions by volume of one-part cement to two parts water. Substitute white cement for part of cement as necessary to produce color matching surrounding concrete.

2.9 MIXING

A. Conform to requirements of CBC Chapter 19A and ACI 211.5R-14.

B. Concrete shall be Ready-Mix Concrete: Mix and deliver in accordance with the requirements set forth in ASTM C 94 and ACI 301. Continuous Batch Plant inspection may be waived in accordance with CBC Section 1705A.3.3, with approval by Structural Engineer of Record, approval by DSA, and the following:

1. Approved Testing Laboratory shall check the first batching for each class of concrete and furnish mix proportions to the Licensed Weighmaster.

2. Licensed Weighmaster to positively identify materials as to quantity and to certify to each load by ticket.

3. Ticket shall be transmitted to Project Inspector by truck driver with load identified thereon. Project Inspector will not accept load without load ticket identifying mix and will keep daily record of pours, identifying each truck, its load and time of receipt and will transmit two copies of record to DSA.

4. Do not add water at the site to concrete mixes with a maximum specified WCR unless the water content at batch time provides for a WCR less than specified and this provision, including the quantity of water which may be added at the site, is specifically noted on the Mix Design and Certification by the mix preparer.

5. At end of project, Weighmaster shall furnish affidavit to DSA on form satisfactory to DSA, certifying that all concrete furnished conforms in every particular and to proportions established by mix designs.

C. On Project Site: Mix in drum type batch mixer, complying with ASTM C685/C685M. Mix each batch not less than 1-1/2 minutes and not more than 5 minutes.

1. Colored Concrete: Add pigments in strict accordance with manufacturer's instructions to achieve consistent color from batch to batch.

D. Transit Mixers: Comply with ASTM C94/C94M.

E. Adding Water: If concrete arrives on-site with slump less than suitable for placement, do not add water that exceeds the maximum water-cement ratio or exceeds the maximum permissible slump.

2.10 SOURCE QUALITY CONTROL

A. An independent testing agency will perform source quality control review, as specified in Division 1.

B. Review mix designs and certificates of compliance for materials Contractor proposes to use.

PART 3 - EXECUTION

3.1 APPROVAL OF FORMS AND REINFORCEMENTS

A. Forms and reinforcements are subject to approval by the Project Inspector, and notice of readiness to place first pour shall be given to DSA, Architect and Structural Engineer 48 hours prior to placement of concrete.

3.2 EXAMINATION

A. Verify lines, levels, and dimensions before proceeding with work of this section.

3.3 PREPARATION

A. Verify that forms are clean and free of rust before applying release agent.

B. Coordinate placement of embedded items with erection of concrete formwork and placement of form accessories.

C. Protect finished surfaces adjacent to concrete placement.

D. Roughen surfaces of previously placed and existing concrete to 1/4 inch amplitude by heavy sand-blasting, waterblasting and/or bush-hammering. Prior to receiving concrete, clean surfaces of dust and debris using compressed air or water.

E. Clean surfaces of reinforcement and forms previously coated with cementitious materials by wire brushing or other acceptable means.

F. Thoroughly wet all concrete and wood forms before application of concrete. Do not allow free water to remain on the surface.

G. Install vapor barrier under interior slabs-on-grade. Lap joints minimum 6 inches and in accordance with manufacturer instructions. Seal watertight by taping edges and ends as required by manufacturer.

3.4 PLACING CONCRETE

A. Place concrete in accordance with ACI 301 and ACI 304R.

B. Place concrete for floor slabs in accordance with ACI 302.1R.

C. Notify Architect not less than 48 hours prior to commencement of placement operations.

D. Do not place concrete until testing agency has inspected reinforcing placement.

E. Water may be added once to each truckload in the field provided the mix design water-cement ratio is not exceeded.

F. Ensure reinforcement, inserts, embedded parts, and formwork and subgrade will not be disturbed during concrete placement.

G. Place concrete continuously without construction (cold) joints wherever possible.

H. Consolidate concrete in accordance with ACI 309R.

I. Finish floors level and flat, unless otherwise indicated, within the tolerances specified below.

3.5 SLAB JOINTING

A. Locate joints as indicated on the drawings and as required in this section.

B. Anchor joint fillers and devices to prevent movement during concrete placement.

C. Isolation Joints: Use preformed joint filler with removable top section for joint sealant, total height equal to thickness of concrete at point of placement, set flush with top of slab.

D. Saw Cut Control (Contraction) Joints in Slabs-on-Grade: Saw cut joints before concrete begins to cool, within 4 to 12 hours after placing; use 1/8 inch thick blade and cut at least 1 inch deep but not less than one quarter (1/4) the depth of the slab as indicated on the drawings. Locate control joints a maximum of 30 times the slab thickness in each direction. Limit the ratio of control joint spacing for each direction to 1.25.

3.6 FLOOR FLATNESS AND LEVELNESS TOLERANCES

A. An independent testing agency, as specified in Section 01 40 00, will inspect finished slabs for compliance with specified tolerances.

B. Minimum F(F) Floor Flatness and F(L) Floor Levelness Values:

1. Exposed to View and Foot Traffic: F(F) of 35; F(L) of 25 Slabs-on-grade and shored slabs.

2. Under Thick-Bed Tile: F(F) of 20; F(L) of 15 Slabs-on-grade and shored slabs.

3. Under Carpeting: F(F) of 25; F(L) of 20 Slabs-on-grade and shored slabs.

5. Under Thin Resilient Flooring: F(F) of 35; F(L) of 25 Slabs-on-grade and shored slabs.

C. Measure F(F) Floor Flatness and F(L) Floor Levelness in accordance with ASTM E1155 (ASTM E1155M), within 48 hours after slab installation; report both composite overall values and local values for each measured section.

D. Correct the slab surface if composite overall value is less than specified and if local value is less than two-thirds of specified value or less than F(F) 13/F(L) 10.

E. Correct defects by grinding, floating with leveling compound, or by removal and replacement of the defective work. Areas requiring corrective work to be identified by Contractor. Re-measure corrected areas by the same process.

3.7 CONCRETE FINISHING

A. Repair surface defects, including tie holes, immediately after removing formwork.

B. Unexposed Form Finish: Rub down or chip off fins or other raised areas 1/4 inch or more in height.

C. Exposed Wall Form Finish: Rub down or chip off and smooth fins or other raised areas 1/4 inch or more in height. Provide finish per architectural finish plans:

1. Painted concrete wall (C2), Class B formwork with CSC 2 finish.
2. Architecturally exposed concrete wall (C3), Class B formwork, CSC 2 finish, and sack finish.

D. Concrete Beams, Girders, and Columns: Smooth formed, Class B formwork, CSC 2 finish.

E. Concealed Concrete Surfaces: Rough Formed

F. Concrete Slabs: Finish to requirements of ACI 302.1R, and as follows, unless otherwise noted on architectural drawings:

1. Surfaces to Receive Thin Floor Coverings: "Light Steel-trowel" as described in ACI 302.1R; thin floor coverings include carpeting, resilient flooring, seamless flooring, and fluid applied waterproofing.
2. Surfaces to Be Left Exposed: Trowel as described in ACI 302.1R, minimizing burnish marks and other appearance defects.
    a. Chemical Hardener: After slab has cured, apply water-diluted hardener in three coats per manufacturer's instructions.
3. For air-entrained concrete, do not densify surface by hard steel troweling operations.

G. In areas with floor drains, maintain floor elevation at walls; pitch surfaces uniformly to drains as indicated on drawings.

3.8 CURING AND PROTECTION

A. Comply with requirements of ACI 308R. Immediately after placement, protect concrete from premature drying, excessively hot or cold temperatures, and mechanical injury.

B. Maintain concrete with minimal moisture loss at relatively constant temperature for period necessary for hydration of cement and hardening of concrete.

1. Normal concrete: Not less than seven days.

C. Formed Surfaces: Cure by moist curing with forms in place. Provide curing for remainder of curing period after form removal.

D. Surfaces Not in Contact with Forms:

1. Slabs and Floors To Receive Adhesive-Applied Flooring: Curing compounds and other surface coatings are usually considered unacceptable by flooring and adhesive manufacturers. If such materials must be used, either obtain the approval of the flooring and adhesive manufacturers prior to use or remove the surface coating after curing to flooring manufacturer's satisfaction.

2. Initial Curing: Start as soon as free water has disappeared and before surface is dry. Keep continuously moist until finishing is completed by water-fog spray or evaporation reducers or retarders.

3. Final Curing: Begin after initial curing but before surface is dry by one of the following:

a. Moisture-Retaining Sheet: Lap strips not less than 3 inches and seal with waterproof tape or adhesive; secure at edges.

b. Curing Compound: Apply in two coats at right angles, using application rate recommended by manufacturer.

3.9 FIELD QUALITY CONTROL

A. Inspection: There will be initial or preliminary inspection of the finished concrete slabs by the Project Inspector and/or Architect for flatness. If deemed necessary, the Owner reserves the right to have a survey performed by a registered surveyor or testing lab. If it is determined that floors not meeting the flatness criteria is due to means and methods fully within the control of the Contractor, the cost of the survey will be back charged to the Contractor. This includes, but is not limited to the erection of steel and metal deck outside industry tolerances and referenced standards.

B. Concrete Strength Testing: Comply with CBC Section 1705A.3, 1903A, 1904A, and as specified in this Section. Owner will engage a special inspector and qualified testing and inspecting agency to perform field tests and inspections and prepare test reports

1. Four identical cylinder samples for strength tests of each class of concrete placed each day shall be taken not less than once a day, or not less than once for each 50 cubic yards of concrete, or not less than once for each 2,000 square feet of surface area for slabs or walls. In addition, samples for strength tests for each class of concrete shall be taken for seven-day tests at the beginning of the concrete work or whenever the mix or aggregate is changed.

2. Strength tests will be conducted by the Testing Lab on one cylinder at seven (7) days and two cylinders at twenty-eight (28) days. The fourth remaining cylinder will be available for testing at fifty-six (56) days if the 28-day cylinder test results do not meet the required design strength.

3. On a given project, if the total volume of concrete is such that the frequency of testing required in Paragraph A.1 above would provide less than five strength tests for a given class of concrete, tests shall be made from at least five randomly selected batches or from each batch if fewer than five batches are used.

4. Cost of retests and coring due to low strength or defective concrete will be paid by School District and back-charged to the Contractor.

C. Moisture and PH Testing of Concrete Slab-On-Grade and Above-Grade Concrete, Scheduled to Receive Floor Finish Material: Refer to Section 09 05 12, Concrete Floor Moisture Content and pH Testing.

D. An independent testing agency will perform field quality control tests, as specified in Division 1.

E. Provide free access to concrete operations at project site and cooperate with appointed firm.

F. Provide full time special inspection during concrete placement and proposed remediation.

G. Tests of concrete and concrete materials may be performed at any time to ensure compliance with specified requirements.

H. Perform one slump test for each set of test cylinders taken, following procedures of ASTM C143/C143M.

I. Concrete Temperature: Test hourly when air temperature is 40F (4C) and below, and when 80F (27C) and above; and each time a set of compression test specimens is made.

J. Review the ticket of each batch of concrete delivered to the site for conformance with this specification.

K. Verify proper curing procedure and applications at initial curing and final curing stages.

L. Verify within 72 hours after placement that floor tolerances are within the limits specified herein.

3.10 DEFECTIVE CONCRETE

A. Test Results: The testing agency shall report test results in writing to Architect and Contractor within 24 hours of test.

B. Defective Concrete: Concrete not complying with required lines, details, dimensions, tolerances or specified requirements.

C. Where deficiencies are noted, the testing agency or Contractor to report defective concrete in writing to Architect and Contractor within 24 hours.

D. Repair or replacement of defective concrete will be determined by the Architect. The cost of additional testing, repair and design services to be borne by Contractor when defective concrete is identified.

E. Contractor to submit repair of defective concrete within 2 days of discovery.

F. Do not patch, fill, touch-up, repair, or replace exposed concrete except upon express direction of Architect for each individual area.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cast-in-place architectural concrete, including form facings, reinforcement accessories, concrete materials, concrete mixtures, concrete placement, and concrete finishes.
2. Requirements in Section 033000 "Cast-in-Place Concrete" apply to this Section.

1.2 DEFINITIONS.

A. Aggregate Exposure: Projection of coarse aggregate from matrix or mortar after completion of exposure operations.

B. Cast-in-Place Architectural Concrete: Concrete that is exposed to view, is designated as architectural concrete, and that requires special concrete materials, formwork, placement, or finishes to obtain specified architectural appearance. At all exposed concrete shearwalls and columns, interior and exterior.

C. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash, slag cement, other pozzolans, and silica fume; materials subject to compliance with requirements.

D. Design Reference Sample: Sample designated by Architect in the Contract Documents that reflects acceptable surface quality and appearance of cast-in-place architectural concrete.

E. Water/Cement Ratio (w/cm): The ratio by weight of water to cementitious materials.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at 2118 Milvia Street, Berkeley, CA. 94704.

1.4 ACTION SUBMITTALS

A. Product Data: For each of the following:

1. Form-facing panels.
2. Form joint tape.
3. Form joint sealant.
4. Wood sealer.

5. Form-release agent.
6. Surface retarder.
7. Form ties.
8. Bar supports.
9. Portland cement.
10. Fly ash.
11. Slag cement.
12. Blended hydraulic cement.
13. Aggregates.
14. Admixtures:

    a. Include limitations of use, including restrictions on cementitious materials, supplementary cementitious materials, air entrainment, aggregates, temperature at time of concrete placement, relative humidity at time of concrete placement, curing conditions, and use of other admixtures.

B. Design Mixtures: For each concrete mixture, include the following:

1. Mixture identification.
2. Minimum 28-day compressive strength.
3. Durability exposure class.
4. Maximum w/cm.
5. Calculated equilibrium unit weight, for lightweight concrete.
6. Slump limit.
7. Air content.
8. Nominal maximum aggregate size.
9. Amounts of mixing water to be withheld for later addition at Project site if permitted.
10. Intended placement method.
11. Alternative design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

C. Shop Drawings:

1. Formwork: Prepared by, and signed and sealed by, a qualified professional engineer responsible for their preparation, detailing fabrication, assembly, and support of forms.

D. Samples: For each of the following materials:

1. Form-facing panels.
2. Form ties.
3. Form liners, 12-by-12-inch Sample, indicating texture.
4. Exposed aggregates.
5. Chamfers and rustications.

E. Concrete Schedule: For each location of each Class of concrete indicated in "Concrete Mixtures" Article, including the following:

1. Concrete Class designation.
2. Location within Project.
3. Exposure Class designation.
4. Formed Surface Finish designation and final finish.
5. Curing process.

F. Placement Schedule: Submit before start of placement operations.

1.5 INFORMATIONAL SUBMITTALS

A. Material Certificates: For each of the following:

1. Cementitious materials.
2. Admixtures.
3. Form materials and form-release agents.

B. Material Test Reports: For the following, by a qualified testing agency:

1. Portland cement.
2. Fly ash.
3. Slag cement.
4. Blended hydraulic cement.
5. Aggregates[**:** Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity].

C. Research Reports: For concrete admixtures in accordance with ICC AC198.

D. Preconstruction Test Reports: For each mix design.

E. Minutes of preinstallation conference.

1.6 QUALITY ASSURANCE

A. Ready-Mixed Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94/C94M requirements for production facilities and equipment.

1. Manufacturer certified in accordance with NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

B. Installer Qualifications: An experienced cast-in-place architectural concrete installer, as evidenced by not less than five consecutive years' experience, specializing in installing cast-in-place architectural concrete similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

1. Provide written evidence of qualifications and experience.

2. Include locations, descriptions, and photographs of completed projects, including name of architect, substantiating the quality of the installer's experience.

1.7 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction testing on concrete mixtures.

1. Include the following information in each test report:

a. Admixture dosage rates.
b. Slump.
c. Air content.
d. Seven-day compressive strength.
e. 28-day compressive strength.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with ACI 301 unless modified by requirements in the Contract Documents.

2.2 FORM-FACING MATERIALS

A. Comply with Section 031000 "Concrete Forming and Accessories" for formwork and other form-facing material requirements, and as specified in this Section.

B. Form-Facing Panels for As-Cast Finishes:

1. Steel- and glass-fiber-reinforced plastic, or other approved nonabsorptive panel materials that provide continuous, true, and smooth architectural concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.
2. Exterior-grade plywood panels, nonabsorptive, that will provide continuous, true, and smooth architectural concrete surfaces, high-density overlay, Class 1, or better complying with DOC PS 1[, or Finnish phenolic overlaid birch plywood].

C. Rustication Strips: Metal[**,** dressed wood**,** or rigid plastic, with sides beveled and back kerfed; nonstaining; in longest practicable lengths.

D. Chamfer Strips: Metal, rigid plastic, elastomeric rubber, or dressed wood, 3/4 by 3/4 inch , minimum; nonstaining; in longest practicable lengths.

E. Form Joint Tape: Compressible foam tape; pressure sensitive; AAMA 800; minimum 1/4 inch thick.

F. Form Joint Sealant: Elastomeric sealant complying with ASTM C920, Type M or Type S, Grade NS, that adheres to form joint substrates, does not stain, does not adversely affect concrete surfaces, and does not impair subsequent treatments and finishes of concrete surfaces.

G. Wood Sealer: Penetrating, clear, polyurethane wood sealer formulated to reduce absorption of bleed water and prevent migration of set-retarding chemicals from wood and does not stain, does not adversely affect concrete surfaces, and does not impair subsequent treatments and finishes of concrete surfaces.

H. Form-Release Agent: Commercially formulated, colorless form-release agent that does not bond with, stain, or adversely affect architectural concrete surfaces and will not impair subsequent treatments and finishes of architectural concrete surfaces.

1. Formulate form-release agent with rust inhibitor for steel form-facing materials.

I. Surface Retarder: Water-soluble chemical liquid set retarder, for application on form-facing materials, capable of temporarily delaying final hardening of newly placed architectural concrete surface to depth of aggregate exposure specified.

1. Furnish glass-fiber-reinforced plastic ties, not less than 1/2 inch and not more than 1 inch (25 mm) in diameter, of color [to match Architect's sample] [selected by Architect from manufacturer's full range].

2.3 REINFORCEMENT ACCESSORIES

A. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire fabric in place.

1. Manufacture bar supports in accordance with CRSI's "Manual of Standard Practice."
2. Where legs of wire bar supports contact forms, use gray, all-plastic] CRSI Class 1, gray, plastic-protected bar supports.

3. Maximum Coarse-Aggregate Size: 3/4 inch
4. Gradation: Uniformly graded.

B. Normal-Weight Fine Aggregate: ASTM C33/C33M manufactured or natural sand, free of materials with deleterious reactivity to alkali in cement, from same source for entire Project.

C. Air-Entraining Admixture: As specified in Section 033000 "Cast-in-Place Concrete."

D. Chemical Admixtures: As specified in Section 033000 "Cast-in-Place Concrete," and certified by manufacturer to be compatible with other admixtures and that do not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.

E. Water and Water Used to Make Ice: ASTM C94/C94M, potable or complying with ASTM C1602/C1602M, including all limits listed in Table 2 and requirements of paragraph 5.4.

2.4 CURING MATERIALS

A. Comply with Section 0330000 "Cast-in-Place Concrete."

2.5 CONCRETE MIXTURES, GENERAL

1. Fly Ash or Other Pozzolans: 25 percent by mass.
2. Slag Cement: 50 percent by mass.
3. Total of Fly Ash or Other Pozzolans, Slag Cement: 50 percent by mass, with fly ash or pozzolans not exceeding 25 percent by mass.
4. Total of Fly Ash or Other Pozzolans: 35 percent by mass, with fly ash or pozzolans not exceeding 25 percent by mass.

B. Admixtures: Use admixtures in accordance with manufacturer's written instructions.
   1. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixture time, quantity, and amount of water added. Record approximate location of final deposit in structure.

PART 3 - EXECUTION

3.1 INSTALLATION OF FORMWORK

A. Comply with Section 031000 "Concrete Forming and Accessories" for formwork, embedded items, and shoring and reshoring, and as specified in this Section.

B. Limit deflection of form-facing panels to not exceed ACI 301 requirements.

C. Limit cast-in-place architectural concrete surface irregularities, as follows:
   1. Surface Finish-3.0: ACI 117 Class A, 1/8 inch .

D. Construct forms to result in cast-in-place architectural concrete that complies with ACI 117.

E. Seal form joints, chamfers, rustication joints, and penetrations at form ties with form joint tape or form joint sealant to prevent cement paste leakage.

   1. Provide closure backing materials if indented rustication is used over a ribbed form line, and seal joint between rustication strip and form with joint sealant.

F. Chamfer exterior corners and edges of cast-in-place architectural concrete.

G. Coat contact surfaces of wood rustications and chamfer strips with wood sealer before placing reinforcement, anchoring devices, and embedded items.

H. Coat contact surfaces of forms with form-release agent, in accordance with manufacturer's written instructions, before placing reinforcement, anchoring devices, and embedded items.

I. Coat contact surfaces of forms with surface retarder, in accordance with manufacturer's written instructions, before placing reinforcement, anchoring devices, and embedded items.

3.2 CONCRETE PLACEMENT

A. Comply with Section 03 30 00 Cast-in-Place Concrete.

3.3 FINISHING FORMED SURFACES

A. Comply with Section 03 30 00 Cast-in-Place Concrete.

B. Architectural Concrete Finish: Match Architect's design reference sample, identified and described as indicated, to satisfaction of Architect.

C. As-Cast Surface Finishes: Comply with Section 03 30 00 Cast-in-Place Concrete for the following:

1. ACI 301 (ACI 301M) Surface Finish-3.0 (SF-3.0.)

D. Final Concrete Finish: Comply with Section 033000 "Cast-in-Place Concrete."

3.4 CONCRETE CURING

A. Comply with Section 03 30 00 Cast-in-Place Concrete using identical curing procedures to that used for field sample panels.

3.5 REPAIR

A. Comply with ACI 301 (ACI 301M).

B. Repair damaged finished surfaces of cast-in-place architectural concrete when repairing is approved by Architect.

C. Match repairs to color, texture, and uniformity of surrounding surfaces and to repairs on approved field sample panels.

D. Remove and replace cast-in-place architectural concrete that cannot be repaired to Architect's approval.

3.6 FIELD QUALITY CONTROL

A. Comply with Section 033000 "Cast-in-Place Concrete."

3.7 CLEANING

A. Clean cast-in-place architectural concrete surfaces after finish treatment to remove stains, markings, dust, and debris.

B. Wash and rinse surfaces in accordance with concrete finish applicator's written instructions.

1. Protect other Work from staining or damage due to cleaning operations.
2. Do not use cleaning materials or processes that could change the appearance of cast-in-place architectural concrete finishes.

3.8 PROTECTION

A. Protect corners, edges, and surfaces of cast-in-place architectural concrete from damage; use guards and barricades.

B. Protect cast-in-place architectural concrete from staining, laitance, and contamination during remainder of construction period.

3.9 FINAL ACCEPTANCE

A. Final acceptance of completed architectural concrete Work will be determined by Architect by comparing approved field sample panels with installed Work, when viewed at a distance of 20 feet

END OF SECTION

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Work Included: Concrete polishing, complete, as shown and specified.

B. Other Applicable Sections: Following Sections apply to Work under this Section.

1. Section 03 10 00 Concrete Formwork.

2. Section 03 20 00 Concrete Reinforcement.

3. Section 03 30 00 Cast-In-Place Concrete.

1.3 REFERENCES

A. General: Comply with the applicable provisions of the referenced standards except as modified by governing codes and the Contract Documents. Where a recommendation occurs in the referenced standards, it shall be considered mandatory. In the event of conflict, the more stringent standard or requirement shall govern.

1. American Concrete Institute (ACI):

a. ACI 301 “Specifications for Structural Concrete for Buildings”.

b. 302.1R “Recommend Practice for Concrete Floor and Slab Construction”.

2. American Society for Testing and Materials (ASTM)

a. ASTM D2047 “Static Coefficient of Friction of Polish-Coated Flooring Surfaces as Measured by the James Machine”.

1.4 SYSTEM DESCRIPTION

A. Performance Requirements

1. Slip Resistance, Wet Dynamic Coefficient of Friction (DCoF): Wet DCoF of installed flooring and paving shall be as follows, when measured in accordance with NFSI/ANSI B101.3.

a. Level Surfaces: Not less than 0.42.

1.5 SUBMITTALS

A. Product Data: Submit for Architect's action. Submit manufacturer's literature and installation instructions for each material and accessory, clearly notating specified requirements. Include technical data sheet giving descriptive data, curing time, and application requirements.

B. Samples:

1. Provide polished and semi-polished samples for Architect's initial review and selection. Samples to be at least 12 in. square and will be returned to subcontractor. Selected sample will be kept for project record.

C. Quality Assurance/Quality Control Submittals: Submit for Architect's information.

1. Certificates:

a. Document Review: Submit a written statement signed by the Contractor and the Applicator stating that the Contract Documents, shop drawings and product data have been reviewed with qualified manufacturer representatives. The statement shall certify that selected materials are proper, compatible with contiguous materials and adequate for the application shown.

b. Installer's Qualifications

1.6 QUALITY ASSURANCE

A. Qualified Installer: Installer to have 5 years' experience in the installation of specified materials on comparable projects. The firm shall have the approval of the materials manufacturer.

B. Walkway Auditor: Certified by NFSI as a "Walkway Auditor Certificate Holder."

C. Regulatory Requirements: Comply with applicable requirements of the laws, codes, and regulations of Authorities Having Jurisdiction (AHJs). Obtain necessary approvals from AHJs.

D. Mock−Up(s):

1. Visual: Prepare a visual mock-up of the polished concrete, extent as shown. Or, if not shown, extent shall be at least 16 ft. by 16 ft. Notify Architect when mock-up is available for review. Do not proceed with work until Architect has approved the visual mock-up.

E. Pre-Installation Meetings: Before the start of Work, meet at the Project site to review methods and sequence of installation, special details and conditions, quality standards, testing and quality control requirements, job organization and other pertinent topics related to the Work. The meeting shall include the Owner, Architect, Architect's consultants, Contractor, and subcontractors whose work is relevant to this Specification Section.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Comply with manufacturer's instructions. Concrete shall be cured a minimum of 28 days.

B. Application shall take place at least 10 days prior to racking and other in-store accessory installation providing a complete, uninhibited concrete slab for application.

C. Power Supply: Provide generator to supply required 480V, 3 phase, 50 amp power required to operate equipment.

PART 2 – PRODUCTS

2.1 POLISHED CONCRETE MATERIALS

A. Polished Concrete: Provide polished concrete floor system "Ultraflor Diamatic USA" or equal. Flooring system shall be NFSI certified and meet specified performance requirements. At areas noted as C-1 on finish plans. Semi-polished finish.

B. Aggregate for Concrete Mix: Coarse aggregate. See Section 03 30 00, 2.2 B.

C. Integral Color: Provide pricing for add alternate to include integrally colored concrete.

D. Densifier: QuestMark 7923 DiamondGuard II concrete Densifier hardening/sealing agent, or approved equal.

E. Sealer Coat: As recommended by Installer.

F. Water: Potable.

G. Epoxy Filler: QuestMark 3380 100% Solids Epoxy Liquid, or approved equal.

H. Joint Sealant: Two-component sealant.
1. Products: QuestMark 5830 Fast Set Flexible Joint Sealant, or approved equal. Color: Clear.

PART 3 – EXECUTION

3.1 SURFACE CONDITIONS

A. Examine substrate, with installer present, for conditions affecting performance of finish. Correct conditions detrimental to timely and proper work. Do not proceed until unsatisfactory conditions are corrected.

B. Verify that base slabs meet finish and surface profile requirements in Division 3 section “Cast-in-Place Concrete” and Project Conditions above.

C. Prior to application, verify that floor surfaces are free of construction laitance.

3.2 APPLICATION OF SEALED CONCRETE

A. General: Apply concrete sealer in accordance with manufacturer’s recommendations.

B. Apply two coats of concrete sealer, unless otherwise directed by Architect.

3.3 APPLICATION OF POLISHED CONCRETE

A. LEVEL 2 CUT / A slightly deeper cut the exposes the fine aggregates and begins to expose the coarse aggregates. Also referred to as a salt and pepper finish.

B. Specified polished floor details

a. Specified floor finish shall have a cut Level of 2
b. Specified floor finish shall have a gloss Level of B – Medium gloss reading of 41-55. 800 grit diamond finish.
c. Specified Flor-Color shall be TBD
d. See addendum for specific steps

1. GRIND/POLISH #1: DIAMATIC 60/80 Grit Metal Bonded Diamonds.
2. Broom and vacuum the floor to remove all residual dust.
3. GRIND/POLISH #2: DIAMATIC #1 Transitional Diamonds, Ceramic Bonded.
4. Broom and vacuum the floor to remove all residual dust.
5. GRIND/POLISH #3: DIAMATIC 200 Grit Resin Bonded Diamonds.
6. Broom and vacuum the floor to remove all residual dust.
7. Apply DIAMATIC FLOR-SIL™ per application instructions at a rate of 400 square feet per gallon.
8. Allow DIAMATIC FLOR-SIL™ to dry 1 hour before continuing on to the next step.
9. GRIND/POLISH #4: DIAMATIC 400 Grit Resin Bonded Diamonds.
10. Broom and vacuum the floor to remove all residual dust.
11. GRIND/POLISH #5: DIAMATIC 800 Grit Resin Bonded Diamonds.
12. Broom and vacuum the floor to remove all residual dust.

13. MICROPOLISH/BURNISH #1: FLOR-GRIT 800 Diamond Impregnated Pad.
14. Dry mop the floor clean to remove all debris.
15. Apply DIAMATIC FLOR-FINISH (High Gloss) per application instructions at a rate of 2,500- 3,000 square feet per gallon.
16. Allow to dry a minimum of 15-30 minutes.
17. MICROPOLISH/BURNISH #2: FLOR-GRIT 800 Diamond Impregnated Pad.
18. Dry mop the floor clean to remove all debris.
19. Apply DIAMATIC FLOR-FINISH (High Gloss) per application instructions at a rate of 3,000 square feet per gallon, 90 degrees to the first application.
20. Allow to dry a minimum of 15 minutes.
21. MICROPOLISH/BURNISH #3: FLOR-GRIT 1500 Diamond Impregnated Pad.

3.4 JOINT SEALANT

A. Install sealant in all construction, isolation, and control joints in exposed slabs, in accordance with manufacturer's recommendations. Coordinate timing of installation with floor polishing operations.

B. Allow slab to cure to the maximum extent possible before installing joint sealant, but not less than two months.

C. Remove all loose material from joints by wire brushing.

D. Provide backer material to provide joint depth to width ratio, and minimum depth required by sealant manufacturer.

E. Install sealants so that sealants completely fill recess and provide uniform, cross-sectional shapes and depths relative to joint widths.

F. Allow three day sealant cure time before foot traffic and one week before full service use.

3.5 WORKMANSHIP AND CLEANING

A. The premises shall be kept clean and free of debris.

B. Remove spatter from adjoining surfaces.

C. Repair damages to surface caused by cleaning operations.

3.6 QUALITY CONTROL

A. Contractor shall hire a Walkway Auditor to test entirety of the polished concrete floor. Floor auditing shall be conducted in accordance with NFIS/ANSI B101.3.

Where concrete floor does not meet specified performance requirements, Contractor shall provide remediation, at no additional cost, that is acceptable to the Owner and Architect.

3.7 PROTECTION

A. Protect finished work until fully cured in accordance with manufacturer's recommendations.

B. Use Ramboard, or equal floor covering/protection immediately following polishing and maintain through substantial project completion.

END OF SECTION

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Pneumatically applied concrete.

1.2 RELATED REQUIREMENTS

A. Section 03 10 00 - Concrete Forms and Accessories.

B. Section 03 20 00 - Concrete Reinforcement.

C. Section 03 30 00 - Cast-In-Place Concrete.

D. Section 05 05 23 - Adhesive and Mechanical Fasteners: Mechanical items for casting into shotcrete.

1.3 REFERENCE STANDARDS

A. ACI 301 - Specifications for Structural Concrete for Buildings: American Concrete Institute International; 1999.

B. ACI 506R - Guide to Shotcrete; American Concrete Institute International; 2016.

C. ACI 506.2 - Specification for Shotcrete; 2013.

D. ACI CCS-4(20) - Shotcrete for the Craftsman, American Concrete Institute; 2020.

E. ASTM C1602/C1602M - Standard Specification for Mixing Water Used in the Production of Hydraulic Cement Concrete; 2012.

F. ASTM C 42/C 42M - Standard Test Method for Obtaining and Testing Drilled Cores and Sawed Beams of Concrete; 2003.

G. ASTM C150/C150M - Standard Specification for Portland Cement; 2020.

H. ASTM C260/C260M - Standard Specification for Air-Entraining Admixtures for Concrete; 2010a (Reapproved 2016).

I. ASTM C494/C494M - Standard Specification for Chemical Admixtures for Concrete; 2019.

J. ASTM C 1141- Standard Specification for Admixtures for Shotcrete; 2015

K. ASTM C1604/1604M - Standard Test Method for Obtaining and Testing Drilled Cores of Shotcrete; 2005(2012).

1.4 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene one week before starting work of this section.

B. The term "Nozzle Operator" in this section is to include any building code or referenced standard reference to "Nozzleman".

1.5 SUBMITTALS

A. See Division 1 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's data on admixtures and curing compounds.

C. Shop Drawings: Indicate formwork, and dimensions, thickness, and tolerances, reinforcement, inserts, accessories. Shop drawings to include mockups and test panels.

D. Placement schedule: Indicate schedule of placement and location of construction joints.

E. Certified mix design: Submit for each type and strength of shotcrete, at least 4 weeks prior to placement of wall test panels.

1. Include results of testing or test data used to establish mix proportions. This is to include weight, slump, shrinkage, and compression test reports. Mix designs to be prepared, stamped and signed by a Professional Engineer registered in the State of California.

F. Submit certificates of compliance for materials of mix.

G. Nozzle Operator Qualifications: Submit for each nozzle operator performing shotcrete operations.

1. ACI Certification

2. Documentation of experience.

3. Project specific mock-up wall test panel grading.

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with ACI 506.2, except as modified herein.

1. Maintain one copy of document on site.

B. Applicator Qualifications: Company specializing in performing shotcrete installations, with minimum five years of documented experience.

C. Nozzle Operator Qualifications: Certified by ACI, and having over 3,000 hours of experience as a nozzle operator, and at least three similar project applications in past 5 years.

1.7 MOCK-UP

A. Wall Test Panel: Construct vertical wall test panels, 6 feet tall by 6 feet wide by 18 inch thick.

B. Wall Test Panels: A minimum of four weeks prior to starting shotcrete work, construct mock-up for evaluation of proposed materials, equipment and workmanship:

1. Provide one test panel fabricated by placing shotcrete onto plywood for each mix design being considered, for each shooting position to be encountered, for each proposed nozzle operator, and a minimum of 3 total test panels.

a. Prepare panels using anticipated shooting orientation and distance from application.

2. Form and reinforce panels to replicate the most congested wall on the project. Include bar bends, reinforcing couplers, reinforcing splices, foundation and wall dowels, additional vertical column bars and ties, and other perimeter conditions.

3. Finish each panel with finish to be used on the project.

4. Form panels to identical shotcrete thickness with reinforcement in place.

C. Locate mock-ups where directed.

D. Mock-ups may not remain as part of the Work.

1.8 FIELD CONDITIONS

A. Maintain material and surrounding air temperature at minimum 50 degrees F prior to and during installation and maintain material at this minimum temperature for 7 days after completion of work. Provide equipment and cover to maintain minimum temperature.

B. Suspend shotcrete operations during high winds, rainy weather, or near freezing temperatures when work cannot be protected.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Cement: ASTM C150/C150M, Type I - Normal; gray color.

B. Aggregate: Normal weight, ASTM C 33, ¾" maximum. For shear walls, shotcrete shall conform to course aggregate grading No. 2 per Table 1.1 of ACI 506.

C. Admixtures: Chemical type conforming to ASTM C494/C494M and ASTM C1141 (wet mix only).

D. Air-Entraining Admixture: Complying with ASTM C260/C260M (wet mix only).

E. Water: ASTM C1602/C1602M; clean, potable, and not detrimental to shotcrete.

F. Curing Compound: ASTM C309, Water-based, spray-on, penetrating curing compound and hardener; not detrimental to application of subsequent surface finish materials; containing no wax, resin, or solvents.

G. Alignment Wire: Small gauge, high strength steel wire.

2.2 SHOTCRETE MIX

A. Provide wet mix design that gives good compaction and low percentage of rebound, is stiff enough not to sag.

B. Comply with following requirements:

1. Compressive Strength (28 day minimum): As indicated on drawings

2. Aggregate Size (maximum): 1/2 inch. Coarse aggregate Grading No. 2 per Table 1.1 of ACI 506R.

3. Pozzolanic Mineral Admixture: 25 percent maximum of total cementitious material by mass.

4. Slump: 1 1/2 inch to 3 inch.

C. Maintain quality control records during production of shotcrete; make records available.

2.3 EQUIPMENT

A. Mixing Equipment: Capable of thoroughly mixing aggregate, cement, and water in sufficient quantity to maintain continuous placement.

B. Delivery Equipment: Capable of discharging wet mix aggregate, cement, and water accurately, uniformly, and continuously.

2.4 SOURCE QUALITY CONTROL AND TESTS

A. An independent testing agency will provide inspection and testing services, as specified in Division I.

B. Prior to start of work, testing agency will review mix proportions, gradation, and quality of aggregate.

C. Provide inspection for compliance with design mix.

D. Test samples in accordance with ACI 506.2, except as modified herein.

E. Independent testing agency will test mock-up wall test panels as follows:

1. Core six test specimens from each panel in accordance with ASTM C42 at following locations in panel:
    a. Three non-reinforced locations.
    b. Three reinforced locations, each taken at different congested areas.
    c. In lieu of coring, the test specimens may be sawcut.
2. Test the non-reinforced specimens for compliance with the specified physical properties in accordance with ASTM C42.
3. Visually grade the reinforced specimens for compliance with specified core grade in accordance with ACI 506.2.
    a. Mean Core Grade: Less than or equal to 2.5.
        1) Only nozzle operators meeting this grade will be approved to place shotcrete.
        2) Additional cores may be taken from panel to increase sample size.
        3) A second set of test panels may be shot and tested.

F. Modify mix design as required based on results of testing and inspection.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that conditions are acceptable and are ready to receive work.

C. Verify that field measurements are as indicated on drawings.

D. Verify fabricated forms are:
1. True to line and dimension.
2. Adequately braced against vibration during placement.
3. Constructed to permit escape of trapped air during gunning operations.
4. Constructed to minimize rebound during gunning operations.

E. Verify correct placement of reinforcement with sufficient clearances to permit complete encasement.

F. Verify that embedded fittings, pipe, conduits, and other items are correctly and securely placed.

G. Ensure easy access to shotcrete surfaces for screeding and finishing, and to permit uninterrupted application.

3.2 PREPARATION

A. Remove existing unsound material from substrate surfaces.

1. Minimize abrupt changes in depth of area to be repaired.

2. Remove square external corners from substrate by radiusing the edges.

B. Determine operating procedures for placement in close quarters, extended distances, or around unusual obstructions where placement velocities and mix consistency may be adjusted during application.

C. Clean and wet cementitious or absorptive substrate surfaces prior to receiving shotcrete. Keep porous surfaces damp for several hours prior to placement of shotcrete.

D. Protect adjacent surfaces not receiving shotcrete, including, but not limited to, finishes, pipes and utility lines.

E. Provide additional sacrificial reinforcing for structural soundness test cores as noted on drawings. Clearly document location for future test cores.

3.3 ALIGNMENT CONTROL

A. Provide alignment wire to establish thickness and plane of required surfaces.

B. Install alignment wire at corners and offsets not established by forms.

C. Tighten alignment wire true to line. Position adjustment devices to permit additional tightening.

3.4 APPLICATION

A. Place shotcrete in accordance with ACI 506.2.

B. Use mixing and delivery equipment capable of thoroughly mixing aggregate, cement, and water in sufficient quantity to maintain continuous and uniform placement.

C. Do not apply shotcrete more than 90 minutes after batching.

D. Do not place shotcrete on surfaces that are frozen, spongy, or where there is free water.

E. Achieve maximum compaction with minimum rebound.

F. Build-up to required thickness in multiple passes to achieve single layer. Encase reinforcement adjacent to form with the first pass.

G. Construction Joints: Provide where unfinished work stands for more than 30 minutes.

1. Construction joints to be sloped at a 45-degree angle.

2. Unless otherwise indicated, square construction joints are not permitted.

H. Do not permit applied shotcrete to sag, slough, or displace.

I. After initial set of final layer, remove excess material outside of forms and alignment lines.

J. At existing floors, do not pneumatically apply the shotcrete. Turn off the air, place, and mechanically vibrate the shotcrete mix.

K. Sandblast construction joints to remove laitance and roughen joint. Clean with air/water pressure jet. Wet entire surface prior to application of additional shotcrete.

L. Finish surface of final layer with wood float finish.

M. Remove rebound at construction joints and reinforcing steel extending from joint.

N. Remove rebound material that does not fall clear of work; discard salvaged rebound.

O. Maintain shotcrete with minimal moisture loss at relatively constant temperature for period necessary for hydration of cement and hardening of shotcrete, minimum 24 hours per CBC 1908A.9.1.

P. Immediately after placement, protect shotcrete from premature drying, excessively hot or cold temperatures, and mechanical injury.

Q. Apply curing compound to exposed surfaces according to manufacturer's instructions.
1. Apply at 200 percent of manufacturer's minimum required application rate.

R. Sound test the applied material with hammer for voids. Expose voids and submit repair procedure for review and approval.

3.5 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Division 1.

B. Provide continuous special inspection during shotcrete placement. Verify materials, placing equipment, details of construction, preparation of base materials and construction procedures.

C. Material Test Panels: Perform in accordance with the California Building Code, latest edition, Chapter 19.

1. Prepare 18 inch by 18 inch by 5 1/2 inch minimum test panels for each days work, or each shift whichever is less, and for every 50 cubic yards of concrete placed.

a. Panels to be prepared in the same position as the work, during the course of the work and by the nozzle operators performing the work.

2. Obtain three, 3-inch diameter by 5 1/2" long concrete core specimens from each test panel prepared in accordance with ASTM C1604, no sooner than 7 days after preparing the panel.
    a. Test cylinders are not to be prepared by shooting directly into a cylinder.
    b. Specimens are to be water soaked for a minimum of 24 hours prior to testing.
3. Perform standard compression tests on each group of core specimens for each panel and verify compliance with specified physical properties using the referenced Code requirements.

D. Structural Soundness Test Cores: Perform in accordance with the California Building Code, latest edition, Chapter 17A.

1. Obtain three 3-inch concrete core specimens from three areas chosen by the Engineer of Record that contain additional sacrificial rebar.
2. Perform visual examination of cores for reinforcing bar embedment, voids, rock pockets, sand streaks and similar deficiencies.
3. Submit report to enforcement agency prior to final approval of the shotcrete.

3.6 PROTECTION

A. Do not permit applied work to damage adjacent surfaces.

END OF SECTION

PART 1 - GENERAL

1.1 SCOPE

A. The work under this section includes all materials, labor, services and equip-ment necessary to complete all post-tensioning work on the structure as shown on the Drawings and specified herein: including shop drawings, post-tensioning tendon specifications, post-tensioning tendons, anchorages, distribution plates, spacer bars, systems, layouts of tendon loca-tions, placing of tendons, stressing tendons (jacking, anchoring and cutting off excessive lengths), records of all elongations, gauge readings, pump calibration and protection of tendon hardware after stressing. All post-tensioning work shall be performed by a quali-fied post-tensioning installer approved by the En-gineer.

B. Related work specified in other sections:

1. Section 03 10 00: Concrete Formwork.
2. Section 03 20 00: Concrete Reinforcement.
3. Section 03 30 00: Cast-in-Place Concrete.

1.2 APPLICABLE SPECIFICATIONS AND CODES

A. Building Code Requirements for reinforced concrete (ACI 318).

B. Specifications for Structural Concrete for Buildings (ACI 301).

C. Recommendations for Concrete Members Prestressed with Unbonded Tendons (ACI 423.3R).

D. Specifications for Uncoated Seven-Wire Stress-Relieved Strand for Prestressed Concrete - ASTM A 416.

E. Specification for Unbonded Single Strand Tendons (PTI M10.2-00).

F. Specification for Unbonded Single Strand Tendon (ACI 423.7).

G. Some products and execution are specified in this section by reference to published specifications or standards of the following.

1. American Concrete Institute (ACI);
2. The American Society of Testing and Materials (ASTM);
3. Prestressed Concrete Institute (PCI);
4. Post-tensioning Institute (PTI).

1.3 SUBMITTAL

A. Manufacturer's Literature: Submit manufacturer's standard specifications, test data and installation instructions for each product edited to correlate to specific job requirements.

B. Shop Drawings: The Contractor shall submit one sepia plus one print of Shop Drawings to the Engineer for review. The following information shall be provided on the shop drawings.

1. Submittals shall be in compliance with the General Conditions.
2. Tendon layout dimensions locating tendons in horizontal plane at all points. Show all openings in slabs and beams as required.
3. Provide tendon profiles showing chair heights and locations. Show clearly the method and location of each tendon support.
4. Furnish details of reinforcement around stressing pockets and closures, if any, of where interference with post-tensioned tendons may occur.
5. Show spacing of anchors to meet criteria of paragraph 2.1.B.3a.
6. Show required elongation of each tendon at jacking points.
7. Contractor shall include the calculations of friction losses on the Shop Drawings to determine that design forces are obtainable. Fur-nish the calculations or the test results as to the adequacy of anchorage.
8. After completion of the review process, the Shop Drawings and data shall not be changed nor shall construction operations be deviated from, unless such changes are approved in writing.
9. Engineer's review of details and construction operations shall be for general conformance with Contract Documents and will not relieve the Contractor of his responsibility for completing the work success-fully in accordance with these specifications and within the contract time.
10. Provide calculations signed and sealed by Professional Engineer registered in State of California.

C. Methods: Furnish complete prestressing procedure to include the following:

1. Jacking force and jacking pressure.
2. Maximum temporary jacking force and jacking pressure.
3. Certified jack calibrations and the method of jack identification. (Use of non-calibrated jack and pump will not be allowed on the job).
4. Method of determining slack, if any.
5. Method of determining anchor force, or force remaining in tendons after anchor.
6. Staging of stress operation when such staging is necessary.
7. Furnish method of burning off excess tendon after anchorage.

8. Provide method for sealing tendons and/or tendon anchorage pock-ets.

D. Tests:

1. The costs of testing specified in this Section shall be paid for by the Owner.

2. Samples for testing shall be accompanied by the Vendor's certifica-tion that samples are representative of material to be furnished, and submitted to the Contractor and to the Structural Engineer.

3. Two tests shall be made for each reel, heat or lot number being used on the job and shall be recorded for identification purposes. Prestressing steel shall be tested for tensile strength and elongation at rupture. Each size of strand to be shipped to the site shall be as-signed an individual lot number and shall be tagged accordingly. The modulus of elasticity shall be determined for each reel, heat or lot number.

4. If adequate information concerning the suitability of prestressing sys-tem cannot be furnished to the Engineer, the Engineer may require tests to be made of the system. The contractor shall bear all the costs of these tests.

E. Mill test reports:

1. Certified mill test reports shall be furnished upon request for each coil or pack of strand, containing as a minimum the following test in-formation:

a. Heat number and identification;

b. Standard chemical analysis for heat of steel;

c. Ultimate tensile strength;

d. Yield strength at 1% extension under load;

e. Elongation at failure;

f. Modulus of elasticity;

g. Diameter and net area of the strand;

h. Type of material (stress-relieved or low relaxation).

1.4 VERIFYING CONDITIONS

A. Visit the site, verify all conditions and dimensions. Examine all drawings af-fecting the work of this Section.

B. Check all work or surfaces to receive work of this Section. Report all condi-tions, which interfere with or will prevent proper execution of the work of this Section.

1.5 COORDINATION WITH OTHER SECTIONS

A. Coordinate all work with that of other Sections. All trades shall be given full cooperation and access for the installation of inserts, bolts, and other em-bedded items in the Concrete.

B. The following criteria for coordination will be followed:

1. Power driven or post-installed anchors for securing steel studs, etc., shall not be allowed at areas where the tendon approaches either the top or bottom surfaces of the slabs.

2. Conduit may be embedded in post-tensioning slabs when meeting the following conditions.

a. Space conduits minimum 1-1/2 diameters clear but no less than 1-1/2" clear. Where conduits are highly congested, conduit installer shall submit details of proposed installation for review and approval.

b. Conduits shall be supported on accessories supplied by con-duit installer. In no case shall conduits rest on, displace, or tie to tendons.

c. Conduit diameter shall not exceed 25% of slab thickness, and shall be placed within the middle one-third of slab thick-ness.

3. Sleeves and cast inserts shall be used in lieu of coring and post-installed anchors. Length of continuous inserts shall not exceed 2'-0" unless specifically coordinated with tendon Shop Drawings and reviewed by the Engineer.

1.6 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are thoroughly trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.

B. For the work of this Section, use a subcontractor having a successful record of completing work of the type specified, to the approval of the Engineer.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Pre-stressing Steel: Lolax strands used in single strand unbonded post-tensioning tendons shall conform to ASTM A 416 Grade 270, specifications for Uncoated Seven-Wire Low Relaxation Type strands for Prestressed Concrete".

1. Strands shall have the following properties:

a. Nominal Diameter = 1/2 inch

b. = 0.153 sq. in.

c. Modulus of Elasticity = 28,000 psi

d. Ultimate Strength = 270,000 psi

2. Strands shall be encapsulated in accordance with the requirements of Section 2.2.6 of PTI M10 and per Section 2.5 of ACI 423.7-07.

3. Strand not specifically itemized in ASTM A 416 may be used provided it conforms to the minimum requirements of this specifica-tion and has no properties which make it less satisfactory than those listed in ASTM A 416.

4. Relaxation losses for low relaxation type material shall be based on relaxation tests of representative samples for a period of 1000 hours, when at 70 degrees F and stressed initially to not less than 70 per-cent of the minimum guaranteed breaking strength of the strand. The tests shall be in accordance with ASTM A 416 and ASTM E 328.

5. Low relaxation strand shall be provided with a mill applied continuous permanent physical marking to permit field identification.

6. The material shall be packaged at the source in a manner which prevents physical damage to the strand during transportation and protects the material from deleterious corrosion during transit and storage.

7. Broken strands and strands showing fabrication defects shall be removed and replaced or member may be rejected.

8. All prestressing steel, within every group of the same type of mem-bers, shall be of same heat where practicable. All the steel shall be assigned a heat number and tagged accordingly.

B. Anchorage: Anchorage devices shall meet the minimum requirements set forth in the ACI 318, "Building Code Requirements for Reinforced Concrete", latest edition and the following criteria:

1. The anchorages of unbonded tendons shall develop at least 95 per-cent of actual ultimate strength of the prestressing steel without ex-ceeding anticipated set. The actual strength of the prestressing steel shall not be less than specified by the applicable ASTM Standard, and shall be determined by tests of representative samples of the tendon material in conformance with ASTM Standards. The total elongation under ultimate load of the tendon shall not be less than 2 percent measured in a minimum length of 10 ft.

2. Tendon anchorages and couplings shall be designed to develop the static and dynamic strength requirements listed below:

   a. Static Tests - The test assembly shall consist of standard production quality components and the tendons shall be at least 10 ft. long. The test assembly shall be tested in a man-ner to allow accurate determination of the yield strength, ultimate strength and percent elongation of the complete tendon to ensure compliance with this specification. The specimen used for the static test need not be one that has been subjected to dynamic loading.

   b. Dynamic Tests - Dynamic tests shall be performed on repre-sentative tendon specimens. In the first test, the tendon shall withstand, without failure, 500,000 cycles from 60 percent to 66 percent of its minimum specified ultimate strength. In the second test, the tendon shall withstand, without failure, 50 cycles from 40 percent to 80 percent of its minimum specified ultimate strength. The period of each cycle involves the change from the lower stress level to the upper stress level and back to the lower.

The specimen used for the second dynamic test need not be the same used for the first dynamic test. Systems utilizing multiple strands, wires or bars may be tested utilizing a test tendon. The test tendon shall duplicate the behavior of the full size tendon and generally shall not have less than 10 percent of the capacity of the full size tendon. Dynamic tests are not required on bonded tendons, unless the anchorage is located or used in such manner that repeated load applications can be expected on the anchorage.

c. The average compressive concrete bearing stress of anchorages shall not exceed the limits set forth below:

1) At service load:

$$f_{cp} = 0.6\, f'_c \sqrt{\frac{A'_b}{A_b}}$$

2) but not greater than 1.25 f'c

3) At transfer load:

$$f_{cp} = 0.8\, f'_{ci} \sqrt{\frac{A'_b}{A_b} - 0.2}$$

4) but not greater than 1.25 f'ci.

5) Where:

(a) = permissible compressive concrete stress;

(b) = compressive strength of concrete;

(c) = compressive strength of concrete at time of initial prestress;

(d) = maximum area of the portion of the concrete anchorage surface that is geometrically similar to and concentric with the area of the anchorage;

(e) = bearing area of the anchorage.

6) As used in the above equation f'c is the average bearing stress, P/A, in the concrete computed by dividing the force P of the prestressing steel by the net projected area, Ab, be-tween the concrete and the bearing plate or other structural element of the anchorage which has the function of transfer-ring the force to the concrete.

7) Special reinforcement, required for the performance of the anchorage, shall be indicated by the tendon supplier.

8) Bending stresses in the bearing plates and anchors shall not exceed 27,000 psi for ASTM A36 structural steel and 20,000 psi for ASTM C148 cast steel. For higher strength steel, corresponding high

stresses may be permitted upon the approval of the structural engineer.

9) These bearing stresses must be appropriately reduced as required, where tendons are in congested areas and in areas depreciated by openings, depressions or other architectural, mechanical or structural details.

10) For wedge type anchorages, the wedge grippers shall be designed to preclude premature failure of the prestressing steel due to notch or pitching effects under the static and/or dynamic test load conditions stipulated for both stress relieved and low relaxation prestressing steel materials.

11) Anchorages are intended for use in corrosive environments and shall include design features permitting a watertight connection of the sheathing to the anchorage, and watertight closing of the wedge cavity, for stressing and non-stressing (fixed) anchorages. Inter-mediate stressing anchorages shall be designed to permit complete watertight encapsulation of the prestressing steel.

C. Corrosion Preventive Coating:

1. The corrosion preventive coating material shall have the following properties:
   a. Provide corrosion protection to the prestressing steel,
   b. Provide lubrication between the strand and the sheathing;
   c. Resist flow from the sheathing within the anticipated tem-perature range of exposure;
   d. Provide a continuous non-brittle film at the lowest anticipated temperature of exposure;
   e. Chemically stable and non-reactive with the prestressing steel, the sheathing material and the concrete.
2. The film shall be an organic coating with appropriate polar, moisture displacing and corrosion preventive additives.
3. Minimum weight of coating material on the prestressing strand shall be not less than 2.5 pounds of coating material per 100 feet of 0.5 inch diameter strand, and 3.0 pounds of coating material per 100 feet of 0.6 inch diameter strand. The amount of coating material used shall be to ensure essentially complete filling the annular space between the strand and the sheathing. The coating shall extend over the entire tendon length.
4. Test results in accordance with the Table I, Page 03365-11 shall be provided for the corrosion preventive coating material:

D. Sheathing:

1. The tendon sheathing for unbonded single strand tendons shall be made of a material with the following properties:

a. Sufficient strength to withstand unrepairable damage during fabrication, transport, installation, concrete placement and tensioning;

b. Watertightness over the entire sheathing length;

c. Chemical stability, without embrittlement or softening over the anticipated exposure temperature range and the service life of the structure;

d. Non-reactive with concrete, steel and the tendon corrosion preventive coating.

2. Minimum thickness of the sheathing shall not be less than 0. 040 inches for medium or high density polyethylene or polypropylene.

3. The sheathing shall have an inside diameter at least 0.010 inches greater than the maximum diameter of the strand.

4. For applications in corrosive environments, the sheathing shall be connected to all stressing, intermediate and fixed anchorages in a watertight fashion, thus providing a complete encapsulation of the prestressing steel.

TABLE 1 PERFORMANCE SPECIFICATION FOR CORROSION PREVENTIVE COATING

TEST	**TEST METHOD**	**ACCEPTABLE CRITERIA**
1. DROPPING POINT DEG. F (DEG. C)	ASTM D 566 OR ASTM D 2265	MINIMUM 300 (148.9)
2. OIL SEPARATION@ 160 DEG. F (71.1 DEG. C) % BY WEIGHT	FTMS 791B METHOD 321.2	MAXIMUM 0.5
3. WATER, % MAX.	ASTM D 95	0.1
4. FLASH POINT, DEG. F (DEG. C) (REFERS TO OIL COMPONENT)	ASTM D 92	MINIMUM 300 (148.9)
5. CORROSION TEST ENVIRONMENTS: RUST5% SALT FOG @ 100 DEG. F (37.8 DEG. C)	ASTM B 117	FOR NORMAL-GRADE 7 OR BETTER AFTER 720 HOURS OF EXPOSURE ACCORDING TO ASTM D610. FOR CORROSIVE ENVIRONMENTS: RUST GRADE 7 OR BETTER AFTER 1000 HOURS OF EXPOSURE ACCORDING TO ASTM D 610. (1)
6. WATER SOLUBLE IONS (2) A. CHLORIDES B. NITRATES C. SULFIDES	 ASTM D 512 ASTM D 992 APHA 427D (15 TH. ED.)	 10 PPM MAX 10 PPM MAX. 10 PPM MAX.

7. SOAK TEST 5% SALT FOG AT 100 DEG. F. (37.8 DEG. C) 5 MILS COATING, Q PANELS, TYPE S. IMMERSE PANELS 50% IN A 5% SALT SOLUTION AND EXPOSE TO SALT FOG.	ASTM B 117 (MODIFIED)	NO EMULSIFICATION OF THE COATING AFTER 720 HOURS EXPOSURE.
8. COMPATIBILITY WITH SHEATHING A. HARDNESS AND VOLUME CHANGE OF POLYMER AFTER EXPOSURE TO GREASE, 40 DAYS @150 DEG. F. B. TENSILE STRENGTH CHANGE OF POLYMER AFTER EXPOSURE TO GREASE, 40 DAYS @ 150 DEG. F.	ASTM D 4289 ASTM D 638	PERMISSIBLE CHANGE IN HARDNESS 15% PERMISSIBLE CHANGE IN VOLUME 10% PERMISSIBLE CHANGE IN TENSILE STRENGTH 30%
NOTES: EXTENSION OF EXPOSURE TIME TO 1000 HOURS FOR GREASES USED IN CORROSIVE ENVIRONMENTS REQUIRES USE OF MORE OR BETTER CORROSION INHIBITING ADDITIVES. PROCEDURE: THE INSIDE (BOTTOM AND SIDES) OF A 1L PYREX BEAKER, APPROXIMATE O.D. 105 MM, HEIGHT 145 MM, IS THOROUGHLY COATED WITH 100 +/- 10 G OF CORROSION PREVENTIVE COATING MATERIAL. THE COATED BEAKER IS FILLED WITH APPROXIMATELY 900 CC OF DISTILLED WATER AND HEATED IN AN OVEN AT A CONTROLLED TEMPERATURE OF 100 DEG. F +/- 2 DEG. F FOR 4 HOURS. THE WATER EXTRACTION IS TESTED BY THE NOTED TEST PROCEDURES FOR THE APPROPRIATE WATER SOLUBLE IONS. RESULTS ARE REPORTED AS PPM IN THE EXTRACTED WATER.		

E. Coupling:

1. Couplings of unbonded tendons shall be used only at locations specifically indicated and approved by the Engineer. Couplings shall not be at points of sharp tendon curvature.

2. All couplings shall develop at least 95% of the minimum specified ul-timate strength of the prestressing tendon without exceeding the an-ticipated set.

3. The couplings of tendons shall not release the elongation at rupture below the requirements of the tendon itself.

4. Couplings shall be coated with the same corrosion preventative coat-ing used on the strand and shall be enclosed in sleeves which permit necessary movements during stressing.

F. Ultimate Strength: The ultimate strength of unloaded tendons shall be taken greater than the ultimate capacity of the anchorages or couplings.

G. Accessories: Accessories required for placement and alignment of the ten-dons shall conform to the concrete reinforcement section of these Specifica-tions.

2.2 OTHER MATERIALS

A. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the contractor subject to the approval of the Engineer.

B. Non-Shrink, Non-Metallic Grout: The non-shrink grout shall be a factory pre-mixed grout and shall conform to ASTM C1107, “Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Non-Shrink).” In addition, the grout manufacturer shall furnish test data from an independent laboratory indicating that the grout when placed at a fluid consistency shall achieve 95% bearing under a 4’ x 4’ base plate. Provide one of the following:

1. “NS Grout”, by The Euclid Chemical Co.
2. “NC Grout”, by Tamms Industries

C. Where high fluidity and/or increased placing time is required using the specified high flow grout, provide one of the following:

1. “Hi-flow Grout”, by The Euclid Chemical Co.
2. “Tammsgrout Supreme”, by Tamms Industries

PART 3 - EXECUTION

3.1 FABRICATION

A. Tendons:

1. Strand tendons shall consist of the required number of 1/2" parallel lay, uncoated, stress relieved, seven wire strand. Strand shall be cut to length allowing sufficient length for attachment of stressing equip-ment. A minimum length of twelve inches at each stressing end is required. Tendons shall be furnished in continuous length, without splices, and enclosed in suitable slippage sheathing ready for im-mediate placement in the forms. Tendons shall be coiled and suffi-ciently tied to prevent premature uncoiling.
2. Strand tendons shall be cut to length at fabricating plant, tagged for identification, and coiled for delivery and shipment to jobsite. Tags shall show the location of the tendon in the forms in conformance with the shop drawings.

B. Couplings of unbonded tendons shall be used only at locations specifically indicated and/or approved by the Engineer. Couplings shall not be used at points of sharp tendon curvature. All coupling components shall be com-pletely protected with coating materials prior to final encasement in concrete.

C. Anchorage components shall be protected with coating material prior to final encasement in concrete.

D. Tendons shall be manufactured in such sequence and quantity as to avoid lengthy storage at the jobsite.

E. Pre-stressing steel shall be satisfactorily protected from excessive rust or other corrosion prior to placement. Sufficient protection shall also be provided for exposed pre-stressing steel at the end of the tendon.

F. Substitutions of post-tensioning system or changes in tendon size and spacing will be considered only on written approval by the Engineer and Construction Manager. The submissions for approval shall include calculations and fabrication and placement drawings.

3.2 SURFACE CONDITIONS

A. The post-tensioning supplier must examine the conditions under which the post-tensioning work is to be performed and notify the contractor in writing of any unsatisfactory conditions. Do not proceed with the work until the unsatisfactory conditions have been corrected in an acceptable manner and approved.

B. The post-tensioning supplier shall provide on-site supervision as required to instruct in the use of stressing equipment and placement of anchorage devices.

3.3 PLACING

A. Placing of the post-tensioning tendons shall be performed by experienced personnel that have been thoroughly instructed and trained in the proper post-tensioning procedures.

B. End anchorages:

1. End anchorages shall be securely fastened to the end forms and shall be perpendicular to the longitudinal axis of the tendon. End anchorages shall be located at the center of gravity axis of the mem-ber unless otherwise shown. Curvature in the tendon profile shall not occur closer than 3 feet from the stressing anchorage.

2. Stressing anchorages shall be attached to the bulkhead forms by either bolts, nails or threaded pocket former fittings. The connections shall be sufficiently rigid to avoid accidental loosening due to con-struction traffic or during concrete placement. Minimum concrete cover for the anchorage shall not be less than the minimum cover to the reinforcement at other locations in the structure.

3. Pocket formers used to provide a void form at stressing and intermediate stressing anchorages shall be positively precluded intrusion of concrete or cement paste into the wedge cavity during concrete placement. The depth of the pocket former from the edge of the concrete to the face of the anchorage shall not be less than 2 inches.

C. Intermediate anchorages:

1. Intermediate anchorages may be installed either embedded in concrete or bearing against the hardened concrete at the construction joint. In the latter case, the anchorage shall have a flat bearing side and the concrete bearing area shall be smooth and without ridges.

2. When placing intermediate anchorages against already hardened concrete, special attention shall be paid to the perpendicularity between the bulkhead form and tendon during placement. This type of anchorage is not recommended for use in corrosive environments.

3. Minimum cover requirements of this Section of these Specifications apply to intermediate anchorages.

D. Fixed anchorages:

1. Fixed end anchorages shall be installed on the tendon at the supplier's plant prior to shipment to the job site.

2. For wedge type anchorages, the fixed end wedges shall be seated, with a load not more than 80% of the minimum ultimate tensile strength of the tendon for stress relieved strand or for low relaxation strand. The seating load shall be sufficient to ensure adequate capacity of non-stressing anchorages.

3. Fixed end anchorages shall be placed in the formwork at the loca-tions shown on the placing drawings, and securely fastened to the reinforcing steel.

4. Minimum cover requirements of this Section of these Specifications apply to fixed end anchorages.

5. Fixed end anchorages intended for use in corrosive environments shall be closed or capped at the wedge cavity side with a watertight cover. This cover shall be shop installed, after filling the void around the wedge grips with corrosion preventative coating material comparable to that used as a corrosion preventive coating over the length of the tendon.

E. Supports for tendons shall be such as to insure their remaining in proper position during the placing of the concrete. Unless otherwise indicated, supports for tendons shall be located at high and low points of profile and at control points located at each 1/4 span of each span or as needed. The use of screws to attach supports for formwork will not be allowed.

F. Vertical tendon dimensional tolerance shall not vary from the dimensions shown on the contract drawings and the approved tendon profile drawings by more than 1/8 of an inch. The maximum horizontal departure from a straight line shall not exceed 1/4" in 12'-0" or be less than a radius of curvature of 21'-0". The clear spacing between tendons shall not be less than one and one-half (1-1/2) the maximum aggregate size except as shown on the Drawings where bundled strands are required. Tendons shall follow an approximate parabolic curvature between the low points and the high points of each span.

G. Tendon supports shall be furnished by strand installer and shall be as detailed unless otherwise permitted. Supports shall be located at the 1/4 points of each span, or as needed and shall be adequately tied to prevent movement or dislodgment during concrete placement. Tendons shall be securely tied to each support to prevent dislodging during concrete place-ment.

H. The minimum clear concrete coverage for tendons shall not be less than 1-1/2 inches for top cover and 3/4 inch for bottom cover, and shall be in ac-cordance with the latest revision of the ACI Building Code, the Prestressed Concrete Institute's "Standard Recommendations for Prestressed Concrete", or the Post-tensioning Institute's "Post-tensioning Manual".

I. Tendons shall be maintained in a straight line, laterally, between anchorages and shall be tied at the intersections where they contact the tendons in the perpendicular direction by standard tie of #16 black annealed tie-wire.

J. Tendons may be displaced as shown on the typical details laterally to miss openings in the slab, as long as this occurs no more than twice on any single tendon, and as long as the angular offset does not exceed 1 in 12. If a greater displacement is required, anchor plates shall be shifted so that the tendon misses the opening, at the direction of the Engineer.

K. Where tendons seem to interfere with each other, one tendon may be moved horizontally in order to avoid this interference. Where there is interference between tendons and any kind of conduit, the tendon profile governs.

L. Placement of mild steel reinforcement shall be coordinated with placement of post-tensioning tendons. Proper tendon placement has priority.

M. Tendons shall clear openings and drains by 2-1/2 inches.

N. Sheathing inspection:

1. After installing the tendons in the forms and prior to concrete placing, the sheathing shall be inspected for possible damage.

2. In corrosive environments, damaged areas shall be repaired by restoring the corrosion preventive coating in the damaged area and repair-ng the sheathing. Repairs to sheathing shall be watertight and must be approved by the Engineer.

3. Tape used to repair sheathing shall be adhesive moisture proof tape, spirally wrapped around the tendon to provide at least two layers of tape.

O. Safety precautions shall be taken to prevent workers from standing behind, above or in front of the stressing jacks during the stressing operations.

P. When welding or burning near post-tensioning tendons or anchorages, care should be taken to prevent tendon components from overheating, and to prevent molten slag from coming into contact with tendons. Care should be exercised to prevent torch flame from coming into contact with wedge grip-pers. No arc welding to be done near tendons.

Q. Upon completion of the stressing operation the tendons shall be finished in accordance with the following procedure:

1. Immediately after tendon tensioning and satisfactory check of elongation and approval of elongation records by the Owner's independent consultant and/or testing agency, the excess tendon length shall be cut. The tendon length protruding beyond the wedges after cutting shall be between 3/4 and 1-1/4 inches.

    a. Tendons shall be cut by means of either cutting, abrasive wheel or hydraulic shears.

2. Stressing pockets shall be cleaned and filled with non-metallic, non-shrink grout as soon as practical after tendon stressing and cutting. Under no circumstances shall the grout or mortar used for pocket filling contain chlorides or other chemicals known to be deleterious to the prestressing steel.

3. The exposed strand and wedge areas shall be coated with tendon coating material comparable to that used over the length of the ten-don and a watertight cap shall be applied over the coated area.

4. Prior to installing the pocket grout, the inside concrete surfaces of the pocket shall be coated or sprayed with a resin bonding agent.

3.4 CONCRETE PLACEMENT

A. Concrete placement shall conform to Section 3C of these Specifications.

3.5 STRESSING

A. Stressing of the post-tensioning tendons shall be performed under the su-pervision of experienced personnel who have been thoroughly instructed and trained in the use of the stressing equipment.

B. Records of elongation and anchor of each tendon shall be kept by the con-tractor and shall be submitted to the Engineer promptly upon the completion of the post-tensioning of each slab. Keep records of final elongation ob-tained for each tendon. Record gauge pressure at anchor liftoff for each 12th tendon or as directed by the structural engineer.

1. Stressing records shall contain the following information:

    a. Tendon mark or identification;

    b. Required elongation;

    c. Gauge pressure to achieve required elongation;

    d. Actual elongation achieved;

    e. Actual gauge pressure;

    f. Date of stressing operation;

    g. Signature of the stressing operator or inspector;

h. Serial or identification number of jacking equipment.

2. Stressing records shall be turned over to the Engineer for verification and safekeeping.

C. Tensioning operation shall not begin until tests of the concrete cylinders, manufactured and cured under the same conditions as the members to be stressed, indicated that the concrete in the members has attained a compres-sive strength of not less than the larger of 40% of the 28 days specified strength or as otherwise specified on the contract drawings or 3,000 psi. A minimum of two cylinders shall be tested. The lowest test results shall not be more than 10% below the specified strength and the average strength of the two tests shall not be less than that specified.

D. After tests indicate that the concrete has reached sufficient strength, the tendons shall be stressed by means of hydraulic jacks equipped with calibrated pressure gauges with an accuracy of 1% of the scale range against known standards at intervals not exceeding 6 months, to permit the stress in the prestressing steel to be computed at any time. Certified test gauge calibration data shall accompany each test gauge. The stressing operation shall be conducted in a safe manner and as recommended by the manufacturer of the prestressing materials.

E. Stress transfer on strand tendons shall be such as to prevent undue scraping of the strand by the wedge grippers during seating.

F. Wedge grippers on strand tendons shall be properly aligned before and after stressing to ensure proper stress retention and to prevent notching of the strand more severely than the normal anchoring wedges.

G. The cause of any difference between the calculated and measured elongation which exceeds 5% shall be ascertained and corrected.

H. The prestressing steel shall be anchored at an initial anchor force or stress that will result in the ultimate retention of the working or effective force shown on the plans. The maximum effective stress shall not exceed 60 percent of the ultimate stress. In no case may the steel be tensioned above 80% (41.3 X .80 = 33.0 kips) of the specified ultimate strength of the prestressing steel. The anchor force shall not exceed 70% (41.3 X .70 = 28.9 kips) of the specified ulti-mate strength of the prestressing steel. Anchor forces shall be verified when necessary by lift-off readings.

I. Jacking from each end of the tendons shall be required when, in the opinion of the Structural Engineer, there is excessive friction between the prestress-ing steel and enclosures. Proper allowance shall be made in any case for friction losses and one tendon shall be checked for friction losses at the start of the post-tensioning.

J. No tensioning will be permitted until it is demonstrated that prestressing steel is reasonably free and unbonded in the enclosure. Evidence that the steel is unbonded will be considered satisfactory if inward movement of the steel is observed at one end of the tendon when a nominal pull is applied to steel at the other end, or when an auxiliary mild steel wire placed in the enclosure for the full length of the enclosure can be pulled intact from the enclosure. An agreement not exceeding five percent between

the observed and the expected elongation after prestressing will be considered satisfactory evidence.

K. End bearing forces shall be uniformly distributed or an end block properly designed, and reinforcement for induced stresses shall be provided.

L. After stressing is completed and only with prior approval from the Engineer, tendons shall be cut or burned off as specified previously in this Section.

M. Exposed stressing recess shall be filled flush with a mix of epoxy, cement, sand and water. White cement shall be added as required for the filler to match adjacent concrete when finished. This work shall be performed as soon as practical after stressing by the contractor.

N. All pockets and closure strips required for anchorages shall be adequately reinforced so as not to decrease the strength of the structure.

3.6 QUALITY CONTROL IN THE FIELD

A. The Owner shall provide inspections through its independent consultant and/or testing agency which shall include the following:

1. Inspection of tendon placement and supporting devices. Contractor shall not be allowed to place concrete until reinforcing steel has been inspected and approved.

B. The Owner's independent consultant and/or testing agency will monitor the tendons force and elongation, before and after anchoring, and certification of jacks.

C. The Owner's independent consultant and/or testing agency are hired solely for the protection of the Owner and does not relieve the Contractor of his responsibility to provide tendons in accordance with Drawings and Specifications.

D. Notify the independent consultant or testing agency and the Architect when all tendons and reinforcement are in place for each pour, at least 24 hours in advance of placing concrete.

E. Exposed tendons in finished work, indicating that the bars are not properly located will be sufficient cause for rejection, removal and replacement of the concrete section.

F. Corrections shall be made by the Contractor at his expense.

G. Cost of testing and inspecting required under this Section will be paid for by the Owner, except for mill tests and certificates described in this section.

H. Cooperate with the owner's testing and inspecting agency and/or personnel as required to enable fulfillment of its duties.

END OF SECTION

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Concrete block.

B. Mortar and grout.

C. Reinforcement and anchorage.

D. Accessories.

1.2 RELATED REQUIREMENTS

A. Section 03 20 00 - Concrete Reinforcement: Reinforcing steel for grouted masonry.

1.3 REFERENCE STANDARDS

A. ASTM A 36/A 36M - Standard Specification for Carbon Structural Steel; 2005.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2016a.

C. ASTM A 563 - Standard Specification for Carbon and Alloy Steel Nuts; 2000.

D. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement; 2020.

E. ASTM C94/C94M - Standard Specification for Ready-Mixed Concrete; 2020.

F. ASTM C140/C140M - Standard Test Methods for Sampling and Testing Concrete Masonry Units and Related Units; 2020a.

G. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar; 2018.

H. ASTM C150/C150M - Standard Specification for Portland Cement; 2020.

I. ASTM C207 - Standard Specification for Hydrated Lime for Masonry Purposes; 2018.

J. ASTM C270 - Standard Specification for Mortar for Unit Masonry; 2019.

K. ASTM C404 - Standard Specification for Aggregates for Masonry Grout; 2018.

L. ASTM C476 - Standard Specification for Grout for Masonry; 2020.

M. ASTM C387 - Packaged, Dry, Combined Materials, for Mortar and Concrete.

N. ASTM C426 - Standard Test Method for Linear Drying Shrinkage of Concrete Masonry Units.

O. ASTM C911 - Quicklime for Structural Purposes.

P. TMS 402/602 - Building Code Requirements and Specification for Masonry Structures; 2016.

Q. ASTM F 844 - Standard Specification for Washers, Steel, Plain (Flat), Unhardened for General Use; 2004e1.

1.4 SUBMITTALS

A. See Division 1 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data for masonry units, mortar and grout, and joint materials.

C. Shop Drawings: Indicate bar sizes, spacings, reinforcement quantities, bending and cutting schedules, reinforcement supporting and spacing devices, accessories and control joint locations. Do not reproduce contract documents for shop drawings.

D. Design Data: Indicate required mortar strength, unit assembly strength in each plane, and supporting test data used to establish masonry strength. Submit mix designs for mortar and grout, stamped and signed by a registered Professional Engineer in the State of California. Mix design and test results for all mortar and grout shall conform to the requirements herein and TMS 602-15 Article 1.5.

1. Establish masonry assembly strength using one of the following methods:

a. Unit Strength Method: In accordance with current California Building Code Section 2105.2.2.1.

b. Prism Test Method: In accordance with current California Building Code Section 2105.2.2.2.

E. Manufacturer's Certificate: Certify that masonry units, cement, aggregates, lime and admixtures meet or exceed specified requirements.

1.5 QUALITY ASSURANCE

A. Comply with provisions of TMS 402/602, except where exceeded by requirements of the contract documents.

1. Maintain one copy of each document on project site.

B. Special Inspection: Coordinate with Owner's special inspector of building structural masonry construction in compliance with 2019 CBC Section 1705A.4. See Section 04300, Article 1.09 for additional requirements.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver, handle, and store masonry units by means that will prevent mechanical damage and contamination by other materials.

B. Protect cementitious materials against exposure to moisture. Use of cementitious or other materials that have become caked and hardened from absorption of moisture will not be permitted.

1.7 FIELD CONDITIONS

A. Maintain materials and surrounding air temperature to minimum 40 degrees F prior to, during, and 48 hours after completion of masonry work.

B. Maintain materials and surrounding air temperature to maximum 90 degrees F prior to, during, and 48 hours after completion of masonry work.

PART 2 - PRODUCTS

2.1 CONCRETE MASONRY UNITS

A. Concrete Block: Comply with referenced standards and as follows:

1. Size: Standard units with nominal face dimensions of 16 x 8 inches unless otherwise noted on drawings, and nominal depths as indicated on the drawings for specific locations.

2. Special Shapes: Provide non-standard blocks configured for other detailed conditions.

3. Load-Bearing Units: ASTM C90, medium weight.

a. Hollow block, as indicated.

b. Compressive Strength: As required to establish strength of masonry block assembly, 2000 psi min

c. Exposed Faces: Manufacturer's standard color and texture where indicated.

d. Pattern: Per architectural drawings.

4. Strength of Masonry Block Assembly: F'm= 2,000 psi, or as indicated on drawings.

2.2 MORTAR AND GROUT MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I.

B. Hydrated Lime: ASTM C207, Type S.

C. Mortar Aggregate: ASTM C144.

D. Grout Aggregate: ASTM C404.

E. Admixtures: Use only with Architect's approval and not adversely affecting bond or compressive strength.

F. Air-Entraining Admixture: Not permitted.

2.3 REINFORCEMENT AND ANCHORAGE

A. Reinforcing Steel: Type specified in Section 03 20 00; size as indicated on drawings; uncoated finish.

B. Headed Anchor Rod: ASTM F1554, Grade 36.

C. Threaded Anchor Rod: ASTM A36.

D. Nuts: ASTM A563 Grade A.

E. Unhardened Flat Washers: ASTM F844.

2.4 ACCESSORIES

A. Preformed Control Joints: Rubber material. Provide with corner and tee accessories, fused joints.

1. Manufacturers:

a. Dur-O-Wal; Product Regular D/A 2001: www.dur-o-wal.com.

B. Cleaning Solution: Non-acidic, not harmful to masonry work or adjacent materials.

2.5 MORTAR MIXES

A. Mortar shall be Type S in accordance with CBC Section 2103A. and ASTM C270 (DSA spec language)

B. Mortar for Unit Masonry: ASTM C270, using the Proportion Specification.

1. Engineered Masonry; Type S, 1800 psi minimum.

C. When ambient air or masonry temperatures drop below 40 degrees F special provisions of TMS 602, Article 1.8C for cold weather construction shall apply. If temperatures rise above 90 degrees F, special provisions of TMS 602, Article 1.8D for hot weather construction shall apply.

2.6 MORTAR MIXING

A. Thoroughly mix mortar ingredients in quantities needed for immediate use in accordance with TMS 602 Article 2.6A.

B. Thoroughly mix mortar ingredients using mechanical batch mixer, in accordance with ASTM C270 and in quantities needed for immediate use.

C. Maintain sand uniformly damp immediately before the mixing process.

D. Add approved admixtures in accordance with manufacturer's instructions. Provide uniformity of mix and coloration.

E. Do not use anti-freeze compounds to lower the freezing point of mortar.

F. If water is lost by evaporation, re-temper only within two hours of mixing.

G. Do not use air-entraining admixtures.

2.7 GROUT MIXES

A. All grout for grouted masonry shall conform to ASTM C476 for coarse grout with no lime. Also, see CBC 2104A.1.3.1.2 for high-lift grouting provision.

B. Engineered Masonry: 2,000 psi strength at 28 days; 8-10 inches slump; provide premixed type in accordance with ASTM C94/C94M.

1. Fine grout for spaces with smallest horizontal dimension of 2 inches clear or less.

2. Coarse grout for spaces with smallest horizontal dimension greater than 2 inches clear.

C. Aggregate for grout to conform to ASTM C 404, Aggregates for Grout.

D. W/C equal to or greater than 0.7. No water reducing admixtures will be approved.

2.8 GROUT MIXING

A. Mix shall contain specified grout Aid admixtures in accordance with manufacturer's instructions:

1. SikaGrout Aid to be added at a rate of 1 lb. per 100 lb. of cementitious materials per manufacturer’s recommendations

2. Provide for uniformity of mix. Regardless of whether grout is job-mixed or plant-mixed, admixture shall be added per manufacturer’s requirements. Admixture must be combined with water to form a slurry which is then added to the mix in order to avoid “balling” and to get proper distribution of the admixture within the mix.

B. Grout shall not be used more than 90 minutes after initial mixing water has been added to dry ingredients at the jobsite.

C. Mix grout in accordance with ASTM C94/C94M.

D. Thoroughly mix grout ingredients in quantities needed for immediate use in accordance with ASTM C476 for fine and coarse grout.

E. Add approved admixtures in accordance with manufacturer's instructions; mix uniformly.

F. Do not use anti-freeze compounds to lower the freezing point of grout.

G. Do not use air-entraining admixtures.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive masonry.

B. Verify that related items provided under other sections are properly sized and located.

C. Verify that built-in items are in proper location, and ready for roughing into masonry work.

3.2 PREPARATION

A. Direct and coordinate placement of metal anchors supplied for installation under other sections.

B. Clean reinforcement of loose rust, dirt, mill scale, concrete or other foreign materials which will reduce bond to grout.

C. Clean concrete surfaces to receive masonry. Remove laitance or other foreign material lodged in surfaces by sandblasting or other means as required.

D. Ensure masonry units are clean and free from dust, dirt, or other foreign materials before laying.

E. Provide temporary bracing, forms and shoring during installation of masonry work. Maintain in place until building structure provides permanent bracing and the grout strength meets or exceeds 75% of the required strength.

F. For areas where high-lift grouting will be employed, provide cleanout openings as follows:

1. Hollow Masonry: Not less than 3 inches high at the bottom of each cell to be grouted, formed by cutting out face shell of masonry unit.
    a. Where inverted open-end bond beam units are provided at the bottom of each pour, the cleanout openings need only be located at the bottom of each cell containing reinforcing, and not more than 32 inches on center.

3.3 COURSING

A. Erect masonry in accordance with the California Building Code, latest edition, Chapter 21.

B. Establish lines, levels, and coursing indicated. Protect from displacement.

C. Maintain masonry courses to uniform dimension. Form vertical and horizontal joints of uniform thickness.

D. Concrete Masonry Units:

1. Bond: Running.
2. Coursing: One unit and one mortar joint to equal 8 inches, unless otherwise noted on architectural drawings.
3. Mortar Joints: Concave, unless otherwise noted on drawings.

3.4 PLACING AND BONDING

A. Lay hollow masonry units with face shell bedding on head and bed joints.

B. Buttering corners of joints or excessive furrowing of mortar joints is not permitted.

C. Remove excess mortar as work progresses.

D. Interlock intersections and external and internal corners.

E. Do not shift or tap masonry units after mortar has achieved initial set. Where adjustment must be made, remove mortar and replace.

F. Perform job site cutting of masonry units with proper tools to provide straight, clean, unchipped edges. Prevent broken masonry unit corners or edges.

G. Stop masonry work by racking back 1/2 masonry unit length in each course; do not "tooth".

H. Cut mortar joints flush where wall tile is scheduled or where required for finishes or waterproofing.

3.5 REINFORCEMENT AND ANCHORAGE

A. Place reinforcement in accordance with the California Building Code, Chapter 21.

B. Reinforcement Bars: Secure at intervals not exceeding 200 bar diameters and to avoid displacement during grouting.

1. Locate reinforcing splices as indicated on drawings.

C. Reinforced Hollow Unit Masonry: Keep vertical cores to be grouted clear of mortar, including bed area of first course.

1. Bond Beams: At bond beams or other locations for horizontally reinforced masonry, provide special masonry units or saw to accommodate reinforcement.

3.6 MASONRY FLASHINGS

A. Install flashing as indicated on Architectural drawings.

3.7 GROUTING

A. Use either high-lift or low-lift grouting techniques, at Contractor's option, as limited below, subject to other limitations of contract documents.

B. Grouting to be per TMS 402/602, Section 3.5.

1. Subject to the additional requirements of Chapter 21A, Section 2104A.5.1.2 of the California Building Code.

2. Do not use high-lift grouting at locations where cleanouts would be exposed to view.

C. Low-Lift for CMU Grouted Construction: Where low-lift grouting is used, the method shall conform with CBC Section 2104A.1.3.1.2.2 requirements.

D. High-Lift for CMU Grouted Construction: Where high-lift grouting is used, the method shall conform with CBC Section 2104A.1.3.1.2.3 requirements, and be approved by the Architect and DSA. An approved admixture that reduces early water loss and produces an expansive action shall be used in the grout. Contractor shall submit a request to use “High-Lift” in accordance with Section 01 33 00.

E. Place grout for spanning elements (beams, lintels, headers) in single, continuous pour.

3.8 CONTROL AND EXPANSION JOINTS

A. Detail horizontal reinforcing at control joints as indicated on drawings.

B. Install preformed control joint device in continuous lengths. Seal butt and corner joints in accordance with manufacturer's instructions.

3.9 BUILT-IN WORK

A. As work progresses, install built-in items as furnished under other sections.

B. Install built-in items plumb, level, and true to line.

C. Bed anchors of metal door and glazed frames in adjacent mortar joints and fill frame voids solid with grout, unless otherwise noted on architectural drawings.

3.10 TOLERANCES

A. Comply with TMS 402/602, Section 3.3 F.

3.11 CUTTING AND FITTING

A. Cut and fit for chases, pipes, conduit, and sleeves. Coordinate with other sections of work to provide correct size, shape, and location.

B. Obtain approval from the Architect prior to cutting or fitting masonry work not indicated or where appearance or strength of masonry work may be impaired.

3.12 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Division 1.

B. Testing and Inspection: Provide special inspection in accordance with the California Building Code, latest edition, Chapters 17 and 21 and per TMS 402/602, Section 1.6 Level B quality assurance.

3.13 CLEANING

A. Remove excess mortar and mortar smears as work progresses.

B. Replace defective mortar. Match adjacent work.

C. Clean soiled surfaces with cleaning solution per manufacturer recommendations.

D. Use non-metallic tools in cleaning operations.

3.14 PROTECTION

A. Without damaging completed work, provide protective boards at exposed external corners that are subject to damage by construction activities.

B. Provide protective boards and sheathing at exposed finished walls adjacent to any subsequent concrete placement.

C. Protect all CMU from damage and exposed CMU from discoloration of any type throughout the construction period. Provide protective tarps, boards, etc. as required.

3.15 SCHEDULES

A. See architectural drawings.

END OF SECTION

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Adhesive anchors.

B. Adhesive dowels.

C. Mechanical anchors.

1.2 RELATED SECTIONS

A. Section 05 12 00 - Structural Steel Framing.

B. Section 03 20 00 - Concrete Reinforcement.

1.3 REFERENCES

A. ASTM F436 - Standard Specification for Hardened Steel Washers; 2011.

B. ASTM F844 - Standard Specification for Washers, Steel, Plain (Flat), Unhardened for General Use; 2019.

C. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement; 2020.

D. ASTM A572/A572M - Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel; 2018.

E. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nuts; 2015.

F. ASTM F844 ANSI B18.22.1 - American National Standard for Plain Washers; 1981.

1.4 SUBMITTALS

A. See Division 1 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit for each type of adhesive and mechanical anchor. Include current ICC-ESR report.

1.5 DELIVERY, STORAGE, AND PROTECTION

A. Deliver threaded rods and dowels to project site in [bundles], tagged and marked.

B. Store threaded rods and dowels under cover and elevated above grade to prevent damage and accumulation of dirt and rust.

C. Store adhesive system and mechanical fasteners in accordance with manufacturer's instructions.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Provide stainless steel fasteners for exterior use and wet locations or when installed into exterior walls.

B. All Thread Rods: ASTM A572/A572M, GR. 50, unless otherwise noted.

C. Steel Nuts: ASTM A563 Grade A, unless otherwise noted.

D. Heavy Hex Nuts: ASTM A563, Grade DH.

E. Plain Unhardened washers: ASTM F844.

F. Hardened Washers: ASTM F436.

G. Dowels: ASTM A615/A615M, Grade 60, unless otherwise noted.

2.2 ADHESIVES

A. Adhesives:

1. For use in Concrete:

a. Manufacturers:

1) Hilti: HIT RE 500-V3; ICC-ESR-3814; www.us.hilti.com.

2) Simpson Strong-Tie: SET-3G; ICC-ESR-4057; www.strongtie.com.

3) Powers: Pure 110+; ICC-ESR-3298; www.powers.com.

2. For use in Masonry:

a. Manufacturers:

1) Hilti: HIT-HY 70; ICC-ESR-2682; www.us.hilti.com.

2) Simpson Strong-Tie: SET-XP; IAPMO-UES ER-265; www.strongtie.com.

3) Powers: AC100+ Gold; ICC-ESR-3200; www.powers.com.

2.3 MECHANICAL ANCHORS

A. Expansion/Wedge Anchors:

1. Concrete Anchorage:

a. Manufacturers:

1) Hilti: KB-TZ2; ICC-ESR-4266; www.us.hilti.com.

2) Hilti: KB1; IAPMO-ER-678; www.us.hilti.com.

3) Simpson Strong-Tie Co.: Strong-Bolt 2; ICC-ESR-3037; www.strongtie.com.

4) Powers: Power-Stud+SD2; ICC-ESR-2502; www.powers.com.

2. CMU Anchorage:

a. Manufacturers:

1) Hilti: KB-3; ICC-ESR-1385; www.us.hilti.com.

2) Simpson Strong-Tie Co.: Wedge-All; ICC-ESR-1396; www.strongtie.com.

3) Powers: Power-Stud SD1; ICC-ESR-2966; www.powers.com.

B. Screw Anchors:

1. Manufacturers:

a. Hilti: HUS-EZ; ICC-ESR-3027; www.us.hilti.com.

b. Simpson Strong-Tie: Titen-HD; ICC-ESR-2713; www.strongtie.com.

c. Powers: Wedge-Bolt+; ICC-ESR-2526; www.powers.com.

C. Powder Actuated Fasteners:

1. Manufacturers:

a. Hilti: X-U; ICC-ESR-2269; www.us.hilti.com

b. Simpson: PDPA; ICC-ER-2138; www.strongtie.com

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install anchors in accordance with the latest ICC-ESR report and the manufacturer instructions.

B. Locate reinforcement and confirm final anchor locations prior to fabricating plates, members or other steel assemblies attached with post-installed anchors.

C. If reinforcing steel is encountered during drilling, abandon and shift the hole location to avoid reinforcement. Provide a minimum of 2 diameters or 1 inch, whichever is larger, of sound concrete between the anchor or dowel and abandoned hole. Do not cut reinforcing.

1. If the anchor cannot be shifted, notify the Architect.

D. Install anchors to the embedment depth noted on the drawings. Embedment depths noted are the effective embedment per manufacturer.

E. Drill anchor holes in clay brick masonry (URM) using a non-impact electric rotary drill.

3.2 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Division 1.

B. Testing of anchors and dowels is to occur no sooner than 24 hours after installation.

C. Replace anchors that fail during testing and retest. If more than 10% of the tested anchors fail to achieve specified test load, test 100% of anchors.

1. Additional testing due to test failures to be paid for by Contractor.

D. Adhesive anchors and dowels:

1. Provide periodic special inspection in accordance with Section 1705.3 of the California Building Code and the ICC-ESR report.

2. Verify adhesive system, expiration date, anchor diameter and anchor grade.

3. Verify hole diameter and location. Observe cleanliness of hole and anchor, adhesive application and anchor embedment.

4. Tension test anchors and dowels to load and frequency as specified on the drawings.

E. Mechanical Anchors:

1. Wedge Anchors, Sleeve Anchors, Undercut Anchors, and Screw Anchors:

a. Provide periodic special inspection in accordance with Section 1705.3 of the California Building Code and the ICC-ESR report.

b. Verify anchor diameter and anchor grade.

c. Verify hole diameter and location. Observe cleanliness of hole and anchor, and anchor embedment.

d. Test anchors to the manufacturer's recommended installation torque or recommended torque in the ICC-ESR report at the frequency specified on the drawings.

END OF SECTION

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Structural steel framing members.

B. Base plates, shear stud connectors and fasteners.

C. Grouting under base plates.

D. Post-installed anchors.

1.2 RELATED REQUIREMENTS

A. Section 05 05 23 - Adhesive And Mechanical Fasteners.

B. Section 05 31 00 - Steel Decking: Support framing for small openings in deck.

1.3 REFERENCE STANDARDS

A. AISC 341 - Seismic Provisions for Structural Steel Buildings; 2016 (Revised 2018).

B. AISC (MAN) - Steel Construction Manual; 2017.

AA. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification; 2014 (Amended 2015).

Ratcliff Project 21415.00 DSA Submittal **July 18, 2022**

AB. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020.

AC. AWS D1.8/D1.8M - Structural Welding Code - Seismic Supplement; 2016.

AD. RCSC (HSBOLT) - Specification for Structural Joints Using High-Strength Bolts; Research Council on Structural Connections; 2014, with Errata (2015).

AE. UL (FRD) - Fire Resistance Directory; Current Edition.

1.4 DEFINITIONS

A. Seismic Force Resisting System (SFRS): Members and connections designed to resist seismic forces, including beams, columns, collectors and connections and designated as SFRS on the drawings.

1.5 SUBMITTALS

A. See Division 1 - Administrative Requirements, for submittal procedures.

B. Shop Drawings:

1. Indicate grade of steel, profiles, sizes, spacing, lengths and locations of structural members, openings, shop surface treatments, attachments, fasteners, welds, dimensional information, items to be galvanized, and AESS items.

2. Indicate cuts, connections, holes and cambers.

3. Indicate welded connections with AWS A2.4 welding symbols. Indicate size, type and net weld lengths.

a. Identify shop and field welds.

b. Identify Demand Critical (DC) welds requiring specialty filler metal.

4. Include complete details, schedules, procedures, and diagrams for fabrication and assembly.

5. Do not reproduce construction documents.

6. Other procedures, along with test required to qualify in accordance with AWS Code Section 4.1.1, shall be submitted to testing agency, DSA and Structural Engineer of Record for approval prior to use.

C. Manufacturer's Product Data: Provide for welding electrodes and filler metals, bolts, nuts, washers, direct tension indicators, couplers, and blind bolts.

1. Identify locations of use for welding electrodes.

2. Provide data indicating capacity of couplers.

3. Provide current ICC-ESR report for blind bolts indicating design capacities and acceptance for use under static and seismic loads.

Ratcliff Project 21415.00 DSA Submittal **July 18, 2022**

D. Manufacturer's Certificate of Conformance: Certify that fasteners, welding electrodes, shear stud connectors, grout, and primer meet or exceed specified requirements.

E. Mill Test Reports: Indicate structural strength, and other properties required by the ASTM specification, including, destructive test analysis and non-destructive test analysis.

1. Provide for all structural steel, bolts and fasteners, and shear stud connectors.

F. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before start of scheduled welding work. Submit for independent agency review.

G. Welding Procedure Specification (WPS) and, as required, WPS Qualification Records: Submit to Architect and to independent testing agency for review. Submit only for welds applicable to project.

H. AISC Certification Statement: **Certification of the steel fabricator and erector is preferred but not required.**

I. Post-Installed Anchor Product Data: Submit for each type of adhesive and mechanical anchor.

1.6 QUALITY ASSURANCE

A. Fabricate structural steel members in accordance with AISC "Steel Construction Manual", AISC "Code of Standard Practice for Steel Buildings and Bridges" and AISC 341 "Seismic Provisions for Structural Steel Buildings".

B. Maintain one copy of each document on site.

C. Fabricator: Company specializing in performing the work of this section with minimum 5 years of documented experience who participates in the AISC Certification program and is designated and is designated an AISC Certified Plant, Category BU at time of bid.

D. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1/D1.1M and AWS D1.8/D1.8M to perform type of welds required.

E. Erector: Company specializing in performing the work of this section with minimum 5 years of documented experience who participates in the AISC Certification program and is designated an AISC Certified Erector, Category ACSE.

F. Welders: Qualified in accordance with AWS D1.1 and AWS D1.8/D1.8M to perform type of welds required.

G. Fabricator and erector to comply with Quality Control (QC) requirements of Chapter N of AISC 360, Chapter J of AISC 341, and as modified by Chapter 17A of the CBC.

Ratcliff Project 21415.00 DSA Submittal **July 18, 2022**

H. An independent testing agency, as specified in Division 1, is to provide Quality Assurance (QA) tasks per Chapter N of AISC 360, Chapter J of AISC 341, and as modified by Chapter 17A of the CBC.

I. All testing and inspection shall be in accordance with CBC, Chapter 17A, and Chapter 22A.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to site at such intervals to ensure uninterrupted progress of work.

B. Store materials to permit easy access for inspection and identification.

C. Store materials supported off the ground.

D. Protect materials from rust corrosion, keep free of dirt, grease and other foreign matter.

PART 2 - PRODUCTS

2.1 REGULATORY REQUIREMENTS

A. Conform to UL (FRD) Assembly Design as designated in 07 81 00 - Applied Fire Protection for restrained ratings with no load restrictions.

2.2 MATERIALS

A. Steel Angles and Channels: ASTM A36/A36M.

B. Steel W Shapes and Tees: ASTM A992/A992M.

1. Heavy Sections, with flanges 1 1/2 inches thick and thicker. Provide with charpy v-notch values in accordance with AISC 360, Section A3.1c and AISC 341, Chapter A3.3.

C. Steel Plates: ASTM A36/A36M or ASTM A572/A572M, Grade 50 (345) as indicated on the drawings.

1. Plates 2 inches thick and thicker: Provide with charpy v-notch values in accordance with AISC 360 Section A3.1d and AISC 341, Chapter A3.3.

D. Cold-Formed Structural Tubing (HSS): ASTM A500/A500M, Grade B.

E. Pipe: ASTM A53/A53M, Grade B, Finish black.

F. Stainless Steel Shapes, Plates and Bars: ASTM A276/A276M, Type 304L.

G. Shear Stud Connectors: Made from ASTM A108 Grade 1010 through 1020 bars and in accordance with AWS D1.1/D1.1M.

Ratcliff Project 21415.00 DSA Submittal **July 18, 2022**

H. Threaded Stud Connectors: Made from ASTM A 108 Grade 1015 bars and in accordance with AWS D1.1/D1.1M.

I. Machine Bolts and Nuts: Carbon steel, ASTM A307, Grade A, with ASTM A563 nuts.

J. Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, Grade A325 with matching compatible ASTM A563 or ASTM A563M nuts and ASTM F436/F436M washers.

K. Coupler: Capacity to meet or exceed ultimate tension capacity of threaded rod being coupled.

L. Stainless Steel Bolts: ASTM A193/A193M, B8M Class 1.

M. Anchor Rods / Anchor Bolts: ASTM F1554, Grade 55 with weldable supplement S1, plain, with matching ASTM A563 or ASTM A563M nuts and ASTM F436 Type 1 washers.

N. All-Thread and Partially Threaded Rod: ASTM A 572/A 572M, Grade 50.

O. High-Strength All-Thread and Partially Threaded Rod: ASTM A193/A193M, B7 GR105.

P. Stainless Steel All-Thread and Partially Threaded Rod: ASTM A193/A193M, B8M Class 2.

Q. Unhardened Flat Washers: ASTM F844 and ANSI B 18.22.1.

R. Beveled Washers: ASTM F436.

S. Stainless Steel Washers: ASTM A276/A276M, Type 304.

T. Stainless Steel Nuts: ASTM A194/A194M, GR8M.

U. Load Indicator Washers: Permitted for pretensioning of bolts. Provide washers complying with ASTM F959/F959M.

V. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

1. Electrodes to be low hydrogen types E7XTX, E7XTXX or E70XXX as applicable.

2. At the following locations, electrodes to meet the requirements of AWS D1.8/D1.8M, Clause 6.3.1 through 6.3.8, with Charpy V-Notch (CVN) test values of a minimum 20 foot-pounds at 0 degrees fahrenheit and 40 foot-pounds at 70 degrees fahrenheit. Where service temperatures are expected to be below 50 degrees fahrenheit Where service temperatures are expected to be below 50 degrees farenheit, including unconditioned penthouses, unconditioned spaces and exterior framing, electrodes to meet the CVN properties per Clause 6.3.6.

a. Welds of the Seismic Force Resisting System (SFRS) and Demand Critical (DC) welds as indicated on drawings and occurring at:

Ratcliff Project 21415.00 DSA Submittal **July 18, 2022**

1) Complete penetration welds

2) Beam to column moment connections: Including flange, web, doubler plates, base plates, and continuity plate fillet and partial joint penetration welds.

W. Grout: ASTM C1107/C1107M; Non-shrink; premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents.

1. Minimum Compressive Strength at 48 Hours: 2,000 pounds per square inch.

2. Minimum Compressive Strength at 28 Days: 7,000 pounds per square inch.

X. Shop and Touch-Up Primer: Fabricator's standard, complying with VOC limitations of authorities having jurisdiction. Primer to be compatible with finish materials.

Y. Touch-Up Primer for Galvanized Surfaces: Fabricator's standard, complying with VOC limitations of authorities having jurisdiction. Primer to be compatible with finish materials.

2.3 FABRICATION

A. Shop fabricate to greatest extent possible.

B. Provide camber for beams and girders as indicated on the drawings.

1. Provide natural camber up, unless otherwise noted, except at cantilevers. At cantilevers provide camber such that tip of cantilever is above final elevation.

C. Where weld size not noted in symbol, provide weld size (E) minimum per AWS prequalified welded joints.

D. At exterior painted assemblies provide seal welding of edges of all overlapping or contacting surfaces of parts.

E. At galvanized assemblies:

1. Provide seal welding of edges of all overlapping or contacting surfaces of parts.

2. Provide vent holes as required. Submit locations for review and approval.

2.4 FINISH

A. Prepare structural component surfaces in accordance with SSPC SP -1 and SP-2 or Sp-3, in accordance with paint manufacturer's recommendations.

B. Shop prime structural steel members in accordance with manufacturer's instructions. Do not prime surfaces that will be fireproofed, field welded, in contact with concrete, galvanized, or at faying surfaces of slip critical bolted connections.

Ratcliff Project 21415.00 DSA Submittal **July 18, 2022**

C. Faying Surfaces of Slip Critical Joints: Provide Class A typical and Class C at hot-dip galvanized surfaces, in accordance with RCSC (HSBOLT) "Specification for Structural Joints Using ASTM A325 or A490 Bolts". Slip critical joints identified as "SC" on the drawings.

D. Galvanize structural steel members to comply with ASTM A123/A123M.

E. Hot-dip galvanized ASTM F1554 rods to be in accordance with ASTM F2329.

F. Fasteners exposed to exterior to have galvanized finish per ASTM A153/A153M.

2.5 SOURCE QUALITY CONTROL

A. An independent testing agency will perform source Quality Assurance (QA) and testing and inspections per this section, as specified in Division 1.

B. Fabricator is to provide source Quality Control (QC) as required by the standards specified in this section.

C. Material Verification: Verify materials in accordance with the California Building Code Section 1705.A, AISC 360 Section N5 and AISC 341 Section J6.

D. Welded Connections and Procedures: Provide review, visual inspection and non-destructive testing in accordance with the California Building Code Section 1705, AISC 360 Section N5.4 and N5.5 and AISC 341 Section J6.

E. Stud Connections: Provide testing and inspection of welded stud connections in accordance with AWS D1.1/D1.1M Clause 7.

F. Test and inspect High Strength Bolts and installation in accordance with CBC Section 1704A.3.3 and 2213A.1.

G. Test end weld studs in accordance with CBC Section 2213A.2.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that conditions are appropriate for erection of structural steel and that the work may properly proceed.

3.2 ERECTION

A. Erect structural steel in compliance with AISC 303.

B. Allow for erection loads and provide sufficient temporary bracing to maintain structure in safe condition, plumb, and in true alignment until completion of erection and installation of permanent bracing.

Ratcliff Project 21415.00 DSA Submittal **July 18, 2022**

C. Coordinate work and cooperate with independent testing agency to allow all tests and inspection procedures to be properly provided.

D. Provide anchor rods, nuts, plate washers and 1/8 inch thick minimum anchor bolt setting templates as required by work of other sections.

E. Install bolts in accordance with RCSC "Specification for Structural Joints Using High-Strength Bolts" as follows:

1. Bolted connections: Pretensioned, unless otherwise noted.

2. Slip Critical: Pretensioned with specified faying surface, where noted on the drawings.

3. Bolts installed through HSS members (outside face to outside face): Snug tightened.

4. Bolts installed in long-slotted holes: Finger-tight and double-nut or mar threads to prevent backoff of nut. Provide 0 to 1/16 inch max gap between plies of joint, not fully tightened, to allow movement in the connection.

F. Provide beveled washers under bolt heads or nuts resting on surfaces exceeding 5 percent slope relative to the head or nut.

G. Perform welding in accordance with AWS D1.1/D1.1M, AWS D1.8/D1.8M and AISC 341.

H. Weld shear stud connectors in accordance with AWS D1.1/D1.1M and the manufacturer's instructions.

I. Do not field cut or alter structural members without approval of Architect.

J. After erection, prime welds, abrasions, and surfaces not shop primed, except surfaces to be in contact with concrete.

K. Repair galvanized steel in accordance with ASTM A780/A780M.

L. Grout solidly between column plates and bearing surfaces, complying with manufacturer's instructions for nonshrink grout. Trowel grouted surfaces smooth, splaying neatly to 45 degrees.

3.3 TOLERANCES

A. Comply with the AISC S303 "Code of Standard Practice for Steel Buildings and Bridges"

3.4 FIELD QUALITY CONTROL

A. An independent testing agency will perform field Quality Assurance (QA) and tests and inspections per this section, as specified in Division 1.

Ratcliff Project 21415.00 DSA Submittal **July 18, 2022**

B. Erector is to provide field Quality Control (QC) as required by the standards specified in this section.

C. Bolts: Provide special inspection in accordance with the California Building Code Section 1705, AISC 360 Section N5.6 and AISC 341 Section J7.

D. Welded Connections and Procedures: Provide review, visual inspection and non-destructive testing in accordance with the California Building Code Section 1705, AISC 360 Section N5.4 and N5.5, and AISC 341 Section J6.

E. Stud Connectors: Provide inspection and testing of stud connectors in accordance with AWS D1.1/D1.1M, Clause 7.

F. Grout: Review mixing of grout under base plates and sample using four 2-inch mortar cubes. Test for ultimate compressive strength at 1, 7 and 28 days after placing and hold the fourth cube until the end of the project. Sample one set minimum for each day that grout is placed.

3.5 TESTING & INSPECTION FOR STRUCTURAL STEEL

A. Test and inspect High Strength Bolts and installation in accordance with CBC Section 1704A.2.5 and 2213A.1.

B. Test end weld studs in accordance with CBC Section 2213A.2.

C. Inspect welding in accordance with CBC Section 1705A.2 and 2204A.1. Welding shall be done under supervision of recognized testing laboratory by qualified Inspector approved by DSA, who will furnish Architect, Structural Engineer and DSA with report, duly verified by both Inspector and Laboratory, that the welding is adequate and has been done in conformity with Drawings and Specifications and that Laboratory has used every means necessary to determine quality of weld. Testing Laboratory may use gamma ray, magnaflux, trepanning, or other non-destructive aid to visual inspection which it deems necessary to assure itself of adequacy of welding. Every layer of weld shall be inspected for quality and every welded joint shall be inspected for quality and every welded joint shall be inspected for agreement with Drawings.

D. Inspect shop fabrication of steel trusses and steel braced frames in accordance with CBC Section 1704A.3. The Inspector shall furnish the Architect, Structural Engineer and the Division of the State Architect a report that the materials and workmanship conform to the approved plans and specifications.

E. Shop Welding Inspection

1. Testing Agency shall inspect and certify all structural welds, unless the fabricating shop has been accredited in conformance with CBC requirements. Submit certification to the Architect/Engineer for review and the Building Official for approval.

Ratcliff Project 21415.00 DSA Submittal **July 18, 2022**

2. Welder Qualifications: Welding inspector shall verify that all the welders are properly qualified prior to steel fabrication and state the qualifications of each welder in the welding inspection report.

3. Welding Inspection: Continuous inspection required unless otherwise noted below. Comply with requirements of AWS D1.1

   a. Welding Inspector shall check all welds, materials, equipment and procedures.

   b. Welding Inspector shall provide reports certifying the welding is as required and has been done in conformity with the plans, specifications and codes.

   c. Welding Inspector shall use radiographic, ultrasonic, magnetic particle, or any other necessary aid to visual inspection to assure adequacy of welds.

4. Periodic Inspection Acceptable:

   a. Single pass fillet welds not exceeding 5/16.

   b. Welding of studs to beams.

END OF SECTION

Ratcliff Project 21415.00 DSA Submittal **July 18, 2022**

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes provision of modular steel strut system components, including channel strut, fittings, threaded rod and fasteners for support of architectural components, conduit, pipe, or ductwork as shown or specified elsewhere.

B. Related Sections:

1. Section 05 50 00 – Metal Fabrications: Provision of miscellaneous steel shapes, fastenings and anchors required for complete support assemblies.

2. Division 21 – Fire Protection: Support of fire protection and fire suppression components.

3. Division 22 – Plumbing: Support of plumbing components.

4. Division 23 – Mechanical: Support of mechanical components including ducts and pipes.

5. Division 26 – Electrical: Support of electrical components.

6. Division 27 – Communications: Support of communications components.

1.2 REFERENCES

E. American Iron and Steel Institute (AISI)

1.3 QUALITY ASSURANCE

A. Manufacturers: Companies regularly engaged in the manufacture of bolted metal strut channel framing systems of the types required for not less than 5 years.

B. Components: All parts provided shall be that of a single manufacturer, with manufacturer’s name, part number and material heat code identification number stamped on channels and fittings for identification. Material certification sheets and test reports must be made available by the manufacturer upon request.

C. Component manufacture and installation shall comply with referenced standards.

1.4 SUBMITTALS

A. Submit under provisions of Section 01 30 00.

B. Product data: Submit manufacturer's product data on strut channels including, but not limited to, types, materials, finishes, gauge thickness, and hole patterns. For each different strut cross-section, submit cross sectional properties including Section Modulus (Sx) and Moment of Inertia (Ix).

C. Shop Drawings to show details, fabrication, installation, anchorage, catalog numbers and interface of the Work of this Section with the Work of adjacent trades.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Packing, Shipping, Handling, and Unloading: Deliver materials in original, tightly sealed containers or unopened packages with manufacturer's name, labels, and product identification intact.

B. Storage and Protection: Store materials out of weather in original containers or unopened packages as recommended by manufacturer.

C. Provide a copy of manufacturer data sheet or letter with percentages of pre and post-consumer recycled content, and provide materials cost

PART 2 – PRODUCTS

2.1 MANUFACTURER

A. General: Furnish compliant system of any of the below manufacturers or approved equal. If the drawings indicate that assemblies are based upon a specific agency-listed pre-approval, furnish the product of the manufacturer listed under that pre-approval. Unless otherwise noted, specific components identified on drawings are based upon Unistrut Corporation as the design basis.

1. Cooper B-Line.
2. Thomas & Betts.
3. Unistrut Corporation.

2.2 MATERIALS

A. General: All specified component characteristics are typical unless indicated otherwise on drawings.

B. Strut Material and Finish: ASTM A653 or ASTM A1011 SS (GR33), 12 gauge, G90 hot-dipped pre-galvanized steel strut unless otherwise indicated. Strut shall be 1-5/8 inches wide in varying heights and welded combinations as required to meet load capacities and designs shown.

1. Strut Fittings: ASTM-compliant, hot-dipped galvanized.

2.3 NUTS AND HARDWARE

A. General: ASTM B633 electrogalvanized channel nuts, screws, nuts, threaded rod, couplings and other accessories required for a complete assembly.

PART 3 – EXECUTION

3.1 COORDINATION

A. Coordinate as required with other trades to assure proper and adequate provision in the Work of those trades for interface with the Work of this Section.

3.2 FIELD MEASUREMENTS

A. Make field measurements to assure that the strut system components can be installed according to plans, and without interference with structural framing, mechanical systems, plumbing or other obstructions. Any conflicts shall be reported to the Architect.

3.3 INSTALLATION

A. General:

1. Set Work accurately into position, plumb, level, true, and free from rack.
2. Seismic brace and anchor firmly into position as shown.

3. Do not cut, weld, or abrade surfaces which are intended for bolted or screwed field connections.

B. Install in compliance with referenced standards and manufacturer's installation instructions. Tighten all connections to their recommended torques.

END OF SECTION

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Roof deck.

B. Supplementary framing for openings up to and including 18 inches.

C. Bearing plates and angles.

D. Deck fastening

E. Deck Shoring

1.2 RELATED REQUIREMENTS

A. Section 05 12 00 - Structural Steel Framing: Support framing for openings larger than 18 inches.

1.3 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2014.

B. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2020.

C. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification; 2014 (Amended 2015).

D. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020.

E. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel; 2018.

F. ICC-ES AC70 - Acceptance Criteria for Fasteners Power Driven into Concrete, Steel and Masonry Elements; 2016.

G. SDI (DM) - Publication No.30, Design Manual for Composite Decks, Form Decks, and Roof Decks; 2007.

H. SSPC-Paint 20 - Zinc-Rich Primers (Type I, "Inorganic," and Type II, "Organic"); 2002 (Ed. 2004).

1.4 SUBMITTALS

A. See Division 1 - Administrative Requirements, for submittals procedures.

B. Product Data: Provide deck profile characteristics, dimensions, structural properties, installation instructions, ICC-ESR report, powder actuated fastener information, welding electrodes, and finishes.

C. Shop Drawings: Indicate deck plan, support locations, projections, openings, deck reinforcement, supplementary framing, deck type, deck orientation, fasteners, welds, shoring, pertinent details, and accessories.

D. Certificates: Certify that products meet or exceed requirements for each heat of steel and requirements for welding electrodes.

E. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before start of scheduled welding work.

1.5 QUALITY ASSURANCE

A. Use only new materials and products, unless existing materials or products are specifically shown otherwise on the Drawings to be salvaged and re-used.

B. Use materials and products of one manufacturer whenever possible.

C. All materials, components, assemblies, workmanship and installation are to be observed by the Owner's Project Inspector. Work not so inspected is subject to uncovering and replacement.

D. Certification: Manufacturer's certification of compliance with the specification.

E. Sheet Steel Welding:

1. General: All welding shall be in compliance with Section 05 12 00 and applicable provisions of 2016 CBC Chapter 2210A.

2. Welders: Qualified for each light gauge welding process to be used in fabrication and AWS certified

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver store and handle decking in a manner to prevent damage or deformation.

B. Cut plastic wrap to encourage ventilation.

C. Store deck on dry wood sleepers; slope for positive drainage.

1.7 TESTING AND INSPECTION

A. All steel decking layout and field welding of decking to supports and to decking will be inspected and certified by the Owner's Testing Laboratory.

B. Material certification per CBC, Section 2203A.1.

C. Welding inspection per CBC, Section 2204A.1.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Steel Deck:

1. Verco Manufacturing, Co;: www.vercodeck.com.
2. ASC Profiles: www.ascsd.com
3. Deck West, Co;: www.deckwest.com.
4. Substitutions: See Section 01 60 00 - Product Requirements.

2.2 STEEL DECK

A. Roof Deck: Non-composite type, fluted steel sheet:

1. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS) Grade 33/230, with G60/Z180 galvanized coating.
2. Structural Properties: as noted on drawings.

2.3 ACCESSORY MATERIALS

A. Plates and Angles: ASTM A36/A36M steel, unfinished.

B. Edge of Slab Bent Plate: ASTM A36/A36M, bent steel plate as detailed on the drawings.

C. Welding Materials: AWS D1.1/D1.1M, type required for materials being welded.

1. Electrodes to be low hydrogen type E7XTX, E7XTXX, or E70XXX as applicable.

D. Powder Actuated Mechanical Fasteners: Type as indicated on drawings. Steel; with knurled shank and forged ballistic point. Comply with applicable requirements of ICC-ES AC70.

E. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20, complying with VOC limitations of authorities having jurisdiction.

F. Flute Closures: Closed cell foam rubber, 1 inch thick; profiled to fit tight to the deck.

2.4 FABRICATED DECK ACCESSORIES

A. Sheet Metal Deck Accessories: Metal closure strips, wet concrete stops, and cover plates, 16 gage thick sheet steel unless otherwise noted; of profile and size as indicated; finished same as deck.

B. Roof Sump Pans: 14 gage sheet steel, flat bottom, sloped sides, recessed 1-1/2 inches below roof deck surface, bearing flange 3 inches wide, sealed watertight. Unless otherwise noted on drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify existing conditions prior to beginning work.

3.2 INSTALLATION

A. Erect metal deck in accordance with SDI Design Manual and manufacturer's instructions. Align and level.

B. On steel supports provide minimum 2 inch (50 mm) bearing.

C. Fasten deck to steel support members at ends and intermediate supports with attachment type, size and spacing as indicated on the drawings.

D. Attach seam side laps as indicated on the drawings.

E. Remove water from deck and supporting steel prior to welding.

F. Weld deck in accordance with AWS D1.3/D1.3M.

G. At deck openings provide supplemental steel and/or slab reinforcing as indicated on the drawings.

H. Provide sheet steel closures and angle flashings to close openings, unless otherwise noted on the drawings. At openings between edge of deck and concrete walls and other concrete elements, provide sheet steel closures below upper flutes only and do not obstruct continuity of concrete in down flutes.

I. Position roof drain pans with flange bearing on top surface of deck. Fusion weld at each deck flute.

J. Provide shoring of metal decking in accordance with the ICC ESR report where construction loads exceed deck capacity and as indicated on the drawings.

K. Cut and neatly fit deck units and accessories around other work projecting through or adjacent to the decking.

L. After cutting or welding deck and other metal components in position, coat welds, burned areas, and damaged surface coating, exposed on bottom surface of deck, with galvanizing repair paint, or touch-up primer for painted decking.

3.3 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests and inspections, as specified in Division 1.

B. Review installed condition of deck units, framed openings, and accessories.

C. Deck Fasteners: Verify the size, type, spacing, and penetration.

D. Deck Welds: Inspect in accordance with the California Building Code Section 1705 and AWS D1.3/D1.3M Clause 6.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes design and provision of formed steel stud exterior wall and soffit framing to resist lateral and uplift loads; accessories such as clips, stiffeners, bridging, bracing and fasteners.

1. Sub-framing components.

B. Related Sections:

1. Division 3: Concrete
2. Section 07 54 23 – Thermoplastic Polyolefin Roofing: Provision of required backing.
3. Section 07 21 16 - Blanket Insulation: Insulation within framing members.
4. Section 07 26 00 - Vapor Retarders.
5. Section 07 27 26 – Fluid-Applied Membrane Air Barriers.
6. Division 8: Coordination of framing for installation and support of doorway and glazing system openings.
7. Section 09 21 16 - Gypsum Board Assemblies: Gypsum sheathing; non-load bearing interior metal stud framing.

8. Section 09 24 00 – Cement Plastering.

1. SSPC Paint 20 - Zinc-Rich Primers (Type I - Inorganic and Type II - Organic).

H. Steel Stud Manufacturers Association:

1. SSMA - Product Technical Information.

I. Underwriter's Laboratories

1. UL Directory.

1.3 SUBMITTALS

A. Division 1 - Submittal Procedures: Submittal requirements.

B. Product Data: Submit data on standard framing members; describe materials and finish, product criteria, limitations.

C. Shop Drawings:

1. Indicate member size and gage designations, number, type, location and spacing, component details, framed openings, anchorage, welds, type and location of fasteners, and accessories or items required of related Work. Show

reinforcing channels, supplemental framing, strapping, bracing, bridging, splices, accessories, and attachment to adjoining work.

2. Large scale, dimensioned shop drawings of all assemblies. Indicate stud and soffit joist layout.

3. Describe method for securing studs to tracks and for bolted or welded framing connections.

D. Mill Certifications: Submit mill certifications for steel delivered to site. Certify steel bare metal thickness in 0.001 inch, yield strength, tensile strength, total elongation in 2 inch or 8 inch gauge length, chemical analysis, and galvanized coating thickness.

E. Welding Certificates: Copies of certificates for welding procedures and personnel.

F. Research/Evaluation Reports: For cold-formed steel framing.

G. Metal stud manufacturer to have a 3rd party evaluation report, (ICC ESR), for its products that are reviewed per CBC 2013 and AISI S100.

H. Provide a copy of manufacturer data sheet or letter with percentages of pre and post-consumer recycled content, and provide materials cost

1.5 QUALITY ASSURANCE

A. Furnish framing materials in accordance with SSMA - Product Technical Information.

B. Perform Work in accordance with the following:

1. Framing: AISI General and AISI NAS.

2. Headers: AISI Header.

3. Wall Studs: AISI WSD.

4. Lateral Design: AISI Lateral.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience and a current member of Steel Stud Manufacturers Association.

B. Installer: Company specializing in performing Work of this section similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of in-service performance.

C. Welding: Qualify procedures and personnel according to AWS D1.1 and AWS D1.3.

D. Fire-Test-Response Characteristics: Where metal framing is part of a fire-resistive rated assembly, provide framing identical to that of assemblies tested for fire

resistance per ASTM E119 by a testing and inspecting agency acceptable to authorities having jurisdiction.

1. Fire Resistance Ratings: Indicated by GA File Numbers in GA-600, or by design designations from UL Directory, or from the listings of another testing and inspecting agency.

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver, store and handle products in a manner to prevent damage and deterioration, including rust.

B. Store materials above the ground in a dry area, in manufacturer's original packaging. Keep labels showing product type, name and grade intact.

PART 2 – PRODUCTS

2.1 COLD-FORMED METAL FRAMING

A. Manufacturers: Compliant products of one of the following, or approved equal.

1. California Expanded Metal Products Company / CEMCO.
2. ClarkDietrich Building Systems LLC.
3. SCAFCO Corporation.
4. Steeler, Incorporated.

B. Cold-Formed Metal Framing: ASTM C955.

2.3 FRAMING COMPONENTS

A. Steel Sheet: ASTM A1003; Structural Grade, Type H, metallic coated.

1. Grade: ST50H for 16-gauge and heavier members.
2. Coating: G60 galvanized.

B. Studs: Steel sheet, formed to C-shape, punched web; thickness (gauge) as shown on drawings, 1.625 inch minimum face (flange) and 6 inch minimum depth unless indicated otherwise on Drawings.

C. Track: Steel sheet, formed to channel shape; same width and thickness (gauge) as studs, tight fit; solid web.

D. Slotted Track: Steel sheet, formed to channel shape; same width and thickness (gauge) as studs, tight fit; solid web. Slotted track shall have 2-1/2 inch minimum face (flange) with slotted holes to accommodate a total vertical movement of 1-1/2 inch minimum. Slotted track shall have minimum 1-1/2 inch long slotted holes in web to accommodate horizontal drift.

2.4 SUB-FRAMING COMPONENTS

A. Z-Girts: ASTM E84; composite metal hybrid subframing consisting of polyester resin matrix, fire-retardant additives and integral G90 galvanized metal reinforcing inserts at fastening locations. Engineered to limit thermal bridging across exterior insulation beneath exterior cladding. Basis of specification: SMARTciSystems' "GreenGirt CMH Sub-Framing" or approved equal.

1. Depth of Girt: As indicated on Drawings to accommodate rigid exterior insulation.

2. Orientation and Spacing: As indicated on Drawings.

3. Mechanical Strength Requirements: Meet product literature of named manufacturer product.

2.5 ACCESSORIES

A. Bracing, Furring, Bridging: Formed sheet steel, thickness determined by performance requirements specified.

B. Plates, Gussets, Clips: Formed sheet steel, thickness determined by performance requirements specified.

C. Backing Plates: Formed steel sheet or c-shapes if indicated, 16 gauge or thickness as indicated.

D. Touch-Up Primer for Galvanized Surfaces: ASTM A780 or SSPC Paint 20.

E, Bridging:

1. Cold-rolled channel: 1-1/2 by 1/2-inch by 54-mil thick.

2. Bridging clip: BridgeClip by the Steel Network, or equal. Provide attachment through stud punch-out clamping onto stud web and wrapping around bridging channel. Provide holes for screw attachment to stud web and channel.

3. Flat strap: Width and thickness required by structural design calculations. Rigid attachment to stud flange.

4. Solid bridging: Channel-shaped bridging with lipped flanges and integral formed clips, BridgeBar by the Steel Network, or equal, screw attachment to stud, 33-mil minimum thickness, size as required by structural design calculations.

2.6 FASTENERS

A. Self-drilling, Self-tapping Screws, Bolts, Nuts, and Washers: Steel, hot dip galvanized unless otherwise indicated on Drawings. Pan or hex washer head complying with ASTM C 1513. Provide screw type and size required drawings.

B. Anchorage Devices: Power actuated, drilled expansion bolts: Steel, hot dip galvanized unless otherwise indicated on Drawings.

C. Welding: In conformance with AWS D1.1 and AWS D1.3.

2.7 GALVANIZING REPAIR

A. Where galvanized surfaces are damaged, prepare surfaces and repair them in compliance with procedures specified in ASTM A 780 using zinc-rich paint.

B. Galvanizing repair (zinc-rich) paint: Tneme-Zinc 90-97 by Tnemec Co., Catha-Coat 303H by Devoe Coatings or Amercoat 68HS by PPG, ZRC by ZRC Worldwide or equal.

2.8 FABRICATION

A. Shop fabrication, where applies:

1. Fabricate assemblies of formed sections of sizes and profiles required.

2. Fit, reinforce, and brace framing members to suit design requirements.

3. Fit and assemble in largest practical sections for delivery to site, ready for installation.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 - Administrative Requirements: Coordination and project conditions.

B. Verify substrate surfaces and building framing components are ready to receive Work. Verify that inserts, clips, and similar attachment devices installed as work of other sections are located and installed properly.

C. Verify rough-in utilities are in proper location.

3.2 ERECTION OF STUDS

A. Comply with requirements of ASTM C1007 except where exceeded by other requirements.

B. Field cutting is allowed with saws or shears, but not torch cutting. Restore damaged zinc coating as specified.

C. Reinforce holes cut thru the studs.

D. Align floor and ceiling tracks; locate to wall layout. Secure in place with fasteners or by welding as shown on Drawings, at maximum 24 inches oc, and in accordance with approved shop drawings. Coordinate installation of sealant with floor and ceiling tracks where indicated.

1. Provide slotted track at stud heads to provide for vertical movement and drift of adjoining structure without loading of the metal framing.

E. Place studs at not more than 16 inches oc; not more than 2 inches from abutting walls and at each side of openings. Connect studs to tracks using fasteners, or welding method where indicated, at both inside and outside flanges

F. Construct corners using minimum three studs. Double stud wall openings, door jambs, and window jambs.

G. Erect - studs one piece full length. Splicing of studs is not permitted.

H. Coordinate placement of insulation in multiple stud spaces after erection.

I. Install intermediate studs above and below openings to align with wall stud spacing.

J. Install studs with deflection allowance in stud track, directly below horizontal building framing at non-load bearing framing.

K. Attach cross studs or furring channels to studs for attachment of fixtures anchored to walls.

L. Install framing between studs for attachment of mechanical and electrical items, and to prevent stud rotation.

M. Install backing plates as required for roofing system and flashing securement.

N. Frame both sides of expansion and control joints with separate studs; do not bridge the joint with components of the stud system.

O. Install horizontal stiffeners in stud system, spaced (vertical distance) at not more than 54 inches on center.

P. Touch-up field welds and damaged metallic coatings with primer to match shop coating.

Q. Complete framing ready to receive gypsum board and sheathing panels, cladding and roofing systems.

3.3 SUB-FRAMING INSTALLATION

A. Install Z-Girt sub-framing with orientation and spacing as shown. Fasten to cold-formed metal studs or concrete substrates with fasteners in accordance with manufacturer's instructions.

3.4 ERECTION TOLERANCES

A. Install cold-formed metal framing level, plumb and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet.

3.5 FIELD QUALITY CONTROL

A The Owner will employ a qualified testing laboratory to perform the following tests and submit test reports.

B. Testing agency will review and approve Weld Procedure Specifications submitted by the Contractor. The testing agency shall visually observe welding procedures to certify the WPS plan is followed.

C. Perform visual inspection of a minimum of 20 percent of all welds.

Additional testing will be required for the following:

a. If more than 5 percent of the tested welds are rejected, than an additional 20 percent of all the welds shall be tested. This additional testing process shall be repeated until the rejection rate drops below 5 in 100.

b. Costs of additional inspection required by this paragraph shall be borne by the Contractor.

D. Inspections and testing shall be in conformance with the CBC.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes provision of shop fabricated metal items and related accessories and fasteners as indicated in Drawings, including but not necessarily limited to the following:

1. Metal handrails and guardrails as indicated on drawings..
2. Fasteners and anchors for framing and miscellaneous anchorages.
3. Structural supports for miscellaneous anchorages.
4. Ledge and shelf angles.
5. Standard steel pipe handrails and railings.
6. Ladders.
7. Elevator sill angles.
8. Bollards.
9. Z-girts

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.
2. Section 05 16 00 – Strut Channel Framing System.
3. Section 05 40 00 – Cold Formed Metal Framing.
4. Section 06 10 53 – Miscellaneous Rough Carpentry.
5. Section 09 21 16 – Gypsum Board Assemblies.
6. Section 09 90 00 – Painting and Coatings: Field applied paint finish.
7. Division 22 – Plumbing: Supports and anchorages.
8. Division 23 – Heating, Ventilating, and Air-Conditioning (HVAC): Supports and anchorages.
9. Division 26 – Electrical: Supports and anchorages.

3. SSPC SP 10 – Near-White Blast Cleaning.
4. SSPC Paint 20 – Zinc Rich Primers (Type I – Inorganic and Type II – Organic).

1.3 QUALITY ASSURANCE

A. Welding Qualifications: Welders shall be qualified in accordance with AWS D1.1.

B. Design Criteria:

1. Finish joints in accordance with NOMMA Guideline 1.
2. Built-up parts shall not exhibit warp.

1.4 SUBMITTALS

A. Manufacturer’s literature describing products including details and dimensions.

B. Shop Drawings:

1. Show large scale construction of various parts, methods of joining, thickness of metals, profiles of surfaces, reinforcing, anchorage, and structural supports. Include information regarding concealed and exposed joints, welds, and fastenings.
2. Where welded connectors and concrete inserts are required to receive work, show size and locations required.

C. Samples: Submit three 8 inches by 4 inches samples of any aluminum anodic or fluoropolymer finish.

D. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within previous 12 months.

E. Provide a copy of manufacturer data sheet or letter with percentages of pre and post-consumer recycled content, and provide materials cost

1.5 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Deliver, store, and handle packaged materials in original containers with seals unbroken and labels intact until time of use.

B. Discharge materials carefully and store on clean concrete surface or raised platform in safe, dry area.

1.6 JOB CONDITIONS

A. Scheduling, Sequencing:

1. Ensure timely fabrication of items to be embedded or enclosed by other work.

2. Furnish information and assistance required for locating embedded items and be responsible for proper locations.

PART 2 – PRODUCTS

2.1 COMPONENTS - STEEL

A. Steel Plates, Channels, Angles, and Tees: ASTM A36.

B. Steel Plate: ASTM A572, Grade 50.

C. Steel Tubes: ASTM A500, Grade B.

D. Steel Pipe: ASTM A53, Grade B, Schedule 40.

E. Steel Sheet: ASTM A653, Grade 33 Structural Quality, Galvanized.

F. Bolts: ASTM A307 Grade A or ASTM A325, Type 1.

G. Nuts: ASTM A563 heavy hex type.

H. Washers: ASTM F436, Type 1.

I. Welding Materials: AWS D1.1; type required for materials being welded.

J. Shop Primer: SSPC Paint 15, Type 1, red oxide.

K. Touch Up Primer: Match shop prime, or SSPC Paint 20 for Galvanized surfaces

2.2 COMPONENTS – STAINLESS STEEL

A. Bars and Shapes: ASTM A276, Type 304 unless shown otherwise.

B. Tubing: ASTM A269, Type 304 unless shown otherwise.

C. Pipe: ASTM A312, Type 304 unless shown otherwise.

D. Plate, Sheet and Strip: ASTM A240, Type 304 unless shown otherwise.

E. Bolts, Nuts and Washers: ASTM A354.

F. Welding Materials: AWS D1.6; type required for materials being welded.

2.3 COMPONENTS – ALUMINUM

A. Extruded Aluminum: ASTM B221, Alloy 6063, Temper T5.

B. Sheet Aluminum: ASTM B209.

C. Bolts, Nuts and Washers: Stainless Steel.

D. Welding Materials: AWS D1.1, type required for materials being welded.

2.4 COMPONENTS - ANCHORS

A. Anchor Rods: ASTM A307, Grade A or ASTM F1554, Grade 55, weldable. Furnish with nut and washer, unfinished.

B. Expansion Anchors: Commercial Item Description A-A-1923A Type 4, carbon or stainless steel as indicated, valid ICC-ES Evaluation Report: Hilti Corporation's "Kwik Bolt TZ" (ICC ESR-1917) or Simpson Strong Tie's "Strong-Bolt" (ICC ESR-1771).

1. Patching Mortar: BASF's "EMACO S66 CI", Sika Corporation's "SikaRepair 223" or equal.

2.5 FABRICATION

A. Preparation:

1. Coordinate with other work supporting or adjoining miscellaneous metal and verify requirements of cutting out, fitting, and attaching.

2. Verify sizes, designs, and locations of items; do so at site whenever construction progress permits.

B. General Requirements

1. Fabricate items from materials noted and make true to profiles shown. Obtain Architect's approval of proposed variations.

2. Miter corners and angles of frames and moldings unless otherwise noted.

3. Perform cutting, shearing, drilling, punching, threading, tapping as required for items or their adjacent work.
4. Drill or punch holes; do not use cutting torch.
5. Ensure shearing and punching leaves true lines and surfaces.
6. Items to be Galvanized: Fabricate in accordance with recommended practices of ASTM A385 and A386 unless specifically noted otherwise.
7. Fabricate exterior items for assembly and installation on site without field-welding of joint.
8. Ensure metal thickness and assembly details provide ample strength and stiffness.
9. Size sleeves for approximately 1/4-inch clearance all around.

C. Fastening:

1. Provide fasteners and anchor assemblies required for complete fabrication, field assembly, and erection.
2. Conceal fastenings wherever practicable.
3. Size internally threaded diameters to accommodate galvanized threaded bolts where galvanizing is required.
4. Permanent connections in Ferrous Metal Items: Employ welding wherever practicable; avoid bolts and screws.

D. Welding:

1. Use electric shielded-arc process according to AWS D1.1 and AWS D1.3.
2. Maintain shape and profile of item welded.
3. Prevent heat blisters, run-throughs, and surface distortions.
4. Welds Normally Exposed to View in Finished Work: Make uniform and grind smooth.
5. Exposed Welds: Remove burrs, flux, welding oxide, air spots and discoloration; grind smooth, polish, or otherwise finish to match material welded.

2.6 FINISHES

A. Preparations of Surfaces:

1. Thoroughly clean mill scale, rust, dirt, grease, and other foreign matter from ferrous metal prior to galvanizing, hot phosphate treatment or painting.
2. Where hand cleaning methods are not adequate, clean in accordance with SSPC-SP 1, SSPC-SP 2, or SSPC-SP 7 as required.

3. Completely eliminate burrs, rough spots and pitting from normally exposed ferrous metal items.

B. Galvanizing:

1. Galvanize items after fabrication in largest sections practicable unless otherwise permitted or recommended by ASTM A384 and A385.

2. Where galvanizing is removed by welding or other assembly procedures, touch up abraded areas with molten zinc or zinc-rich paint.

3. Where ferrous metal item is noted to be galvanized, perform galvanizing in accordance with following standards as applicable to item:

a. Hardware items Including Fasteners: ASTM A153.

b. Other Fabricated items: ASTM A123.

C. Finish Schedule: Unless noted otherwise in Materials or Standard Catalog Products Articles.

1. Ferrous Metal, Interior Items:

a. Concealed: Clean, chemically etch, and shop-apply one prime-coat.

b. Exposed: Clean, treat with hot phosphate, chemically etch, and shop-apply one prime-coat.

2. Ferrous metal, Exterior Items:

a. Concealed: Clean and hot-dip galvanize in accordance with galvanizing standards.

b. Exposed: Clean, then hot-dip galvanize in accordance with galvanizing standards, chemically etch, and shop-apply one prime-coat.

3. Items Noted as Chrome-Plated: Same as US26D finish.

4. Hardware Including Fasteners (Bolts, Nuts, Washers, Etc.) and Anchors:

a. Finish to match items fastened or as shown. Furnish stainless steel expansion anchors at exterior locations and where indicated on Drawings.

b. Where galvanizing is required, hot-dip galvanize according to ASTM A153.

2.7 METAL FABRICATION ITEMS

A. Miscellaneous: Provide miscellaneous metal fabricated angles, channels, plates and shapes, threaded rods, pipe, bolts, nuts, washers, spacers, and fastenings shown or otherwise required to complete Work.

B. Fixed Ladders – Steel:

1. General: Fabricate each ladder to suit locations indicated on Drawings, in compliance with applicable provisions of NAAMM Metal Stairs Manual and requirements of CCR GISO, Section 3277.

2. Finish: Galvanized in compliance with Finishes article. Shop prime where painted finish is indicated on Drawings.

3. Rungs: Minimum 3/4” diameter solid steel bar, 12-inches on center; extend through side railings/stringers. Hold rungs at least 7 inches clear of wall and other obstruction construction.

   a. Non-Slip Surface: Provide on each rung. Coat top of rung with aluminum oxide set in an epoxy resin adhesive or provide a type of manufactured rung filled with aluminum oxide.

4. Side Railings / Stringers: Punch to receive rungs.

5. Safety Cage: Furnish in compliance with GISO on ladders exceeding 20 feet and where indicate on Drawings. Fabricate from galvanized steel bar sections, minimum 1/4 x 2-inches.

6. Anchorage: Furnish ladders with mounting brackets as shown on Drawings for anchoring to structure.

C. Standard Steel Pipe Railings and Handrails (Handgrips):

1. General: Fabricate railings and handrails to suit locations indicated on Drawings, in compliance with applicable provisions of NAAMM Pipe Railing Manual and California Building Code. Provide closed ends with return bends to walls, smooth bends, closed ends and welded connections with "Type 2" joint construction for appearance.

   a. Structural Requirements: Comply with CBC Section 1607A.7.1 for concentrated and uniform load resistances at post spacings and heights shown.

   b. Height: Guardrails shall be not less than 42 inches high, measured vertically above the adjacent walking surface or the line connecting the leading edges of stair treads, unless specifically shown otherwise on Drawings.

   c. Guardrail Accessibility Compliance: Guardrails shall not have openings between components and between sections of railings which allow passage of a sphere 4 inches in diameter, except where specifically indicated in the CBC.

   d. Handrail Accessibility Compliance: Handrail extensions beyond the top and bottom riser of stairs shall apply as required at all locations unless explicitly detailed otherwise on Drawings.

2. Top Rails, Posts and Handrails: 1-1/4 inch diameter minimum steel pipe or as indicated on drawings; welded joints.

3. Intermediate Rails: 1 inch diameter minimum steel pipe or as indicated on drawings; welded joints

4. Fittings: ADA-compliant cast wall brackets with suitable anchors for mounting to wall condition. Trimco’s “No. 3406” or equal.

5. Exposed Fasteners: Flush countersunk screws or bolts; consistent with design of railing.

6. Splice Connectors: Steel concealed spigots.

7. Finish: Refer to Finish Schedule article.

D. Bollards: ~~6-inch diameter steel pipe~~ **Cold-formed structural tubing (HSS)**, concrete-filled ~~with crowned cap~~, set in concrete footing.

1. Size: ~~6-inch diameter~~ **As indicated on Drawings**. Length as required by drawings, 36-inch minimum.

2. Finish: Galvanized. Prepare and paint exposed surface in accordance with Section 09 90 00 - Painting, color as directed by Architect.

3. Concrete Footing and Fill: 3,000 psi minimum compressive strength, as specified in Section 03 30 00 – Cast-In-Place Concrete.

PART 3 – EXECUTION

3.1 INSPECTION

A. Examine areas to receive work and verify that: Setting conditions and dimensions are correct to receive items.

B. Do not start installation until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install work plumb, true, rigid, and neatly trimmed out.

B. Do not tighten fastener through finish alone without spacer washers.

C. Provide concrete inserts or predrilled expansion bolts in fastening items into concrete. Install and tighten expansion anchors in accordance with manufacturer's recommendations and referenced Reports. Coordinate for inspection and testing as required. Clean and repair surfaces damaged by drilling or installation and fill abandoned holes with patching mortar in accordance with the manufacturer's instructions. Correction of defective work shall be the responsibility of the Contractor.

D. Protect dissimilar metals from contact with each other or with other materials causing corrosion.

E. Fasten work tightly to prevent rattle or vibration except where expansion-contraction tolerances are required.

F. Use non-shrink grout mixed in accordance with manufacturer's direction for setting frames, plates, sills, bolts and similar items.

G. Set items shown or required to be installed in sleeves with quick-setting anchor cement unless otherwise noted.

H. Protect metal from damage to surface, profile and shape.

3.3 CLEANING

A. Remove protective devices only when items will safe from other construction operations or removal is required to permit related work.

B. Touch up and clean prime-coated items as required for finish painting per Section 09 90 00.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes design and provision of steel frame of structural sections with closed stair risers; pan to receive ~~polished~~ **steel trowelled** concrete fill at interior stair and broom finish at exterior stair at stair treads and landings; integral guards and custom handrail.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements. (LEED v4.1)

4. SSPC SP 10 – Near-White Blast Cleaning.
5. SSPC SP 15 – Steel Joist Shop Primer / Metal Building Primer.
6. SSPC Paint 20 – Zinc Rich Primers (Type I – Inorganic and Type II – Organic).

1.3. SUBMITTALS

A. Division 1 - Submittal Procedures: Requirements for submittals.

B. Shop Drawings:

1. Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories.
2. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.
3. Indicate railing layout and dimensions, including splices and attachments.

C. Certificates

1. Welders' Certificates: Certify welders and welding procedures employed on the Work, verifying AWS qualification within previous 12 months.

D. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Recycled Content Materials: Furnish materials with maximum available recycled content.

E. Provide a copy of manufacturer data sheet or letter with percentages of pre and post-consumer recycled content, and provide materials cost

1.4 QUALITY ASSURANCE

A. Perform railing work according to ASTM E985.

B. Finish joints according to NOMMA Guideline 1.

C. Welders and Welding Procedures: AWS D.1 qualified within previous 12 months for employed weld types.

D. Fabricator and Erector: Companies specializing in fabricating products specified in this Section with minimum five years' experience.

PART 2 – PRODUCTS

2.1 COMPONENTS

A. Steel W-Shapes: ASTM A992.

B. Steel T-Shapes: Cut from structural W-shapes

C. Steel Channels, Angles, and Tees: ASTM A36.

D. Round, Square and Rectangular Hollow Steel Sections: ASTM A500, Grade B or ASTM A501.

E. Steel Pipe: ASTM A53, Grade B.

F. Steel Plates: ASTM A53.

G. Floor Plates: ASTM A786; raised pattern.

H. Sheet Steel: ASTM A653, galvanized Grade 33 coating class.

I. Tread and Landing Concrete Reinforcement: Bar type.

J. Bolts: ASTM A307, Grade A.

K. Nuts: ASTM A563, heavy-hex type.

L. Washers: ASTM F844 for ASTM A307 bolts.

M. Shop Primer: SSPC Paint 15, Type 1, red oxide.

N. Touch Up Primer: Match shop prime; SSPC Paint 20 for Galvanized surfaces, ASTM A780.

O. Cast-in-Place Concrete: Type as specified in Section 03 30 00 – Cast-in-Place Concrete.

P. Polished Concrete filled Pan Treads at interior stair.

Q. Contrasting Nosing Strip: Basis of Specification: Wooster Products Inc, "Supergrit Type #630A" 3-inch wide by ¼"-inch deep Type 6063-T5 extruded aluminum base safety nosing with anti-slip aluminum oxide abrasive filler and sure-hold anchor for embedding in wet concrete. Abrasive Filler Color: Black (BLA-1).

2.2 SUSTAINABILITY CHARACTERISTICS

A. Division 1 - Sustainable Design Requirements: Requirements for sustainable design compliance.

B. Materials and Resources Characteristics:

1. Recycled Content Materials: Furnish materials with maximum available recycled content, and with no less than that required in Section 01 81 13.

2.3 FABRICATION

A. Fit and shop-assemble components in largest practical sections, for delivery to Site.

B. Fabricate components with joints tightly fitted and secured.

C. Continuously seal joined pieces by continuous welds.

D. Form simple and compound curves by bending pipe in jigs to produce uniform curvature for each repetitive configuration required; maintain cylindrical cross section of pipe throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of pipe.

E. Exposed Welded Joints: NOMMA Guideline 1 Joint Finish:

1. Exposed Surfaces: Finish #1.

2. Concealed Surfaces: Finish #3.

F. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; unobtrusively located; consistent with design of component, except where specifically noted otherwise.

G. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

H. Accurately form components required for anchorage of stairs, landings and railings to each other and to building structure.

I. Pan Stairs and Landings:

1. Fabricate stairs and landings with closed risers and treads of metal pan construction, ready to receive concrete.

2. Form treads and risers in accordance with NAAMM Figure 7, with minimum 12-gage sheet steel stock.

3. Secure tread pans to stringers with clip angles welded in place.

4. Form stringers with rolled-steel channels, depth as required by Performance Requirements. Weld fascia plates to channels.

5. Form landings with sheet stock with reinforced underside to attain design load requirements.

6. Form guardrail balusters with steel sections indicated welded to stringers.

2.4 FINISHES

A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

B. Do not prime surfaces in direct contact with concrete or where field welding is required.

C. Prime paint items with two coats.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 – Administrative Requirements: Verification of existing conditions before starting work.

B. Verify that concealed blocking and reinforcement is installed and correctly located to receive wall-mounted handrails.

3.2 PREPARATION

A. Division 1 - Execution and Closeout Requirements: Requirements for installation preparation.

B. Clean and strip primed steel items to bare metal where Site welding is required.

C. Supply items required to be cast into concrete and or embedded in masonry with setting templates.

D. Apply primer as required to prevent interference with adhesion by substances that cannot be removed.

3.3 INSTALLATION

A. Install components plumb and level, accurately fitted, free from distortion or defects.

B. Install anchors, plates, angles, hangers or struts required for connecting stairs to structure.

C. Allow for erection loads. Install sufficient temporary bracing to maintain framing safe, plumb, and in alignment.

D. Field-weld components indicated on Shop Drawings. Perform field welding according to AWS D1.1.

E. Field-bolt and -weld to match shop bolting and welding. Conceal bolts and screws whenever possible. Where not concealed, use flush countersunk fastenings.

F. Mechanically fasten joints butted tight, flush, and hairline. Grind welds smooth and flush.

G. Obtain approval of Architect/Engineer prior to Site cutting or creating adjustments not scheduled.

H. After erection, prime welds, abrasions, and surfaces not galvanized, except surfaces to be in contact with concrete.

3.4 TOLERANCES

A. Maximum Variation from Plumb: 1/4-inch per story, noncumulative.

B. Maximum Offset from Alignment: 1/4-inch.

3.5 FIELD QUALITY CONTROL

A. Division 1 - Quality Requirements: Requirements for inspecting and testing.

B. Inspection: Inspect welds according to AWS D1.1.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes roof curbs, perimeter nailers; blocking in wall and roof openings; sleepers at floor-anchored casework; wood furring and grounds; telephone and electrical panel back boards; and preservative treatment of wood.

B. Related Sections:

1. Section 06 41 00 – Architectural Wood Casework.
2. Section 07 53 00 – Single Ply Roofing.

3. DOC PS 20 - American Softwood Lumber Standard.

G. West Coast Lumber Inspection Bureau:

1. WCLIB - Standard Grading Rules for West Coast Lumber.

1.3 SUBMITTALS

A. Product Data: Submit technical data on wood preservative and fire retardant treatment materials and application instructions.

B. Environmental Data: Certify products meet or exceed specified sustainable design requirements.

1. Certify lumber is harvested from Forest Stewardship Council Certified well managed forest.
2. Certify each composite wood product contains no added urea-formaldehyde resins.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with the following:

1. Lumber Grading Agency: Certified by DOC PS 20.
2. Wood Structural Panel Grading Agency: APA - The Engineered Wood Association.
3. Lumber: DOC PS 20.
4. Wood Structural Panels: DOC PS 1 or DOC PS 2.

B. Surface Burning Characteristics:

1. Fire Retardant Treated Materials: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

C. Apply label from agency approved by authority having jurisdiction to identify each preservative treated and fire retardant treated material.

D. No particleboard is allowed.

PART 2 – PRODUCTS

2.1 MATERIALS

A. Lumber Grading Rules: WCLIB.

B. Solid Wood Blocking and Framing: FSC-Certified, Stress Group 1, Douglas Fir species, Construction grade No. 3.

C. Plywood: APA PS 1-83, Grade C-C; Exterior. No added urea-formaldehyde resins.

2.2 ACCESSORIES

A. Fasteners and Anchors:

1. Fasteners: ASTM A153, hot dipped galvanized steel for high humidity, exterior, and treated wood locations, unfinished steel elsewhere.

2. Nails and Staples: ASTM F1667.

3. Anchors: Refer to Section 05 50 00 – Metal Fabrications.

2.3 FACTORY WOOD TREATMENT

A. Wood Preservative (Pressure Treatment): AWPA U1, Commodity Specification A-Sawn Products or F-Wood Composites using water-borne ACQ or SBX type preservative.

B. Fire Retardant Treatment: Chemically treated and pressure impregnated, having flame spread of 25 or less when tested in accordance with ASTM E 84 and showing no evidence of significant progressive combustion when test is continued for an additional 20 minute period, Interior Type.

C. Moisture Content after Treatment:

1. Lumber: Maximum 19 percent.

2. Structural Panels: Maximum 15 percent.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 - Administrative Requirements: Verification of existing conditions before starting work.

B. Verify substrate conditions are ready to receive blocking, curbing and framing.

3.2 PREPARATION

A. Coordinate placement of blocking, curbing and framing items.

3.3 INSTALLATION

A. Set members level and plumb, in correct position.

B. Place horizontal members, crown side up.

C. Construct curb members of solid wood sections.

D. Curb roof openings except where prefabricated curbs are provided. Form corners by alternating lapping side members.

E. Coordinate curb installation with installation of decking and support of deck openings.

F. Plywood: Gap joints 1/16 inch. Butt joints accurately at centerlines of supporting members..

G. Bolts and nuts: When installed, bear no more than 1/2-inch of threads on wood and allow no more than 1/2-inch of bolt to project beyond nut. Drill bolt holes 1/32-inch oversize. Tighten nuts snug when placed, and re-tighten at end of job or just before closing in.

3.4 SCHEDULE

A. Roof Blocking and Nailers: Specified solid lumber species, 19 percent maximum moisture content, pressure preservative treatment.

B. Sills or Plates on Concrete: Specified solid lumber species, 19 percent maximum moisture content, pressure preservative treatment. Set in grout if surface of concrete deviates from true plane by more than 1/16-inch in 4 feet. Anchor with bolts as shown. Use two bolts minimum per piece with one bolt located between 4 inches and 8 inches from each end of each piece of sill.

C. Telephone and Electrical Panel Boards: 3/4 inch thick Plywood, Class A Fire Retardant treated, square edges, painted to match walls per Section 09 90 00 – Painting and Coatings prior to installation of equipment.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes custom-fabricated plastic laminate faced cabinet units, cabinet hardware, countertops, preparation for installing utilities in cabinets and shop finishing.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.
2. Section 06 10 53 – Miscellaneous Rough Carpentry: Sleepers at floor-mounted casework.
3. Section 09 21 16 – Gypsum Board Assemblies: Provision of support framing and backing.
4. Section 09 65 00 – Resilient Flooring: Provision of resilient base.
5. Division 26 - Electrical: Electrical items integrated into casework.
6. Division 27 - Communications: Audio-visual system components integrated into casework.

2. CCP – Certified Compliance Program.

1.3 SUBMITTALS

A. Division 1 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate materials, component profiles and elevations, assembly methods, joint details, fastening methods, accessory listings, hardware location and schedule of finishes.

1. Show required locations for backing provided by contractor for anchorage of casework and countertops to building construction.

2. Shop drawings shall bear an individually-serial numbered WI Shop Drawing Certified Compliance Program label on cover page and each casework and/or countertop elevation.

C. Product Data: Submit data for hardware accessories and finishes.

D. Samples:

1. Submit two 8 x 10 inch size samples, illustrating all types of cabinet finish.

2. Submit two 8 x 10 inch size samples, illustrating all types of counter top finish.

3. Submit two samples of drawer pulls, hinges, and locks, illustrating hardware finish and style.

E. Certification: Submit WI Certified Compliance Program (CCP) certificates.

F. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Indoor Environmental Quality Certificates:

a. Certify volatile organic compound content for each interior sealant and adhesive.

b. Certify each composite wood product contains no added-urea formaldehyde resins.

G. All wood products to be FSC certified.

1.4 QUALITY ASSURANCE

A. Fabricator: Company shall be an Accredited Millwork Company (AMC) of the Woodwork Institute, authorized to provide WI Certified Compliance Program (CCP) certification.

B. Perform work in accordance with NAAWS Premium Grade except where modified elsewhere in this specification.

C. Perform work in compliance with WI Certified Compliance Program (CCP).

1. Before delivery to the job site, the supplier shall issue a CCP certificate or Certificate of Re-inspection indicating the products that will be furnished for this job and certifying that they will fully meet all the requirements of the grade or grades specified.

2. Each elevation of casework, each laminated plastic top, and each solid surface top shall bear a Woodwork Institute Certified Compliance Label.

3. At completion of installation, the woodwork installer shall provide a Woodwork Institute Certified Compliance Certificate indicating the products installed, and certifying that the installation of these products fully meets the requirements of the Grade or Grades specified.

4. All fees charged by the Woodwork Institute for its Certified Compliance Program are the responsibility of the millwork manufacturer and/or installer and shall be included in their bid.

D. Surface Burning Characteristics: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

1.5 REGULATORY REQUIREMENTS

A. Comply with Bay Area Air Quality Management District Regulation 8:

1. Rule 23: Coating of Flat Wood Paneling and Wood Flat Stock.

2. Rule 32: Wood Products Coatings.

3. Rule 51: Adhesive and Sealant Products.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Division 1 - Product Requirements: Product storage and handling requirements.

B. Do not deliver casework products until an area is provided for storage that is enclosed, all wet work dry, and broom clean.

C. Protect products from direct sunlight. Maintain relative humidity between 45 and 65 percent. Maintain ambient temperature between 68 and 98 degrees F.

D. Allow products to acclimate to building conditions for minimum 72 hours before installation. Inspect for damage.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Division 1 - Product Requirements.

B. Maintain storage space relative humidity within ranges indicated in NAAWS Section 2.

C. During and after installation of Work of this section, maintain same temperature and humidity conditions in building spaces as will occur after occupancy.

1.8 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication. Indicate field measurements on Shop Drawings.

1.9 WARRANTY

A. In addition to the warranty and correction of work requirements of the General Conditions, work under this Section shall be free of defects including but not limited to delamination, door or drawer warpage exceeding NAAWS standards for a period of two years from date of "Notice of Completion." Written guarantee signed by the cabinet manufacturer and the Contractor shall include all materials and labor required to make necessary repairs or replacement and make good any damage to other work caused by such repair or replacement.

PART 2 – PRODUCTS

2.1 COMPONENTS

A. Medium Density Fiberboard (MDF): ANSI A208.2; industrial grade, composed of randomly oriented wood fibers and resin, hot pressed.

1. Formaldehyde Free and Fire Retardant Treated MDF: Urea-formaldehyde free, Class A fire retardant, Forest Stewardship Council certified; Panel Source International “Pyroblock FSC Certified Particleboard and MDF”.

B. Lumber: Douglas fir; No. 3 or construction grade per WCLIB. Provide pressure-treated for moisture resistance at floor sleepers.

C. High Pressure Decorative Laminate:

1. Plastic Laminate: ASTM E84; Class A, NEMA LD 3, GP50 for horizontal surfaces, GP28 for vertical surfaces, CL20 for cabinet liner surfaces, BK20 for undecorated backing sheets, PF42 for post forming, FR50 for fire-retardant surfaces; surface texture as selected.

2. Manufacturer, Color and Pattern: No substitutions.

a. As indicated on finish schedule.

D. Countertops:

1. As indicated on finish schedule.

2. Subtops: Plywood as specified in Section 06 10 53, 5/8-inch thick or as indicated on Drawings.

2.2 SUSTAINABILITY CHARACTERISTICS

A. Division 1 - Sustainable Design Requirements: Requirements for sustainable design compliance.

B. Materials and Resources Characteristics:

1. Certified Wood Materials: Furnish wood materials certified in accordance with guidelines referenced in Section 01 81 13.

C. Indoor Environmental Quality Characteristics:

1. Adhesives and Sealants: Maximum volatile organic compound content in accordance with Section 01 81 13.

2. Composite Wood Products: Emissions content in accordance with Section 01 81 13.

2.3 ACCESSORIES

A. Adhesive for High Pressure Decorative Laminates and Surfacing Facings: Formaldehyde free types. Type recommended by facing manufacturer to suit application.

B. Painter's Caulk and Sanitary Sealant: Refer to Section 07 90 00.

C. Plastic Laminate Edge Band: 0.050-inch thick plastic laminate edge band matching face veneer.

D. Bolts, Nuts, Washers, Lags, Pins, and Screws: Of size and type to suit application and as shown; plain finish in concealed locations and plated finish in exposed locations except otherwise indicated.

E. Concealed Joint Fasteners: Threaded steel.

F. Drawer and Door Pulls: 2-7/8" long wire pull with satin stainless finish, DP57A by Doug Mockett.

G. Drawer Slides: 100 pounds load rating for drawers less than 24 inches wide and 150 pounds for drawers more than 24 inches wide, galvanized steel construction, ball bearings separating tracks, full extension type. Accuride, Grant/Hettich, or accepted equal.

H. Hinges: European style, all-metal construction, 170-degree minimum opening, controlled-self-closing hinges. Blum's Clip 170 hinge with Blumotion, or equal.

I. Shelf support:

1. Casework Prep: Provide 2 rows of 5mm diameter holes, full height in every case shown to have adjustable shelves. Center holes at spacing compatible with supports. Provide 4 supports per shelf.

2. Wood and Solid Phenolic Shelf Supports: Clear plastic lock down supports suitable for ¾-inch and 1-inch thick shelves. Double 5 mm pins @ 32 mm centers. Haefele 282.47.402, Bainbridge No. 3220, or equal.

3. Glass Shelf Support: Nickel-plated zinc alloy clamp with transparent plastic glass rest and 5 mm pin suitable for up to ½-inch thick shelves. Haefele 282.13.712 or equal.

J. Catches: Screw mount magnet, black plastic, steel strike. Holding power: 4-5 kg. Haefele 246.29.301.

K. Cabinet Locks: Re-keyable via set screw cylinder release; solid brass pin tumbler cylinder drilled for 5 pins; US26D finish; National Keyway, master keyed, 5 pin standard. Drawers / Doors: Olympus Lock, Incorporated's 200DW / 100DR or equal.

2.4 FABRICATION

A. General Requirements:

1. Shop assemble casework for delivery to site in units easily handled and to permit passage through building openings.

2. When necessary to cut and fit on Site, fabricate materials with ample allowance for cutting. Furnish trim for scribing and site cutting.

3. Mechanically fasten back splash to counter tops with steel brackets at 16 inches on center.

4. Fabricate cabinets and counter tops with cutouts for plumbing fixtures and trims, inserts, appliances, outlet boxes, fixtures and fittings, and toilet accessories. Verify locations of cutouts from on-site dimensions. Seal cut edges.

B. Plastic Laminate Cabinets:

1. Fabricate cabinets in compliance with NAAWS Section 10 Casework: Custom Grade. Construction shall be Type I Style A frameless. Door and drawer front style shall be flush overlay.

2. Door Style: Flush Type A.

3. Door, Drawer Fronts, Slope Tops, and Closure Panels: 3/4 inch thick.

4. Shelves: 3/4 inch thickness less than 2 feet 6 inches span. 1 inch thickness for 2 feet 6 inches and longer span.

5. Plastic Laminate: High pressure plastic laminate unless otherwise indicated.

a. Apply high pressure decorative laminate finish in full uninterrupted sheets consistent with manufactured sizes. Fit corners and joints hairline; secure with concealed fasteners.

b. Fit shelves, doors, and exposed edges with nominal matching plastic laminate edging. Use one piece for full length only.

c. Semi-exposed surfaces: Grade CL20 light color high pressure plastic laminate cabinet liner nominal 0.020-inch thickness; except visible surfaces, open cabinet shall be same as exposed exterior surfaces.

d. Interior exposed shelf edges shall be self-edged with matching plastic laminate.

e. Doors shall have same material both sides.

C. Solid Surface Countertops:

1. Fabricate countertops in accordance with recommendations of NAAWS Section 11 Premium grade.

2. Apply full uninterrupted sheets consistent with manufactured sizes. Fit corners and joints hairline; secure with concealed fasteners.

3. Thickness: As specified and shown.

4. Fabricate with eased edge.

5. Provide 4-inch high square splash with scribe allowance unless otherwise shown and scribe to wall. Include return splashes for end walls.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 – Administrative Requirements: Coordination and project conditions.

B. Verify dimensions at site.

C. Verify adequacy of backing and support framing.

D. Verify location and sizes of utility rough-in associated with work of this section.

3.2 INSTALLATION

A. Install casework in accord with NAAWS Sections 10 and 11 except as otherwise shown or specified.

B. Set and secure casework in place; rigid, plumb, and level.

C. Use fixture attachments in concealed locations for wall mounted components.

D. Use concealed joint fasteners to align and secure adjoining cabinet units and counter tops.

E. Carefully scribe casework abutting other components, with maximum gaps of 1/32 inch. Do not use additional overlay trim for this purpose.

F. Secure cabinet and counter bases to floor using appropriate angles and anchorages.

G. Install base finish indicated on Drawings and specified elsewhere at toe kicks and as shown.

H. Countertops:

1. Run counter continuous over base cabinets, equipment and spaces as shown.

2. Provide splash at end where top is adjacent to wall or any equipment, fixed or movable, unless otherwise shown.

3. Scribe to wall or other adjacent materials leaving a gap of 1/16-inch minimum. Use Painter's Caulk or Sanitary Sealant of an approved color to seal gaps.

4. Apply finish top and splash in full uninterrupted sheets with no splices unless run exceeds maximum limits of material. Use draw-bolt tight joint fasteners at all splice joints. Where run exceeds maximum limits of material use no piece less than 3 feet in length. Corners and joints: hairline. Locate counter butt joint, if required, at least 2 feet from sink cutouts.

3.3 ADJUSTING

A. Division 1 - Execution and Closeout Requirements: Testing, adjusting and balancing.

B. Adjust moving or operating parts to function smoothly and correctly.

3.4 FIELD QUALITY CONTROL

A. Inspection: Furnish third party inspection in compliance with NAAWS CCP and CSIP. Furnish Architect with copies of all reports conducted.

3.5 CLEANING

A. Division 1 - Execution and Closeout Requirements: Final cleaning.

B. Clean casework, counters, shelves, hardware, fittings, and fixtures.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes:

1. Positive-side, below grade sheet membrane waterproofing (pre-applied "blindside" and/or post-applied) to vertical walls, related accessories including drainage panel, protective cover and perforated drainage piping; coordination with other waterproofing systems where they intersect.

2. Pre-applied, blindside sheet membrane waterproofing below slabs on-grade at locations indicated.

~~3. Waterproofing membrane for elevated plaza deck, located beneath plaza paver systems.~~

B. Related Sections:

1. Section 03 30 00 – Cast In Place Concrete.

2. Section 07 26 00 – Vapor Retarders: Tie-in of sheet waterproofing with below-slab vapor retarders.

3. Section 07 62 00 – Sheet Metal Flashing and Trim: Coordination with perimeter flashing components.

4. Section 07 76 00 – Plaza Paver Systems: Provision of waterproofing membrane and protection course below paver systems.

1.2 REFERENCES

A. American Society for Testing and Materials International (ASTM):

1. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers-Tension.

2. ASTM D624 - Standard Test Method for Tear Strength of Conventional Vulcanized Rubber and Thermoplastic Elastomers.

3. ASTM D746 - Standard Test Method for Brittleness Temperature of Plastics and Elastomers by Impact.

4. ASTM D822 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers-Tension.

5. ASTM D5957 - Standard Guide for Flood Testing Horizontal Waterproofing Installations.

6. ASTM E96 - Standard Test Methods for Water Vapor Transmission of Materials.

1.3 SYSTEM DESCRIPTION

A. Waterproofing Systems:

1. Comply with local regulatory restrictions for Volatile Organic Compounds (VOC).
2. Prevent water or moisture migration to interior.
3. Protect surfaces noted against permeation by water from above grade.
4. Compatible with related waterproofing systems.
5. Furnish products of, or accepted by, single manufacturer for each system type furnished.

1.4 SUBMITTALS

A. Comply with Division 1 – Submittal Procedures.

B. Product Data. Include manufacturer's written instructions for evaluating, preparing and treating substrate, installation instructions, technical data and tested physical and performance properties of materials.

C. Certification that manufacturer and installer meet requirements of QUALITY CONTROL article in this Section.

D. Certification by manufacturer's representative accepting the proposed use of waterproofing materials and methods as specified under Jobsite Meeting.

E. Submit copy of manufacturer's technical representative's field inspection reports on installation and water test inspection of sheet membrane waterproofing.

F. Warranties: Special warranties specified in this Section.

1.5 QUALITY CONTROL

A. Comply with Division 1 – Quality Control.

B. Single Responsibility: Obtain waterproofing materials and accessory items through one source from a single manufacturer. Work shall be performed by single installer having undivided responsibility for providing complete work, including all components and related work, and for performance and quality of waterproofing.

C. Acceptance is required of products of service, of proposed manufacturer and installer, and will be based upon submission of certification that:

1. Manufacturer regularly and presently manufactures sheet membrane waterproofing as one of manufacturer's principal products.
2. Manufacturer's product submitted has been in satisfactory and efficient use on three installations similar or equivalent to this project for three years. Submit list

of installations. List shall include name and location of project and name of owner.

3. Installer has had a minimum of five years successful experience in applying sheet membrane waterproofing.

4. Installer has been licensed or approved by sheet membrane waterproofing manufacturer, and certified by the manufacturer as having the necessary expertise to install the specified system.

D. Contractor shall arrange for manufacturer's technical representative to be on Site to advise installer of proper procedures and precautions for use of materials and to review installation.

1.6 PRE-INSTALLATION MEETINGS:

A. Required Conferences:

1. Contractor-Installer-Manufacturer Review: Contractor and installer shall review Drawings and Specifications with representative of waterproofing materials manufacturer and obtain manufacture's agreement that selected systems are proper, compatible, and adequate for application shown and that conditions and details do not conflict with manufacturer's warranty/guaranty.

2. Pre-Application Conference: Contractor shall arrange conference to review waterproofing work prior to actual installation.

a. Conference to be attended by Owner, Consultants, Contractor, and Installer, authorized representatives of accepted manufacturer, and other installers whose work may be affected by quality of waterproofing. Contractor to provide at least one week's advance notice of conference date and time.

b. Conference shall be held at Site and shall be conducted with accepted submittal and prior to delivering any material to Site.

c. Following major considerations shall be reviewed at conference:

i. Review in detail surface preparation, protection of adjacent surfaces, installation procedures, field quality control, and other related items.

ii. Review in detail project conditions, schedule, construction sequence, application requirements, and quality of completed installation.

iii. Review methods for storing and handling materials.

iv. Review in detail means of protecting completed work during remainder of construction period.

v. Record discussions of conference and any conflict, incompatibility, or inadequacy, and furnish a copy of record to each participant.

vi. Meeting notes of this conference will be produced by Contractor that will record discussions of conference and any conflict, incompatibility, or inadequacy and they will indicate that installer of waterproofing

has reviewed and accepted substrates for waterproofing. Distribute meeting notes to attendees prior to installation of waterproofing.

vii. Flood testing.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle packaged materials in original containers with seals unbroken and labels intact until time of use.

B. Discharge materials carefully and store on clean concrete surface or raised platform in safe, dry area at temperatures above 40 and below 75 degrees F. Do not dump onto ground.

C. Remove and replace materials that cannot be applied within their stated shelf life.

D. Store rolls according to manufacturer's written instructions and protect materials from direct sunlight.

1.8 PROJECT CONDITIONS

A. Environmental Requirements: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to damp or wet substrate.

1. Do not apply waterproofing in snow, rain, fog or mist.

2. Apply waterproofing within range of ambient and substrate temperatures recommended by manufacturer.

B. Maintain adequate ventilation during preparation and application of waterproofing materials.

1.9 SCHEDULING

A. Schedule work such that membrane will not be left exposed to weather for longer than time period recommended by manufacturer.

B. Schedule installation immediately prior to installation of wearing surfaces.

1.10 WARRANTY

A. Manufacturer Warranty: Warrant sheet waterproofing system, including related and integral flashings, watertight and weather-tight for period of 10 years from Substantial Completion.

B. Contractor Warranty: Furnish a two year written performance warranty, countersigned by the waterproofing installer that the installed systems shall not deteriorate or fail to perform as a result of workmanship.

PART 2 – PRODUCTS

2.1 SHEET WATERPROOFING

A. Manufacturers: Furnish products of one of the following or approved equal:

1. Grace Construction Products
2. Polyguard Products

B. System Description: Waterproofing membrane products for blind-side and/or post-applied applications. Component products and Accessories identified below are products of Grace Construction for clarification of specification basis.

2.2 COMPONENTS

A. Post-Applied Sheet Waterproofing Membrane: Self-adhesive, cold-applied, composite HDPE membrane; minimum 1.5mm (0.056 inch) thick; black color; conforming to following criteria:

Properties	Test	Results
Tensile Strength, Membrane	ASTM D412	2240 kPa (325 lbs/in2) minimum
Elongation, Rubberized Asphalt Ultimate Failure	ASTM D412	300% minimum
Puncture Resistance, Membrane	ASTM E154	222N (50 lbs) minimum
Peel Strength	ASTM D903	1576 N/m (9 lbs/in) minimum
Water Absorption	ASTM D570	0.1% maximum
Water Vapor Permeance (perms)	ASTM E96 Water Method	2.9 ng/m2sPa (0.05 perms) maximum
Resistance to Hydrostatic Head	ASTM D5385	70 m (210 ft) water

1. Design Basis Product: “Bituthene 4000”

B. Below-Slab, Blind-Side Waterproofing Membrane: Pressure-sensitive self-adhering, blind-side composite HDPE membrane with protective release liner; minimum 1.2mm thick; conforming to following criteria:

Properties	Test	Results
Tensile Strength, Membrane	ASTM D412	4000 psi minimum
Elongation, Rubberized Asphalt Ultimate Failure	ASTM D412	500% minimum
Puncture Resistance, Membrane	ASTM E154	220 lbs minimum
Peel Strength	ASTM D903	5 lbs/inch minimum
Water Absorption	ASTM D570	0.5% maximum
Water Vapor Permeance (perms)	ASTM E96 Water Method	0.01 perms maximum
Resistance to Hydrostatic Head	ASTM D5385	230 feet water minimum

1. Basis of Specification: “Preprufe 300R **Plus**”.

2. Pre-formed Corners: Furnish for all inside and outside corners, including slab-edge upturns.

2.3 ACCESSORIES

A. Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.

B. Drainage Panel / Protection Course:

1. Vertical Applications: Provide sheet membrane manufacturer’s standard or recommended product. Minimum 9.5 mm (0.375 inch) thick composite drainage sheet system with hollow core protected with filter fabric cover sheet. Design Basis Product: “Hydroduct 220”.

2. Horizontal Applications: Provide sheet membrane manufacturer’s standard or recommended high impact product. Minimum 9.5 mm (0.375 inch) thick composite drainage sheet system with hollow core protected with filter fabric cover sheet. Minimum compressive strength: 18,000 lbs/ft2. Design Basis Product: “Hydroduct 660”.

C. Primer (Surface Conditioner): Sheet membrane manufacturer’s water-based latex standard or recommended product to bind site dust and concrete efflorescence. Shall dry quickly and slightly tacky. Design Basis Product: “Bituthene Primer B2 LVC".

D. Deck Preparation: Sheet membrane manufacturer’s recommended deck levelling and repair material for elevated plaza decks. Design Basis Product: “Bituthene Deck Prep”.

E. Liquid Membrane: Two component, elastomeric, cold-applied trowel-grade material. Grace Construction Products’ “Bituthene Liquid Membrane” as required for Grace system.

F. Sheet Strips: Self-adhering, rubberized asphalt sheet strips of same material and thickness as waterproofing.

G. Metal Termination Bars: Manufacturer’s standard pre-punched extruded aluminum bars, or, aluminum bars approximately 1- by 1/8-inch thick, predrilled holes at 9-inch centers.

H. Fasteners: Waterproofing manufacturer’s standard fasteners or as recommended by waterproofing manufacturer.

I. Perforated Drainage Piping: Perforated corrugated high density polyethylene tubing for sub-drainage applications, meets or exceeds requirements of ASTM D1248 Type III, Category 4 or 5, Grade P33 or P34, Class C, 4-inches diameter. Oxford Plastics Inc.; ADS; or accepted equal.

J. Geotextile (Filter Fabric): Polyolefin or polyester fabric, non-woven, formed into sock or sleeve, water pervious type. TenCate's "Mirifi 140N"; Carriff Engineered Fabrics' "Drain Sleeve Filter"; or accepted equal.

PART 3 – EXECUTION

3.1 EXAMINATION

A. General: Inspect and remove from surfaces to receive waterproofing all dirt, debris, grease, oil, form releasing agents, paints and other penetrating contaminants. Verify that penetrations and projections through the substrate have been installed. Remove fins, ridges, mortars and other projections and fill honeycomb, aggregate pockets, and other voids, and verify that concrete substrate and patches have cured a sufficient length of time in accordance with membrane manufacturer's recommendations but in no case less than seven days.

B. Satisfactory Conditions: Do not commence installation until conditions are satisfactory to manufacturer of primary waterproofing membrane, as certified in writing. Start installation only in presence of manufacturer's representative.

3.2 PREPARATION – POST-APPLIED SHEET WATERPROOFING

A. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.

B. Mask off adjoining surfaces not receiving waterproofing.

C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.

E. Prepare, fill, prime, and treat voids, joints and cracks in substrates as recommended by sheet membrane waterproofing manufacturer. Remove dust and dirt from joints and cracks according to ASTM D4258.

1. Install sheet strips and center over treated construction and contraction joints and cracks exceeding width of 1/16-inch as instructed by sheet membrane manufacturer.

F. Corners: Prepare, prime, and treat inside and outside corners according to ASTM D6135.

G. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing and at drains and protrusions according to ASTM D6135.

3.3 POST-APPLIED SHEET WATERPROOFING MEMBRANE INSTALLATION

A. General: Comply with specifications and installation instructions in manufacturer's published literature.

1. Install two complete layers of sheet waterproofing at elevated decks with plaza paver systems located over interior space below. Waterproofing membranes shall be installed over deck preparation product applied directly to concrete or plywood substrate.

B. Prime concrete surfaces immediately prior to application of tapes and pressure sensitive waterproofing accessories. Apply primer to substrates at required rate and allow to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Re-prime areas exposed for more than 24 hours.

C. Install self-adhering sheets according to waterproofing manufacturer's written instructions and recommendations in ASTM D6135.

D. Apply and firmly adhere sheets over area to receive waterproofing. Accurately align sheets and maintain uniform 6-inch minimum lap widths and end laps. Overlap and seal seams and stagger end laps to ensure watertight installation.

1. When ambient and substrate temperatures range between 25- and 40- degrees F, install self-adhering, rubberized-asphalt sheets produced for low-temperature application. Do not use low-temperature sheets if ambient or substrate temperature is higher than 60-degrees F.

2. Seal all laps with Liquid Membrane.

3. Hand roll all laps and strips to ensure full adhesion.

E. Apply continuous sheets over sheet strips bridging substrate cracks, construction, and contraction joints.

F. Seal exposed edges of sheets at terminations not concealed by metal counterflashings or ending in reglets with mastic or sealant.

G. Install sheet waterproofing and auxiliary materials to tie into adjacent waterproofing. Use pre-formed corners at blind-side slab edges and furnish adequate upturn for 6 inch lap of positive-side membrane material.

H. Terminate top edge of membrane with termination bar.

1. At fasteners installed to concrete, pre-drill fastener penetrations to minimize spalling at substrate.

2. Fasten at 9-inch on center with accepted fasteners.

3. Coat top edge and termination bar with 90-mil application of liquid membrane. **Coordinate tie-ins to assemblies above as detailed in Drawings.**

I. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheets extending 6 inches beyond repaired areas in all directions.

J. Correct deficiencies in or remove sheet waterproofing that does not comply with requirements, repair substrates, reapply waterproofing, and repair sheet flashings.

K. Projection Treatment: Apply liquid membrane and 9-inch detail sheet around pipes and similar projections at least 2-1/2 inches in all directions.

L. Penetrations: Cut holes to fit tightly around penetrations and apply collar flashing.

M. Protrusions: Apply two layers of membrane around protrusions and drains at least 6 inches in all directions and seal with mastic.

N. Repair tears, punctures, air blisters, and inadequately lapped seams, in accordance with the manufacturer's instructions before or protection board is applied.

1. Damage or Puncture of Modified Bituminous Sheet Membrane: Install patch of short membrane set in liquid membrane. Patch must extend 3-inches in every direction around extent of damaged area. Install waterproofing tape centered over edge of the patch. If damaged areas does not have 5-inches of sound material around it, inject liquid membrane into puncture until liquid membrane backs out, and proceed with patch as space allows.

2. Scratch on White Coating Exposing Underlying Black Surfacing of Sheet Membrane: Install waterproofing tape at areas where white coating of membrane is damaged, including boot scuff marks and abrasion by rebar.

O. Install composite drainage panel / protection course over vertical and horizontal waterproofing membrane applications per manufacturer's directions. Do not install until after successful flood testing specified in Field Quality Control, where required.

3.4 PRE-APPLIED BELOW SLAB SHEET WATERPROOFING INSTALLATION

A. General: Comply with specifications and installation instructions in manufacturer's published literature.

B. Examine substrate to ensure that it is sound so as to eliminate movement during concrete placement. Remove any standing water and eliminate sharp protrusions and loose aggregate.

C. Place the membrane with HDPE film side to the substrate. Stagger end laps to avoid build-up and leave plastic release liner in place until overlap procedure is completed.

D. Lap the previous sheet 3 inches along marked selvedge. Do not lap sheets unless underside of the succeeding sheet is clean, dry and free from contamination. Peel back release liner between the overlap as the two layers are bonded together. Ensure a continuous bond is achieved without creases and roll firmly with heavy roller.

E. Completely remove liner to expose the protective coating.

F. Penetrations: Grout around the penetrant if not stable. Scribe membrane tight to the penetrant. Apply manufacturer's detailing tape to cover gaps exceeding 1/4-inch. Apply Liquid Membrane around the penetration using a fillet to provide a watertight seal between membrane and tape. Remove any liner from the tape.

G. Perimeters: Install membrane beyond perimeter of slab and/or footings to leave "tail" with length adequate to permit a minimum of 6-inch overlap at tie-in with post-applied vertical waterproofing system per Drawings and manufacturer's standard recommendations.

H. Repair damaged areas by wiping clean with a damp cloth and and allowing to dry prior to installing manufacturer's detailing tape. Remove any liner from the tape.

3.5 PROTECTION

A. Protect waterproofing from damage and wear during remainder of construction period.

B. Protection installed membrane, drainage panels and protection boards from damage due to UV light, harmful weather exposure, physical abuse and other causes. Provide temporary coverings where material will be subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

C. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer for affected construction.

3.6 FIELD QUALITY CONTROL

A. Contractor shall provide all inspections required from the manufacturer for the specified warranty. Engage full-time site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions; surface preparation; membrane application, flashings, protection, and drainage components; and to furnish daily reports to Contractor and Owner.

~~B. Horizontal Post-Applied Sheet Waterproofing Membrane Testing: Furnish flood test, in conformance with ASTM D5957, of each installation of waterproofing assembly located over habitable space for leaks after waterproofing installation and before protection course and overlaying construction are installed. Plug or dam drains and fill with water to a depth of 2-inches across entire area. Keep separate container of water to similar depth nearby to establish evaporation rates. Flood each area for 48 hours.~~

~~1. Correct deficiencies as specified herein and re-test plaza deck areas at no additional cost to Owner as necessary to determine compliance with requirements for a watertight assembly.~~

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY:

A. Section includes polyurethane waterproofing for rooftop equipment pads and where otherwise indicated.

B. Related Sections:

1. Section 03 30 00 – Cast-in-Place Concrete.
2. Section 07 18 00 – Traffic Coatings.
3. Section 07 54 23 – Thermoplastic Polyolefin Roofing.
4. Section 07 62 00 – Sheet Metal Flashing and Trim.

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM):

1. ASTM C836 – Standard Specification for High Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane for Use with Separate Wearing Course.
2. ASTM C898 - Standard Guide for Use of High Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane With Separate Wearing Course.
3. ASTM C1127 – Standard Guide for Use of High Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane with an Integral Wearing Surface.
4. ASTM D4258 - Standard Practice for Surface Cleaning Concrete for Coating.
5. ASTM D4259 - Standard Practice for Preparation of Concrete by Abrasion Prior to Coating Application
6. ASTM E108 – Standard Test Methods for Fire Tests of Roof Coverings.

B. Cool Roof Rating Council (CRRC)

1. CRRC-1 – Roof Product Rating Manual.

C. South Coast Air Quality Management District:

1. SCAQMD Rule 1113 – Architectural Coatings

1.3 SUBMITTALS:

A. Product Data for each product specified, to include installation instructions and details, tested physical and performance properties of waterproofing, dry- or wet-film thickness requirements, and finish.

B. Shop Drawings to include details for treating any substrate joints and cracks, sheet flashings, penetrations, corner conditions, tie-ins with adjoining waterproofing and/or roofing, and other termination conditions.

C. Qualification Data for manufacturer-authorized installer.

D. Field Quality Control inspection report.

E. Maintenance Data: For waterproofing to include in maintenance manual.

1.4 PERFORMANCE CRITERIA

A. Fire-Test-Response Characteristics: ASTM E108, Class A.

B. Roofing System Design: Provide membrane roofing system identical to systems that have been successfully testing by a qualified testing and inspection agency to resist uplift pressure calculated according to ASCE / SEI 7.

C. Energy Performance: Provide waterproofing with an initial Solar Reflectance Index of not less than 0.70 and emissivity of not less than 0.75 when tested according to CRRC-1

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1.6 ENVIRONMENTAL CONDITIONS:

A. Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by manufacturer. Regardless of those recommendations, do not apply waterproofing to damp or wet substrates, when temperatures are below 40 deg F, when relative humidity exceeds 85 percent, or when temperatures are less than 5 deg F above dew point.

1. Do not apply waterproofing in snow, rain, fog, or mist, or when such weather conditions are imminent during the application and curing period. Apply only when frost-free conditions occur throughout the depth of substrate.

B. Maintain adequate ventilation during application and curing of waterproofing materials.

1.7 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace waterproofing that fails in materials or workmanship within Ten years from date of Substantial Completion. Failures include, but are not limited to:

PART 2 – PRODUCTS

2.1 POLYURETHANE WATERPROOFING

A. Manufacturers: Provide compliant products of one of the following or approved equal:

1. Johns Manville Corporation.
2. Kemper System America Inc.
3. Siplast.

B. System Description: ASTM C836; VOC-compliant, polymethyl methacrylate (PMMA) waterproofing membrane, two-component composed of catalyst and fleece reinforcement layer with a collective dry-film thickness of 80 mil. Basis of the Specification: Johns Manville's "JM PMMA".

2.2 AUXILIARY MATERIALS

A. General: Provide auxiliary materials recommended in writing by waterproofing manufacturer for intended use and compatible with one another and with waterproofing.

B. Primer: Liquid primer, sealer or surface conditioner as recommended in writing for substrate and conditions by waterproofing manufacturer.

C. Membrane: Manufacturer's cold fluid-applied reactive cure polyurethane resin.

D. Membrane-Reinforcing Fabric: Manufacturer's recommended fiberglass mesh or polyester fabric, manufacturer's standard weight.

E. Membrane Flashings: A composite of the same resin material as field membrane with fleece reinforcement, 90 mil dry-film thickness.

F. PMMA Surfacing and Color Finish: For use with PMMA membrane systems in combination with catalyst to form a resilient finish top coat. Finish Color: Manufacturer's standard Light Gray.

2.3 ACCESSORY MATERIALS

A. Transition membrane: Foil-faced separator as specified in roofing membrane Section.

PART 3 – EXECUTION

3.1 EXAMINATION:

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, surface smoothness, and other conditions affecting performance of waterproofing work.

B. Verify that substrates are visibly dry and free of moisture.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

1. Begin waterproofing application only after substrate construction and penetrating work have been completed.

2. Begin coating application only after minimum concrete-curing and -drying period recommended in writing by waterproofing manufacturer has passed and after substrates are dry.

3. Application of waterproofing indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. If concrete substrate surface texture does no comply with waterproofing manufacturer's requirements, mechanically abrade surface to a uniform profile acceptable to manufacturer, according to ASTM D4259. Do not acid etch.

B. Clean and prepare substrates according to ASTM C1127 and manufacturer's written instructions to produce clean, dust-free, dry substrate for traffic-coating application. Remove projections, fill voids, and seal joints if any, as recommended in writing by traffic-coating manufacturer.

C. Priming: Unless manufacturer recommends in writing against priming, prime substrates according to manufacturer's written instructions.

1. Limit priming to areas that will be covered by traffic-coating material on same day. Reprime areas exposed for more time than recommended by manufacturer.

D. Schedule preparation work so dust and other contaminants from process do not fall on wet, newly coated surfaces.

E. Mask adjoining surfaces not receiving waterproofing to prevent overspray, spillage, leaking, and migration of coatings. Prevent traffic-coating materials from entering deck substrate penetrations and clogging weep holes and drains.

3.3 TERMINATIONS AND PENETRATIONS

A. Prepare vertical and horizontal surfaces at terminations and penetrations through waterproofing and at expansion joints, drains, and sleeves according to ASTM C898 and manufacturer's written instructions.

B. Provide sealant cants at penetrations and at reinforced and nonreinforced, deck-to-wall butt joints.

3.4 JOINT AND CRACK TREATMENT

A. Prepare, treat, rout, and fill joints and cracks in substrates according to ASTM C898 and manufacturer's written recommendations. Before coating surfaces, remove dust and dirt from joints and cracks according to ASTM D4258. Comply with recommendations in ASTM C1193 for joint-sealant installation.

B. Terminate edges of any deck-to-deck expansion joints with joint reinforcing strip with first preparation coat.

3.5 WATERPROOFING INSTALLATION

A. Apply waterproofing according to ASTM C898 and manufacturer's written instructions.

B. Apply primer over prepared substrate unless otherwise instructed in writing by waterproofing manufacturer.

C. Mix materials and apply waterproofing by roller, notched squeegee, trowel, or other suitable application method.

1. Apply first coat of waterproofing, embed membrane-reinforcing fabric, and apply second coat of waterproofing to completely saturate reinforcing fabric and to obtain a seamless reinforced membrane free of entrapped gases and pinholes, with an average dry film total thickness of 80 mils.

2. Apply reinforced waterproofing to prepared wall terminations and vertical surfaces to height indicated; omit aggregate on vertical surfaces.

3. Verify that wet-film thickness of each coat complies with requirements every 100 sq ft.

D. Cure waterproofing, taking care to prevent contamination and damage during application and curing.

E. Uniformly broadcast and embed aggregate in each coat indicated to receive aggregate according to manufacturer's written instructions. After coat dries, sweep away excess aggregate.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform Electronic Leak-Detection Testing:

1. Testing agency must test each waterproofed area for leaks using an electronic leak-detection method that locates discontinuities in the waterproofing membrane.

2. Testing agency must perform tests on abutting or overlapping smaller areas as necessary to cover entire test area.

3. Testing agency must create a conductive electronic field over the area of waterproofing to be tested and electronically determine locations of discontinuities or leaks, if any, in the waterproofing.

4. Testing agency must provide survey report indicating locations of discontinuities, if any.

B. Final Traffic-Coating Inspection: Arrange for waterproofing manufacturer's technical personnel to inspect membrane installation on completion. Notify Architect or Owner 48 hours in advance of date and time of inspection.

C. Waterproofing will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports for submittal.

3.7 PROTECTION AND CLEANING

A. Protect waterproofing from damage and wear during remainder of construction period.

1. Install protection course with butted joints over waterproofing before starting subsequent construction operations.

2. For vertical applications, set protection course in nominally cured membrane, which will act as an adhesive. If membrane cures before application of protection course, use adhesive.

B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY:

A. Section includes waterproof traffic coatings for pedestrian traffic where indicated for exterior balconies.

B. Related Sections:

1. Division 3 – Cast-in-Place Concrete: Concrete substrates.

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM):

1. ASTM C957 – Standard Specification for High-Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane With Integral Wearing Surface.

2. ASTM C1127 – Standard Guide for Use of High Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane with an Integral Wearing Surface.

3. ASTM C1193 - Standard Guide for Use of Joint Sealants.

4. ASTM D4258 - Standard Practice for Surface Cleaning Concrete for Coating.

5. ASTM D4259 - Standard Practice for Preparation of Concrete by Abrasion Prior to Coating Application

6. ASTM E108 – Standard Test Methods for Fire Tests of Roof Coverings.

B. Cool Roof Rating Council (CRRC)

1. CRRC-1 – Roof Product Rating Manual.

C. South Coast Air Quality Management District:

1. SCAQMD Rule 1113 – Architectural Coatings

1.3 SUBMITTALS:

A. Product Data for each project specified, to include installation instructions and details, material descriptions, dry- or wet-film thickness requirements, and finish.

B. Shop Drawings to include details for treating any substrate joints and cracks, flashings, deck penetrations, and other termination conditions that are not included in manufacturer's product data.

C. Samples for selection of each type of exposed finish from manufacturer’s standard.

D. Qualification Data for manufacturer-authorized installer.

E. Field Quality Control inspection report.

F. Maintenance Data: For traffic coatings to include in maintenance manual.

1.3 PERFORMANCE CRITERIA

A. Fire-Test-Response Characteristics: ASTM E108, Class A.

B. Energy Performance: Provide traffic coating with an initial Solar Reflectance Index of not less than 0.70 and emissivity of not less than 0.75 when tested according to CRRC-1

1.4 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. Source Limitation: Obtain traffic coating systems from single source and from single manufacturer, except where manufacturer recommends use of alternate sources.

C. Material Compatibility: Provide primers; base coat, intermediate coat, and topcoat; and accessory materials that are compatible with one another and with substrate under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

D. Mockups: Build mockups to set quality standards for materials and execution.

1. Build mockup for each traffic coating and substrate to receive traffic coatings.

2. Size: Minimum 100 sq. ft. of each substrate to demonstrate surface preparation, joint and crack treatment, thickness, texture, color, and standard of workmanship.

3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 ENVIRONMENTAL CONDITIONS:

A. Apply traffic coatings within the range of ambient and substrate temperatures recommended in writing by manufacturer. Regardless of those recommendations, do not apply traffic coatings to damp or wet substrates, when temperatures are below 40 deg F, when relative humidity exceeds 85 percent, or when temperatures are less than 5 deg F above dew point.

1. Do not apply traffic coatings in snow, rain, fog, or mist, or when such weather conditions are imminent during the application and curing period. Apply only when frost-free conditions occur throughout the depth of substrate.

B. Do not install traffic coating until items that penetrate membrane have been installed.

1.6 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace traffic coating that fails in materials or workmanship within Five years from date of Substantial Completion. Failures include, but are not limited to:

1. Adhesive or cohesive failures.

2. Abrasion or tearing failures.

3. Surface crazing or spalling.

4. Intrusion of water, oils, gasoline, grease, salt, deicer chemicals, or acids into deck substrate.

PART 2 – PRODUCTS

2.1 PEDESTRIAN TRAFFIC COATINGS

A. Manufacturers: Provide compliant products of one of the following or approved equal:

1. Hempel / Neogard.

2. Sika Corporation.

3. Tremco Construction Products Group.

B. Product Description: ASTM C957-compliant, standard, traffic-bearing, seamless, high-solids-content, cold liquid-applied, elastomeric, water-resistant membrane system with integral wearing surface for pedestrian traffic service condition. Components of Neogard's "Peda-Gard FC" system are listed below the Basis of the Specification.

2.2 COMPONENTS

A. Primer: Liquid primer as recommended in writing for substrate and conditions by traffic-coating manufacturer.

B. Base Coat: Two-component, fast cure polyurethane base coat, compliant with SCAQMD VOC criteria. Neogard's "FC7500/FC7960".

1. Thickness: Minimum dry- and wet-film thickness as recommended in writing by manufacturer for substrate and service conditions indicated.

C. Intermediate / Wear Coat: Two-component, fast cure aromatic urethane intermediate coat, compliant with SCAQMD VOC criteria, with embedded aggregate. Neogard's "FC7510/FC7961".

1. Thickness: Minimum dry- and wet-film thickness as recommended in writing by manufacturer for substrate and service conditions indicated. Measurement shall exclude aggregate.

2. Aggregate Content: As recommended in writing by traffic-coating manufacturer for substrate and service conditions indicated.

D. Topcoat: Two-component, fast cure aromatic urethane with UV inhibitors, compliant with SCAQMD VOC criteria. Neogard's "FC7540/FC7964"

1. Thickness: Minimum dry- and wet-film thickness as recommended in writing by manufacturer for substrate and service conditions indicated.

2. Color: As selected by Architect from manufacturer's full range of standard options.

E. Aggregate: Manufacturer's standard aggregate for each use indicated, consisting of particle sizes, shape, and minimum hardness recommended in writing by traffic-coating manufacturer

2.3 ACCESSORY MATERIALS

A. Joint Sealants: Manufacturer's recommended urethane sealant, color as selected by Architect.

B. Sheet Flashing: Nonstaining sheet material recommended in writing by traffic-coating manufacturer.

C. Adhesive: Contact adhesive recommended in writing by traffic-coating manufacturer.

D. Reinforcing Fabric: Fiberglass mesh recommended in writing by traffic-coating manufacturer.

PART 3 – EXECUTION

3.1 EXAMINATION:

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, surface smoothness, and other conditions affecting performance of traffic-coating work.

B. Verify that substrates are visibly dry and free of moisture.

1. Test for moisture content by method recommended in writing by traffic-coating manufacturer.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

1. Begin coating application only after substrate construction and penetrating work have been completed.

2. Begin coating application only after minimum concrete-curing and -drying period recommended in writing by traffic-coating manufacturer has passed and after substrates are dry.

3. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. If concrete substrate surface texture does not traffic coating manufacturer's requirements, mechanically abrade surface to a uniform profile acceptable to manufacturer, according to ASTM D4259. Do not acid etch.

B. Clean and prepare substrates according to ASTM C1127 and manufacturer's written instructions to produce clean, dust-free, dry substrate for traffic-coating application. Remove projections, fill voids, and seal joints if any, as recommended in writing by traffic-coating manufacturer.

C. Priming: Unless manufacturer recommends in writing against priming, prime substrates according to manufacturer's written instructions.

1. Limit priming to areas that will be covered by traffic-coating material on same day. Reprime areas exposed for more time than recommended by manufacturer.

D. Schedule preparation work so dust and other contaminants from process do not fall on wet, newly coated surfaces.

E. Mask adjoining surfaces not receiving traffic coatings to prevent overspray, spillage, leaking, and migration of coatings. Prevent traffic-coating materials from entering deck substrate penetrations and clogging weep holes and drains.

3.3 TERMINATIONS AND PENETRATIONS

A. Prepare vertical and horizontal surfaces at terminations and penetrations through traffic coatings and at expansion joints, drains, and sleeves according to ASTM C1127 and manufacturer's written instructions.

B. Provide sealant cants at penetrations and at reinforced and nonreinforced, deck-to-wall butt joints.

C. Terminate edges of any deck-to-deck expansion joints with preparatory base-coat strip.

D. Install sheet flashings at deck-to-wall expansion and dynamic joints, and bond to deck and wall substrates according to manufacturer's written recommendations.

3.4 JOINT AND CRACK TREATMENT

A. Prepare, treat, rout, and fill joints and cracks in substrates according to ASTM C1127 and manufacturer's written recommendations. Before coating surfaces, remove dust and dirt from joints and cracks according to ASTM D4258. Comply with recommendations in ASTM C1193 for joint-sealant installation.

B. Apply reinforcing strip in traffic-coating system where recommended in writing by traffic-coating manufacturer.

3.5 TRAFFIC COATING INSTALLATION

A. Apply traffic coating according to ASTM C1127 and manufacturer's written instructions.

B. Apply coats of specified compositions for each type of traffic coating at locations as indicated on Drawings.

C. Verify that wet-film thickness of each coat complies with requirements every 100 sq ft.

D. Uniformly broadcast and embed aggregate in each coat indicated to receive aggregate according to manufacturer's written instructions. After coat dries, sweep away excess aggregate.

E. Apply traffic coatings to prepared wall terminations and vertical surfaces to height indicated; omit aggregate on vertical surfaces.

F. Cure traffic coatings. Prevent contamination and damage during coating application and curing.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform Electronic Leak-Detection Testing:

1. Testing agency must test each deck area for leaks using an electronic leak-detection method that locates discontinuities in the traffic-coating membrane.

2. Testing agency must perform tests on abutting or overlapping smaller areas as necessary to cover entire test area.

3. Testing agency must create a conductive electronic field over the area of traffic coating to be tested and electronically determine locations of discontinuities or leaks, if any, in the traffic coating.

4. Testing agency must provide survey report indicating locations of discontinuities, if any.

B. Final Traffic-Coating Inspection: Arrange for traffic-coating manufacturer's technical personnel to inspect membrane installation on completion. Notify Architect or Owner 48 hours in advance of date and time of inspection.

C. Waterproofing will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports for submittal.

3.7 PROTECTION AND CLEANING

A. Protect traffic coatings from damage and wear during remainder of construction period.

B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes rigid and semi-rigid board insulation for use at exterior wall cavities.

B. Related Sections:

1. Section 01 81 13 – Sustainability Requirements.
2. Section 05 40 00 – Cold Formed Metal Framing: Coordination with exterior wall assemblies.
3. Section 07 21 16 – Blanket Insulation: Provision of insulation at stud cavities.
4. Section 07 27 14 – Self-Adhered Sheet Air Barriers.
5. Section 07 90 00 – Joint Protection.
6. Section 09 21 16 - Gypsum Board Assemblies: Sheathing.
7. Divisions 22 and 23 - Mechanical and Plumbing Pipe and Duct Insulation:

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM):

1. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.
2. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation.
3. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction.
4. ASTM C795 – Standard Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel.
5. ASTM C1104 - Standard Test Method for Determining the Water Vapor Sorption of Unfaced Mineral Fiber Insulation
6. ASTM E84 – Standard Test Method for Surface Burning Characteristics of Building Materials.
7. ASTM E96 - Standard Test Methods for Water Vapor Transmission of Materials.
8. ASTM E136 - Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750 degrees C.

1.3 SUBMITTALS

A. Product Data: Submit manufacturer information on insulation product characteristics and accessories, performance criteria, and recommended installation methods.

B. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Materials Resources Certificate: Certify recycled material content for recycled content products.

a. Product Cost Data: Products with recycled material content. Exclude cost of labor and equipment to install products.

C. Closeout: Warranty.

1.4 QUALITY ASSURANCE

A. Manufacturer: Company with minimum five years' experience specializing in manufacturing of products specified in this Section.

B. Installer: Company with minimum three years' experience specializing in installation of Work of this Section.

C. Fire Test Response Characteristics: Provide insulation and related materials with the fire-test response characteristics specified, as determined by testing identical products per test method indicated by Underwriters Laboratories, Intertek or other testing agency acceptable to authority having jurisdiction.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Packing, Shipping, Handling, and Unloading: Deliver materials to Project site in manufacturers' original packaging. Clearly identify manufacturer, contents, brand name, applicable standard, and R-value.

B. Storage and Protection: Store materials off ground, protected against weather, condensation, and damage. Comply with manufacturer's recommendations for storage and protection during installation. Replace wet or damaged insulation materials.

1.6 ENVIRONMENTAL CONDITIONS

A. Do not install adhesives when temperature or weather conditions are detrimental to successful installation.

1.7 WARRANTY

A. Division 1 – Warranties.

PART 2 – PRODUCTS

2.1 BOARD INSULATION – CAVITY WALLS

A. Manufacturers: Furnish compliant products of one of the following or approved equal:

1. Roxul

2.2 BOARD INSULATION – CURTAIN WALL CAVITY

1. Thermafiber Firespan 90 (formaldehyde free)

B. Other acceptable products (Thermafiber Rainbarrier 45).

2.3 ACCESSORIES

A. Attachment Devices: Non-corrosive mechanical fasteners in accordance with insulation manufacturer's written recommendations.

B. Adhesives: All-purpose construction adhesive in accordance with insulation manufacturer's written recommendations.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Verify that substrate, air barrier, adjacent materials and insulation boards are dry and ready to receive insulation and adhesive, where applicable.

B. Verify that substrate surface is flat and free of materials or substances affecting adhesive bond.

3.2 INSTALLATION – CAVITY WALLS

A. Install per insulation manufacturer's written recommendations for substrate and means of cladding support.

1. Apply adhesive in beads or full-bedding and place boards to maximize contact bedding

2. Where not utilizing adhesive, friction fit boards between cladding support components and utilize impaling fasteners to substrate at recommended frequency.

3. Orient boards horizontally when possible. Butt edges and end joints to adjacent boards and protrusions and stagger end joints.

4. Place locking discs on any impaled-type fasteners.

B. Install insulation to maintain continuity of thermal protection to building elements and spaces. Cut and fit insulation tight to protrusions or interruptions to insulation plane, except keep insulation minimum three inches clear of heat emitting devices such as recessed light fixtures, chimneys and vents.

3.3 PROTECTION

A. Protect installed products and accessories from damage during construction. Replace damaged insulation boards at no additional cost to Owner.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes blanket (batt) insulation in interior partition assemblies, exterior wall assemblies, in roof/ceiling construction or where otherwise shown.

B. Related Sections:

1. Section 01 81 13 – Sustainability Requirements.
2. Section 05 40 00 – Cold Formed Metal Framing: Coordination with exterior wall assemblies.
3. Section 07 21 16 – Board Insulation: Provision of continuous insulation at exterior wall assemblies.
4. Section 07 92 00 – Joint Protection.
5. Section 09 21 16 - Gypsum Board Assemblies: Coordination with interior partition assemblies.
6. Divisions 22 and 23 - Mechanical and Plumbing Pipe and Duct Insulation:

1.2 REFERENCES

A. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction.

B. ASTM E84 – Standard Test Method for Surface Burning Characteristics of Building Materials.

C. ASTM E96 - Standard Test Methods for Water Vapor Transmission of Materials.

1.3 SUBMITTALS

A. Product Data: No submittal required for provision of products listed in this Section. Submit “equal” manufacturer’s literature and installation instructions for each material and accessory, clearly notating specified requirements.

B. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Materials Resources Certificate: Certify recycled material content for recycled content products.
   a. Product Cost Data: Products with recycled material content. Exclude cost of labor and equipment to install products.
2. Indoor Air Quality Certificates: Furnish GreenGuard™ certification, Collaborative for High Performance Schools (CHPS) material specifications certification, or other recognized third party certification indicating equivalent mold-resistance and

emission test results. Submission not required when Product Data submission indicates provision of products listed by name in this Specification.

1.4 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with applicable requirements of the laws, codes, and regulations of Authorities Having Jurisdiction (AHJs). Obtain necessary approvals from AHJs.

1. Fire Hazard Classification: Provide insulating materials per Flame Spread Rating and Smoke Density requirements of the California Building Code.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Packing, Shipping, Handling, and Unloading: Deliver materials to Project site in manufacturers' original packaging. Clearly identify manufacturer, contents, brand name, applicable standard, and R-value.

B. Storage and Protection: Store materials off ground, protected against weather, condensation, and damage. Comply with manufacturer's recommendations for storage and protection during installation.

PART 2 – PRODUCTS

2.1 BATT INSULATION

A. Unfaced Batt (“Blanket”) Insulation: ASTM C665, Type I, Class A pre-formed natural fiber or fiberglass wool conforming to the following characteristics:

1. Thermal Resistance: R-13 minimum at 3-1/2 inch thickness, R-19 minimum at 6-1/4 inch thickness.

2. Thickness: As indicated on Drawings.

3. Manufacturers: Knauf Insulation’s “Ecobatt”, CertainTeed’s “Sustainable Insulation, or equal.

B. Foil Faced Batt (“Blanket”) Insulation: ASTM C665, Type III, Class A, Category 1 pre-formed natural fiber or fiberglass wool with flanged reinforced facing, conforming to the following characteristics:

1. Thermal Resistance: R-13 minimum at 3-1/2 inch thickness, R-19 minimum at 6-1/4 inch thickness.

2. Thickness: As indicated on Drawings.

3. Manufacturers: Knauf Insulation’s “FSK-25 Foil Faced Ecobatt”, CertainTeed’s “CertaPro Commercial Sustainable Insulation”, or equal.

2.2 SUSTAINABILITY CHARACTERISTICS

A. Division 1 - Sustainable Design Requirements: Requirements for sustainable design compliance.

B. Materials and Resources Characteristics:

1. Recycled Content Materials: Furnish materials with maximum available recycled content, and with no less than that required in Section 01 81 13.

C. Environmental Quality Characteristics:

1. Interior Air Quality: Furnish mold-resistant materials that are non-petroleum based, formaldehyde-free, and phenol-free.

2.3 ACCESSORIES

A. Attachment Devices: Galvanized, as specified and as recommended by insulation manufacturers; type and size to suit application.

B. Tape: Laminate of aluminum foil, glass fiber reinforcing, and kraft paper with pressure-sensitive adhesive; UL listed; recommended by insulation manufacturer.

PART 3 – EXECUTION

3.1 GENERAL

A. Manufacturer's Instructions: Prepare substrates and install the work, including components and accessories in accordance with the manufacturer's instructions, except where more stringent requirements are shown or specified. Examine the areas to receive the Work and remedy detrimental conditions.

3.2 INSTALLATION

A. General: Install insulation continuously per manufacturer's recommendations without gaps and voids in wall and ceiling assemblies indicated. Butt tightly to mechanical and electrical services within plane of insulation and at joints.

B. Provide minimum 3-1/2 inch thick product at thermal and acoustical assembly stud cavities 4 inches and shallower. Provide minimum 5-1/2 inch thick at stud cavities 6 inches and deeper.

1. Install unfaced batts where concealed within partition or wall assemblies. Friction fit snugly between framing members. Do not compress insulation.

2. Install faced batts where not concealed within partition or wall assemblies, with facing oriented to building interior. Lap ends and side flanges of membrane over framing members and retain in place per manufacturer’s recommendations. Tape seal butt ends, lapped flanges, and tears or cuts in membrane.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Foamed-in-Place Insulation of the following types: Closed-cell, spray-applied, polyurethane foam insulation. (SealTite Pro One Zero)

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM)

- ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus
  .
- ASTM D1621 - Standard Test Method for Compressive Properties of Rigid Cellular Plastics.

B.ICC Evaluation Service (ICC-ES):

- ICC-ES AC377 - Acceptance Criteria for Spray-Applied Foam Plastic Insulation.
- International Association of Plumbing and Mechanical Officials (IAPMO).
- Spray Polyurethane Foam Alliance: Professional Certification Program (SPFA PCP).

1.3 SUBMITTALS

A. Submit under provisions of Section 01 33 00 – Submittal Procedures.

B. Product Data: Submit manufacturer's product data, including surface preparation and application instructions.

C. Manufacturer's Certification:
- Submit manufacturer's certification that materials comply with specified requirements and are suitable for intended application.
- Submit manufacturer's certification from SPFA PCP as Accredited Supplier Company.
- Submit evidence that manufacturer has Dunn & Bradstreet rating of 5A or can supply performance bond.

D. Product Evaluation Reports: Submit manufacturer's product evaluation reports from accredited evaluation service.

E. Manufacturer's Project References: Submit manufacturer's list of 5 successfully completed polyurethane foam insulation projects of similar size and scope, including project name and location, name of architect, and type and quantity of materials furnished.

F. Applicator's Project References: Submit applicator's list of successfully completed polyurethane foam insulation projects, including project name and location, name of architect, and type and quantity of materials applied.

G. Warranty Documentation: Submit manufacturer's standard warranty.

1.4 QUALITY ASSURANCE

A. Manufacturer's Qualifications:
- Manufacturer regularly engaged, for a minimum of 10 years, in the manufacturing of polyurethane foam insulation of similar type to that specified.
- Accreditation: SPFA PCP as Accredited Supplier Company.

B. Applicator's Qualifications:
- Applicator regularly engaged, for a minimum of 5 years, in application of polyurethane foam insulation of similar type to that specified.
- Certified by manufacturer to install their products.
- Use persons trained by manufacturer in polyurethane foam insulation application or certified by SPFA PCP as Master Installer - Insulation, Closed Cell.

C. Source Limitations: Provide each type of product from a single manufacturing source to ensure uniformity

1.5 PRE-INSTALLATION CONFERENCE

A. Convene a conference approximately two weeks before scheduled commencement of the Work.

B. Require attendance of parties directly affecting Work of this Section, including Contractor, Architect, applicator, and manufacturer's representative.

C. Review the Following:
- Materials.
- Protection of in-place conditions.
- Surface preparation.
- Application.
- Field quality control.
- Cleaning.
- Protection.
- Coordination with other Work.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Delivery Requirements: Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.

B. Storage and Handling Requirements:
- Store materials in clean, dry area indoors.
- Store materials at 70 to 80 degrees F (21 to 27 degrees C) a minimum of 48 hours before use.
- Store materials out of direct sunlight.
- Protect materials from freezing.
- Protect materials during storage, handling, and application to prevent contamination or damage.

1.7 PROJECT CONDITIONS

A. Ambient and Substrate Temperatures: As recommended by Manufacturer.

B. Moisture: Do not apply polyurethane foam insulation when moisture in form of rain, snow, ice, fog, frost, or dew is expected during application.

C. Relative Humidity: Do not apply polyurethane foam insulation when relative humidity over 85 percent is expected during application.

D. Wind: Do not apply polyurethane foam insulation with wind speed above 12 mph (19 kmh).

E. Do not apply polyurethane foam insulation under ambient conditions outside manufacturer's limits.

1.8 WARRANTY

A.Manufacturer's Warranty: Provide manufacturer's standard limited warranty.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

2.1.1 Acceptable Manufacturer: Carlisle Spray Foam Insulation, which is located at: 100 Enterprise Dr.; Cartersville, GA 30120; Tel: 844-922-2355; web:https://www.carlislesfi.com

2.1.2 Substitutions Not permitted

2.1.3 Requests for substitutions will be considered in accordance with provisions of Section 01 60 00 Product Requirements.

2.2 CLOSED CELL, SPRAY APPLIED, POYURETHANE FOAM INSULATION

2.2.1 Basis of Design: SealTite Pro Closed Cell Pro One Zero; as manufactured by Carlisle Spray Foam Insulation.

:

2.2.1.1 Thickness, 2 inch (50 mm)

PART 3 – EXECUTION

3.1 EXAMINATION

3.1.1 Examine areas to receive polyurethane foam insulation.

3.1.2 Notify Architect of conditions that would adversely affect application.

3.1.3 Do not begin surface preparation or application until unacceptable conditions are corrected.

3.2 PREPARATION

3.2.1 Protection of In-Place Conditions:

3.2.1.1 Protect adjacent surfaces from contact with overspray

3.2.2 Protect electrical outlet and junction boxes from contact with polyurethane foam insulation. Surface Preparation:

3.2.2.1 Prepare surfaces in accordance with manufacturer's instructions

3.2.2.2 Remove dirt, dust, debris, oil, grease, rust, loose scale, ice, frost, moisture, and other surface contaminants which could adversely affect application of polyurethane foam insulation.

3.3 INSTALLATION

3.3.1 Spray-apply polyurethane foam insulation in accordance with manufacturer's instructions at locations indicated on the Drawings.

3.3.2 Material Temperature: Maintain materials in containers at 65 to 85 degrees F (18 to 29 degrees C) while in use.

3.3.3 Ensure substrates are dry during application.

3.3.4 Insulation Thickness:

3.3.4.1 Maximum Pass Thickness: 2 inches (102 mm)

3.3.4.2 Total Thickness: Indicated on the Drawings.

3.3.5 Apply polyurethane foam insulation to uniform thickness without voids, pinholes, cracks, and crevices.

3.4 FIELD QUALITY CONTROL

3.4.1 Field Inspection: Coordinate field inspection in accordance with appropriate sections in Division 01.

3.4.1.1 Inspect completed application of polyurethane foam insulation, including:

3.4.1.2 Total thickness.

3.4.1.3 Free of voids, pinholes, cracks, and crevices.

3.4.1.4 Adhesion to substrate.

3.5 CLEANING AND PROTECTION

3.5.1 Promptly clean surfaces that receive overspray of polyurethane foam insulation.

3.5.2 Do not use harsh cleaning materials or methods that could damage surfaces.

3.5.3 Protect Work of this Section from damage during construction.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes above-grade sheet materials for controlling vapor diffusion through slabs on-grade.

B. Related Sections:

1. Section 03 30 00 – Cast In Place Concrete.
2. Section 05 40 00 – Cold Formed Metal Framing.
3. Section 07 21 16 – Blanket Insulation.
4. Section 09 21 16 – Gypsum Board Assemblies.

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM):

1. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction.
2. ASTM D1709 - Standard Test Methods for Impact Resistance of Plastic Film by the Free-Falling Dart Method.
3. ASTM E96 - Test Methods for Water Vapor Transmission of Materials.
4. ASTM E154 - Standard Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover.
5. ASTM E1643 - Installation of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs.
6. ASTM E1745 - Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs.
7. ASTM F1249 - Standard Test Method for Water Vapor Transmission Rate Through Plastic Film and Sheeting Using a Modulated Infrared Sensor.

1.3 PERFORMANCE REQUIRMENTS

A. Underslab Sheet Vapor Retarder:

1. General: Product shall have following characteristics to provide resistance to transmission of water vapor into concrete slab and durability to resist damage due to construction-related activities.
    a. Water Vapor Permeance: ASTM E154, Section 7 or ASTM D1249; 0.010 perms (grains/(ft^2*hr*in.Hg)) maximum.
    b. Tensile Strength: ASTM E154, Section 9; 45.0 lbf/in minimum.
    c. Puncture Resistance: ASTM D1709, Method B; 2300 grams minimum.

1.4 SUBMITTALS

A. Product Data: Submit manufacturer's published product literature, including physical and performance characteristics, standard installation details, installation instructions, and general recommendations.

1.5 QUALITY ASSURANCE

A. Installer's Qualifications:

1. Minimum 3 years' experience with specified materials on projects of similar scope and complexity.

2. Acceptable to manufacturer of vapor retarder materials.

PART 2 – PRODUCTS

2.1 UNDERSLAB SHEET VAPOR RETARDER

A. Manufacturers: Furnish compliant product of one of the following or approved equal:

1. Insulation Solutions, Incorporated.

2. Raven Industries, Incorporated.

3. Stego Industries, LLC.

B. Membrane: ASTM E1745, Class A; polyethylene or polyolefin film meeting specified Performance Requirements. Basis of Specification: Stego Industries' "Stego Wrap 15 mil".

C. Accessories:

1. Seaming Tape: Manufacturer's recommended compatible pressure-sensitive adhesive tape. Minimum 4 in. wide self-adhering type designed to maintain vapor retarder integrity.

2. Mastic Adhesive: Manufacturer's recommended mastic with ASTM E96 vapor transmission rate of 0.3 perms or less.

PART 3 – EXECUTION

3.1 GENERAL

A. Underslab Vapor Retarder Manufacturer's Instructions: Prepare substrates, apply primers and install the work, including components and accessories, in accordance with the manufacturer's instructions, except where more stringent requirements are shown or specified. Examine the areas to receive the Work and remedy detrimental conditions.

1. Ensure sleeves, curbs, and projections that pass through vapor retarder are properly and rigidly installed.

2. Ensure base material is installed as specified, is free of projections and irregularities that may be detrimental to proper installation of vapor retarder.

3. Penetrations through the vapor retarder are not allowed except for reinforcing steel and permanent utilities.

3.2 UNDERSLAB VAPOR RETARDER INSTALLATION

A. Install in accordance with most stringent requirements of ASTM E1643, manufacturer's instructions, and as specified herein.

B. Place sheet to create fewest number of laps with long dimension parallel to length of the slab area. Make laps a minimum of 6" wide. Completely seal the laps and penetrations with waterproof seaming tape.

C. Further seal penetrations with liquid membrane or as recommended by manufacturer.

D. Lap vapor retarder and temporarily secure with seaming tape onto top surface of footing elements to the extent necessary to ensure they remain secured when thickened slab edges are cast. Maintain edges minimum 1-1/2 inches clear of vertical dowels.

E. Repair damaged areas by cutting patches of vapor retarder sheeting, overlapping damaged area 6 inches and taping all four sides with pressure sensitive tape. Ballast the sheet as required to hold in place and protect from damage during placement of reinforcing and concrete.

3.3 FIELD QUALITY CONTROL

A. Final Underslab Vapor Retarder Inspection: Arrange job walk with either project inspector and/or Architect immediately prior to the placement of concrete slab. Identify damaged areas and correct as indicated under Installation.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes installation of vapor emission control systems to control moisture or water vapor emission at areas of concrete slabs specified herein to received specific flooring finishes.

1. New Concrete Floor Surfaces:

a. Provision of vapor emission and alkalinity control at new concrete floors scheduled to receive carpeted and other floor finishes. The requirement for vapor emission control is absolute and not based upon testing of new concrete surfaces.

b. Testing of concrete floors after installation of vapor emission and alkalinity control if required under floor finish manufacturer's warranty requirements.

c. Provision of underlayment at treated and untreated floors as required for floor finish adhesion and/or to meet floor tolerance criteria.

B. Related Sections:

1. Section 03 30 00 – Cast in Place Concrete.

2. Section 09 68 13 – Tile Carpeting.

C. Schedule: Construction Schedule submitted by the Contractor per the General Conditions shall account for the procedures required to achieve the Work of this Section. Additional effort required to correct defects and failures shall not extend the Contract Time.

1.2 REFERENCES

A. American Concrete Institute (ACI)

1. ACI 302.2R - Guide for Concrete Slabs that Receive Moisture-Sensitive Flooring Materials.

2. ACI 117 - Specification for Tolerances for Concrete Construction and Materials

B. American Society for Testing and Materials (ASTM)

1. ASTM C348 - Standard Test Method for Flexural Strength of Hydraulic-Cement Mortars.

2. ASTM C349 - Standard Test Method for Compressive Strength of Hydraulic-Cement Mortars (Using Portions of Prisms Broken in Flexure).

3. ASTM D1308 - Effect of Household Chemicals on Clear and Pigmented Organic Finishes.

4. ASTM C1583 – Test Method for Tensile Strength of Concrete Surfaces and the Bond Strength or Tensile Strength of Concrete Repair and Overlay Materials by Direct Tension (Pull-off Method)
5. ASTM D7234 - Standard Test Method for Pull-Off Adhesion Strength of Coatings on Concrete Using Portable Pull-Off Adhesion Testers.
6. ASTM E96 - Water Vapor Transmission of Materials.
7. ASTM F710 - Preparing Concrete Floors to Receive Resilient Flooring.
8. ASTM F2170 - Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes.
9. ASTM F3010 – Standard Practice for Two-Component Resin Based Membrane-Forming Moisture Mitigation Systems for Use Under Resilient Floor Coverings.

C. International Concrete Repair Institute (ICRI)

1. ICRI No. 310.2R - Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, Polymer Overlays, and Concrete Repair.

1.3 PERFORMANCE REQUIREMENTS

A. Vapor Emission Control: In-situ Relative Humidity per ASTM F2170; system must be able to perform as required with relative humidity (RH) probe reading of 100 percent.

1. Alkalinity Control: ASTM D1308; system must be insensitive to alkaline environment up to and including pH 14.
2. System must be compatible with floor finish installations, either alone or through the addition of a cementitious underlayment.
3. VOC (Mixed): 20 g/L maximum.
4. Minimum Tensile Bond Strength: ASTM D7234; 200 psi.
5. Permeance: ASTM E96 water method; maximum 0.090 perms.

B. Cementitious Underlayment: When installed with manufacturer’s recommended primer.

1. Minimum Compressive Strength: ASTM C349; 4,000 psi at 28 days.
2. Minimum Flexural Strength: ASTM C348; 800 psi at 28 days.
3. Minimum Tensile Bond Strength: ASTM D7234; 140 psi at 28 days.

1.4 SUBMITTALS

A. Division 1 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit manufacturer's complete descriptive data, installation instructions, applicable technical bulletins, and material safety data sheets.

1. Water Vapor Emission Control product.
2. Cement patching compounds, crack and joint treatment.
3. Product data for shot blasting equipment.
4. Manufacturer's qualifications and product performance history.

C. Certifications:

1. Manufacturer's written certification that all materials meet volatile organic content (VOC) limits specified herein.
2. Written approval from water vapor emissions control system manufacturer of the concrete analysis and concrete surface preparation prior to installation of coating.
   a. Include review of concrete tensile strength test results.
   b. Approval shall include that of in situ concrete relative-humidity test results before proceeding with installation.
   c. Approval shall include that of mockup tensile adhesion test results from the moisture-mitigation coating manufacturer before proceeding with installation.
3. Written approval of substrates and installation procedures from leveling underlayment manufacturer at the start of installation.

D. Testing Procedures: Manufacturer's written instructions describing the testing procedures/ methods to be used to verify the vapor emissions of the concrete slabs prior to and after the installation of the water vapor emission control system.

E. Testing Report:

1. Submit independent testing agency's vapor emissions testing report for record.
2. Submit results of wet film thickness (WTF) measurements taken during installation of vapor emission control system.

F. Manufacturer's Field Reports: Written program of execution of on-site inspection of installation.

G. Installer's Certification: Manufacturer's written certification of installer's qualifications. Include list of three (3) recently completed and similar water vapor emission control systems projects with project names, addresses, names of owners and responsible architects.

1.5 QUALITY CONTROL

A. Qualified Installer: Installer to have five (5) years' experience installing the approved water vapor emissions control system and leveling underlayment materials on projects of comparable type and size. Installer shall be either manufacturer's trained personnel or factory certified installer. Water vapor emissions control system installer shall be

experienced in surface preparation and application of the moisture mitigation system and shall be subject to inspection and control by the manufacturer.

B. Manufacturer's Qualifications: Minimum five (5) years manufacturing water vapor emissions control products. Manufacturer shall carry manufacturer's product liability insurance covering both material performance and installation workmanship for the duration of warranty program. The water vapor emissions control system shall be specifically formulated and marketed for water-vapor reduction and alkalinity control in concrete floor slabs. Water vapor emission control system design and formulation shall not have changed for a minimum of five consecutive years before the start of the work.

C. Product Performance History: Manufacturer shall provide independent laboratory test reports documenting performance of the water vapor emissions control system per the following:

1. ASTM E96 – Water Vapor Transmission (wet methods): Performance shall be documented by an independent testing laboratory indicating a maximum water vapor permeance of 0.1 perms.

2. ASTM D1308 – Insensitivity to alkaline environment up to pH 14.

3. Certify acceptance and exposure to continuous topical water contact after final cure.

D. Moisture Testing: Perform relative humidity (RH) testing of the existing concrete floor slab before the installation of moisture-mitigation system as required by the mitigation system manufacturer. Testing must be performed by an ICRI Certified Concrete Slab Moisture Testing Technician (CCSMTT). Coordinate the schedule so as to allow for proper testing before installation of moisture-mitigation system. Submit written approval of the test results from the product manufacturers before proceeding with installation.

E. Concrete Tensile Strength Testing: After mechanical preparation of the concrete surface, test the tensile strength of the concrete surface according to ASTM C1583. Perform at least three concrete tensile strength tests for every 1,000 sq ft of prepared concrete substrate. The tensile strength of the prepared substrate must be at least 200 psi. Perform additional mechanical preparation as needed to achieve required tensile strength before application of the coating.

F. Moisture Mitigation Thickness Measurements: During application of moisture-mitigation system, measure the wet film thickness (WFT) of the applied moisture-mitigation system. Take at least three WFT measurements for every 100 sq ft of mitigation coating system installed. The average WFT shall not be less than the specified thickness for each coverage rate. Adjust the coverage rate to achieve the required minimum mil thickness.

G. Representatives from the water vapor emissions control system and leveling underlayment manufacturers must be on site at the start of installation to approve substrates and installation procedures in writing. In addition, representative of the self-leveling

underlayment to confirm and approve proper mixing quantities and procedures in writing.

1.6 DELIVERY, STORAGE AND HANDLING

A. Packing, Shipping, Handling, and Unloading: Deliver packaged materials to the project site in manufacturer's original, unopened containers with seals unbroken and labels indicating brand names, colors, patterns, and quality designations legible and intact.

B. Storage and Protection: Do not open containers or remove labels until materials have been inspected and accepted.

1.7 ENVIRONMENTAL CONDITIONS

A. Install system treatments when concrete surface temperatures exceed 60ºF and rain is not expected.

1.8 WARRANTY

A. Division 1 - Execution and Closeout Requirements: Product warranties and product bonds. Warranties shall pay for all costs associated with repairs and replacement upon notification of defects.

B. Material Warranty: Provide material manufacturer's product warranty against defects in manufacturing and workmanship for a minimum of ten (10) years from date of Substantial Completion.

1. Warrant against failure of flooring system due to concrete water vapor emissions to the system installed. Warranty shall not exclude concrete cracking.

2. Warranty to include replacement of finish flooring material, adhesive, water vapor control systems, and labor costs for removal and replacement of those products, provided failure is due to vapor emissions within the limits of installed system.

3. By terms of warranty, agree to remove and replace other Work, as required which has been connected to or superimposed on the substrate material to be replaced.

C. Installation Warranty: Provide a Contactor's warranty stating that all work is installed according to these Specifications and manufacturers' directions and that defective work will be repaired or replaced to the Owner's satisfaction at no additional cost to the Owner. State that the obligation of the Warranties shall run directly to the Owner and may be enforced by the Owner against the Contractor, shall survive the termination of the Contract, and shall not be limited by conditions other than this Contract. The Contractor's warranty shall be for a term of two years from the Date of Substantial Completion. Providing this warranty is a requirement to receive final payment.

PART 2 – PRODUCTS

2.1 CONCRETE VAPOR EMISSION CONTROL SYSTEM

A. Manufacturers: Furnish compliant products of a single manufacturer selected from one of the following or approved equal.

1. Koster American Corporation.
2. Mapei Corporation.
3. United States Gypsum Durock Brand (NST System).

B. Product Description: One or two-component, VOC-compliant, low viscosity, 100% solids epoxy vapor barrier meeting specified system performance requirements. Koster American Corporation's "Koster VAP I 2000" is the Basis of the Specification.

2.2 MATERIALS

A. Vapor Control Coating:

1. ASTM F3010 – Standard Practice for Two-Component Resin Based Membrane-Forming Moisture Mitigation Systems for Use Under Resilient Floor Coverings.
2. ASTM E96 – Water Vapor Transmission (wet methods): Performance shall be documented by an independent testing laboratory indicating a maximum water vapor permeance of 0.1 perms.
3. ASTM D1308 – Insensitivity to alkaline environment up to pH 14.
4. Certified acceptance and exposure to continuous topical water contact after final cure.

B. Underlayment Primer: Vapor Control Coating manufacturer's recommended non-porous substrate primer suitable for use over vapor control coating or un-coated concrete. Basis of Specification: "Koster VAP I 06 Primer".

C. Underlayment: High-strength, non-shrinking, self-leveling polymer modified portland cement-based concrete meeting or exceeding specified performance criteria. Feather edge conditions shall not exceed 1/8-inch thickness. Gypsum-based underlayment and filler materials not permitted. Basis of Specification: "Koster SL".

D. Miscellaneous: Vapor Control Coating manufacturer's recommended products for sealing of movement joints; repair of non-movement joints, cracks and spalls.

2.3 EQUIPMENT

A. Shot-Blasting Equipment: The device must be equipped with a local exhaust-capture system such that the bulk of the shot, dust, and debris is captured by the system and contained for disposal.

B. Only electrically or pneumatic powered equipment may be used indoors. No combustion engines or gas powered equipment allowed.

PART 3 – EXECUTION

3.1 SURFACE PREPARATION

A. Inspect with manufacturer's representative all concrete floor surfaces scheduled to receive resilient, carpet or terrazzo floor finish with regard to their suitability to receive moisture vapor reduction system.

B. Vacuum shot-blast all areas of the structural slab to receive moisture-mitigation system. Grinding of the concrete is allowed only in areas inaccessible with the shot-blasting equipment or for edging purposes. Acid etching is not permitted.

1. Provide dust control during shot-blasting and grinding procedures using vacuums and other dry means. Wet cutting and grinding is not permitted.

C. Provide a surface profile matching International Concrete Repair Institute (ICRI) Concrete Surface Profiles (CSP) of 3. Surface profiles shall be sufficient for bonding of the moisture-mitigation system and shall not result in bruising of the concrete substrate.

D. If the concrete substrate is too uneven to provide a uniform film thickness of the moisture-mitigation coating, pre-smooth the substrate using manufacturer-approved moisture resistant patch.

E. At the completion of surface preparation, perform concrete tensile strength tests.

3.2 CONCRETE VAPOR EMISSION CONTROL APPLICATION

A. Receive written approval of the prepared substrate from the moisture-mitigation system manufacturer before proceeding with installation.

1. If any measured RH levels exceed 98%, notify the Architect and moisture-mitigation system manufacturer for approval prior to proceeding with installation.

B. Re-vacuum slab surface to remove dust or debris accumulation before moisture mitigation installation.

C. Repair all cracks, expansion joints, control joints, and open surface honeycombs and fill in accordance with Manufacturer's recommendations. Reinforcing fibers that are visible after shot blasting must be removed and vacuumed leaving no fibers left on the concrete surface.

1. All expansion and moving joints must extend through the moisture-mitigation coating and finish flooring.

2. Clean all cracks and voids wider than 1/32 in. and fill with joint filler as required by the manufacturer.

D. Mix vapor emission control system components in clean containers and install per manufacturer's instructions.

E. Spread vapor emission control using a squeegee and back-roll with a 3/8 inch nap epoxy-rated roller to provide complete coverage of treatment area. Coverage rates are dependent upon surface profile and porosity as well as the level of moisture. 100 – 150

square feet per gallon is typical: Refer to manufacturer's technical data sheets for specific wet film thickness (WFT).

F. Maintain the required thickness of the moisture-mitigation system over high areas in the prepared concrete substrate. During application of moisture-mitigation system, measure the wet film thickness (WFT) of the applied moisture-mitigation system. Take at least three WFT measurements for every 100 sq ft of mitigation coating system installed. The average WFT shall not be less than the specified thickness for each coverage rate. Adjust the coverage rate to achieve the required minimum mil thickness.

G. Apply uniform coating of moisture-mitigation system across entire substrate surface. Extend coating to continuously contact wall bases and penetrations so that there are not voids or discontinuities at the intersections of the coating with any penetrations or terminations.

H. At transitions between work phases, moisture-mitigation system must be continuous without any gaps or areas of nonexistent coverage. Clean and prepare installed moisture-mitigation coating as required by the manufacturer to provide proper integration with next phase of moisture mitigation system installation.

I. Allow the moisture-mitigation system to cure as required by the moisture-mitigation system manufacturer before installation of the leveling underlayment and not less than 12 hours. Protect applied moisture-mitigation coating from damage and construction traffic before installation of the leveling underlayment.

J. Inspect the moisture-mitigation system installation after curing. If pinholes are present, prepare the surface and provide an additional layer of the moisture-mitigation system as required by the moisture mitigation system manufacturer.

3.3 UNDERLAYMENT APPLICATION

A. Clean all dust, dirt, and debris from the surface of the cured moisture-mitigation system before application of the leveling underlayment and primer. Do not sand or grind the cured moisture-mitigation system.

B. Mix and apply leveling underlayment primer as specified by the primer manufacturer over the moisture-mitigation system. Use a short-nap roller, leaving a thin coat of primer over the entire surface. Do not leave any bare spots. Brush off puddles and excess primer. Apply primer within 1 hr of mixing. Allow primer to dry to a thin, slightly tacky, film (3 – 24 hrs).

C. Mix and install leveling underlayment as specified by the manufacturer onto primed moisture-mitigation system. Minimum required underlayment thickness to match the depth of existing concrete removal and be coordinated with manufacturer's requirements for intended adhesive for new floor finishes and the thickness of the various floor finishes.

1. Pour the liquid leveling underlayment and spread into place. Wear nonmetallic cleats to avoid leaving marks in the liquid leveling underlayment.

2. If an underlayment application of greater than 1/4 inches is required, prepare the surface as required by the moisture-mitigation system manufacturer.

D. Allow the leveling underlayment to cure as required by the leveling underlayment manufacturer before installation of floor finishes or temporary protection, 16 hours minimum. Protect the leveling underlayment from traffic during the entire cure period and until finish flooring is installed.

3.4 FIELD QUALITY CONTROL

A. Provide testing of all treated slabs by Independent Testing Agency when required by floor finish manufacturer to verify performance of vapor emission control system for purposes of flooring manufacturer's warranty. Provide testing in accordance with the protocol identified by the floor finish manufacturer.

B. Re-apply control system in areas where concrete testing exceeds vapor emissions tolerances. Re-test area per same Standard at no additional cost to Owner.

3.5 CLEANING AND PROTECTION

A. Clean all tools and equipment with solvent recommended by manufacturer immediately after use.

B. Remove all debris resulting from preparation and installation of moisture-mitigation system and underlayment from project site daily.

C. Protect the surface of the leveling underlayment from abuse by other trades by the use of Masonite or other suitable protection course

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes fluid-applied air and weather barrier systems and accessories to control the movement of moisture and air through a wall.

B. Work Specified Elsewhere:

1. Section 07 62 00 – Sheet Metal Flashing and Trim.
2. Section 07 92 00 – Joint Sealants.
3. Section 09 21 16 – Gypsum Board Assemblies: Exterior Sheathing.

1.2 REFERENCES

A. Air Barrier Association of America (ABAA):

1. ABAA Quality Assurance Program.

B. American Society for Testing and Materials (ASTM):

1. ASTM C1193 – Guide for Use of Joint Sealants.
2. ASTM E96 – Test Methods for Water Vapor Transmission of Materials, Procedure B.
3. ASTM E2178 - Standard Test Method for Air Permeance of Building Materials.

1.3 PERFORMANCE REQUIREMENTS

1. Service Temperature: Minimum 175 degrees Fahrenheit.
2. Membrane Air Permeance: ASTM E2178; test pressure of 1.57 lb/ft^2 (75 Pa); maximum 0.002 cfm/ ft^2 (0.002 L/s/m^2).
3. Membrane Water Vapor Permeance: ASTM E96, Method B; minimum 10.0 perms.
4. Manufacturer’s Warranted Maximum UV Exposure Limit: 60 days or greater.

1.4 SUBMITTALS

A. Product Data: Submit manufacturer’s product data, tested physical and performance properties, installation instructions, and instructions for evaluating, preparing and treating substrate.

1. Include VOC content of each material, and applicable legal limit in the project jurisdiction.

B. Quality Assurance/Quality Control Submittals:

1. Submit a written statement signed by the Contractor and the Applicator stating that the Contract Documents and product data have been reviewed with qualified manufacturer representatives. The statement shall certify that proposed materials are permanently chemically compatible with each of the adjacent material proposed for use.

2. Installer's Qualifications.

C. Closeout Submittals:

1. Warranties.

1.5 QUALITY ASSURANCE

A. Manufacturer: Obtain primary materials from a single manufacturer that is a currently accredited member of the ABAA. Secondary materials shall be obtained from a source acceptable to the primary materials manufacturer.

B. Qualified Installer: Installer to be currently accredited by the AABA and have 5 years' experience in the installation of specified materials on comparable projects. The firm shall have the approval of the materials manufacturer. Installation of weather barriers, membrane flashings, and sealant shall be the responsibility of the membrane applicator to ensure undivided responsibility.

C. Pre-Installation Meetings: Before the start of Work, meet at the Project site to review methods and sequence of installation, special details and conditions, quality standards, testing and quality control requirements, job organization and other pertinent topics related to the Work. The meeting shall include Owner Representatives, Architect, Contractor, and subcontractors whose work is relevant to this Specification Section.

D. Field Quality Assurance: Implement the ABAA Quality Assurance Program requirements. Cooperate with AABA and other inspectors, as well as Owner's testing and inspection agencies. Do not conceal Work until it has been inspected, tested and accepted.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Packing, Shipping, Handling, and Unloading: Products delivered to the job site shall be in the original unopened containers or wrappings.

B. Storage and Protection: Handle all materials to prevent damage. Place all materials on pallets and fully protected from moisture with canvas tarpaulins.

1.7 PROJECT / SITE CONDITIONS

A. Proceed with weather barrier installation only after substrate preparation is complete. Obtain acceptance from the weather barriers manufacturer's representative of substrate surface before proceeding with installation. Weather barriers contractor is

responsible to ensure substrate is adequately prepared to receive weather barriers system.

1.8 WARRANTY

A. General: Warranties shall pay for all costs associated with repairs and replacement upon notification of defects.

B. Material Warranty: Provide material manufacturer's product warranty for a minimum of five (5) years from date of Substantial Completion.

C. Installation Warranty: Provide installation warranty for a minimum of five (5) years from date of Substantial Completion. Warranty shall include all accessories and materials of the air barrier assembly against failures including loss of air-tight seal, loss of watertight seal, loss of attachment, loss of adhesion and failure to cure properly.

PART 2 – PRODUCTS

2.1 FLUID-APPLIED MEMBRANE AIR BARRIERS

A. Manufacturers: Furnish compliant products of one of the following or approved equal:

1. Grace Construction Products.
2. Henry Company.
3. Sto Corporation.

B. System Description: Fluid-applied, single component, acrylic membrane that cures to form a resilient, monolithic, fully-bonded elastomeric sheet when applied to construction substrates. Material shall allow the passage of water vapor, while forming a barrier against air and liquid water. Basis of specification: Grace Construction Products' "Perm-A-Barrier VP" and associated accessories.

2.2 COMPONENTS

A. Fluid-Applied Vapor Permeable Membrane Air Barrier: UV-resistant, elastomeric, modified bituminous membrane. "Perm-A-Barrier VP". (FAM).

B. Flashing Membrane: Self-adhering, UV-resistant, polyethylene film reinforced rubberized asphalt laminated to layer of butyl adhesive with release liner backing. "Perm-A-Barrier Detail Membrane". (SAFM).

C. Detail Membrane: Self-adhering, UV-resistant, polyethylene film reinforced rubberized asphalt bonded to aluminum film, approximately 40 mil thick. "Perm-A-Barrier Aluminum Flashing" at openings. (SADM).

D. Primer: Air and weather barrier manufacturer's water-based wall primer for self-adhering transition membrane. "Perm-A-Barrier WB Primer".

E. Sealants, Mastics Adhesives and Tapes: As recommended by Manufacturer.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Verify that substrates and conditions, including any cladding anchors, are ready to accept the Work of this section. Notify Architect in writing of any discrepancies.

B. All surfaces must be sound, dry, clean and free of oil, grease, dirt, excess mortar or other contaminants detrimental to the adhesion of the membranes. Fill voids, gaps and spalled areas in substrate to provide an even plane.

3.2 SURFACE PREPARATION

A. Refer to manufacturer's literature for requirements for preparation of substrates. Surfaces shall be sound and free of voids, spalled areas, loose aggregate and sharp protrusions. Remove contaminants such as grease, oil and wax from exposed surfaces. Remove dust, dirt, loose stone and debris. Use repair materials and methods that are acceptable to manufacturer of the fluid-applied air barrier assembly.

B. Exterior sheathing panels: Ensure that the boards are sufficiently stabilized with corners and edges fastened with appropriate screws. Pre-treat all screw heads and board joints per air barrier manufacturer's recommendations.

C. Install primer to substrate if instructed by air barrier manufacturer.

D. Related Materials: Treat construction joints and install flashing as shown on Drawings and recommended by manufacturer.

E. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.

F. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

3.3 INSTALLATION

A. Install air barrier accessories and fluid-applied membrane air barrier material to provide continuity throughout the building envelope in a shingle fashion. Install materials in accordance with material manufacturer's instructions and the following (unless manufacturer recommends other procedures in writing based on project conditions or particular requirements of their recommended materials):

1. Position subsequent sheets of transition material so that membrane overlaps the membrane sheet below by a minimum of 2 inches, unless greater overlap is recommended by the material manufacturer. Ensure transition membrane is securely sealed onto substrate with roller.

2. Overlap horizontally adjacent pieces of transition material a minimum of 2 inches, unless greater overlap is recommended by the material manufacturer.

3. Seal around all penetrations with termination mastic/sealant, detail flashing or other procedure in accordance with material manufacturer's instructions, ensuring chemical compatibility amongst adjoining materials.

4. Connect air barrier in exterior wall assembly continuously to the air barrier of the roof, to concrete below-grade structures, to windows, curtain wall, storefront, louvers, exterior doors, other intersection conditions and transitions from wet cavity to dry cavity and seal penetrations using accessory materials in accordance with the material manufacturer's instructions.

5. Provide transition material at changes in substrate plane with detail membrane under membrane to eliminate all inside and outside corners and to make a smooth transition from one plane to another.

6. Provide mechanically fastened non-corrosive metal sheet or other manufacturer approved transition material to span gaps greater than 1 inch in substrate plane and to make a smooth transition from one plane to the other. Transition membrane shall be installed continuously from air barrier material onto sheet metal maintaining 2 inch overlap on both edges.

7. Lap transition membrane over top edge of through-wall, head- or other metal flashings. Transition membrane shall be installed continuously from air barrier material onto sheet metal maintaining 2 inch overlap on both edges.

8. Provide backup for the membrane to accommodate anticipated movement or use other manufacturer approved transition material at deflection and control joints.

9. Provide transition to the joint assemblies at expansion and seismic joints.

10. Apply a bead or trowel coat of mastic along membrane seams at reverse lapped seams, rough cuts, and as recommended by the material manufacturer.

11. Seal top edge of the self-adhered membrane to substrate with termination mastic at end of each working day.

12. Inspect installation assembly prior to AABA inspection and repair punctures, damaged areas and inadequately lapped seams with a patch of detail membrane extending 6 inches beyond repaired areas.

3.4 FIELD QUALITY CONTROL

A. Inspections: Air-barrier materials, accessories and installation are subject to AABA's testing agency for inspection for compliance with requirements. Notify AABA in writing of schedule for Work of this Section to allow sufficient time for testing and inspection. Do not cover Work of this Section until testing and inspection is accepted. Arrange and pay for site audits by ABAA to verify conformance with the material manufacturer's instructions, the site Quality Assurance Program used by ABAA, and this section of the project specification.

B. Perform audits at rate recommended by AABA.

C. Forward written audit reports to the Architect within 10 working days of the inspection and test being performed.

D. Air barriers will be considered defective if they do not pass tests and inspections. Remove and replace deficient air barrier components and retest as specified above.

3.5 CLEANING AND PROTECTION

A. Protect air barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.

B. Protect air and weather barrier from exposure to UV light and harmful weather exposure as required by manufacturer. Remove and replace main air barrier material when exposure exceeds manufacturer’s limit.

C. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended by manufacturer of affected construction.

D. Remove masking materials after installation.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes single-ply thermoplastic-polyolefin (TPO) roofing membrane with flashings and other components required to comprise a complete, fully-functioning roofing system as shown and specified.

B. Related Sections:

1. Section 03 38 00 – Post Tensioned Structural Concrete
2. Section 05 40 00 – Cold Formed Metal Framing: Metal Backing for securement of membrane and flashing at parapet walls.
3. Section 06 10 53 – Miscellaneous Rough Carpentry: Nailers and blocking at openings.
4. Section 07 14 16 – Cold-Fluid Applied Waterproofing: Coordination at equipment pads.
5. Section 07 62 00 – Flashing and Sheet Metal.
6. Section 09 21 16 – Gypsum Board Assemblies: Sheathing.
7. Divisions 22 and 23: Pipes, Drains, Vents, Ducts, and their Flashings.

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM):

1. ASTM C1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board.
2. ASTM D4263 - Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method.
3. ASTM D6878 – Standard Specification for Thermoplastic Polyolefin Based Sheet Roofing.

B. Cool Roof Rating Council (CCRC)

1. CCRC-1 – Standard Practice for Measuring Solar Reflectance of a Flat, Opaque, and Heterogeneous Surface Using a Portable Solar Reflectometer.

C. Factory Mutual Global (FM):

1. FM DS 1-28 - Wind Loads to Roof Systems and Roof Deck Securement.
2. FM – Approval Guide.

D. National Roofing Contractors Association (NRCA):

1. NRCA - The NRCA Roofing Manual: Membrane Roof Systems.

E. Single Ply Roofing Institute (SPRI):

a. Wind Load Design Guide For Low Sloped Flexible Membrane Roofing Systems

b. Fastener Selection Guide

c. ANSI/SPRI FX-1 Standard Field Test Procedure for Determining the Withdrawal Resistance of Roofing Fasteners.

d. ANSI/SPRI ES-1 Wind Design Guide For Edge Systems Used With Low Slope Roofing Systems

1.3 PERFORMANCE REQUIREMENTS

A. General: Installed roofing membrane system shall remain watertight and resist specified wind uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacturer, fabrication, installation, or other defects in construction.

B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent waterproofing membranes and sealants under conditions of service and application required, as demonstrated by membrane roofing and accessory item manufacturer based on testing and field experience.

C. Roofing System Design: Provide membrane roofing system identical to systems that have been successfully testing by a qualified testing and inspection agency to resist uplift pressure calculated according to ASCE / SEI 7.

D. Listings: UL 1897, 90 psf uplift pressure resistance; Factory Mutual I-90.

E. Energy Performance: Provide roofing system with initial solar reflectance not less than 0.70, emissivity not less than 0.75 and Solar Reflectance Index (SRI) not less than 78 when tested according to CRRC-1.

1.4 SUBMITTALS

A. Product Data: Product literature, installation instructions, and general recommendations from manufacturers of single ply membrane system for types of roofing required.

B. Manufacturer Certificates: Signed by roofing manufacturer certifying roofing system complies with specified Performance Requirements and verification that roofing system is appropriate for proposed project conditions. Provide certification that materials are compatible with sealants, flashings and other accessories materials at transition conditions.

C. Qualification Data: Roofing manufacturer’s written certification or license of installer.

D. Warranties: Provide sample special warranties for review prior to installation.

E. Provide documentation of roofing material w/ 3-year aged SRI of 64, or initial SR of 82.

1.5 QUALITY ASSURANCE

A. Qualified Installer: Installer to have 5 years' experience in the installation of specified materials on comparable projects. The firm shall have the approval of the materials manufacturer.

B. Regulatory Requirements: Comply with applicable requirements of the laws, codes, and regulations of Authorities Having Jurisdiction (AHJs). Obtain necessary approvals from AHJs.

C. Labels and Approvals: Provide labeled materials that have been tested and listed by Underwriter's Laboratories (UL) in "Building Materials Directory" or by other nationally-recognized testing laboratory for application indicated with Class A rated materials system for roof slopes indicated.

D. Source: Manufacturer shall produce its own membrane. No private label membranes will be accepted.

E. Pre-Installation Meetings: Before the start of Work, meet at the Project site to review methods and sequence of installation, special details and conditions, quality standards, testing and quality control requirements, job organization and other pertinent topics related to the Work. The meeting shall include the Owner, Architect, Contractor, and subcontractors whose work is relevant to this Specification Section. Provide at least 72 hours advance notice to participants prior to convening pre-installation meeting.

1. Manufacturer's Representative: Present as required for compliance with manufacturer's warranty requirements during installation and shall review and approve completion of roof installation.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Packing, Shipping, Handling, and Unloading: Deliver materials in original unopened containers or packages bearing manufacturer's labels intact and with seals unbroken.

B. Storage and Protection: Store materials in a dry location in manner to prevent damage and intrusion of foreign matter.

1.7 WARRANTY

A. Installers: Provide five (5) year contractor guarantee starting from the date of final acceptance of all roofs. The bonding company must also cover the first year warranty. Provisions of the warranty must cover defects in workmanship and materials; and all corrective actions necessary to repair damage to the roof membrane and insulation materials caused by roof leaks or improper application.

1. Warranty: Must cover damage to building and contents resulting from failure to resist penetration of water during construction.

B. Manufacturer: Provide twenty (20) year manufacturer standard warranty for manufacturer's membrane and accessory products covering defects in workmanship and materials; and all corrective actions necessary to repair damage to the roof membrane and separation board materials caused by roof leaks or improper application. Warranty must include coverage of ponding water areas.

1.8 PROJECT / SITE CONDITIONS

A. Weather Conditions: Do not apply materials during adverse weather or when ambient temperature is below 50 degrees F, unless otherwise approved by roofing manufacturer.

PART 2 – PRODUCTS

2.1 THERMOPLASTIC-POLYOLEFIN ROOFING

A. Manufacturers: Provide compliant products of one of the following or approved equal.

1. Carlisle SynTec Systems.
2. Firestone Corporation.
3. Johns Manville.

B. System Description: Single-ply, fleece-back, thermoplastic-polyolefin (TPO) membrane fully-adhered to sloped lightweight insulating concrete substrate. Basis of Specification: Firestone Corporation’s “UltraPly TPO XR Roofing System”. Components and Accessories listed below are those of Firestone Corporation unless otherwise indicated.

2.2 COMPONENTS

A. Membrane: ASTM D6878; 60 mils thick heat weldable, polyester reinforced with fleece backing. Surface color: Manufacturer’s standard white.

B. Walkway Pads: Membrane manufacturer’s heat-weldable, textured TPO membrane walkway pad. Color: Light Gray or other low-contrast color with roofing membrane and as acceptable to Architect. “UltraPly TPO Walkway Pad” or equal.

C. Cover Board: ASTM C1177; fiberglass mat-faced, water-resistant gypsum core, formulated for roofing application. Georgia Pacific Gypsum LLC’s DensDeck Prime® with Eonic Technology.

1. Fire Resistance Classifications: UL 790 and UL 1256.
2. Thickness: 1/2 inch thick or as indicated, 5/8 inch thick where substituted for sheathing at back of parapets.

D. Rigid Insulation: ASTM C1289, Type-II, Class 1, faced rigid cellular polyisocyanurate roof insulation, CBC-compliant for foam plastic insulation. Straight and tapered

versions required to achieve thickness and slopes shown on Drawings. Firestone Corporation's "ISO 95+ GL" or approved equal.

1. Compressive Strength: 20 psi minimum.

2. Long Term Thermal Resistance (LTTR) Value: 6.0 per inch thickness minimum.

2.3 ACCESSORIES

A. General: Meet VOC requirements of the Bay Area Air Quality Management District (BAAQMD).

B. Flashing Membrane: Heat weldable, reinforced 60-mil thick TPO resin sheet.

C. Bonding Adhesive: ISO Spray R or manufacturers approved adhesive.

D. Splice Cleaner: "Splice Wash, SW-100".

E. Seam and Lap Sealant: Manufacturer's liquid TPO sealing compound with a consistency equal to that of honey at room temperature.

F. Edge Sealant: Manufacturer's polymer-based sealant. VOC: 250 g/L or less. Color to match membrane. "UltraPly TPO Cut Edge Sealant LVOC".

G. General Purpose Sealant: Single component, non-sag sealant compatible with roof membrane. Color: White. VOC: 250 g/L or less.

H. Pre-molded / prefabricated detail components: Provide inside/outside corners and PVC pipe boots in sizes to fit diameters from 3/4-inch to 11 inches. Color: Match membrane.

I. Clad Sheet Metal Flashing: TPO-clad galvanized metal flashing as recommended by membrane manufacturer and as shown in Drawings. Color: Match membrane. "UltraPly TPO Coated Metal".

J. Clad Gravel Stops: TPO-clad metal flashing as recommended by membrane manufacturer and as shown in Drawings. Color: Match membrane.

K. Joint Cover Strips: For use in waterproofing joints of metal.

L. Seam Plates and Fasteners: Manufacturer's recommended corrosion-resistant fasteners and plates.

M. Metal Termination Bars: Manufacturer's standard "U" shaped, nominal 1-inch wide, flat, roll-formed aluminum or stainless steel bar.

N. Fasteners: Factory-coated steel fasteners and metal or plastic plates meeting corrosion resistant provisions, designed for fastening membrane to substrate and acceptable to membrane roofing system manufacturer: "Sarandisc XPS Plates with XP Fasteners".

O. Metal Batten: Manufacturer's standard, aluminum-zinc-alloy coated or zinc-coated steel sheets, 1-inch wide by 0.05-inch thick.

P. Metal Hose Clamp: Stainless steel worm drive type by Murray Corporation's “Gold Seal”, or equal.

Q. Separator Tape: Aluminum tape for covering asphalt contaminated deck components or penetrations.

R. Metal Backing: Furnished under Section 05 40 00.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with following requirements and other conditions affecting performance of roofing system.

1. Verify roof openings and penetrations are in place and curbs are set and braced and roof drain bodies are securely clamped in place.

2. Verify blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and nailers match thicknesses of insulation.

3. Verify metal backing is properly located as required for securement of membrane, termination bars and flashings to framed vertical surfaces of walls and parapets.

4. Verify minimum concrete drying period recommended by roofing system manufacturer has passed.

5. Verify lightweight insulating concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D4263.

6. Verify concrete curing compounds that will impair adhesion of roofing components to roof deck have been removed. Concrete shall be free of projections and depressions.

B. Notify Owner of any discrepancies between Drawings and actual field conditions, and of any elements requiring repair at time of installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. General: Comply with manufacturer's instructions for preparation of substrate to receive sheet membrane. Verify that penetrations, expansion joints, and blocking are in place and secured and that roof drains are properly clamped into position.

B. Clean substrate of dust, debris, oil, grease, and other substances detrimental to sheet membrane. Remove sharp projections.

C. Install flashings and accessory items as indicated and recommended.

D. Prime substrate where recommended by manufacturer of materials being installed.

E. Prevent compounds from entering and clogging drains and conductors, and from spilling or migrating onto surfaces of other work.

F. Notify Owner of any discrepancies between Drawings and actual field conditions, and of any elements that require repair at time of installation.

3.3 INSTALLATION

A. General: Comply with Manufacturer's instructions and NRCA Roofing Manual, except where more stringent requirements are indicated or specified.

1. Possible Inclement Weather during Installation

a. Temporary Waterstops: Install temporary waterstops at the end of each day's work. The new membrane shall be sealed to substrate so that water will not travel under the roofing. Seal the edge by placing in a continuous, heavy application of grid adhesive of 6 inch width. During inclement weather, contractor shall provide labor necessary to monitor waterstops. Remove temporary waterstops at the start of the next day's work by removing the contaminated edges of membrane and properly dispose. If any water enters under the roofing assembly, the contractor shall remove and replace the area at no additional expense to the Owner.

b. Concurrent Flashing Installation: Install flashings concurrently with the membrane in order to maintain a watertight condition as the work progresses. Schedule each day's work to coincide with the temporary waterstop locations.

2. Do not install the roofing membrane in direct contact with any product containing asphalt, coal tar pitch, creosote or penta-based materials. Do not allow waste products containing petroleum, grease, acid, solvents, vegetable or mineral oils, animal fats et cetera, or steam venting to come into direct contact with the roofing membrane.

3. Do not weld or otherwise use open flame near roofing material without appropriate safety precautions.

B. Rigid Insulation Installation:

1. Set layers of rigid insulation in cold adhesive in built up sections over deck substrate to achieve thicknesses and slopes indicated.

C. Cover Board Installation:

1. Install substrate boards over insulation with long joints in continuous straight lines, perpendicular to roof slopes, with end joints staggered between joints. Tightly butt substrate boards together and set in cold adhesive.

D. Membrane Installation: Start installation only in presence of manufacturer's technical representative when required for warranty.

1. Utilize manufacturer's recommended "Fold Method". Unroll the sheet roofing and position without stretching the membrane. Allow the membrane to relax at least 15 minutes when the temperature is above 60 degrees F., or 30 minutes when temperatures are cooler.

2. Prior to installation, inspect for damage. Remove sections of membrane that are creased or damaged.

3. Lap sheets as recommended by manufacturer depending upon installation method used, minimum 3-inches wide when automatic machine-welding and 4-inches wide when hand-welding. Shingle ("waterfall") side laps with slope of roof where possible. Turn sheets minimum of 4 inches up perimeter vertical surfaces, at obstructions in the field, and as shown.

4. Once the membrane has been properly positioned, fold the sheet back and apply bonding adhesive to substrate in accordance with manufacturer's instructions. Do not apply adhesive to the lap areas of the sheet that will be welded. Mechanically fasten to perimeter vertical surfaces & other obstructions using manufacturer's recommended seam plates and fasteners. The adhered membrane shall be smooth and free of wrinkles and buckles.

5. Seam Overlaps:

    a. Clean and dry in accordance with Manufacturer's instructions. No sealants shall be present within lap areas.

    b. Welding equipment shall be provided by or approved by membrane manufacturer. Mechanics intending to use equipment shall have successfully completed training course provided by manufacturer's representative prior to welding.

    c. At laps without selvage edge, weld membrane cover strips over laps.

    d. Hand Welding: Hand-welded seams shall be completed in three stages. Hot-air welding equipment shall be allowed to warm up for at least one minute prior to welding.

        i. Lap shall be tack welded every 36-inches to hold seam in place.

        ii. Back edge of seam shall be welded with narrow but continuous weld to prevent loss of hot air during final welding.

        iii. Nozzle shall be inserted into seam at a 45-degree angle to edge of membrane. Once proper welding temperature has been reached and membrane begins to "flow", hand roller shall be positioned perpendicular to nozzle and rolled lightly.

    e. Machine Welding: Machine welded seams shall be achieved by use of automatic welding equipment.

        i. Follow manufacturer's instructions and local codes for electric supply, grounding, and over current protection observed.

        ii. Verify automatic welding machines requirements. Verify need for dedicated circuit power or dedicated portable generator.

f. T-Joints (Three-Way Laps):

i. When welding three-way overlap with membrane thicker than 60-mil, top edge of second membrane layer shall be shaved down to create smooth transition for top membrane layer to conform to for positive welding. Chamfer edge of membrane using means and methods acceptable to manufacturer.

6. Membrane Flashing: Flash penetrations, walls and drains with cured flashing membrane, as recommended by manufacturer. Use prefabricated accessories when feasible, in lieu of uncured flashing. Terminate flashings per manufacturer's standard details.

a. Roll out membrane, free from wrinkles or tears. Place sheet into place without stretching.

b. Shingle joints on sloped substrate in direction of drainage.

c. Fully Adhered Application: Apply adhesive to substrate per Manufacturer's recommendations. Fully embed membrane in adhesive except in areas directly over or within three inches of expansion joints.

d. Overlap edges and ends. Do not apply adhesive in lap areas that will be hot-air welded.

e. At vertical walls, extend flashing 4 inches minimum onto horizontal field membrane and underneath rigid flashings at top of wall and as shown. Lap with wall air barriers for continuous weather-resistant envelope, ensuring lapped materials are compatible. Provide horizontal termination bars per manufacturer's recommendations and as shown.

f. At flashing intersections with vertical surfaces:

i. Extend membrane up a minimum of four inches and as indicated onto vertical surfaces.

ii. Fully adhere flexible flashing over membrane and up to nail strips.

iii. Secure flashing with termination bar.

g. Around roof penetrations, use prefabricated flashing collars and seal flanges and flashing with flexible flashing.

h. Coordinate installation of roof drains and sumps and related flashings.

7. Sealants: Install in accordance with instructions of roofing system manufacturer and as specified in Section 07 90 00.

E. Walkway Pads: Adhere walkway pads in accordance with manufacturer's instructions. Where walkway intersects valleys in roof slope, install with 6-inch gap in walkway pad along valley to facilitate drainage.

3.4 SHEET METAL FLASHING INSTALLATION

A. General: Refer to 07 62 00 for installation of coated and un-coated metal flashings. Coordinate installation where metal flashing interfaces with roofing membrane to

prevent metal from pulling free or buckling, and provide seal to prevent moisture from entering roofing system or Building.

B. Complete metal work in conjunction with waterproofing and flashings so that watertight condition exists daily.

C. Provide metal to achieve adequate resistance to bending and allow for normal thermal expansion and contraction.

D. Ensure metal joints are watertight. At prefabricated reglets and counter flashings, lap flashings a minimum of 4-inches and bed in sealant. At bent flashings, provide sealed butt joint with 8-inch backer plate.

E. Metal flashing shall have minimum 4-inches nailing flange and shall be fastened into solid wood blocking with fixings of same type with two rows of annular ring nails, 4-inches on center staggered, or into concrete anchors 6-inches on center staggered. Fixings shall penetrate wood nailer minimum of 1-1/4 inch.

F. Adjacent sheets of TPO coated metal shall be spaced 1/4-inch apart. End joints of metal shall be fastened 6-inches on center. Joints shall be covered with 1-inch wide aluminum tape. 4-inch wide membrane flashing strip shall be hot-air welded over joint (lap dimensions etc.).

3.5 FIELD QUALITY CONTROL

A. Continuous Inspection: Refer Quality Control article for field continuous inspection.

B. Welded Seam Quality Control:

1. Completed welded seams shall be checked by installer after cooling for continuity using rounded screwdriver or other suitable blunt object.

2. Visible evidence that welding is proceeding correctly is smoke during welding operation, shiny membrane surfaces, and an uninterrupted flow of black material from edge of completed joints.

3. On-site evaluation of welded seams shall be made daily by Contractor at locations as directed by membrane manufacturer’s representative.

4. 2-inch wide cross-section samples of welded seams shall be taken at least three times daily through completed seams. Correct welds display failure from shearing of membrane prior to separation of weld. Each test cut shall be patched by Contractor at no extra cost to Owner.

C. Final Roof Inspection: Upon completion of installation, representative of roof membrane manufacture shall inspect to verify that membrane system has been installed in accordance with manufacturer’s approved specifications and details.

D. Repair or remove and replace components of membrane roofing system where inspections indicate that they do not comply with specified requirements.

E. Additional inspections, at Contractor's expense, shall be performed to determine compliance of replaced or additional work with specified requirements.

3.6 CLEANING

A. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.7 PROTECTION

A. Protect membrane roofing system from damage and wear during remainder of construction period. At end of construction period, or at time when remaining construction will not affect or endanger roofing, make a final inspection of roofing and prepare a written report to Owner, describing nature and extent of deterioration or damage found.

B. Correct deficiencies in or remove membrane roofing system that does not comply with requirements; repair substrates; and repair or reinstall membrane roofing system to condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

END OF SECTION

B. ASTM International:

1. ASTM A240 - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
2. ASTM A625 - Standard Specification for Tin Mill Products, Black Plate, Single Reduced.

3. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
4. ASTM A755 - Standard Specification for Steel Sheet, Metallic Coated by the Hot-Dip Process and Prepainted by the Coil-Coating Process for Exterior Exposed Building Products.
5. ASTM B32 - Standard Specification for Solder Metal.
6. ASTM B101 - Standard Specification for Lead-Coated Copper Sheet and Strip for Building Construction.
7. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
8. ASTM B370 - Standard Specification for Copper Sheet and Strip for Building Construction.
9. ASTM B749 - Standard Specification for Lead and Lead Alloy Strip, Sheet, and Plate Products.
10. ASTM D226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.
11. ASTM D4397 - Standard Specification for Polyethylene Sheeting for Construction, Industrial, and Agricultural Applications.
12. ASTM D4586 - Standard Specification for Asphalt Roof Cement, Asbestos-Free.

C. Copper Development Association Inc.:

1. CDA - Copper in Architecture - Handbook.

D. Federal Specification Unit:

1. FS TT-C-494 - Coating Compound, Bituminous, Solvent Type, Acid Resistant.

E. Sheet Metal and Air Conditioning Contractors:

1. SMACNA - Architectural Sheet Metal Manual.

1.3 SUBMITTALS

A. Division 1 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate material profile, jointing pattern, jointing details, fastening methods, flashings, terminations, and installation details.

C. Samples:

1. Submit two samples 12 x 12 inch in size illustrating shop applied metal finish color.

D. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Materials Resources Certificate: Certify recycled material content for recycled content products.

2. Product Cost Data: Products with recycled material content. Exclude cost of labor and equipment to install products.

1.4 QUALITY ASSURANCE

A. Thermal Movement: Fabricate and install sheet metal flashings to allow for movement of components without causing buckling, failure of joint seals, undue stress on fasteners or other detrimental effects when subject to 100 year seasonal temperature ranges.

1.5 QUALIFICATIONS

A. Installer: Company specializing in sheet metal work with minimum three years' experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Division 1 - Product Requirements: Product storage and handling requirements.

B. Stack material to prevent twisting, bending, and abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.

C. Prevent contact with materials causing discoloration or staining.

1.7 COORDINATION

A. Coordinate with Work of other Sections requiring flashing and trim components for a complete assembly.

PART 2 – PRODUCTS

2.1 SHEET METAL FLASHING AND TRIM

A. Galvanized Steel: ASTM A653; structural steel sheet, G90 zinc coating; 0.024 inch thick steel.

B. Pre-Finished Galvanized Steel Sheet: ASTM A755; structural steel sheet, G90 zinc coating; 0.024 inch thick core steel, shop pre-coated with fluoropolymer finish as specified in Factory Finishing; color as selected.

C. Pre-Finished Aluminum Sheet: ASTM B209; 3003 alloy, H14 temper; 0.032 inch thick; finish shop pre-coated with fluoropolymer finish as specified in Factory Finishing; color as selected.

D. Lead: ASTM B749, 0.039 inch thick.

E. Stainless Steel: ASTM A240; Type 316, dead soft fully annealed, 0.015 inch thick; smooth surface, smooth surface, Number 4 finish.

F. Copper: ASTM B370; H00 temper except where 060 temper is required for forming, 16 oz. (0.022 inch thick).

2.2 ACCESSORIES

A. Fasteners: Same material and finish as flashing metal. Match finish of exposed heads with material being fastened.

B. Slip Sheet: 5-lb. rosin sized building paper.

C. Primer: Zinc molybdate type for Aluminum, Stainless Steel and Galvanized Steel. Galvanized iron type primer may be used with Galvanized Steel.

D. Protective Backing Paint: Zinc molybdate alkyd or FS TT-C-494, Bituminous.

E. Mastic Sealant: Type E butyl, non-hardening, non-skinning, non-drying, non-migrating sealant. Ultra-violet and ozone resistant.

F. Elastomeric Sealant: Type recommended by manufacturer of metal and fabricator of components being sealed and complying with requirements for joint sealants as specified in Section 07 90 00.

G. Plastic Cement: ASTM D4586, Type I.

H. Reglets: Non-corrosive metal units of type and profile indicated, compatible with flashing indicated. Acceptable manufacturers: Fry Reglet Corporation, W.P. Hickman Company, MM System Corporation.

I. Solder: ASTM B32.

1. For use with Steel: 50-50 tin/lead, with rosin flux.

2. For use with Stainless Steel: 60-40 tin/lead, with acid-chloride type flux, except use rosin flux over tinned surfaces.

2.3 FABRICATION

A. Shop-fabricate work to greatest extent possible. Comply with details shown and with applicable requirements of Reference Standards and other recognized industry practices. Fabricate for waterproof and weather-resistant performance, with expansion provisions for running work, sufficient to permanently prevent leakage, damage, or deterioration of the work. Form work to fit substrates. Comply with material manufacturer instructions and recommendations for forming material. Form exposed sheet metal work without excessive oil-canning, buckling, and tool marks, true to line and levels indicated. Apply bituminous paint on concealed surfaces of metal flashings, except where metal flashing will be in contact with incompatible materials (including PVC).

B. Fabricate cleats of same material as sheet metal, interlocking with sheet.

C. Unless indicated otherwise on Drawings, form pieces in longest possible equal lengths up to 10 feet. Hem exposed edges on underside 1/2 inch; miter and seam corners.

D. Non-Moving Joints: Form only non-moving material with sealed flat lock seams or mechanically fasten and solder 1 inch minimum lap or as indicated on Drawings. Neutralize flux after soldering.

E. Expansion Provisions: Use sealed lapped or bayonet-type seams. Where lapped or bayonet-type expansion provisions in Work cannot be used or would not be sufficiently water/weatherproof, form expansion joints of interlocking hooked seams, not less than 1 inch deep, filled with mastic sealant concealed within joints.

F. Fabricate corners from one piece with minimum 18 inch long legs; seam or solder for rigidity, seal with sealant.

G. Fabricate vertical faces with bottom edge formed outward 1/4 inch and hemmed to form drip.

2.4 FACTORY FINISHING

A. Fluoropolymer Coating: Provide where indicated or specified for sheet metal system, thermally cured, conforming to AAMA 2605.

B. Washcoat: Finish concealed side of metal sheets with washcoat compatible with finish system, as recommended by finish system manufacturer.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division - Administrative Requirements: Coordination and project conditions.

B. Verify roof openings, curbs, pipes, sleeves, ducts, and vents through roof are solidly set, reglets in place, and nailing strips located.

C. Verify roofing termination and base flashings are in place, sealed, and secure.

3.2 PREPARATION

A. Install starter and edge strips, and cleats before starting installation.

B. Install surface mounted reglets to lines and levels indicated on Drawings. Seal top of reglets with sealant.

C. Paint concealed metal surfaces with protective backing paint to minimum dry film thickness of 15 mil.

D. Where stainless steel or aluminum is to be installed directly on cementitious or wood substrates, install slip sheet and polyethylene underlayment.

1. Weatherlap joints as recommended by system manufacturer, not less than 2 in. at building paper.

2. Secure underlayment in place, stagger joints between layers; lap ends minimum 6 inches; stagger end joints.

3. Apply layer of sheet membrane underlayment extending 18 inches from penetrations, including windows and doors; start at bottom of penetration and weatherlap joints; apply top layer over metal flashing to direct water to exterior.

3.3 INSTALLATION

A. Except as otherwise indicated, comply with manufacturer's installation instructions and recommendations and with Reference Standards. Complete all metal work in conjunction with waterproofing so that a watertight condition exists daily.

B. Insert counterflashings into reglets either by snap-in seal arrangement or by welding in place for anchorage and filling reglet with mastic or elastomeric sealant, as indicated and depending on degree of sealant exposure.

C. Apply plastic cement compound between metal flashings and felt flashings.

D. Fit flashings tight in place. Make corners square, surfaces true and straight in planes, and lines accurate to profiles.

E. Flashings shall have a 4-inch minimum nailing flange or as shown and shall be fastened into solid wood blocking or metal backing with fasteners of the same type with two rows of annular ring nails 4 inches on center staggered. Fasteners shall penetrate wood blocking a minimum of 1-1/4 inch. Anchor flanges to concrete with acceptable concrete anchors 6 inches on center staggered. Bed flanges of Work in thick coat of bituminous roofing cement where required for waterproof performance.

F. Lap expansion joints minimum of 2 inches and seal watertight with plastic cement.

G. Seal metal joints watertight.

H. Provide soldered metal joints with full metal surface contact. After soldering, wash metal clean with neutralizing solution and rinse with water.

3.4 FIELD QUALITY CONTROL

A. Exposed Metal Surfaces: Clean and remove substances that might cause corrosion of metal or deterioration of finishes.

B. Protection: Protect flashings and sheet metal work during construction to ensure that work will be without damage or deterioration other than natural weathering at time of Substantial Completion.

C. Touch up scratched and damaged metal to match new. Remove and replace sheet metal units that cannot be repaired to look identical to adjacent sheet metal when viewed from 15 feet away.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes provision of pedestrian plaza paver systems at elevated terraces.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.
2. Section 03 30 00 – Cast-in-Place Concrete: Structural and topping slabs supporting paver system.
3. Section 07 13 00 – Sheet Waterproofing: Waterproofing and protection course beneath paver system.
4. Section 07 62 00 – Sheet Metal Flashing and Trim: Coordination of pavers with perimeter flashing tie-in to waterproofing.

1.2 REFERENCES

A. American Society for Testing and Materials International (ASTM):

1. ASTM C140 - Standard Test Methods for Sampling and Testing Concrete Masonry Units and Related Units.
2. ASTM C293 - Standard Test Method for Flexural Strength of Concrete (Using Simple Beam with Center-Point Loading).
3. ASTM E1980 - Standard Practice for Calculating Solar Reflectance Index of Horizontal and Low-Sloped Opaque Surfaces.

1.3 SUBMITTALS

A. Comply with Division 1 – Submittal Procedures.

B. Product Data. Submit manufacturer’s data for paver units and support components.

C. Samples:

1. Submit 12 x 12 inch minimum paver section for verification of color and texture. **Apply sealer to one-half of top surface of each sample.**
2. Pedestal support system components.

D. Warranties: Warranties specified in this Section.

1.4 QUALITY CONTROL

A. Comply with Division 1 – Quality Control.

B. Single Responsibility: Obtain each plaza paver component type through one source from a single manufacturer.

C. Mockup: Construct one 6-foot by 6-foot area of each type of paving, size and pattern, indicating pavers requiring cutting. Install pavers on pedestals.

1. Include specified edge treatments per Drawings.

2. Mockup may be installed and remain as part of the permanent installation if found acceptable by the Owner's representative.

3. The approved mockup shall become the project standard for tolerances and appearance.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle packaged materials in original containers with seals unbroken and labels intact until time of use.

B. Discharge materials carefully and store on clean concrete surface or raised platform in safe, dry area at temperatures above 40 and below 75 degrees F. Protect materials from direct sunlight.

1.6 PROJECT CONDITIONS

A. Waterproofing Inspection: Do not install plaza paver system until waterproofing field quality control inspections and repairs have been completed per Section 07 13 00.

1.7 WARRANTY

A. Manufacturer Warranty: Pavers and pedestal components against failure within specified performance criteria for period of 10 years from Substantial Completion.

PART 2 – PRODUCTS

2.1 PLAZA PAVER SYSTEMS

A. System Description: Concrete unit pavers supported on an elevated adjustable pedestal system installed over waterproofing membrane protection course (specified elsewhere). Pavers to be installed level.

B. Pavers: High density concrete units, 2 inches thick, as manufactured by the Concrete Collaborative or compliant, approved equal.

1. Weight: 24-28 psf.

2. Compressive Strength: ASTM C140; 8,000 psi minimum.

3 Flexural Strength: ASTM C293; 725 psi minimum.

4. Size: 16" x 32"

5. Color: Trails Series "Taupe", meeting specified minimum SRI value.

6. Finish: “Flekk” and “Midgrind”, distributed in accordance with Drawings.

7. **Sealer: Paver manufacturer’s recommended, silane-based water and oil repelling clear liquid.**

C. Pedestals: Elevated polypropylene system capable of providing adjustable-height support between 1 inch and 24 inches in height. Top plate with 1/8” thick vertical tabs for proper positioning of pavers when shimmed. Staybars and wire crosstie system available for bracing of taller installations.

1. Bearing Capacity: 1,250 lbs minimum per pedestal.

2. Minimum Bearing Area: 38 square inches (equivalent to 7-inch diameter).

3. Product: Bison Innovative Products’ “Versadjust” or compliant, approved equal.

D. Leveling Shims: EPDM or other resilient shims configured to coordinate with pedestals. Pedestal manufacturer’s standard thicknesses to 1/8-inch thick maximum. Color: Black.

2.2 SUSTAINABILITY CHARACTERISTICS

A. Section 01 81 13 Sustainable Design Requirements: Requirements for sustainable design compliance.

B. Heat Island Effect: Paver product shall provide minimum Solar Reflectance Index (SRI) value of 29 when calculated in accordance with ASTM E1980.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Inspect and ensure that area drains, waterproofing membrane, protection course, metal flashings, and all other components to be concealed by plaza paver system are complete and watertight.

3.2 PREPARATION

A. Clean and prepare substrates.

B. Lay-out pavers as required to best suit installation. Establish grid pattern for pedestals, avoiding layouts that require cutting paver units smaller than one-half their dimension. Lay out pedestals so that paver rows at opposite sides of the field are of equal size (symmetric) in each direction, and as indicated on Drawings if specifically identified.

3.3 INSTALLATION

A. Install pavers on pedestals to provide a level paver surface. Furnish staybar and bracing system in accordance with pedestal manufacturer's recommendations.

B. Do not exceed 1/8-inch variation in elevation of adjacent pavers. Level pavers as necessary, using shims to achieve required elevations.

C. Ensure paver surfaces at entrances comply with Drawings, and in no case more than 1/4 inch lower than interior finish floor.

D. Cut pavers as necessary along valleys and ridges of slopes and cut neatly around fixed obstructions.

E. Apply two applications of sealer to exposed surface of pavers according to sealant manufacturer's directions. Do not apply sealer until paver installation is complete, all debris is removed from the area and pavers have been cleaned in accordance with CLEANING article in this Section.

1. Do not apply sealer in windy conditions. Protect surface of pavers from introduction of foreign matter while sealer is curing.

3.4 CLEANING

A. During the course of the work and upon completion, remove any cut dust from the surface of the pavers by means of high-pressure water or air to avoid discoloration of pavers.

3.5 PROTECTION

A. Protect pavers from damage and wear during remainder of construction period.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes firestopping systems consisting of a material, or combination of materials installed to retain integrity of fire-rated construction by maintaining an effective barrier against the spread of flame, smoke, and/or hot gases through penetrations, blank openings, construction joints, or at perimeter fire containment in or adjacent to fire-rated barriers.

1. Penetrations through fire-resistance-rated floor and roof assemblies requiring protected openings including both empty openings and openings that contain penetrations.

2. Penetrations through fire-resistance-rated wall assemblies including both empty openings and openings that contain penetrations.

3. Membrane penetrations in fire-resistance-rated wall assemblies where items penetrate one side of barrier only.

4. Joints in fire-resistance-rated assemblies to allow independent movement.

5. Joints through penetrations and membrane penetrations in Smoke Barriers and Smoke Partitions.

B. Related Sections:

1. Section 07 90 00 – Joint Protection

2. Section 09 21 16 - Gypsum Board Assemblies at through-penetrations or joints.

3. Divisions 21 and 22: Fire Suppression and Plumbing work requiring through-penetration firestopping.

4. Division 23: HVAC work requiring through-penetration firestopping.

5. Division 26: Electrical work requiring through-penetration firestopping.

6. Divisions 27 and 28: Communications, Security and Fire Alarm work requiring through-penetration firestopping.

1.2 REFERENCES

A. Comply with applicable requirements of following standards. Where these standards conflict with other specified requirements, most restrictive requirement shall govern.

B. American Society for Testing and Materials International (ASTM):

1. E84 - Test Method for Surface Burning Characteristics of Building Materials.

2. E119 - Test Method for Fire Tests of Building Construction and Materials.

3. E136 - Test Method for Behavior of Materials in a Vertical Tube Furnace at 750F.

4. E814 - Fire Tests of Through-Penetration Fire Stops.
5. E1399 - Cyclic Movement and Measuring Minimum and Maximum Joint Widths.
6. E1966 - Test Method for Resistance of Building Joint.
7. E2174 - Standard Practice for On-Site Inspection of Installed Fire Stops.
8. E2307 -- Standard Test Method for Determining Fire Resistance of Perimeter Fire Barrier Systems Using Intermediate-Scale, Multi-story Test Apparatus

C. California Office of the State Fire Marshal Listing Service.

D. Factory Mutual (FM) Research:

1. FM Approval Standard of Firestop Contractors – Class 4991.

E. Firestop Contractors International Association (FCIA):

1. MOP: Manual of Practice.

F. International Firestop Council (IFC):

1. Ref. 1 Recommended IFC Guidelines for Evaluating Firestop Engineering Judgments (April 2001).
2. Ref. 2 Inspectors Field Pocket Guide.

G. National Fire Protection Association (NFPA):

1. NFPA 70 - National Electric Code.
2. NFPA 221 - Fire Walls and Fire Barriers (preliminary to be released).
3. NFPA 251 - Fire Tests of Building Construction and Materials.

H. Underwriters Laboratories, Inc. (UL):

1. UL 263 Fire Tests of Building Construction and Materials.
2. UL 723 Surface Burning Characteristics of Building Materials.
3. UL 1479 Fire-Tests of Through-Penetration Fire Stops.
4. UL 2079 Tests for Fire Resistance of Building Joint Systems.

1.3 SYSTEM PERFORMANCE REQUIREMENTS

A. Through Penetrations: Provide firestopping systems that are produced to resist the spread of fire, and passage of smoke and other gases according to requirements indicated, including but not limited to following:

1. Firestop all penetrations through fire resistance rated wall and floor assemblies and other locations as indicated on Drawings.

2. Provide and install complete through penetration firestopping systems that have been tested and approved by third party testing agency.

3. F - Rated Through-Penetration Firestopping Systems: Provide through-penetration firestopping systems with F ratings indicated, as determined per ASTM E 814, but not less than one hour or fire-resistance rating of construction being penetrated.

4. T - Rated Through-Penetration Firestopping Systems: Provide firestopping systems with T ratings, in addition to F ratings, as determined per ASTM E 814, where indicated by Code.

B. Fire-Resistive Joints: Provide joint systems with fire-resistance ratings indicated, as determined per UL 2079 or (ASTM E 1399 and E 1966), but not less than fire-resistance rating of construction in which joint occurs.

C. Where firestopping is exposed to view, traffic, moisture, and physical damage, provide appropriate firestopping systems for these conditions.

D. Where there is no specific third party tested and classified firestop system available for a particular firestopping configuration, firestopping contractor shall obtain from firestopping manufacturer an Engineering Judgment (EJ) or Equivalent Fire Resistance Rated Assembly (EFFRA). Engineering Judgment (EJ) or Equivalent Fire Resistance Rated Assembly (EFFRA) shall be prepared to comply with CBC Part 1 by licensed engineer.

1.4 SUBMITTALS

A. Submit Manufacturers Product Data Sheets for each type of product selected. Certify that firestopping material shall be asbestos free and complies with local regulations.

1. Certification by firestopping manufacturer that products supplied comply with local regulations controlling use of volatile organic compounds (VOC’s) and are nontoxic to building occupants.

B. Submit system design listings, including illustrations from a qualified testing and inspection agency that is applicable to each firestopping configuration.

1. Where there is no specific third party tested and classified firestopping system available for particular firestopping configuration, firestopping contractor shall obtain from firestopping manufacturer an Engineering Judgment (EJ) or Equivalent Fire Resistance Rated Assembly (EFRRA).

C. Submit subcontractor qualifications as noted in “Quality Assurance” article.

1.5 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: Provide firestopping System Design Listing by a testing and inspection agency in accordance with appropriate ASTM Standard(s) per article 1.3. A qualified testing and inspection agency may be Underwriters Laboratory Inc. (UL), factory Mutual Research (FM), Intertek Testing Services, Omega Point

Laboratories (OPL) or other agencies performing testing and follow-up inspection services for firestopping materials.

B. Subcontractor Qualifications: Acceptable installer firms shall be:

1. FM Approved in accordance with FM Standard 4991 – Approval of Firestop Contractors.

2. Licensed by the State or OSHPD, where applicable.

3. Shown to have successfully completed not less than 5 comparable scale projects.

4. Firestopping Contractors International Association Contractor Member in good standing.

C. Single Source Responsibility: Obtain firestopping systems from a single manufacturer for each kind of through penetration and construction joint condition indicated.

1. Materials of different manufacture shall not be intermixed in same firestopping system or opening.

2. Tested and listed firestopping systems are to be used before an Engineering Judgment (EJ) or Equivalent Fire Resistance Rated Assembly (EFRRA) is installed.

1.6 REGULATORY REQUIREMENTS

A. Firestopping systems, other than those shown on Drawings, will be subjected to agency having jurisdiction review.

B. Do not use firestopping systems that have no agency having jurisdiction approval for this Project.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver firestopping products to Project site in original, unopened containers or packages with intact and legible manufacturers' labels identifying product and manufacturer.

B. Store and handle firestopping materials in accordance with manufacturers written instructions.

1.8 PROJECT CONDITIONS

A. Environmental Conditions: Install firestopping in accordance with manufacturers written instructions.

B. Ventilation: Ventilate per firestopping manufacturers' instructions or Material Safety Data Sheet (MSDS)

1.9 SEQUENCING AND SCHEDULING

A. Project coordination is essential to inform and communicate to parties involved with firestopping installation of their role, and manner they can impact firestopping installation, on Project. Pre-construction meeting shall be scheduled and required for all parties involved prior to start of construction.

B. Do not cover up firestopping installations until Owner's inspection agency or Inspector of Record (IOR) has examined each installation.

1.10 ENVIRONMENTAL REGULATIONS

A. Materials shall be asbestos free and comply with local VOC Regulations.

B. If required, hazardous disposal of firestopping materials shall be strictly observed as noted on individual MSDS.

PART 2 – PRODUCTS

2.1 THROUGH PENETRATION AND JOINT FIRESTOPPING SYSTEMS

A. Systems listed by approved testing agencies, as identified in PART 1 above, may be used, providing they conform to construction type, penetrant type, annular space requirements and fire rating involved in each separate instance.

B. Manufacturer of firestop products shall have been successfully producing and supplying these products for a period of not less than five years, and be able to show evidence of at least ten projects where similar products have been installed and accepted.

C. Manufacturers: Furnish products of manufacturers listed below for use in tested assemblies referenced on Drawings or approved by Architect.

1. 3M Fire Protection Products
2. AD Fire Protection Systems
3. Hilti, Incorporated
4. Specified Technologies Incorporated’s (STI)

2.2 THROUGH PENETRATION AND JOINT FIRESTOPPING MATERIAL

A. Firestopping Sealant: ASTM E1966, UL-classified, gunnable single-component acrylic or silicone sealant compound listed for use in tested assemblies. Furnish in manufacturer’s standard red color at all non-visible locations. At locations exposed to view, furnish paintable firestopping sealant or alternate standard color selected by Architect.

1. Head of wall and other fire-resistive movement joints: Silicone firestopping capable of 45% minimum joint movement.

B. Firestopping Joint Spray: ASTM E1966 and E2307, UL-classified, sprayable single-component flexible acrylic sealant compound listed for use in tested assemblies. Furnish in manufacturer's standard red color at all non-visible locations. At locations exposed to view, furnish paintable firestopping sealant or alternate standard color selected by Architect. Basis of Specification: Specified Technologies' "AS200".

C. Mineral Wool Firesafing (Insulation): Minimum 4 pcf un-faced. Basis of Specification: Thermafiber's "Thermafiber Safing".

D. Outlet Box Pads: ASTM E814, moldable putty pad type, listed for fire rating up to 2 hours.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of firestopping. Notify responsible party or parties of any unsatisfactory conditions. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Priming: Prime substrates where recommended by firestopping manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond. Do not allow spillage and migration onto exposed surfaces.

B. Masking Tape: Use masking tape to prevent firestopping from contacting adjoining surfaces that will remain exposed upon completion of Work. Remove tape as soon as it is possible to do so without disturbing firestopping seal with substrates.

C. Verify that system components are clean, dry, and ready for installation.

D. Verify that field dimensions are as shown on Drawings and as recommended by manufacturer.

3.3 INSTALLING THROUGH PENETRATION FIRESTOPS

A. General: Comply with "System Performance Requirements" article in Part 1 and through-penetration firestopping manufacturer's published installation instructions and drawings pertaining to products and applications indicated.

1. Coordinate with other trades to assure that all pipes, conduit, cable, and other items, which penetrate fire rated construction, have been permanently installed prior to installation of firestopping assemblies.

2. Schedule work to assure that partitions and all other construction that conceals penetrations are not erected prior to installation of firestopping and smoke seals.

B. Install forming/damming materials and other accessories in accordance with manufacturers written instructions.

C. Install fill materials for through-penetration firestopping systems by proven techniques to produce following results:

1. Completely fill voids and cavities formed by openings, forming materials, accessories, and penetrating items.

2. Install materials so they contact and adhere to substrates formed by openings and penetrating items.

3. For fill materials that will remain exposed after completing Work, finish to produce smooth, uniform surfaces.

3.4 INSTALLING FIRESTOP JOINT SYSTEMS

A. General: Comply with "System Performance Requirements" article in PART 1 and with join firestopping manufacturer's installation instructions and drawings pertaining to products and applications indicated.

1. Install joint fillers to provide support of firestopping materials during application and at position required to produce cross-sectional shapes and depths of installed firestopping material relative to joint widths that allow optimum sealant movement capability and develop fire-resistance rating required.

B. Install systems by proven techniques that result in firestopping materials:

1. Directly contacting and fully wetting joint substrates.

2. Completely filling recesses provided for each joint configuration,

3. Providing uniform, cross-sectional shapes and depths relative to joint width that optimize movement capability.

C. Tool non-sag firestopping materials immediately after their application and prior to time skinning or begins. Form smooth, uniform beads of configuration indicated or required to:

1. Produce fire-resistance rating

2. To eliminate air pockets

3. To ensure contact and adhesion with sides of joint.

3.5 FIELD QUALITY CONTROL

A. Inspection – Owner’s inspection agency or IOR will examine through penetration and joint firestopping in accordance with ASTM E2174. Inspection agency or IOR will examine firestopping and will determine, in general, that firestopping has been installed in compliance with requirements of tested and listed firestopping system, and installation process conforms to FM 4991.

B. Inspector shall advise Contractor of any deficiencies noted within one (1) working day.

C. Do not conceal firestopping systems with other construction until inspection agency or IOR has verified that firestopping installation complies with requirements.

D. Where deficiencies are found, repair or replace firestopping so that it complies with requirements of tested and listed system design.

3.6 CLEANING

A. Clean off excess fill materials and sealants adjacent to openings and joints as work progresses. Use methods and cleaning materials approved by manufacturers of firestopping products and or assemblies in which openings and joints occur.

B. Protect firestopping during and after curing period from contact with contaminating substances. If damage caused by others, owner and general contractor to instruct firestopping contractor to make appropriate repairs and charge to appropriate trades.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes sealants, caulks and accessories, at interior and exterior, as required for complete installation as shown and specified.

B. Related Sections:

8. ASTM E90: Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.

B. South Coast Air Quality Management District (SCAQMD)

1. SCAQMD Rule 1168: Adhesive and Sealant Applications.

C. National Association of Architectural Metal Manufacturers (NAAMM):

1. NAAMM Standard SG-1: Specification for Dense Rubber-Like Compression Gasket Material.

1.3 SYSTEM DESCRIPTION

A. Exterior Joint Sealants: Provide materials produced and installed to establish and maintain watertight, airtight, continuous, and flexible seals without staining or adversely affecting joint substrates or adjacent materials.

B. Interior Joint Sealants: Provide materials produced and installed to establish and maintain airtight, continuous, water-resistant seals without staining or adversely affecting joint substrates or adjacent materials.

C. Environmental Requirements: For joint sealants applied on site within the waterproofing membrane, provide only joint sealants that conform to VOC requirements in South Coast Air Quality Management District Rule 1168.

1.4 SUBMITTALS

A. Product Data: Submit manufacturer’s literature and Material Safety Data Sheets for each material and accessory, clearly notating specified requirements.

1. Product Test Reports and Compatibility and Adhesion Test Reports: Submit for each sealant type for applicable substrates, indicating evidence of compliance with requirements and recommendations for primers and substrate preparation.

B. Samples:

1. Samples for Initial Selection: Provide manufacturer’s color charts consisting of strips of cured sealants showing full range of colors available for each product exposed to view from minimum of three manufacturer’s for each type for selection by Owner.
2. Design Reference Samples: For each type of and color of sealant required, provide samples of sealants in 1/2 inch joints formed between two 12-inches long strips of material matching appearance of exposed surfaces adjacent to joint sealants.

a. Label samples to indicate product and location in Work. Samples will be reviewed for appearance only. Compliance with other requirements is responsibility of Contractor.

C. Quality Control Submittals: Submit certificates for Owner's information.

1. Sealant manufacturer's written statement of products and compatibility.

2. Installer's Qualifications.

D. Closeout Submittals: Submit for Owner's documentation:

1. Warranties.

E. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Indoor Air Quality Certificates: Certify volatile organic compound content for each interior sealant and related primer. See 01 81 13 Sustainable Design Requirements.

1.5 QUALITY CONTROL

A. Single Source Responsibility: Obtain joint sealant materials from single manufacturer for each different product type required.

B. Compatibility: Before purchase of each required material, confirm its compatibility with each other material it will be applied to in joint system as well as itself during and after curing.

1. Certificates: Sealant manufacturer's written statement that sealant applications and materials, including surface preparation, primers, and back-up materials provide proper adhesion are compatible with substrate materials and finishes in contact therewith, and conform to specified design criteria.

C. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 5-years documented experience.

D. Qualified Installer: Installer to have 5-years experience in the installation of specified materials on comparable projects. The firm shall have the approval of the materials manufacturer.

E. Pre-Installation Meetings: Before start of Work, meet at Site to review methods and sequence of installation, special details and conditions, quality standards, testing and quality control requirements, job organization and other pertinent topics related to Work. Meeting shall include Owner, Architect, Architect's consultants, Contractor, and subcontractors whose work is relevant to this Section.

F. Pre-Construction Field Adhesion Testing: Prior to installation of elastomeric and rigid joint sealants, field test their adhesion to joint substrates as follows:

1. Locate test joints where accepted by Owner.

2. Conduct field test for each kind of sealant and joint substrate.

3. Arrange for tests to occur with sealant manufacturer's representative present.

4. Test joint sealants by hand-pull method as follows:

   a. Install sealant in 60-inches long joints using same material and methods for joint preparation and joint sealant installation required for complete work. Allow sealants to cure fully before testing.

   b. Make knife cuts from one side of joint to other side, follow by two cuts approximately 2-inches long at sides of joint and meeting cross cut at one end. Place a mark 1-inch from cross cut end of 2-inch piece.

   c. Use finger to grasp 2-inch piece of sealant between cross cut end and 1-inch mark, pull firmly at 90-degree angle or more in direction of side cuts while holding a ruler along side of sealant. Pull sealant out of joint to distance recommended by sealant manufacturer for testing adhesive capability, but not less than that equaling specified maximum movement capability in extension. Hold this position for 10-seconds.

   d. For joints with dissimilar substrates, check adhesion to each substrate separately. Do this by extending cut along one side, checking adhesion to opposite side, then repeat procedure for opposite side.

   e. Report whether sealant fail to adhere to joint substrates or tear cohesively. Include data on pull distance used to test each type of product and joint substrate. For sealant that fails test, re-test until satisfactory adhesion is achieved.

   f. Sealants not indicating adhesive failure from testing, in absence of other indications of non-compliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Comply with Division 1 – Product Requirements.

B. Packing, Shipping, Handling, and Unloading: Deliver materials in original, tightly sealed containers or unopened packages with manufacturer's name, labels, and product identification intact.

C. Storage and Protection: Store materials out of weather in original containers or unopened packages as recommended by manufacturer.

1.7 PROJECT / SITE CONDITIONS

A. Weather Conditions: Do not apply materials under extreme temperature conditions when joint openings are at maximum or minimum width and during wet weather when surfaces are not dry.

1.8 SCHEDULING

A. General: Coordinate Work with the work of Sections affected by sealants to assure Work is performed in proper sequence and in manner to cause no delay.

1.9 WARRANTY

A. General: Warrant each system free from defects in material for 20 years and workmanship for 2 years such as failure of watertightness, adhesion, cohesion, resistance to weather, migration, flow, staining, and other forms of deterioration. Repair or replace defective Work appearing within warranty periods at Contractor's expense.

1. Building Sealant Systems: 20 years.

2. Traffic Sealant Systems: 5 years.

3. Include removal and replacement of super-imposed work of other trades, repair or replace defective Work appearing within warranty periods at Contractor's expense.

B. Warranty/guarantee shall further state that sealants are warranted/guaranteed against:

1. Adhesive or cohesive failure of sealants in joints where movement is within manufacturer’s published range of maximum extension and compression capability for base sealant.

2. Crazing greater than 3-mils in depth developing on surface of sealant material.

3. Staining of surface adjacent to sealant joints, by sealants, primers, and joint filler materials, by migrating through building materials in contact with them.

4. Puncture, abrasion, or tear failure due to pedestrian or vehicular traffic in self-leveling polyurethane base sealant installed at pedestrian or vehicular traffic surfaces.

PART 2 – PRODUCTS

2.1 JOINT SEALANT MATERIALS

A. Compatibility: Provide joint sealant materials and miscellaneous materials that are compatible with one another and with joint substrates under conditions of service and application as demonstrated by sealant manufacturers based on testing and field experience.

B. Colors:

1. Concealed Material: Any of manufacturer's standard colors. Use same color throughout project.

2. Exposed Material: Manufacturer's standard color(s), matching Design Reference Samples as selected by Owner.

2.2 SUSTAINABILITY CHARACTERISTICS

A. Division 1 - Sustainable Design Requirements: Requirements for sustainable design compliance.

B. Indoor Environmental Quality Characteristics:

1. Adhesives and Sealants; Sealant Primers: Maximum volatile organic compound content in accordance with Section 01 81 13.

2.3 ELASTOMERIC JOINT SEALANTS

A. Stain-Test-Response Characteristics: Provide products undergone testing in accordance to ASTM C1248 and have not stained porous joint substrates indicated for Project.

B. Suitability for Immersion in Liquids: Provide products undergone testing in accordance to ASTM C1247 and qualify for length of exposure indicated by reference to ASTM C920 for Class 1 or 2, for joints that will be continuously immersed in liquids. Liquid used for testing is deionized water, unless otherwise indicated.

C. Building Sealant: Elastomeric for general exterior building use and other sealant applications where a specific type is not otherwise identified.

1. General: ASTM C920, Type S, Grade NS, Use NT, single-component silicone sealant, for joints with moderate to maximum movement.

a. Movement Capacity: Provide building sealants that have capacity to move not less than 50-percent in both compression and 100-percent extension.

2. Manufacturers and Types: General Electric's “Silpruf 2000”, Dow's “790”, Dow's “791”, Dow's “795”, Tremco “Spectrum 1”, or accepted equal.

D. High Temperature Sealant: Elastomeric for exposure to temperatures consistently in excess of 200-degrees F with capability to perform under intermittent exposures up to 500-degrees F.

1. One part silicone sealant, non-paintable.

2. Manufacturers and Types: Polymeric Systems Inc’s “PSI-613 High Temperature Silicone Adhesive/Sealant”, Dow's “Hi-Temp Silicone Sealant”, or accepted equal.

E. Traffic Sealant: Urethane for exterior and interior horizontal joints subject to traffic.

1. General: ASTM C920, Type M, Grade P, Use T, multi-component polyurethane, pourable and immersible type.

2. Manufacturers and Types: Pacific Polymers, Inc. “Elasto-Thane 227 R Type II, Tremco’s “Vulkem 245”, Pecora's “NR-200 Urexpan”, Sonneborn's “Sonolastic Paving Joint Sealant”, or accepted equal.

F. Sanitary Sealant: Provide for joints between plumbing fixtures, toilet accessories and other equipment, and, interior joints between plumbing fixtures and adjoining walls, floors, and counters, including non-porous surfaces.

1. General: ASTM C920, Type S, Grade NS, Class 25, and Uses NT, G, and A, standard white color, one-part mildew-resistant silicone sealant.

a. Shore A Hardness of 35 (plus 5) at ultimate cure with 25-percent movement capacity.

2. Manufacturers and Types: GE's “SCS 1702”, Dow's “786”, Tremco’s “Tremsil 200”, or accepted equal.

2.4 LATEX JOINT SEALANTS

A. Acoustical Sealant: ASTM E90 tested to demonstrate reduction in airborne sound transmission through exposed and concealed joints in building construction. ASTM C834 acrylic latex sealant shall be non-skinning, non-hardening, flexible sealant specifically designed for sealing gypsum wallboard. Sealant shall be capable of spanning 1/2-inch wide by 3/8-inch deep gaps.

1. Pecora Corporation’s “AC-20 FTR Acoustical and Insulation Sealant”.

2. United States Gypsum Corporation’s “Sheetrock Acoustical Sealant”.

B. General Purpose Latex Caulk: ASTM C834, Type P, Grade NF, non-sag, paintable, non-staining type. Provide for general sealing of static joints in woodwork, casework, and similar assemblies primarily for appearance.

1. Bostik Findley’s “Chem-Calk 600”.

2. Pecora Corporation’s “AC-20+”.

3. Schnee-Morehead, Incorporated’s “SM 8200”.

4. Sonneborn’s “Sonolac”.

5. Tremco’s “Tremflex 834”.

2.5 ACCESSORIES

A. Joint Primer/Sealer: Provide type of joint primer/-sealer recommended by sealant manufacturer for joint surfaces to be primed or sealed.

B. Joint Sealant Backing (Backer Rod): Provide open cell at interior conditions, and closed cell exterior conditions, polyurethane backer rods, non-staining, compatible with joint substrates, sealants, primers, and other joint fillers, do not outgas, and are approved for application by sealant manufacturer.

1. General: ASTM C1330, Type O for interior conditions and Type C for exterior conditions.

2. Manufacturers and Types: Backer Rod Manufacturing, Inc.’s “Denver Foam”, ITP’s “TundraFoam”, Nomaco’s “Foam Pak II”, or accepted equal.

C. Bond Breaker Tape: 4- to 6-mil thick polyethylene tape with pressure-sensitive adhesive on one side, as recommended by sealant manufacturer.

D. Cleaning Solvent: Non-corrosive type recommended by manufacturer; compatible with joint substrates.

E. Masking Tape: Non-staining, non-absorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 – EXECUTION

3.1 GENERAL

A. Manufacturer's Instructions: Prepare substrates, apply primers and install the work, including components and accessories in accordance with the manufacturer's instructions, except where more stringent requirements are shown or specified. Examine the areas to receive Work and remedy detrimental conditions.

3.2 EXAMINATION

A. Inspect joints and spaces to receive sealant, and verify that:

1. Surfaces are free from bituminous materials, release agents, bond breakers, curing compounds, water repellants, or other deleterious surface treatments.

2. Metallic surfaces are free from rust, mill-scale, coatings, oil, and grease.

3. Aluminum surfaces are free of protective materials.

4. Concrete and plaster surfaces have been cured.

5. Joints and spaces requiring sealing are at correct or normal width.

3.3 PREPARATION

A. Perform preparation in accordance with ASTM C1193.

B. Cleaning: Clean joint substrates immediately before installation of sealant.

1. Sealant Bond: Remove dirt, insecure coatings, moisture, and other substances which would interfere with bond of sealant.

2. Cleaning Solvent: Use to clean joint surfaces. Wipe joints free of solvent, using clean, dry white cotton cloths or white, lint-less paper.

C. Tests: Do not install sealant until pre-construction tests for durability and adhesion in peel on applicable type substrates have been successfully completed.

D. Priming and Sealing: Prime or seal joint surfaces in accordance to sealant manufacturers’ printed instructions. Do not allow primer/sealer to spill or migrate to adjoining surfaces.

1. Make preliminary tests to insure primers will not stain exposed materials or deteriorate back-up material.

3.4 INSTALLATION

A. Perform installation in accordance with ASTM C1193.

B. Backer Rod: Install for building sealant and other elastomeric sealants, except where recommended to be omitted by sealant manufacturer for application shown, or backed by other solid substrate.

C. Techniques: Employ only proven installation techniques, which will ensure that sealants will be deposited in uniform, continuous ribbons without gaps or air pockets, with complete wetting of joint bond surfaces equally on opposite sides.

1. Sealant Rabbet: Except as otherwise indicated, fill, and tool as required, to a slightly concave surface, slightly below adjoining surfaces.

2. Intersections: Where horizontal joints are between a horizontal surface and a vertical surface, fill joint to form a slight cove, so that joint will not trap moisture and dirt.

D. Sealant Depths: Install sealants to depths as recommended by sealant manufacturer, but within following general limitations:

1. Floor and Similar Joints Subject to Traffic: And other abrasion and indentation exposures, fill joints to a depth equal to 75-percent of joint width, but not more than 3/4-inch deep nor less than 3/8-inch deep.

2. Joints Not Subject to Traffic: Fill joints to depth equal to 50-percent of joint width, but not more than 1/2-inch deep nor less than 1/4-inch deep.

E. Compressible Seals: Install as shown and per manufacturer's recommendations. Use specified building sealant to adhere and seal butt joints, bed both sides of extrusion in continuous bead, and seal both sides of extrusion face in conjunction with bond breaker tape.

3.5 CLEANING AND CURING

A. Cleaning: Clean adjoining surfaces to eliminate evidence of spillage; do not mar surfaces.

B. Curing: Cure joint sealants per manufacturer's instructions and recommendations to obtain high early-bond strength, internal cohesive strength, and surface durability.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes: Hollow metal steel frames for doors and interior glazed lites (windows).

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.
2. Section 07 62 00 – Sheet Metal Flashing and Trim.
3. Section 08 14 16 - Flush Wood Doors: Provision of doors.
4. Section 08 71 00 - Door Hardware: Provision of hardware, silencers, and gasketing.
5. Section 08 80 00 – Glazing: Provision of glass and glazing.
6. Section 09 21 10 – Gypsum Board Assemblies: Framing for door openings.
7. Section 09 24 00 – Cement Plastering.
8. Section 09 90 00 – Painting and Coating: Finish painting.

1.3 SUBMITTALS

A. No Product Data or Manufacturer Installation Instructions submittals required unless products and systems used deviate from those indicated in Part 2 of this Section and from Proposed Products List required in Section 01 33 00.

B. If submittal is required due to product deviation, submit the following items under provisions of Section 01 33 00.

C. Shop Drawings: Indicate frame elevations, reinforcement, anchor types and spacing, location of cut-outs for hardware, and finish.

D. Product Data: Submit frame configuration and finishes.

E. Manufacturer's Installation Instructions: Submit manufacturer’s installation instructions.

F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

G. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Materials Resources Certificate: Certify recycled material content for recycled content products.
2. Product Cost Data: Products with recycled material content. Exclude cost of labor and equipment to install products.

H. Provide documentation showing paints and coatings in accordance with 01 81 13 Sustainable Design Requirements.

1.4 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with applicable requirements of the laws, codes, and regulations of the state of California.

B. Fire Rated Frame Construction:

1. Conform to ASTM E152.

2. Smoke and draft control assemblies: Comply with UL 10B, Fire Tests of Door Assemblies. Label shall carry a supplemental “S” signifying smoke rating.

C. Installed Frame Assembly:

1. Conform to NFPA 80 for fire rated class same as fire door.

2. Smoke and draft assemblies: Comply with UL 10B, Fire Tests of Door Assemblies, and installation instructions for listed assembly.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Division 1- Product Requirements: Product storage and handling requirements.

B. Accept frames on site in manufacturer's packaging. Inspect for damage.

C. Break seal on-site to permit ventilation.

1.7 COORDINATION

A. Division 1– Administrative Requirements: Coordination and project conditions.

B. Coordinate Work with frame opening construction, door, and hardware installation.

C. Sequence installation to accommodate required door hardware electric wire connections.

PART 2 – PRODUCTS

2.1 STANDARD STEEL FRAMES

A. Manufacturers: Furnish compliant products of one of the following or approved equal:

1. Curries Company

2. Door Components, Incorporated.

3. Steelcraft.

4. Stiles Custom Metal, Incorporated.

B. Product Description: Standard shop fabricated steel frames, fire rated and non-rated types. Cold-rolled or hot-rolled steel sheet; not less than 14-gauge.

2.2 SUSTAINABILITY CHARACTERISTICS

A. Division 1 - Sustainable Design Requirements: Requirements for sustainable design compliance.

B. Materials and Resources Characteristics:

1. Recycled Content Materials: Furnish materials with maximum available recycled content, and with no less than that required in Section 01 81 13.

2.3 ACCESSORIES

A. Removable Stops: Rolled steel channel shape, butted corners; prepared for countersink style tamper proof screws.

B. Mullion Stirrups and Clips: Manufacturer's standard to suit mullion profile.

C. Bituminous Coating: Non-asbestos fibered asphalt emulsion.

D. Primer: Primer compatible with finish paint system. ANSI A250.10 rust inhibitive type.

E. Silencers: Specified in Section 08 71 00.

F. Weatherstripping: Specified in Section 08 71 00.

2.4 FABRICATION

A. Provide welded units with integral trim, of sizes and shapes shown. Knocked-down frames not accepted.

B. Transom Bars for Glazed Lights: Of same profiles as jamb and head.

C. Fabricate frames with hardware reinforcement plates welded in place. Provide mortar guard boxes.

D. Reinforce frames wider than 48 inches with roll formed steel channels fitted tightly into frame head, flush with top.

E. Prepare frames for silencers. Omit at fire-rated doors.

F. Fabricate fire rated and smoke and draft assembly metal frames of materials in accordance with requirements of the listing label. Place labels where visible when frames are installed in position. Refer to Drawings for rating requirements.

G. Finished Work: Strong and rigid, neat in appearance, square, true and free of defects, warp or buckle. Fabricate molded members clean cut, straight and of uniform profile throughout their lengths.

H. Jamb Depths, Trim, Profile, Returns, and Backbends: Depths and profiles shown. Double return backbends typical.

I. Corner Joints: Solid interlocking with 16 gauge concealed corner clip reinforcing. Close contact edges tight, hairline miter edges, and butt stops.

J. Stops: Minimum depth 5/8-inches and as shown.

K. Hardware Reinforcements:

1. General: Mortise, reinforce, drill, and tap frames at factory for fully templated mortised hardware only, per hardware schedule and templates provided by hardware supplier. Where surface-mounted hardware is to be applied, provide frames with reinforcing plates only.

2. Hardware Reinforcing Plates: Minimum thickness as follows:

a. Hinge And Pivot Reinforcements: 7-gauge, 1-1/4 foot by 10-inches, minimum size.

b. Strike Reinforcements: 12 gauge.

c. Flush Bolt Reinforcements: 12 gauge.

d. Closer Reinforcements: 12 gauge.

e. Surface-Mounted Hardware Reinforcements: 12 gauge.

f. Hold-Open Arm Reinforcements: 12 gauge.

g. Surface Exit Device Reinforcements: 12 gauge.

L. Floor Anchors:

1. General: Securely weld inside each jamb, with minimum two holes provided at each jamb for base anchorage.

2. Adjustable Anchors: Where so scheduled or specified, provide adjustable floor anchors, not less than 2 inches in height adjustment.

3. Thickness: Minimum 14 gauge.

M. Jamb Anchors:

1. Stud Partitions: Provide frames with steel anchors of suitable design, not less than 16-gauge thickness, securely welded inside each jamb as follows:

a. Frames up to 7'-6" height: 4 anchors.

b. Frames 7'-6" to 8'-0" height: 5 anchors.

c. Frames over 8'-0" height: 5 anchors plus one additional for each 2'-0” or fraction thereof over 8'-0".

N. Steel Spreader: Provide frames with steel spreader attached to feet of both jambs to serve as temporarily brace during installation.

O. Loose Glazing Stops: Cold rolled steel, not less than 20-gauge thickness, butt at corner joints and secure to frame with counter-sunk cadmium- or zinc-plated screws.

2.5 SHOP FINISHING

A. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, “Solvent Cleaning”; remove dirt, oil, grease, or other contaminants that could impair paint bond. Remove mill scale and rust, if present, form uncoated steel, complying with SSPC-SP 3, “Power Tool Cleaning”, or SSPC-SP 6/NACE No. 3 “Commercial Blast Cleaning”.

B. Factory Priming for Field-Painted Finish: Apply manufacturer’s standard rust-inhibitive primer immediately after surface preparation and pretreatment. Apply primer to a uniform dry film thickness of not less than 0.7-mils. Fully cure before shipment.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 – Administrative Requirements: Coordination and project conditions.

B. Verify opening sizes and tolerances are acceptable.

C. Verification of Conditions: Examine substrate and conditions under which hollow metal frames are to be installed and give notification, in writing, of any conditions detrimental to proper and timely completion of work. Do not proceed with work until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install frames in accordance with ANSI A250.8 and NFPA 80 for fire rated frames.

1. Install smoke and draft control assemblies in accord with the requirements of the label.

2. Install frames in accordance with manufacturer’s printed instructions for fire rated frames.

B. Coordinate with gypsum board wall construction for anchor placement.

C. Setting: Exercise care in setting of frames to maintain scheduled dimensions, hold head level, and maintain jambs plumb and square.

D. Anchorages and Connections: Secure to adjacent construction. Furnish anchors to suit wall conditions or clips welded to frame for fastening to structure.

E. Spreader Bars: Whenever possible, leave frame spreader bars intact until frames are set perfectly square and plumb and anchors are securely attached.

F. Expansion Movement: Allow for as required.

G. Coordinate installation of glass and glazing specified in Section 08 80 00.

H. Coordinate installation of frames with installation of hardware specified in Section 08 71 00.

I. Install roll formed steel reinforcement channels between two abutting frames. Anchor to structure.

J. Ensure that frames are securely and rigidly anchored to adjacent construction.

K. Install side light and window frames with formed glass stops on room side. Coordinate the installation of glass and glazing.

L. After installation, touch up scratched or damaged surfaces. Use type of primer identical to that used for shop coat.

3.3 ERECTION TOLERANCES

A. Division 1 - Quality Requirements: Tolerances.

B. Maximum Diagonal Distortion: 1/8 inch measured with straight edges, crossed corner to corner.

3.4 FIELD FINISHING

A. General: Immediately after installation remove rust, sand smooth, and touch-up items with prime coat which has been damaged with same primer as applied in shop. Meet all local VOC regulations.

B. Finish Painting: High Performance Coating. Apply finish paint per Section 09 96 00.

C. Color: Valspar, Fluropon Classic as noted on drawings.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes aluminum frames for interior doors and windows.

B. Related Sections:

1. Section 08 14 16 – Flush Wood Doors.
2. Section 08 71 00 – Door Hardware.
3. Section 08 80 00 – Glazing.
4. Section 09 21 16 – Gypsum Board Assemblies: Rough opening framing in compliance with frame manufacturer's recommendations.

1.2 REFERENCES

A. Aluminum Association (AA)

1. AA DAF-45 – Designation System for Aluminum Finishes

B. American Architectural Manufacturers Association (AAMA)

1. AAMA 611 – Voluntary Specification for Anodized Architectural Aluminum.

C. ASTM International

1. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

D. National Fire Protection Association (NFPA):

1. NFPA 80 - Standard for Fire Doors and Fire Windows.

1.3 SUBMITTALS

A. Division 1 - Submittal Procedures: Submittal procedures.

B. Product Data: Include typical details, material descriptions, hardware reinforcements, profiles, anchors, fire-resistance rating, and finishes.

C. Manufacturer's Installation Instructions: Include rough opening framing recommendations.

D. Shop Drawings: Indicate frame elevations, reinforcement, anchorage and spacing, location of cut-outs for hardware, and finish.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

F. Samples:

1. Submit 12 x 12 inches in size illustrating each type of specified finished aluminum surface.

2. Submit 12-inch length of frame profile in any throat size and finish. Division 1 criteria for sample quantity do not apply: one sample required only.

G. Provide documentation showing paints and coatings in accordance with 01 81 13 Sustainable Design Requirements.

1.4 QUALITY ASSURANCE

A. Manufacturer and Installer: Companies specializing in manufacturing and installing aluminum door and glazing frame systems with minimum five years' experience.

B. Fire-Rated Assemblies: Whenever a fire-resistance classification is indicated, provide fire-rated frames investigated, tested, and labeled as part of a fire door or fire window assembly to certify compliance with the requirements of UL 10C Positive Pressure Test for specified exposure by an agency acceptable to governing authorities.

1. Labels: Provide labels permanently fastened on each fire rated frame that are within size limits established by NFPA and the testing authority.

2. Installation: Install assemblies in compliance with NFPA 80 and as specified herein.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Packing, Shipping, Handling, and Unloading: Package interior aluminum frames work in cardboard or other containers with separators, banding, spreaders, and paper wrappings to protect items during transit and Project site storage.

B. Identification: Mark frame, on a surface which will be hidden after installation, with designation of opening for which it is furnished.

1.6 COORDINATION

A. Hardware Suppliers: Furnish interior aluminum frame manufacturer with accepted hardware schedule, hardware templates, and samples of physical hardware where necessary to ensure correct fitting and installation.

1.7 WARRANTY

A. Division 1 - Execution and Closeout Requirements: Product warranties and product bonds. Warranties shall pay for all costs associated with repairs and replacement upon notification of defects.

B. Material Warranty: Provide material manufacturer's product warranty for a minimum of two (2) years from date of Substantial Completion.

C. Material Warranty: Provide material manufacturer's product warranty that finish will not contain defects including cracking, flaking, blistering, peeling and excessive fading,

chalking and non-uniformity in color for a minimum of five (5) years from date of Substantial Completion.

PART 2 – PRODUCTS

2.1 ALUMINUM DOOR AND GLAZING FRAMES

A. Manufacturers: Provide compliant products of one of the following or approved equal.

1. Frameworks / Assa Abloy.
2. RACO Interior Products, Incorporated.
3. Wilson Partitions.

B. Product Description: Wilson Partitions' "Series 200" is the Basis of the Specification. Extruded aluminum frames, non-rated and rated, either fabricated to required throat sizes or furnished with expandable throat to required sizes. Snap-on rectilinear trim with 1-1/2 inch wide flush profile. Frame shall accept 3/8 inch laminated glass.

2.2 COMPONENTS

A. Aluminum: ASTM B221; 6063 alloy, T5 temper. Not less than 25 percent pre-consumer recycled content.

B. Fasteners: Aluminum, nonmagnetic, stainless-steel or other noncorrosive metal fasteners compatible with frames, stops, panels, reinforcement plates, hardware, anchors, and other items being fastened.

C. Door Silencers: Manufacturer's standard continuous mohair, wool pile, or vinyl seals.

D. Glazing Gaskets: Manufacturer's standard extruded or molded plastic, to accommodate glazing thickness indicated. Color to be black.

E. Glass: As indicated on Drawings and specified in Section 08 80 00. Glazing sealants to be grey.

F. Hardware: As specified in Section 08 71 00.

2.3 FABRICATION

A. Pre-machine jambs and prepare for hardware, with concealed reinforcement plates, drilled and tapped as required, and fastened within the frame.

B. Provide corner reinforcements and alignment clips for precise butt or mitered connections.

C. Fabricate all components to allow secure installation without exposed fasteners.

D. Fabricate kits for glazing with removable stops to allow glazing replacement without dismantling.

E. Manufacturer shall pre-cut and ship all frame materials knock-down.

2.4 ALUMINUM FINISHES

A. High-Performance Organic Finish – Two-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat.

1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

2. Color: Match Glazed Aluminum Curtainwall as specified in Section 08 44 13.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 – Administrative Requirements: Coordination and project conditions.

B. Examine project conditions and verify that the work of this section may properly commence. Do not proceed with the installation until unsatisfactory conditions have been corrected.

C. Verify that the wall thickness does not exceed manufacturer’s recommended tolerances of specified frame throat size.

3.2 INSTALLATION

A. Comply with frame manufacturer’s printed installation instructions and approved shop drawings. Strictly adhere to maintaining specified wall thickness to insure dimension does not exceed frame throat size specified.

B. Install frames plumb and square, free from warp or twist. Securely anchor to substrates with fasteners recommended by frame manufacturer.

1. Use concealed installation clips to assure that splices and connections are tightly butted and properly aligned.

2. Secure clips to main structural extrusion components and not to snap-in or trim members.

3. Do not use screws or other fasteners that will be exposed to view when installation is complete.

4. Maintain dimensional tolerances and alignment with adjacent work. Ensure hairline joints and flush surfaces and with adjacent aluminum components.

3.3 CLEANING AND ADJUSTMENT

A. Division 1 – Execution and Closeout Requirements: Requirements for cleaning.

B. Clean work in accordance with manufacturer’s recommendations.

C. Touch up marred areas so that touch-up is not visible from a distance of 4 feet. Remove and replace frames that cannot be satisfactorily adjusted.

3.4 PROTECTION

A. Protect installed work against damage from other construction work.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes provision of steel doors of types noted and installation of their hardware.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.
2. Section 08 12 14 - Standard Steel Frames.
3. Section 08 71 00 - Door Hardware.
4. Section 08 80 00 - Glazing: Glass for doors.
5. Section 09 90 00 - Painting and Coating: Field painting of doors.

1.2 REFERENCES

A. American National Standards Institute (ANSI):

1. ANSI A250.8 / SDI 100 - Recommended Specifications for Standard Steel Doors and Frames.

B. ASTM International (ASTM):

1. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
2. ASTM C1363 - Standard Test Method for the Thermal Performance of Building Assemblies by Means of a Hot Box Apparatus.
3. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

C. Intertek Testing Services (Warnock Hersey Listed):

1. WH - Certification Listings.

D. National Fire Protection Association (NFPA):

1. NFPA 80 - Standard for Fire Doors, Fire Windows.
2. NFPA 105 – Standard for the Installation of Smoke Door Assemblies and Other Opening Protectives.
3. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies.

1. UL - Building Materials Directory.

2. UL 10B - Fire Tests of Door Assemblies.
3. UL 10C - Positive Pressure Fire Tests of Door Assemblies.
4. UL 1784 - Air Leakage Tests of Door Assemblies.

1.3 SUBMITTALS

A. Division 1 - Submittal Procedures: Requirements for submittals.

B. Shop Drawings: Indicate door elevations, internal reinforcement, closure method, and cut-outs for glazing, louvers, and finishes.

C. Product Data: Submit door configurations, location of cut-outs for hardware reinforcement.

D. Manufacturer's Installation Instructions: Submit special installation instructions.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

F. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Materials Resources Certificate: Certify recycled material content for recycled content products.
   a. Product Cost Data: Products with recycled material content. Exclude cost of labor and equipment to install products.
2. Indoor Environmental Quality Certificate: Certify adhesives, sealants, and core material comply with emissions criteria.

G. Provide documentation showing paints and coatings in accordance with 01 81 13 Sustainable Design Requirements.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with ANSI A250.8.

B. Steel doors shall be the product of the same manufacturer to insure uniformity of quality and appearance throughout the project.

C. Fire Rated Door Construction:

1. 20-Minute Fire-Rated Corridor Doors: As part of a fire tested assembly in accordance with NFPA 252 or UL 10C without the hose stream test. Assembly shall be gasketed and meet smoke and draft control requirements in accordance with UL 1784.
2. 45-Minute Special Use Room Doors: As part of a fire tested assembly in accordance with NFPA 252, UL 10B or UL 10C with the hose stream test.
3. 60- and 90-Minute Exit Stair and Exit Passageway Doors: As part of a fire tested assembly in accordance with NFPA 252 or UL 10C with the hose stream test.

D. Installed Fire Rated Door Assembly: Conform to NFPA 80 for fire rated class as indicated on Drawings.

E. Installed Smoke and Draft Control Door Assembly: Conform to NFPA 105.

F. Attach WH-Certification or label from other agency approved by authority having jurisdiction to identify each fire rated door.

1. Smoke and Draft Control Door Assemblies: Include the letter “S” on the label.

1.5 QUALIFICATIONS

A. Manufacturer and Installer: Companies specializing in manufacturing and installing products specified in this section with minimum three years’ documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Division 1 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Accept doors on site in manufacturer's packaging. Inspect for damage.

C. Do not store in damp or wet areas. Break seal on site to permit ventilation.

1.7 COORDINATION

A. Division 1 - Administrative Requirements: Requirements for coordination.

B. Coordinate Work with door opening construction, door frame, and door hardware installation.

C. Coordinate installation to accommodate door hardware electric wire connections.

PART 2 – PRODUCTS

2.1 STANDARD STEEL DOORS

A. Manufacturers: Furnish compliant products of one of the following or approved equal:

1. Curries Company
2. Door Components, Incorporated.
3. Steelcraft.
4. Stiles Custom Metal, Incorporated.

B. Product Description:

1. Exterior Doors (Insulated): ANSI/SDI A250.8, SDI 108, 1-3/4 inch thick, shop primed. Fire rated and non-fire rated types.
    a. Level 3 and Physical Performance Level A – Extra Heavy Duty, Model 2 - seamless design.
    b. Galvanized steel sheet faces, end closures, and internal components.
2. Interior Doors: ANSI/SDI A250.8, SDI 108, 1-3/4 inch thick, shop primed. Fire rated and non-fire rated types.
    a. Level 2 and Physical Performance Level B – Heavy Duty, Model 2, seamless design.
    b. Cold-rolled steel sheet faces, end closures, and internal components.

2.2 SUSTAINABILITY CHARACTERISTICS

A. Division 1 - Sustainable Design Requirements: Requirements for sustainable design compliance.

B. Materials and Resources Characteristics:

1. Recycled Content Materials: Furnish materials with maximum available recycled content, and with no less than that required in Section 01 81 13.

C. Indoor Environmental Quality Characteristics:

1. Volatile Organic Compounds: Furnish sealants, adhesives, and field-applied finishes that do not exceed VOC limits required in Section 01 81 13.
2. Urea-Formaldehyde: Do not use composite wood and agrifiber products that contain urea-formadehyde resin.

2.3 COMPONENTS

A. Face: Steel sheet in accordance with ANSI A250.8/SDI 100.

B. End Closure: Cold-rolled channel, flush orientation.

C. Core: Chemically-inert, moisture-resistant as recommended by door manufacturer.

D. Thermal Insulated Door: Total insulation minimum R-Value of 2.4, measured in accordance with ASTM C1363.

E. Glass: Meeting requirements specified in this section, as scheduled on Drawings and specified in Section 08 80 00, minimum required thickness. Glass size shall not exceed that tested for fire-rated door assemblies.

2.4 ACCESSORIES

A. Removable Glazing Stops: Rolled steel, channel shape, mitered corners; prepared for countersink style tamper proof screws.

2.5 FABRICATION

A. Fabricate doors with hardware reinforcement welded in place.

2.6 SHOP FINISHING

A. Steel Sheet: Galvanized to ASTM A653 G60 or G90.

B. Primer: ANSI A250.10 rust inhibitive type.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 - Administrative Requirements: Verification of existing conditions before starting work.

B. Verify opening sizes and tolerances are acceptable.

3.2 INSTALLATION

A. Install doors in accordance with ANSI A250.8.

1. Install smoke and draft control assemblies in accordance with NFPA 105.

2. Install fire-rated doors in accordance with NFPA 80.

B. Coordinate installation of glass and glazing specified in Section 08 80 00.

C. Coordinate installation of doors with installation of frames specified in Section 08 12 14 and hardware specified in Section 08 71 00.

3.3 ERECTION TOLERANCES

A. Division 1 - Quality Requirements: Tolerances.

B. Maximum Diagonal Distortion: 1/8 inch measured with straight edge, corner to corner.

3.4 FIELD FINISHING

A. General: Immediately after installation remove rust, sand smooth, and touch-up items with prime coat which has been damaged with same primer as applied in shop. Meet all local VOC regulations.

B. Finish Painting: High Performance coating. Valspar, Fluropon Classic. Color as noted on drawings. Apply finish paint per Section 09 96 00.

3.5 ADJUSTING

A. Division 1 - Execution and Closeout Requirements: Requirements for adjusting.

B. Adjust door for smooth and balanced door movement.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes non-rated and fire-rated flush wood doors.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.
2. Section 08 12 14 – Standard Steel Frames.
3. Section 08 71 00 - Door Hardware.
4. Section 08 80 00 – Glazing.

4. UL 1784 - Air Leakage Tests of Door Assemblies.

G. Window and Door Manufacturers' Association.

1. WDMA I.S. 1-A – Architectural Wood Flush Doors.

1.3 SUBMITTALS

A. Submit the following items under provisions of Division 1 - Submittals.

B. Submit door manufacturer's product construction data, hardware attachment performance data, specifications and installation instructions for each type of wood door, including details of core and edge construction, facing materials, trim for lite openings and similar components.

C. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Materials Resources Certificates: Certify chain of custody for products containing certified wood.

D. Samples:

1. Submit two samples of door veneer face, 12 x 12 inch in size illustrating wood grain, factory finish.

1.4 QUALITY ASSURANCE

A. Wood doors shall be the product of the same manufacturer to insure uniformity of quality and appearance throughout the project.

B. Fire Rated Door Construction:

1. 20-Minute Fire-Rated Corridor Doors: As part of a fire tested assembly in accordance with NFPA 252 or UL 10C without the hose stream test. Assembly shall be gasketed and meet smoke and draft control requirements in accordance with UL 1784.

2. 45-Minute Special Use Room Doors: As part of a fire tested assembly in accordance with NFPA 252, UL 10B or UL 10C with the hose stream test.

3. 60- and 90-Minute Exit Stair and Exit Passageway Doors: As part of a fire tested assembly in accordance with NFPA 252 or UL 10C with the hose stream test.

C. Installed Fire Rated Door Assembly: Conform to NFPA 80 for fire rated class as indicated on Drawings.

D. Installed Smoke and Draft Control Door Assembly: Conform to NFPA 105.

E. Attach WH-Certification or label from other agency approved by authority having jurisdiction to identify each fire rated door.

1. Smoke and Draft Control Door Assemblies: Include the letter "S" on the label.

F. Door components shall contain no added urea formaldehyde.

1.5 QUALIFICATIONS

A. Door Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Division 1 - Product Requirements: Product storage and handling requirements.

B. Package, deliver and store doors in accordance with AWI AWS Section 2.

C. Building HVAC system shall be operating. Temperature to be in range of 50 - 90 degrees F. Humidity to be in range of 30 - 50 percent relative.

D. Do not store in damp or wet areas; or in areas where sunlight might bleach veneer. Seal top and bottom edges when stored more than one week.

E. Break seal on site to permit ventilation.

1.7 COORDINATION

A. Division 1 – Administrative Requirements: Coordination and project conditions.

B. Coordinate Work with door opening construction, door frame and door hardware installation.

1.8 WARRANTY

A. Division 1 - Warranties: Product warranties and product bonds.

B. Include coverage for delamination of veneer, warping beyond specified installation tolerances, defective materials, and telegraphing core construction.

C. Furnish manufacturer’s “Life of Installation” warranty for interior doors.

PART 2 – PRODUCTS

2.1 FLUSH WOOD DOORS

A. Manufacturers: Furnish products of one of the following or approved equal:

1. Lynden Door Incorporated.
2. Masonite Architectural.
3. Oshkosh Door Company.
4. VT Industries, Incorporated.

B. Product Description: WDMA I.S. 1A and AWI/AWS Section 9 Premium Grade solid core flush wood doors. Five-ply construction, 1-3/4 inches thick, wood veneer or high

pressure decorative laminate (HPDL) facing material as specified in Components, fire rated and non-fire rated types, flush glazed design, factory pre-fit, shop finished.

2.2 COMPONENTS

A. Core:

1. Non-Rated and 20 Minute Fire Rated: Type SCL – FSC Structural Composite Lumber Core.

2. 45 Minute, 60 Minute, and 90 Minute Hour Fire-Rated: Mineral Core conforming to the requirements of the applicable labeling agency acceptable to the Authority Having Jurisdiction for the label specified.

B. Veneer Facing:

1. Cross Banding: One ply of manufacturer's standard construction.

2. Facing: FSC Wood veneer for transparent finish.

a. Grade: HPVA HP-1, AA-Grade.

b. Species: White Birch

c. Veneer Cut: Quarter cut.

d. Veneer Matching: Slip matched.

e. Face Matching: Center balanced. Pair match multiple door leaves in single opening.

3. Facing Adhesive: Type I – Waterproof.

C. Glazing Stops: Wood with mitered corners. Furnish metal clips for rated doors. Prepare for countersunk style tamper-proof screws.

D. Glass: Meeting requirements specified in this section, as scheduled on Drawings and specified in Section 08 80 00, minimum required thickness. Glass size shall not exceed that tested for fire-rated door assemblies.

2.2 DOOR FABRICATION

A. Fabricate doors in accordance with AWI requirements.

B. Where necessary for core type, furnish 5 inch high solid blocking rails at top and bottom edges for hardware reinforcement. Furnish lock blocks at lock edge for hardware reinforcement.

C. Vertical Exposed Edge of Stiles: Of same species as veneer facing. Hardwood for transparent finish.

D. Factory machine doors for finish hardware in accordance with hardware requirements and dimensions. Do not machine for surface hardware. Furnish solid blocking for through bolted hardware.

E. Factory fit doors for frame opening dimensions identified on shop drawings.

F. Provide edge clearances in accordance with AWI AWS Section 9.

2.3 DOOR SHOP FINISHING

A. Finish work in accordance with WDMA I.S. 1A.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 – Administrative Requirements: Coordination and project conditions.

B. Verify opening sizes and tolerances are acceptable.

C. Do not install doors in frame openings that are not plumb or are out-of-tolerance for size or alignment.

3.2 INSTALLATION

A. Install doors in accordance with AWI AWS Section 9 and manufacturer's instructions.

B. Trim non-rated door width by cutting equally on both jamb edges. Trim door height by cutting bottom edges to maximum of 3/4 inch.

C. Coordinate installation of doors with installation of frames and hardware specified in Section 08 71 00.

3.3 INSTALLATION TOLERANCES

A. Division 1 - Quality Requirements: Tolerances.

B. Conform to AWI requirements for fit and clearance tolerances.

C. Maximum Diagonal Distortion (Warp): 1/4 inch measured with straight edge or taut string, corner to corner, over imaginary 36 x 84 inches surface area.

D. Maximum Vertical Distortion (Bow): 1/8 inch measured with straight edge or taut string, top to bottom, over imaginary 36 x 84 inches surface area.

E. Maximum Width Distortion (Cup): 1/8 inch measured with straight edge or taut string, edge to edge, over imaginary 36 x 84 inches surface area.

3.4 ADJUSTING

A. Division 1 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Adjust door for smooth and balanced door movement.

C. Adjust closer for full closure.

END OF SECTION

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Smoke detector activated elevator door smoke containment curtain and control system designed to provide a tight-fitting, smoke-and draft-control assembly.

1.02 RELATED SECTIONS

A. Section 09 25 00 – Gypsum Board: Metal backing in housing mounting area.

B. Section 09 90 00 – Painting: Field painting of specified components.

C. Division 16 – Electrical: Power and control circuit power including conduit, boxes, conductors, wiring devices, and emergency power.

D. Division 16 – Electrical: Provision of smoke detectors, connections to fire detection system, and installation of end-of-line diode (3.9V, 2W) at smoke detector to monitor the circuit.

1.03 REFERENCES

A. ASTM A240/240M – Standard Specification for Heat Resisting Chromium and Chromium-Nickel Stainless Steel Plate, Sheet and Strip for Pressure Vessels.

B. ICC-ES AC77 – Acceptance Criteria for Smoke-Containment Systems Used With Fire-Resistive Elevator Hoistway Doors and Frames.

C. ICC-ES Legacy Report ER 4968.

D. NFPA Codes and Standards:

1. 70 – National Electrical Code.

2. 105 – Recommended Practice for the Installation of Smoke-Control Door Assemblies.

3. 72 – National Fire Alarm Code.

E. CBC 2019 Standard 7.210 (Part II) Test Standard for Smoke and draft control assemblies of the International Conference of Building Officials.

F. UL Standards:

1. 268 – Smoke Detectors for Fire Protective Signaling Systems.

2. 508 – Industrial Control Equipment.

3. 864 – Control Units for Fire Protective Signaling Systems.

4. 1784 – Air Leakage Tests for Door Assemblies.

G. ICC-ES Legacy Report NER 637

1.04 SUBMITTALS

A. Submit under provisions of Section 01330.

B. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.

2. Storage and handling requirements and recommendations.

3. Installation methods.

C. Shop Drawings: Include door width and height, jamb width, jamb and head projection, curtain width, mounting height, and housing width. Show and identify related work performed under other sections of the specifications.

D. Selection Samples: Color charts representing manufacturer's full range of available colors and patterns.

E. Maintenance Instructions: Comply with Section 01700.

1. Manufacturer’s installation instructions and testing procedures.

2. Manufacturer’s operation and maintenance manual.

F. Certifications: Copy of specified items.

G. Warranties: Copies of manufacturer’s warranties.

1.05 QUALITY ASSURANCE

A. Overall Standards: Manufacturer shall maintain a quality control program in accordance with ICBO-ES Acceptance Criteria AC 77.

B. Qualifications:

1. Manufacturer Qualifications: Minimum seven years experience in producing smoke containment systems of the type specified.

2. Installer Qualifications: Factory trained by manufacturer.

C. Certifications

1. Manufacturer’s ICC-ES Legacy Report 4968.

2. California Office of the State Fire Marshal Listing.

3. Testing Laboratory Label.

4. UL Listing.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Follow manufacturer’s instructions.

1.07 WARRANTY

A. Provide manufacturer’s standard one year warranty.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturer: Smoke Guard Corporation “Model 600”. Substitutions not permitted (no known equal).

1. Verify width of elevator door openings.

2.02 PERFORMANCE REQUIREMENTS

A. Air Leakage: Not to exceed 3 cfm per square foot of door opening at 0.1 inch water pressure differential at ambient temperature and 400 degree F tested per 1998 California Building Code/UBC Standard 7-2.

2.03 MATERIALS

A. Curtain:

1. Film: Minimum 1 mil thick transparent polyimide film reinforced with minimum 100 denier Nomex yarn at 0.25 in each way.

2. Magnetic Strips: Flexible multi-pole strips attached to longitudinal edges of film with low modulus silicone adhesive.

B. Housing: 20 gauge, powder coated, cold rolled steel container with dust cover and door with concealed hinges. Housings are 55 inches or 64 inches in length, plus 1-1/2 inches for a junction box on the left side.

C. Rewind Motor: NFPA 70, 90V DC.

D. Release Mechanism: Comply with UL Standard No. 864.

E. Screen Rewind Switch: Include switch to rewind curtain into housing.

F. Label each smoke containment system with following information:

1. Manufacturer’s name.

2. Maximum leakage rating at specified pressure and temperature conditions.

3. Label of quality control agency.

PART 3 EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared. Notify Architect of satisfactory preparation before proceeding.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Protect adjacent surfaces from damage due to installation.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions.

3.04 FIELD QUALITY CONTROL

A. Field Test: Follow manufacturer’s cycle test procedures.

1. Notify Owner’s Representative, local Fire Marshal, Contractor, fire alarm sub-contractor and elevator service company minimum 5 working days in advance of scheduled testing.

2. Demonstrate operation of all installed containment curtains and control systems to the satisfaction of all notified parties.

3. Complete maintenance service record.

3.05 CLEANING

1. Reference Section 01700 – Execution.

3.06 DEMONSTRATION

1. Demonstrate required testing and maintenance procedures to Owner's Representative.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes fire-rated and non-rated service access doors and panels in walls and ceilings.

1. Provide for access to controls, valves, traps, dampers, cleanouts, and similar items requiring operation behind inaccessible finished surfaces, whether shown or not.

2. Provide at other locations as shown.

3. Coordinate exact locations with various trades to assure proper placement of access doors and panels.

4. Refer to Part 3 for application Schedule.

B. Related Sections:

1. Section 09 21 16 – Gypsum Board Assemblies: Furnishing rough openings for access doors and frames.

2. Section 09 90 00 - Painting and Coating: Field paint finish.

3. Division 21 – Fire Protection: Furnishing access doors as required. Types as described in this Section.

4. Division 22 – Plumbing: Furnishing access doors as required. Types as described in this Section.

5. Division 23 – Heating, Ventilating and Air Conditioning: Furnishing access doors as required. Types as described in this Section.

6. Division 26 – Electrical: Furnishing access doors as required. Types as described in this Section.

1.2 REFERENCES

A. American Society for Testing and Materials International (ASTM):

1. ASTM E119: Standard Test Methods for Fire Tests of Building Construction and Materials.

B. California Building Code (CBC) 2010.

C. Intertek Testing Services (Warnock Hersey Listed) (WH):

1. Certification Listings.

D. National Fire Protection Association (NFPA):

1. NFPA 80 - Standard for Fire Doors, Fire Windows.

E. Underwriters Laboratories Inc. (UL):

1. UL - Building Materials Directory.

1.3 SUBMITTALS

A. Submit following items under provisions of Division 1.

B. Product Data: Submit literature indicating sizes, types, finishes, hardware, scheduled locations, fire resistance listings, and details of adjoining Work.

1.4 CLOSEOUT SUBMITTALS

A. Division 1 - Execution and Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of access units.

1.5 QUALITY ASSURANCE

A. Conform to CBC for fire rated access units.

B. Fire Resistance Ratings: Where indicated as fire rated assemblies from manufacturers listed in UL Directory or Intertek Testing Services (Warnock Hersey Listed) Directory.

C. Fire Rated Horizontal Access Doors: Rating as indicated on Drawings.

1. Tested Rating: Determined in accordance with ASTM E119.

D. Attach label from agency approved by authority having jurisdiction to identify each fire rated access door.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified with minimum three years documented experience, and with service facilities within 100 miles of Project.

1.7 COORDINATION

A. Division 1 – Administrative Procedures: Requirements for coordination.

B. Coordinate Work with work requiring controls, valves, traps, dampers, cleanouts, and similar items requiring operation being located behind finished surfaces.

PART 2 – PRODUCTS

2.1 ACCESS DOORS AND PANELS

A. Manufacturers: Furnish compliant products of one or more of the following or approved equal. Furnish single manufacturer per classification of access door or panel.

1. Bauco Access Panel Solutions, Inc.
2. Karp Associates, Incorporated.
3. J.L. Industries / Activar Incorporated.
4. Nystrom Products Company.
5. Milcor LTD, Partnership.

B. Product Descriptions: Products of Karp Associates, Inc. are referenced in each product classification as the basis of the specification, except as noted.

1. Flanged Stainless – Non-Rated: Stainless steel door and 16 gauge frame with flanges flush to door face. Basis of Specification: "DSC-214M".
2. Flanged Stainless – Fire Rated: Stainless steel, self-closing and self-latching door and 16 gauge frame with UL label valid for two-hour wall assembly. Basis of Specification: "KRP-250FR".
3. Concealed Flange Steel – Non-Rated: 16 gauge, galvanized beaded frame for embedment in drywall compound for concealment. Factory primed for field painting. Basis of Specification: "KDW".
4. Concealed Flange Steel - Rated: 16 gauge, galvanized beaded frame for embedment in drywall compound for concealment. UL label valid for two-hour wall assembly. Self-closing, self-latching steel door. Factory primed for field painting. Basis of Specification: "KRP-350FR".
5. Concealed Flange Drywall – Non-Rated Acoustical: Concealed hinge and 5/8-inch moisture-resistant gypsum board inlay for flush installation, recessed aluminum frame. Installation shall result in approximately 1/8-inch flush drywall gap all around. Basis of Specification: Bauco Access Panel's "baucoplus-II" series.

2.2 FABRICATION

A. Fabricate units of continuous welded construction; weld, fill, and grind joints to assure flush and square unit.

B. Wall and Ceiling Access Door and Panel Hardware:

1. Hinge: Standard continuous or concealed spring pin type, 175 degree steel hinges. Finish to match door and frame. Fire rated doors shall be self-closing.
2. Lock: Furnish all steel access doors and panels with keyed cylinder lock, all keyed alike. Fire rated doors shall be self-latching.

C. Size Variations: Obtain acceptance of manufacturer's standard size units which vary slightly from sizes shown or scheduled on Drawings.

D. Finish:

1. Stainless: No. 4.

2. Steel: Factory primed for field painting.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 – Administrative Procedures: Coordination and project conditions.

B. Verify rough openings for access doors and panels are correctly sized and located.

3.2 INSTALLATION – STEEL ACCESS DOORS

A. Secure frames rigidly in place, plumb and level in opening, with plane of door and frame face nominally aligned with adjacent finished surfaces.

B. Position unit to provide convenient access to concealed work requiring access.

C. Install fire rated units in accordance with NFPA 80 and requirements for fire listing. Line rough opening with gypsum board.

D. Paint factory primed doors to match adjacent gypsum board surface.

3.3. INSTALLATION – CONCEALED FLANGE DRYWALL ACCESS DOORS

A. Install panel finish flush with adjacent gypsum board ceiling surface. Fasten frame securely into rough opening per manufacturer's recommendations.

B. Tape, fill and sand smooth edges of frame to adjacent gypsum board for continuous appearance.

C. Paint to match adjacent gypsum board surface.

3.4 INSTALLATION SCHEDULE

A. General: Furnish access panel and door product classifications as follows:

1. Ceramic Tile Walls: Flanged Stainless. Furnish fire-rated where installed in fire rated partitions and walls.

2. Gypsum Board Walls: Concealed Flange Steel, field painted to match adjacent surface. Furnish fire-rated where installed in fire rated partitions and walls.

3. Gypsum Board Walls and Ceilings, Non-Rated Acoustical: Concealed Flange Drywall, field finished to match adjacent surface.

4. Gypsum Board Ceilings – Rated: Concealed Flange Steel, fire-rated, field painted to match adjacent surface.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes motor-operated overhead coiling door assemblies and operating hardware.

1. Provide anchorages and inserts as required for mounting and anchoring.

B. Related Sections:

1. Section 05 50 00 – Metal Fabrications: Provision of structural supports, **jamb and head sheet metal trim.**

2. Section 08 71 00 – Hardware: Product Requirements for cylinder core and keys for placement by this Section.

3. Section 09 90 00 Painting and Coating

4. Division 26 - Electrical **wiring and conduit, fuses, disconnect switches, connection of operator to power supply, and installation of control station and wiring**.

C. **Products That May Be Supplied, But Are Not Installed Under This Section:**

1. Control Station

1.2 REFERENCES

A. American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE):

1. ASHRAE Handbook – Fundamentals.

B. ASTM International:

1. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

2. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

C. Underwriters Laboratories (UL):

1. UL 325 - Standard for Door, Drapery, Gate, Louver, and Window Operators and Systems.

1.3 PERFORMANCE REQUIREMENTS

A. Wind Loads: Design door assembly to withstand positive and negative wind load as determined in conformance with given wind load criteria identified in Structural Drawings, with maximum deflection of 1/120, and without damage to door or assembly components.

B. Seismic Performance: Overhead coiling doors are to withstand the effects of earthquake motions determined according to ASCE/SEI 7.

C. Operation: Design door assembly to operate for not less than 50,000 cycles.

1.4 SUBMITTALS

A. Division 1 – Submittal Procedures: Submittal procedures.

B. Product Data: Submit general construction, component connections and details.

1. Manufacturer's Installation Instructions: Indicate installation sequence and procedures, and adjustment and alignment procedures.

C. Shop Drawings: Indicate pertinent dimensioning, anchorage methods, hardware locations, and installation details.

1. Reference each door using Opening Number identified in the Drawings.

D. Maintenance and Operating Manuals: Furnish complete manuals describing materials, devices, and procedures to be followed in operating and maintaining coiling doors. Include manufacturer’s brochures and parts lists describing actual materials used in the product.

E. Samples: Submit door slats, 12 inch x 12 inch in size illustrating shape, color and finish texture.

1.5 QUALITY ASSURANCE

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years’ experience.

B. Installer: Company specializing in performing work of this section with minimum three years’ experience and approved by the manufacturer.

C. Insulated Door Slat Material Requirements:

1. Maximum 10/50 flame spread/smoke developed index when tested in accordance with ASTM E84.

2. Minimum R-value of 6.2 as calculated according to ASHRAE.

3. Insulation to be CFC-free with an Ozone Depletion Potential rating of zero.

D. Provide each overhead coiling door as complete unit produced by single manufacturer, including hardware, accessories, mounting and installation components.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Division 1 – Product Requirements.

B. Deliver, store, and handle items to prevent damage or deformation.

C. Deliver items only after proper facilities are available. Do not discharge or store materials on ground.

D. Store delivered products undercover and in clean, safe, dry surfaces or platform as required. Protect from deterioration and foreign matter.

1.7 WARRANTY

A. Division 1 - Execution and Closeout Requirements: Requirements for warranties.

B. General: Warranties shall pay for all costs associated with repairs and replacement upon notification of defects.

C. Material Warranty: Provide material manufacturer's product warranty for a minimum of five (5) years from date of Substantial Completion. Shall include finish warranty against rust through, fading, peeling and chalking.

1. Motor Warranty: Provide two-year material warranty on operator motor and parts.

PART 2 – PRODUCTS

2.1 OVERHEAD COILING DOORS

A. Manufacturers: Provide compliant products of one of the following or approved equal:

1. The Cookson Company, Incorporated.
2. Lawrence Roll-Up Doors, Incorporated.
3. Overhead Door Corporation.

B. Product Description: Insulated, face of wall mounted, motorized service door. Basis of Specification: Cookson Company's "Thermiser Max" Model "ESD30".

2.2 COMPONENTS

A. Curtain: Conform to the following:

1. Steel Slats: Interlocking, minimum 22 gauge of Grade 40 ASTM A653 galvanized steel.
   a. Type: Sandwich slat construction with manufacturer's standard insulated core.
2. Bottom Bar: Two 1/8 inch steel angles mechanically joined together. Factory-applied baked on thermosetting powder coat to match finish indicated on curtain.

B. Guides: Minimum 3/16 inch thick steel angles, continuous, vertical mounted; steel mounting brackets.

C. Hood Enclosure and Fascia: Square Shape, minimum 24 gauge galvanized steel, internally reinforced to maintain rigidity and shape.

D. Electric Operator: UL 325, front of coil side mounted, totally enclosed, nonventilated or fan-cooled medium duty motor. Basis of Specification: Cookson Company "Model MG".

1. Motor Enclosure: NEMA MG1 Type 1 enclosure.
2. Motor Rating: 3/4 hp; continuous duty.
3. Motor Voltage: 230/460 volt, three phase, 60 hz.
4. Motor Controller NEMA ICS 2, full voltage, reversing magnetic motor starter.
5. Controller Enclosure: NEMA 250 Type 4.
6. Door Speed: 12 inches per second.
7. Brake: Adjustable friction clutch type, activated by motor controller.

F. Control Station: Standard three button (Open-Stop-Close) constant pressure control for each operator; 24 volt circuit, recessed.

G. Safety Edge: Manufacturer's standard safety edge and weatherseal located at door bottom, full width, sensitized type, wired to reverse upon striking object.

H. Emergency Chain Hoist: Provide manual chain hoist operator with endless steel chain, chain pocket wheel and guard, geared reduction unit, and chain keeper secured to guide.

I. Weatherstripping:

1. Bottom Bar: Replaceable, bulb-style, compressible EDPM gasket extending into guides.

2. Guides: Replaceable vinyl strip on guides sealing against fascia side of curtain.

3. Hood: Neoprene/rayon baffle to impede air flow above coil.

2.3 ACCESSORIES

A. Locks: Manufacturer's standard cylinder dead lock on inside at door jamb, key operated from interior. Cylinder shall be master keyed.

B. Weatherstripping: Moisture and rot proof, resilient types for complete weathertight installation at bottom bar and guides at fascia side of curtain.

1. Include baffle to impede air flow seal between hood and lintel.

2.4 SHOP FINISHING

A. Curtain Slats – Galvanized Steel: Bonderized coating for prime coat adhesion to galvanized surface, and factory applied thermosetting powder coating applied with a minimum thickness of 2.5 mils. Custom color as selected by Architect.

B. Hood Enclosure, Fascia **and Jamb Trim** – **24 GA .**Galvanized Steel: Match curtain slat system and color. **Provide minimum 1/4 inch (6.35 mm) steel intermediate support brackets as required to prevent excessive sag.**

C. Steel Guides: Factory-applied baked on thermosetting powder coat to match finish indicated on curtain.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 - Administrative Requirements: Coordination and project conditions.

B. Examine substrates upon which work will be installed and verify conditions are in accordance with approved shop drawings.

C. Verify opening sizes and tolerances are acceptable.

3.2 INSTALLATION

A. Install overhead coiling grilles in accordance with manufacturer's printed instructions and reviewed Shop Drawings.

B. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.

C. Securely and rigidly brace components suspended from structure. Secure guides to structural members only.

D. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

E. Coordinate installation of sealants and backing materials at frame perimeter as specified in Section 07 90 00.

F. Install all weatherstripping.

3.3 ADJUSTING

A. Division 1 - Execution and Closeout Requirements: Testing, adjusting, and balancing.

B. Adjust shutter, hardware, and operating assemblies for smooth and quiet operation.

C. Upon completion, ensure overhead coiling grilles are free from warp, twist, or distortion, and are lubricated and properly adjusted to operate freely.

3.4 CLEANING

A. Division 1 - Execution and Closeout Requirements: Final cleaning.

B. Thoroughly clean surfaces of grease, oil, and other impurities as recommended by manufacturer.

C. Remove labels and visible markings.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes design and provision of INTERIOR tubular aluminum-framed storefront systems, with or without supplementary internal support framing, operable window units where shown on Drawings, aluminum and glass entrance doors and frames, glass glazing, related flashings, anchorage and attachment devices.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.
2. Section 05 50 00 - Metal Fabrications: Steel fabricated attachment devices.
3. Section 07 42 43 – Composite Wall Panels: Infill panels in storefront.
4. Section 07 62 00 – Sheet Metal Flashing and Trim.
5. Section 07 90 00 - Joint Protection: System perimeter sealant and back-up materials.
6. Section 08 44 13 – Glazed Aluminum Curtain Walls.
7. Section 08 71 00 - Door Hardware.
8. Section 08 80 00 - Glazing.

5. ASTM E283 - Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.

6. ASTM E330 - Standard Test Method for Structural Performance of Exterior Windows, Curtain Walls, and Doors by Uniform Static Air Pressure Difference.

7. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Curtain Walls, and Doors by Uniform Static Air Pressure Difference.

8. ASTM E547 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Cyclic Static Air Pressure Differential.

9. ASTM E1105 - Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Curtain Walls, and Doors by Uniform or Cyclic Static Air Pressure Difference.

E. California Code of Regulations,Title 24, Part 1:

1. CAC – California Administrative Code

F. National Fenestration Rating Council Incorporated:

1. NFRC 100 - Procedures for Determining Fenestration Product U-Factors.

G. SSPC: The Society for Protective Coatings:

1. SSPC Paint 20 - Zinc-Rich Primers (Type I - Inorganic and Type II - Organic).

2. SSPC Paint 25 - Red Iron Oxide, Zinc Oxide, Raw Linseed Oil, and Alkyd Primer.

1.3 PERFORMANCE REQUIREMENTS

A. System Design: Design and size components to withstand dead and live loads caused by positive and negative wind pressure acting normal to plane of wall, including building corners.

1. As calculated in accordance with the current version of the California Building Code, as tested in accordance with ASTM E330. Refer to Structural Drawings.

2. Safety Factor: Unless otherwise specified, design components, parts, and assemblies including glazing stops, gaskets, adhesives, and sealants for a safety factor not less than 1.5. Failure of any part or assembly not acceptable at less than 1.5 times design wind load pressure. Failure defined as breakage, disengagement, permanent deformation of framing members in excess of L/1000 or 1/64-inch of their clear span, whichever is less; or permanent deformation of anchor assemblies beyond tolerance and slippage limitations.

3. Deflection Normal to Wall Plane: Limit mullion deflection to 1/175 for spans under 13’-6” or 3/4 inch, whichever is less, except L/360 at members adjacent to plaster or gypsum board surfaces; with full recovery of glazing materials.

B. System Assembly: Accommodate without damage to components or deterioration of seals, movement within system, movement between system and peripheral construction, dynamic loading and release of loads, deflection of structural support framing.

C. Air Infiltration: Limit air leakage through assembly to 0.06 cfm/min/sq ft of wall area, measured at reference differential pressure across assembly of 6.24 psf as measured in accordance with AAMA/WDMA 101/I.S.2.

D. Expansion / Contraction: Provide for expansion and contraction within system components caused by cycling temperature range of 170 degrees F over 12 hour period without causing detrimental effect to system components and anchorage.

E. System Internal Drainage: Drain water entering joints, condensation occurring in glazing channels, or migrating moisture occurring within system, to exterior by weep drainage network.

F. Not Permitted: Assemblies shall be free from rattles, vibration harmonics, wind whistles, noises caused by thermal and structural movement, thermal movement transmitted to other building elements, loosening, weakening, or fracturing of attachments or components of the system.

G. Design Modifications: Maintain general design concept without altering profiles or adversely affecting appearance, durability, or strength of materials. Modifications acceptable only as may be necessary to comply with design criteria. Submit variations in details and materials for review.

1.4 SUBMITTALS

A. Division 1 - Submittal Procedures: Submittal procedures.

1. Provide stamped engineered drawings indicating system dimensions, framed opening requirements and tolerances, affected related Work and expansion and contraction joint location and details. Furnish elevations of each section of storefront and include details of each condition for each storefront section, indicating anchorages, sealant application, glazing system, integration of flashings specified elsewhere, and as required for proper fabrication, assembly, and installation.

2. Calculations: Submit stamped engineered calculations to substantiate shop drawing compliance with the specified design criteria.

    a. Design Data: Indicate framing member structural and physical characteristics, dimensional limitations.

B. Product Data: Submit component dimensions, describe components within assembly, anchorage and fasteners, glass and infill, and internal drainage details.

C. Test Reports: Submit certified test reports showing compliance with specified Performance Requirements.

D. Samples: Submit 12 x 12 inches in size illustrating each type of finished aluminum surface, and glass glazing materials.

E. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Materials Resources Certificate: Certify recycled material content for recycled content products.

    a. Product Cost Data: Products with recycled material content. Exclude cost of labor and equipment to install products.

2. Indoor Air Quality Certificates: Certify volatile organic compound content for each interior adhesive and sealant and related primer.

F. Provide documentation showing paints and coatings in accordance with 01 81 13 Sustainable Design Requirement.

1.5 QUALIFICATIONS

A. Manufacturer and Installer: Companies specializing in manufacturing and installing aluminum glazing systems with minimum three years experience.

1.6 PRE-INSTALLATION MEETINGS

A. Before the start of Work, meet at the Project site to review methods and sequence of installation, special details and conditions, quality standards, testing and quality control requirements, job organization and other pertinent topics related to the Work. The meeting shall include the Owner's representative, Architect, Contractor, and subcontractors whose work is relevant to this Specification Section.

1.7 DELIVERY, STORAGE, AND PROTECTION

A. Packing, Shipping, Handling, and Unloading: Deliver units and accessories in manufacturer's original packaging, clearly identified with manufacturer's name and type of product, finish, and installation location.

B. Storage and Protection: Store in the original packaging, indoors, in an upright position, protected from damage. Handle in a manner to prevent twisting and other damage.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Do not install sealants nor glazing materials when ambient temperature is less than 40 degrees F during and 48 hours after installation.

1.9 COORDINATION

A. Coordinate the Work with installation of metal flashings, air and weather barriers, automatic entrance doors, and door hardware components or materials.

1.10 WARRANTY

A. Division 1 - Execution and Closeout Requirements: Product warranties and product bonds. Contractor shall make repairs and replacements upon notification of defects.

1. Assembly: Warrant for 10 years against excessive deflection, water penetration and failure of operable components.

2. Finishes: Warrant for 20 years against excessive deterioration of finishes.

PART 2 – PRODUCTS

2.1 ALUMINUM-FRAMED STOREFRONTS

A. Manufacturers: Provide one of the following or approved equal.

1. C.R. Laurence Company, Incorporated / U.S. Aluminum.

2. EFCO Corporation / Pella Company.

3. Kawneer North America.

B. Product Description: Kawneer’s “Trifab 451” is the Basis of the Specification.

1. Aluminum Frame: 2 inches by 4-1/2 inches deep, thermally broken; flush front glazing; capacity for 1/4 inch to 1 inch glazing infills,; drainage holes; internal weep drainage system.

2. Mullions: Profile of extruded aluminum with internal reinforcement of aluminum or shaped steel structural section where required to meet specified Performance Requirements.

3. Doors: Manufacturer’s heavy-duty aluminum framed glass doors; 1-3/4 to 1-7/8 inches thick, nominal 5 to 6 inch wide top rail and vertical stiles, ADA-compliant bottom rail; capacity for 1/4 inch to 1 inch infills, square glazing stops.

4. Frameless Glass Pivot Door: Basis of design CRL Wedge-Lock Dry Glazed Glass Securing system. 1/2" thick tempered glass with 14" high custom length 0" high alum. bottom and 4" high custom length square style non-clad door top rails and non-clad header. 10" high custom length square style non-clad door bottom rails with locks. Finish to be brushed stainless.

2.2 SUSTAINABILITY CHARACTERISTICS

A. Division 1 - Sustainable Design Requirements: Requirements for sustainable design compliance.

B. Materials and Resources Characteristics:

1. Recycled Content Materials: Furnish materials with maximum available recycled content, and with no less than that required in Section 01 81 13.

C. Indoor Environmental Quality Characteristics:

1. Adhesives and Sealants: Maximum volatile organic compound content in accordance with Section 01 81 13.

2. Paints and Coatings: Maximum volatile organic compound content in accordance with Section 01 81 13.

2.3 COMPONENTS

A. Extruded Aluminum: ASTM B221; 6063 alloy, T5 temper typical; 6061 alloy, T6 temper for extruded structural members.

B. Sheet Aluminum: ASTM B209, 5005 alloy, H15 or H34 temper.

C. Steel Sections: ASTM A36; shaped to suit mullion sections, galvanized or alkyd type zinc chromate primer complying with FS TT-P-645.

D. Glass: Specified in Section 08 80 00. Provide grey glazing sealants.

E. Glazing Materials: Storefront manufacturer's standard types to suit application and to achieve weather, moisture, and air infiltration requirements.

F. Gaskets: All gaskets to be grey.

H. Hardware: Specified in Section 08 71 00.

I. Sealant and Backing Materials:

1. Sealant Used Within System (Not Used for Glazing): Manufacturer's standard materials to achieve weather, moisture, and air infiltration requirements. Color to be grey.

2. Perimeter Sealant: Specified in Section 07 90 00.

J. Fasteners: Stainless, aluminum or other materials warranted by manufacturer to be non-corrosive and compatible with components being fastened.

K. Anchors: Stainless of size and type appropriate for intended use.

L. Shims: Multi-polymer plastic, 8000 psi, or stainless steel of same type used for anchors.

2.4 FABRICATION

A. Fabricate components with minimum clearances and shim spacing around perimeter of assembly, yet enabling installation and dynamic movement of perimeter seal. Verify with Architect any restrictions upon the use of stacked shims at load bearing conditions.

B. Accurately fit and secure joints and corners. Make joints flush, hairline.

C. Prepare components to receive anchor devices. Fabricate anchors.

D. Arrange fasteners and attachments to conceal from view.

E. Reinforce interior horizontal head rail to receive window treatment brackets and attachments, where required.

F. Prepare components with internal reinforcement for door hardware.

G. Reinforce framing members for imposed loads.

2.5 ALUMINUM FINISHES

A. High-Performance Organic Finish – Two-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat.

1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

2. Color: Match Glazed Aluminum Curtainwall as specified in Section 08 44 13.

B. Concealed Steel Items: Galvanized to ASTM A123; primed with iron oxide paint.

C. Apply bituminous paint to concealed aluminum and steel surfaces in contact with cementitious or dissimilar metals.

D. Shop Primer for Steel Components: SSPC Paint 25 red oxide.

E. Touch-Up Primer for Galvanized Steel Surfaces: SSPC Paint 20 zinc rich.

F. Extent of Finish:

1. Apply finish to surfaces cut during fabrication where visible in completed assemblies, including joint edges.

2. Apply touch-up materials recommended by coating manufacturer for field application to cut ends and minor damage to factory applied finish.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division - Administrative Requirements: Coordination and project conditions.

B. Verify dimensions, tolerances, and method of attachment with other Work.

C. Verify wall openings and adjoining air and vapor seal materials are ready to receive Work of this Section.

3.2 INSTALLATION

A. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

B. Provide alignment attachments and shims to permanently fasten system to building structure. Do not stack shims where they will bear gravity loads unless approved by Architect.

C. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent Work as indicated.

D. Provide thermal isolation where components penetrate or disrupt building insulation.

E. Install sill flashings. Turn up ends and edges; seal to adjacent Work to form water tight dam.

F. Coordinate attachment and seal of perimeter air and vapor retarder materials.

G. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

H. Install integral flashings and integral joint sealers.

I. Set thresholds in bed of mastic or sealant and secure.

J. Install hardware using templates provided. Refer to Section 08 71 00 for installation requirements.

K. Install infill panels using method required to achieve performance criteria.

L. Coordinate installation of glass with Section 08 80 00; separate glass from metal surfaces.

M. Coordinate installation of perimeter sealants with Section 07 90 00.

3.3 ERECTION TOLERANCES

A. Maximum Variation from Plumb: 0.06 inch every 3 feet non-cumulative or 1/16 inch per 10 feet, whichever is less.

B. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch.

3.4 FIELD QUALITY CONTROL

A. Test to AAMA 502 or 503. Perform test at three different locations identified by Architect or Owner's Representative. Test at earliest date possible subsequent to completion of storefront installation and curing of sealants. At locations of failed tests, correct deficiencies; inspect and correct for similar deficiencies found at other storefront locations. Re-test failed locations at no additional cost to Owner until all tests pass.

3.5 ADJUSTING

A. Adjust operating hardware for smooth operation.

3.6 CLEANING

A. Division 1 - Execution and Closeout Requirements: Final cleaning.

B. Remove protective material from pre-finished aluminum surfaces.

C. Wash down surfaces with solution of mild detergent in warm water, applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean.

D. Remove excess sealant by method acceptable to sealant manufacturer.

3.7 PROTECTION OF INSTALLED CONSTRUCTION

A. Division 1 - Execution and Closeout Requirements: Protecting installed construction.

B. Protect finished Work from damage.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes design and provision of tubular aluminum-framed glazed curtain wall systems with or without supplementary internal support framing, integral operable window units and louver units where shown on Drawings, glass glazing, metal infill panels, related flashings, integral and perimeter sealants, insulation at floor slab interface, anchorage and attachment devices.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.
2. Section 05 50 00 - Metal Fabrications: Steel fabricated attachment devices.
3. Section 07 42 43 – Composite Wall Panels: Infill panels in curtainwall.
4. Section 07 62 00 – Sheet Metal Flashing and Trim.
5. Section 07 90 00 - Joint Protection: System perimeter sealant and back-up materials.
6. Section 08 41 13 – Aluminum-Framed Storefronts and Entrances: Includes entrances installed into curtain wall.
7. Section 08 80 00 – Glazing: Glass glazing in curtainwall.

2. SSPC Paint 25 - Red Iron Oxide, Zinc Oxide, Raw Linseed Oil, and Alkyd Primer.

1.3 PERFORMANCE REQUIREMENTS

A. System Design: Design and size components to withstand dead and live loads caused by positive and negative wind pressure acting normal to plane of wall, including building corners.

1. As calculated in accordance with the current version of the California Building Code, as tested in accordance with ASTM E330. Refer to Structural Drawings.

2. Safety Factor: Unless otherwise specified, design components, parts, and assemblies including glazing stops, gaskets, adhesives, and sealants for a safety factor not less than 1.5. Failure of any part or assembly not acceptable at less than 1.5 times design wind load pressure. Failure defined as breakage, disengagement, permanent deformation of framing members in excess of L/1000 or 1/64-inch of their clear span, whichever is less; or permanent deformation of anchor assemblies beyond tolerance and slippage limitations.

3. Deflection Normal to Wall Plane: Limit mullion deflection to 1/175 for spans under 13'-6" or 3/4 inch, whichever is less, except L/360 at members adjacent to plaster or gypsum board surfaces; with full recovery of glazing materials.

B. System Assembly: Accommodate without damage to components or deterioration of seals, movement within system, movement between system and peripheral construction, dynamic loading and release of loads, deflection of structural support framing, interstory drift.

C. Air Infiltration: Limit air leakage through assembly to 0.06 cfm/min/sq ft of wall area, measured at reference differential pressure across assembly of 6.24 psf as measured in accordance with AAMA/WDMA 101/I.S.2.

D. Water Leakage: None, when measured in accordance with AAMA/WDMA 101/I.S.2 with test pressure difference of 20 percent of design pressure, with minimum differential of 2.86 lbf/sq ft and maximum of 12.00 lbf/sq ft.

E. Air and Weather Seal: Maintain continuous air and weather barrier at all perimeter interfaces at adjacent assemblies.

F. Thermal and Solar Heat Transmittance of Assembly (U-Factor and Solar Heat Gain Coefficient): NFRC 100; comply with the California Energy Code for climate zone in which project is located.

G. Expansion / Contraction: Provide for expansion and contraction within system components caused by cycling temperature range of 170 degrees F over 12 hour period without causing detrimental effect to system components and anchorage.

H. System Internal Drainage: Drain water entering joints, condensation occurring in glazing channels, or migrating moisture occurring within system, to exterior by weep drainage network.

I. Not Permitted: Assemblies shall be free from rattles, vibration harmonics, wind whistles, noises caused by thermal and structural movement, thermal movement transmitted to other building elements, loosening, weakening, or fracturing of attachments or components of the system.

J. Design Modifications: Maintain general design concept without altering profiles or adversely affecting appearance, durability, or strength of materials. Modifications acceptable only as may be necessary to comply with design criteria. Submit variations in details and materials for review.

1.4 SUBMITTALS

A. Division 1 - Submittal Procedures: Submittal procedures.

1. Shop Drawings: Provide stamped engineered drawings indicating system dimensions, framed opening requirements and tolerances, affected related Work and expansion and contraction joint location and details. Furnish elevations of each section of storefront and include details of each condition for each storefront section, indicating anchorages, sealant application, glazing system, integration of flashings specified elsewhere, and as required for proper fabrication, assembly, and installation.

2. Calculations: Submit stamped engineered calculations to substantiate shop drawing compliance with the specified design criteria.

a. Design Data: Indicate framing member structural and physical characteristics, dimensional limitations.

B. Product Data: Submit component dimensions, describe components within assembly, anchorage and fasteners, glass and infill, and internal drainage details.

C. Test Reports: Submit certified test reports showing compliance with specified Performance Requirements.

D. Samples: Submit 12 x 12 inches in size illustrating each type of finished aluminum surface, and glass glazing materials.

E. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Materials Resources Certificate: Certify recycled material content for recycled content products.

a. Product Cost Data: Products with recycled material content. Exclude cost of labor and equipment to install products.

2. Indoor Air Quality Certificates: Certify volatile organic compound content for each interior adhesive and sealant and related primer.

F. Provide documentation showing paints and coatings in accordance with 01 81 13 Sustainable Design Requirements

1.5 QUALIFICATIONS

A. Manufacturer and Installer: Companies specializing in manufacturing and installing aluminum glazing systems with minimum five years' experience and with service facilities within 100 miles of Project.

1.6 PRE-INSTALLATION MEETINGS

A. Before the start of Work, meet at the Project site to review methods and sequence of installation, special details and conditions, quality standards, testing and quality control requirements, job organization and other pertinent topics related to the Work. The meeting shall include the Owner's representative, Architect, Contractor, and subcontractors whose work is relevant to this Specification Section.

1.7 DELIVERY, STORAGE, AND PROTECTION

A. Packing, Shipping, Handling, and Unloading: Deliver fabricated units and accessories to the project site in accordance with the requirements of AAMA CW-10, in manufacturer's original packaging, clearly identified with manufacturer's name and type of product, finish, and installation location.

B. Storage and Protection: Store in the original packaging, indoors, in an upright position, protected from damage. Handle in a manner to prevent twisting and other damage.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Do not install sealants nor glazing materials when ambient temperature is less than 40 degrees F during and 48 hours after installation.

1.9 COORDINATION

A. Coordinate the Work with installation of metal flashings, air and weather barriers, automatic entrance doors, and door hardware components or materials.

1.10 WARRANTY

A. Division 1 - Execution and Closeout Requirements: Product warranties and product bonds. Contractor shall make repairs and replacements upon notification of defects.

1. Assembly: Warrant for 10 years against excessive deflection, water penetration and failure of operable components.

2. Finishes: Warrant for 20 years against excessive deterioration of finishes.

PART 2 – PRODUCTS

2.1 GLAZED ALUMINUM CURTAIN WALL

A. Manufacturers: Provide one of the following or approved equal.

1. C.R. Laurence Company, Incorporated / U.S. Aluminum.
2. EFCO Corporation / Pella Company.
3. Kawneer North America.
4. Shuco USA L.P.
5. Overrgaard, Ltd.

B. Product Description: Overgaard Ltd 1034is the Basis of the Specification. Glazed aluminum curtainwall, thermally broken with interior tubular section insulated from exterior glass retaining member; matching stops and glass retaining member of sufficient size and strength to provide bite on glass and infill panels; drainage holes, deflector plates and internal flashings to accommodate internal weep drainage system.

1. Aluminum Frame: Profile of extruded aluminum with 2-3/4 inches by 7-1/2 inches, with minimum wall thickness of 1/8 inch, flush front glazing by pressure plate or combination pressure plate and structural silicone glazing; capacity for 1/4 inch to 1-11/16 inch glazing infills.
2. Reinforcement: Internal reinforcement of aluminum or shaped steel structural section where required to meet specified Performance Requirements.
3. Miscellaneous aluminum sill extensions, mullion closures and other profiles as shown on Drawings or required for a complete system.

2.2 SUSTAINABILITY CHARACTERISTICS

A. Division 1 - Sustainable Design Requirements: Requirements for sustainable design compliance.

B. Materials and Resources Characteristics:

1. Recycled Content Materials: Furnish materials with maximum available recycled content, and with no less than that required in Section 01 81 13.

C. Indoor Environmental Quality Characteristics:

1. Adhesives and Sealants: Maximum volatile organic compound content in accordance with Section 01 81 13.
2. Paints and Coatings: Maximum volatile organic compound content in accordance with Section 01 81 13.

2.3 COMPONENTS

A. Extruded Aluminum: ASTM B221; 6063 alloy, T5 temper typical; 6061 alloy, T6 temper for extruded structural members.

B. Sheet Aluminum: ASTM B209, 5005 alloy, H15, H16 or H34 temper.

C. Steel Sections: ASTM A36; shaped to suit mullion sections, galvanized or alkyd type zinc chromate primer complying with FS TT-P-645.

D. Glass: Specified in Section 08 80 00. Glazing sealants to be grey.

E. Glazing Materials: Curtainwall manufacturer's standard types to suit application and to achieve weather, moisture, and air infiltration requirements.

F. Gaskets: All gaskets to be grey.

G. Infill Panels:

1. Composite Panel: Specified in Section 07 42 43.

H. Flashings: Pre-Finished Aluminum Sheet as specified in Section 07 62 00 unless otherwise indicated on Drawings. Finish to match mullion sections where exposed.

I. Sealant and Backing Materials:

1. Sealant Used Within System (Not Used for Glazing): Manufacturer's standard materials to achieve weather, moisture, and air infiltration requirements.

2. Perimeter Sealant: Specified in Section 07 90 00.

J. Insulation: Mineral wool, specified in Section 07 21 16.

K. Fasteners: Stainless, aluminum or other materials warranted by manufacturer to be non-corrosive and compatible with components being fastened.

L. Anchors: Stainless of size and type appropriate for intended use.

M. Shims: Multi-polymer plastic, 8000 psi, up to 1/4 inch maximum thickness, or stainless steel of same type used for anchors.

2.4 FABRICATION

A. Do not begin fabrication until after approval of shop drawings and approval of any visual or testing mockups.

B. Fabricate components with minimum clearances and shim spacing around perimeter of assembly, yet enabling installation and dynamic movement of perimeter seal. Verify with Architect any restrictions upon the use of stacked shims at load bearing conditions.

C. Accurately machine and fit joints, corners, copes and miters, and rigidly fasten together tat contact points by welding or approved mechanical connections in accordance with approved shop drawings. Secure joints and corners. Make joints flush and hairline unless otherwise shown. Do not rigidly fasten joints designed to accommodate movement.

D. Prepare components to receive anchor devices. Fabricate anchors and paint all ferrous metal parts to be concealed with zinc rich primer.

E. Reinforce framing members and joints with steel plates, bars, rods, or angles for rigidity and strength as needed to fulfill Performance Requirements. Use concealed stainless steel fasteners for jointing which cannot be welded.

F. Provide fasteners of strength sufficient to support both horizontal wind load and vertical dead load. Space and size fasteners to develop the maximum strength of the members they secure or support. Arrange fasteners and attachments to conceal from view.

G. Make provisions in doors and frames to receive the specified hardware and accessories. Where concealed closers or other mechanisms are required, provide the necessary space, cutouts, and reinforcements for secure fastening.

H. Do not label exposed portions with trade or manufacturer's name.

2.5 ALUMINUM FINISHES

A. Superior-Performance Organic Finish – Three-Coat PVDF: Fluoropolymer finish for extrusions complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.

1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

2. Color: PPG Industries' Duranar XL ~~#UC82080XL "Champagne"~~ **#3ZMA3190 – "Ultra-Cool Champagne"**. Provide manufacturer's same color in coil-coat version as required for products specified in other Sections to match Curtain Wall.

B. Extent of Finish:

1. Apply finish to surfaces cut during fabrication where visible in completed assemblies, including joint edges.

2. Apply touch-up materials recommended by coating manufacturer for field application to cut ends and minor damage to factory applied finish.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division - Administrative Requirements: Coordination and project conditions.

B. Verify dimensions, tolerances, and method of attachment with other Work.

C. Verify wall openings and adjoining air and vapor seal materials are ready to receive Work of this Section.

3.2 INSTALLATION

A. Install wall system in accordance with AAMA MCWM-1.

B. Coordinate glazed aluminum curtain wall systems with the work of other trades and provide items placed during the installation of other work at the proper time to avoid delays in the work. Place such items, including inserts and anchors, accurately in relation to the final location of curtain wall components.

C. Attach aluminum curtain wall system to structure with steel plates and profiles to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

D. Provide alignment attachments and shims to permanently fasten system to building structure. Do not stack shims where they will bear gravity loads unless approved by Façade SEOR

E. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent Work as indicated.

F. Provide thermal isolation where components penetrate or disrupt building insulation.

G. Install sill flashings. Set into two, continuous, parallel rows of sealant at concrete. Turn sill flashings up 1/2 inch or as indicated on Drawings at ends and edges; seal to adjacent Work to form water tight dam.

H. Coordinate attachment and seal of perimeter air and vapor retarder materials.

I. Install integral flashings and integral joint sealers.

J. Install infill panels using method required to achieve performance criteria.

K. Coordinate installation of glass with Section 08 80 00; separate glass from metal surfaces.

L. Coordinate installation of perimeter sealants with Section 07 90 00.

3.3 ERECTION TOLERANCES

A. Maximum Variation from Plumb: 0.06 inch every 3 feet non-cumulative or 0.5 inch per 100 feet, whichever is less.

B. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch.

C. Sealant Space Between Curtain Wall Mullions and Adjacent Construction: ½" Nominal.

3.4 FIELD QUALITY CONTROL

A. Test installation for water penetration per AAMA 502 or 503. Perform test at 1 different location identified by Architect or Owner's Representative. Test at earliest date

possible subsequent to completion of curtain wall installation and curing of sealants. At locations of failed tests, correct deficiencies; inspect and correct for similar deficiencies found at other curtain wall locations. Re-test failed locations at no additional cost to Owner until all tests pass.

B. Curtain wall manufacturer to provide field surveillance of installation of system.

3.5 ADJUSTING

A. Adjust operating hardware for smooth operation.

3.6 CLEANING

A. Division 1 - Execution and Closeout Requirements: Final cleaning.

B. Remove protective material from pre-finished aluminum surfaces.

C. Wash down surfaces with solution of mild detergent in warm water, applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean.

D. Remove excess sealant by method acceptable to sealant manufacturer.

3.7 PROTECTION OF INSTALLED CONSTRUCTION

A. Division 1 - Execution and Closeout Requirements: Protecting installed construction.

B. Protect finished Work from damage.

END OF SECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions of Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes items known commercially as finish or door hardware that are required for swing, sliding, and folding doors, except special types of unique hardware specified in the same sections as the doors and door frames on which they are installed.

B. This Section includes the following, but is not necessarily limited to:

1. Door Hardware, including electric hardware.
2. Storefront and Entrance door hardware.
3. Low-energy door operators plus sensors and actuators.
4. Thresholds, gasketing and weather-stripping.
5. Door silencers or mutes.

1.3 REFERENCES (USE DATE OF STANDARD IN EFFECT AS OF BID DATE.)

A. 2019 California Building Code, CCR, Title 24.

B. BHMA – Builders' Hardware Manufacturers Association

C. CCR – California Code of Regulations, Title 24, Part 2, California State Accessibility Standards.

D. DHI – Door and Hardware Institute

E. NFPA - National Fire Protection Association.

1. NFPA 80 - Fire Doors and Other Opening Protectives
2. NFPA 105 - Smoke and Draft Control Door Assemblies

F. UL - Underwriters Laboratories.

1. UL 10C - Fire Tests of Door Assemblies
2. UL 305 - Panic Hardware

G. WHI - Warnock Hersey Incorporated

H. SDI - Steel Door Institute

1.4 SUBMITTALS & SUBSTITUTIONS

A. General: Submit in accordance with Conditions of the Contract and Division 1 Specification sections.

B. Submit product data (catalog cuts) including manufacturers' technical product information for each item of door hardware, installation instructions, maintenance of operating parts and finish, and other information necessary to show compliance with requirements.

C. Submit six (6) copies of schedule organized vertically into “Hardware Sets” with index of doors and headings, indicating complete designations of every item required for each door or opening. Include following information:

1. Include a Cover Sheet with;
   a. Job Name, location, telephone number.
   b. Architects name, location and telephone number.
   c. Contractors name, location, telephone number and job number.
   d. Suppliers name, location, telephone number and job number.
   e. Hardware consultant's name, location and telephone number.
2. Job Index information included;
   a. Numerical door number index including; door number, hardware heading number and page number.
   b. Complete keying information (referred to DHI hand-book "Keying Systems and Nomenclature"). Provision should be made in the schedule to provide keying information when available; if it is not available at the time the preliminary schedule is submitted.
   c. Manufacturers' names and abbreviations for all materials.
   d. Explanation of abbreviations, symbols, and codes used in the schedule.
   e. Mounting locations for hardware.
   f. Clarification statements or questions.
   g. Catalog cuts and manufacturer’s technical data and instructions.
3. Vertical schedule format sample:

Heading Number 1 (Hardware group or set number – HW -1)					
			(a) 1 Single Door #1 - Exterior from Corridor 101	(b) 90°	(c) RH
			(d) 3' 0"x7' 0" x 1-3/4" x (e) 20 Minute (f) WD x HM		
(g) 1	(h)	(i) ea	(j) Hinges - (k) 5BB1HW 4.5 x 4.5 NRP (l) ½ TMS	(m) 626	(n) IVE

2	6A A	1 ea		Lockset - ND50PD x RHO x RH x 10-025 x JTMS	626	SCH

(a) - Single or pair with opening number and location. (b) - Degree of opening (c) - Hand of door(s) (d) - Door and frame dimensions and door thickness. (e) - Label requirements if any. (f) - Door by frame material. (g) - (Optional) Hardware item line #. (h) - Keyset Symbol. (i) - Quantity. (j) - Product description. (k) - Product Number. (l) - Fastenings and other pertinent information. (m) - Hardware finish codes per ANSI A156.18. (n) - Manufacture abbreviation.

D. Make substitution requests in accordance with Division 1. Substitution requests must be made prior to bid date. Include product data and indicate benefit to the project. Furnish samples of any proposed substitution.

E. Wiring Diagrams: Provide product data and wiring and riser diagrams for all electrical products listed in the Hardware Schedule portion of this section.

F. Keying Schedule: Submit separate detailed schedule indicating clearly how the Owner's final instructions on keying of locks has been fulfilled.

G. Templates for doors, frames, and other work specified to be factory prepared for the installation of door hardware. Check shop drawings of other work to confirm that adequate provisions are made for locating and installing door hardware to comply with indicated requirements.

H. Furnish as-built/as-installed schedule with close-out documents, including keying schedule and transcript, wiring/riser diagrams, manufacturers' installation and adjustment and maintenance information.

I. Fire Door Assembly Testing: Submit a written record of each fire door assembly to the Owner to be made available to the Authority Having Jurisdiction (AHJ) for future building inspections.

J. LEED Certification Points: Submit information and certifications necessary to achieve maximum points for LEED certification; coordinate and cooperate with Owner and Architect in providing information necessary for required LEED rating.

1.5 QUALITY ASSURANCE

A. Obtain each type of hardware (latch and lock sets, hinges, closers, exit devices, etc.) from a single manufacturer.

B. Supplier Qualifications: A recognized architectural door hardware supplier, with warehousing facilities in the project's vicinity, that has a record of successful in-service performance for supplying door hardware similar in quantity, type, and quality to that indicated for this project and that employs an experienced architectural hardware consultant (AHC) who is available to Owner, Architect, and Contractor, at reasonable times during the course of the Work, for consultation.

1. Responsible for detailing, scheduling and ordering of finish hardware.
2. Meet with Owner to finalize keying requirements and to obtain final instructions in writing. To maintain the integrity of patented key systems provide a letter of authorization from the specified manufacturer indicating that supplier has authorization to purchase the key system directly from the manufacturer.
3. Stock parts for products supplied and are capable of repairing and replacing hardware items found defective within warranty periods.

C. Hardware Installer: Company specializing in the installation of commercial door hardware with five years documented experience.

D. Fire-Rated Openings: Provide door hardware for fire-rated openings that complies with NFPA Standard No. 80 and requirements of authorities having jurisdiction. Provide only items of door hardware that are listed and tested by UL or Warnock Hersey for given type/size opening and degree of label. Provide proper latching hardware, door closers, approved-bearing hinges and seals whether listed in the Hardware Schedule or not.

1. Where emergency exit devices are required on fire-rated doors, (with supplementary marking on doors' UL labels indicating "Fire Door to be Equipped with Fire Exit Hardware") provide UL label on exit devices indicating "Fire Exit Hardware".

E. Exit Doors: Operable from inside with single motion without the use of a key or special knowledge or effort.

F. Product packaging to be labelled in compliance with CA Prop 65, Safe Drinking Water and Toxic Enforcement Act of 1986.

1.6 DELIVERY, STORAGE AND HANDLING

A. Coordinate delivery of packaged hardware items to the appropriate locations (shop or field) for installation.

B. Hardware items shall be individually packaged in manufacturers' original containers, complete with proper fasteners. Clearly mark packages on outside to indicate contents and locations in hardware schedule and in work.

C. Provide locked storage area for hardware, protect from moisture, sunlight, paint, chemicals, etc.

D. Contractor to inventory door hardware jointly with representatives of hardware supplier and hardware installer until each all are satisfied that count is correct.

1.7 WARRANTY

A. Provide warranties of respective manufacturers' regular terms of sale from day of final acceptance as follows:

1. Locksets: "ND" Ten (10) years.

2. Electronic: One (1) year.
3. Closers: Thirty (30) years--except electronic closers shall be two (2) years.
4. Exit devices: Three (3) years.
5. All other hardware: Two (2) years.

1.8 MAINTENANCE

A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

1.9 PRE-INSTALLATION CONFERENCE

A. Convene a pre-installation conference at least one week prior to beginning work of this section.

B. Attendance: Architect, Construction Manager, Contractor, Security Contractor, Hardware Supplier, Installer, Key Owner Personnel, and Project Inspector.

C. Agenda: Review hardware schedule, products, installation procedures and coordination required with related work. Review Owner's keying standards.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

Item	Manufacturer	Acceptable Substitutes
Hinges	Ives	None-Owner Standard
Locks, Latches & Cylinders	Schlage	None-Owner Standard
Exit Devices	Von Duprin	None-Owner Standard
Closers	LCN	None-Owner Standard
Auto Operators	LCN	None-Owner Standard
Push, Pulls & Protection Plates	Ives	None-Owner Standard
Flush Bolts	Ives	None-Owner Standard
Dust Proof Strikes	Ives	None-Owner Standard
Coordinators	Ives	None-Owner Standard
Stops	Ives	None-Owner Standard

Overhead Stops	Glynn-Johnson	None-Owner Standard
Thresholds	Zero	None-Owner Standard
Seals & Bottoms	Zero	None-Owner Standard

MATERIALS

A. Hinges: Exterior out-swinging door butts shall be non-ferrous material and shall have stainless steel hinge pins. All doors to have non-rising pins.

1. Hinges shall be sized in accordance with the following:
    a. Height:
        1) Doors up to 42" wide: 4-1/2" inches.
        2) Doors 43" to 48" wide: 5 inches.
    b. Width: Sufficient to clear frame and trim when door swings 180 degrees.
    c. Number of Hinges: Furnish 3 hinges per leaf to 7'-5" in height. Add one for each additional 2 feet in height.
2. Furnish non-removable pins (NRP) at all exterior out-swing doors and interior key lock doors with reverse bevels.

B. Continuous Hinges: As manufactured by Ives, an Allegion Company. UL rated as required.

C. Heavy Duty Cylindrical Locks and Latches: Schlage "ND" Series as scheduled with "Rhodes" design, fastened with through-bolts and threaded chassis hubs.

1. Provide cylindrical locksets exceeding the ANSI/BHMA A156.2 Grade 1 performance standards for strength, security, and durability in the categories below:
    a. Abusive Locked Lever Torque Test – minimum 3,100 inch-pounds without gaining access
    b. Offset lever pull – minimum 1,600 foot pounds without gaining access
    c. Vertical lever impact – minimum 100 impacts without gaining access
2. Cycle life - tested to minimum 16 million cycles per ANSI/BHMA A156.2 Cycle Test with no visible lever sag or use of performance aids such as set screws or spacers
3. UL 10C for 4’-0” x 10’-0” 3-hour fire door.
4. Cylinders: Refer to “KEYING” article, herein.
5. Provide solid steel anti-rotation through bolts and posts to control excessive rotation of lever.
6. Provide lockset that allows lock function to be changed to over twenty other common functions by swapping easily accessible parts.

7. Provide locks with standard 2-3/4 inches (70 mm) backset, unless noted otherwise, with 1/2 inch latch throw capable of UL listing of 3 hours on a 4’ x 10’ opening. Provide proper latch throw for UL listing at pairs.
8. Provide locksets with separate anti-rotation thru-bolts, and no exposed screws.
9. Provide independently operating levers with two external return spring cassettes mounted under roses to prevent lever sag.
10. Provide standard ASA strikes unless extended lip strikes are necessary to protect trim.
11. Provide wired electrified options as scheduled in the hardware sets.
    a. 12 through 24 volt DC operating capability, auto-detecting
    b. Selectable EL (fail safe)/EU (fail secure) operating mode via switch on chassis
    c. 0.230A (230mA) maximum current draw
    d. 0.010A (10mA) holding current
    e. Modular / “plug in” request to exit switch
12. Lever Trim: Solid cast levers without plastic inserts, and wrought roses on both sides.

D. Exit devices: Von Duprin as scheduled.

1. Provide certificate by independent testing laboratory that device has completed over 1,000,000 cycles and can still meet ANSI/BHMA A156.3 - 2001 standards.
2. All internal parts shall be of cold-rolled steel with zinc dichromate coating.
3. Mechanism case shall have an average thickness of .140".
4. Compression spring engineering.
5. Non-handed basic device design with center case interchangeable with all functions.
6. All devices shall have quiet return fluid dampeners.
7. All latchbolts shall be deadlocking with ¾” throw and have a self-lubricating coating to reduce friction and wear.
8. Device shall bear UL label for fire and or panic as may be required.
9. All surface strikes shall be roller type and utilize a plate underneath to prevent movement.
10. Lever Trim: “Breakaway” design, forged brass or bronze escutcheon with a minimum of .130” thickness, match lockset lever design.
11. Removable Mullions: Removable with single turn of building key. Securely reinstalled without need for key.
12. Furnish glass bead kits for vision lites where required.
13. All Exit Devices to be sex-bolted to the doors.
14. Panic Hardware shall comply with CBC Section 11B.404.2.7 and shall be mounted between 34" and 44" above the finished floor surface.
    a. Provide exit devices UL certified to meet maximum 5 pound requirements according to the California Building Code section 11B-309.4, and UL listed for Panic Exterior Fire Exit Hardware.

E. Closers: LCN as scheduled. Place closers inside building, stairs, room, etc.

1. Door closer cylinders shall be of high strength cast iron construction with double heat treated pinion shaft to provide low wear operating capabilities of internal parts throughout the life of the installation. All door closers shall be tested to ANSI/BHMA A156.4 test requirements by a BHMA certified testing laboratory. A written certification showing successful completion of a minimum of 10,000,000 cycles must be provided.
2. All door closers shall be fully hydraulic and have full rack and pinion action with a shaft diameter of a minimum of 11/16 inch and piston diameter of 1 inch to ensure longevity and durability under all closer applications.
3. All parallel arm closers shall incorporate one piece solid forged steel arms with bronze bushings. 1-9/16” steel stud shoulder bolts, shall be incorporated in regular arms, hold-open arms, arms with hold open and stop built in. All other closers to have forged steel main arms for strength, durability, and aesthetics for versatility of trim accommodation, high strength and long life.
4. All parallel arm closers so detailed shall provide advanced backcheck for doors subject to severe abuse or extreme wind conditions. This advanced backcheck shall be located to begin cushioning the opening swing of the door at approximately 45 degrees. The intensity of the backcheck shall be fully adjustable by tamper resistant non-critical screw valve.
5. Closers shall be installed to permit doors to swing 180 degrees.
6. All closers shall utilize a stable fluid withstanding temperature range of 120 degrees F. to -30 degrees F. without requiring seasonal adjustment of closer speed to properly close the door.
7. Provide the manufactures drop plates, brackets and spacers as required at narrow head rails and special frame conditions. NO wood plates or spacers will be allowed.
8. Maximum effort to operate closers shall not exceed 5 lbs., such pull or push effort being applied at right angles to hinged doors. Compensating devices or automatic door operators may be utilized to meet the above standards. When fire doors are required, the maximum effort to operate the closer may be increased but shall not exceed 15 lbs. when specifically approved by fire marshal. All closers shall be adjusted to operate with the minimum amount of opening force and still close and latch the door. These forces do not apply to the force required to retract latch bolts or disengage other devices that hold the door in a closed position. Per 11B-404.2.8.1, door shall take at least 5 seconds to move from an open position of 90 degrees to a position of 12 degrees from the latch jamb.

F. Electro-Mechanical Automatic Operators - LCN Senior Swing.

1. Requirements:

a. Provide low energy automatic operator units that are electro-mechanical design complying with ANSI/BHMA A156.19.
   1) Opening: Powered by DC motor working through reduction gears.
   2) Closing: Spring force.
   3) Manual, hydraulic, or chain drive closers: Not permitted.
   4) Operation: Motor is off when door is in closing mode. Door can be manually operated with power on or off without damage to operator.

Provide variable adjustments, including opening and closing speed adjustment.

5) Cover: Aluminum.

b. Provide units with manual off/auto/hold-open switch, push and go function to activate power operator, vestibule interface delay, electric lock delay, hold-open delay adjustable from 2 to 30 seconds, and logic terminal to interface with accessories, mats, and sensors.

c. Provide drop plates, brackets, or adapters for arms as required to suit details.

d. Provide hard-wired motion sensors and/or actuator switches for operation as specified. Provide weather-resistant actuators at exterior applications.

e. Provide complete assemblies of controls, switches, power supplies, relays, and parts/material recommended and approved by manufacturer of automatic operator for each individual leaf. Actuators control both doors simultaneously at pairs. Sequence operation of exterior and vestibule doors with automatic operators to allow ingress or egress through both sets of openings as directed by Architect. Locate actuators, key switches, and other controls as directed by Architect.

1) Actuators to comply with CBC 11B-404.3.5 Controls.

f. Provide units with inputs for smoke evacuation doors, where specified, which allow doors to power open upon fire alarm activation and hold open indefinitely or until fire alarm is reset, presence detector input, which prevents closed door from opening or door that is fully opened from closing, hold open toggle input, which allows remote activation for indefinite hold open and close second time input is activated, vestibule inputs, which allow sequencing operation of two units, and SPDT relay for interfacing with latching or locking devices.

G. Flush Bolts & Dust Proof Strikes: Automatic Flush Bolts shall be of the low operating force design. Utilize the top bolt only model for interior doors where applicable and as permitted by testing procedures.

1. Manual flush bolts only permitted on storage or mechanical openings as scheduled.
2. Provide dust proof strikes at openings using bottom bolts.

H. Door Stops:

1. Unless otherwise noted in Hardware Sets, provide floor type with appropriate fasteners. Where wall type cannot be used, provide floor type. If neither can be used, provide overhead type.
2. Do not install floor stops more than four (4) inches from the face of the wall or partition (CBC Section 11B-307).
3. Overhead stops shall be made of stainless steel and non-plastic mechanisms and finished metal end caps. Field-changeable hold-open, friction and stop-only functions.

I. Protection Plates: Fabricate either kick, armor, or mop plates with four beveled edges. Provide kick plates 10" high and 2" LDW. Sizes of armor and mop plates shall be listed in the Hardware Schedule. Furnish with machine or wood screws of bronze or stainless to match other hardware.

J. Thresholds: As Scheduled and per details.

1. Thresholds shall not exceed 1/2" in height, with a beveled surface of 1:2 maximum slope.
2. Set thresholds in a full bed of butyl-rubber or polyisobutylene mastic sealant complying with requirements in Division 7 “Thermal and Moisture Protection”.
3. Use ¼” fasteners, red-head flat-head sleeve anchors (SS/FHSL).
4. Thresholds shall comply with CBC Section 11B-404.2.5.

K. Seals: Provide silicone gasket at all rated and exterior doors.

1. Fire-rated Doors, Resilient Seals: UL10C Classified complies with NFPA 80 & NFPA 252. Coordinate with selected door manufacturers' and selected frame manufacturers' requirements.
2. Fire-rated Doors, Intumescent Seals: Furnished by selected door manufacturer. Furnish fire-labeled opening assembly complete and in full compliance with UL10C Classified complies with NFPA 80 & NFPA 252. Where required, intumescent seals vary in requirement by door type and door manufacture -- careful coordination required.
3. Smoke & Draft Control Doors, Provide UL10C Classified complies with NFPA 80 & NFPA 252 for use on “S” labeled Positive Pressure door assemblies.

L. Door Shoes & Door Top Caps: Provide door shoes at all exterior wood doors and top caps at all exterior out-swing doors.

M. Silencers: Furnish silencers for interior hollow metal frames, 3 for single doors, 2 for pairs of doors. Omit where sound or light seals occurs, or for fire-resistive-rated door assemblies.

2.2 KEYING

A. Furnish a Proprietary Schlage masterkey system as directed by the owner or architect. Key system to be designated and combinated by the Schlage Master Key Department even if pinned by the Authorized Key Center, Authorized Security Center or a local authorized commercial dealer.

B. Extend the original Schlage masterkey system established for Merritt College

C. Furnish all cylinders in the Patent Protected Schlage Small Format Interchangeable Core. (SFIC) “Everest B” family of keyways. Pack change keys independently (PKI)

1. Confirm keyway with PCCD prior to ordering

D. Furnish construction keying for doors requiring locking during construction.

1. For SFIC systems provide 80-035 Small Format Construction Cores in either “BRN” or “GRN” combination for all locks that need to be locked during construction and M204-152 Disposable Cores for all cylinders not required to be locked.
2. For SFIC systems provide ten 48-310 Const. Keys in either “BRN” or “GRN” combination to match cores in # 1 above.
3. For SFIC systems provide two 48-311 Control Keys in either “BRN” or “GRN” combination to match cores in # 1 above. (const.)
4. For SFIC systems provide two control keys for installing the permanent cores (either 48-311 for non-patented keyways or 49-356 for patented keyways such as “Everest -B” family)

E. Furnish all keys with visual key control. *(Not all options listed below are*

1. Stamp key “Do Not Duplicate”.
2. Stamp (BHMA) key symbol on key.

F. Furnish all cylinders with visual key control.

1. Stamp (BHMA) key symbol on side of cylinder (CKC).

G. Furnish mechanical keys as follows:

1. Furnish 2 cut change keys for each different change key code.
2. Furnish 1 uncut key blank for each change key code.
3. Furnish 6 cut masterkeys for each different masterkey set.
4. Furnish 3 uncut key blanks for each masterkey set.
5. Furnish 2 cut control keys cut to the top masterkey for permanent I/C cylinders.
6. Furnish 1 cut control key cut to each SKD combination.

H. Furnish Schlage Padlocks and the cylinders to tie them into the masterkey system for gates, storage boxes, utility valve security, roof hatches and roll-up doors keyed as directed in the keying schedule.

1. Furnish KS41D1200 padlock for use with SFIC Schlage cylinders. Furnish 80-037 (Everest-B) with above.

I. Furnish one Schlage cabinet lock for each cabinet door or drawer so designated on the drawings or keying schedule to match the masterkey system.

1. Furnish CL721G for use with SFIC Schlage cylinders.

2.3 FINISHES

A. Generally to be satin chrome US26D (626 on bronze and 652 on steel) unless otherwise noted.

B. Furnish push plates, pull plates and kick or armor plates in satin stainless steel US32D (630) unless otherwise noted.

C. Door closers shall be powder-coated to match other hardware, unless otherwise noted.

D. Aluminum items to be finished anodized aluminum except thresholds which can be furnished as standard mill finish.

2.4 FASTENERS

A. Screws for strikes, face plates and similar items shall be flat head, countersunk type, provide machine screws for metal and standard wood screws for wood.

B. Screws for butt hinges shall be flathead, countersunk, full-thread type.

C. Fastening of closer bases or closer shoes to doors shall be by means of sex bolts and spray painted to match closer finish.

D. Provide expansion anchors for attaching hardware items to concrete or masonry.

E. All exposed fasteners shall have a phillips head.

F. Finish of exposed screws to match surface finish of hardware or other adjacent work.

G. All Exit Devices and Lock Protectors shall be fastened to the door by the means of sex bolts or through bolts.

PART 3 - EXECUTION

3.1 INSPECTION

A. Verify that doors and frames are square and plumb and ready to receive work and dimensions are as instructed by the manufacturer.

B. Beginning of installation means acceptance of existing conditions.

C. Fire-Rated Door Assembly Inspection: Upon completion of the installation, all fire door assemblies shall be inspected to confirm proper operation of the closing device and latching device and that only the manufacturer's furnished fasteners are used for installation and that it meets all criteria of a fire door assembly per NFPA 80 (Standard for Fire Doors and Other Opening Protectives) 2016 Edition. A written record shall be maintained and transmitted to the Owner to be made available to the Authority Having Jurisdiction (AHJ). The inspection of the swinging fire doors shall be performed by a certified FDAI (Fire Door Assembly Inspector) with knowledge and understanding of the operating components of the type of door being subjected to the inspection. The record shall list each fire door assembly throughout the project and include each door number, an itemized list of hardware set components at each door opening, and each door location in the facility.

3.2 INSTALLATION

A. Install hardware in accordance with manufacturer's instructions and requirements of DHI.

B. Use the templates provided by hardware item manufacturer.

C. Mounting heights for hardware shall be as recommended by the Door and Hardware Institute. Operating hardware will to be located between 34" and 44" AFF.

D. Set units level, plumb and true to line and location. Adjust and reinforce the attachment substrate as necessary for proper installation and operation.

E. Drill and countersink units that are not factory-prepared for anchorage fasteners. Space fasteners and anchors in accordance with industry standards.

F. Set thresholds for exterior doors in full bed of butyl-rubber sealant.

G. If hand of door is changed during construction, make necessary changes in hardware at no additional cost.

H. Hardware Installer shall coordinate with security contractor to route cable to connect electrified locks, panic hardware and fire exit hardware to power transfers or electric hinges at the time these items are installed so as to avoid disassembly and reinstallation of hardware.

I. Hardware Installer shall also be present with the security contractor when the power is turned on for the testing of the electronic hardware applications. Installer shall make adjustments to solenoids, latches, vertical rods and closers to insure proper and secure operation.

J. All wiring for electro-mechanical hardware mounted on the door shall be connected through the power transfer and terminated in the interface junction box specified for in the Electrical Section.

K. Conductors shall be minimum 18 gage stranded, multicolored. A minimum 12 in. loop of conductors shall be coiled in the interface junction box. Each conductor shall be permanently marked with its function.

L. If a power supply is specified in the hardware sets, all conductors shall be terminated in the power supply. Make all connections required for proper operation between the power supply and the electro-mechanical hardware. Provide the proper size conductors as specified in the manufacturer’s technical documentation.

3.3 ADJUST AND CLEAN

A. Adjust and check each operating item of hardware and each door, to ensure proper operation or function of every unit. Replace units which cannot be adjusted to operate freely and smoothly as intended for the application made.

B. Clean adjacent surface soiled by hardware installation.

C. Final Adjustment: Wherever hardware installation is made more than one month prior to acceptance or occupancy, return to that work area and make final check and

adjustment of all hardware items in such space or area. Clean operating items as necessary to restore proper function and finish of hardware and doors. Adjust door control devices to compensate for final operation of heating and ventilating equipment.

D. Instruct Owner's Personnel in proper adjustment and maintenance of hardware finishes, during the final adjustment of hardware.

E. Continued Maintenance Service: Approximately six months after the completion of the project, the Contractor accompanied by the Architectural Hardware Consultant, shall return to the project and re-adjust every item of hardware to restore proper functions of doors and hardware. Consult with and instruct Owner's personnel in recommended additions to the maintenance procedures. Replace hardware items which have deteriorated or failed due to faulty design, materials or installation of hardware units. Prepare a written report of current and predictable problems (of substantial nature) in the performance of the hardware.

3.4 HARDWARE LOCATIONS

A. Conform to CCR, Title 24, Part 2; and ADAAG; and the drawings for access-compliant positioning requirements for the disabled.

3.5 FIELD QUALITY CONTROL

A. Contractor is responsible for providing the services of an Architectural Hardware Consultant (AHC) or a proprietary product technician to inspect installation and certify that hardware and its installation have been furnished and installed in accordance with manufacturers' instructions and as specified herein.

3.6 SCHEDULE

A. The items listed in the following schedule shall conform to the requirements of the foregoing specifications.

B. While the hardware schedule is intended to cover all doors, and other movable parts of the building, and establish type and standard of quality, the contractor is responsible for examining the Plans and Specifications and furnishing proper hardware for all openings whether listed or not. If there are any omissions in hardware groups in regard to regular doors they shall be called to the attention of the Architect prior to bid opening for instruction; otherwise, list will be considered Complete. No extras will be allowed for omissions.

C. The Door Schedule on the Drawings indicates which hardware set is used with each door.

Manufacturers Abbreviations (Mfr.)

BLU	=	Blumcraft	Frameless Glass Door Panic Hardware
DRM	=	Dorma	Frameless Glass Door Closer
GLY	=	Glynn-Johnson Corporation	Overhead Door Stops

IVE	=	Ives	Hinges, Pivots, Bolts, Coordinators, Dust Proof Strikes, Push Pull & Kick Plates, Door Stops & Silencers
JOH	=	L.E. Johnson	Sliding Door Hardware
LCN	=	LCN	Door Closers, Auto Operators, Actuators
SCH	=	Schlage Lock Company	Locks, Latches & Cylinders
VON	=	Von Duprin	Exit Devices
ZER	=	Zero International	Thresholds, Gasketing & Weather-stripping

END OF SECTION

PART 1- GENERAL

1.1 SUMMARY

This section includes the following types of automatic door operators:

1. In-ground, low energy door operators for swinging doors.

Related Sections:

2. Division 7 Sections for caulking to the extent not specified in this section.
3. Division 8 Section “Aluminum-Framed Entrances and Storefronts” for entrances furnished separately in Division 8 Section.
4. Division 8 Section “Sliding Automatic Entrances” for single and bi-parting sliding automatic entrance doors with sidelites.
5. Division 8 Section “Door Hardware” for hardware to the extent not specified in this Section.
6. Division 26 and 28 Sections for electrical connections including conduit, liquid-tight connections, and wiring for automatic entrance door operators and access control devices.

1.2 REFERENCES

References: Refer to the version year adopted by the Authority Having Jurisdiction.

1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
2. ICC/IBC - International Building Code.
3. NFPA 70 - National Electrical Code.
4. NFPA 80 - Fire Doors and Windows.
5. NFPA 101 - Life Safety Code.
6. NFPA 105 - Installation of Smoke Door Assemblies.

American National Standards Institute (ANSI) / Builders Hardware Manufacturers Association (BHMA).

7. ANSI/BHMA A156.10 American National Standard for Power Operated Pedestrian Doors.
8. ANSI/BHMA A156.19 Standards for Power Assist and Low Energy Power Operated Doors.

American Association of Automatic Door Manufacturers (AAADM).

American Society for Testing and Materials (ASTM).

9. ASTM B221 Standard Specification for Aluminum and Aluminum Alloy Extruded Bars, Rods, Wire, Profiles and Tubes.

10. ASTM B209 Standard Specification for Aluminum and Aluminum Alloy Sheet and Plate.

American Architectural Manufacturers Association (AAMA).

11. AAMA 611 Voluntary Specification for Anodized Architectural Aluminum.

National Association of Architectural Metal Manufacturers (NAAMM).

12. Metal Finishes Manual for Architectural Metal Products.

International Code Council (ICC).

13. CBC: California Building Code.

1.3 DEFINITIONS

Activation Device: Device that, when actuated, sends an electrical signal to the door operator to activate the operation of the door.

1. Knowing act: Consciously initiating the opening of a power operated door using acceptable methods including wall mounted switches such as push plates and controlled access devices such as keypads, card readers and key switches.

Safety Device: A device that detects the presence of an object or person within a zone where contact could occur and provides a signal to stop the movement of the door.

Double Egress Doors: A pair of doors that swing with the two doors moving in opposite directions and no mullion between them.

1.4 PERFORMANCE REQUIREMENTS

Automatic door equipment accommodates medium to heavy pedestrian traffic.

Opening Force Requirements: Doors shall open with a manual force, not to exceed 30lbf (133N) to set the door in motion and 15 lbf to fully open the door applied at 1” (25 mm) from the latch edge of the door. The force required to prevent a stopped door from opening or closing shall not exceed 15 lbf (67 N) measured 1” (25 mm) from the latch edge of the door at any point during opening or closing.

Closing Time:

1. Doors shall be field adjustable to close from 90 degrees to 10 degrees in 3 seconds or longer as applicable per ANSI/BHMA A156.19 standards.

2. Doors shall be field adjusted to close from 10 degrees to fully closed in not less than 1.5 seconds.

1.5 SUBMITTALS

Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, fabrication, operational descriptions and finishes.

Shop Drawings: Submit manufacturer’s shop drawings, including elevations, sections and details, indicating dimensions, materials, operator, motion /presence sensor control device, anchors, hardware, finish, options and accessories.

1. Indicate required clearances, and location and size of each field connection.

2. Indicate locations and elevations of entrances showing activation devices.

3. Wiring Diagrams: For power, signal, and activation / safety device wiring.

Samples: Submit manufacturer’s samples of aluminum finish.

Manufacturers Field Reports: Submit manufacturer’s field reports from AAADM certified technician of inspection and approval of doors for compliance with ANSI/BHMA after completion of installation.

Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the work of this section in quantity as required in Division 01, Closeout Submittals. The manual to include the name, address, and contact information of the manufacturers providing the operators and their nearest service representatives. The final copies delivered after completion of the installation test to include spare parts list.

Warranties and Maintenance: Special warranties and maintenance agreements specified in this Section.

1.6 QUALITY ASSURANCE

Manufacturers Qualifications: Engage qualified manufacturers with a minimum 10 years of documented experience in manufacturing of doors and equipment of similar to that indicated for this Project and that have a proven record of successful in-service performance. Manufacturer to have a company certificate issued by AAADM.

Installer Qualifications: Installers, trained by the primary product manufacturers, with a minimum 3 years documented experience installing and maintenance of units similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

Certified Inspector Qualifications: Certified by AAADM.

Source Limitations for Automatic Door Operators: Obtain each type of door, frame, operator and sensor components specified in this Section from a single source, same manufacturer unless otherwise indicated.

1. Operator shall be furnished complete with the cement case, case cover and drive mechanism from a single manufacturer.

Certifications: Operators shall be certified by the manufacturer to meet performance design criteria in accordance with the following standards.

2. ANSI/BHMA A156.19 American National Standard for Power Assist and Low Energy Operated Doors.

3. NFPA 101 - Life Safety Code.

Emergency Exit Door Requirements: Comply with requirements of authorities having jurisdiction for automatic entrance doors serving as a required means of egress.

1.7 COORDINATION

Coordinate door operators with doors, frames and related work to ensure proper size, thickness, hand, function and finish. Coordinate hardware for automatic entrances with hardware required for rest of the project.

Coordinate sizes and locations of recesses in concrete if applicable. Concrete, reinforcement and formwork are specified in Division 03.

Electrical System Roughing-in: Coordinate layout and installation of power door operators with connections to power supplies and access control system as applicable.

1.8 WARRANTY

General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

Automatic Door Operators shall be free of defects in material and workmanship for a period of one (1) year from the date of substantial completion.

During the warranty period a factory-trained technician shall perform service and affect repairs. An inspection shall be performed after each adjustment or repair.

During the warranty period all warranty work, including but not limited to emergency service, shall be performed during normal business hours.

Manufacturer shall have in place a dispatch procedure that shall be available 24 hours a Day, 7 Days a week for emergency call back service.

PART 2- PRODUCTS

2.1 MANUFACTURER

Basis of Design Manufacturer: ASSA ABLOY Entrance Systems, 1900 Airport Road, Monroe, NC 28110. Toll Free (877) SPEC-123. Fax (704) 290- 5555 Website www.assaabloyentrance.com contact: specdesk.na.aaes@assaabloy.com

Acceptable Manufacturers: Subject to compliance with the requirements, provide products by one of the following:

1. ASSA ABLOY Entrance Systems, Inc.; an ASSA ABLOY Group Company.
2. Horton Automatics; a Division of Overhead Door Corporation.
3. Stanley Access Technologies; Division of The Stanley Works.

2.2 MATERIALS

1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated, as indicated below:
2. Extruded Aluminum, Alloy 6063-T5.

2.3 SWING DOOR OPERATORS

Model: LCN 9553

Reference Standard: ANSI/BHMA A156.19.

1. Configuration: Operator to control pairs of swinging doors as indicated on the drawings and specified below:
   a. Traffic Pattern: Two way.
   b. Pairs of Doors: Simultaneous swing.
2. Automatic Door Operator: Electro-mechanical, non-handed operator, powered by 24 volt, 1/4 hp motor. Operator shall be adjustable to compensate for different manual push forces as required.
   a. Automatic operator shall be capable of operating and controlling up to a 700 pound (317.5 kg) door, 48 inches (1219 mm) in width.
   b. In-Ground Operator Enclosure and Drive Unit:
      i. Cement case shall be 12 gauge minimum thickness steel, fully welded enclosure.
         i) Corrosion Protection: 6 to 10 mill powder coat finish suitable for continuous protection when in contact with concrete and masonry.
      ii. Removable top case cover shall be 12 gauge minimum thickness steel with powder coat finish.
         i) Cover shall be sealed to cement case by a neoprene gasket.

ii) All penetrations including the operator drive shaft shall have seals to prevent water and moisture infiltration.

iii. Drive Mechanism Assembly: Manufacturer's drive mechanism assembly designed to provide swing door operation from an in-ground automatic door operator.

i) Operator shaft shall be directly coupled to the pivot assembly.

ii) Weight of door shall be fully supported independently through a pivot bearing support. Door weight shall not be supported by the operator or the gear box assembly.

iv. Connecting hardware to door shall be a door arm attached to the bottom rail of the swing door.

i) Output shaft adapter and door arm shall allow for center pivoted installation as indicated on drawings.

ii) Top pivot assembly shall be supplied by Division 8 Section "Door Hardware".

c. Operator Temperature Range: Capable of operating within temperature ranges of -31° F to 160° F (-35° C to 71° C).

d. Electrical Characteristics: Maximum power consumption is 300 watts (2.5 amps at 120 VAC), 50/60hz, built-in thermal overload protection.

3. Door Operation:

a. Opening Cycle The adjustable speed operator mechanically powers the drive shaft and the torque control maintains constant speed throughout the opening cycle regardless of stack pressures or wind speed. Operator shall allow manual door operation with operational forces as indicated to fully open the door applied at 1" (25 mm) from the latch edge of the door.

i. Manual push force shall be adjustable from 5 lbf to 15 lbf maximum.

b. Hold Open: The operator shall stop and hold the door open at the selected door opening angle for an adjustable period of time (1.5 seconds to 30 seconds).

c. Closing Cycle: Spring close with speed controlled power assist.

i. Upon loss of power, dynamic braking will control the door insuring controlled closing.

ii. Selectable Torque Control: Automatically adjusts torque without changing the closing speed of the operator.

i) When the torque control is activated, the closing speed shall remain constant regardless of stack pressures or wind speed.

ii) Torque Cancellation: The torque control is deactivated whenever there is a signal received from door mounted sensors.

iii) The torque control is disabled during manual use of the door.

d. Wind Force Dampening: The operator electromechanically counteracts wind forces, slowing down the door movement to safely open or close the door.

e. Stack Pressure Compensation: Operator shall counteract positive stack pressures, negative stack pressures, and sudden changes of stack pressures. The operator never allows the door to open or close faster than the speed control settings, regardless of pressures.

f. Obstruction Control: The operator will stop and reverse the door movement.

g. Electric Lock Management:

i. Internal module for electrified locking integration.

ii. Electric Lock Output: Selectable 12 VDC, maximum 1200 mA / 24 VDC, maximum 600 mA.

iii. Lock monitoring prevents operator(s) from opening door(s) until release of electrified lock.

iv. Operator pulls door closed before opening, automatically unjamming electric latch hardware.

v. Sequenced operation between operators for pairs of doors allowing lock release and astragal coordination.

h. Lock Retry Circuit: If attempt to fully close the door is unsuccessful, the operator will automatically reverse open 10 degrees and reclose in an attempt to successfully close the door.

i. Selectable Alarm Reset: The operator can be field set so that after receiving an alarm signal, the operator will not accept any activation impulses and will operate only as a manual door closer until manually reset.

j. Electronic Controls: Solid state integrated circuit controls the operation and switching of the swing power operator. The electronic control provides low voltage power supply for all means of actuation. The controls include time delay (1 to 30 seconds) for normal cycle.

k. Control Switch: Automatic door operators shall be equipped with the following type of multi-position function switch:

i. 4 position rotary switch remotely mounted (On-Off-Hold- Special Function).

4. Operator Interface:

a. Safety Sensor Integration for overhead presence safety device and door mounted reactivation safety sensors.

2.4 ACTIVATION DEVICES

General: Provide activation and safety devices in accordance with ANSI/BHMA standards, for condition of exposure and for long-term, maintenance-free operation under normal traffic load for type of occupancy indicated. Coordinate activation and safety devices with door operation and door operator mechanisms.

Knowing Act Activation Device:

1. Touch-Activated Vertical Activation Column Door Control “INGRESS’R” as manufactured by Wikk Industries, Inc. Bollard mounted on Wikk Model B-6SQ-RT-32D-SM-INGR.
    b. Vertical activation column with activation of automatic door from any approach and height level along vertical profile.
        i. Size: 36” high x 2-1/2” wide 136 Series activation column mounted in a 36” high x 6” wide x 1-1/2” deep enclosure.
        ii. Engraved with "Push to Open" and a I.S.A. logo.
    c. Tapered profile deflects impact from wheeled conveyances and directs movement into center vertical activation column.
    d. Vandal and Weather Resistant.
    e. Stainless Steel: Type 304, nominal thickness 18/19 gauge sheet metal.
        i. Stainless Steel Finish: Satin US32D. Blue wheelchair I.S.A. logo.
    f. Hard Wire: Hard-wired from flush junction boxes.

Manual Operation:

2. Operator shall allow manual door operation with operational forces adjustable from 5 lbf to 15 lbf maximum.

3. Floor plate: Floor Plate/Threshold: Manufacturer’s standard threshold as indicated. 1/2 inch high CBC and ADA compliant aluminum threshold extending the width of the door opening.

PART 3- EXECUTION

3.1 EXAMINATION

1. Examine doors and frames, with Installer present, for compliance with requirements for installation tolerances, wall and floor construction, and other conditions affecting performance of swinging power operated doors.

2. Examine roughing-in for electrical source power to verify actual locations of wiring connections.

3. Verify that all electrical penetrations into the cement case enclosure have liquid tight fittings.
    1. Water-test electrical conduit penetrations (high volt and low volt connections) in cement case to assure leak-free system.

Proceed only after such discrepancies or conflicts have been resolved.

3.2 INSTALLATION

Do not install damaged components. Fit joints to produce hairline joints free of burrs and distortion. Rigidly secure non-movement joints.

Operators: Install automatic door operators plumb and true in alignment with established lines and grades without warp or rack of framing members and doors. Anchor securely in place.

1. Install in-ground operator housing in accordance with manufacturer's instructions and reviewed shop drawings.
2. Install operator drive mechanism assembly in accordance with manufacturer's instructions.
3. Adjust operator and drive mechanism to achieve smooth operation including back-check, latch, and proper limit stops.
4. Install exposed to view fittings using concealed fasteners where possible.
5. Install threshold and operator fittings per manufacturer's instructions.

Door Operators: Connect door operators to electrical power distribution system as specified in Division 26 Sections.

Sealants: Comply with requirements specified in division 7 Section "Joint Sealants" to seal between the operator housing and the adjacent surfaces and provide a water-tight closure.

Signage: Apply signage on both sides of each door and sidelite as required by ANSI/BHMA A156.19 and manufacturers installation instructions.

3.3 ADJUSTING

Adjust automatic door operators, controls and hardware for smooth and safe operation and for weather tight closure. Adjust doors in compliance with ANSI/BHMA A156.19.

3.4 FIELD QUALITY CONTROL

Before placing doors into operation, AAADM certified technician shall inspect and approve doors for compliance with ANSI/BHMA A156.19. Certified technician shall be approved by manufacturer.

3.5 CLEANING AND PROTECTION

Clean adjacent surfaces soiled by automatic door operator installation.

Clean metal surfaces promptly after installation. Remove excess sealants, compounds, dirt and other substances. Repair damages and finish to match original finish.

3.6 DEMONSTRATION

Engage a factory-authorized representative to train Owner's maintenance personnel to adjust, operate, and maintain safe operation of the door.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes glass glazing for metal frames, doors, windows, glazed walls and other products referencing this Section.

B. Related Sections:

1. Section 07 90 00 – Joint Protection: Joint sealants.
2. Section 08 12 14 – Standard Steel Frames.
3 Section 08 14 16 – Flush Wood Doors.
4. Section 08 41 13 – Interior Entrances and Storefronts
5. Section 08 44 13 – Glazed Aluminum Curtain Walls.
~~6. Section 13 49 00 – Radiation Protection: Leaded glass.~~

2. NFPA 257 – Standard of Fire Test for Window and Glass Block Assemblies.

F. Underwriters Laboratories Inc. (UL)

1. UL 9 – Standard for Fire Tests of Window Assemblies.
2. UL 10C – Positive Pressure Fire Tests of Door Assemblies.
3. UL 263 – Fire Tests of Building Construction and Materials.

1.3 SYSTEM DESCRIPTION

A. Design and Performance Requirements:

1. Glass thicknesses and heat treatment, if specified, are minimum requirements. Engineer and provide glass thicknesses and heat treatment to comply with ASTM E1300.
2. Vertical Glass: Limit the statistical probability of failure to eight lites per thousand at Design Wind Pressures.
3. Glass Deflection - Vertical Lites, Interior or Exterior: Maximum center deflection no greater than 1 inch at center point at Design Wind Pressures.

B. Labeling: Each piece of tempered glass shall be permanently labeled with logo indicating glass type.

1.4 SUBMITTALS

A. Product Data: Submit manufacturer’s literature and installation instructions for each material and accessory, clearly notating each specified requirement.

B. Samples: Each type and thickness of glass products, except for clear, 12 inches square.

C. Quality Assurance/Quality Control Submittals

1. Test Reports: Submit test reports, indicating the following products comply with specified requirements: insulated glass, coated float glass, heat soak testing for tempered glass, glazing sealants, glazing gaskets.

D. Closeout Submittals: Submit for Owner's documentation.

1. Warranties.

2. Maintenance Data.

1.5 QUALITY ASSURANCE

A. Qualified Installer: Installer to have five years' experience in the installation of specified materials on comparable projects. The firm shall have the approval of the materials manufacturer.

B. Regulatory Requirements: Comply with applicable requirements of the laws, codes, and regulations of authority having jurisdiction.

C. Perform Work in accordance with GANA Glazing Manual, GANA Sealant Manual, and GANA Laminated Glass Design Guide for glazing installation methods.

D. Fire Rated Window Glazing: Rating as indicated on Drawings. Tested in accordance with NFPA 257 and complying with NFPA 80.

1. NFPA 257: Adjusted so two-thirds of test specimen is above neutral pressure plane at 10 minutes into test.

E. Fire Rated Door Glazing: Tested in accordance with UL 10C and complying with NFPA 80.

F. Apply permanent testing agency label to identify each fire rated glass lite.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Packing, Shipping, Handling, and Unloading: Deliver products in manufacturer's unopened containers fully identified. Protect from scratches and abrasions. Clearly label each lite with manufacturer's name and brand. Keep handling to minimum.

1.7 WARRANTY

A. Division 1 – Execution and Closeout Requirements: Product warranties and bonds.

B. Furnish five year warranty to include coverage for sealed glass units from seal failure, interpane dusting or misting, and replacement of same.

C. Furnish five year warranty to include coverage for delamination of laminated glass and replacement of same.

D. Furnish five year warranty to include coverage for deterioration of spandrel glass coating and replacement of same.

PART 2 − PRODUCTS

2.1 FLOAT GLASS MATERIALS

A. Annealed Glass: ASTM C1036, Type 1 transparent flat, Quality Q3, float glass.

B. Heat Strengthened Glass: ASTM C1048, Type 1 transparent flat, Quality Q3, Kind HS heat strengthened, Condition A uncoated, float glass.

C. Tempered Glass: ASTM C1036, Type 1 transparent flat, Quality Q3, Kind FT fully tempered, Condition A uncoated, float glass with horizontal tempering.

2.2 FLOAT GLASS PRODUCTS

A. Float Glass Manufacturers: Provide compliant fabricated glass products of one of the following or approved equal.

1. AGC Interpane Flat Glass North America, Inc.
2. Guardian Industries Corporation.
3. Pilkington North America, Inc.
4. Vitro Architectural Glass.

B. Laminated Glass Manufacturers: Provide compliant fabricated glass products of one of the following or approved equal:

1. GlassFab Tempering Services
   1448 Mariani Court
   Tracy, CA 95376
   PHONE (209) 229-1060
2. Old Castle
3. Saflex/Eastman Chemical Co.

C. Glazing Type (GL-01) - Insulating Glass Units: STC 44. ASTM E2190 certified by Insulating Glass Certification Council; edge-sealed. Purge interpane space with dry hermetic air. AGC Interpane is the basis of the specification.

1. Total Unit Thickness: 1 11/16”
2. Outboard lite: 6 mm clear glass heat strengthened (HS) with Ipasol Platin 47/27 on #2
3. 24 mm airspace. Grey T spacer with grey PIB (Argon fill)
4. Mid lite: 6 mm thick clear glass heat strengthened (HS)
5. Air space: 1.52 mm acoustic interlayer

6. Inboard lite: 6 mm thick clear glass heat strengthened (HS)

D. Glazing Type (GL-02) – 1 11/16" thick Insulated Glass Units: STC 44. ASTM E2190 certified by Insulating Glass Certification Council; edge-sealed. Purge interpane space with dry hermetic air. AGC Interpane is the basis of the specification.

1. Total Unit Thickness: 1 11/16"
2. Outboard lite: 6 mm clear glass heat strengthened (HS) with Ipasol Platin 47/27 on #2
3. 24 mm airspace. Grey T spacer with grey PIB (Argon fill)
4. Mid lite: 6 mm thick clear glass heat strengthened (HS)
5. Interlayer space: 1.52 mm acoustic interlayer
6. Inboard lite: 6 mm thick clear glass heat strengthened (HS) with RAL 9010 Silkscreen frit 2mm (on the portion of the lite), 80% coverage on #5

E. Glazing Type (GL-03) – 7/8" thick Laminated glass.

1. Total Unit Thickness: 7/8"
2. Outer pane: 10mm thick clear glass heat strengthened (HS)
3. Interlayer space: 1.52mm clear PVB
4. Inboard lite: 10mm thick clear glass heat strengthened (HS)

F. Glazing Type (GL-04): TBD

G. Glazing Type (GL-05) – 1" thick insulated glass

1. Outboard lite: 6 mm thick clear glass heat strengthened HS) with Ipasol Platin 47/27 on #2
2. Air space: 13mm grey spacer with grey PIB (Argon fill)
3. Inboard lite: 6mm thick clear glass heat strengthened (HS)

H. Glazing Type (GL-06) – Not Used.

I. Glazing Type (GL-07) Clear Laminated Glass, STC 40: Tempered float glass as specified, Class 1 clear. CPSC 16 CFR 1201 Category I and II safety.

1. Total Unit Thickness: 9/16".
2. Outer pane: 1/4" thick clear glass – tempered.
3. Interlayer space: .060 Acoustic Interlayer – SAFLEX QS71
4. Inboard lite: 1/4" thick clear glass – tempered.

J. Glazing Type (GL-08) Clear monolithic glass. Tempered float glass as specified, Class 1 clear. CPSC 16 CFR Category I and II safety.

1. Minimum thickness ½" inch.

K. Glazing Type (GL-09) – 1" thick insulated glass, STC 35. Tempered float glass as specified, Class 1 clear. CPSC 16 CFR 1201 Category I and II safety.

1. Outboard lite: 6 mm thick clear glass – tempered.

2. Air space: 13mm grey spacer with grey PIB (air fill)

3. Inboard lite: 6mm thick clear glass – tempered.

L. Glazing Type (GL-10) Clear Laminated Glass: Tempered float glass as specified, Class 1 clear. CPSC 16 CFR 1201 Category I and II safety.

1. Outboard lite: 3/16" thick clear glass – tempered.

2. Interlayer space: .030 PVB

3. Inboard lite: 3/16" thick clear glass – tempered.

2.5 GLAZING SEALANTS

A. General: Use product of one manufacturer. Design recommended by manufacturer.

1. Elastomeric Glazing Sealants: Materials compatible with adjacent materials including glass, laminated glass core, insulating glass seals and glazing channels

a. Silicone Glazing Sealant: ASTM C920, Type S, Grade NS, Class and Use suitable for glazing application indicated, single component, capable of water immersion without loss of properties, non-staining, non-bleeding, cured Shore A Hardness Range of 15 to 25. Color: Grey

i. Structural Silicone: Furnish high-modulus structural silicone glazing materials where sealant bonds glass to substrate.

b. Polyurethane Glazing Sealant: ASTM C920, Type S, Grade NS, Class and use suitable for glazing application indicated, single component chemical curing, non-staining, non-bleeding, Shore A Hardness Range 20 to 35. Color: Grey

c. Structural Silicone (sealant at interior butt joint glazing. Same as item "a" above), Color: Clear.

2. Dense Gaskets: ASTM C864 or ASTM C1115, resilient extruded shape to suit glazing channel retaining slot. Color: Grey

3. Soft Gaskets: ASTM C509, resilient extruded shape to suit glazing channel retaining slot, grey color.

4. Pre-formed Glazing Tape: Closed cell polyvinyl chloride foam, coiled on release paper over adhesive on two sides, maximum water absorption by volume of 2

percent, designed for compression of 25 percent to effect an air barrier and vapor retarder seal. Color: Grey.

2.6 GLAZING ACCESSORIES

A. Setting Blocks: Elastomeric material recommended by glass manufacturer, 60 to 70 Shore D durometer hardness, length of 0.1 inch for each square foot of glazing or minimum of 4 inch x width of glazing rabbet space minus 1/16 inch x height to suit glazing method and pane weight and area. For laminated glass or heavy/large units (>= 10 sq. meters and / or 500 kg) an elastic support from maximum 2 mm should be added.

B. Spacer Shims: Elastomeric material recommended by glass manufacturer, 50 to 60 Shore A durometer hardness, minimum 3 inch long x one half the height of glazing stop x thickness to suit application.

C. Glazing Clips: Manufacturer's standard type.

D. Glazing Film: Polyester, pressure-sensitive decorative glass and window film. Fire Rating tested according to ASTM E84 and classified as Class A. Basis of Specification: 3M Fasara Glass Finish.

1. Location: As indicated in Drawings.

2. Pattern: To be selected by Architect from manufacturer's full range of available patterns.

3. Color: To be selected by Architect from manufacturer's full range of available colors.

PART 3 − EXECUTION

3.1 EXAMINATION

A. Division 1 – Administrative Requirements: Coordination and project conditions.

B. Verify openings for glazing are correctly sized and within acceptable tolerance.

C. Verify surfaces of glazing channels or recesses are clean, free of obstructions impeding moisture movement, weeps are clear, and ready to receive glazing.

3.2 PREPARATION

A. Clean contact surfaces with solvent and wipe dry.

B. Seal porous glazing channels or recesses with substrate compatible primer or sealer.

C. Prime surfaces scheduled to receive sealant.

3.3 INSTALLATION

A. Unless otherwise shown or specified, perform installation in accordance with GANA Glazing Manual and Sealant Manual.

1. Glazing Sealants: Comply with ASTM C1193. Color to be Grey.

2. Fire Rated Openings: Comply with NFPA 80.

B. Use one of the following glazing methods, all colors to be Grey.

1. Exterior dry method (gasket glazing).

2. Exterior wet/dry method (pre-formed tape and sealant).

3. Exterior (and Interior) wet method (sealant and sealant).

4. Interior dry method (tape and tape).

5. Interior wet/dry method (tape and sealant).

3.4 CLEANING

A. Remove glazing materials from finish surfaces.

B. Remove labels after Work is complete.

C. Clean glass and adjacent surfaces.

3.5 PROTECTION

A. Protect glass from damage after installation. Mark exposed panes with an “X” by using removable plastic tape.

B. Remove and replace glass damaged or broken prior to Substantial Completion at no additional cost to Owner.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Work includes fixed louvers, frames and accessories.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.
2. Section 07 16 20 – Cement Plastering.
3. Section 07 27 26 – Fluid-Applied Membrane Air Barriers
4. Section 07 62 00 – Sheet Metal Flashings and Trim.
5. Section 07 90 00 – Joint Protection.
6. Division 23 – Mechanical.

3. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
4. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

1.3 PERFORMANCE REQUIREMENTS

A. Wind Load: Furnish blade wall thickness and integral structural supports, designed by manufacturer, to carry a wind load of not less than 20 psf.

1.4 SUBMITTALS

A. Division 1 – Submittal Procedures: Submittal procedures.

B. Product Data: Submit data describing design characteristics, maximum recommended air velocity, design free area, materials and finishes.

C. Shop Drawings: Indicate louver layout plan and elevations, opening and clearance dimensions, tolerances; head, jamb and sill details inclusive of anchorage; blade configuration, screens, blankout areas required, and frames.

D. Samples: Submit minimum 6 inches square with specified finish.

E. Manufacturer's Certificate: Certify products meet or exceed specified performance requirements.

F. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Materials Resources Certificate: Certify recycled material content for recycled content products.

a. Product Cost Data: Products with recycled material content. Exclude cost of labor and equipment to install products.

2. Indoor Air Quality Certificates: Certify volatile organic compound content for each interior adhesive and sealant and related primer.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with AMCA Certification for Water Penetration, Air Performance, and Wind Driven Rain, in compliance with AMCA 500-L. Attach AMCA seal to louvers.

1.6 QUALIFICATIONS

A. Manufacturer and Installer: Companies specializing in manufacturing and installing Products specified in this section with minimum three years' experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Division 1 - Product Requirements: Product storage and handling requirements.

B. Protect louvers from accelerated weathering by removing or venting sheet plastic shipping wrap.

C. Handle and store pre-finished material off ground with weather protection to prevent twisting, bending, or abrasion, and to provide ventilation.

1.8 COORDINATION

A. Division 1 - Administrative Requirements: Coordination and project conditions.

B. Coordinate Work with adjacent assemblies, providing sequencing for installation of air and weather barrier and flashing installations.

C. Verify field measurements prior to fabrication.

1.9 WARRANTY

A. Division 1 - Execution and Closeout Requirements: Product warranties and product bonds. Contractor shall make repairs and replacements upon notification of defects.

1. Furnish 20 year manufacturer warranty against excessive deflection and deterioration of finishes.

PART 2 – PRODUCTS

2.1 WALL LOUVERS – DRAINABLE STYLE

A. Manufacturers: Furnish compliant products of one of the following or approved equal:

1. Construction Specialties, Incorporated.

2. Airolite K6747 (59% free area).

B. System Description: Construction Specialties PL-4080 Perforated High Performance Louver is basis of design.

1. Unit Depth: 7.5-inches maximum.

2. Blade Wall Thickness: 0.068” inches minimum and as required for unit width, integral support spacing.

3. Net Free Area: AMCA 500; 46.8 percent minimum.

4. Maximum Pressure Drop: AMCA 500; 0.20 inch water gauge at 1,000 feet per minute.

5. Water Penetration: AMCA 500; 0.01 oz/sq ft maximum of free area at minimum 822 ft/min face velocity.

2.2 SUSTAINABILITY CHARACTERISTICS

A. Division 1 - Sustainable Design Requirements: Requirements for sustainable design compliance.

B. Materials and Resources Characteristics:

1. Recycled Content Materials: Furnish materials with maximum available recycled content, and with no less than that required in Section 01 81 13.

C. Indoor Environmental Quality Characteristics:

1. Adhesives and Sealants: Maximum volatile organic compound content in accordance with Section 01 81 13.

2.3 COMPONENTS

A. Aluminum: ASTM B221; alloy 6063-T5; extruded shape; prefinished with shop applied fluoropolymer finish.

B. Birdscreen: Interwoven aluminum mesh; 0.063 inch; 1/2 inch open weave; removable, rewireable frame.

C. Blank-Off Panels: ASTM B209; 0.040 inch aluminum sheet; factory installed with removable screws and neoprene gaskets.

2.4 ACCESSORIES

A. Fasteners and Anchors: Stainless steel type.

B. Flashings: Of same material as louver frame and specified in Section 07 62 00.

C. Sealants: Elastomeric silicone building sealant as specified in Section 07 90 00.

2.5 FABRICATION:

A. Louver Frame: Channel shape; welded corner joints, 0.081 inch minimum material thickness. Form perimeter of frame with return to retain backer rod for sealant application.

B. Intermediate Mullions: Concealed, profiled to suite louver frame.

C. Head and Sill Flashings: Fabricate to required shape, single length in one piece for each location.

D. Screens and Blank-Off Panels: Factory install on interior of louver.

2.6 ALUMINUM FINISHES:

A. Superior-Performance Organic Finish – Three-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.

1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions. Apply finish to both sides of panel.

2. Color: Match Glazed Aluminum Curtainwall as specified in Section 08 44 13.

B. Extent of Finish:

1. Apply finish to surfaces cut during fabrication where visible in completed assemblies, including joint edges.

2. Apply touch-up materials recommended by coating manufacturer for field application to cut ends and minor damage to factory applied finish.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 - Administrative Requirements: Coordination and project conditions.

B. Verify prepared openings and flashings are ready to receive Work and opening dimensions are as indicated on shop drawings.

3.2 INSTALLATION

A. Install louvers plumb, level, true, and properly align with adjacent work.

B. Install flashings and align louver assembly to ensure moisture shed from flashings and diversion of moisture to exterior.

C. Secure louvers in opening framing with concealed fasteners.

D. Install perimeter backer rod and sealant in accordance with Section 07 90 00.

3.3 ADJUSTING

A. General: Touch-up minor scratches and blemishes with coating manufacturer's recommended product and system; match original finish for color and gloss. Replace damaged units that cannot be repaired to Architect’s satisfaction at no additional cost to Owner.

3.4 CLEANING

A. Clean louver surfaces in accordance with manufacturer’s instructions.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal stud partition framing.
2. Rigidly-framed gypsum board ceilings and soffits.
3. Framing of suspended gypsum board ceilings, complete with hanger wires, braces, backing, trims, and accessories.
4. Miscellaneous interior light gauge framing.
5. Gypsum board panel product, installation and finish on walls and ceilings, including joint treatment.
6. Gypsum sheathing.
7. Fire protection of recessed light fixtures, electric panels, fire extinguisher cabinets, and other accessories where shown recessed in gypsum wallboard systems at fire rated conditions.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.
2. Section 02 41 00 - Selective Demolition: Coordination with existing assemblies to be altered or extended.
3. Section 05 40 00 - Cold-Formed Metal Framing: Exterior stud wall framing system.
4. Section 05 50 00 – Metal Fabrications: Expansion anchors & miscellaneous supports for framing.
5. Section 07 54 23 – Thermoplastic Polyolefin Roofing: Glass mat faced gypsum roofing cover board.
6. Section 07 84 00 – Firestopping: Provision of firestopping materials in fire-resistive penetrations and joints of rated gypsum board assemblies.
7. Section 07 90 00 – Joint Protection: Provision of sealants in gypsum board assemblies.
8. Section 08 12 14 - Standard Steel Frames: Coordination with Gypsum Board Assemblies.
9. Section 09 90 00 - Paints and Coatings: Surface finish and primer/sealer.

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM):

C. Gypsum Association (GA):

1. GA-201: Gypsum Board for Walls and Ceilings.
2. GA-214: Recommended Specification: Levels of Gypsum Board Finish.
3. GA-216: Recommended Specifications for Application and Finishing of Gypsum Board.
4. GA-253: Recommended Specification for the Application of Gypsum Sheathing.
5. GA-600: Fire Resistance Design Manual.

D. ICC Evaluation Service:

1. International Code Council Evaluation Service Reports as referenced herein.

E. Federal Specifications:

1. United States General Services Agency Federal Specifications and Commercial Item Description reports as referenced herein.

F. Underwriters Laboratories, Inc. (UL):

1. Fire Resistance Directory.

G. Warnock Hersey (WH):

1. Certification Listings.

1.3 PERFORMANCE REQUIREMENTS

A. Conform to applicable code for fire rated assemblies in conjunction with Section 07 84 00 as follows:

1. Fire Rated Partitions: Listed assembly by UL as shown, and as required to complete gypsum board assemblies against abutting assemblies.

2. Fire Rated Structural Column Framing: Listed assembly by UL or WHI.

3. Fire Rated Structural Beam Framing: Listed assembly by UL or WHI.

4. Fire Rated Shaft Wall Requirements: 1- and 2-hour in accordance with UL or WHI.

1.4 SUBMITTALS

A. Division 1 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit manufacturer’s literature and installation instructions for each material and accessory. Clearly identify specified sizes and options intended to be furnished.

C. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Materials Resources Certificate: Certify recycled material content for recycled content products.

2. Product Cost Data: Products with recycled material content. Exclude cost of labor and equipment to install products.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with the referenced documents listed above.

B. Regulatory Requirements: Comply with applicable requirements of the laws, codes, and regulations of Authority Having Jurisdiction.

1.6 QUALIFICATIONS

A. Installer: Company specializing in performing Work of this section with minimum five years documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Storage and Protection: Store materials inside under cover and stacked flat. Stack gypsum board so that long lengths are not over short lengths.

1.8 PROJECT/SITE CONDITIONS

A. Temperature: Maintain temperature range between 55 degrees and 70 degrees F for 24 hours before, during and after gypsum board and joint treatment application.

B. Ventilation:

1. Provide ventilation during and following adhesive and joint-treatment applications.
2. Use temporary air circulators in enclosed areas lacking natural ventilation.
3. Under slow drying conditions, allow additional drying time between coats of joint treatment.

PART 2 – PRODUCTS

2.1 PARTITION AND RIGID CEILING FRAMING MATERIALS

A. Manufacturers: Furnish compliant products of one of the following, or approved equal.

1. California Expanded Metal Products Company / CEMCO.
2. ClarkDietrich Building Systems LLC.
3. SCAFCO Corporation.
4. Steeler, Incorporated.

B. Studs, Joists and Tracks: ASTM C645 and GA-600, galvanized steel sheet, 16 gauge unless otherwise indicated on Drawings.

1. Material:

18-Gauge and Lighter: ASTM A570, Grade C, steel sheet with corrosion resistant factory finish, 33 ksi yield strength.

16-Gauge and Heavier: ASTM A570, Grade E, steel sheet with corrosion-resistant factory finish, 50 ksi yield strength.

2. Studs and Joists: Non-bearing "cee" type with punched webs and flanges not less than 1-3/8 inches wide, depth as indicated.
3. Track: Steel sheet channel with unpunched webs and flanges not less than 1-1/2 inches wide. Depth as indicated and/or to match interfacing studs or joists.

4. Optional Pre-engineered Long Leg Jamb Studs: 16 gauge steel, flange length 3-inches, return lip of 7/8-inch, depth as indicated, valid ICC-ES Evaluation Report. Cemco's "King Studs", (ICC ESR-4943P) or equal.

5. Slotted Steel Track: Same gauge, depth and finish as interfacing metal studs unless otherwise shown. 2-1/2" deep, vertically-slotted legs to permit up to 1-1/2 inches of total vertical deflection without loading of the studs below. Product shall have a current evaluation report from a recognized testing service. ClarkDietrich's "MaxTrak (SLT)" or equal.

6. Backing Plates and Bracing Straps: 20-gauge steel sheet unless otherwise shown, same finish as interfacing metal studs, and sizes as shown.

C. Sustainability Characteristics: Division 1 – Sustainable Design Requirements: Requirements for sustainable design compliance.

1. Materials and Resources Characteristics:

a. Recycled Content Materials: Furnish stud, joist and track materials with maximum available recycled content, and with no less than that required in Section 01 81 13.

2.2 SUSPENDED GYPSUM BOARD CEILING FRAMING MATERIALS

A. Generic Framing Option: Cold-rolled channel main members with furring channels.

1. Main Carrying Channels at Gypsum Board Suspended Ceiling: 16 gauge, 1-1/2 inch cold-rolled steel carrying channels coated with rust-inhibitive material or galvanized.

2. Furring (Hat) Channels: Roll formed 20-gauge galvanized steel, hat-shaped channels, 2-5/8 inches wide and 7/8-inch deep, with 1/2-inch flanges.

3. Hanger Wires: Size as shown on Drawings. Soft-annealed galvanized steel complying with ASTM C636.

B. Pre-Engineered Framing Option: Heavy-duty classified, concealed suspended tee-grid system. ICC ES-1289. Armstrong's "Drywall Grid – XL 7936 Series". No substitutions.

1. Main Beams: ASTM C635; heavy-duty classified, rotary-stitched double-web construction, ASTM A653 hot dipped galvanized steel. "HD 8900 Series".

2. Cross Tees: Rotary-stitched double-web construction, ASTM A653 hot dipped galvanized steel. "XL 8900 Series".

3. Hanger Wires: Size as shown on Drawings. Soft-annealed galvanized steel complying with ASTM C636.

4. Wall Moldings: Manufacturer's standard.

2.3 MISCELLANEOUS FRAMING MATERIALS

A. Clips and Clip Angles: 20-gauge steel sheet, unless otherwise shown, same finish as interfacing metal studs, and sizes and shapes as shown.

B. Fasteners: Hot-dip galvanized at exterior assemblies and at pressure-treated lumber unless indicated otherwise on drawings.

1. Screws: ASTM C954 or ASTM C1002. Self-drilling, self-tapping hex or pan head.

2. Powder-actuated fasteners: 0.157-inch shank diameter, 1-1/4 inch length unless otherwise noted on Drawings.

3. Expansion Anchors: Refer to 05 50 00 – Metal Fabrications.

4. Welding: In conformance with AWS D1.1 and AWS D1.3.

5. Welding Electrodes: AWS, low hydrogen type, as required.

C. Miscellaneous Framing Accessories: Manufacturer's standard, suitable for use intended.

2.4. GYPSUM PANEL MATERIALS

A. Manufacturer: Compliant products of one of the following, or approved equal. Products of Georgia-Pacific are listed below as the specified basis.

1. Georgia-Pacific Corporation.

2. National Gypsum Company.

3. United States Gypsum Company.

B. Gypsum Board: Paper-faced ASTM C1396, fire-resistive type throughout unless otherwise shown or specified. 5/8-inch thick or as indicated, maximum available length in place; tapered edges. “ToughRock Fireguard”.

C. Moisture-Resistant Gypsum Board: Fiberglass mat-faced ASTM C1658, fire-resistive type where indicated. Mold-resistant and paintable. 5/8-inch thick or as indicated, maximum available length in place. “DensArmor Plus High Performance Interior Panel”.

D. Gypsum Tile Backer Board: Fiberglass mat-faced ASTM C1178 when furnished in 5/8” thickness, anti-microbial, built-in moisture barrier and moisture-resistant core. ANSI A118.9-compliant. 5/8-inch thick or as indicated, maximum available length in place. “DensShield Tile Backer”.

E. Gypsum Sheathing: ASTM C1177; fiberglass mat-faced gypsum core, 5/8 inch thick or as indicated, maximum available length in place. “DensGlass Gold”.

F. Fasteners: ASTM C1002, Type S, Philips head bugle shape screws. Provide rust-resistant at Gypsum Tile Backer Board and Gypsum Sheathing. Sizes as required by code and as recommended by gypsum panel manufacturer.

2.5 ACCESSORIES

A. Blanket (Batt) Thermal and Acoustic Insulation: Refer to Section 07 21 16 – Blanket Insulation.

B. Acoustic Sealant: Refer to 07 90 00 – Joint Protection.

C. Corner Beads: Galvanized or aluminum.

D. Edge Trim: GA-216; Type LC bead, galvanized or aluminum.

E. Control Joints: Miscellaneous factory-primed aluminum extrusions suitably finished for field painting with acrylic latex paint. Reveal width as indicated. Extrusions shall feature fins suitable for screw anchorage and finished over with tape and joint compound. Control Joints shall include concealed continuous compression seals. Pittcon “Softforms”, Fry Reglet “Reveal Molding”, or equal.

F. Gypsum Board Joint Materials:

1. Joint Tape: ASTM C475; 2-inch cross-fibered paper. At Moisture-Resistant Gypsum Board and Gypsum Tile Backer Board, furnish alkali-resistant glass fiber tape.

2. Joint Compounds: ASTM C475, ready-mix, non-asbestos, vinyl formulation joint compound. At Moisture-Resistant Gypsum Board and Gypsum Tile Backer Board, use tile-setting mortar or adhesive.

3. Adhesive: Laminating Adhesive: Special adhesive or joint compound recommended for laminating gypsum base panels to face panels in multilayer construction.

4. Repair Tape: U S Gypsum “Sheetrock Fiberglass Drywall Tape”, self-adhesive.

G. Outlet Box Pads used for Fire-Rated or Acoustical purposes: Refer to 07 84 00 – Firestopping.

~~H. Mullion Closures: Used for gap closure between end of partitions and glazing system mullions. Aluminum, factory spring-loaded, self-gasketing, nominally 2-inch wide by required depth. Minimum STC: 38. Finish: Custom to match glazing system mullion. Gordon Interior Specialties’ “Mullion Mate” or approved equal.~~

H. Mullion Closures: Used for visual gap closure, acoustical and fire-resistive separation at intersection of interior partitions with continuous interior or exterior glazing system.

1. Non-Fire-Rated Partition Assemblies: Continuous, spring-loaded, self-gasketing, aluminum assembly designed to fill gap between end of partition and back of vertical glazing system mullion. Basis of Specification: Gordon Interior Specialties’ “Mullion Mate” or approved equal.

a. Size: 2-inches wide nominal, depth as required to fill gap.

b. Sound Transmission Class (STC): 38 minimum, unless indicated otherwise.

c. Aluminum Finish: AAMA 2605, custom color to match glazing system mullion.

2. Fire-Rated Partition Assemblies: Aluminum with ASTM E84, Class 1 foam infill and continuous gasketing for face of glass. Assembly to encapsulate window mullion for complete acoustical separation. Basis of Specification: MULL-it-OVER Products' "Mullion Trim Cap" series or approved equal.

a. Depth: As required to encapsulate glazing system mullion.

b. Sound Transmission Class (STC): 55 minimum, unless indicated otherwise.

c. Fire Rating: One- or Two-Hour options to match interior partition assembly rating, UL Assembly tested.

d. Aluminum Finish: AAMA 2605, custom color to match glazing system mullion.

I. Sound Isolation Clips: Engineered with resilient isolation material for installation on steel wall studs and application of horizontal furring channels. Listed with UL for optional use on fire-resistive wall assemblies to two-hour minimum. Furnish one of the following or approved equal:

1. Kinetics Noise Control, Incorporated's "Isomax".
2. Pliteq, Incorporated's "Genie Clip".
3. PAC International, Incorporated's "RSIC-1".

J. Miscellaneous Items: Provide components not specified but shown and provide other items and accessories required for complete installation.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 – Administrative Requirements: Coordination and project conditions.

B. Verify site conditions are ready to receive work and opening dimensions are as instructed by manufacturer.

3.2 GENERAL

A. Install Work plumb, level, true, straight and rigid per reference standards, manufacturer's recommendations, and as specified.

B. Tolerances: Do not vary from true plane greater than 1/8-inch in 8 feet, measured in any direction.

C. Do not bridge building expansion or seismic joints with framing or furring members. Independently frame both sides of joints with framing or furring members.

D. Frame and reinforce openings for doors, windows, ducts, access panels, and other openings and items as shown or per referenced standards.

E. Install accessories and miscellaneous specialties plumb, true and level. Install other materials and items as required as part of the Work of other Sections.

F. Install and tighten expansion anchors in accordance with manufacturer's recommendations and referenced Reports. Coordinate for inspection and testing as required. Clean and repair surfaces damaged by drilling or installation and fill abandoned holes with patching mortar in accordance with the manufacturer's instructions. Correction of defective work shall be the responsibility of the Contractor.

3.3 INTERIOR WALL AND PARTITION INSTALLATION

A. Frame from floor to structure above with metal studs at 16 inches on center, unless otherwise shown.

1. Fasten floor track and slotted top track to structure as shown, 2 inches from ends and with spacing not to exceed that of studs.

2. Secure metal studs in tracks with sheet metal screws as indicated. Fasten studs to slotted top tracks through centers of slotted holes as shown.

B. Brace studs as shown, including at locations that will not receive gypsum panels.

C. Provide backing as scheduled and detailed and of sufficient length to fasten each end to metal framing. Provide backing support for each point of fastening of every unit to be anchored.

D. Resilient Channel: Attach resilient channels, where required, on 16-inch centers perpendicular to stud framing.

1. Drive screws only through pre-punched holes in channels.

2. Attach resilient channels with mounting flanges facing in only one direction. Orient the gap between the channel and stud faces upward on walls.

3. Hold back ends of channels 1/2 to 3 inches from intersecting surfaces.

4. Splice channels only at studs and overlap ends by not more than 1-1/2 inches.

5 Locate channels so that gypsum board will not be cantilevered more than 6 inches from vertical surfaces.

3.4 CEILING SUPPORT INSTALLATION

A. Rigidly frame or install suspended gypsum panel ceiling system as indicated on drawings. Seismically brace suspended framing as indicated.

3.5 ACOUSTIC ACCESSORIES INSTALLATION:

A. Place acoustic insulation in partitions tight within spaces, around cut openings, behind and around electrical and mechanical items within or behind partitions, and tight to items passing through partitions.

B. Install Outlet Box Pads at all boxes within partitions identified as fire-rated or acoustical.

3.6 GYPSUM PANEL INSTALLATION (INTERIOR):

A. General: Comply with applicable requirements of specified reference standards, except where more stringent requirements are specified; mandated by local codes; or by manufacturer of gypsum board.

1. End Joints: Neatly fit and stagger.

2. Joints: Locate on different studs at opposite sides of partition.

3. Workmanship: Install Work with plumb and straight surfaces, with no waves or buckles, and free of unevenness at joints.

B. Ceilings:

1. General: Apply gypsum board with long dimension at right angles to horizontal supports.

2. End Joints: Provide with solid bearing.

C. Partitions:

1. General: Apply gypsum board with long dimensions perpendicular to studs and with all abutting edges over supports.

a. Start application at corner of room or space.

b. Stagger joints to occur on different framing members on opposite sides of partitions wherever possible.

c. Do not place butt ends against tapered edges.

d. Cut, fit neatly around outlets, switches, and other penetrating items.

e. Cut gypsum board to not more than 1/4-inch of penetrating ducts, pipes, conduit, outlet boxes, and other penetrating items.

D. Fastening:

1. Attach gypsum board with specified fastener type. Space fasteners per more stringent of specified Reference Standards or UL standards. Stagger opposite each other on adjacent ends or edges.

2. Drive screws with power screwdriver recommended by gypsum board manufacturer. Do not hammer-drive screws.

3. Set fastener head slightly below surface of gypsum board. Do not break through facing surface of gypsum board.

4. Omit fasteners at edges where metal edge trim will be installed.

5. When furring channels are used with sound isolation clips, attach gypsum board to furring channel only. Do not allow gypsum screws to contact studs.

E. Double-Layer Installation:

1. Install first layer per requirements specified above and finish to Level 2 as specified below.

2. Screw fasten second layer similarly. Orient second layer of panels in either direction. Stagger joints and abut vertical joints over studs.

F. Metal Trim:

1. General: Apply trim at exterior corners and at interior corners where gypsum board intersects metal or other dissimilar materials.

2. Trim Lengths: Install in longest lengths practicable.

3. Trim: Run straight and square with planes.

4. Edges: Apply applicable shape metal edge trim at exposed edges of gypsum board and where otherwise shown. Where gypsum panel abuts other materials, install edge trim with 1/8-inch clearance to allow for caulking, unless otherwise shown.

5. External Corners: Apply cornerbeads at external corners and where otherwise shown in single lengths.

6. Install control joints as indicated. Install straight, level and plumb. Align with corners of openings and other elements. Confirm with Architect the requirements for control joints where not indicated at continuous gypsum board surfaces 30 feet or greater in length.

G. Perimeters, Penetration, and Openings: Seal all perimeter material transitions, penetrations, outlet boxes, and openings.

1. Acoustic Partitions: Install Acoustic Sealant and install and seal other gaps per requirements on drawings and as specified in Section 07 90 00.

2. Fire-Rated Partitions: If partition is fire-rated, install fire-stopping in lieu of acoustic sealant as specified in Section 07 84 00.

3.7 GYPSUM PANEL TAPING AND FINISHING:

A. Level 1: Provide in plenums, attics, and other concealed areas. All joints and interior angles shall have tape set in joint compounds. Surface shall be free of excess joint compound. Tool marks and ridges are acceptable.

B. Level 2: Not Used.

C. Level 3: Not Used.

D. Level 4: Provide in areas where flat and eggshell paints, light textures, or wall coverings are to be applied. All joints and interior angles shall have tape embedded in joint compound and two separate coats of joint compound applied over all flat joints and one separate coat of joint compound applied over interior angles. Fastener heads and accessories shall be covered with three separate coats of joint compound. All joint compounds shall be smooth and free of tool marks and ridges.

E. Level 5: Provide at locations where indicated and at all locations scheduled to receive paints with semi-gloss and gloss sheen as defined under Section 09 90 00. Finish gypsum board, after taping and finishing specified under Level 4 above, as follows.

1. Apply a thin skim coat of joint compound to entire surface of gypsum board. Apply in manner to minimize suction, porosity, and other surface variations between joint compound and face paper surface. Take special care to eliminate lap and tool marks during application.

F. General: Apply joint compound and joint tape per manufacturer's directions.

G. Acoustical Sealant: Do not apply joint tape and joint compound over joints containing acoustical sealant until sealant has completely cured.

H. Tape: Center tape over joints and embed in uniform layer of joint compound of sufficient width and depth to provide form and complete bond.

1. Apply skim coat while embedding tape.

2. At Moisture Resistant Gypsum Board and Tile Backer Board, fill fastener heads, penetrations, and joints with tile setting mortar or adhesive and use alkali-resistant glass-fiber tape.

I. Angles: Treat with joint tape folded to conform to adjacent surfaces and straight, true angles.

J. Drying Time: Provide minimum 24 hours between applications of compound.

K. Finishing Compound: Apply coat over joint compound and tape.

1. Spread evenly and feather out beyond edge of board.

2. After first finishing coat is thoroughly dry, cover with second coat with edges feathered out slightly beyond the preceding coat.

3. Apply third coat if required to visually conceal gypsum board joints.

L. Fastener Depressions: Give dimples at fastener heads and marred spots on surface of gypsum board one coat joint compound and two coats finishing compound. Apply in same manner as for joints.

M. Metal Trim: Conceal flanges with minimum two coats compound. Extend compound 8 to 10 inches each side of metal nosing.

N. Sanding: After each application of joint or finishing compound has dried, lightly sand joints. Leave gypsum board and treated areas uniformly smooth and ready for painting or other decoration.

3.8 GYPSUM SHEATHING INSTALLATION:

A. General: Comply with ASTM C1280, GA-253 and manufacturer's written instructions, except where more stringent requirements are specified; mandated by local codes; or by manufacturer of gypsum board.

B. Orient sheathing vertically (parallel with framing) and abut ends and/or edges of the boards centered over face of framing members. Offset board joints by not less than one stud spacing.

C. Cut panels at penetrations, edges, and other obstructions of work; fit closely against abutting construction unless otherwise indicated.

D. Coordinate sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.

E. Do not bridge building expansion or deflection joints; cut and space edges of panels to match spacing of supporting elements.

F. Install boards with a 1/4-inch gap where they abut concrete or similar material that might retain moisture, to prevent wicking. Install with a 3/8-inch gap where structural elements, plumbing and conduit penetrate sheathing, unless otherwise noted. Seal all gaps per Division 7.

G. Fasten sheathing to cold formed metal framing with screws with power screwdriver recommended by gypsum board manufacturer. Do not hammer-drive screws. Locate fasteners not less than 3/8 inch from ends and edges of sheathing, spaced at 4 inch centers along vertical sides and 8 inch centers along intermediate supports. Set fastener heads at or slightly below surface of sheathing.

1.4 SUBMITTALS

A. Product Data:

Submit manufacturer's technical data for each type of Metal Framing system required.

B. Samples:

Metal Framing System, including main runner and 4 foot cross tees.

C. Shop Drawings:

Layout and details of Metal Framing System. Show locations of items which are to be coordinated with, or supported by the metal suspension system.

1.5 QUALITY ASSURANCE

A.

Installer Qualifications: Installer experienced in performing work of this section who has specialized in installation of work similar to that required for this project.

B.

Pre-installation Meetings: Conduct pre-installation meeting to verify project requirements, substrate conditions, and manufacturer's installation instructions.

C.

Fire Resistance Characteristics: For fire-resistance-rated assemblies that incorporate Metal framing systems provide materials and construction identical to those tested in fire resistance assembly as indicated in the construction documents and or architectural plans in accordance with ASTM E119.

1.6 SUSTAINABLE MATERIALS

Transparency: Manufacturers will be given preference when they provide documentation to support sustainable requirements for the following: Material ingredient transparency,

Removal of Red List Ingredients per LBCV3, Life Cycle impact information, Low-Emitting Materials, and Clean Air performance.

1. Health Product Declaration. The end use product has a published, complete Health Product Declaration with disclosure at a minimum of 1000ppm of known hazards in compliance with the Health Product Declaration open Standard.

2. Declare Label. The end use product has a published Declare label by the International Living Future Institute with disclosure of 100 ppm with a designation of Red List Free or Compliant (less than 1% proprietary ingredients).

3. Low Emitting products with VOC emissions data. Preference will also be given to manufacturers that can provide emissions data showing their products meet CDHP Standard Method v1.1 (Section 01350).

4. Life cycle analysis. Products that have communicated lifecycle data through Environmental Product Declarations (EPDs) will be preferred.

5. End of Life Programs/Recycling: Where applicable, manufacturers that provide the option for recycling of their products into new products at end-of-life through take-back programs will be preferred.

6. Products meeting LEED V4 requirements including:

Storage & Collection of Recyclables

Construction and Demolition Waste Management Planning

Building Life-Cycle Impact Reduction

Building Product Disclosure and Optimization Environmental Product Declarations

Building Product Disclosure and Optimization Sourcing of Raw Materials

Building Product Disclosure and Optimization Material Ingredients

Construction and Demolition Waste Management

1.7 DELIVERY, STORAGE AND HANDLING

Protect and store products in manufacturer's unopened packaging until ready for installation.

1.8 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.9 WARRANTY

A. Acoustical Panel: Submit a written warranty executed by the manufacturer, agreeing to repair or replace panels that fail within the warranty period. Failures include, but are not limited to the following:

1. Acoustical Panels: Sagging and warping

2. Grid System: Rusting and manufacturer's defects

B. Warranty Period:

1. Grid: One (1) year from date of substantial completion

C. The Warranty shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and will be in addition to and run concurrent with other warranties made by the Contractor under the requirements of the Contract Documents.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A.

Suspension Systems:

1. Armstrong World Industries, Inc.

B.

Aluminum Custom Perimeter Trim Extruded:

(a) Armstrong World Industries, Inc.

C.

Perimeter Systems:

1. Armstrong World Industries, Inc.

2.2.1 DRYWALL SUSPENSION SYSTEMS

A. Armstrong Drywall Suspension Systems all main beams and cross tees shall be commercial quality hot-dipped galvanized steel

1. Tee: manufactured main beam- 1-1/2" knurled face with ScrewStop™ reverse hem by 1-11/16 inches high. Drywall Main Beams are factory punched with crosstee routs and hanger wire holes and SuperLock™ main beam clip for a strong secure connection and fast accurate alignment. Both ShortSpan and Drywall Main Beams are Heavy-duty performance per ASTM C635

HD7940 - 3600mm Drywall Furring Main Beam 38mm

2. Cross Tees: manufactured main beam- 1-1/2" knurled face with ScrewStop™ reverse hem by 1-1/2 inches high with factory punched cross tee routs and hanger wire holes and XL stake on clip for a strong secure connection.7930 - 1200mm Drywall Cross Tee

3. Wall Molding:

7856 - 10ft F Molding for 5/8" Gypsum

4. Hanger wire: a Class 1 zinc coating, soft temper, pre-stretched, with a yield stress load of at least time three times the design load, but not less than 12-gauge.

5. Material Ingredient Transparency: Health Product Declaration (HPD); Declare Label

6. Life Cycle Assessment: Third Party Certified Environmental Product Declaration (EPD)

PART 3 – EXECUTION

3.1 EXAMINATION

A:

Prior to installation, inspect previous work of all other trades. Verify that all work is complete and accurate to the point where this installation may properly proceed in strict accordance with framing shop drawings.

B.

If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

C.

Installation: In accordance with all approved plans, details, and manufacturer's installation guidelines located in the Armstrong Drywall Grid Systems and ShortSpan Installation Guides.

(1) Install seismic components if required by the building code. Seismic components to be specified on the architectural plans by the project engineer or design team.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes Portland cement plaster system with integral color, acrylic-modified finish over cement plaster base coat(s), including building paper, lath and accessories**.**

1. Three-coat system over building paper and lath at gypsum sheathing and rigid insulation substrates.

2. Two-coat system over bonding compound at concrete and concrete masonry unit substrates.

3. Anti-Graffiti coating at ~~First Floor~~ areas**/heights indicated on Construction Drawings**.

B. Related Sections:

1. Section 05 40 00 - Cold-Formed Metal Framing: Structural metal studding and framing **and sub-framing** behind plaster base.

2. Section 07 21 13 – Board Insulation: Continuous insulation used in exterior wall assemblies.

3. Section 07 27 14 – Self-Adhered Sheet Air Barriers: Air and weather barrier beneath building paper.

4. Section 09 21 16 - Gypsum Board Assemblies: Exterior sheathing.

1.2 REFERENCES

A. ASTM International:

1. ASTM C150 - Standard Specification for Portland Cement.

2. ASTM C206 - Standard Specification for Finishing Hydrated Lime.

3. ASTM C847 - Standard Specification for Metal Lath.

4. ASTM C897 - Standard Specification for Aggregate for Job-Mixed Portland Cement-Based Plasters.

5. ASTM C926 - Standard Specification for Application of Portland Cement-Based Plaster.

7. ASTM C1002 - Standard Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases.

8. ASTM C1063 - Standard Specification for Installation of Lathing and Furring to Receive Interior and Exterior Portland Cement-Based Plaster.

9. ASTM C1116 - Standard Specification for Fiber-Reinforced Concrete and Shotcrete.

B. Federal Specification Unit:

1. FS UU-B-790 - Building Paper, Vegetable Fiber: (Kraft, Waterproofed, Water Repellent and Fire Resistant).

1.3 SUBMITTALS

A. Division 1 - Submittal procedures.

B. Product Data: Submit data on each lathing material and accessory, plaster materials, and characteristics and limitations of products specified. Include proposed method for curing scratch coat.

C. Shop Drawings: Indicate locations of proposed control and expansion joints where not indicated on Drawings.

D. Samples: Submit 12 x 12 inch in size illustrating finish color and texture.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with ASTM C926. Obtain Architect's approval of scratch coat curing methodology via Submittal process.

B. Qualified Manufacturer and Installer: Companies specializing in manufacturing products specified in this section with minimum five years' experience.

C. Quality control of plaster mixes is imperative. Field-mixed plaster materials will not be accepted.

D. Pre-Installation Meetings: Before the start of Work, meet at the Project site to review methods and sequence of installation, special details and conditions, quality standards, testing and quality control requirements, job organization and other pertinent topics related to the Work. The meeting shall include Owner Representatives, Architect, Contractor, and subcontractors whose work is relevant to this Specification Section.

E. Mockup: Construct mockup of cement plaster, minimum 100 square feet in area, including typical expansion joint intersection and specified plaster color and finish.

1. Reconstruct the mock-up as many times as necessary to meet Architect's approval, without additional cost to the Owner. The approved mock-up will establish both a technical and aesthetic standard for the remainder of the project including the installation of lath and accessories, the mixing and application of the plaster (for color and texture) and the curing of the plaster (for crack control).

2. The mockup shall be separate from the final construction and shall be removed from the site at the direction of the Owner's representative. Only at the Architect's discretion may the approved mockup become part of the permanent finish.

1.5 ENVIRONMENTAL REQUIREMENTS

A. Division 1 - Product Requirements.

B. Do not apply plaster unless minimum ambient temperature of 40 degrees F has been and continues to be maintained for minimum 48 hours prior to application and until plaster is cured.

C. Take precautionary measures to ensure plaster is not subjected to excessive sun and wind which could cause uneven and excessive evaporation, premature dehydration, or cracking. Provide opaque tarpaulins or other temporary means of protection when weather conditions warrant.

1.6 WARRANTY

A. General: Warranties shall pay for all costs associated with repairs and replacement upon notification of defects.

B. Material Warranty: Manufacturer shall warrant cement plaster and acrylic finish materials bearing its name on the label against defects for ten years, regardless of the source of manufacture.

PART 2 – PRODUCTS

2.1 METAL LATH

A. Expanded Metal Lath: ASTM C847, with ASTM A653 G60 galvanized coating, diamond mesh, self-furring to hold face 1/4 inch from backing, not less than 3.4 pounds per square yard.

2.2 BASE-COAT CEMENT PLASTER

A. Plaster Base Materials: Pre-mixed, engineered material with fiber for scratch and brown coat complying with ASTM C926 and below.

1. Cement: ASTM C150, Type I Portland cement.
2. Lime: ASTM C206, Type S.
3. Aggregate: ASTM C897.
4. Fiber: ASTM C1116, 1/2-inch nominal length alkaline-resistant glass or polypropylene fibers specially formulated for base coats. Comply with fiber manufacturer's written instructions for fiber quantities in mixes, but do not exceed 1 lb of fiber per cubic yard of cementitious materials.
5. Water: Clean, fresh, potable and free of mineral or organic matter capable of affecting plaster.

B. Portland Cement Base-Coat Mixes for Use over Metal Lath: Scratch and brown coats for three-coat plasterwork as follows:

1. Scratch Coat: For cementitious material, mix 1 part portland cement and 3/4 to 1-1/2 parts lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.

2. Brown Coat: For cementitious material, mix 1 part portland cement and 3/4 to 1-1/2 parts lime. Use 3 to 5 parts aggregate per part of cementitious material, but not less than volume of aggregate used in scratch coat.

C. Portland Cement Base-Coat Mixes for Base-Coat Mixes for Use over Low-Absorption Concrete: Single base (scratch) coat for two-coat plasterwork on low-absorption plaster bases as follows:

1. Portland Cement Mix: For cementitious material, mix 1 part portland cement and 0 to 3/4 part lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.

D. Portland Cement Base-Coat Mixes for Base-Coat Mixes for Use over High-Absorption Concrete Unit Masonry: Single base (scratch) coat for two-coat plasterwork on high-absorption plaster bases as follows:

1. Portland Cement Mix: For cementitious material, mix 1 part portland cement and 3/4 to 1-1/2 parts lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.

2.3 CRACK RESISTANT BASE COAT

A. Apply in thin layer over plaster brown coat and embed reinforcing mesh.

1. Polymer-Modified Basecoat: Fiber-reinforced, 1/8-inch thick nominal.

2. Reinforcing Mesh: ASTM C1116, alkali-resistant glass fiber, 4-1/2 ounces per square yard, treated as necessary for full compatibility with related materials.

2.4 FINISH COATS

A. Acrylic-Based Finish Coatings: Factory-mixed acrylic-emulsion coating systems formulated with colorfast mineral pigments and fine aggregates; for use over cement plaster base coats. Include manufacturer's recommended primers and sealing topcoats for acrylic-based finishes.

1. Manufacturers: Furnish compliant product of one of the following or approved equal:

a. BMI Products, Incorporated.

b. Senergy / BASF Wall Systems.

c. STO Corporation.

2. Color: Match Architect’s sample.

2.5 ACCESSORIES

A. Metal Accessories: Comply with ASTM C1063. Furnish as specified and indicated on the Drawings to match the following:

1. Expanded Metal Lath: ASTM C847, galvanized, diamond mesh, self-furring to hold face 1/4 inch from backing, not less than 3.4 pounds per square yard.

2. Casing Bead: ASTM C1047; formed zinc, No. 66X profile, depth governed by plaster thickness, maximum possible lengths, expanded metal flanges, with square edges.

3. Corner Bead: ASTM C1047; formed zinc, No. 1A profile, depth governed by plaster thickness, maximum possible lengths, expanded metal flanges with straight edge.

4. Base Sill Screed: ASTM C847; formed galvanized sheet steel, No. 36 profile, depth governed by plaster thickness, maximum possible lengths, solid flanges, weep holes, without full return below edge.

5. Strip Mesh: Expanded metal lath, minimum 0.018 inch thick, 2 inch wide x 24 inch long; galvanized.

6. Control Joint Accessories: ASTM C1047; formed zinc, No. 15 accordion ("Double-V") profile, 2 inch expanded metal flanges each side.

7. Channel Screed: Single piece, extruded 6063 T5 aluminum alloy. Depth governed by plaster thickness, reveal width as indicated on Drawings, maximum possible lengths, mill finish.

8. "X" Corner Molding: Single piece, extruded 6063 T5 aluminum alloy to form "negative" outside corners. Depth governed by plaster thickness.

9. Anchorage: Tie wire, nails, and other metal supports, of type and size to suit application; to rigidly secure materials in place, galvanized.

10. Fasteners: ASTM C1002, self-drilling, self-tapping Type S screws.

11. Custom Column Ring: Gordon Incorporated's "PR-3X4".

B. Backing Material: FS UU-B-790a, Type I, Grade D, Style 2 vapor-permeable building paper.

C. Bonding Compound: ASTM C932, tinted. Compound will not re-emulsify, re-wet or re-tackify.

2.6 ANTI-GRAFFITI COATING

A. Non-Sacrificial, clear drying, odor-free, two-part system composed of sealer and wear coating. Rainguard Brands, LLC "Vandlguard" or compliant, approved equal.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Ensure all wall framing, installation of utilities and other accessories to be installed in wall cavity are complete and inspected prior to covering with cement plaster work. Furnish additional framing and backing required for proper securement of plaster accessories, including vertical joints and reveals.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. General: Clean surfaces to receive plaster. Remove loose materials and other deleterious substances with may impair work.

B. Do not conceal weather barrier and rigid insulation until field quality control inspections and corrective work is complete.

3.3 INSTALLATION OF METAL LATH

A. Do not install metal lath at concrete and masonry substrates. Proceed directly to “Installation of Accessories” article below.

B. Isolation: Isolate lathing and metal support system where it abuts building structure horizontally, and where partition/wall work abuts overhead structure, to prevent transfer of building loads into plaster.

C. Installation of Lathing Materials:

1. Apply one layer of Grade D building paper over weather barrier and **gypsum sheathing** substrate **as well as over rigid insulation**; lap edges horizontally in waterfall arrangement, 2 inches minimum. Fasten in place.

2. Install metal lath in accordance with ASTM C1063. Apply lath taut, with long dimension perpendicular to supports; secure end laps with tie wire where they occur between supports; lap sides minimum 1-1/2"; secure with tie wires.

3. Place strip mesh diagonally at corners of lathed openings. Secure rigidly in place.

4. Place strip mesh at junctions of dissimilar materials; place parallel with dissimilar materials; secure rigidly in place.

3.4 INSTALLATION OF ACCESSORIES

A. Install metal accessories in accordance with ASTM C1063.

B. Place corner bead at external wall corners; fasten at outer edges of lath only at maximum 12 inches on center.

C. Place casing beads at terminations of plaster finish. Use single length of metal beads wherever length of run does not exceed longest standard stock length available; miter or cope corners. Butt and align ends. Secure rigidly in place.

D. Provide casing beads where plaster abuts dissimilar construction and at perimeter of openings where edges of plaster will not be concealed by other work.

E. Install door and glazed frames plumb and level in opening. Secure rigidly in place.

F. Install sill and drip screeds with paper sheathing and lath installed over attachment flange of screeds.

G. Control Joints:

1. Install control joints where indicated on Drawings and so plaster areas do not exceed 120 square feet, and with area sides having a maximum one to two and a half (1:2-1/2) ratio, unless otherwise approved by Architect.

2. Coordinate joint placement with other related work. Where joints meet frames at openings, align with outside corners.

3.5 APPLICATION OF BASE-COAT CEMENT PLASTER

A. Masonry and Concrete Substrates: Apply Bonding Compound to unit masonry and concrete surfaces for direct application of plaster.

B. Apply plaster in accordance with ASTM C926. Work shaded surfaces, providing temporary shading as necessary to avoid application in direct sunlight.

C. Walls and Ceilings - Portland Cement Base-Coat Mixes for Use over Metal Lath: For scratch and brown coats with 3/4-inch total thickness for three-coat plasterwork as follows:

1. Apply first, “scratch” coat to lath to a nominal thickness of 3/8 inch, scored horizontally for mechanical key. Moist cure for a minimum 48 hour period.

2. Apply second, “brown” coat to nominal thickness of 3/8 inch, using straightedge to bring surface to a true, even plane, flush with plaster grounds. Float surface with a wood or hard rubber float to promote densification and ensure a surface with adequate “tooth” receptive to bonding of the finish coat.

3. Provide minimum of 2 days of moist curing. Provide additional moist curing to conform to manufacturer’s recommendations, weather conditions and local code criteria, and as otherwise necessary to provide an acceptable substrate for finish work.

D. Wall and Ceilings - Portland Cement Base-Coat Mixes for Use over Concrete or Concrete Masonry Units for two-coat plasterwork as follows:

1. Apply base coat over Concrete Masonry Units with Bonding Compound to a thickness of 3/8-inch.

2. Apply base coat over Concrete with Bonding Compound to a thickness of 1/4-inch.

3. Moist cure for a minimum 48 hour period.

E. Crack Resistant Base Coat Application:

a. Ensure that the surface of the base coat is cured, clean, dry and free of efflorescence, oil or other contaminants that would impair adhesion.

b. Apply polymer-modified mixture in continuous layer approximately 3/32-inch thick.

c. Apply a layer of reinforcing mesh into the wet mixture and trowel smooth until mesh is fully embedded. Lap adjoining pieces of mesh 2-1/2 inches minimum and as required in the manufacturer's written instructions.

d. Cure for a minimum of 24 hours, until dry, or longer as required by weather conditions.

3.6 APPLICATION OF CEMENT PLASTER FINISH COATS

A. Plaster Finish Coats: Apply to provide smooth finish to match Architect's sample.

B. Ensure that the surface to be finished is clean, dry and free of any contaminants that would impair adhesion.

C. Acrylic-Based Finish Coatings: Apply coating system, including primers, finish coats, and sealing topcoats, according to manufacturer's written instructions.

1. Apply finish to natural breaks to avoid visible cold joints.

2. Work shaded surfaces, providing temporary shading as necessary to avoid application in direct sunlight.

3.7 ERECTION TOLERANCES

A. Maximum Variation from Flat Surface: 1/4 inch in 10 feet.

3.8 ADJUSTING

A. Cut, patch, point, and repair plaster as necessary to accommodate other work and to restore cracks, dents, and imperfections.

B. Repair or replace work to eliminate blisters, buckles, crazing, check cracking, dry-outs, efflorescence, sweat-outs, and similar defects.

C. Finish cutting and patching to match undamaged plaster; patching shall not be visible in finished installation.

3.9 APPLICATION OF ANTI-GRAFFITI COATING

A. Apply to First Floor Areas of Acrylic Finish in accordance with manufacturer's written instructions.

3.10 CLEANING

A. Remove temporary protection and enclosure of other work after plastering is complete.

B. Promptly remove plaster from surfaces not indicated to be plastered.

C. Repair surfaces stained, marred or otherwise damaged during plastering.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Work includes interior ceramic wall tiling and floor tiling with or without waterproofing and isolation membrane; solid surface door thresholds.

B. Work Specified Elsewhere:

1. Section 07 90 00 – Joint Protection: Sanitary sealant.

1.2 REFERENCES

A. American National Standards Institute (ANSI):

B. American Society for Testing and Materials (ASTM)

1. ASTM C270 - Standard Specification for Mortar for Unit Masonry

C. Tile Council of North America, Inc. (TCNA):

1. TCNA - Handbook for Ceramic Tile Installation.

1.3 SYSTEM DESCRIPTION

A. Performance Requirements

1. Slip Resistance: ANSI A137.1; Dynamic Coefficient of Friction (DCOF) 0.42 or greater for tile used on floors.

1.4 SUBMITTALS

A. Product Data: Submit manufacturer's literature and installation instructions for each material and accessory, clearly notating specified requirements.

B. Samples: Furnish sufficient samples to establish full range of colors and textures for materials exposed in the finished Work. Label samples to indicate product and location in the Work. Samples will be reviewed for appearance only. Compliance with other requirements is the responsibility of the Contractor.

1. For Initial Selection: Manufacturer's color charts consisting of actual tiles or sections of tile showing full range of colors, textures, and patterns available for each type and composition of tile indicated. Include samples of grout and accessories requiring color selection.

2. For Verification: For products which involve color and texture variations, submit sets showing full range of variations expected.

a. Tile: Each type and composition of tile and for each color and texture required, at least 12 inches square, mounted on plywood or hardboard backing and grouted.

b. Trim and Accessories: Full-size units of each type for each color required.

c. Thresholds: 6-inch lengths.

d. Metal Edge Strips: 6-inch lengths.

C. Quality Assurance/Quality Control Submittals:

1. Test Reports: Slip Resistance Test Reports.

D. Closeout Submittals:

1. Maintenance Data.

1.5 QUALITY ASSURANCE

A. Qualified Installer: Installer to have 5 years' experience in the installation of specified materials on comparable projects. The firm shall have the approval of the materials manufacturer.

B. Single-Source Responsibility for Tile: Obtain each color, grade, finish, type, composition, and variety of tile from single source with resources to provide products of consistent quality in appearance and physical properties without delaying progress of Work.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Packing, Shipping, Handling, and Unloading: Deliver packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirement of ANSI A137.1 for labeling sealed tile packages.

B. Storage and Protection: Protection: Prevent damage or contamination to materials by water, freezing, foreign matter, and other causes.

C. Handling: Handle tile with temporary protective coating on exposed surfaces to prevent coated surfaces from contacting backs or edges of other units. If, despite these precautions, coating does contact bonding surfaces of tile, remove coating from bonding surfaces before setting tile.

1.7 PROJECT/SITE CONDITIONS

A. Environmental Conditions: Maintain and protect Work during and after installation per Reference Standards and manufacturer's printed recommendations.

B. Ventilation: Vent temporary heaters to exterior to prevent damage to tile work from carbon dioxide buildup.

C. Temperature: Maintain temperatures at 50 degrees F. (10 degrees C.) or more in tiled areas during installation and for 7 days after completion, unless higher temperatures are required by Reference Standards or manufacturer's instructions.

1.8 MAINTENANCE

A. Extra Materials:

1. General: Deliver extra materials to Owner at Project site. Furnish extra materials that match products installed as described below, packaged with protective covering for storage and identified with labels clearly describing contents.

2. Tile and Trim Units: Furnish quantity of full-size units equal to 3 percent of amount installed, for each type, composition, color, pattern and size.

PART 2 – PRODUCTS

2.1 CERAMIC TILE

A. General: ANSI 137.1; 20 percent minimum recycled content.

B. Ceramic Tile ‘CT1’ – See finish plans. Ceramic Floor Tile.

C. Ceramic Tile ‘CT2’ – See finish plans. Ceramic Wall Tile.

D. Ceramic Tile “CB1” – See finish plans. Match wall tile.. Coved tile base.

2.2 MORTAR AND GROUT

A. Manufacturers: Furnish products of one of the following or approved equal:

1. Custom Building Products.

2. Laticrete International, Incorporated.

3. Mapei International.

B. Thin-Set / Bond Coat: ANSI 118.4; single-step, polymer-fortified, cementitious thin-set mortar. Basis of Specification: Laticrete International, Inc.'s "254 Platinum".

C. Thick-Bed Mortar: ASTM C270; TCNA Extra-Heavy service rating; single-step, polymer-fortified, portland cement mortar. Basis of Specification: Laticrete International, Inc.'s "3701 Fortified Mortar Bed".

D. Grout: ANSI 118.3; water-cleanable, moderate chemical-resistant, non-sagging, sanded epoxy compound suitable for specified joint widths. Basis of Specification: Laticrete International, Inc.'s "SpectraLock PRO Premium Grout".

1. Colors:

a. Floors: To be selected from manufacturer's extended selection.

b. Walls: To be selected from manufacturer's extended selection.

2.3 ACCESSORIES

A. Bonded Waterproofing and Crack Isolation Membrane: ANSI A118.10; load-bearing, liquid rubber polymer with reinforcing fabric. Basis of Specification: Laticrete International's "Laticrete 9235".

B. Cleavage Membrane: ANSI A108.1A; unbonded.

C. Wire Reinforcing: ANSI A108.1A; 16 gauge, 2 inch x 2 inch.

D. Solid Surface Thresholds: ASTM E84, Class A; resinous polymer with homogenous color throughout. Honed finish, 1/2 inch high, 2 inches deep and full width of wall or frame opening, beveled one side as shown on drawings, radiused edges from bevel to vertical face. Dupont's "Corian" or approved equal. Color: To be selected.

2.3 MIXES

A. General: Mix mortars and grout per Reference Standards and manufacturer's recommendations, including those requirements for accurate proportioning of materials, water, or additive content; type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other procedures needed to produce mortars and grouts of uniform quality with optimum performance characteristics for application indicated.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 – Administrative Requirements: Coordination and project conditions.

B. Verify inserts, accessories, plumbing, and similar items are placed or provided for.

C. Verify surfaces are ready to receive work.

3.2 PREPARATION

A. Protect surrounding work from damage.

B. Vacuum clean surfaces and damp clean.

C. Seal substrate surface cracks with filler. Level existing substrate surfaces to acceptable flatness tolerances.

D. Install Gypsum Tile Backer Board as specified elsewhere. Tape joints and corners with 2-inch wide alkali-resistant glass fiber mesh tape, cover with skim coat of dry-set mortar to feather edge.

3.3 INSTALLATION SYSTEMS

A. General: Install membranes, tile, thresholds, and grout in accordance with manufacturer's recommendations, applicable requirements of ANSI A108.1 through A108.10, and TCNA Handbook recommendations for systems specified.

B. Floor Installation - Thin-Set Methods:

1. Over interior concrete slab on-grade substrates, install in accordance with TCNA Handbook Method F115. Waterproofing membrane is not required.

2. Over interior elevated concrete substrates, install in accordance with TCNA Handbook Method F115A. Furnish waterproofing membrane.

C. Floor Installation - Mortar-Set Methods:

1. Over interior concrete slab on-grade substrates, install in accordance with TCNA Handbook Method F121. Furnish cleavage membrane and reinforcing. Bonded waterproofing membrane is not required.

2. Over interior elevated concrete substrates, install in accordance with TCNA Handbook Method F121. Furnish cleavage membrane, reinforcing and waterproofing membrane.

D. Wall Installation:

1. Over coated glass mat water-resistant gypsum backer board in accordance with TCNA Handbook Method W245. Furnish waterproofing membrane at shower and bathtub walls.

2. Over interior concrete and masonry install in accordance with TCNA Handbook Method W202. Furnish waterproofing membrane at shower and bathtub walls.

3.4 INSTALLATION

A. At full mortar installations with bonded waterproofing membrane, apply cleavage membrane below mortar bed and waterproofing membrane above.

B. At full mortar installation where finish is indicated to slope, slope as indicated on Drawings and in no case greater than 1/4 inch per foot.

C. Install full mortar beds minimum 1-1/4 inches thick or as indicated on Drawings. Ensure proper alignment with adjacent floor finishes.

D. Lay ceramic tile to pattern indicated on Drawings. Do not interrupt tile pattern through openings. If floor pattern is not indicated on Drawings, lay out monolithic tile floors to minimize cut tiles along perimeter by more than one-half the tile width. Layout is subject to Architect's final approval.

E. Where large floor tile units will not conform to dished areas at floor drains, review floor lay out with Architect. Cut tiles on diagonal to facilitate conformance to slope. Final tile lay out around drain shall be symmetric.

F. Place thresholds, edge strips at exposed tile edges.

G. Cut and fit tile to penetrations through tile, leaving sealant joint space. Form corners and bases neatly. Align floor, base, and wall joints.

H. Place tile with joints uniform in width, subject to variance in tolerance allowed in tile size. Make joints watertight, without voids, cracks, excess mortar, or excess grout.

I. Form internal angles coved and external angles bullnosed. Use metal cove at all floor-to-wall intersections.

J. Install ceramic accessories rigidly in prepared openings.

K. Sound tile after setting. Replace hollow sounding units.

L. Keep expansion joints and divider strips free of adhesive or grout.

M. Allow tile to set for minimum of 48 hours prior to grouting.

N. Grout tile joints. Use specified grout type unless otherwise indicated.

O. Apply sanitary sealant as specified in Section 07 90 00 along junction of tile edge strip and dissimilar materials and junction of dissimilar planes.

3.5 CLEANING

A. Division 1 - Execution Requirements: Final cleaning.

B. Clean tile and grout surfaces.

3.6 PROTECTION OF INSTALLED CONSTRUCTION

A. Division 1 - Execution Requirements: Protecting installed construction.

B. Do not permit traffic over finished floor surface for 4 days after installation.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Work includes interior suspended and braced grid ceiling assemblies, with or without lay-in panels, including fascias and trim, as shown and specified.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.
2. Section 09 21 16 – Gypsum Board Assemblies: Specifications of expansion anchors and powder actuated fasteners. Suspended gypsum board ceilings.
3. Division 21 – Fire Suppression: Coordination of fire sprinklers.
4. Division 23 – Heating, Ventilating, and Air Conditioning: Coordination of air supply, ducts, and connections.
5. Division 26 – Electrical: Coordination of lighting fixtures and equipment outlet boxes.
6. Division 27 – Communications: Coordination of communications devices installation.
7. Division 28 – Electronic Safety and Security: Coordination of intrusion detection devices and fire detection and alarm devices.

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM).

3. ASTM C636 - Standard Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels.
4. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
5. ASTM E580 Section 5 - Standard Practice for Installation of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Subject to Earthquake Ground Motions (Seismic Design Category D, E & F).

B. Ceiling and Interior System Contractors Association (CISCA):

1. CISCA - Ceiling Systems Handbook.

C. California Department of General Services – Division of the State Architect (DSA):

1. DSA IR 25-2.13 – Metal Suspension Systems for Lay-In Panel Ceilings (2013 CBC).

1.3 PERFORMANCE REQUIREMENTS

A. Fire-Hazard Classification: Provide suspended panel ceiling systems that are identical to those tested for following fire hazard characteristics, per ASTM test method indicated below, by UL or other testing and inspecting organizations acceptable to authorities have jurisdiction. Identify panel ceiling components with appropriate markings of applicable testing and inspecting organization.

1. Test Method: ASTM E84.
2. Flame Spread: 25 or less.
3. Smoke Developed: 50 or less.

B. Grid Capacity: Deflection of installations shall not exceed a maximum of L/360 of span.

C. Acoustical-Type Tile Performance:

1. Light Reflectance: 85 percent minimum; manufacturer's standard white finish.
2. Noise Reduction Coefficient (NRC): 70 percent minimum.

1.4 SUBMITTALS

A. Submit the following items under provisions of Division 1.

B. Product Data: Submit manufacturer's literature and installation instructions for each material and accessory, clearly notating specified requirements.

C. Shop Drawings: Indicate tile layout and related junctions with other work or ceiling finishes, splicing locations, changes in level, interrelation of mechanical and electrical and other items related to system and means of support of fixtures installed through ceiling panels.

D. Samples:

1. Exposed Suspension System Components: 12-inch long piece of each grid type specified in Part 3.
2. Ceiling Panels: Minimum 6 inch square, each type and finish specified in Part 3.

E. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Materials Resources Certificate: Certify recycled material content for recycled content products.
2. Product Cost Data: Products with recycled material content. Exclude cost of labor and equipment to install products.

F. Provide documentation showing ceiling products have been tested in according to California Department of Public Health (CDPH) Standard Method v1.2–2017

1.5 QUALITY ASSURANCE

A. Qualified Installer: Installer to have 5 years' experience in the installation of specified materials on comparable projects. The firm shall have the approval of the materials manufacturer.

B. Regulatory Requirements: Comply with applicable requirements of the laws, codes, and regulations of AHJ.

C. Single-Source Responsibility: Obtain each type of ceiling system unit from single source with resources to provide products of consistent quality in appearance and physical properties without delaying progress of Work.

D. Coordination of Work: Coordinate layout and installation of ceiling system units and suspension system components with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system components, and partition system.

E. Visual Mock-Up: Build portion of suspended ceiling as shown. Include lighting fixtures, air distribution system, drapery pocket, ceiling trim, and other items shown within bay.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Packing, Shipping, Handling, and Unloading: Deliver suspended ceiling units to Project site in original, unopened packages.

B. Storage and Protection: Store suspended ceiling units in fully enclosed space protected against damage from moisture, direct sunlight, surface contamination, and other causes.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Storage: Before installing suspended ceiling units, permit them to reach room temperature and stabilized moisture content.

B. Space Enclosure: Do not install suspended ceilings until space is enclosed and weatherproof, wet-work in space is completed and nominally dry, work above ceilings is complete, and ambient conditions of temperature and humidity will be continuously maintained at values near those expected for final occupancy.

1.8 MAINTENANCE

A. Extra Materials: Deliver 2 percent full-size units of each type of extra materials of amount installed to Owner at Project site. Furnish extra materials that match products installed, are packaged with protective covering for storage, and are identified with appropriate labels.

PART 2 – PRODUCTS

2.1 SUSPENDED PANEL CEILING SYSTEMS:

A. Manufacturers: Provide compliant products of one of the following or approved equal:

1. Armstrong World Industries, Incorporated.

2. United States Gypsum Corporation.

B. System Description: Wire-suspended ceiling grid system with or without lay-in panels of types scheduled in Part 3. Basis of Specification: Listed Components and Accessories are products of Armstrong World Industries.

2.2 SUSTAINABILITY CHARACTERISTICS

A. Division 1 - Sustainable Design Requirements: Requirements for sustainable design compliance.

B. Materials and Resources Characteristics:

1. Recycled Content Materials: Furnish panel and grid materials with maximum available recycled content, and with no less than that required in Section 01 81 13.

2.3 INTERIOR SYSTEM COMPONENTS

A. General: Provide each component as products of a single manufacturer. Material to contain 25-percent recycled content.

B. Suspension System Components: ASTM C635; ASTM E580, Section 5.1.

1. Grid: ASTM C635; classified Heavy Duty, hot-dipped galvanized. Double-web, rotary-stichted steel construction with 9/16 inch or 15/16 inch type exposed flange design, specific profiles as listed in Part 3 – Ceiling System Schedule.

a. All runners, splices, expansion devices and intersection connectors shall be designed to carry a mean ultimate test load of not less than 180 lbs in compression and tension per ASTM E580.

b. Finish: Manufacturer’s standard white; or match the actual color of the selected ceiling tile, unless noted otherwise.

2. Hanger Wires: ASTM A641; Class 1 galvanized steel; 12 gauge minimum and as indicated on Drawings, soft temper and 70 ksi minimum tensile strength.

3. Perimeter Moldings: Angle molding per Drawings, with matching corner caps and splice pieces; same finish and flange width as that of exposed suspension system members, 15-gauge with hemmed edge, typical.

4. Spreader Strut: Slotted angles or channels designed to snap tight to runners to prevent spreading.

C. Lateral Force Bracing Components:

1. Bracing Wires: ASTM C635; soft-annealed galvanized steel; 12 gauge minimum and as indicated on Drawings.

2. Compression Struts: C-studs as indicated on Drawings and specified in Section 09 21 16.

D. Ceiling Panels: ASTM E84; Class A. Refer to Part 3 – Ceiling System Schedule for Types.

2.5 ACCESSORIES

A. General: Provide manufacturer's standard miscellaneous items and accessories suitable for use intended and required for complete installation.

B. Runner End Detaining Clip: Integrate assembly with "Seismic Rx Suspension System, ICC Report ESR-1308" (Armstrong World Industries). Provide Armstrong's BERC2 clip, or equal, where grid is not attached to the wall.

C. Seismic Joint Clip: "SJCG" (Armstrong World Industries), or equal. Two piece unit designed to accommodate a seismic separation joint.

D. Main Beam Seismic Joint Clip: "SJMR15" (Armstrong World Industries), or equal.

E. Transition Fascias:

1. Straight Transition Fascia: Width as shown with 3/4 inch horizontal legs, straight sections with special bosses formed for attachment to tee-bar connection clip or hanging clip; commercial quality, extruded aluminum, factory-finished in factory-applied baked polyester paint to match tee-bar.

2. Manufacturer and Products: Armstrong World Industries, Inc.'s "Axiom Series Transition Channels".

PART 3 – EXECUTION

3.1 EXAMINATION

A. Verification of Conditions: Examine substrates and structural framing to which ceiling system attached or abuts, with Installer present, for compliance with requirements specified in this and other sections that affect installation and anchorage of ceiling system. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install suspended panel ceiling systems per DSA IR 25-2.13; ASTM E580, Section 5; ASTM C636; Drawings and manufacturer's instructions.

B. Ceiling Suspension System:

1. Main and Secondary Grid Members: Install at spacing indicated on Drawings, four foot maximum.

a. Suspend and brace grid with specified wires at indicated spacing.

C. Lateral Force Bracing:

1. Furnish compression strut at each splayed bracing wiring set. Do not install struts more than 1 in 6 out of plumb.

2. Powder-actuated devices are not permitted for attachment of bracing wires.

3. Bracing Omission:

a. Bracing may be omitted at small ceiling areas per the Referenced Standards.

b. Bracing may be omitted at free floating (“cloud”) ceilings not attached to any perimeter walls.

D. Acoustic-Type Ceiling Panels:

1. General: Make joints straight and true to line with exposed surfaces flush and level.

2. Cut panel edges to match tegular profile for partial panels having tegular edges.

3. Paint cut edges of panels with manufacturer’s standard white low-gloss paint, except edges within 1 inch of wall.

E. Metal and Wood Ceiling Panels: Provide positive attachment to ceiling runners when weight exceeds one-half psf.

F. Ceiling Fixtures, Air Terminals, and Other Devices:

1. Ceiling panels may not support any fixtures, terminals or devices.

2. Install devices in ceiling per Referenced Standards.

3.3 ERECTION TOLERANCES

A. Do not deviate from level in excess of 1/8 inch in 12 feet.

3.4 CLEANING

A. Cleaning: Clean exposed surfaces of ceiling tiles. Comply with manufacturer's instructions for cleaning and touch-up of minor finish damage. Remove and replace work that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

3.5 CEILING SYSTEM SCHEDULE

A. Acoustic Panels (ACT1): Armstrong's "Ultima" Techzone No.1915 conforming to the following:

1. Size: 24 x 48 x 9/16 inches with 6" slots with fine textured finish.
2. Composition: Mineral fiber
3. Edge: Beveled tegular
4. Surface Color: White.
5. Ceiling Suspension: 9/16" Suprafine XL grid.

B. Acoustic Panels (ACT2): Armstrong's "ULTIMA Tegular" No.1912 conforming to the following:

1. Size: 24 x 24 x 3/4 inch with fine textured finish.
2. Composition: Mineral fiber
3. Edge: Tegular Lay-In
4. Surface Color: White.
5. Ceiling Suspension: 9/16" Suprafine XL grid.

C. Acoustic Panels (ACT3): Armstrong's "ULTIMA Tegular" No.1912 conforming to the following:

1. Size: 24 x 48 x 3/4 inch with fine textured finish.
2. Composition: Mineral fiber
3. Edge: Tegular Lay-In
4. Surface Color: White.
5. Ceiling Suspension: 9/16" Suprafine XL grid.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section Includes:

1. Un-perforated metal ceiling panels
2. Acoustical backing.
3. Suspension assemblies
4. Accessories; provide other necessary items including devices for attachment overhead construction, secondary members, splines, splices, connecting clips, wall connectors, wall angles, and other devices required for a complete installation.
5. Supplemental support framing: Provide fully engineered secondary framing as required to meet code, conforming to layout shown in drawings, to support direct-hung metal ceilings suspension system.
6. Coordinate layout and installation of items penetrating or being installed in ceiling systems with responsible trades.

B. Related Sections:

1. Sections 05 40 00 – Cold-Formed metal Framing
2. Sections 09 20 00 – Plaster and Gypsum Board
3. Sections 09 50 00 – Acoustical Ceilings
4. Sections 09 90 00 – Paintings and Coatings
5. Division 23 – Heating, Ventilating and Air Conditioning
6. Division 26 – Electrical

2. E 488 – “Standard Test Methods for Strength of Anchors in Concrete and Masonry Elements”
3. B 209 – “Standard Specification for Aluminum and Aluminum Alloy Sheet and Plate”
4. C 423 – “Sound Absorption and Sound Absorption Coefficients by Reverberation Room Method”

5. E 580 – “Standard Practice for Application of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Requiring Moderate Seismic Restraint”
6. C 635 – “Standard Specification for Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings”
7. C 636 – “Recommended Practice for Installation of Metal Ceiling Suspensions Systems for Acoustical and Lay-in Panels”
8. A 641 – “Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire”
9. A 653 – “Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy Coated (Galvannealed) by the Hot-Dip process.
10. E 1264 – Classification for Acoustical Ceiling Products”
11. E 1477 – Standard Test Method for Luminous Reflectance factor of Acoustical Materials by use of Integrating-Sphere Reflectometers”
12. D 1044 – Practice for Abrasion Resistance
13. D 1002 – Practice for Adhesion Resistance

B. Architectural Woodworking Institute (AWI) and or WIC requirements shall be met for woodworking materials.

C. NEMA Standard 11-14-95 for Chemical Resistance

1.3 SUBMITTALS

A. Product Data: Manufacturers product data for each type of product specified in this section.

B. Product Certification: Manufacturer’s certifications that products comply with specified requirements and governing codes including product data, laboratory test reports and research reports showing compliance with specified standards.

C. Shop (Coordination) Drawings: Submit shop drawings for reflected ceiling plans (RCP’s), drawn to scale, and coordinating penetrations and ceiling mounted items. Show the following details:

1. Reflected ceiling plan including joint patterns & details.
2. Metal ceiling suspension system plan with appropriate components, suggested hanger locations & details.
3. Method of attaching suspension system hangers to building structure.
4. Ceiling-mounted items including: light fixtures, air outlets and inlets, speakers, sprinklers, and other interfaces.
5. Special moldings at walls, column penetrations, and other junctures of acoustical ceilings with adjoining construction.

6. Framing and support details for work supported by ceiling suspension system.
7. List of materials, dimensions, hanger fastenings and any special details.
8. Minimum drawing scale: 1/8” = 1’-0”.
9. Provide full scale drawings of perforation patterns. Provide minimum 1”=1’-0” scale layout for each panel type showing perforation layout and orientation as required.

D. Samples for Verification: Full-size units (or as specified below) of each type of ceiling assembly indicated; in sets for each color, texture, and pattern specified, showing the full range of variations expected in these characteristics. Submit samples for each type specified.

1. 12-inch square, (acoustical) metal pan units.
2. 12-inch long samples of each exposed molding or trim.
3. 12-inch long samples of each suspension component.

E. Qualification Data: For firms and persons specified in "Quality Assurance" (Section 1.5). Provide documents to demonstrate their capabilities and experience. Include lists of at least 5 completed projects with project names and addresses, names and addresses of Architects and employers, and other information specified.

F. Provide documentation showing ceiling products to meet LEED emissions requirements.

1.5 QUALITY ASSURANCE

A. Qualified Installer: Installer to have a minimum 5 years experience in the installation of specified materials on comparable projects. The firm shall have the approval of the mateials manufacturer.

B. Manufacturer

1. To certify a minimum of 5 years experience manufacturing similar products to those specified.
2. Provide support documentation including name and date of project completion. Include names and contact numbers of Architect and employers for reference
3. Manufacturer shall be single source and shall be the fabricator and supplier of appropriate major components.

C. Fire-Test-Response Characteristics: Provide acoustical metal pan ceilings that comply with one of the following requirements:

1. Fire-response tests performed by UL, ITS/Warnock Hersey, or another independent testing and inspecting agency that is acceptable to authorities having jurisdiction and that performs testing and follow-up services.

2. Surface-burning characteristics of acoustical metal pan ceilings comply with ASTM E 1264 for Class A materials as determined by testing identical products per ASTM E 84.

D. Mock-Ups: Before releasing acoustical metal ceilings, if requested, construct mock-ups for each form of construction and finish required to verify selections made under sample submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mock-up to comply with the following minimum requirements, using materials indicated for completed work:

1. Locate mock-ups in the location and of the size indicated or, if not indicated, as directed by the Architect. Minimum mock-up size to be 10'x 10' unless otherwise specified.

2. Notify Architect seven days in advance of the dates and times when mock-ups will be constructed.

3. Demonstrate the proposed range of aesthetic effects and workmanship.

E. Pre-installation Conference: Conduct conference at Project site as directed by the project Architect.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver acoustical metal ceiling units and suspension system components in original, unopened packages clearly labeled with the following information: name of manufacturing source and location; product type, description and quantity; clients name and shipping address.

B. Panel's protective layer to be removed only after installation is complete to help prevent panel surface damage.

C. Store components in a fully enclosed space where they will be protected against physical damage from direct moisture, significant change in humidity, direct sunlight, significant change in temperature, surface contamination, and any other preventable cause.

D. Exercise care in handling components to prevent damage to the surfaces and edges and prevent distortion or other physical damage. Comply with prescribed stacking instructions to prevent damage to thee components

1.7 PROJECT CONDITION

A. Space Enclosure: Do not install acoustical metal pan ceilings until after spaces are enclosed and weather tight and after wet work and work above ceilings is complete and accepted by project Architect.

B. Maintain environmental conditions (temperature, humidity and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits. Allow materials to reach

ambient temperature and humidity for a minimum of 24 hours (48 hours recommended), prior to starting installation.

1.8 WARRANTY

A. Provide specified manufacturers warranty against defects in workmanship, discoloration, or other defect considered undesirable by the Architect or Owner.

B. This warranty shall remain in effect for a minimum period of five (5) years from date of initial acceptance.

1.9 MAINTENANCE & EXTRA MATERIALS

A. Maintenance Instructions: Provide manufacturers standard maintenance and cleaning instructions for finishes provided.

B. Extra Materials: Furnish extra materials described below that match products installed, are packaged with protective covering for storage, and are identified with labels describing contents. Only typical system components are included with attic stock.

1. Acoustical Metal Ceiling Pan Units: Full-size units equal to 1½ percent (1½%) of amount installed.

2. Ceiling Suspension System Components: Quantity of each grid and exposed component equal to 1½ percent (1½%) of amount installed.

PART 2 – PRODUCTS

2.1 LINEAR METAL CEILING AND WALL SYSTEMS:

A. Manufacturer: Ceilings Plus - 6711 E. Washington Blvd., Los Angeles, CA 90040. 800-822-3411 – www.ceilingsplus.com.

B. Supply specified item or comply with Section 01 60 00 “Substitutions”. Specified manufacturer’s standard of quality and manufacturing tolerances shall be the criteria for evaluating “equivalent” products. Substitution shall be equal to or of better quality than the specified product in the opinion of the Architect and / or owner.

2.2 MATERIALS

A. Wall and Ceiling PL1 - Ceilings Plus “Planx” – Non-perforated – S-22 Oak Line Sarante.

1. Panels are to be manufactured from single sheets of aluminum selected for surface flatness, smoothness and freedom from surface blemishes where exposed to view in a finished unit. Do not use material where the exposed surface exhibit pitting, seam marks, roller marks, stains, discolorations, or variations in flatness exceeding those permitted by referenced standards for stretcher-leveled aluminum alloy sheets.

2. Panels to die formed with a +/-1” x .3” minimum integral returns on panel sides. No fasteners of any kind shall be visible on exposed face surfaces of ceiling

panels or support tees. Down light openings and other ceiling penetrations shall be factory precision cut whenever viable.

3. Panel material shall be primed aluminum sheet type 3105 (painted) / 5005 (anodized) series alloy that has a minimum 70% (50% @ 5005) recycled content. It shall be machine stretcher-leveled and a minimum of .040" thickness, or greater if required, so that the panel deflection does not exceed L/360.

4. The panel finish shall be:

   a. "Sarante" PVC free, faux wood veneer that is permanently bonded to the aluminum sheet with formaldehyde free, water based adhesive of minimum bond strength of 8 psi @ 25 degrees C.

5. Linear member sizes shall be 5 ½" unperforated face panels with ½" reveal – 6" module – 8'-0" typical lengths. 1'-2" x 8'-0" fascia panels (style white). Return panels, width varies x 9'-8" (style white)

6. End Profile: Panel end joints are butt condition with a splice plate (black), unless specified otherwise.

7. The plenum shall be 100% accessible.

8. Fire Tests: Complete system test including suspension, primed aluminum and finish shall meet ASTM E 84 Class A.

B. Provide and install "white" brakeshape finish trim on each side of each suspended area (or as specified).

2.3 METAL SUSPENSION SYSTEMS. GENERAL

A. Metal Suspension Standard: Provide panel manufacturer's metal suspension systems of types, structural classifications, materials, and finishes indicated that comply with applicable ASTM C 635 requirements.

1. Main and cross runners to be Standard "Heavy Duty" tee bar (as per ASTM C 635).

2. Face of main and cross runners to be factory finished matte black unless known otherwise.

3. Face of main runners to be slotted and factory formed to accept panel side flanges

4. Provide suspension system made from steel sheet with an average recycled content such that post-consumer recycled content plus one half or pre consumer content is not less than 25 percent.

B. Suspension Systems: Provide complete suspensions systems with main runners, cross runners, hangers, trim molding, seismic retention clips, load resisting struts and other suspension components required to support ceiling and other ceiling supported construction (some of these parts may be supplied by the installer).

C. Attachment Devices: Size for five times design load indicated in ASTM C 635, Table 1, "Direct-Hung", unless otherwise indicated (supplied by installer)

1. Provide anchor, for use in the particular application, as approved by the "Structural Engineer of record".

2. Structural substrate, as indicated to support attachment device, also to be approved by the "Structural Engineer of record".

3. Anchors specified must provide corrosion resistance as per metal type and application.

a. Anchors into Concrete (with or without steel deck)

i. Pre-installed – Cast in Place Anchors

ii. Post-installed - Expansion Anchors

iii. Post-installed – Chemical Anchors

iv. Post-installed – Powder Actuated Fasteners

4. "Direct-Hung" Suspension Systems: System composed of main runners supported by hangers to building structure, and complying with the following requirements:

a. Hangers: Type and metal standard with ceiling system manufacturer, sized to comply with structural classification indicated.

b. Wire Hangers, where applicable, Braces, and Ties: Provide wires complying with the following requirements

i. Zinc-Coated Carbon-Steel Wire: ASTM A 641 (ASTM A 641M), Class 1 zinc coating, soft temper.

ii. Size: Select wire diameter so its stress at three times hanger design load (ASTM C 635, Table 1, Direct Hung) will be less than yield stress of wire, but provide not less than 2mm diameter.

iii. Extruded Aluminum members shall comply with ASTM B209.

c. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.

d. Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.

e. Angle Hangers: Angles with legs not less than 22mm wide, formed with 1mm thick, galvanized steel sheet complying with ASTM A 653/A 653M, G90 coating designation, with bolted connections.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examine substrates and structural framing to which acoustical metal panels attach or abut, with Installer present, for compliance with requirements specified in this and other

Sections that affect installation and anchorage, and other conditions affecting performance of metal panel ceilings.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Coordination: Furnish layouts for cast-in-place anchors, clips, and other ceiling anchors whose installation is specified in other Sections.

B. Measure each ceiling area and establish layout of acoustical metal pan units to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width units at borders, and comply with layout shown on reflected ceiling plans.

C. Survey substrate for wall attachment to assure squareness and proper elevation for wall panel installation.

3.3 INSTALLATION

A. General: Install acoustical metal pan ceilings, per manufacturers shop drawings provided, per manufacturer's written instructions and to comply with publications referenced below.

1. CISCA "Ceiling Systems Handbook.
2. Standard for Ceiling Suspension System Installations - ASTM C 636.
3. Standard for Ceiling Suspension Systems Requiring Seismic Restraint - ASTM E 580
4. IBC (International Building Code) standard for Seismic Zone for local area.

B. Suspend ceiling hangers from building's approved structural substrates and as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, counter-splaying, or other equally effective means.
3. Where width of ducts and other construction within ceiling plenum produce hanger spacings that interfere with location of hangers at spacing required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
4. Where used secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure; that are

appropriate for substrate; and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.

5. Space hangers not more than 48 inches on center, along each member supported directly from hangers, unless otherwise indicated; and provide hangers not more than 8 inches from ends of each member. Supply supporting calculations from licensed Structural Engineer verifying hanger spacing meets all requirements, when spacing exceed those recommended.

6. Fine level grid to 1/8 inch in 10 feet from specified elevation(s), square and true.

7. Adjust suspension system runners so they are square (within .5 degree from 90 degrees) and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

C. Secure bracing wires to ceiling suspension members and to supports acceptable to Architect / Engineer and or inspector. Suspend bracing from building's structural members and / or structural deck, as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs(unless directed otherwise).

D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical metal pan. Method of edge trim attachment and design of edge trims to be approved by Architect.

1. Screw attach moldings to substrate at intervals not more than 18” O.C. and not more than 6” from ends, leveling with ceding suspension system to a tolerance of 1/8” in 10’. Miter corners accurately and connect securely.

2. Do not use exposed fasteners, including pop rivets, on moldings and trim without prior written approval. Or unless detailed otherwise.

E. Scribe and cut metal panel units for accurate fit at penetrations by electrical, fire sprinkler or other work through ceilings. Stiffen edges of cut units as required to eliminate evidence of buckling or variations in flatness exceeding referenced standards for stretcher-leveled metal sheet.

F. Install metal panel units in coordination with suspension system.

1. Align joints in adjacent courses to form uniform, straight joints parallel to room axis in both directions, unless otherwise indicated. Install directionally patterned or textured panels in directions indicated on approved shop drawings. Panel-joints shall flow smoothly and in a straight line within 1/8” in 10’. Intersections shall be continuous

2. Fit adjoining units to form flush, tight joints. Scribe and cut units for accurate fit at borders and around construction penetrating ceiling.

3. Remove protective film from panels only when space is completely clean and free of airborne particles. Use white cotton gloves for final installation of panels into grid system.

3.4 ADJUSTING AND CLEANING

A. Adjust ceiling components to provide a consistent finish and appearance in conformity with established tolerances and requirements.

B. Clean exposed surfaces of acoustical metal panel ceilings and walls. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage.

C. Remove and replace work that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage, including dented and bent units.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Work Included: Finished suspended wood ceiling systems, complete, as shown and specified.

B. Work Specified Elsewhere:

1. Metal Fabrications: 05 50 00

2. Suspended Panel Ceiling System: 09 51 00

3. Painting and Coating: 09 90 00

4. Air Supply, Ducts, and Conections: Division 23

5. Light Fixtures: Division 26

1.2 QUALITY ASSURANCE

A. Installer Qualifications: The installer must be a firm with a minimum of two (2) years of successful experience in installation of suspended wood ceilings of similar requirements to this project. The installer must be acceptable to the architect, manufacturer, and owner's representative.

B. Environmental Standards: The wood ceiling shall originate from well managed forests as certified by accredited and recognized industry certifying organizations.

1.3 PROJECT CONDITIONS

A. Installation shall be done only when the temperature and humidity closely approximate the interior conditions that will exist when the building is occupied. The heating and cooling systems shall be operating before, during, and after installation, with the humidity of the interior spaces maintained between 25% and 55%, temperature between 60 to 90 degrees F.

B. It is important that plenums have proper ventilation, especially in high moisture areas. There shall be no excessive build up of heat in the ceiling areas.

C. Prior to the start of installation, all exterior windows and doors are to be in place, glazed, and weather-stripped. The roof is to be watertight, and all wet trades' work is to be completed, and thoroughly dry.

D. Mechanical, electrical, and other utility service installations above the ceiling plane shall have been completed. No materials should rest against, or wrap around, the ceiling suspension components or connecting hangers.

1.4 SUBMITTALS

A. Product Data: Submit product data sheets and installation instructions for all supplied ceiling materials.

B. Shop Drawings: Submit shop drawings showing Panel Grille lengths, and placement of hangers, T-rail carriers, and other details needed to show proper installation. Show locations for linear wood grille access panels.

C. Samples: Submit 12" (305mm) wide x 12" (305mm) long wood ceiling sample, in the specified Panel Grille style, with finish applied.

D. Provide documentation showing ceiling products to meet LEED emissions requirements

1.5 DELIVERY, STORAGE, AND HANDLING

A. Panel Grilles and components shall be delivered to the project site in original, unopened packages.

B. The Panel Grilles shall be stored flat and level in a fully enclosed space. For a minimum of seventy-two (72) hours immediately prior to ceiling installation, the Panel Grilles shall be stored in the room in which they will be installed. The temperature and humidity of the room shall closely approximate those conditions that will exist when the building is occupied. The Panel Grilles must be stored off the floor.

C. Care in handling must be exercised to avoid damage.

1.6 WARRANTIES

A. Manufacturer: All materials supplied by the ceiling manufacturer shall be guaranteed against manufacturing defects for one (1) year.

B. Contractor: All work shall be guaranteed for one (1) year from the date of Substantial Completion of the work.

PART 2 – PRODUCT

2.1 LINEAR WOOD PANELS

A. The wood strips shall be made from prime grade, all-natural White Birch with a transparent stained finish, RC Satin Clear Blend. Provide assembly from Rulon International, or equal.

B. Panelized Linear Wood Panels, (ALW1) are assembled from boards using 4 ½” modules, having wood strips ¾” thick X 3-3/4” wide with a ¾” ABS spacers between the boards. A fiberfelt spacer shall be factory-installed between the wood strips. The fiberfelt spacer is provided in a standard black color.

C. Standard Panel Grilles shall be assembled 1' wide - in nominal lengths of 2’ to 10’. Wood strips shall be manufactured without finger-joints, and fastened together with wood backers on reverse side (upside). The battens shall be positioned 5-1/2” from the ends and 12" on center, for support of the system. Woodbackers shall be painted black.

D. Woodbacker clips shall be used to suspend Linear Wood Panels when removability of panels is necessary for access above the ceiling.

E. All dimension tolerances are ± 1/8".

F. Manufacturer: Wood strip panel grilles: Rulon International or equal.

2.2 SUSPENSION SYSTEMS

A. Panel Grilles shall be suspended from suspended standard heavy-duty 15/16" Tee-rail carriers provided and installed under Specification Section 09 51 00. Coordinate tee-rail suspension system location with panel grille layout if installed by separate contractor. Provide suspension grid in flat black color.

B. Suspend Panel Grilles using manufacturer’s methods for connection so removability of panel grilles, where shown, is possible for access above the ceiling.

2.3 ACCESSORIES, EDGES, BORDERS, AND PERIMETER TRIMS

A. Edges, borders, and perimeter trims, shall as shown in the drawings. All wood ceiling products specified shall be supplied by the ceiling manufacturer.

B. Panel Grille black-out scrim: Anchorage 2335 by Guilford of Maine or equal recommended by panel grille system manufacturer.

1. Color: Black polyester fabric.

2. Weight: 15.0 +/- 1.0 oz/liny d.

3. Width 66” minimum useable.

C. Acoustic Insulation: 2” thick batt insulation with black facing.

2.4 FINISHES AND COLORS

A. All Panel Grilles shall be factory-finished with RC Satin Clear Blend.

B Finishes shall be stain or sealer coats, spray-applied to a smooth-sanded surface.

PART 3 – EXECUTION

3.1 PREPARATION

A. Ceiling Layout: The contractor shall measure ceiling areas, and establish layout of Panel Grilles and T-rails, in accordance with installation instructions.

B. Coordination:

1. The contractor shall furnish the layout for supports that shall be installed for suspension of ceilings.

2. Furnish concrete inserts, steel deck hanger clips, or similar devices for installation and in time to coordinate the work.

3. The contractor shall coordinate with the work of other trades the location of devices which will penetrate the Panel Grilles or interfere with the installation. Recessed or surface devices located within the ceiling panels are to be located and cut in the field. This includes but is not limited to light fixtures, HVAC equipment, and fire suppression system components.

3.2 INSTALLATION

A. General: The contractor shall install materials in accordance with manufacturers printed instructions. The installation shall comply with all applicable Codes, regulations and industry standards.

B. Perimeters: Using a leveling device, the contractor shall lay out and install the perimeter trim as specified.

C. Suspension: The T-rail carriers shall be suspended and leveled in a direction perpendicular to the wooden strip direction. #12 gauge wire hangers shall be used to support T-rail carriers. Hangers shall be placed at 4' intervals along the carrier.

D. Black-out scrim: Install fabric to suspension grid as recommended by Panel Grille manufacturer. Lay out fabric to minimize joints. Joints should overlap a minimum 3” to prevent open joints.

E. Wood Suspension: Panel Grilles shall be suspended from the T-rail carrier system by dowel clips. Install Panel Grille wood slats in alignment.

F. Install acoustical insulation above suspension system as Panel Grilles are being installed and as recommended by Panel Grille manufacturer.

3.3 ADJUSTMENT, CLEANING, AND REPAIR

A. The contractor shall make final adjustments to level or contours.

B. Upon completion of ceiling installation, all Panel Grilles and borders shall be cleaned free of dirt, dust, grease, oils, and fingerprints.

C. All work which cannot be successfully cleaned or repaired, shall be removed and replaced.

3.4 INSPECTION

A. Upon completion of ceiling installation, the owner's representative shall inspect all finished surfaces to ensure that work has been performed in a manner satisfactory to the owner. Any deficiencies in the installed ceiling shall be corrected by the contractor at no additional cost to the owner, or to the ceiling manufacturer.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes resilient flooring, resilient wall base, and accessories.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.
2. Section 07 26 20 – Concrete Vapor Emission Control: Includes attendance at concrete vapor emission control pre-installation meeting; leveling of concrete floor surfaces.
3. Section 07 90 00 – Joint Protection: Sealants.
4. Section 09 68 13 – Tile Carpeting: Use of resilient base.
5. Section 09 68 16 – Sheet Carpeting: Use of resilient base.

1.2 References

A. American Society for Testing and Materials International (ASTM):

1. ASTM D2047 – Standard Test Method for Static Coefficient of Friction.
2. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
3. ASTM E648 - Test Method for Critical Radiant Flux for Floor Covering Systems Using a Radiant Heat Energy Source.
4. ASTM F1861 - Specification for Resilient Wall Base.
5. ASTM F2034 – Standard Specification for Linoleum Sheet Flooring.

B. National Fire Protection Association:

1. NFPA 253: Standard Method of Test for Critical Radiant Flux for Floor Covering Systems Using a Radiant Heat Energy Source.

C. South Coast Air Quality Management District (SCAQMD):

1. SCAQMD Rule 1168: Adhesive and Sealant Applications.

1.3 SUBMITTALS

A. Division 1 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate seaming plan, custom patterns and inlay designs.

C. Product Data: Submit data describing physical and performance characteristics; including sizes, patterns and colors available; and installation instructions.

D. Samples:

1. Submit manufacturer's complete set of color samples for initial selection.

2. Submit two samples, 20 x 20 inch in size illustrating color and pattern for each resilient flooring product specified.

E. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Indoor Environmental Quality Certificates: Certify volatile organic compound content for each interior flooring system and adhesive.

F. Provide product documentation that ensures all flooring meets LEED VOC emissions requirements

1.4 CLOSEOUT SUBMITTALS

A. Division 1 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning and polishing.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum three years documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Division 1 - Product Requirements: Product storage and handling requirements.

B. Protect roll materials from damage by storing on end.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Division 1 - Product Requirements.

B. Maintain temperature in storage area between 55 degrees F and 90 degrees F.

C. Store materials for not less than 48 hours prior to installation in area of installation at temperature of 70 degrees F to achieve temperature stability. Thereafter, maintain conditions above 55 degrees F.

1.8 MAINTENANCE MATERIAL

A. Division 1 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish 5 percent of flooring of each type and color specified.

PART 2 – PRODUCTS

2.1 RESILIENT FLOORING

A. Resilient Sheet Type “RF1”: ASTM F2034, Type I; PVC-free; homogenous sheet linoleum with natural jute backing and welded seams. Forbo Flooring Systems’ “Marmoleum”.

1. Critical Radiant Flux: ASTM E648, Class 1.
2. Thickness: 1/8 inch nominal (2.5 mm).
3. Minimum Roll Width: 78 inches.
4. Seam Rod: Manufacturer’s matching.
5. Coefficient of Friction: ASTM D2047; 0.6 or greater wet and dry.
6. Color: As indicated on drawings.

2.2 RESILIENT BASE

A. Manufacturers: Furnish compliant products of one of the following or approved equal:

1. Allstate Rubber.
2. Burke Flooring.
3. Johnsonite / Tarkett.

B. Product Description: ASTM F1861; ASTM E84, Class C or better, PVC-free rubber wall base and manufacturer’s recommended low-VOC adhesive. Basis of Specification: Products of Johnsonite are listed below.

C. Resilient Base Types:

1. Resilient Base Type “RB1”: Type TS, Group 1, Styles A. 4-1/2 inches high with standard profile: Johnsonite “Tightlock” series. Color: As indicated on drawings. Use coved style at exposed concrete and straight style at carpet tile.

2.3 SELF-COVED BASE

A. Manufacturer: Same as specified resilient flooring.

B. Height: 4 inches unless indicated otherwise on Drawings.

2.4 SUSTAINABILITY CHARACTERISTICS

A. Division 1 - Sustainable Design Requirements: Requirements for sustainable design compliance.

B. Indoor Environmental Quality Characteristics:

1. Adhesives and Sealants: Maximum volatile organic compound content in accordance with Section 01 81 13.

2.5 ACCESSORIES

A. Adhesives: Recommended by flooring manufacturer. VOC Limit: 60 g/L.

B. Transitions Accessories: Adhered vinyl, disabled access-compliant profiles.

1. Resilient Flooring Reducer: Underslung type, 1-5/8 inch maximum exposed width. Mercer No. 735 or equal.

C. Sealer and Wax: Types recommended by flooring manufacturer.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 – Administrative Requirements: Verification of existing conditions before starting work.

B. Section 07 26 20 – Concrete Vapor Emission Control: Furnish at all new concrete slabs scheduled to receive resilient flooring. Verify that existing concrete floors meet maximum vapor emission rates required by resilient flooring manufacturer for warranty of flooring and installation, and exhibit negative alkalinity, carbonization, and dusting. Furnish emission control system at existing concrete floors that do not meet the required rates.

C. Verify floor and lower wall surfaces are free of substances capable of impairing adhesion of new adhesive and finish materials.

3.2 PREPARATION

A. Smooth and level concrete floor surfaces that are out of tolerance per Section 07 26 20.

B. Prohibit traffic until filler is cured.

C. Clean substrate.

D. Apply primer as required to prevent "bleed-thru" or interference with adhesion by substances cannot be removed.

3.3 EXISTING WORK

A. Extend existing resilient flooring installations using materials and methods compatible with existing installations, or as specified.

3.4 INSTALLATION - GENERAL

A. Install flooring in accordance with manufacturer's printed instructions.

B. Installed flooring shall be fully bonded to substrate, free from damage, flaws, or other defects detrimental to appearance, uniform in pattern, spacing, margin, and finish.

C. Spread adhesive evenly in quantity recommended by flooring manufacturer to ensure adhesion uniformly over the entire area of installation.

D. Avoid applying excessive amount of adhesive to sub-floor. Bleeding of adhesive on finished floor requires removal of flooring and adhesive and re-laying of flooring at no expense to Owner.

E. Where adhesives with a limited "pot life" are used, install flooring within allowable time limit.

3.5 INSTALLATION - SHEET FLOORING

A. Lay flooring with joints and seams in accordance to seaming plan or as directed by Architect. Align joints and seams parallel to building lines to produce symmetrical pattern as appropriate.

1. Lay sheets in same direction.

B. Lay flooring with tight and straight joints, level and true, free from waves, blisters, buckles, cracks, projecting edges, or other imperfections.

C. Install edge strips at unprotected or exposed edges, where flooring terminates, and where indicated.

D. Heat Welded Seams: Join flooring with heat welded seams.

1. General procedures consist of routing flooring for joint, position welding rod of proper size into routed space, and thermally fusing rod to flooring material to form homogeneous and seamless floor.

2. Use equipment and procedures developed by flooring manufacturer.

3. Fuse welding rod and flooring at least 65-percent through thickness of material.

4. Remove excess welding rod material upon completion of welding. Finished surface across joint shall be flush, free from recessed or raised areas.

5. Correct un-welded seams at no extra expense to Owner.

E. Self-Coved Base: Terminate flooring with integral coved base to walls, columns, cabinets, and other construction.

1. Use coved base filler as backing at floor to wall junction.

2. Extend sheet flooring vertically to height indicated.

3. Cover top edge with cap strip.

F. Roll finished flooring with minimum 150-pounds roller, in each direction to insure solid contact between flooring and sub-floor, free from air pockets, bulges, low and high corners or edges.

3.5 INSTALLATION - TILE FLOORING

A. Install tile in direction indicated. To degree possible, install in consistent direction in adjacent rooms.

B. Fully-butt tiles by setting into place without sliding. Hand roll all seams immediately.

C. Roll entire floor or sections of floor per manufacturer's instructions. Do not exceed rolling time constraints relative to adhesive set.

3.6 INSTALLATION – RUBBER BASE

A. Fit joints tightly and make vertical. Maintain minimum dimension of 18 inches between joints.

B. Miter internal corners. At external corners, 'V' cut back of base strip to 2/3 of its thickness and fold. At exposed ends, use pre-molded units.

C. Install base on solid backing. Bond tightly to wall and floor surfaces.

D. Scribe and fit to door frames and other interruptions.

3.7 CLEANING

A. Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Remove excess adhesive from floor, base, and wall surfaces without damage.

C. Clean, seal, and maintain resilient flooring products.

3.8 PROTECTION OF INSTALLED CONSTRUCTION

A. Division 1 - Execution and Closeout Requirements: Protecting installed construction.

B. Prohibit traffic on resilient flooring for 48 hours after installation.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes fluid-applied epoxy resin system flooring with self-coved base, including:

1. Preparation of existing concrete substrate.
2. Waterproofing membranes and accessories.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.
2. Section 03 30 00 - Cast-In-Place Concrete: Concrete subfloor finish.
3. Section 07 26 20 – Concrete Vapor Emission Control: Includes attendance at concrete vapor emission control pre-installation meeting; leveling of concrete floor surfaces.
4. Section 07 90 00 - Joint Protection.

1.2 REFERENCES

A. ASTM International:

1. ASTM C307 - Standard Test Method for Tensile Strength of Chemical-Resistant Mortar, Grouts, and Monolithic Surfacings.
2. ASTM C413 - Standard Test Method for Absorption of Chemical-Resistant Mortars, Grouts, Monolithic Surfacings, and Polymer Concretes.
3. ASTM C579 - Standard Test Methods for Compressive Strength of Chemical-Resistant Mortars, Grouts, Monolithic Surfacings, and Polymer Concretes.
3. ASTM D635 - Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Plastics in a Horizontal Position.
5. ASTM D2794 - Standard Test Method for Resistance of Organic Coatings to the Effects of Rapid Deformation (Impact)
6. ASTM D4060 - Standard Test Method for Abrasion Resistance of Organic Coatings by the Taber Abraser

1.3 PERFORMANCE REQUIREMENTS

A. Flammability: ASTM D635, self-extinguishing when bonded to concrete.

B. Slip Resistance: Material shall be hard, firm and slip resistant.

C. VOC Content: 50 g/L maximum.

D. Tensile Strength: ASTM C307, 1,800 psi minimum.

E. Compressive Strength (Aggregate Included): ASTM C579, 10,000 psi minimum after seven days.

F. Impact Resistance: ASTM D2794, >160 in/lbs; or ASTM D2240 Shore D, 80-85.

G. Water Absorption: ASTM C413, < 1 percent.

H. Abrasion Resistance: ASTM D4060 (CS17), 0.06 gm maximum weight loss.

1.4 SUBMITTALS

A. Division 1 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit data on specified products, describing physical and performance characteristics; sizes, patterns and colors available.

C. Samples: Each material, type of color and mix specified, three samples of 12-inches square, in thicknesses of respective film layers. Accepted samples shall be used as standard of color chips exposure and finish.

D. Manufacturer’s Certificate: Certify products meet or exceed specified requirements.

E. Qualifications: Submit Installer’s project lists and specified manufacturer certifications, including project names and addresses and contact names and telephone numbers.

1.5 CLOSEOUT SUBMITTALS

A. Division 1 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit maintenance procedures, recommended maintenance materials, procedures for stain removal, repairing surface, and suggested schedule for cleaning.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years’ experience.

B. Installer: Company specializing in performing work of this section with minimum three years’ documented experience and approved by manufacturer.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Division 1 - Product Requirements: Product storage and handling requirements.

B. Materials shall be delivered to Project site in supplier's original wrappings and containers, labeled with source or manufacturer's name, material or product brand name, and lot number if any.

C. Materials shall be stored in their original, undamaged packages and containers, in a dry, secure location where they will not be exposed to direct sunlight.

D. Store materials for three days prior to installation in area of installation to achieve temperature stability.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Division 1 - Product Requirements.

B. Maintain ambient temperature required by manufacturer 72 hours prior to, during, and 24 hours after installation of materials.

1.9 MAINTENANCE MATERIAL

A. Division 1 - Execution and Closeout Requirements: Requirements for maintenance materials.

B. Extra Stock Materials: Supply two (2) gallons of flooring material, of each color selected.

PART 2 – PRODUCTS

2.1 RESINOUS FLOORING

A. Manufacturer: Furnish compliant products of one of the following or approved equal:

1. Dex-O-Tex / Crossfield Products Group.
2. Dudick, Incorporated.
3. Stonhard, Incorporated.

B. Product Description: Multiple-component, 3/16 inch thick, waterproof, self-coved flooring system comprised of a troweled epoxy resin mortar base, free-flowing epoxy under- or grout coat, quartz aggregate and UV-resistant clear epoxy sealer. Basis of Specification: Stonhard's "Stonshield HRI".

2.2 SUSTAINABILITY CHARACTERISTICS

A. Division 1 - Sustainable Design Requirements: Requirements for sustainable design compliance.

B. Materials and Resources Characteristics:

1. Recycled Content Materials: Furnish materials with maximum available recycled content, and with no less than that required in Section 01 81 13.

C. Indoor Environmental Quality Characteristics:

1. Adhesives and Sealants: Maximum volatile organic compound content in accordance with Section 01 81 13.

2.3 COMPONENTS

A. Primer: Manufacturer's recommended bondcoat.

B. Troweled Epoxy Base: Multiple-component mortar consisting of epoxy resin and curing agent.

C. Under (Grout) Coat: Free flowing formulation consisting of epoxy resin and curing agent.

D. Aggregate: Colored quartz.

E. Sealer: Two-component, UV-resistant clear epoxy.

F. Matrix Color: As indicated on Drawings.

2.4 ACCESSORIES

A. Waterproofing Membrane: Type recommended or produced by manufacturer of resinous flooring system for type of service and floor condition indicated.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 - Administrative Requirements: Coordination and project conditions.

B. Verify floor surfaces are smooth and flat with maximum variation as specified in Section 03 30 00 and are ready to receive work.

C. When manufacturer requires limitations of concrete subfloor vapor emission and alkalinity, furnish Concrete Vapor Emission Control per Section 07 26 20. Test concrete subfloor as specified to verify performance after installation of control.

D. Verify floor and lower wall surfaces are free of substances capable of impairing adhesion of adhesive and finish materials.

3.2 PREPARATION

A. Prepare surfaces as required by manufacturer.

B. Smooth and level concrete floor surfaces that are out of tolerance per Section 07 26 20.

C. Concrete substrate shall be clean and dry. Dislodge dirt, mortar spatter, paint overspray, and other dry surface accumulations and contamination by bead-blasting, scraping, brushing, sweeping, vacuuming, and/or compressed air blow-down.

D. Surfaces that are heavily contaminated shall be cleaned with appropriate degreaser, detergent, or other appropriate cleaner/surfactant followed by thoroughly rinsing with

fresh water to remove accumulation prior to mechanical cleaning efforts. Mechanical cleaning will not remove such deposits, but only drive them deeper.

E. Install transition/termination strips along flooring edge and along top edge of cove base, and other locations as required by flooring manufacturer.

F. Install fillet strips at base of walls where flooring is to be extended up wall as a base.

3.3 INSTALLATION

A. Apply flooring system in accordance with manufacturer's printed instructions.

B. Prime subfloor in accordance with manufacturer's recommendations.

C. Furnish waterproofing membrane per manufacturer's directions at floor locations on elevated decks only.

C. Apply each component of flooring system within thickness range required by manufacturer, to achieve total system thickness of 3/16 inch:

D. Cove system at vertical surfaces as shown on Drawings, or 4 inches high if not shown.

E. Work in quick and deliberate pace to avoid deterioration of material from manufacturer's stated pot life.

F. Do not leave any puddles. Roll out such accumulations.

G. Allow adequate curing time between each coat.

H. When broadcasting decorative aggregate, apply evenly and consistently, including at cove base.

3.4 PROTECTION

A. Division 1 - Execution and Closeout Requirements: Protecting installed construction.

B. Prohibit traffic on floor finish per manufacturer's directions, until cured.

C. Protect flooring from traffic with protective material until Substantial Completion.

3.5 CLEANING

A. Cleaning: Wash flooring with manufacturer's recommended cleaning compound. Use warm water and fine abrasive where necessary to remove stains. Rinse with clean water and allow surface to dry thoroughly.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes carpet tile, fully adhered, and accessories.

B. Related Requirements:

1. Section 07 26 20 – Concrete Vapor Emission Control.
2. Section 09 65 00 – Resilient Flooring: Base finish.
3. Divisions 26 and 27 – Electrical and Communications: Electrical and telecommunications floor cover plates for carpeted floor finish.
4. Section 01 81 13 Sustainable Design Requirements.

1.2 REFERENCES

A. American Association of Textile Chemists and Colorists:

1. AATCC Test Method 134 - Electrostatic Propensity of Carpets.

B. ASTM International:

1. ASTM E648 - Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source
2. ASTM E662 – Test Method for Specific Optical Density of Smoke Generated by Solid Materials.

C. Carpet and Rug Institute:

1. CRI Carpet Installation Standard - Standard for Installation of Commercial Carpet.
2. CRI Green Label Plus Testing Program.
3. CRI Model Specifications for Commercial Carpets.

D. National Fire Protection Association:

1. NFPA 253 - Standard Method of Test for Critical Radiant Flux for Floor Covering Systems Using a Radiant Heat Energy Source.

E. South Coast Air Quality Management District:

1. SCAQMD Rule 1168 - Adhesive and Sealant Applications.

1.3 SUBMITTALS

A. Division 1 - Submittal Procedures: Requirements for submittals.

B. Product Data: Submit data on specified products, describing physical and performance characteristics; sizes, patterns, colors available, and method of installation.

C. Samples:

1. Submit full carpet tiles illustrating color and pattern design for each carpet color selected. Matching roll carpet samples if applicable.

2. Submit 6 inch long samples of edge strip.

D. Provide product documentation that ensures all flooring meets LEED VOC emissions requirements

1.4 CLOSEOUT SUBMITTALS

A. Division 1 - Execution and Closeout Requirements: Requirements for submittals.

B. Operation and Maintenance Data: Submit maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning.

1.5 QUALITY ASSURANCE

A. Surface Burning Characteristics:

1. Floor Finishes: Comply with one of the following:

a. Critical Radiant Flux: ASTM E648, compliant; and NFPA 253, Class I, minimum 0.45 watts/sq cm.

b. Specific Optical Density Smoke Rating: ASTM E662; 450 or less.

B. Texture Appearance Retention Rating: Rating classifications as determined by CRI Model Specifications for Commercial Carpets.

1. Greater than or equal to 3.0 TARR for Heavy Traffic Level Classification.

C. Static Control: AATCC-134; 3.5 KV or less under standard test conditions of 70 degrees Fahrenheit and 20 percent relative humidity.

D. Indoor Environmental Quality Characteristics

1. Adhesives: Maximum volatile organic compound content in accordance with SCAQMD Rule 1168.

2. Carpet: Maximum volatile organic compound content in accordance with CRI Green Label Plus Testing Program.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years' experience.

B. Installer: Company specializing in performing work of this section with minimum three years' experience.

1. FCIB or IFCI certified carpet installers.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Division 1 - Temporary Facilities and Controls: Ambient conditions control facilities for product storage and installation.

B. Store materials in area of installation for 48 hours prior to installation.

1.8 MAINTENANCE MATERIAL

A. Division 1 - Execution and Closeout Requirements: Requirements for maintenance materials.

B. Extra Stock Materials:

1. Furnish additional five percent of installed carpet tile quantity of each color and pattern selected. Wrap, label with carpet type, pattern, and color, and store as directed by Owner.

PART 2 – PRODUCTS

2.1 CARPET TILE

A. Manufacturers:

1. As indicated on drawings.

2. Substitutions: Not Permitted.

2.2 COMPONENTS

A. Carpet Type CPT-1: As indicated on drawings.

1. Color: As indicated on drawings.

2. Tile Size: 24 x 24 inch, nominal.

3. Construction: Textured Loop.

4. Gauge: 1/10.

5. Stitches per Inch: 10 or more.

6. Pile Height: 0.100 – 0.120 inches.

7. Average Density: 6,900 or more.

8. Fiber: Invista Antron Legacy Type 6,6 nylon.

9. Pile Weight: 20 oz/sq yd.

10. Primary Backing Material: 100% woven synthetic.

2.3 ACCESSORIES

A. Reducer Edge Strips: Adhered vinyl, disabled access-compliant profile, 1-1/2" exposed width, color as selected by Architect. Mercer's "No. 800" or equal.

B. Adhesive: Recommended by carpet manufacturer, pressure-sensitive, water-resistant type.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 – Administrative Requirements: Verification of existing conditions before starting work.

B. Prior to start of Work, examine surfaces to receive carpet and verify that surfaces are clean, dry, sound, level and free of oil, grease, wax, and other foreign matter that would impair installation. Do not start Work until unsatisfactory conditions are corrected.

C. Section 07 26 20 – Concrete Vapor Emission Control: Furnish at all new concrete slabs scheduled to receive resilient flooring. Verify that existing concrete floors meet maximum vapor emission rates required by resilient flooring manufacturer for warranty of flooring and installation, and exhibit negative alkalinity, carbonization, and dusting. Furnish emission control system at existing concrete floors that do not meet the required rates.

D. Matching: Check matching of carpet before cutting and ensure there is no visible variation between dye lots.

3.2 PREPARATION

A. Division 1 - Execution and Closeout Requirements: Requirements for installation preparation.

B. Smooth and level concrete floor surfaces that are out of tolerance per Section 07 26 20.

C. Clean substrate.

D. Apply primer as required to prevent interference with adhesion by substances that cannot be removed.

3.3 INSTALLATION

A. Install carpet tile in accordance with CRI Carpet Installation Standard and manufacturer's recommendations.

B. Do not mix carpet from different cartons unless from same dye lot.

C. Cut carpet tile clean, straight and unfrayed. Fit carpet tight to intersection with vertical surfaces without gaps.

D. Install carpet tile in square pattern, with pile direction relative to next unit and building orientation per Architect's direction or specified in Part 2. Do not change run of pile in any one room or from one room to next. Locate change of color or pattern between rooms under door centerlines.

E. Fully adhere carpet tile to substrate, free from damage, flaws, or other defects detrimental to appearance, uniform in pattern, spacing, margin, and finish

F. Adhere carpet tile with self-stick adhesive backing by removing protective membrane and pressing tile back onto clean and dry substrate.

G. Trim carpet tile neatly at walls and around interruptions. Where no base is scheduled, fit carpet snugly, leaving no gaps.

H. Install edge strips at unprotected or exposed edges, where flooring terminates, and where indicated. Use full-length pieces only. Butt tight to vertical surfaces. Where splicing cannot be avoided, butt ends tight and flush.

3.4 CLEANING

A. Division 1 - Execution and Closeout Requirements: Requirements for cleaning.

B. Remove excess adhesive from floor, base, and wall surfaces without damage.

C. Clean and vacuum carpet surfaces.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes decorative, noise-reducing panels for fixed installation on walls.

B. Related Sections:

1. Section 01 81 13 - Sustainable Design Requirements.

2. Section 09 21 16 - Gypsum Board Assemblies: Provision of wall backing and gypsum board finishing.

1.2 REFERENCES

A. ASTM International:

1. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.

2. ASTM D5116 - Standard Guide for Small-Scale Environmental Chamber Determinations of Organic Emissions From Indoor Materials/Products.

4. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.3 SUBMITTALS

A. Division 1- Submittal Procedures: Requirements for submittals.

B. Shop Drawings: Indicate layout and dimensions of sound-absorptive wall panels, means of attachment and interface with adjacent materials.

C. Product Data: Include composition of material, performance metrics and statement of VOC content.

D. Samples: Submit two samples, minimum 6”x6”, of each component illustrating construction, profile and surface texture and finish.

1.4 CLOSEOUT SUBMITTALS

A. Division 1 - Execution and Closeout Requirements: Requirements for submittals.

B. Operation and Maintenance Data: Submit surface care and maintenance procedures.

1.5 QUALITY ASSURANCE

A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum three years’ experience.

B. Surface Burning Characteristics: ASTM E84, Class A, maximum 25/450 flame spread/smoke developed index.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Division 1 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Accept materials on site in manufacturer's original packaging. Inspect for damage.

C. Store materials indoors with environmental conditions as specified for installation.

D. Acclimate materials to installation conditions for seventy two hours prior to installation.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Division 1 - Product Requirements: Environmental conditions affecting products on site.

B. Do not install acoustical wall treatment until space has been enclosed and is watertight, wet work is complete and dry and adjacent and related work is completed.

C. Do not install acoustical wall until ambient temperature and humidity level will be continuously maintained at conditions indicated for Owner occupancy.

1.8 EXTRA MATERIALS

A. Division 1 - Execution and Closeout Requirements: Requirements for extra materials.

B. Furnish five percent of additional panel stock, and minimum five panels.

1.9 WARRANTY

A. Material: Warrant panels to remain colorfast and free of embrittlement for a period of two years from date of substantial completion.

PART 2 – PRODUCTS

2.1 FIXED SOUND-ABSORPTIVE PANELS

A. Manufacturers: Furnish the following product. No exceptions permitted.

1. Kirei USA LLC's "EchoPanel Print Panels"

B. Product Description: ASTM E84 Class A, thermoplastic polymer resin (PET) panels with flat profile.

1. Noise Reduction Coefficient (NRC): ASTM C423, 0.25 minimum.

2. Panel Size: 4 foot x 8 foot minimum nominal dimension.
3. Panel Thickness: 12mm.
4. Mounting: Non-resin adhesive.
5. Color: Printed pattern, to be selected by Architect from manufacturer's standard.

2.2 SUSTAINABILITY CHARACTERISTICS

A. Division 1 - Sustainable Design Requirements: Requirements for sustainable design compliance.

B. Indoor Environmental Quality Characteristics:

1. Adhesives and Sealants: Maximum volatile organic compound content in accordance with Section 01 81 13.

2.3 ACCESSORIES

A. Manufacturer's recommended, standard, VOC-compliant, non-resin adhesive.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 - Administrative Requirements: Verification of existing conditions before starting work.

B. Verify substrate is flat, plumb and level and ready to receive the work of this section.

C. Verify adjacent and related work is complete.

3.2 PREPARATION

A. Establish distribution of panels across each wall to ensure a symmetric layout with respect to perimeter as well as other objects on wall.

3.3 INSTALLATION

A. Install frame plumb, level, in plane, and aligned.

B. Attach panels to wall with adhesive in accordance with manufacturer's instructions.

C. Use included internal splines, and J-moldings as furnished for panel edges.

D. Material is eligible for standard PET recycling streams. Dispose of clean, excess material by recycling in accordance with Section 01 74 19 – Construction Waste Management.

3.4 ERECTION TOLERANCES

A. Division 1 - Quality Requirements: Tolerances.

B. Maximum Variation From Indicated Position: 1/4 inch.

C. Maximum Offset From Indicated Alignment: 1/16 inch.

D. Maximum Out of Square: 1/8 inch difference in panel diagonals.

3.5 ADJUSTING AND CLEANING

A. Division 1 - Execution and Closeout Requirements: Requirements for cleaning.

B. Clean exposed fabric faces.

C. Replace stained, damaged and broken panels.

D. Protect sound-absorptive panels from abuse and overspray of other materials for duration of construction.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Work includes sound-absorbing, suspended, decorative acoustical ceiling devices, including framing hardware and fasteners.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.
2. Section 05 50 00 – Metal Fabrications: Provision of miscellaneous mounting shapes and hardware.
3. Section 09 21 16 – Gypsum Board Assemblies: Specifications of expansion anchors and powder actuated fasteners.
4. Division 21 – Fire Suppression: Coordination of fire sprinklers with baffle locations.
5. Division 23 – Heating, Ventilating, and Air Conditioning: Coordination of air supply, ducts, and connections with baffle locations.
6. Division 26 – Electrical: Coordination of lighting fixtures and equipment outlet boxes with baffle locations.

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM).

1. ASTM C423 – Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.
2. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.3 PERFORMANCE REQUIREMENTS

A. Fire-Hazard Classification: Provide acoustical ceiling baffles that meet the following fire hazard characteristics, per ASTM test method indicated below, by UL or other testing and inspecting organizations acceptable to authorities have jurisdiction. Identify acoustical ceiling components with appropriate markings of applicable testing and inspecting organization.

1. Test Method: ASTM E84.
2. Flame Spread: 25 or less.
3. Smoke Developed: 50 or less.

1.4 SUBMITTALS

A. Submit the following items under provisions of Division 1.

B. Product Data: Submit manufacturer's technical data and installation instructions for each type of ceiling baffle required.

C. Shop Drawings: Indicate ceiling baffle layout and details. Show changes in level, interrelation of mechanical and electrical and other items related to system and means of support of fixtures requiring coordination with baffles.

D. Samples: Baffle Panels. Minimum 6 inch square, each type and finish specified.

E. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Materials Resources Certificate: Certify recycled material content for recycled content products.

2. Product Cost Data: Products with recycled material content. Exclude cost of labor and equipment to install products.

1.5 QUALITY ASSURANCE

A. Qualified Installer: Installer to have 3 years' experience in the installation of specified material type on comparable projects.

B. Single-Source Responsibility: Obtain all ceiling baffle components from single source.

C. Coordination of Work: Coordinate layout and installation of acoustical ceiling baffles and suspension system components with other overhead construction, including light fixtures, HVAC equipment, fire-suppression system components, and partition systems.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Packing, Shipping, Handling, and Unloading: Deliver acoustical ceiling baffles to Project site in original, unopened packages and store them in a fully enclosed space where they will be protected against damage from moisture, direct sunlight, surface contamination, and other causes. All nearby wet work, including concrete and plastering, must be complete and dry.

B. Handle ceiling baffles and dowels carefully to avoid damaging the surface and edges in any way.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Storage: Before installing acoustical ceiling baffles, permit them to reach room temperature and a stabilized moisture content.

B. Space Enclosure: Do not install acoustical ceiling baffles until space is enclosed and weatherproof, wet-work in space is completed and nominally dry, work above ceilings is complete, and ambient conditions of temperature and humidity will be continuously maintained at values near those expected for final occupancy.

1.8 EXTRA MATERIALS

A. Division 1 - Execution and Closeout Requirements: Requirements for extra materials.

B. Furnish five percent of additional panel stock, and minimum five baffle panels.

1.9 WARRANTY

A. Material: Warrant baffles to remain colorfast and free of embrittlement for a period of two years from date of substantial completion.

PART 2 – PRODUCTS

2.1 ACOUSTICAL CEILING BAFFLES:

A. Manufacturers: Provide compliant products of the following or approved equal (no known equal):

1. Kirei USA, LLC.

B. System Description: ASTM E84 Class A, lightweight, geometric panels with majority composition of thermoplastic polymer resin (PET), each unit mounted on two dowels and suspended with stainless steel aircraft cable. Basis of Specification: Kirei USA's "EchoCloud Ziggy".

1. Noise Reduction Coefficient (NRC): ASTM C423, 0.25 minimum.
2. Panel Size: Custom width and lengths as indicated, up to maximum panel size of 46 inchs x 72 inches
3. Panel Thickness: 12mm.
4. Geometric Depth: 4 inches.
5. Weight: Less than 1 lb/sf and 18 lbs for maximum panel size.
6. Mounting Dowels: Manufacturer's standard 3/4-inch diameter, unfinished White Birch to be field finished as indicated under Part 3 – Execution.
7. Baffle Color: Solid color, to be selected by Architect from manufacturer's standard.

2.2 SUSTAINABILITY CHARACTERISTICS

A. Division 1 - Sustainable Design Requirements: Requirements for sustainable design compliance.

B. Materials and Resources Characteristics:

1. Recycled Content Materials: Furnish baffle materials with maximum available recycled content, and with no less than that required in Section 01 81 13.

C. Indoor Environmental Quality Characteristics:

1. Adhesives and Sealants: Maximum volatile organic compound content in accordance with Section 01 81 13.

2.3 ACCESSORIES

A. Suspension Cable: 3/64” stainless steel aircraft cable, looped.

B. Terminal Hardware: Manufacturer’s standard hardware for connecting aircraft cable to baffle dowels.

C. Deck Anchorage: As shown on Drawings and specified in Sections 05 50 00 and 09 21 16.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Verification of Conditions: Examine substrates and structure to which ceiling baffles will suspend from. Ensure unencumbered access to structure overhead. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Field finish wood dowels to match white birch benches specified elsewhere.

3.3 INSTALLATION

A. General: Install ceiling baffle systems as shown and per manufacturer’s instructions. Install terminal hardware to dowels, and install four suspension cables for each baffle panel.

B. Anchor suspension cables to structure above using powder-actuated hardware devices utilized for suspension wires for suspended gypsum board ceilings.

C. Set Work accurately into position, plumb, level, true, and free from rack. Anchor firmly into position as shown, using four suspension cables for each baffle panel.

D. Do not wrap or bend suspension cable around other objects. Do not use cables and ceiling baffles to support any other material.

3.4 ERECTION TOLERANCES

A. Maximum Variation from Indicated Position: 1/4 inch.

B. Maximum Variation from Plumb: 1/4 inch.

3.5 CLEANING

A. Division 1 - Execution and Closeout Requirements: Requirements for cleaning.

B. Clean exposed fabric faces.

C. Replace stained, damaged and broken baffles and dowels.

D. Protect acoustical ceiling baffles from abuse and overspray of other materials for duration of construction.

END OF SECTION

Part 1 – GENERAL

1.1 SUMMARY

A. Section includes surface preparation and field application of paints, other coatings. "Paint" is defined as any coating system herein specified.

B. Related Sections:

1. Section 01 81 13 – Sustainability Requirements.
2. Section 05 50 00 – Metal Fabrications: Shop primed items.
3. Section 05 70 00 – Decorative Metal: Shop primed and finished items.
4. Section 08 12 14 – Standard Steel Frames: Shop primed items.
5. Section 08 14 16 – Flush Wood Doors: Shop stained wood doors.
6. Section 08 31 13 – Access Doors and Panels: Shop primed access doors.
7. Section 09 21 16 - Gypsum Board Assemblies: Joint compound skim coat finish.
8. Divisions 22 through 23 - Shop primed plumbing and mechanical components.
9. Division 26 - Shop primed electrical components

1.3 DEFINITIONS

A. Conform to ACA Glossary of Terms for interpretation of terms used in this section. Refer to ASTM D16 for terms not listed in ACA.

1.4 SUBMITTALS

A. Division 1 - Submittal Procedure: Submittal procedures.

B. Product Data: Submit manufacturer's literature and installation instructions for each material and accessory, clearly notating specified requirements.

C. Samples: Furnish sufficient samples to establish full range of colors and textures for materials exposed in the finished Work. Label samples to indicate product and location in the Work. Samples will be reviewed for appearance only. Compliance with other requirements is the responsibility of the Contractor.

1. Opaque Colors and Finishes: Submit samples, on hardboard, using materials accepted for Project, of each color and paint finish selected with texture to simulate actual conditions. Prepare three samples, 8-1/2 inches by 11 inches, with required number of paint coats clearly visible.

D. Manufacturer's Installation Instructions: Submit special surface preparation procedures and substrate conditions requiring special attention.

E. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Air Quality Certificates: Certify volatile organic compound content for each interior sealant and related primer.

F. Provide product documentation that ensures paints/coatings meet LEED v4.1 VOC content and emissions requirements. See 01 81 13 Sustainable Design.

1.5 CLOSEOUT SUBMITTALS

A. Division 1 - Execution Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit data on cleaning, touch-up, and repair of painted and coated surfaces.

1.6 QUALITY ASSURANCE

A. Manufacturer and Applicator: Companies specializing in manufacturing and applying products specified in this section with minimum three years' experience.

B. Test galvanized surfaces for passivator removal prior to painting as specified in this Section, with project inspector or Architect present.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Division 1 - Product Requirements: Product storage and handling requirements.

B. Deliver products to site in sealed and labeled containers; inspect to verify acceptability.

C. Container Label: Include manufacturer's name, type of paint, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and reducing.

D. Paint Materials: Store at minimum ambient temperature of 45 degrees F and maximum of 90 degrees F, in ventilated area, and as required by manufacturer's instructions.

E. Store only acceptable Project materials on Project site.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Division 1 - Product Requirements.

B. Do not apply materials when surface and ambient temperatures are outside temperature ranges required by paint product manufacturer.

C. Do not apply exterior coatings during rain when relative humidity is outside humidity ranges, or moisture content of surfaces exceed those required by paint product manufacturer.

D. Minimum Application Temperatures for Latex Paints: 45 degrees F for interiors; 50 degrees F for exterior; unless required otherwise by manufacturer's instructions.

1.9 SEQUENCING

A. Division 1 - Summary: Project phasing and work sequence.

B. Sequence application to the following:

1. Do not apply finish coats until paintable sealant is applied.
2. Back prime wood trim before installation of trim.

1.10 WARRANTY

A. Division 1 - Execution Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for paints and coatings.

C. Colors of all surfaces finished under this section shall, at the end of one year, have remained free from serious fading, and variations, if any, shall be uniform. All materials shall have their original adherence at the end of one year, and there shall be no evidence of blisters, running, peeling, scaling, chalking, streaks or stains at the end of this period. Washing with alkali-free soap and water shall remove surface dirt without producing any deteriorating effects.

1.11 EXTRA MATERIALS

A. Division 1 - Execution Requirements: Spare parts and maintenance products.

B. Supply 1 gallon of each color, type, and surface texture; store where directed.

C. Label each container with color, type, texture, and room locations in addition to manufacturer's label.

PART 2 – PRODUCTS

2.1 ACRYLIC PAINTS

A. Manufacturers: Furnish compliant products of one of the following or approved equal. Products used in combination shall be of a single manufacturer, and shall be compatible with each other. Acrylic Paint products of Kelly-Moore are listed below as the Basis of the Specification.

1. Benjamin Moore
2. Dunn Edwards
3. Frazee / Sherwin Williams
4. Kelly-Moore
5. PPG / Glidden Professional / Devoe

B. Interior Acrylic Primer: Vinyl acrylic resin.

1. VOC Limit Compliance: CARB and GS-11; 50 g/L maximum.
2. Basis of Specification: “971 AcryPlex Interior PVA Primer/Sealer”.

C. Interior/Exterior Acrylic Metal Primer: Direct-to-metal acrylic, rust-inhibitive/anti-corrosive.

1. VOC Limit Compliance: CARB and GC-03; 100 g/L maximum.
2. Basis of Specification: “5725 DTM Acrylic Primer / Finish”.

D. Exterior Acrylic Wood Primer: 100% acrylic resins, mildew-resistant. Formulated for cold-weather application.

1. VOC Limit Compliance: CARB; 100 g/L maximum.
2. Basis of Specification: “255 AcryShield 100% Exterior Wood Primer”.

E. Exterior Acrylic Masonry & Concrete Primer: 100% acrylic resins, akali-resistant. Formulated for cold-weather application.

1. VOC Limit Compliance: CARB; 100 g/L maximum.
2. Basis of Specification: “247 AcryShield 100% Exterior Masonry Primer”.

F. Interior Acrylic Finish: 100% acrylic resins, gloss level as specified and indicated on drawings.

1. VOC Limit Compliance: CARB and GS-11; 100 g/L maximum for non-flats, exclusive of colorants.
2. Solids Content by Volume: 40 percent minimum (+/- 2%) for “Eggshell” sheen (10-20 @ 60-degrees).
3. Basis of Specification: “1600-Series - AcryPlex 100% Acrylic Interior Enamel”.
4. Alternate at Overhead Structure: Contractor may substitute Acrylic Dryfall type flat finish on **exposed, overhead structure, ducts, pipes, conduit, et cetera. Color: As indicated on Drawings.**
    a. VOC Limit Compliance: CARB and GS-11; 50 g/L maximum.
    b. Solids Content by Volume: 29 percent minimum (+/- 2%).
    c. Basis of Specification: “Dry Fog II Flat Latex Maintenance Finish”.

G. Exterior Acrylic Finish: 100% acrylic resins, mildew resistant, gloss level as specified and indicated on drawings. Formulated for low temperature application.

1. VOC Limit Compliance: CARB; 100 g/L maximum for non-flats, exclusive of colorants.
2. Solids Content by Volume: 36 percent minimum (+/- 2%) for “Semi-Gloss” sheen (45-55 @ 60-degrees).
3. Basis of Specification: “1200-Series AcryShield 100% Acrylic Exterior Enamel”.

2.2 CLEAR COATINGS

A. Interior Clear Wood Finish: AWS Finishing System 12; water-based, non-yellowing polyurethane with satin sheen.

1. VOC Limit Compliance: CARB and SCAQMD; 275 g/L maximum.
2. Solids Content by Volume: 25 percent minimum.
3. Manufacturer and Product: Cabot's "Water-Borne Polyurethane No. 8082" or approved equal.

2.3 COMPONENTS

A. Paints and Coatings: Ready mixed, except field catalyzed coatings. Prepare coatings:

1. To soft paste consistency, capable of being readily and uniformly dispersed to homogeneous coating.
2. For good flow and brushing properties.
3. Capable of drying or curing free of streaks or sags.

B. Accessory Materials: Linseed oil, shellac, turpentine, paint thinners and other materials not specifically indicated but required to achieve finishes specified; commercial quality.

PART 3 – EXECUTION

3.1 GENERAL

A. Manufacturer's Instructions: Prepare substrates, apply primers and apply the work, including components and accessories in accordance with the manufacturer's instructions, except where more stringent requirements are shown or specified. Examine the areas to receive the Work and remedy detrimental conditions.

B. Prepare and finish surfaces as specified and as scheduled at end of the Section, and as shown. Unless otherwise shown or specified, all exposed paintable type surfaces - except where specified with factory finish in their respective sections - shall receive suitable paint finish, whether or not specifically scheduled.

1. Paintable surfaces include temporary barriers exposed to public, visitors and staff during construction.

C. Surfaces Not to be Painted:

1. Manufactured products with factory finish, fabric and glass components, as specified in various Sections.
2. Prefinished wall, ceiling, and floor coverings.
3. Painting specified elsewhere and included in respective Sections, including but not necessarily limited to, shop priming and high performance coatings.
4. Code-Required Labels: Keep equipment identification and fire rating labels free of paint.

5. Surfaces concealed in walls and above solid ceilings except as specifically indicated otherwise.

6. Ducts, piping, conduit, and equipment concealed in walls and ceilings, unless specifically indicated otherwise.

3.2 EXAMINATION

A. Division 1 – Administrative Requirements: Coordination and project conditions.

B. Verify surfaces and substrate conditions are ready to receive Work as instructed by product manufacturer.

C. Examine surfaces scheduled to be finished prior to commencement of work. Report conditions capable of affecting proper application.

1. Verify smoothness of gypsum board finished surfaces for projection surface coating suitable for prime coat application.

D. Test shop applied primer for compatibility with subsequent cover materials.

E. Measure moisture content of surfaces using electronic moisture meter. Do not apply finishes unless moisture content of surfaces are below the following maximums:

1. Plaster and Gypsum Wallboard: 12 percent.

2. Masonry, Concrete, and Concrete Unit Masonry: 12 percent.

3. Wood: 15 percent, measured in accordance with ASTM D4442.

3.3 PREPARATION

A. Surface Appurtenances: Remove electrical plates, hardware, light fixture trim, escutcheons, and fittings prior to preparing surfaces or finishing.

B. Surfaces: Correct defects and clean surfaces capable of affecting work of this section. Remove or repair existing coatings exhibiting surface defects.

C. Impervious Surfaces: Remove mildew by scrubbing with solution of tetra-sodium, tri-sodium phosphate and bleach. Rinse with clean water and allow surface to dry.

D. Aluminum Surfaces Scheduled for Paint Finish: Remove surface contamination by steam or high pressure water. Remove oxidation with acid etch and solvent washing. Apply etching primer immediately following cleaning.

E. Insulated Coverings: Remove dirt, grease, and oil from canvas and cotton.

F. Copper Surfaces Scheduled for Paint Finish: Remove contamination by steam, high pressure water, or solvent washing. Apply vinyl etch primer immediately following cleaning.

G. Gypsum Board Surfaces: Fill minor defects with filler compound. Spot prime defects after repair.

H. Galvanized Surfaces:

1. Clean and prepare with an etching metal prep and passivator remover.

2. To ensure removal of passivator coatings, test prepared area with two- to five-percent copper sulfate solution with project inspector or Architect present. If the galvanized surface blackens, the passivator has been removed and the surface is ready for coating system application.

3. If the copper sulfate solution has no effect on color of the galvanized surface, either re-treat with remover or lightly abrade it with a Scotch pad, using care not to remove layer of galvanization.

I. Concrete and Unit Masonry Surfaces Scheduled to Receive Paint Finish: Remove dirt, loose mortar, scale, salt or alkali powder, and other foreign matter. Remove oil and grease with solution of tri-sodium phosphate; rinse well and allow to dry. Remove stains caused by weathering of corroding metals with solution of sodium metasilicate after thoroughly wetting with water. Allow to dry.

J. Plaster Surfaces: Fill hairline cracks, small holes, and imperfections with latex patching plaster. Make smooth and flush with adjacent surfaces. Wash and neutralize high alkali surfaces.

K. Uncoated Steel and Iron Surfaces: Refer also to Division 5. Remove grease, mill scale, weld splatter, dirt, and rust. Where heavy coatings of scale are evident, remove by wire brushing or sandblasting; clean by washing with solvent. Apply treatment of phosphoric acid solution, ensuring weld joints, bolts, and nuts are similarly cleaned. Spot prime paint after repairs.

L. Shop Primed Steel Surfaces: Refer also to Division 5. Sand and scrape to remove loose primer and rust. Remove any loose mill scale or mill scale flaking. Feather edges to make touch-up patches inconspicuous. Clean surfaces with a product compatible with the primer and the finish coating system. Re-prime shop primed items in accord with the specified coating system.

M. Interior Wood Items Scheduled to Receive Paint Finish: Refer also to Division 6. Wipe off dust and grit prior to priming. Seal knots, pitch streaks, and sappy sections with sealer. Fill nail holes and cracks after primer has dried; sand between coats.

N. Interior Wood Items Scheduled to Receive Transparent Finish: Refer also to Division 6. Wipe off dust and grit prior to sealing, seal knots, pitch streaks, and sappy sections with sealer. Fill nail holes and cracks after sealer has dried; sand lightly between coats.

O. Exterior Wood Scheduled to Receive Paint Finish: Refer also to Division 6. Remove dust, grit, and foreign matter. Seal knots, pitch streaks, and sappy sections. Fill nail

holes with tinted exterior paintable caulking compound after prime coat has been applied.

P. Exterior Wood Scheduled to Receive Transparent Finish: Refer also to Division 6. Remove dust, grit, and foreign matter; seal knots, pitch streaks, and sappy sections with sealer. Fill nail holes with tinted exterior caulking compound after sealer has been applied.

Q. Metal Doors Scheduled for Paint Finish: Refer also to Division 8. Prime metal door top and bottom edge surfaces.

3.4 APPLICATION

A. Do not apply finishes to surfaces that are not dry. Allow applied coats to dry before next coat is applied.

B. Apply each coat to uniform appearance. Apply each coat of paint slightly darker than preceding coat unless specified otherwise.

C. Sand wood and metal surfaces lightly between coats to achieve required finish.

D. Vacuum clean surfaces of loose particles. Use tack cloth to remove dust and particles just prior to applying next coat.

E. Prime concealed surfaces of interior wood surfaces scheduled to receive stain or varnish finish with gloss varnish reduced 25 percent with thinner.

F. Finishing Mechanical and Electrical Equipment:

1. Refer to Divisions 21 through 26 for schedule of color coding and identification banding of equipment, duct work, piping, and conduit.

2. Paint shop primed equipment. Paint shop finished items occurring at interior areas.

3. Remove unfinished louvers, grilles, covers, and access panels on mechanical and electrical components and paint separately.

4. Prime and paint insulated and exposed pipes, conduit, boxes, insulated and exposed ducts, hangers, brackets, collars and supports except where items are shop finished.

5. Paint interior surfaces of air ducts visible through grilles and louvers with one coat of flat black paint to visible surfaces. Paint dampers exposed behind louvers, grilles, and convector and baseboard cabinets to match face panels.

6. Paint exposed conduit and electrical equipment occurring in finished areas.

7. Paint both sides and edges of plywood backboards for electrical and telephone equipment before installing equipment.

8. Color code equipment, piping, conduit, and exposed duct work in accordance with requirements indicated and matching existing. Color band and identify with flow arrows, names, and numbering.

9. Reinstall electrical cover plates, hardware, light fixture trim, escutcheons, and fittings removed prior to finishing.

3.5 FIELD QUALITY CONTROL

A. Division 1 - Execution Requirements: Testing, adjusting, and balancing.

3.6 CLEANING

A. Division 1 - Execution Requirements: Final cleaning.

B. Collect waste material which may constitute fire hazard, place in closed metal containers, and remove daily from site.

3.7 SCHEDULE - GENERAL REQUIREMENTS

A. General: Major material categories only are scheduled, but all miscellaneous items and areas within a room or space shall be treated with a suitable system, unless otherwise shown or specified. This specification shall serve as a guide and is meant to establish procedure, quality and minimum number of coats.

B. Coating Thickness: Acrylic primer and paint shall be applied to the manufacturer recommended dry film, per coat thickness and in no case less than 1.4 mils. Other products shall have a minimum dry mil thickness as recommended by manufacturer, unless mil thickness is specified. Mil thicknesses are minimums, not averages.

C. Number of Coats: Where number of coats is specified, it is only as a minimum requirement. Apply additional coats, at no additional cost to Owner, if necessary to completely hide base material, produce uniform color, and provide satisfactory finish result.

3.8 SCHEDULE - EXTERIOR SURFACES

A. Steel – Unprimed and Galvanized:

1. One coat of Interior/Exterior Acrylic Metal Primer.

2. Two coats Exterior Acrylic Finish, semi-gloss unless otherwise noted.

B. Steel - Primed:

1. Touch-up with Interior/Exterior Acrylic Metal Primer.

2. Two coats Exterior Acrylic Finish, semi-gloss unless otherwise noted.

C. Wood – Unprimed (Indicated on Drawings for Opaque Finish):

1. One coat Exterior Acrylic Wood Primer.

2. Two coats Exterior Acrylic Finish, semi-gloss unless otherwise noted.

D. Concrete and Masonry (Indicated on Drawings for Opaque Finish):

1. One coat Exterior Acrylic Masonry & Concrete Primer.
2. Two coats Exterior Acrylic Finish, semi-gloss unless otherwise noted.

3.11 SCHEDULE - INTERIOR SURFACES

A. Steel – Unprimed and Galvanized

1. One coat of Interior/Exterior Acrylic Metal Primer.
2. Two coats Interior Acrylic Finish, semi-gloss unless otherwise noted.

B. Steel - Primed:

1. Touch-up with Interior/Exterior Acrylic Metal Primer.
2. Two coats Interior Acrylic Finish, semi-gloss unless otherwise noted.

C. Gypsum Board:

1. One coat of Interior Acrylic Primer.
2. Two coats Interior Acrylic Finish, semi-gloss unless otherwise indicated.

D. Shop-Primed Hollow Metal Doors and Frames:

1. Sand smooth and fill dents with automotive type filler.
2. Two coats Interior Acrylic Finish, semi-gloss.

E. Wood – Opaque Finish:

1. One coat of Interior Acrylic Primer.
2. Two coats Interior Acrylic Finish, semi-gloss unless otherwise indicated.

F. Wood – Clear Finish

1. Two coats of Interior Clear Wood Finish.
2. Minimum dry film thickness: Not less than manufacturer’s recommended spreading rate.

3.12 SCHEDULE - COLORS

A. Architect reserves the right to select and vary colors on surfaces throughout the Work. Refer to requirements for samples and for mock-ups/field samples.

B. Colors: Refer to colors and locations on Drawings. Match the listed manufacturer’s standard colors:

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes high performance coatings and special preparation of surfaces, complete as shown and specified:

1. Steel handrails, stringers and metal pans at metal stairs.
2. Exposed HSS support steel and plates at roof screens
3. Corrugated panels at Roof Screen.
4. Aluminum door frames.
5. Interior Entrances and Storefronts mullions, frames and door stiles and rails. Two coat
6 .Exterior mechanical louvers.

B. Related Sections:

1. Section 01 81 13 – Sustainabile Design Requirements (CalGreen).
2. Section 05 50 00 – Metal Fabrications
3. Section 08 12 14 – Standard Steel Frames
4. Section 08 12 16 – Aluminum Door and Glazing Frames.
5. Section 08 13 14 – Standard Steel Doors.
6. Section 08 36 13 – Sectional Glass and Aluminum Overhead Doors
7. Section 08 41 13 – Interior Entrances and Storefronts
8. Section 08 44 13 – Glazed Aluminum Curtain Walls
9. Section 08 51 13 – Aluminum-Framed Storefronts and Entrances
10. Section 08 91 00 - Louvers
11. Section 09 90 00 - Painting and Coating.

1.2 REFERENCES

A. Green Seal:

1. GC-03 - Anti-Corrosive Paints.
2. GS-11 - Product Specific Environmental Requirements.

B. South Coast Air Quality Management District:

1. SCAQMD Rule 1113- Architectural Coatings.

C. SSPC: The Society for Protective Coatings:

1. SSPC SP 2 - Hand Tool Cleaning.
2. SSPC SP 3 - Power Tool Cleaning.

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedure: Submittal procedures.

B. Product Data: Submit manufacturer’s literature and installation instructions for each material and accessory, clearly notating specified requirements.

C. Samples: Furnish sufficient samples to establish full range of colors and textures for materials exposed in the finished Work. Label samples to indicate product and location in the Work. Samples will be reviewed for appearance only. Compliance with other requirements is the responsibility of the Contractor.

1. Opaque Colors and Finishes: Submit samples, on hardboard, using materials accepted for Project, of each color and paint finish selected with texture to simulate actual conditions. Prepare three samples, 8-1/2 inches by 11 inches, with required number of paint coats clearly visible.

D. Manufacturer's Installation Instructions: Submit special surface preparation procedures and substrate conditions requiring special attention.

E. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Air Quality Certificates: Certify volatile organic compound content for each interior sealant and related primer.

1.4 CLOSEOUT SUBMITTALS

A. Division 1 - Execution Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit maintenance and cleaning requirements for coatings, repair and patching techniques.

1.5 QUALITY ASSURANCE

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years’ experience.

B. Applicator: Company specializing in performing work of this section with minimum three years’ experience and approved by manufacturer.

C. Test galvanized surfaces for passivator removal prior to painting as specified in this Section, with project inspector or Architect present.

1. On at least 100 square feet of surface as directed, provide full-coat finish samples until required sheen, color and texture are obtained.

1.6 DELIVERY, STORAGE AND HANDLING

A. Division 1 – Product Requirements: Product storage and handling requirements.

B. Deliver products to site in sealed and labeled containers; inspect to verify acceptability.

C. Container Label: Include manufacturer's name, type of paint, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and reducing.

D. Paint Materials: Store at minimum ambient temperature of 45 degrees F and maximum of 90 degrees F, in ventilated area, and as required by manufacturer's instructions.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Division 1- Product Requirements.

B. Do not install materials when ambient temperature is outside range required by coatings manufacturers, and in no case below 55 degrees F or above 90 degrees F.

C. Maintain this temperature range, 24 hours before, during, and 72 hours after installation of coating.

D. Restrict traffic from area where coating is being applied or is curing.

1.8 WARRANTY

A. Division 1 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Warranty: Include installation coverage for bond to substrate, degradation of chemical resistance for a minimum of 5 years.

1.9 MAINTENANCE MATERIALS

A. Division 1 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Supply 1 gallon of each color of each type of coating specified, for Owner's maintenance use.

C. Label each container with manufacturer's name, product number, color number, and room names and numbers where used.

PART 2 – PRODUCTS

2.1 LEED REQUIREMENTS

A. For paints and coatings applied inside the weatherproofing line and applied on site, provide products with VOCs that comply with limits found in Section 018113 Sustainability Requirements.

2.2 MANUFACTURERS

A. High-Performance Fluoropolymer Coating at Exterior Steel Substrates:

1. Surface Preparation: SSPC-SP6/NACE3 Commercial Blast Cleaning with a minimum angular anchor profile of 1.5 mils.

2. Shop Primer: Tnemec Series 90-97 Tneme-Zinc. Zinc-rich aromatic urethane. 2.5 to 3.5 mils DFT.

3. Field-Appled Finish Coat: Tnemec Series 1071V Fluoronar. Thermoset solution fluoropolymer. Semi-gloss finish. 2.0 to 3.0 mild DFT.

B. High-Performance Coatings at Interior Steel Substrates:

1. Shop Primer: Tnemec 27WB Typoxy. Apply at 3.0 to 5.0 mils DFT.

2. Touch all damaged or bare spots per SSPC-SP 15 (feather-in all edges) and spot prime with Tnemec 27WB at 3.0-4.0 mil DFT.

3. Field - Applied Finish Coat:

a. Semi-Gloss Sheen: Tnemec 750 UVX semi-gloss. Apply at 3.0 – 5.0 mils DFT.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 - Administrative Requirements: Coordination and project conditions.

B. Verify substrate surfaces are ready to receive work as instructed by coating manufacturer. Obtain and follow manufacturer's instructions for examination and testing of substrates.

3.2 PREPARATION

A. Clean surfaces of loose foreign matter.

B. Remove substances that would bleed through finished coatings. When removal is not possible, seal surface with shellac.

C. Remove finish hardware, fixture covers, and accessories and store.

D. Existing Painted and Sealed Surfaces:

1. Prepare per manufacturer’s recommendations.

2. Clean with mixture of trisodium phosphate and water to remove surface grease and foreign matter.

E. Galvanized Surfaces:

1. Clean and prepare with an etching metal prep and passivator remover.

2. To ensure removal of passivator coatings, test prepared area with two- to five-percent copper sulfate solution. If the galvanized surface blackens, the passivator has been removed and the surface is ready for coating system application.

3. If the copper sulfate solution has no effect on color of the galvanized surface, either re-treat with remover or lightly abrade it with a Scotch pad, using care not to remove layer of galvanization.

F. Ferrous Metal:

1. Solvent clean.

2. Remove loose rust, loose mill scale, and other foreign substances using hand tools according to SSPC-SP 2 or power tools according to SSPC-SP 3.

3. Protect adjacent surfaces and materials not receiving coating from overspray; mask when necessary to provide adequate protection. Repair damage.

3.3 INSTALLATION

A. Apply all components per manufacturer's recommendations and as specified.

B. Apply primer to previously uncoated surfaces, unless specifically not required by coating manufacturer.

C. Wood: Prior to priming patch with filler to produce smooth, even surface.

D. Concrete: Prior to priming, patch with masonry filler to produce smooth surface.

E. Apply coatings to thicknesses required.

F. Apply in uniform thickness coats, without runs, drips, pinholes, brush marks, or variations in color, texture, or finish. Finish edges, crevices, corners, and other changes in dimension with full coating thickness.

3.4 CLEANING

A. Division 1 - Execution and Closeout Requirements: Final cleaning.

B. Collect waste material which may constitute fire hazard, place in closed metal containers, and remove daily from site.

C. Clean surfaces immediately of overspray, splatter, and excess material.

D. After coating has cured, clean and replace finish hardware, fixtures, and fittings previously removed.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes surface preparation and application of elastomeric coatings to exterior concrete masonry unit substrates.

B. Related Sections:

1. Section 01 81 13 – Sustainability Requirements.
2. Section 03 30 00 – Cast-in-Place Concrete.
3. Section 04 29 00 – Reinforced Unit Masonry.
4. Section 09 90 00 – Painting and Coating.
5. Section 09 96 00 – High-Performance Coatings.

1.2 REFERENCES

A. American society for Testing and Materials (ASTM):

1. ASTM D412 - Standard Test Method for Vulcanized Rubber and Thermoplastic Rubbers and Thermoplastic Elastomers - Tension.
2. ASTM D1653 - Standard Test Method for Water Vapor Transmission of Organic Coatings.
3. ASTM D2369 - Standard Test Method for Volatile Content of Coatings.
4. ASTM D6904 - Standard Practice for Resistance to Wind-Driven Rain for Exterior Coatings Applied on Masonry.

B. Sealant, Waterproofing, and Restoration Institute (SWRI):

1. SWRI Validation Program.

1.3 PERFORMANCE REQUIREMENTS

A. Resistance to Wind-Driven Rain: ASTM D6904; pass.

B. Moisture-Vapor Transmission: Minimum 12 perms, based on testing according to ASTM D1653.

C. Elongation: ASTM D412; 500 percent minimum.

D. Tensile Strength: ASTM D412; 250 psi minimum.

1.4 SUBMITTALS

A. Product Data: Include manufacturer's literature and installation instructions for each material, including VOC content.

   1. Provide SWRI Validation Certificate for each coating specified to be validated by SWRI's Coating Validation Program.

B. Samples: Minimum 8-inches square, for each type of elastomeric coating indicated and in each selected color and gloss.

1.5 QUALITY ASSURANCE

A. Manufacturer and Applicator: Companies specializing in manufacturing and applying products specified in this section with minimum Five years' experience.

B. Material Compatibility:

   1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.

   2. For each coat in a paint system, products shall be recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.

C. Mockup: Apply mockups of each paint system indicated and each color and finish selected to demonstrate aesthetic effects and set quality standards for materials and execution.

   1. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft.

   2. Final approval of color selections will be based on mockups. If preliminary color selections are not approved, apply one additional mockup of additional color selected by Architect at no added cost to Owner.

   3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

   4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE AND HANDLING

A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 deg F

1.7 ENVIRONMENTAL CONDITIONS

A. Apply coatings only when temperature of surfaces to be coated and ambient air temperatures are between 50 and 90 deg F unless otherwise permitted by manufacturer's written instructions.

B. Do not apply coatings in snow, rain, fog, or mist; when relative humidity exceeds 85 percent; at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.

C. Allow wet surfaces to dry thoroughly and attain temperature and conditions specified before starting or continuing coating operation.

1.8 MAINTENANCE MATERIAL

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

B. Quantity: Furnish an additional 5 percent but not less than 1 gal. of each material, color, and texture applied.

1.9 WARRANTY

A. Manufacturer's standard form in which manufacturer agrees to repair or replace elastomeric coatings that fail within ten (10) years from date of Substantial Completion. Failures include water penetration through the coating and deterioration of coating beyond normal weathering.

PART 2 – PRODUCTS

2.1 ELASTOMERIC COATINGS

A. Manufacturers: Furnish compliant products of one of the following or approved equal:

1. Dow Chemical Company.

2. Mapei.

3. Sherwin Williams.

B. Product Description: SWRI certified, single-component, fluid applied, water-based, pigmented silicone elastomer. Basis of Specification: Dow Chemical Company’s “DOWSIL AllGuard”.

1. Color: As selected by Architect from manufacturer’s full, standard range.

2. Surface Profile: Smooth.

3. Volatile Organic Compound (VOC) Content: Less than 50 g/L.

2.2 ACCESSORY MATERIALS

A. General: Furnish the following when recommended by manufacturer for specific project conditions.

B. Crack Fillers: Elastomeric coating manufacturer's recommended, factory-formulated crack fillers or sealants, including crack filler primers, compatible with substrate and other materials indicated.

C. Primer: Elastomeric coating manufacturer's recommended, factory-formulated, alkali-resistant primer compatible with substrate and other materials indicated.

D. Concrete Unit Masonry Block Filler: Elastomeric coating manufacturer's recommended, factory-formulated, high-performance latex block filler compatible with substrate and other materials indicated.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with manufacturer's requirements for maximum moisture content, alkalinity, and other conditions affecting performance of work.

B. Begin coating only when moisture content of substrate is 12 percent or less when measured with an electronic moisture meter.

C. Begin coating no sooner than 28 days after substrate is constructed and is visually dry on both sides.

D. Preinstallation Testing: Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers.

1. Conduct field tests for adhesion, alkalinity and moisture level as required for manufacturer’s warranty.

E. Begin coating application only after unsatisfactory conditions have been corrected and surfaces are dry.

3.2 PREPARATION

A. Comply with manufacturer's written instructions applicable to substrates and coating systems indicated.

B. Clean substrates of substances that could impair bond of coatings, including dirt, oil, grease, and incompatible paints and encapsulants. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.

1. Remove incompatible primers and reprime substrate with compatible primers as required to produce coating systems indicated.

2. Perform cleaning and coating application so dust and other contaminants from cleaning process will not fall on wet, newly coated surfaces.

C Fill cracks according to manufacturer's written instructions before coating surfaces.

3.3 APPLICATION

A. Apply elastomeric coatings according to manufacturer's written instructions.

1. Unless otherwise noted, use equipment and techniques best suited for substrate and type of material being applied.

2. Coat surfaces behind movable items the same as similar exposed surfaces.

3. Apply each coat separately according to manufacturer's written instructions.

B. Primers: Apply at a rate to ensure complete coverage.

C. Block Fillers: Apply at a rate to ensure complete coverage with pores filled.

D. Elastomeric Finish Coats: Minimum two coats with a total dry film thickness in accordance with manufacturer’s recommended total dry film thickness, and not less than 16 to 18 mils.

E. Tint each undercoat a lighter shade of selected finish color to facilitate identification of each coat. Tint undercoats similar to color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

F. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform finish, color, and appearance.

G. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

H. Apply coatings to prepared surfaces as soon as practicable after preparation and before subsequent surface soiling or deterioration.

I. Spray Application: Use spray equipment for application only when permitted by authorities having jurisdiction. Wherever spray application is used, do not double back with spray equipment to build up film thickness of two coats in one pass.

3.4 CLEANING AND PROTECTION

A. After completing coating application, clean spattered surfaces. Remove spattered coatings by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

B. Protect work of other trades against damage from coating application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.

C. At completion of construction activities, touch up and restore damaged or defaced coated surfaces.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Work includes interior concrete floor dust sealer and hardener at rooms with exposed concrete floors.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.
2. Section 03 30 00 – Cast In Place Concrete.

1.2 REFERENCES

A. American Concrete Institute (ACI).

1. ACI 302 - Guide for Concrete Floor and Slab Construction.

B. South Coast Air Quality Management District

1. SCAQMD Rule 1113 - Architectural Coatings.

1.3 SUBMITTALS

A. Division 1 - Submittal Procedures: Requirements for submittals.

B. Product Data: Submit manufacturer’s literature and installation instructions.

1.4 DELIVERY, STORAGE AND HANDLING

A. Packing, Shipping, Handling, and Unloading: Products delivered to the job site shall be in the original unopened containers or wrappings.

B. Store materials in a clean, dry area in accordance with manufacturer's instructions. Keep products from freezing.

C. Avoid direct contact with this product as it may cause mild to moderate irritation of the eyes and/or skin.

D. Protect materials during handling and application to prevent damage or contamination.

1.5 QUALITY ASSURANCE

A. Indoor Environmental Quality Characteristics

1. Coatings: Comply with SCAQMD Rule 1113 VOC limits.

B. Concrete Floor Classifications

1. Recommended for ACI 302, Class 1 through 4 concrete floors.

1.6 ENVIRONMENTAL REQUIREMENTS

A. Do not proceed with application of materials when concrete temperature is less than 40°F or above 135°F.

B. Do not apply materials unless surface to receive coating is clean and dry.

C. Do not use on highly dense or non-porous surfaces.

PART 2 – PRODUCTS

2.1 CONCRETE HARDENER AND DENSIFIER (DUST SEALER)

A. Manufacturers: Provide one of the following or approved equal.

1. Laticrete International, Incorporated “Seal Hard”.
2. Sonneborn / BASF “Lapidolith”.
3. SpecChem, LLC. “SpecHard”.
4. W.R. Meadows Incorporated “Liqui-Hard”.

B. Product Description: Waterbased, colorless, ready to use liquid concrete densifier and chemical hardener formulated with chemically reactive raw materials to harden and dustproof concrete.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examine surfaces to receive dust sealer and hardener. Notify architect if surfaces are not acceptable. Do not begin application until unacceptable conditions have been corrected.

B. Ensure material can penetrate the concrete surface.

3.2 SURFACE PREPARATION

A. Protect adjacent surfaces not designated to receive treatment.

B. Clean and prepare surfaces to receive treatment in accordance with manufacturer's instructions, ensuring that all stains, oil, grease, form release agents, dust, and dirt are removed prior to application.

3.3 APPLICATION

A. Apply two coats of concrete dust sealer and hardener in accordance with manufacturer's instructions.

B. Do not dilute concrete sealer.

C. Saturate the surface with undiluted concrete dust sealer and hardener by sprayer, squeegee or broom.

D. Keep the surface wet with concrete dust sealer and hardener for a minimum of 30 minutes. (A range of 30-60 minutes may be required depending on temperature and conditions.)

E. Ensure areas are kept wet at all times with concrete dust sealer and hardener.

F. Once the surface begins to gel and become slippery, immediately spray the surface with a light water mist.

G. Scrub the surface with a broom or mechanical scrubber to increase the penetration of the concrete densifier and chemical hardener.

H. Continue to work the concrete dust sealer and hardener into the surface for another 5-10 minutes or until it becomes gelled and slippery for a second time.

I. Thoroughly flush the surface with water and agitate the surface with a broom to aid in removal of the excess concrete dust sealer and hardener.

J. Remove all excess material with mop or squeegee. Thoroughly squeegee the surface dry.

K. Repeat for second application.

3.4 CLEANING

A. Remove debris resulting from completion of coating operation from the project site.

3.5 PROTECTION

A. Keep surface dry for a minimum of 48 hours after application.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes field-applied dry erase wall coverings.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.
2. Section 09 21 16 – Gypsum Board Assemblies.
3. Section 10 11 00 – Visual Display Units for surface-mount marker trays installed over dry erase wall coverings.

1.2 REFERENCES

A. ASTM International:

1. ASTM D523 – Standard Test Method for Specular Gloss.
2. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
3. ASTM F793 - Standard Classification of Wall Covering by Use Characteristics.

B. Green Seal:

1. GS-11 - Green Seal Standard for Paints, Coatings, Stains, and Sealers.

C. South Coast Air Quality Management District:

1. SCAQMD Rule 1168 - Adhesive and Sealant Applications.

1.3 SUBMITTALS

A. Division 1- Submittal Procedures: Requirements for submittals.

B. Product Data:

1. Manufacturer information regarding covering and adhesive indicating products meet or exceed specified requirements.
2. Manufacturer’s detailed instructions on installation requirements, with special procedures and perimeter conditions requiring special attention.

C. Samples: Submit two 12-inch x 12-inch samples of each covering specified, illustrating color, texture and finish.

D. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Indoor Environmental Quality Certificates: Certify volatile organic compound content for each wall covering and adhesive.

1.4 CLOSEOUT SUBMITTALS

A. Division 1 - Execution and Closeout Requirements: Requirements for submittals.

B. Operation and Maintenance Data: Submit information regarding cleaning, touchup, and repair of covered surfaces. Provide precautions against cleaning materials and methods that may be detrimental to finish and performance.

1.5 QUALITY ASSURANCE

A. Surface Burning Characteristics: ASTM E84, Class A, maximum 25/450 flame spread/smoke developed index.

B. Indoor Environmental Quality Characteristics:

1. Adhesives: Maximum VOC content according to SCAQMD Rule 1168.

2. Flat and Non-Flat Paints & Primers: Maximum VOC content according to GS-11.

C. Manufacturer and Installer: Companies specializing in manufacturing and installing Products specified in this section with minimum three years' experience.

1.6 MOCKUPS

A. Division 1 - Quality Requirements: Requirements for mockup.

B. Size: Construct mockup, size as indicated by Architect, illustrating installed covering and joint seaming technique.

C. Locate mockup where directed by Architect. Approved mockup may be incorporated as part of Work.

D. Maintain mockups to serve as the standard of quality for this Section.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Division 1 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Accept materials on site in manufacturer's original packaging. Inspect for damage.

C. Protect materials from moisture and dust by storing in clean, dry location according to manufacturer's instructions. Do not store roll goods on end.

D. Protect packaged adhesive from temperature cycling.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Division 1 - Product Requirements: Environmental conditions affecting products on site.

B. Do not install wall coverings until space has been enclosed and is watertight, wet work is complete and dry and adjacent and related work is completed.

C. Do not apply materials when surface and ambient temperatures are outside temperature ranges required by adhesive manufacturer or by vinyl covering product manufacturer.

D. Subsequent Conditions: Maintain recommended conditions 24 hours before, during, and after installation of adhesive and covering.

1.9 EXTRA MATERIALS

A. Division 1 - Execution and Closeout Requirements: Requirements for maintenance materials.

B. Furnish 25 linear feet of each specified version of covering. Package and label each roll by manufacturer, color, and pattern.

C. Store extra materials where directed by Owner.

1.10 WARRANTY

A. Division 1 - Execution and Closeout Requirements: Requirements for warranties.

B. Material: Warrant coverings to remain free of defects for a period of ten (10) years from date of substantial completion.

PART 2 – PRODUCTS

2.1 DRY ERASE WALL COVERINGS

A. Manufacturers: Furnish compliant products of the following or approved equal:

1. IdeaPaint

B. Product Description: Paper-backed, polymeric-coated film of polyethylene terephthalate, for a low-sheen wall-covering suitable for dry erasability and projection, meeting ASTM E84, Class A criteria.

1. Roll Width: 48 inches minimum.
2. Gloss Level: As established in conformance with ASTM D523:
   a. 20-Degrees: >38 GU
   b. 60-Degrees: >43 GU
   c. 85-Degrees: >48 GU
3. Color: White.

2.2 ACCESSORIES

A. Stainblocking Primer: Manufacturer's GS-11 compliant, standard primer formulated for use with wall covering, or recommended wallpaper primer.

B. Adhesive: SCAQMD Rule 1168-compliant, as recommended by covering manufacturer to suit application to substrate.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 - Execution and Closeout Requirements: Requirements for installation examination.

B. Verify that substrate surfaces are ready to receive Work of this Section, and that they comply with requirements of covering manufacturer.

C. Wall surfaces shall be dry and free of dirt, grease, loose paint and scale.

D. Verify that flatness tolerance of surfaces does not vary more than 1/8 inch in 10 feet, or vary at rate greater than 1/16 inch per foot.

3.2 PREPARATION

A. Division 1 - Execution and Closeout Requirements: Requirements for installation preparation.

B. Fill cracks in substrate, smooth irregularities with filler, and sand smooth.

C. Sand and wash impervious surfaces, rinse and neutralize, and then wipe dry.

D. Correct defects and clean surfaces that affect Work of this Section. Remove existing coatings that exhibit loose surface defects. Surface shall be brought to a minimum Level 4 finish before the application of wallcovering.

E. Treat surface with stainblocking primer as directed by manufacturer's instructions.

F. Apply primer sealer to substrate surfaces as directed by manufacturer instructions.

G. Plan wallcovering installation so as to limit number of seams and orient symmetrically. Horizontal seams are not acceptable.

3.3 INSTALLATION

A. Apply adhesive to wall or covering surface as directed by manufacturer, immediately prior to application of covering. Do not overapply adhesive.

B. Install covering in pattern sequence in accordance with manufacturer's recommendations and to meet layout established during Preparation.

C. Razor-trim edges according to manufacturer's instructions.

D. Apply covering smooth, and without wrinkles, gaps, or overlaps. Eliminate air pockets and ensure full bond to substrate surface.

E. Remove excess adhesive while wet from seam before proceeding to next covering sheet. Wipe clean with dry cloth.

F. Wait 24 hours before using.

3.4 CLEANING AND PROTECTION

A. Division 1 - Execution and Closeout Requirements: Requirements for cleaning.

B. Clean coverings of excess adhesive, dust, dirt, and other contaminants.

C. Protect installed product and finished surfaces from damage during construction.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes markerboard ("whiteboard") units or walls, tackboard ("bulletin board"), factory and/or field assembled to sizes indicated on Drawings; and, loose marker trays for installation over dry erase wallcoverings.

B. Related Sections:

1. Section 09 21 16 – Gypsum Board Assemblies.
2. Section 09 97 37 – Dry Erase Wall Coverings
3. Division 26 – Electrical: Coordination with lighting control devices, wall outlet locations.
4. Division 27 – Communications: Coordination with device locations.

1.2 REFERENCES

A. ASTM International:

1. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
2. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
3. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials
4. ASTM F2034 - Standard Specification for Linoleum Sheet Floor Covering.

B. Porcelain Enamel Institute:

1. PEI S-104 Performance Specification for Porcelain Enamel Markerboards and Chalkboards.

C. South Coast Air Quality Management District:

1. SCAQMD Rule 1168 - Adhesive and Sealant Applications.

1.3 SUBMITTALS

A. Division 1 - Submittal Procedures: Submittal procedures.

B. Product Data: Submit data on white boards, trim and accessories. Include certification of VOC-compliant adhesives and core material urea-formaldehyde content.

1.4 CLOSEOUT SUBMITTALS

A. Division 1 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit Operation and Maintenance Data.

1.5 QUALITY ASSURANCE

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years' experience.

1.6 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.7 WARRANTY

A. Division 1 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for visual display boards.

C. Warranty: Include coverage of markerboard surface from discoloration due to cleaning, crazing or cracking, staining.

PART 2 – PRODUCTS

2.1 VISUAL DISPLAY BOARDS

A. Manufacturers: Furnish compliant products of one or more of the following or approved equal. Furnish single manufacturer per classification of visual display board.

1. Claridge Products and Equipment, Incorporated.
2. Marsh Industries, Incorporated.
3. Platinum Visual Systems
4. PolyVision Americas.
5. Steelcase.

B. Marker Board Type "WB1" - Porcelain enameled steel face, narrow profile trim (where provided) with continuous solid pen tray with smoothly curved and polished ends. Provide smooth butt-joints at face, concealed fasteners and hanger devices. Basis of Specification: Platinum Visual Systems' "Narrow Hanger Trim System (NTS)". Size: 48 inches high, length as indicated on Drawings.

2.2 COMPONENTS

A. Outer Steel Face Sheet: PEI S-104; porcelain enamel finished steel, 28 gauge minimum.

1. Maximum Size Available: 4 foot by 16 foot length minimum when required.

B. Markerboard Core: ASTM E84; Class A medium density fiberboard or mineral fiberboard, nominal 1/2 inch thick minimum, with no added urea-formaldehyde resins.

C. Markerboard Backing Surface: ASTM B209; aluminum sheet, 0.005 inch thick minimum. Foil backing not acceptable.

D. Markerboard Splice Joint: Concealed spline of sheet steel where required.

E. Tackboard Face: ASTM E84, Class B; 1/4 inch thick homogenous linoleum surface calendared on manufacturer's standard backing.

F. Aluminum Frame: ASTM B221, 6063 alloy, T5 temper. 3/4 inch maximum profile; concealed fasteners, and integrated hanger to coordinate with concealed hanger bars. Pen tray where Specified. No map rail.

2.3 ACCESSORIES

A. Adhesives: Manufacturer's recommended with maximum volatile organic compound content in accordance with SCAQMD Rule 1168.

B. Hanger Bars: Manufacturer's standard for concealed mounting of frame to wall.

C. Marker Tray: Standard continuous solid aluminum chalktray with ribbed section and smoothly curved and polished ends aluminum with smoothly curved, polished ends; clear anodized. Platinum Visual Systems' CR315, or approved equal.

D. Screw-On Marker Tray Trim For Installation @ DEW Walls: Platinum Visual Systems' CR310, or Claridge Products and Equipment, Inc. "Chalk/Maker Tray Model No. 264", or equal. Provide size, in single units, and configuration shown on Drawings.

1. Mounting: Exposed fasteners for surface-mount over specified dry-erase wall covering (DEWP/DEW) per Section 09 97 37 Dry Erase Wall Coverings

2. Aluminum Finish: Clear anodic finish.

E. Adhesive-Backed Marker Tray For Installation @ DEW Walls: Claridge Products and Equipment, Inc. "Adhesive-Backed Tray Model No. GM-Tray 1", or equal. Provide 12"-long, in single units, and configuration shown on Drawings.

1. Mounting: Manufacturer's standard double-sided tape for surface-mount over specified dry-erase wall covering (DEW) per Section 09 97 37 Dry Erase Wall Coverings.

2. Aluminum Finish: Satin anodized finish.

F. Temporary Protective Cover: Adhered polyethylene or other sheet, manufacturer's standard.

2.4 FACTORY FINISHING

A. Porcelain Enamel: Glass fibered enamel, baked to vitreous surfaces; standard white color, high gloss.

B. Aluminum Frame and Accessories: Anodized to clear satin finish.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 - Administrative Requirements: Coordination and project conditions.

B. Verify internal wall blocking is ready to receive Work and positioning dimensions are as indicated on drawings.

3.2 INSTALLATION

A. Secure units level and plumb.

B. Butt multiple adjacent panels tight with concealed spline to hairline joint.

C. Carefully cut holes in markerboards for wall switches and other devices so that cover plates will conceal holes. Do not locate devices within markerboard field unless position is specifically dimensioned on drawings. Otherwise, review with Architect prior to locating.

D. Furnish one magnetic marker tray for each face sheet panel.

3.3 CLEANING

A. Division 1 - Execution and Closeout Requirements: Final cleaning.

B. Cover chalkboard surfaces with protective cover, taped to frame.

C. Remove temporary protective cover at date of Substantial Completion.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Non-internally illuminated panel signs.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings

1. Include plans, elevations of all faces with message/icons, sections, details, and mounting/ footing attachments to other existing surfaces.

2. Provide message list, typestyles, graphic symbols, and layout for each sign at least half size and full-size details of graphic layouts.

3. Include full-size templates for cutout characters and graphic symbols.

C. Samples for Initial Selection: Manufacturer's color charts consisting of actual units or sections of units showing the full range of colors available for the following:

1. Acrylic Sheet

D. Samples for Verification: For each of the following products and for full range of color and sign material indicated, of sizes indicated:

1. Acrylic Sheet: 8 x 8 inches for each color / finish required.

2. Full size representative samples of specified typestyles of tactile and surface printed characters and graphic symbols.

3. Hardware: Actual sample of each type.

1.3 QUALITY ASSURANCE

A. Installer Qualifications TBD.

B. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.

C. Source Limitations for Signs: Obtain each sign type indicated from one source from a single manufacturer.

D. Regulatory Requirements: Comply with applicable provisions in the California Building Code and ADA-ABA Accessibility Guidelines and ICC A117.1.

E. Pre-fabrication Samples: Construct samples to verify selections made under sample submittals, demonstrate aesthetic effects, and set quality standards for materials and execution. Comply with the following requirements, using materials indicated for the completed Work:

1. Prepare one representative sample for each Sign Type specified in paragraph 2.2.

2. Sign Subcontractor to provide samples in on- or off-site location and of size indicted, or if not indicated, as directed by the Project Representative.

3. Employ workers that will be employed during the project fabrication, and supervisory personnel who will oversee the sample fabrication.

4. Demonstrate the proposed range of aesthetic effects and workmanship.

5. Sign Subcontractor to provide notice to Project Representative 14 days in advance of dates & times when samples will be available for review.

6. Sign Subcontractor required to receive Project Representative's approval of samples prior to fabrication of Work in this section. Allow 21 days for initial review and each re-review of each sample.

7. Sign Subcontractor to provide resubmit samples as required to obtain Project Representative's approval.

8. Sign Subcontractor to retain samples during construction in an undisturbed condition as a standard for judging the completed work.

9. Sign Subcontractor to remove samples when directed. When permitted by the Project Representative, approved samples may become part of the completed Work.

F. Pre-installation Conference: Conduct conference at Project site:

1. Sign Subcontractor to provide review of and finalize construction schedule and verify availability of materials, Sign Subcontractor's personnel, equipment, and facilities needed to make progress and avoid delays.

2. Sign Subcontractor to provide review temporary protection requirements for signage during and after installation.

G. "Related Sections" heading in the technical specifications is included only to help guide Contractor to other Sections related to Work of that Section. Completeness is not guaranteed nor should it be interpreted as in anyway controlling Contractor's right to distribute Work.

1.4 PROJECT CONDITIONS

A. Weather Limitations: Sign Subcontractor to proceed with installation only when existing and forecasted weather conditions permit installation of signs in exterior locations to be performed according to manufacturers' written instructions and warranty requirements.

B. Field Measurements: Sign Subcontractor to provide verification of sign locations by field measurements before fabrication and indicate measurements on Shop Drawings.

C. Sign Subcontractor to provide final attachment method information in Shop Drawings.

1.5 COORDINATION

A. Coordinate installation of anchorages for signage requiring hardware mounting. Furnish setting drawings, templates, and directions for installing anchorages and other items that are to be embedded in surfaces.

1.6 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of pylon signs that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following

a. Deterioration of sign materials beyond normal weathering.

b. Deterioration of tactile graphics and graphic image colors.

2. Warranty Period: Sign Subcontractor to provide information determined from date of Substantial Completion.

PART 2 – PRODUCTS

2.1 SUMMARY

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Thomas Swan Sign Company

2. Martinelli Environmental Graphics

3. Creo Industrial Arts

4. Priority Signs

5. Arrow Signs

B. Changeable Message Inserts: Fixed non-glare, clear acrylic “window” to receive paper name insert.

1. Furnish insert material and template for creating text and symbols for [PC-Windows] [Macintosh] computers for owner production of paper inserts.

C. Tactile and Braille Sign: Manufacturer's standard process for producing text and symbols complying with California Accessibility Guidelines and with ICC/ANSI A117.1. Text shall be accompanied by California Grade 2 Braille. Produce precisely formed

letters with square-cut edges free from burrs and cut marks; Braille dots with domed or rounded shape.

1. Panel material: 3/16” thick acrylic or aluminum (exterior).
2. Raised copy Thickness: 1/32 inch minimum.

D. Sign Schedule.

1. Exterior Panel Signs
   a. Sign Size: See Design Intent Drawings.
   b. Panel Material: 3/16” thick aluminum.
   c. Finish / Color: See Design Intent Drawings.
   d. Mounting: Fix sign panel with 316 stainless steel studs, 1/16” thick VHB double-faced foam tape and clear silicone adhesive.
2. Interior Panel Signs
   a. Sign Size: See Design Intent Drawings.
   b. Panel Material: 3/16” thick acrylic.
   c. Finish / Color: See Design Intent Drawings.
   d. Mounting: Fix sign panel with 1/16” thick VHB double-faced foam tape and clear silicone adhesive.
3. Other Sign Types TBD

PART 3 – EXECUTION (TBD)

END OF SECTION

PART 1 – GENERAL

1.1 SECTION INCLUDES

A. Solid Color Reinforced Composite (SCRC) Substrate, Toilet Partitions.

1.2 RELATED SECTIONS

A. Section 05 50 00 - Metal Fabrications.

B. Section 06 10 00 - Rough Carpentry.

C. Section 10 28 13 - Toilet Accessories.

1.3 SUBMITTALS

A. Submit under provisions of Section 01 30 00 - Administrative Requirements.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.

C. USA Certificate of Origin: Manufacturer shall supply with first submittal, an example of their Certificate of Origin declaring toilet compartments are wholly manufactured and assembled specifically in the United States, including city and state locations. A notarized Certificate of Origin shall be provided with closeout documents.

D. Shop Drawings: Submit manufacturer's shop drawings for each product specified, including the following:
   1. Plans, elevations, details of construction and attachment to adjacent construction.
   2. Show anchorage locations and accessory items.
   3. Verify dimensions with field measurements prior to final production of toilet compartments.

E. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.

F. Verification Samples: For each finish product specified, two samples, minimum size 6 inches (150 mm) square representing actual product, color, and patterns.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: Minimum 10 year experience manufacturing similar products.

B. Installer Qualifications: Minimum 2 year experience installing similar products.

C. Single Source Requirements: To the greatest extent possible provide products from a single manufacturer.

D. Accessibility Requirements: Comply with requirements applicable in the jurisdiction of the project, including but not limited to ADA and ICC/ANSI A117.1 requirements as applicable.

1.5 PRE-INSTALLATION MEETINGS

A. Convene minimum two weeks prior to starting work of this section.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store products in manufacturer's unopened packaging bearing the brand name and manufacturer's identification until ready for installation.

B. Handling: Handle materials to avoid damage.

1.7 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's recommended limits.

1.8 WARRANTY

A. Manufacturer's Warranty: Manufacturer's standard 25-year limited warranty for panels, doors, and stiles against breakage, corrosion, delamination, and defects in factory workmanship. Manufacturer's standard 1 year guarantee against defects in material and workmanship for stainless steel door hardware and mounting brackets.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design Products: Based on the quality and performance requirements of the project, specifications are based on the products of Bobrick Washroom Equipment, 3092G.67P Sierra Series SCRC solid phenolic toilet partitions in custom heights.

B. Requests for substitutions will be considered in accordance with provisions of Section 01 60 00 - Product Requirements.

2.2 SOLID COLOR REINFORCED COMPOSITE (SCRC) SUBSTRATE

A. Solid Color Reinforced Composite (SCRC) Toilet Partitions: Bobrick Sierra Series.
   1. Design Type:
      a. Maximum Height:
         1) Door/Panel Overall Component Height: 90”.
         2) Doors to run up to headrail, see elevations.
         3) Floor Clearance standard stalls: 3/4” AFF.
         4) Floor Clearance ADA stalls: 3/4” AFF.
         5) Door clearance: ¾” AFF.
   2. Privacy Style Partitions: No sightlines with gap-free interlocking doors and stiles routed 0.300 inches (7.6 mm) from the edge to allow for 0.175 inch (4.4

mm) overlap to prevent line-of-sight into the toilet compartment. Privacy strips fastened or adhered onto the partition material are not acceptable.

3. Mounting Configuration:
   a. Floor-mounted, overhead-braced with satin finish, extruded anodized aluminum headrails, 0.065 inch (1.65 mm) thick with anti-grip profile.
      1) Stile Maximum Height: 90 inches (211 cm).

B. Materials: Solid color reinforced composite (SCRC) material for stiles, panels, doors, and screens with Bobrick GraffitiOff coating, thermoset and integrally fused into homogenous piece; high density polyethylene (HDPE), high density polypropylene not acceptable.
   1. Composition: Dyes, organic fibrous material, and polycarbonate/phenolic resins.
   2. Surface Treatment: Non-ghosting, graffiti resistant surface integrally bonded to core through a manufacturing steps requiring thermal and mechanical pressure.
   3. Edges: Same color as the surface.

C. Color:
   1. As indicated on Drawings.

D. Fire Resistance:
   1. National Fire Protection Association/International Building Code Interior Wall and Ceiling Finish: Class B / Uniform Building Code: Class II.
      a. Flame Spread Index (ASTM E 84): 75 or less.
      b. Smoke Developed Index (ASTM E 84): 450 or less.

E. Finished Thickness:
   1. Stiles and Doors: 3/4 inch (19 mm).
   2. Panels and Screens: 1/2 inch (13 mm).

F. Stiles: Floor-anchored stiles furnished with expansion shields and threaded rods.
   1. Leveling Devices: 7 gauge, 3/16 inches (5 mm) thick, corrosion-resistant, chromate-treated, double zinc-plated steel angle leveling bar bolted to stile; furnished with 3/8 inch (10 mm) diameter threaded rods, hex nuts, lock washers, flat washers, spacer sleeves, expansion anchors, and shoe retainers.
   2. Stile Shoes: One-piece, 22 gauge (0.8 mm), 18-8, Type 304 stainless steel, 4 inch (102 mm) height; tops with 90 degree return to stile. One-piece shoe capable of adapting to 3/4 inch (19 mm) or 1 inch (25 mm) stile thickness and capable of being fastened (by clip) to stiles starting at wall line.

G. Anchors: Expansion shields and threaded rods at floor connections as applicable. Threaded rods secured to supports above ceiling as applicable. Supports above ceiling furnished and installed as Work of Section 05 50 00 - Metal Fabrications.

H. Hardware: All hardware to be concealed inside toilet compartments by factory installed threaded brass inserts at all fastening points, tested up to 1,500 ponds of pull force per insert. Exposed hardware unacceptable. Exception: Outswing doors.
   1. Compliance: Operating force of less than 5 lb (2.25 kg).

2. Emergency Access: Hinges, latch allow door to be lifted over keeper from outside compartment on inswing doors.
3. Materials: 18-8, Type 304, heavy-gauge stainless steel with satin finish.
4. Fastening: Hardware is secured to door and stile with pin-in-head Torx stainless steel machine screws. Hinges, latch and optional door stops secured to door with pin-in-head Torx stainless steel machine screws into factory-installed, threaded brass inserts. Fasteners for hinges, latch and optional door stops secured directly into core not acceptable.
   a. Threaded Brass Inserts: Factory-installed; withstand direct pull force exceeding 1500 lb (680 kg) per insert.
5. Clothes Hooks: Projecting no more than 1-1/8 inch (29 mm) from face of door.
6. Door Occupancy Indicator Latch: Manufactured from stainless steel, allows patrons to quickly identify what stalls are occupied/unoccupied (Red/Green).
7. Locking: Door locked from inside by sliding door latch into keeper.
8. Hinge Type:
   a. Standard.
      1) Balanced, with field-adjustable cam to permit door to be fully closed or partially open when compartment is unoccupied.
9. Mounting Brackets:
   a. Full-Height.
      1) Mounting Brackets: 18 gauge (1.2 mm) stainless steel and extend full height of panel.
      2) U-Channels: Secure panels to stiles.
      3) Angle Brackets: Secure stiles-to-walls and panels to walls.

PART 3 EXECUTION

3.1 PREPARATION

A. Prepare substrates including but not limited to blocking and supports in walls and ceilings at points of attachment using methods recommended by the manufacturer for achieving the best result for the substrates under the project conditions.
   1. Inspect areas scheduled to receive compartments for correct dimensions, plumbness of walls, and soundness of surfaces that would affect installation of mounting brackets.
   2. Verify spacing of plumbing fixtures to assure compatibility with installation of compartments.

B. If preparation is the responsibility of another installer, notify Architect in writing of deviations from manufacturer's recommended installation tolerances and conditions.

C. Do not proceed with installation until substrates have been properly prepared with blocking and supports in walls and ceilings at points of attachment and deviations from manufacturer's recommended tolerances are corrected. Commencement of installation constitutes acceptance of conditions.

3.2 INSTALLATION

A. Install products in strict compliance with manufacturer's written instructions and recommendations, including the following:

1. Verify blocking and supports in walls and ceilings has been installed properly at points of attachment.
2. Verify location does not interfere with door swings or use of fixtures.
3. Use fasteners and anchors suitable for substrate and project conditions
4. Install units rigid, straight, plumb, and level.
5. Conceal evidence of drilling, cutting, and fitting to room finish.
6. Test for proper operation.

3.3 ADJUSTING, CLEANING AND PROTECTION

A. Adjust hardware for proper operation after installation. Set hinge cam on in-swinging doors to hold doors open when unlatched. Set hinge cam on out-swinging doors to hold unlatched doors in closed position.

B. Touch-up, repair or replace damaged products.

C. Clean exposed surfaces of compartments, hardware, and fittings.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes folding panel acoustic partitions; ceiling track and operating hardware.

B. Related Sections:

1. Section 05 50 00 – Metal Fabrications: Components for overhead support.
2. Section 06 10 53 - Miscellaneous Rough Carpentry: Wood blocking and track support shimming.
3. Section 08 71 00 – Door Hardware: Lock cylinders for hardware.
4. Section 09 21 16 – Gypsum Board Assemblies: Coordination with wall and ceiling assemblies, including overhead acoustical barrier.
5. Division 9: Coordination with floor finishes.

1.2 REFERENCES

A. ASTM International:

1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
2. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.
3. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
4. ASTM E413 - Classification for Rating Sound Insulation.
5. ASTM E557 - Standard Guide for Architectural Design and Installation Practices for Sound Isolation between Spaces Separated by Operable Partitions.

B. South Coast Air Quality Management District:

1. SCAQMD Rule 1168 - Adhesive and Sealant Applications.

1.3 PERFORMANCE REQUIREMENTS

A. Sound Transmission Classification (STC): As specified, calculated in accordance with ASTM E413, based on tests performed in accordance with ASTM E90, on partition size of 100 sq ft.

1.4 SUBMITTALS

A. Division 1 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate opening sizes, track layout, details of track and required supports, static and dynamic loads, location and details of pass door and frame, adjacent construction and finish trim, and stacking sizes.

C. Product Data: Submit data on partition operation, hardware and accessories, track switching components, colors and finishes available.

D. Samples for Review: Submit samples of surface finish, 12 x 12 inches size, illustrating quality, colors selected and texture.

E. Manufacturer's Instructions: Submit special procedures, perimeter conditions requiring special attention and installation sequence.

F. Certificates:

1. Certify partition system meets or exceeds specified acoustic requirements.

2. Certify installer’s qualifications.

1.5 CLOSEOUT SUBMITTALS

A. Division 1 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit recommended cleaning methods, cleaning materials, and stain removal methods. Describe cleaning materials detrimental to fabric surfaces and hardware finish.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years’ experience.

B. Installer: Company specializing in performing work of this section and approved by manufacturer.

1.7 COORDINATION

A. Division 1 - Administrative Requirements: Coordination and project conditions.

B. Coordinate Work with other sections providing panel finish materials to this section.

PART 2 – PRODUCTS

2.1 OPERABLE PANEL PARTITIONS

A. Manufacturers:

1. Nanawall

a. Product Description: NanaWall HSW60 is Basis of the Specification. Manual operation, Standard top-hung, single-track, interlocking aluminum-framed

sliding glass storefront system panel. Manufacturer's standard frame and panel profiles, with head track, stacking bays, side jambs, sliding panels with dimensions as shown on Drawings. Sound Transmission Class: STC 39 for entire assembly.

2.2 COMPONENTS

A. Panels:

1. Size: 10'-0" high. Widths as shown on drawings.

2. Provide clear anodized aluminum head track with aluminum covers on both sides that match aluminum profile finish.

3. Head rail: 4-5/16 x 2-5/16 inch.

4. Jamb rail: 5-1/4 x 2-5/16 inch.

5. Bottom rail width:
   a. 2-3/8 inch
   b. Manufacturer's standard kickplate 6" high.

6. Aluminum Extrusion:
   a. Thickness: 0.078 inch

7. Finish:
   a. Powder coat: From manufacturer's full RAL selection. High gloss. Color: to match ~~Kawneer 789G048 Permadize "Light Sequin"~~ **PPG Industries' Duranar XL #3ZMA3190 – "Ultra-Cool Champagne"** to match glazed aluminum curtain wall.

B. Glass and Glazing:

1. Safety Glazing: In compliance with ANSI Z97.1 and CPSC 16CFR 1201.
   a. Glass Acoustical Performance: STC 41, 1 inch, double IGU, air filled, double-laminated clear glass.

2. Manufacturer's tempered and laminated glass lites, dry glazed with grey seals and glass stops on the inside.
   a. Glass lite / Insulated Glass Unit (IGU)
      1) Double IGU: 15/16 inch thick. Air filled.
   b. Glass Spacers: Manufacturer's standard grey.

C. Locking Hardware and Handles:

1. Main Entry Panel(s) for Models WITH Swing Panel(s): Provide manufacturer's standard lever handles on the inside and outside, and a standard lockset with a lockable latch and multi-point locking with a dead bolt and rods at the top and bottom.
   a. Rods to be concealed and not edge mounted.
   b. After turn of key or thumbturn, depression of handles withdraws latch.

c. Lifting of handles engages rods and turn of key or thumb turn engages deadbolt and operates lock.
d. Lever Handles - Finish: Brushed satin stainless steel.

2. Secondary Panels: Provide manufacturer's standard flat handles, brushed satin stainless steel finish. Handles and concealed one or two point locking hardware operated by 180º turn of handle. Face applied flush bolt locking not acceptable.

3. Handle Height: 41-3/8 inch centered from bottom of panel or as otherwise indicated.

4. Aluminum locking rods with standard fiberglass reinforced polyamide end caps at the bottom (and top on certain panels). Rods to have a stroke of 15/16 inch (24 mm).

5. Additional profile cylinders to be keyed alike.

6. Incorporated Swing Panel: Provide crank handle stored in flap on panel stile to convert sliding panel to a swing panel and vice versa.
   a. Conversion Box located on upper arm of top rail to be polyamide in silver gray finish.

NOTE: If swing door to frame fixing hardware for operation of the incorporated door is above 7'-0" (2.13 m), provide with an integrated pole for single person operation.

Operation above 7'-0" (2.13 m) should be easy to complete and not require additional mean to reach the fixing/locking mechanism other than the provided pole.

7. Swing Door Attachment: Geared positive attachment only to affix swing door to the frame for incorporated swing doors for ease of operation and rigid security.

8. Pinch Resistance: Provide rounded extrusions on pivot side of incorporated swing panels.

D. Standard Flush Sill:

1. Finish: Aluminum with a clear anodized finish.

E. Fasteners: Stainless steel machine screws for connecting frame components.

2.3 FABRICATION

A. Extruded aluminum frame and panel profiles, corner connectors and hinges, sliding hardware, locking hardware and handles, glass and glazing components to construct sliding glass wall with stacking bays.

1. Each unit factory pre-assembled and shipped with all components and installation instructions.

2. Exposed work to be carefully matched to produce continuity of line and design with all joints.

3. No raw edges visible at joints.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examination and Acceptance of Conditions per Section 01 70 00 and as follows:

1. Carefully examine rough openings with Installer present, for compliance with requirements affecting Work performance.
   a. Verify that field measurements, substrates, tolerances, levelness, plumbness, cleanliness and other conditions are as required by the manufacturer, and ready to receive Work.
   b. Verify the structural integrity of the header for deflection with live and dead loads limited to the lesser of L/720 of the span or 1/4 inch (6 mm). Provide structural support for lateral loads, and both wind load and eccentric load when the panels are stacked open.

2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install Sliding Glass Storefront system in accordance with the Drawings, approved submittals, manufacturers' recommendations and installation instructions, and as follows:

1. Properly flash, waterproof and seal around opening perimeter.

2. Securely attach anchorage devices to rigidly fit frame in place, level, straight, plumb and square. Install frame in proper elevation, plane and location, and in proper alignment with other work

3. When lower track is designed to drain, provide connections to allow for drainage.

4. Install panels, handles, lock set, and other accessories in accordance with manufacturer’s recommendations and instructions.

3.3 FIELD QUALITY CONTROL

A. Field Tests and Inspections per Section 01 40 00 of the following:

1. Verify the Sliding Glass Storefront system operates and functions properly. Adjust hardware for proper operation.

B. Non-Conforming Work: Repair or replace non-conforming work as directed by the Architect; see General and Supplementary Conditions, and Division 01, General Requirements.

3.4 CLEANING AND PROTECTION

A. Keep units closed and protect Sliding Glass Storefront installation against damage from construction activities.

B. Remove protective coatings and use manufacturer recommended methods to clean exposed surfaces.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Work includes provision of protective wall coverings, wall corner guards, and related accessories.

B. Work Specified Elsewhere:

1. Section 09 21 10 – Gypsum Board Assemblies.

1.2 References:

A. American Society for Testing and Materials International (ASTM):

1. ASTM E84: Test Method for Surface Burning Characteristics of Building Materials.

1.3 SUBMITTALS

A. No Product Data submittals required unless products and systems used deviate from those listed in Part 2 of this Section.

B. Product Data: Submit manufacturer's literature and installation instructions for each material and accessory, clearly notating specified requirements.

C. Samples: Minimum 6-inch square of each specified sheet product finish and 6 inch length of each corner guard product finish.

D. Maintenance Manual: Three printed copies of manufacturer's recommendation of care, cleaning, and maintenance.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Delivery and store packaged materials in original containers with seals unbroken and labels intact until time of use.

1.5 ENVIRONMENTAL CONDITIONS

A. Temperature: Maintain areas to receive protective wall covering at reasonably constant temperature of not less than 50 degrees F for at least three days before and during application period.

PART 2 – PRODUCTS

2.1 PROTECTIVE WALL COVERING:

A. Manufacturers: Provide compliant products of one of the following or approved equal:

1. Construction Specialties, Incorporated.

2. InPro Corporation.

B. Product Description: ASTM E84 Class A, PVC-free, impact, chemical and stain resistant rigid polyethylene terephthalate glycol (PETG) sheet with butt vertical seams. Basis of Specification: Construction Specialties' "Acrovyn 4000 Wall Covering".

1. Thickness: 0.060 inch.
2. Texture: "Suede".
3. Color: No. 858 "Pumice".
4. Adhesive: Manufacturer's standard water-based, 50 g/L VOC maximum.

2.2 CORNER GUARDS:

A. Manufacturers: Provide compliant products of one of the following or approved equal:

1. Construction Specialties, Incorporated.
2. InPro Corporation.

B. Product Description: Basis of Specification: Construction Specialties' "CO-8".

1. Size: 2 inch x 2 inch. 16 ga.
2. 304 Stainless Steel with #4 satin finish.
3. Adhesive applied.

PART 3 – EXECUTION

3.1 GENERAL:

A. Manufacturer's Instructions: Prepare substrates and install the work, including components and accessories in accordance with the manufacturer's instructions, except where more stringent requirements are shown or specified. Examine the areas to receive the Work and remedy detrimental conditions.

B. General: Set work accurately in location, alignment, and elevation; plumb, level, true, and free of rattle or vibration except where expansion-contraction tolerances are required; measured from established lines and levels.

3.2 PREPARATION:

A. Remove hardware, accessories, plates, and similar items prior to installing wall covering. Upon completion of each space, replace removed items.

3.3 INSTALLATION:

A. Install items in accordance with manufacturer's printed instructions. Install protective wall covering and corner guards without horizontal seams.

B. Remove access adhesive immediately from wall surface as each joint or seam is made, and before proceeding to next joint or seam.

C. Assure installation is secure, smooth, clean, without gaps and edges not adhered to backing surface.

3.4 CLEANING:

A. Thoroughly clean items after installation in accordance with manufacturer's printed instructions.

3.5 PROTECTION:

A. Protect work from damage to surface and remove protective covering prior to final acceptance.

B. Replace damaged items.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes toilet**,** ~~and~~ janitor's closet accessories**, and waste receptacles**.

B. Related Requirements:

1. Section 09 21 16 – Gypsum Board Assemblies: Backing for mounting of accessories
2. Section 10 21 13 - Toilet Compartments.
3. Division 26 – Electrical: Provision of power to electrical accessories.

1.2 REFERENCE STANDARDS

A. ASTM International:

1. ASTM A123 - Standard Specification for Zinc (Hot Dip Galvanized) Coatings on Iron and Steel Products.
2. ASTM A153 - Standard Specification for Zinc Coating (Hot Dip) on Iron and Steel Hardware.
3. ASTM A269 - Standard Specification for Seamless and Welded Austenitic Stainless Steel Tubing for General Service.
4. ASTM A653 - Standard Specification for Steel Sheet, Zinc Coated (Galvanized) or Zinc Iron Alloy Coated (Galvannealed) by the Hot Dip Process.
5. ASTM A666 - Standard Specification for Annealed or Cold Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.
6. ASTM B456 - Standard Specification for Electrodeposited Coatings of Copper Plus Nickel Plus Chromium and Nickel Plus Chromium.
7. ASTM C1036 - Standard Specification for Flat Glass.

1.3 PERFORMANCE REQUIREMENTS

A. Installation of grab bars and attachments shall be adequate to resist minimum 250 lb. concentrated load applied at any point in any direction.

1.4 COORDINATION

A. Division 1 - Administrative Requirements: Requirements for coordination.

B. Coordinate Work of this Section with placement of internal wall reinforcement and where required reinforcement of toilet partitions to receive anchor attachments.

1.5 SUBMITTALS

A. Division 1 - Submittal Procedures: Requirements for submittals.

B. Product Data: Submit data on accessories, describing size, finish, details of function, and attachment methods.

1.6 QUALITY ASSURANCE

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum five years' experience.

1.7 WARRANTY

A. Division 1 - Execution and Closeout Requirements: Requirements for warranties.

B. Furnish five-year manufacturer's warranty for electric hand dryers.

C. Furnish fifteen-year manufacturer's warranty for mirror glass and stainless steel mirror frames.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. Manufacturer List: Except where equal products are identified as acceptable below, provide without substitution the products listed below.

2.2 MATERIALS

A. Accessories: Shop assembled, free of dents and scratches, and packaged complete with anchors and fittings, steel anchor plates, adapters, and anchor components for installation.

1. Grind weld joints smooth.

2. Fabricate units made of metal sheet of seamless sheets with flat surfaces.

B. Keys: Furnish two keys for each keyed accessory to Owner; master key accessories to Owner's system].

C. Stainless Steel Sheet: ASTM A666, Type 304.

D. Stainless Steel Tubing: ASTM A269, Type 304 stainless steel.

E. Mirror Glass: ASTM C1036, Type 1 transparent flat, Class 1 clear, Quality Q1 mirror select; type with copper and silver coating, and organic overcoating.

F. Fasteners, Screws, and Bolts: Manufacturer’s standard stainless steel or ASTM A153 hot-dip galvanized, tamper-proof.

G. Expansion Shields: Fiber, lead, or rubber as recommended by accessory manufacturer for component and substrate.

2.3 TOILET ROOM ACCESSORIES

A. Grab Bars 'GB' : Surface-mounted, stainless steel satin finish. 1-1/2 inches outside diameter, minimum 18 gauge wall thickness, concealed flange mounting with snap flange cover. 1-1/2 inches exact clearance between wall finish and inside of mounted grab bar. Furnish manufacturer's standard through-mounting kit where mounting required at toilet compartment panel. Bobrick Washroom Accessories' "B-6806".

1. Lengths: Minimum 42-inch (GB42) at rear of water closet, minimum 48-inch (GB48) at side of water closet, and as indicated on Drawings. (OFCI)

B. Paper Towel Dispenser 'PTD': Kimberley Clark Hands Free, Sanitouch #09990 (Black) (OFCI)

C. Soap Dispenser 'SD': GoJo/FMX/Gray #5250-09 (No substitution) 2000ml . (OFCI)

D. Mirrors 'M1': Surface-mounted, satin stainless steel framed, 1/4 inch thick float glass mirror. Mitered, welded, ground and polished frame corners. Full-mirror, minimum 0.03 inch galvanized steel sheet backing and non-absorptive filler material. Bobrick Washroom Equipment Incorporated's "B-165 1836" or equal. (CFCI)

E. Recessed Seat-Cover Dispenser, Sanitary Napkin Disposal and Toilet Tissue Dispenser 'SCD'/'SND'/'TPD': Bobrick ClassicSeries® Stainless steel "B-3574" (CFCI)

F. Coat Hook 'CH': Surface-mounted, stainless steel. Bobrick Washroom Equipment Incorporated's "B-76727" or equal. (OFCI)

G. Baby Changing Station 'BCS': Koala Kare Model "KB110 -SSRE" (OFCI)

H. Waste Receptacle 'WR': Recessed waste receptacle, Type-304 stainless steel. Bobrick "B-35643" (OFCI)

I. Sanitary Napkin Vendor 'SNV': Sanitary Napkin / Kotex Vendor Bobrick "B-47069"

J. Hand Dryer 'HD': Dyson Airblade V

2.4 JANITOR'S CLOSET ACCESSORIES

A. Mop and Broom Holder: Surface-mounted, stainless steel. Bobrick Washroom Equipment Incorporated's "B-223 x 24".

B. Utility Shelf with Mop / Broom Holders Bobrick "B-239"

2.5 WASTE RECEPTACLES

A. General: Furnish receptacles of type and quantity as indicated below. Rubbermaid Commercial models are listed as the Basis of the Specification.

1. Trash: One receptacle in each classroom, office, and cubicle.

2. Recycle:

a. Small: One receptacle in each office and cubicle.
b. Medium: One receptacle in each classroom.

B. Receptacles:

1. Trash Receptacle (Medium): 7 gallon (28 quart) capacity. Color: Black. Nominally 14.5”x10.5”x15.0” (LxWxH). Model No. FG295600BLA.

2. Recycle Receptacle (Small): 3.25 gallon (13 quart) capacity. Color: Blue. Nominally 11.38”x8.25”x12.13” (LxWxH). Model No. FG295573BLUE.

3. Recycle Receptacle (Medium): 7 gallon (28 quart) capacity. Color: Blue. Nominally 14.5”x10.5”x15.0” (LxWxH). Model No. FG295600BLUE.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 - Administrative Requirements: Requirements for installation examination.

B. Verify exact location of accessories for installation.

C. Verify field measurements and rough-in dimensions for recessed accessories are as indicated on product data.

D. Comply with Manufacturer’s installation instructions, Drawings and Section 09 21 16 for installation of anchorage backing in walls.

3.2 PREPARATION

A. Division 1 - Execution and Closeout Requirements: Requirements for installation preparation.

B. Deliver inserts and rough-in frames to Site for timely installation.

C. Provide templates and rough-in measurements as required.

3.3 INSTALLATION

A. Do not install accessories until after completion of all finishes to adjacent wall and ceiling surfaces.

B. Install plumb and level, securely and rigidly anchored to substrate.

C. Turn over to Owner all keys and special tools required for lockable or secured accessories.

D. Mounting Heights and Locations: As indicated on Drawings.

E. Furnish one Mop and Broom Holder at each Janitor’s closet

3.4 REPAIR

A. Clean and repair existing toilet accessories that remain or are to be reinstalled.

3.5 CLEANING

A. Division 1 - Execution and Closeout Requirements: Requirements for cleaning.

B. Clean mirrors and exposed surfaces using procedures as recommended by accessory manufacturer.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Work includes fire extinguishers and fire extinguisher cabinets.

B. Related Sections:

1. Section 06 10 53 – Miscellaneous Rough Carpentry: Wood blocking and shims.

2. Section 09 21 16 – Gypsum Board Assemblies.

1.2 REFERENCES

A. California Code of Regulations - Title 24, Part 9.

1. CFC – California Fire Code (Current).

B. National Fire Protection Association (NFPA).

1. NFPA 10 – Standard for Portable Fire Extinguishers.

C. Underwriters Laboratories Inc. (UL).

1. UL – Fire Protection Equipment Directory.

1.3 PERFORMANCE REQUIREMENTS

A. Conform to NFPA 10 and California Fire Code.

B. Provide fire extinguishers classified and labeled by Underwriters Laboratories Inc. for purpose specified and indicated.

C. Provide fire-rated versions of specified fire extinguisher cabinets when installed into fire-rated walls and partition assemblies. Cabinets shall be classified and labeled by Underwriters Laboratories Inc. for purpose specified and indicated, with rating equal or greater to that of the wall or partition assembly.

D. Projection of semi-recessed fire extinguisher cabinet handles shall not exceed 4 inches from face of adjacent wall surface.

1.4 SUBMITTALS

A. Product Data: Submit extinguisher operational features, fire-resistive rating where applicable, color and finish, anchorage details.

1. Manufacturer’s Installation Instructions: Submit special criteria and wall opening coordination requirements.

1.5 QUALITY ASSURANCE

A. Coordination:

1. Wall Depths: Verify wall and partition assemblies will suit sizes and locations of fire extinguisher cabinets.

2. Fire Extinguisher Type and Capacity: Coordinate fire extinguisher cabinets to ensure proper fit.

1.6 PROJECT CONDITIONS

A. Do not deliver or install extinguishers until just before Substantial Completion.

B. Do not use permanent fire extinguishers for construction period fire protection.

PART 2 – PRODUCTS

2.1 FIRE EXTINGUISHER CABINETS

A. Manufacturers: Furnish compliant products of one of the following or approved equal:

1. Activar Inc. / J.L. Industries.

2. Larsen's Manufacturing Company.

3. Nystrom Building Products

B. General: Steel cabinet box, rated or non-rated, powdercoat or baked enamel finish.

1. Inside dimensions: Coordinate size with specified fire extinguisher.

2. Door and Frame: Aluminum, clear satin anodized.

3. Door Style: Full panel clear acrylic glazing.

4. Basis of Specification: Larsen's "Occult Series". Model O-2409. Stainless steel door and frame. Vertical duo door with Larsen-Loc and clear tempered glazing in door. Black vertical diecut lettering.

C. Cabinet Type "FEC-1" - Fully-Recessed, "FEC-2" – Fully-Recessed, Fire Rated cabinet

2.2 FIRE EXTINGUISHERS

A. Manufacturers:

1. Activar Inc. / J.L. Industries.

2. Kidde Fire Extinguishers.

3. Larsen's Manufacturing Company.

4. Nystrom Building Products.

5. Potter Roemer.

B. Fire Extinguishers: Multi-purpose 5 lb. capacity extinguishers for Class ABC fires with minimum UL 2A-10B:C rating. Furnish one extinguisher for each cabinet or bracket-type mounting location. Furnish manufacturer's compatible standard mounting bracket with each extinguisher. Basis of Specification: Larsen's "Model MP5".

PART 3 – EXECUTION

3.1 GENERAL

A. Manufacturer's Instructions: Prepare substrates and install the work, including components and accessories in accordance with the manufacturer's instructions, except where more stringent requirements are shown or specified. Examine the areas to receive the Work and remedy detrimental conditions. Provide wall backing for anchorage whether shown or not. Coordinate cutouts in architectural finishes and wall paneling where cabinets and boxes are installed through them.

3.2 INSTALLATION

A. Perform installation in accordance with the manufacturer's instructions except where more stringent requirements are shown or specified, and except where project conditions require extra precautions or provisions to ensure satisfactory performance of the work.

B. Install cabinets at locations and at heights indicated, square and plumb and aligned with any cut-outs in architectural wall finishes. Where back of cabinet door will project more than one-half inch beyond face of any architectural finish panel, furnish Semi-Recessed option with return trim to suit. Install extinguishers inside fire extinguisher cabinets.

C. Substantial Completion: Determine date of Substantial Completion of Work. Inspect, charge, and tag fire extinguishers within 10 days before Substantial Completion date.

D. Install extinguishers in cabinets.

3.3 ADJUSTING AND CLEANING

A. General: Adjust fire extinguisher cabinets to operate without binding. Verify hardware is working properly.

B. Clean surfaces as recommended by the manufacturer.

C. Touch-Up: Use materials recommended by manufacturer. If cabinet cannot be restored to factory-finished appearance, replace cabinet.

END OF SECTION

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Solid plastic lockers.

1.2 RELATED SECTIONS

A. Division 06 Section 06 10 53 Miscellaneous Rough Carpentry for locker anchorage.

1.3 REFERENCES

A. ASTM International (ASTM):

1. ASTM A 666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.
2. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

B. US Federal Government:

1. U.S. Architectural & Transportation Barriers Compliance Board. Americans with Disabilities Act (ADA), Accessibility Guidelines for Buildings and Facilities (ADAAG).

C. GREENGUARD Environmental Institute (GREENGUARD):

1. GREENGUARD certified low emitting products.

1.4 ACTION SUBMITTALS

A. Product Data: Manufacturer's data sheets for each type of product indicated include fabrication details, description of materials and finishes.

1. Product Test Reports: When requested by Architect, provide documentation indicating compliance of products with requirements, from a qualified independent testing agency.

B. Shop Drawings: Include overall locker dimensions, floor plan, elevations, sections, details, and attachments to other work. Include choice of options with details.

C. Samples for Selection: Furnish samples of manufacturer's full range of colors for initial selection.

D. Samples for Approval: Furnish a physical sample of the material in the selected color.

1. Size: 6 by 6 inch (102 by 102 mm) in type of finish specified.

E. LEED Submittals:

1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of post-consumer and pre-consumer recycled content. Include breakout costs for each product with recycled content.

1.5 INFORMATIONAL SUBMITTALS

A. Installation instructions.

B. Warranty: Sample of special warranty.

1.6 MAINTENANCE SUBMITTALS

A. Operation and Maintenance Data.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Approved manufacturer listed in this section, with minimum **[**5**]** years experience in the manufacture of plastic lockers. Manufacturers seeking approval must submit the following in accordance with Instructions to Bidders and Division 01 requirements:

1. Product data, including test data from qualified independent testing agency indicating compliance with requirements.
2. Samples of each component of product specified.
3. List of successful installations of similar products available for evaluation by Architect.
4. Submit substitution request not less than 15 days prior to bid date.

B. Installers Qualifications: An experienced Installer regularly engaged in the installation of lockers for a minimum of 3 years.

C. Source Limitations: Obtain plastic lockers and trim accessories from single manufacturer.

D. Accessibility Requirements: Comply with requirements of ADA/ABA and with requirements of authorities having jurisdiction.

E. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 100 or less.

2. Smoke-Developed Index: 450 or less.

PART 2 - PRODUCTS

2.1 PLASTIC LOCKERS

A. Manufacturer: Furnish compliant products of one of the following or approved equal:

1. Bradley Corporation.

2. Hadrian.

3. Republic.

B. MATERIALS

1. High Density Polyethylene (HDPE): 30 percent pre-consumer recycled content polyethylene thermoplastic formed under high pressure into solid plastic components.
2. Stainless-Steel Sheet: ASTM A 666, Type 304.
3. Fasteners: Tamper-Resistant Fasteners: Stainless steel torx-head screws.

   a. Locker Connectors: No. 10-24 sex bolts.
   b. Anchors: Type and size required for secure anchorage.
   c. Drilled-in-place Masonry Anchors: Minimum 1/4 by 1-3/4 inch (6 by 44 mm) screws.

2.2 STANDARD PLASTIC LOCKERS

A. Basis-of-Design Product: Bradley Corporation's "LENOXLOCKER".

B. Locker Configuration: Refer to Drawings.

C. Locker Dimensions

1. Height, Nominal 72 inch
2. Width: 12 inch and 15 inch
3. Depth: 15 inch

D. Material: HDPE plastic, 30 percent recycled material.

E. Sides, Tops, Bottoms, Dividers, and Shelves: 3/8 inch (10 mm) thick HDPE plastic with smooth finish.

F. Locker Shelves: 3/8 inch (10 mm) HDPE plastic, mortised into sides and back.

G. Locker Tops: Slope top.

H. Doors: Fabricate from a single piece 1/2 inch (13 mm) HDPE plastic.

1. Doors and Frame: 1/2 inch (13 mm) thick HDPE plastic with matte texture finish.

2. Handle: ADA/ABA Compliant handle fabricated from injection molded plastic.Locks: Built-in combination lock.Hinges: Continuous piano hinges, .05 inch/18 gauge (1.27 mm) thick type 304 stainless steel fabricated to wrap around edges of door and frame and attached with stainless steel tamper-resistant screws.

   a. Finish: Powder coated to match color of locker.

3. Latch Bar: Full-height latch bar constructed of 1/2 inch (13 mm) HDPE plastic secured to locker with stainless steel tamper-resistant screws.

I. Color: Basis of Design Manufacturer's "Canyon Granite M244", or as selected from other manufacturer's standard.

J. Accessories:
1. End Panels: **[**3/8 inch (10 mm)**]** **[**1/2 inch (13mm)**]** thick, with color and finish matching locker body.
2. Filler Panels: 1/2 inch (13 mm) HDPE filler panel, with color and finish matching locker body, attached with 3/8 inch (10 mm) thick HDPE solid plastic angle bracket.
3. Wall Hooks: Black powder coated, cast zinc hook one per locker.
4. Number Plate: White acrylic with black film coating, laser etched with number specified. Provide one per locker.
5. Locker Base: 1 inch (26 mm) solid HDPE plastic, with black or finish matching locker body, 4 inch (101 mm) high.
6. Lock: Locker manufacturer's digital combination lock.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install lockers in climate controlled environment, shielded from direct sunlight.

B. General: Install on floor or other firm support. Install level, plumb, and true.

1. Position locker base per approved shop drawing. Using fasteners provided by manufacturer, anchor base sections to the floor.
2. Attach filler pieces to lockers with male-female sex bolts.
3. Position first locker according to submittal layout. Square and plumb the locker using concealed shims. Secure the locker to the wall at the top and bottom of the locker. Position second locker next to first, square and plumb to align the tops and bottoms; and temporarily clamp lockers together. Drill four holes through the sides of the lockers and connect lockers using sex bolts provided by manufacturer.

C. Accessories: Fit exposed connections of trim, fillers, and closures together to form tight, hairline joints, with concealed fasteners and splice plates furnished by locker manufacturer. Install as indicated on approved shop drawings.

1. Identification Plates: Identify plastic lockers with approved identification numbers. Attach plates to each locker door.
2. Filler Panels: Attach with concealed fasteners.
3. Sloping Tops: Attach sloping-tops to plastic lockers, with closures at exposed ends.
4. Finished End Panels: Attach at ends indicated.

3.2 FINAL CLEANING

A. Clean locker interior and exterior surfaces.

B. Remove packaging and construction debris and legally dispose of off-site.

END OF SECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Pre-fabricated metal storage and metal shelving.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include rated capacities, construction details, material descriptions, dimensions of individual components and profiles, and finishes for metal storage shelving.

B. LEED Submittals:
1. For Credit MR 4, submit manufacturer's product data that delineates % of recycled content by weight. Provide material costs for post-consumer and pre-consumer recycled content. Only include materials permanently installed on the project site.
2. For Credit MR 5, submit a list of products that have been extracted, harvested or recovered, as well as manufactured, within 500 miles of the project site. Include the cost and percentage of each material, by weight. Provide documentation from manufacturer that confirms the address of the place of manufacture and verifies the method of transit. If a product has multiple points of assembly, provide detailed data on location and assembly.
3. For Credit IEQ 4.1, submit product data for adhesives and sealants used inside the weatherproofing line, indicating VOCs comply with limits found in Section 01 81 13 "LEED Requirements."
4. For Credit IEQ 4.2, submit product for paints and coatings used inside the weatherproofing line, indicating VOCs comply with limits found in Section 01 81 13 "LEED Requirements."

C. Shop Drawings: For customized metal storage shelving. Include plans, elevations, sections, details, and attachments to other work. Include installation details of connectors, lateral bracing, and special bracing.

D. Samples: For units with factory-applied color finishes. Include similar Samples of accessories involving color selection.

E. Product Schedule: For metal storage shelving.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Product Certificates: For each type of metal storage shelving from manufacturer.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For metal storage shelving to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project. Installer shall have not less than 5 years of experience installation of metal storage shelving similar to that required for this project.

B. Source Limitations: Obtain metal storage shelving from single source from single manufacturer.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install metal storage shelving until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.8 COORDINATION

A. Coordinate sizes and locations of blocking and backing required for installation of metal storage shelving attached to wall and ceiling assemblies.

B. Coordinate locations and installation of metal storage shelving that may interfere with ceiling systems including lighting, HVAC, speakers, sprinklers, access panels, electrical switches or outlets, and floor drains.

PART 2 - PRODUCTS

2.1 LEED REQUIREMENTS

A. MR 4: Provide products that contain recycled content.

B. MR 5: Provide products that are extracted, harvested, recovered, or manufactured within 500 miles of the project site, depending on its method of transportation to the project site.

C. IEQ 4.1: For adhesives and sealants used inside the weatherproofing line and applied on site, provide products with VOCs that comply with limits found in Section 018113 “LEED Requirements.”

D. IEQ 4.2: For paints and coatings applied inside the weatherproofing line and applied on site, provide products with VOCs that comply with limits found in Section 018113 “LEED Requirements.”

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design metal storage shelving, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Structural Performance: Attachment of double-faced shelving to the supporting floor structure, and of single-faced shelving to wall construction shall be designed in accordance with structural criteria requirements of CBC Table 1607A and ASCE Table 13.5-1.

C. Regulations: Provide shelving systems, including all related components and anchorages, capable of withstanding seismic forces in compliance with applicable requirements of CBC Chapter 16A. Details of construction and installation shall be approved by the Division of the State Architect (DSA).
   1. Comply with CFC Section 2703.8.7 for hazardous materials and CRC 3403.2 for flammable/combustible materials.

2.3 MATERIALS

A. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.

B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.

C. Steel Tubing: ASTM A 513, Type 2.

D. Steel Wire: ASTM A 899.

E. Particleboard: ANSI A208.1, made with binder containing no urea formaldehyde.

F. Composite Wood Products: Products shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

G. Floor Anchors: Galvanized-steel, post-installed expansion anchors, power-actuated fasteners or threaded concrete screws. Simpson Strong-Tie Titen HD 5/8" x 4" Hex Washer Head Screw Anchor with Anchor Plate for Wide span storage Rack H-1523ANCHOR. Provide number per unit recommended by manufacturer unless additional anchors are indicated in calculations.

H. Wall Anchors: Manufacturer's standard, galvanized-steel anchors designed to secure metal storage shelving to adjacent wall. Hillman Hangman Furniture Ant-Tip Kit. Provide one per shelving unit for each shelving unit adjacent to a wall unless additional anchors are indicated in calculations.

2.4 MANUFACTURERS

A. Acceptable Manufacturers:
   1. Uline, Pleasant Prairie, WI
   2. Global Industrial, Port Washington, NY

B. Like materials shall be the products of one manufacturer and shall be either the ones upon which the design is based or equal products of other manufacturers accepted in advance in accordance with Section 01 33 00.

2.5 CASE-TYPE METAL STORAGE SHELVING

A. General: Factory-formed, field-assembled, freestanding, case-type metal storage shelving system, designed for shelves to span between and be supported by sheet metal end panels (without posts), with shelves adjustable over the height of shelving unit. Fabricate shelf units with end panel at each end so each unit is independent. Provide fixed top and bottom shelves, adjustable intermediate shelves, and accessories indicated.

B. Types: Janitor/Storage shelving, to be braced Bulk Storage Racks, manufactured by ULine, or equal.
   1. Type S-1: Fixed 3-Shelf Bulk Storage Rack with 5/8" particle board shelves, 48 in. long by 12 in. deep by 72 in. high; Model #: H-2498
      a. Add one (1) additional shelf, Model #: H-2496-ADD, each unit.

   2. Type S-2: Fixed 3-Shelf Bulk Storage Rack with 5/8" particle board shelves, 36 in. long by 12 in. deep by 72 in. high; Model #: H-2497.
      a. Add one (1) additional shelf, Model #: H-2495-ADD, each unit.

   3. Type S-3: Fixed 3-Shelf Bulk Storage Rack with 5/8" particle board shelves, 48 in. long by 18 in. deep by 72 in. high; Model #: H-1523.
      a. Add one (1) additional shelf, Model #: H-2190-ADD, each unit.

   4. Type S-4: Fixed 3-Shelf Bulk Storage Rack with 5/8" particle board shelves, 36 in. long by 18 in. deep by 72 in. high; Model #: H-2206
      a. Add one (1) additional shelf, Model #: H-2188 ADD, each unit.

5. Type S-5: Fixed 3-Shelf Bulk Storage Rack with 5/8" particle board shelves, 36 in. long by 24 in. deep by 72 in. high; Model #: H-1888
    a. Add one (1) additional shelf, Model #: H-2189 ADD, each unit.

6. Type S-6: Fixed 3-Shelf Bulk Storage Rack with 5/8" particle board shelves, 48 in. long by 24 in. deep by 72 in. high; Model #: H-1524
    a. Add one (1) additional shelf, Model #: H-2191 ADD, each unit.

7. Type S-7: Fixed 3-Shelf Bulk Storage Rack with 5/8" particle board shelves, 60 in. long by 18 in. deep by 72 in. high; Model #: H-1525
    a. Add one (1) additional shelf, Model #: H-2194 ADD, each unit.

8. Type S-8: Fixed 3-Shelf Bulk Storage Rack with 5/8" particle board shelves, 72 in. long by 24 in. deep by 72 in. high; Model #: H-1528
    a. Add one (1) additional shelf, Model #: H-2199 ADD, each unit.

9. Type S-9: Fixed 3-Shelf Bulk Storage Rack with 5/8" particle board shelves, 60 in. long by 24 in. deep by 72 in. high; Model #: H-1526
    a. Add one (1) additional shelf, Model #: H-2195 ADD, each unit.

C. Types: Wall Mounted shelving, secured to in wall backing with surface mounted heavy duty single slot wall standards with 1" slots on 2" centers, satin zinc, two per each section of shelving. Provide two shelf brackets per shelf.

1. Type WS-1: Adjustable 4-shelf wall-mount solid ½" thick melamine shelving, 48 in. long by 18 in. deep by 48" high. By Global Industrial.

2. Type WS-2: Adjustable 4-shelf wall-mount solid ½" thick melamine shelving, 36 in. long by 18 in. deep by 48" high. By Global Industrial.

3. Type WS-3: Adjustable 4-shelf wall-mount solid ½" thick melamine shelving, 36 in. long by 12 in. deep by 48" high. By Global Industrial.

4. Type WS-4: Adjustable 4-shelf wall-mount solid ½" thick melamine shelving, 36 in. long by 24 in. deep by 48" high. By Global Industrial.

5. Type WS-5: Adjustable 4-shelf wall-mount solid ½" thick melamine shelving, 72 in. long by 12 in. deep by 48" high. By Global Industrial

6. Type WS-6: Adjustable 4-shelf wall-mount solid ½" thick melamine shelving, 24 in. long by 18 in. deep by 48" high. By Global Industrial

7. Type WS-7: Adjustable 4-shelf wall-mount solid ½" thick melamine shelving, 48 in. long by 12 in. deep by 48" high. By Global Industrial

8. Type WS-8: Adjustable 4-shelf wall-mount solid ½" thick melamine shelving, 28 in. long by 12 in. deep by 48" high. By Global Industrial

9. Type WS-9: Single wire shelf, wall mounted, 48” long by 18” deep x 14” high by U-Line. Model H-4796

D. Storage Cabinets, to be braced, manufactured by Line or equal.

1. Type C-1 Welded Storage Cabinets, 14 gauge powdercoat finish, 36 long by 24” deep by 74” high. Model #H-4459, each unit by ULine.

2. Type C-2 Welded Storage Cabinets, 14 gauge powdercoat finish, 48” long by 24” deep by 74” high. Model #H-44, each unit by ULine.

3. Type C-3 Welded Storage Cabinets, 14 gauge powdercoat finish, 48” long by 18” deep by 74” high. Model #H-44, each unit by ULine.

2.6 FABRICATION

A. Shop Fabrication: Prefabricate shelving components in shop to greatest extent possible to minimize field fabrication; temporarily preassemble shelving components where necessary to ensure that field-assembled components fit together properly. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

B. Fabricate metal storage shelving square and rigid, with posts plumb and true and shelves flat and free of dents or distortion. Fabricate connections to form a rigid structure, free of buckling and warping.

1. Form exposed work true to line and level with accurate angles and surfaces and straight sharp edges.
2. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Locate joints where least conspicuous.
3. Build in straps, plates, brackets, and other reinforcements as needed to support shelf loading.
4. Cut, reinforce, drill, and tap metal fabrications to receive hardware, fasteners, and similar items.

C. Form metal in maximum lengths to minimize joints. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing the Work.

D. Form edges and corners free of sharp edges or rough areas. Fold back and crimp exposed edges of unsupported sheet metal to form a 1/2-inch-wide hem on the concealed side; ease edges of metal plate to radius of approximately 1/32 inch. Shear and punch metals cleanly and accurately. Remove burrs.

E. Weld corners and seams continuously to develop strength, minimize distortion, and maintain the corrosion resistance of base metals. At exposed locations, finish welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface. Weld before finishing components

to greatest extent possible. Remove weld spatter and welding oxides from exposed surfaces before finishing.

2.7 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.8 STEEL FINISHES

A. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning" or SSPC-SP 8, "Pickling."

B. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry thickness.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine floors for suitable conditions where metal storage shelving will be installed.

C. Examine substrates to which metal storage shelving will be attached for properly located blocking, grounds, or other solid backing for attachment of support fasteners.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Vacuum finished floor over which metal storage shelving is to be installed.

3.3 INSTALLATION

A. Install metal storage shelving level, plumb, square, rigid, true, and with shelves flat and free of dents or distortion. Make connections to form a rigid structure, free of buckling and warping.

1. Install exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible.
2. Install braces, straps, plates, brackets, and other reinforcements as needed to support shelf loading and as required for stability.
3. Adjust post-base bolt leveler to achieve level and plumb installation.
4. Anchor shelving units to floor with floor anchors through floor plate. Shim floor plate to achieve level and plumb installation.
5. Install seismic restraints.
6. Connect shelving units together.
7. Install shelves in each shelving unit at spacing indicated on Drawings or, if not indicated, at equal spacing.

    a. Case-Type Metal Storage Shelving: Install adjustable shelf clips at front and back of each shelf.

3.4 ERECTION TOLERANCES

A. Erect case-type metal storage shelving to a maximum tolerance from vertical of 1/2 inch in up to 10 feet of height, not exceeding 1 inch for heights taller than 10 feet.

3.5 ADJUSTING

A. Adjust metal storage shelving so that connectors and other components engage accurately and securely.

B. Adjust and lubricate operable components to operate smoothly and easily, without binding or warping. Check and readjust operating hardware.

C. Touch up marred finishes or replace metal storage shelving that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by metal storage shelving manufacturer.

D. Replace metal storage shelving that has been damaged or has deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes stand-alone roof equipment screens, supporting steel framework and accessories.

B. Related Sections:

1. Section 05 12 00 – Structural Steel: Metal framing.

2. Section 05 31 00 – Steel Decking.

3. Section 05 50 00 - Metal Fabrications: Frames and supports.

4. Section 07 54 23 – Thermoplastic Polyolefin Roofing: Flashing of roofing at base of steel frames.

5. Division 23 - Roof Top HVAC Equipment.

1.2 REFERENCES

A. American Architectural Manufacturers Association (AAMA):

1. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels.

B. American Society of Civil Engineers (ASCE):

1. ASCE/SEI 7 - Minimum Design Loads for Buildings and Other Structures.

C. American Society for Testing and Materials International (ASTM):

1. ASTM A792 - Standard Specification for Steel Sheet, 55 % Aluminum-Zinc Alloy-Coated by the Hot-Dip Process.

D. American Welding Society (AWS):

1. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination.

2. AWS D1.1 – Structural Welding Code – Steel.

3. AWS D1.6 - Structural Welding Code – Stainless Steel.

1.3 PERFORMANCE REQUIREMENTS

A. Provide metal wall panels designed to resist the following, in accordance with ASCE/SEI 7:

1. Wind Loads: Determine loads based on uniform pressure as identified on Drawings.

2. Deflection Limits: Metal wall panel assemblies shall withstand horizontal deflections no greater than L/240 of the span.

B. Installed panels shall accommodate expansion and contraction under normal conditions without causing detrimental effect to system components and anchorage.

1.4 SUBMITTALS

A. Submit in accordance with Division 1 – Submittals.

B. Product Data: Manufacturer's data sheets on each product to be used, including installation methods.

C. Shop Drawings: Layout and erection drawings showing typical cross sections and dimensioned locations of all frames and base supports. Include erection drawings, elevations, and details where applicable. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.

D. Samples: Minimum 12" x 12" sample of each grille or screen panel specified, showing profile, pattern and finish of each.

E. Welders Certificates: Certify products meet or exceed specified requirements.

F. Warranties.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Panel manufacturer with a minimum five years documented experience in producing screens.

B. All welds to be performed by an AWS certified welder. Valid certification to be provided.

1.6 DELIVERY, STORAGE AND HANDLING

A. Deliver materials to the project site clearly marked for proper identification.

B. Receive, handle and store materials in conformance with the manufacturers printed instructions.

C. Store products under cover, in manufacturer's unopened packaging until ready for installation. Protect materials from exposure to moisture.

1.7 PROJECT CONDITIONS

A. Do not install products under environmental conditions outside manufacturer's absolute limits.

B. Field Measurements: Verify roof screen dimensions and conditions of the installation by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.8 WARRANTY

A. Panel Finish: Provide written material warranty stating that the paint finish applied on all equipment enclosure panels will be warranted against chipping, peeling, cracking, fading, or blistering for the coverage period of twenty (20) years.

B. Panel Installation: Provide written installation warranty stating that for a period of five (5) years the assembled panel screens will be free of rattles, vibration harmonics, damage caused by thermal movement, or loosening of attachments.

PART 2 – PRODUCTS

2.1 EXTERIOR GRILLES AND SCREENS

A. Manufacturer: Furnish compliant products of one of the following or approved equal. Kingspan/Morin's Model BR7-35 is the Basis of the Specification.

1. AEP Span.

2. Kingspan Group / Morin.

3. Nucor / Centria.

B. Product Description: ASTM A792, engineered for exposed fastening, 1-1/2" deep profile perforated with 1/8-inch holes at 3/8-inch spacing, formed of minimum 24 gauge galvalume and as require to meet performance requirements based upon designed support spacing under horizontal application.

1. Panel Trim: Same material and finish as panel, 24 gauge minimum. Configuration as shown in Drawings.

2. Panel Fasteners: No. 14 self-tapping sheet metal screws with neoprene washers, with color-coated heads to match panel finish.

3. Furnish sheet steel framing components, fasteners and other components as required for complete installation of grilles and screens.

2.2 ACCESSORIES

A. Steel support frames shall be galvanized and furnished as indicated on Drawings in accordance with Division 5.

B. Metal Framing: Galvanized steel sheet as specified in Section 05 50 00.

1. Hat-Shaped, Rigid Furring Channels: 16 gauge, 1-inch depth.

2. Cold-Rolled Furring Channels: 16 gauge, depth as indicated on Drawings.

C. Bolts, Nuts and Washers: Stainless steel, as specified in Section 05 50 00.

D. Self-Drilling Screws: Carbon steel with factory applied protective coating conforming to ASTM B 117 salt spray testing.

E. Welding Materials: AWS D1.1; type required for materials being welded.

2.3 FABRICATION

A. Form metal wall panels to lap with edges of adjacent panels which are then mechanically attached through panel to supports using color-coated fasteners with a neoprene washer.

B. Panels shall be factory formed. Field formed panels are not acceptable.

C. Curved wall panels: Panels shall be factory curved as approved by manufacturer.

D. Mitered Corners: Structurally bonded horizontal outside or inside trimless corners matching metal wall panel material, profile and factory applied finish shall be fabricated by metal wall panel manufacturer.

1. Welded, riveted or field fabricated corners are not acceptable.

E. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

F. Fabricate system components so that portions of screen can be dismantled for repairs to equipment being screened and for future roof replacement.

2.4 SCREEN FINISHES

A. Superior-Performance Organic Finish – Three-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.

1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions. Apply finish to both sides of panel.

2. Color: Match Glazed Aluminum Curtainwall in coil coat version, as specified in Section 08 44 13

PART 3 – EXECUTION

3.1 EXAMINATION

A. Supporting Steel Frame: Support members shall be installed within the following tolerances:

1. Plus or minus 1/8 inch in 5 feet in any direction along plane of framing.

2. Plus or minus ¼ inch cumulative in 20 feet in any direction along plane of framing.

3. Plus or minus ½ inch from framing plane on any elevation.

4. Plumb or level within 1/8 inch at all changes of transverse for performed corner panel applications.

5. Verify that bearing support has been provided behind vertical joints of horizontal panel systems and vertical joints of horizontal panel systems. Width of support shall be as recommended by manufacturer.

B. Provide field measurements to manufacturer as required to achieve proper fit of the metal wall panels to building envelope. Measurements shall be provided SUCH THAT that there is no impact to construction or manufacturing schedule.

3.2 INSTALLATION

A. Install grille and screen panels in accordance with manufacturer's installation guidelines and recommendations.

B. Install panels plumb, level, and true-to-line to dimensions and layout indicated on approved shop drawings.

C. Cutting and fitting of panels shall be neat, square and true. Torch cutting is prohibited.

D. Fasten panels securely to structure. Separate dissimilar metals and use gasketed fasteners, isolation shim, or isolation tape to eliminate possibility of corrosive or electrolytic action between metals.

E. Place trim and trim fasteners only as indicated per details on the approved shop drawings.

3.3 CLEANING AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, immediately following installation, unless otherwise indicated in manufacturer's written installation instructions. Maintain in a clean condition during construction.

B. Protect installed panels against damage to finish and structure by subsequent construction activities. Replace panels and framing members that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes hydraulic, stationary, loading dock lifts and control stations.

B. Related Requirements:

1. Section 03 33 00 – Cast-In-Place Concrete: Docks and pits.
2. Section 05 50 00 – Metal Fabrications: Embeds for pit edge.
3. Divisions 26 – Electrical: Electrical service for dock levelers.

1.2 REFERENCES

A. American National Standards Institute (ANSI):

1. ANSI MH30.1 – Industrial Loading Dock Boards (Ramps).
2. ANSI MH29.1 – Industrial Scissor Lifts.
3. ANSI MH 30.3 – Vehicle Restraining Devices (Safety, Performance and Testing).

1.3 SUBMITTALS

A. Product Data: Manufacturer's specifications, catalog cuts, standard details, performance data, and installation instructions.

B. Shop Drawings:

1. Indicate required opening dimensions, tolerances of opening dimensions, placement dimensions and perimeter conditions of construction.
2. Wiring diagrams including location of control stations and disconnect switches.

C. Maintenance and Operating Instructions: Detailed operating, servicing, inspection, cleaning, and maintenance instructions.

1.4 CLOSEOUT SUBMITTALS

A. Division 1 - Execution and Closeout Requirements: Requirements for submittals.

B. Operation and Maintenance Data: Submit maintenance procedures, recommended maintenance materials, and suggested schedule for cleaning.

1.5 QUALITY ASSURANCE

A. Stationary lifts shall conform to requirements of ANSI MH30.1

B. Vehicle restraining devices shall conform to requirements of ANSI MH30.3.

C. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years' experience.

D. Installer: Company specializing in performing work of this section with minimum five years' experience.

1.6 PRODUCT HANDLING

A. General: Protect items from damage at factory, in transit, and after installation.

1.7 FIELD CONDITIONS

A. Verify actual dimensions of construction contiguous with stationary loading dock equipment, including recessed pit dimensions, by field measurements before fabrication.

1.8 WARRANTIES

A. Manufacturer agrees to repair or replace stationary lifts that fail in materials or workmanship within specified warranty period. Failures include, but are not limited to, the following:

1. Structural failures including cracked or broken structural support members, load-bearing welds, and front and rear hinges.

2. Faulty operation of operators, control system, or hardware.

3. Deck plate failures including cracked plate or permanent deformation in excess of 1/4 inch between deck supports.

4. Hydraulic system failures including failure of hydraulic seals and cylinders.

B. Warranty Period for Structural Assembly: 10 years from date of Substantial Completion.

C. Warranty Period for Hydraulic System: 4 years from date of Substantial Completion.

D. Warranty shall be for unlimited usage of lift for the specified rated capacity over the term of the warranty.

PART 2 – PRODUCTS

2.1 STATIONARY DOCK LIFT

A. Product Description: Stationary, scissors-type, single-leg, hydraulic dock lift of capacity, size, and construction indicated; complete with controls, safety devices, and accessories required.

B. Manufacturers: Products of Advance Lifts, Inc. or compliant, approved equal.

C. Model: T-50608 Pit Mounted Dock Lift.

D. Rated Capacity: As determined in accordance with MH 29.1. Not less than 5,000 pounds.

E. Platform: Nonskid, safety-tread heavy steel deck plate.

1. Platform Size: 72 inches wide by 96 inches long.

2. Guarding: Bevel toe guards to comply with MH 29.1

3. Steel guard rails on two sides of platform with a single, removable chain across each end. Provide guard rails not less than 39 inches high with midrail and 4-inch high kickplate at bottom.

F. Hydraulic Operating System: Self-contained, electric, hydraulic power unit for raising and lowering lift; of size, type, and operation needed for capacity of lift indicated; controlled from a remotely located push-button station.

1. Remote-Control Station: Multibutton control station of the constant-pressure type with UP and DOWN push buttons. Controller shall consist of magnetic motor starter with three-pole adjustable overloads and 24-V control transformer with 4-A, fused secondary prewired to terminal strips and enclosed in NEMA ICS 6 box. Equip unit with manufacturer's standard, adjustable, upper-travel-limit switch.

G. Finish: Manufacturer’s standard baked-on factory finish unless otherwise indicated.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 – Administrative Requirements: Verification of existing conditions before starting work.

B. Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.

3.2 INSTALLATION

A. Install stationary lift in prepared opening in accordance with manufacturer’s instructions. Use mechanics skilled in Work involved.

B. Set square and level.

C. Anchor unit securely, flush with pit. Touch up welds with matching paint.

3.4 ADJUSTING AND CLEANING

A. Adjust installed unit for smooth and balanced operation.

B. Leave installation properly operating, clean, and free from defects.

3.5 DEMONSTRATION AND TRAINING

A. Demonstrate operation and maintenance requirements to Owner's personnel.

END OF SECTION

SECTION 11 24 23 - FAÇADE ACCESS EQUIPMENT

PART 1 – GENERAL

1.1 SUMMARY

A. These performance specifications shall be read in conjunction with the Façade Access drawings that are part of the construction documentation for this trade package, specifically sheets with “FA” prefix.

B. Provide all design, engineering, materials, manufacturing, and installation labor required to deliver a complete EBM and Façade Access system necessary to provide access to all façade elements outlined on the Façade Access drawings.

2. DOCUMENTATION

a. Original Equipment Manufacturer (OEM) Operations and Maintenance (O&M) Manuals
b. Demonstration of equipment

1.2 WORK EXCLUDED

A. The following are regulatory and operational project requirements not included in this section:

1. Guardrail systems.
2. Fixed ladders and other related access equipment.
3. Electronic two-way communication devices.
4. Electrical power receptacles and wiring as identified on drawings.
5. Water supply hose bibs as identified on drawings.
6. Waterproofing, flashings, etc.
7. Reinforcing of the building structure.
8. Operating Procedures Outline Sheet (OPOS).

1.3 RELATED SECTIONS

A. Division 1 General Requirements
B. Division 3 Concrete
C. Division 5 Metals

1.4 REGULATORY COMPLIANCE

A. All design, engineering, materials, equipment, system performance, inspection, and testing, use and written work product to comply with and be performed in compliance with the following applicable regulatory codes and standards. Special consideration shall be given to procuring the most recent revision of said codes and standards. This is in addition to any other pertinent local, state, and federal requirements having jurisdiction. Any conflicting codes or standards affecting this work shall be presented to the Project Consultant for determination and course of action.

1. California Code of Regulations, Title 8, GISO, Article 5
2. California Code of Regulations, Title 8, GISO, Article 6

3. American National Standards Institute (ANSI) / IWCA I-14.1 Window Cleaning Safety Standard
4. Federal Occupational Safety and Health Act (OSHA): OSHA Part 1910, paragraph 1910.66 “Power Platforms for Building Maintenance.”
5. Federal Occupational Safety and Health Act (OSHA): OSHA Part 1910, Subpart D “Walking-Working Surfaces.”
6. American Society of Mechanical Engineers (ASME) / ANSI A120.1 “Safety Requirements for Powered Platforms for Building Maintenance”
7. American National Standards Institute (ANSI) / SAIA A92.6 “American National Standard for Self-Propelled Elevating Work Platforms”
8. American National Standards Institute (ANSI) / ASSE Z359 “Safety Requirements for Personal Fall Arrest Systems, Subsystems and Components”
9. American Institute of Steel Construction (AISC): AISC “Load and Resistance Factor Design Specification for Structural Steel Buildings”
10. American Welding Society (AWS): D1.1 “Structural Welding Code, Steel”

1.5 SUBMITTALS

A. Prior to fabricating and construction, submit the following to the General Contractor for review and approval:

1. Equipment/Materials List: Complete equipment and materials listing, with quantities) of all items proposed for this project.
2. Product Data: Manufacturer specifications and product data sheets of all standard or typical components proposed. The compliance with paragraph 1.4 of this specification is to be clearly noted on all manufacturer specifications and product data sheets.
3. Shop Drawings: Scaled shop drawings showing the layout, details, sections, rigging procedure, drop sequence and related operating procedures. The following shall be included in the shop drawings:

    a. Consideration of any potential physical and operational conflicts with the architectural design elements and with all other division trade work installations and systems as well as proposed resolution/coordination of such conflicts.
    b. Equipment layout plan, elevations, details, and sections which clearly illustrate the equipment installation location and methods as well as the rigging procedures and drop sequence that demonstrate an operation system without conflicts with current project conditions, façade elements, site work, etc.
    c. Identification of all equipment component materials, dimensions, sizes, arrangements, thicknesses, finishes, and other data to clearly illustrate the equipment being installed.
    d. Required load capacities of the building structure to which all equipment installations are proposed are to be clearly illustrated for consideration and review of the overall project Structural Engineer.
    e. Identification of “other trade” work designations including but not limited to electrical power requirements and locations of receptacle and water supply hose bib locations.
    f. Professional Engineer wet stamp and signature by a Professional Engineer with a minimum of 5 years of experience in designing window cleaning and related façade access equipment and licensed/registered in the state where the Project is located.

4. Structural Calculations: To be executed on all equipment and components for this Project by a Professional Engineer licensed/registered in the state where the Project is located. The

Professional Engineer must have a minimum of 5 years of experience in designing window cleaning and related façade access equipment.

5. Welding Certification: Demonstrating that all field and shop welding complies with the AWS D1.1 and performed by AWS Certified Welder.

B. After fabrication and construction, submit the following to the General Contractor for review and approval:

1. Test results from all Inspections and Tests conducted per paragraph 3.3.
2. Equipment Warranty: Three (3) copies
3. Operation and Maintenance Manual: Three (3) copies, labeled, bound, and neatly illustrated documenting the operation and maintenance of the “specific” equipment installed on this Project. Minimum manual requirements are as follows:

    a. Table of Contents
    b. Manufacturer
    c. Equipment Inventory complete with location and serial numbers.
    d. Warnings and Notices.
    e. Illustration of Labels and Notices affixed to permanent and portable equipment.
    f. Inspection Check List (Periodic and Maintenance Inspections).
    g. Inspection Log (Periodic, Maintenance, Daily).
    h. Maintenance procedures.
    i. Operating procedures.
    j. Troubleshooting.
    k. Rescue Plan.
    l. Rigging Access Plan.
    m. Warranty in triplicate.

4. Certificate of Regulation Compliance

1.6 QUALITY ASSURANCE

A. California Projects: All equipment is to be manufactured and installed by a manufacturer or contractor possessing a current and valid Scaffold Inspection and Testing Agency (SIT) designation by the California Department of Industrial Relations, Division of Occupational Safety and Health.
B. Engineer Qualifications: Registered Professional Engineer licensed to practice in the jurisdiction where the Project is located possessing a minimum of 5 years’ experience in designing building maintenance, façade access and related fall protection equipment. Per CCR T8 GISO 3294(a)(1) and 3295(a)(1) the engineer shall be “experienced in such design”
C. Manufacturer Qualifications: Manufacturer’s primary trade is the design and manufacturing of window cleaning and related façade access equipment and has been actively engaged in this business for not less than 10 years.
D. Contractor/Installer Qualifications: Installer is required to be employed by manufacturer or provide written approval from manufacturer to install its products.
E. Welder Qualifications: AWS certified within the last 12 months for each type of weld required.
F. Regulatory Compliance: Refer to paragraph 1.4

1.7 DELIVERY, STORAGE AND HANDLING

A. Comply with requirements in Section 01 60 00.

B. Deliver all equipment and material to the project properly packaged according to the manufacturer's packaging requirements in sizes as large as practical.
C. Store materials under cover in a dry and clean location off the ground.
D. Damaged or faulty equipment or materials are to be removed from the project and replaced with acceptable equipment or materials.

1.8 WARRANTY

A. Provide Manufacturer's Warranty for a period of three (3) year(s) to cover the following:

1. Material defects.
2. Workmanship.
3. Installation (self-performed)
4. Installation (by other trades)
5. Certification clause of adherence to paragraph 1.4 (Regulatory Compliance)

B. Warranty to be submitted on original certificated document. Three (3) originals to contain wet signatures by the authorizing party.

PART 2 - PRODUCTS

2.1 CONTRACTORS / INSTALLERS

A. Contractor / Installer Qualifications:

1. Installer is required to be employed by manufacturer or provide written approval from manufacturer to install its products and have a minimum of 5 years' experience in the installation of this and related equipment.

2.2 DESIGN REQUIREMENTS

A. The complete Building Maintenance Equipment system including individual components and overall functionality is to be designed by or under the direction of a Professional Engineer registered in the state where the project is located. Duties and responsibilities include verification that all components supplied comply with the applicable portions of paragraph 1.4 above.

B. In addition to compliance with the design requirements of the various regulatory standards cited in paragraph 1.4, special attention shall be given to the following:

1. All loads transferred to the building structure by the equipment in this section are to be clearly called out on the drawings and calculations and submitted for review to the overall Project Structural Engineer for review and consideration of any required additional reinforcing of the structure.
2. A minimum safety factor of four (4) is to be designed into all equipment in this section. Exceptions to this are the following:

    a. Suspension Wire Rope: the minimum safety factor shall be ten (10).
    b. Tie-Back Anchors: 5000-pound anchorage and assembly strength for loads applied in any direction without any permanent deflection.
    c. Horizontal / Catenary Lines: the minimum safety factor shall be two (2).

3. All parapets or building component upon which safety line are resting to be designed with consideration of the dynamic loading from the potential shock loading of a fall arrest incident.

2.3 GENERAL REQUIREMENTS

A. Corrosion Resistance:

1. All structural steel components and assemblies are to be hot dipped galvanized prior to final assembly according to the applicable ASTM standard specification for the particular steel, component, or assembly. These standards include but are not limited to ASTM A123 / A123M -13 (structural steel) ad ASTM A123 (hardware).
2. When it is necessary to breach the hot dipped galvanized finish of steel components due to welding or machining, the standard practice for repair of damaged and uncoated areas of hot dipped galvanized coatings found in ASTM A780 / A780M -09 shall be adhered to.
3. Vent holes in steel components required for the galvanization process shall be permanently sealed to prevent accumulation of moisture from condensation.

B. Hardware and Fasteners:

1. All hardware and fasteners shall be comprised of materials suitable for their application, considering dissimilar base and clamping materials. Isolators, when required due to conditions presented by the base and clamping materials, shall be used to prevent bimetallic or galvanic corrosion. At minimum, the following criteria shall apply to all fasteners:

    a. All hardware, fasteners, and their accessories, including springs and rivets, shall be comprised of austenitic stainless steel. Exception: hot dipped galvanized fasteners embedded in concrete or used to make connections between other hot dipped galvanized base and clamping materials.
    b. All threaded fastening assemblies including bolted connections and studs shall be provided with a mechanical means to stop the nut from unintentionally backing out.

2.4 COMPONENTS AND EQUIPMENT

A. Pedestals: Furnish and install the appropriate number of pedestal assemblies for each type of portable socket assembly required by the application at the specific roof level and elevation that are designed, engineered, and fabricated to the standards and regulations cited in this specification including but not limited to the following:

1. Pedestals shall be designed, fabricated, and installed with the top plate level and plumb.
2. The distance of the davit pedestal to the finished roof shall be no less than 4” and no more than 10”. Consideration shall be given to the sloping of the roofing system.

B. Tie-Back Anchors: Furnish and install Tie-Back Anchors that are designed, engineered, and fabricated to the standards and regulations cited in this specification including but not limited to the following:

1. Anchor loop to be designed for a minimum of 5000# factored load applied in any direction of the attachment point without any permanent deflection.
2. The inside minimum diameter of all anchor loops or attachment shall be no less than 2”.

C. Davits: Furnish and install permanent davits that are designed, engineered, and fabricated to the standards and regulations cited in this specification including but not limited to the following:

1. The davit boom/bracket section is to be top or bottom rotating.
2. The overall length of the boom section shall not be more than that required to position the centerline of the wire rope hang point at no more 20” from the outer most face of the building façade elements and/or as limited or shown in the Façade Access drawings.
3. Accurately machined components complete with rollers and/or nylon sliders required to provide for the extension and retraction of the boom section.
4. Each davit is to be designed for F-Type suspended platforms or 2-point suspended powered bosuns or work baskets.
5. All davits shall be provided with a rating plate bearing the manufacturer’s name, a high voltage warning prohibiting use near power lines, the davits rated load, and the davits total assembled weight.
6. Any davit component weighing more than 80 pounds shall be provided with a means to transport the component from location to location. Such means shall maintain the center of gravity required to prevent the component from overturning during transport
7. Any complete davit assembly weighing more than 140 pounds shall be provided with a mechanical means to lift the davit into position.
8. All wheels used in transport assemblies incorporated into or provided with this equipment shall have solid rubber wheels. Pneumatic wheels will not be accepted.

D. Portable Sockets: Furnish and install the appropriate number of portable socket assemblies for each type of davit required by the application at the specific roof level and elevation that are designed, engineered, and fabricated to the standards and regulations cited in this specification including but not limited to the following:

1. Portable sockets shall be designed to provide plumb davit working conditions.
2. All portable socket assemblies shall be provided with pivoting sockets that will allow the insertion or removal of a davit at a position of not more than 35 degrees above the horizontal roof.
3. The portable socket shall allow for the complete davit assembly to be inboard of the building face being served while being raised and lowered.
4. The portable socket assembly shall be provided with a means to positively lock the davit assembly to the socket assembly while in operation.
5. The portable socket assembly shall be provided with a means to positively lock this assembly to the permanent pedestal while in operation.
6. All portable socket assemblies shall be designed with wheels to allow ready movement from pedestal to pedestal.
7. All portable sockets shall not require lifting to mate with the pedestal. Consideration shall be given to the sloping of the roofing system.
8. All wheels used in transport assemblies incorporated into or provided with this equipment shall have solid rubber wheels. Pneumatic wheels will not be accepted.
9. Any safety line tieback anchors incorporated into the portable socket assembly shall engineered to provide a minimum of 5000# load capacity independently and as part of the overall davit, socket, and pedestal assembly.

PART 3 – EXECUTION

3.1 EXAMINATION

A. All affected and affecting work areas, installations, etc. shall be examined to ensure physical conditions and other related conditions are adequate for the subsequent installation.

B. Consideration of any potential physical and operational conflicts with the architectural design elements and with all other division trade work installations and systems shall be made as well as proposed resolution/coordination of such conflicts be developed.

3.2 INSTALLATION

A. All installations shall be performed in accordance with all original design drawings, shop drawings, approved submittals, manufacturer specifications and applicable regulatory governmental compliance.

B. Coordination with other division trade work installations is mandatory.

3.3 FIELD QUALITY CONTROL

A. Tests and Inspections: The following inspections and tests shall be conducted on components and installed equipment to ensure compliance with this specification and full operational functionality of the overall system. Any material, equipment functionality and operational deficiencies noted as a result of these inspections and tests shall be corrected and reinspected/tested to verify compliance with this specification.

1. All inspection criteria, operational testing procedures and load test prescriptions to be obtained by the original equipment manufacturer, in writing, prior the conduction any of the following tests.
2. Tie-Back Anchors: Each loop to be tested in a manner as prescribed by the manufacturer to a load no less than 50% of its design load capacity but no more than 2500 pounds.
3. Suspension Equipment (Davits, Outriggers, Carriages, etc.): Full live load and operational tests under the maximum live loading conditions over the complete range of the overall system.
4. Suspended Equipment: Verify the dead (self) weight of the platform. The OEM design engineer is responsible for issuing a Certificate of Regulation Compliance as per the paragraph 3.4 of this specification.

B. All test results shall be recorded and submitted according to paragraph 1.5.

3.4 CERTIFICATION

A. Provide a written Certificate of Regulation Compliance for all components and equipment installed under this specification certifying the following:

1. All components and equipment have been manufactured and installed according to all Project regulations and applicable regulatory jurisdiction.
2. The components and equipment have been inspected and tested according to the provisions in paragraph 3.3 and have successfully passed.
3. The system is operational and ready for owner turnover.
4. Certificate of Regulation Compliance to be dated and signed by a registered professional engineer representative of the contractor/manufacturer.

3.5 DEMONSTRATION

A. Only once the complete system has been installed, inspected, and tested, and a Certificate of Compliance has been issued, a demonstration of said equipment is to be arranged with the General Contractor and Owner at a time that is mutually agreeable. The following conditions shall apply to the demonstration of the equipment:

    1. The demonstration event shall not be used to satisfy the requirements of part 3.3 of this specification.
    2. The demonstration shall include, but is not limited to, the following:

        a. One functional demonstration of each type of equipment at every unique building/rigging condition where that type of equipment occurs.
        b. Instruction, as needed, shall be provided to Owner representatives during the demonstration.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes residential appliances indicated.

B. Related Sections:

1. Division 22 – Plumbing.
2. Division 26 – Equipment Wiring Connections.

1.2 REFERENCES

A. National Fire Protection Association:

1. NFPA 54 - National Fuel Gas Code.

B. Underwriters Laboratories Inc.:

1. UL - Electrical Appliance and Utilization Equipment Directory.

1.3 SUBMITTALS

A. Submit following items under provisions of Division 1.

B. Product Data: Submit data on equipment and accessories.

1.4 CLOSEOUT SUBMITTALS

A. Division 1 - Execution and Closeout Requirements: Closeout procedures.

B. Operation and Maintenance Data: Submit relevant instructions.

1.5 QUALITY ASSURANCE

A. Manufacturer: Company specializing in manufacturing products specified with minimum five years' experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Division 1 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Deliver materials in manufacturer's packaging; include installation instructions.

C. Inspection: Accept appliances on-Site. Inspect for damage.

D. Store appliances according to manufacturer's instructions.

PART 2 – PRODUCTS

2.1 RESIDENTIAL KITCHEN APPLIANCES

A. General: Furnish all kitchen appliances from a single manufacturer. Maytag models are listed as the basis of the specification.

B. Refrigerator/Freezer – Full-Height: Free-standing, one-door style with frost-free bottom-freezer and filtered ice-maker. Reversible hinge. Finish: Stainless. Energy Star qualified. Nominally 70”x33”x33” (HxWxD). Maytag “MBF2258FEZ” or approved equal.

C. Microwave Oven: Large capacity, built-in over-range type, with convection cooking function. 1000 watt. Finish: Stainless. Nominally 17”x30”x16” (HxWxD) and 1.9 cu ft compartment. Maytag Model “MMV6190FZ” or approved equal.

D. Dishwasher: Integrated dishwasher, ADA compliant. Finish: Stainless. Nominally 34”x24”x24” (HxWxD). Maytag Model No. “MDB4949SKZ” or approved equal.

2.2 LAUNDRY APPLIANCES

A. General: Furnish washer and dryer as a matching set. Maytag models are listed as the Basis of the Specification.

B. Front-Load Washer: 3 cubic foot capacity. Energy Star rated. Nominally 38”x27”x29” (HxWxD). Maytag Model No. “MHN33PR”.

C. Front-Load Dryer: Electric. 6.7 cubic foot capacity. Energy Star rated. Nominally 39”x27”x29” (HxWxD). Maytag Model No. “MDE23PR”.

2.3 MISCELLANEOUS APPLIANCES

A. Food Disposal: Continuous feed, 1/2-HP motor, galvanized steel grinding elements with two stainless steel 360º swivel lugs. Insinkerator “Badger 5” or approved equal.

~~B. Coffee Machine: Built-in, plumbed. Coffee, espresso, tea functions. Coffee and teapots included. Finish: Stainless. Thermador Model “TCM24PS” or approved equal.~~

PART 3 – EXECUTION

3.1 EXAMINATION

A. Division 1 – Administrative Procedures: Coordination and project conditions.

B. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, power connections, and other conditions affecting installation and performance of residential appliances.

C. Examine roughing-in for piping systems to verify actual locations of piping connections before appliance installation.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install appliances according to manufacturer's written instructions.

B. Built-in Equipment: Securely anchor units to supporting cabinets or countertops with concealed fasteners. Verify that clearances are adequate for proper functioning and that rough openings are completely concealed.

C. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.

D. Range Anti-Tip Device: Install at each range according to manufacturer's written instructions.

E. Install gas appliances according to requirements of NFPA 54.

3.3 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:

1. Perform visual, mechanical, and electrical inspection and testing for each appliance according to manufacturers' written recommendations. Certify compliance with each manufacturer's appliance-performance parameters.

2. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.

3. Operational Test: After installation, start units to confirm proper operation.

4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and components.

B. An appliance will be considered defective if it does not pass tests and inspection.

3.4 PROTECTION

A. Division 1 - Execution and Closeout Requirements: Requirements for protecting finished Work.

B. Do not permit operation of appliances, other than for testing, prior to Substantial Completion.

END OF SECTION

PART 1- GENERAL

1.1 SUMMARY

A. Section Includes manually-operated roller shades with single rollers.

B. Related Sections:

1) Section 06 10 53 - Rough Carpentry for wood blocking and grounds for mounting roller shades and accessories.
2) Section 07 92 00 - Joint Sealants for sealing the perimeters of installation accessories for light-blocking shades with a sealant.
3) ~~Section 09 22 16 "Non-structural Metal Framing" for metal backing plates for mounting roller shades and accessories.~~
4) Section 09 21 16 – Gypsum Board Assemblies for Backing Plates and other coordination with gypsum board assemblies for installation of shade pockets, closures and related accessories.
5) Section 09 51 00 - Suspended Panel Ceiling Systems: Coordination with suspended ceiling assemblies.

1.2 REFERENCES

A. ASTM International (ASTM):

1) ASTM G 21: Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

B. National Fire Protection Association (NFPA):

1) NFPA 701: Fire Tests for Flame-Resistant Textiles and Films, Small Scale Test.

1.3 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: Passes NFPA 701-99 small and large-scale vertical burn. Materials tested shall be identical to products proposed for use. Material shall also be washable, dimensionally stable and U.V. resistant.

B. Anti-Microbial Characteristics: 'No Growth' per ASTM G 21 results for fungi ATCC9642, ATCC 9644, ATCC9645.

C. Maximum Allowable Roller Deflection: L/700 for the clear span from roller to bottom of window shade, when fully extended.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1) Include styles, material descriptions, construction details, dimensions of individual components and profiles, features, finishes, and operating instructions for roller shades.
2) Shop Drawings: Show fabrication and installation details for roller shades, including shadeband materials, their orientation to rollers, and their seam and batten locations.

B. Plan drawings showing location of each shade.

1) Details of all shade types.

C. Samples for Verification: For each type of roller shade.

1) Shadeband Material: Not less than 10 inches square. Mark inside face of material if applicable.
2) Roller Shade: Full-size operating unit, not less than 16 inches wide by 36 inches long for each type of roller shade indicated.
3) Installation Accessories: Full-size unit, not less than 10 inches long.

D. Roller-Shade Schedule: Use same designations indicated on Drawings.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Certificates: For each type of shadeband material, signed by product manufacturer.

C. Product Test Reports: For each type of shadeband material, for tests performed by manufacturer and witnessed by a qualified testing agency.

1.5 QUALITY ASSURANCE

A. Manufacturer's Qualifications: Obtain all roller shade system components through single manufacturer source.

B. Qualified Installer: Installer trained and certified by the manufacturer with a minimum of five years' experience in installing products comparable to those specified in this section.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For roller shades to include in maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1) Roller Shades: Full-size units equal to 5 percent of quantity installed for each size, color, and shadeband material indicated, but no fewer than two units.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver roller shades in factory packages, marked with manufacturer, product name, and location of installation using same designations indicated on Drawings.

1.9 FIELD CONDITIONS

A. Environmental Limitations: Do not install roller shades until construction and finish work in spaces, including painting, is complete and dry and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Field Measurements: Where roller shades are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operating hardware of operable glazed units through entire operating range. Notify Architect of installation conditions that vary from Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.10 WARRANTIES

A. Material Warranty: Provide material manufacturer's product warranty for the durations identified below from the date of Substantial Completion.

1) Roller Shade Hardware and Chains: Twenty year.

2) Shadecloth: Ten year.

PART 2 –PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: Products by MechoSystems; 42-03 35th Street, Long Island City, NY 11101. Local rep: Lyndsey Harper. Email: Lyndsey.harper@MechoSystems.com or equal.

B. Source Limitations: Obtain roller shades from single source from single manufacturer

2.2 MANUAL ROLLER SHADE SYSTEMS **(TYPE WS1A (and WS1B -AS NOTED))**

A. Product Description: Chain operated manual interior roller shade systems. Surface mountings, with fascia as shown on Drawings. Single-roll with room darkening shade cloth. MechoSystems' "Ecoveil 1550" is the basis of the specification.

B. Mounting: Minimum 1/8 inch thick steel mounting brackets, 3 inches deep by 4 inch maximum profile. Maximum 4 inch standoff from wall with wall to fascia mount angle in place. Roll up diameter capacity with fascia 2-3/4 inches minimum.

1) Shade Roll Direction: Regular roll.

C. Manual Shade Pulls: Stainless steel bead chain with breaking strength of not less than 30 lbs. Position of shade pulls shall not require notching of fascias. **Provide Lift Assist Mechanism to comply with ADA allowable pull pressures.**

D. Manual Geared Operator: Braking mechanism shall allow shade to be stopped at any desired point of travel.

E. Rollers: Corrosion-resistant steel or extruded-aluminum tubes of diameters and wall thicknesses required to accommodate operating mechanisms and weights and widths of shadebands indicated without deflection. Provide with permanently lubricated drive-end assemblies and idle-end assemblies designed to facilitate removal of shades for service.

1) Roller:

a. Drive-End Location: To be reviewed in shop drawings by the Architect.
b. Direction of Shadeband Roll: Regular, from back of roller.

2) Shadeband-to-Roller Attachment:

a. Provide for positive mechanical attachment of shade band to roller tube; shade band shall be made removable / replaceable with a "snap-on", "snap-off" spline mounting, without having to remove shade roller from shade brackets
b. Mounting Spline shall not require use of adhesives, adhesive tapes, staples, and/or rivets.
c. Any method of attaching shade band to roller tube that requires the use of: adhesive, adhesive tapes, staples, and/or rivets, does not meet the performance requirements of this specification and shall not be accepted.

F. Mounting Hardware: Brackets or endcaps, corrosion resistant and compatible with roller mounting configuration, roller assemblies, operating mechanisms, installation accessories, and installation locations and conditions indicated.

G. Roller-Coupling Assemblies: Coordinated with operating mechanism and designed to join up to three inline rollers into a multiband shade that is operated by one roller drive-end assembly.

H. Shadebands, as indicated on drawings:

1) Shadeband Material: Light-filtering fabric.

a. Basis of Design is Mechoshade Ecoveil 1550. Transparency 3%
b. Shadeband Material Flame-Resistance Rating: Comply with NFPA 701. Testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

2) Shadeband Bottom (Hem) Bar: Steel or extruded aluminum. Color as selected by architect.

I. Installation Accessories: ~~(For all manual shades):~~

1) TYPE WS1A: Wall mounted end brackets: with removable **3"** bottom closure panel, **with closure mount with tile support trim.**

2) TYPE WS1B: Alum Curtainwall Mullion mounted Shade Pocket: Rectangular, extruded-aluminum enclosure designed for open ceiling installation; with fascia, and back formed as one piece, end caps, and removable **3"** bottom closure panel.

~~2. Closure Panel and Wall Clip: Removable aluminum panel designed for installation at bottom of site-constructed ceiling recesses or pockets and for snap-in attachment to wall clip without fasteners.~~

2.3. MANUALLY OPERATED, DOUBLE-ROLLER SHADES **(TYPE: WS2)**

A. Product Description: Chain operated manual interior roller shade systems. Surface mountings, with fascia as shown on Drawings. Double-roll with Solar and Room Darkening Shadebands. MechoSystems "Ecoveil 1550" and Mechoshade 0250 Chelsea Series are the basis of the specification.

B. Mounting: Minimum 1/8 inch thick steel mounting brackets, 3 inches deep by 4 inch maximum profile. Maximum 4 inch standoff from wall with wall to fascia mount angle in place. Roll up diameter capacity with fascia 2-3/4 inches minimum.

1) Shade Roll Direction: Regular roll.

C. Manual Shade Pulls: Stainless steel bead chain with breaking strength of not less than 30 lbs. Position of shade pulls shall not require notching of fascias. Provide Lift Assist Mechanism to comply with ADA allowable pull pressures.

D. Manual Geared Operator: Braking mechanism shall allow shade to be stopped at any desired point of travel.

E. Rollers: Corrosion-resistant steel or extruded-aluminum tubes of diameters and wall thicknesses required to accommodate operating mechanisms and weights and widths of shadebands indicated without deflection. Provide with permanently lubricated drive-

end assemblies and idle-end assemblies designed to facilitate removal of shades for service.

1) Double-Roller Mounting Configuration: As indicated on Drawings.

F. Mounting Hardware: Brackets or endcaps, corrosion resistant and compatible with roller mounting configuration, roller assemblies, operating mechanisms, installation accessories, and installation locations and conditions indicated.

G. Roller-Coupling Assemblies: Coordinated with operating mechanism and designed to join up to three inline rollers into a multiband shade that is operated by one roller drive-end assembly.

H. Solar Shadebands, as indicated on Drawings.

1) Shadeband Material: Light-filtering fabric.

a. Basis of Design is Mechoshade Ecoveil 1550. Transparency 3%
b. Shadeband Material Flame-Resistance Rating: Comply with NFPA 701. Testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

2) Shadeband Bottom (Hem) Bar: Steel or extruded aluminum

a. Type: exposed with end caps
b. Color and Finish: as selected by Architect from manufacturer's full range.

I. Room Darkening Shadebands (Single-Fabric), as indication on Drawings.

1) Shadeband Material: Blackout material.

a. Basis of Design is Mechoshade 0250 Chelsea Series, PVC Free – Polyester base with foam backing. Reverse of shade is charcoal color.
b. Shadeband Material Flame-Resistance Rating: Comply with NFPA 701. Testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

2) Shadeband Bottom (Hem) Bar: Steel or extruded aluminum

a. Type: exposed with end caps
b. Color and Finish: as selected by Architect from manufacturer's full range

J. Installation Accessories:

1) Front Fascia: Aluminum extrusion that conceals front and underside of roller and operating mechanism and attaches to roller endcaps without exposed fasteners.

a. Shape: L-shaped
b. Height: Manufacturer's standard height required to conceal roller and shadeband assembly when shade is fully open, but not less than 4 inches.

2) Exposed Headbox: Rectangular, extruded-aluminum enclosure including front fascia, top and back covers, endcaps, and removable bottom closure.

   a. Height: Manufacturer's standard height required to conceal roller and shadeband assembly when shade is fully open, but not less than 4 inches.
   b. Endcap Covers: To cover exposed ends.

K. Bottom (Sill) Channel or Angle: With light seals and designed to eliminate light gaps at bottoms of shades when shades are closed.

1) Installation Accessories Color and Finish: as selected from manufacturer's full range.

L. Roller Shade Fabrication:

1) Product Safety Standard: Fabricate roller shades to comply with WCMA A 100.1, including requirements for flexible, chain-loop devices; lead content of components; and warning labels.

2) Unit Sizes: Fabricate units in sizes to fill window and other openings as follows, measured at 74 deg F:

   a. Between (Inside) Jamb Installation: Width equal to jamb-to-jamb dimension of opening in which shade is installed less 1/4 inch per side or 1/2-inch total, plus or minus 1/8 inch. Length equal to head-to-sill or -floor dimension of opening in which shade is installed less 1/4 inch, plus or minus 1/8 inch.
   b. Outside of Jamb Installation: Width and length as indicated, with terminations between shades of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.

M. Shadeband Fabrication: Fabricate shadebands without battens or seams to extent possible except as follows:

1) Vertical Shades: Where width-to-length ratio of shadeband is equal to or greater than 1:4, provide battens and seams at uniform spacings along shadeband length to ensure shadeband tracking and alignment through its full range of movement without distortion of the material:

N. Railroaded Materials: Railroad material where material roll width is less than the required width of shadeband and where indicated. Provide battens and seams as required by railroaded material to produce shadebands with full roll-width panel(s) plus, if required, one partial roll-width panel located at top of shadeband.

PART 3- EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, accurate locations of connections to building electrical system, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 ROLLER-SHADE INSTALLATION

A. Install roller shades level, plumb, and aligned with adjacent units according to manufacturer's written instructions

1) Room Darkening Shadebands: Located so shadeband is not closer than 2 inches to interior face of glass.

3.3 ADJUSTING

A. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

3.4 CLEANING AND PROTECTION

A. Clean roller-shade surfaces after installation, according to manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that roller shades are without damage or deterioration at time of Substantial Completion.

C. Replace damaged roller shades that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain motor-operated roller shades.

END OF SECTION

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes recessed entrance floor walk-off mat systems, inclusive of frames.

B. Related Sections:

1. Section 01 81 13 – Sustainable Design Requirements.

2. Section 03 30 00 – Cast-in-Place Concrete: Recesses for floor mats and frames.

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM):

1. ASTM D2047 Coefficient of Friction (James Method)

2. ASTM E648 Critical Radiant Flux

3. ASTM B117 Product Corrosion to Salt

1.3 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide entrance floor mats and frames capable of withstanding a rolling wheel load of 350 lb.

B. Slip Resistance: Entrance floor mats and frames shall meet or exceed a slip resistance of 0.6 when tested in accordance with ASTM D2047.

C. Corrosion Resistance: Entrance floor mats and frames shall be tested in accordance with ASTM B117, with no notable change in appearance after 100 hours.

1.4 SUBMITTALS

A. Product Data: Include material descriptions, dimensions of individual components and profiles, product performance, and finishes for each type of product to be furnished. If required, furnish manufacturer's standard colors for selection.

B. Shop Drawings: Show any divisions between mat sections, and frame relationship to floor recess.

C. Samples: Submit assembled sections of floor mat with each type of tread rail and frame members in each type and color to be furnished, no larger than 8 inches by 8 inches.

D. Sustainable Design Submittals: Section 01 81 13 Sustainable Design Requirements.

1. Materials Resources Certificate: Certify recycled material content for recycled content products.

2. Indoor Environmental Quality Certificates: Certify volatile organic compound content for each interior flooring system and adhesive.

1.5 DELIVERY, STORAGE AND HANDLING

A. Deliver components in manufacturer's original, unopened factory packages labeled to indicate contents. Store and handle materials in safe, dry area fully-protected from weather and in accordance with manufacturer's instructions.

1.6 WARRANTY

A. Provide five (5) year written manufacturer product warranty agreeing to repair or replace units, which fail in materials or workmanship, including fading or other deterioration of finishes which exceeds that of normal wear and tear.

B. Provide two (2) year written installation warranty signed by installer, agreeing to repair or replace units that do not maintain flush, rigid installation devoid of rocking, shifting or deflection under normal loading conditions.

PART 2 – PRODUCTS

2.1 ENTRANCE FLOOR MATS AND FRAMES

A. Manufacturers: Furnish compliant products of one of the following or approved equal:

1. Babcock-Davis.
2. Construction Specialties.
3. Forbo Flooring.
4. Mats Inc.
5. Pawling Corporation.

B. Product Description: Recessed grid and mat assemblies consisting of extruded aluminum tread rails alternating with tread inserts, joined together with bolt-through system and aluminum spacers. Assembly shall facilitate the drainage of water and facilitate cleaning. Basis of Specification: Mats Inc "Advance Track" with style "AD" angle frame.

1. Frames: 6061-T6 aluminum alloy with 1-5/8 inch total depth.
2. Tread Inserts: Manufacturer's premium nylon in standard Gray color.
3. Scraping Rails: 6063-T5 aluminum alloy.
4. Colors, Textures and Patterns of Inserts: As selected by Architect from among manufacturer's standard.
5. Rail and Frame Color: Clear Anodized.
6. Mat Size: As indicated on Drawings.

7. Accessories: Furnish each grid section with stainless steel hinges and galvanized steel key lock-downs.

2.2 SUSTAINABILITY CHARACTERISTICS

A. Division 1 - Sustainable Design Requirements: Requirements for sustainable design compliance.

B. Materials and Resources Characteristics:

1. Recycled Content Materials: Furnish materials with maximum available recycled content, and with no less than that required in Section 01 81 13.

2.3 CONCRETE GROUT MATERIAL

A. Provide concrete grout material equivalent in strength to cast-in-place concrete slabs for recessed mats and frames. Use aggregate no larger than one-third fill thickness.

2.4 FABRICATION

A. Shop fabricate units to greatest extent possible in sizes indicated. Unless otherwise indicated, provide single unit for each mat installation; do not exceed manufacturer's recommended maximum sizes for units that are removed for maintenance and cleaning. Where joints in mats are necessary, space symmetrically and away from normal traffic lanes. Miter corner joints in framing elements with hairline joints or provide prefabricated corner units without joints.

B. Shop fabricate frames for permanent recessed installation, complete with corner pins or reinforcement and anchorage devices. Fabricate edge-frame members in single lengths or, where frame dimensions exceed maximum available lengths, provide minimum number of pieces possible, with hairline joints equally spaced and pieces spliced together by straight connecting pins.

C. Coat concealed surfaces of aluminum frames that contact cementitious material with manufacturer's standard protective coating.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examine substrates and floor conditions for compliance with requirements for location, sizes, minimum recess depth, and other conditions affecting installation of floor mats and frames. Ensure that concrete floor recesses are adequate to properly install and level product.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install recessed mat frames and mats to comply with manufacturer's written instructions so that tops of mats will be flush with adjoining finished flooring. Set mats with tops at height recommended by manufacturer for most effective cleaning action; coordinate tops of mat surfaces with bottoms of doors that swing across mats to provide clearance between door and mat.

1. Install grout and fill around frames and, if required to set mat tops at proper elevations, in recesses under mats. Finish grout and fill smooth and level.

2. Install necessary shims, spacers, and anchorages for proper location, and secure attachment of frames.

3.3 PROTECTION

A. After completing frame installation and concrete work, provide temporary filler of plywood or fiberboard in recesses and cover frames with plywood protective flooring. Maintain protection until construction traffic has ended and Project is near Substantial Completion.

END OF SECTION

PART 1 – GENERAL

1.1 Summary

A. This section includes specifications for the sliding hook bike file rack.

1. Bikes parked per unit: 7 bikes per 6’-6” foot unit.

1.2 Quality Assurance

A. Installer Qualifications: An experienced installer who has completed installation of bicycle racks similar in material, design, and extent to that indicated for this project and whose work has resulted in construction with a record of successful in-service performance.

B. Manufacturer Qualifications: A firm experienced in manufacturing bicycle racks similar to those required for this project and with a record of successful in-service performance.

C. Source Limitations: Obtain each color, finish, shape and type of bicycle rack from a single source with resources to provide components of consistent quality in appearance and physical properties.

D. Product Options: Drawings indicate size, shape and dimensional requirements of bicycle racks and are based on the specific system indicated.

1.3 Submittals

A. Product Data: Include physical characteristics such as shape, dimensions, bicycle, material parking capacity and finish for each bicycle rack.

B. Shop Drawings: Show installation details for each bicycle rack.

C. Samples for Verification: Submit finish samples for review and verification.

D. Maintenance Data: For each bicycle rack.

1. Include recommended methods for repairing damage to the finish.

1.4 Delivery, Storage and Handling

A. Upon delivery, before signing for shipment, inspect for any damages and notate on the B.O.L.

B. Store bicycle racks in original undamaged packages and containers until ready for installation. Handle bicycle racks with sufficient care to prevent any scratches or damage to the finish.

1.5 Warranty

A. Bicycle racks carry a one year manufacturer’s limited warranty against defects in materials and workmanship. The one year warranty period begins the date the product is shipped from the manufacturer.

PART 2 – PRODUCTS

2.1 Acceptable Manufacturers

A. Provide bicycle racks manufactured by Southwest Solutions Group, 2353-B E. State

Highway 121, Ste. 110, Lewisville, TX 75056, 1-800-803-1083

Website: www.southwestsolutions.com

2.2 Materials

A. 12 gauge galvanized steel trolley track, stainless steel trolley assembly, 1” 16g arms.

B. Installation Methods: Wall mounted, ceiling mounted, and floor mounted models are available.

2.3 Finishes

A. All frame components are zinc-plated and trolleys are stainless steel.

2.4 Bike File

A. Setbacks

1. Wall Setback: 0”
2. Distance Between Racks: Bike Files may be connected in a series to make one system. One unit is 96” long.
3. Aisle: The aisle should start 50” from the wall or back of Bike File and be 36” wide.

B. Racks

1. Wall mount: The wall mounted Bike File may be mounted to walls that will support the weight of a Bike File that is fully loaded with bikes.

PART 3 – EXECUTION

3.1 Installation

A. Installation Method

1. Wall mount
2. Ceiling mount
3. Floor mount
4. It is the responsibility of the installer to ensure that all base materials into which the rack will be installed can support the rack and will not be damaged by any required installation procedures.

3.2 Ordering Information

A. When ordering or specifying this rack, make sure the product type, size, and fastener type (if applicable) are included. Contact your Southwest Solutions Group representative for a current price list or to place an order.

3.3 Freight

A. Call 1-800-803-1083 for freight quotes.

END OF SECTION

SECTION 142150
GEARLESS MACHINE ROOM LESS TRACTION ELEVATORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes two gearless machine-room-less (MRL) traction passenger elevators, Cars 1 and 2.

B. Products Installed but Not Furnished Under This Section:
   1. Camera provisions. Section 28 23 00, Refer to Security Drawings.
   2. Elevator security devices, control unit, mounting brackets, wiring materials, logic circuits, security system interface terminals, boxes, and relays. Section 28 13 00, Coordinate with Security Vendor.
   3. Car interior finishes.
   4. Car flooring.
   5. Monitoring system interface. Section 28 31 00.

1.2 ALTERNATES

A. Refer to Division 01 section “Alternates” for requirements and procedures for acceptance.

B. Detailed description of Alternates for work of this section are included in Part 2.7.

1.3 ACTION SUBMITTALS

A. Product Data:
   1. Include capacities, sizes, performance data, operation, control, signal systems operation, safety features, finishes, and similar information.
   2. Include product data for car enclosures and hoistway entrances.
   3. Include product data for signal fixtures, lights, graphics, Tactile marking plates, and details of mounting.

B. Shop Drawings: Provide scaled shop drawings of the following:
   1. Plan and section layouts of hoistways, pits, overheads, machinery spaces and openings at each landing, to include the following:
      a. Location of all equipment.
      b. Static and dynamic loads imposed on building structure.
      c. Details of equipment isolation.
      d. Required clearances around equipment.
      e. Control room and machine heat release.
      f. Provide heat loads based on a regenerative emergency power operation.
      g. Power Requirements:
         1) Motor horsepower, code letter, starting current, full load running current, and demand factor.
         2) Provide maximum and average power consumption.
      h. Service connections.

i. Running Clearances.
j. Location of fixtures.

2. Elevation Section of Hoistways:
   a. Overhead, pits: clearances, and runby.
   b. Entrance details.
   c. Sill support detail.
3. Pit Equipment:
   a. Buffers.
   b. Counterweight guards.
   c. Pit reactions.
   d. Service ladder, platform.
   e. Stop switches.
4. Elevator Cabs:
   a. Car shell fabrication.
   b. Gasketing.
   c. Ventilation.
   d. Ceiling construction details.
   e. Wall construction details.
   f. Lighting details.
   g. Handrail mounting details.
   h. Transom, entrance returns.
5. Fixtures:
   a. Car operating panel.
   b. Hall stations.
   c. Destination/landing input stations.
   d. Hall Lanterns.
   e. Position indicators.
   f. Access key switches.
   g. Remote fixtures.
      1) Firefighter's control panel.
      2) Emergency power selector switches.
   h. Two-way communication device at all master stations.

C. Submittals:
   1. All submittals are delivered via Portable Document Format (.pdf)
   2. All submittals are clearly marked and identified with project name and appropriate device identification.
   3. All submittals are subject to approval.
   4. Corrections requested are incorporated onto the submittals.
   5. All shop drawings submitted must be signed and sealed by an Engineer licensed in the state where the elevator system will be installed.

D. Samples for Initial Selection: For finishes involving surface treatment, paint or color selection.

E. Samples for Verification:
   1. For exposed car, hoistway door and frame, and signal equipment finishes.
   2. Samples of sheet materials: 3" (75 mm) square.
   3. Running trim members: 4" (100 mm) lengths.

4. Include full component samples, if requested:
    a. Signal fixtures
    b. Lighting
    c. Graphics
    d. Tactile markings

1.4 CLOSEOUT SUBMITTALS

A. Continuing Maintenance Proposal:
1. Submit executed Installer's Two-year maintenance agreement, starting at the end of the warranty maintenance period.
2. State services, obligations, conditions, and terms for agreement period and for future renewal options.

B. Record Documents: The following record documents are furnished upon completion and before final payment and delivered via Portable Document Format (.pdf):
1. Shop Drawings:
    a. Complete sets of as installed plan and section layouts of hoistways, pits, overheads, and equipment spaces, to include the following:
        a) Static and dynamic loads imposed on building structure.
        b) Details of equipment isolation.
        c) Required clearances around equipment.
        d) Control room heat release.
        e) Power requirements.
    b. Elevation Section of Hoistways: Overhead, pits, and entrance details.
    c. Elevator cabs.
    d. Fixtures:
        1) Car fixtures.
        2) Hall fixtures.
        3) Remote fixtures.
    e. Control room heat release and power requirements.
2. Wiring Diagrams:
    a. Complete sets of as installed straight-line wiring diagrams, showing the electrical connections of all altered vertical transportation equipment, are furnished upon completion.
    b. A legend sheet is furnished with each set of drawings containing the following information:
        1) Name and symbol of each relay, switch and other electrical or solid-state apparatus.
        2) Location on drawings, drawing sheets, number and area of switches and relays, and location of all contacts.
        3) Location of apparatus whether on controller, in hoistway or on elevator cab.
3. Maintenance and Operating Manuals:
    a. Description and sequence of operation of all equipment installed, including operating use for Building Personnel and tenants, as well as system troubleshooting manuals for technicians.
    b. Maintenance instructions and procedures of all vertical transportation equipment installed, including parts lists, for each elevator system.

c. Lubrication charts indicating all lubricating points and type of lubricant recommended for all equipment.
d. Complete parts catalogs for all replaceable parts.

C. Tools: The following equipment is furnished upon completion and before final payment:
1. The Elevator Contractor provides all the necessary tools, including laptop, hand-held devices, required software and manuals, required to troubleshoot, adjust, synchronize, calibrate, repair, and maintain the vertical transportation systems, as well as perform all necessary procedures to perform all safety tests as required by code and local governing authority.
2. Owner's equipment and software is updated regularly to properly troubleshoot, adjust, synchronize, calibrate, repair, maintain and test the vertical transportation systems. All equipment and/or software is of the same version as issued to technicians maintaining the vertical transportation systems.
3. The Elevator Contractor provides a backup copy of any software that resides on the troubleshooting tool.
4. Upon cancellation of service agreement, the Elevator Contractor provides all updates indicated above.

D. Keys:
1. Four sets of keys to operate all keyed switches and locks are furnished upon completion.
2. Keys properly tagged.
3. All keying arranged with the Contractor.

1.5 PERMITS, TESTS, AND CERTIFICATES

A. Permits:
1. The Elevator Contractor secures the permits required for work to be performed, including work of sub-contractors.
2. The Elevator Contractor obtains and pays for all municipal and state permits necessary for execution of the elevator work, including fees for renewing permits.
3. The Elevator Contractor is responsible for posting all permits as required by the AHJ.
4. The Elevator Contractor is responsible for obtaining final sign-off and approval for each permit.

B. Tests and Inspections:
1. The Elevator Contractor performs all necessary tests as required by ASME A17.1 and recommended by A17.2.
2. The Elevator Contractor is responsible for scheduling the necessary tests as required by the local authorities. Any fees associated with a missed appointment, or for expediting of test or overtime tests due to delays caused by the Elevator Contractor are the responsibility of the Elevator Contractor.

C. Certificates:
1. Elevator Contractor is responsible for obtaining and providing Contractor with all temporary and final inspection certificates of the proper governing authorities and provides the Contractor with such certificates.

2. The Elevator Contractor pays for all fees necessary for obtaining temporary and final inspection certificates.

1.6 QUALITY ASSURANCE

A. Compliance with Regulatory Agencies: Comply with most stringent provisions of codes, laws, and/or authorities, including revisions and changes in effect.

B. Progress Reviews:
1. The Elevator Contractor is subject to reviews by the Consultant and/or Contractor at any time throughout the project.
2. Contractor to assist without additional cost.

1.7 DELIVERY, STORAGE, AND HOISTING

A. General:
1. The protection of all equipment and exposed finishes is the responsibility of the Elevator Contractor during delivery, handling, and installation until final acceptance of elevator equipment.
2. The Elevator Contractor replaces damaged materials with new, at no additional cost for material and labor.

B. Delivery and Storage:
1. It is the responsibility of the Elevator Contractor to properly store and protect all materials in space provided or designated by the Contractor against damage, stains, scratches, corrosion, weather, construction debris and environmental conditions.
2. Deliver materials to the site in the manufacturer's original and unopened containers and packaging, bearing labels as to type of material, brand name and manufacturer's name.
3. Store materials under cover in a dry and clean location, off the ground. Remove delivered materials that are damaged or not suitable for installation from the job site and replace with acceptable materials.

C. Hoisting: All required hoisting and movement of equipment is the responsibility of the Elevator Contractor.

1.8 COORDINATION

A. General: Coordinate the following requirements with the other trades.

B. Cast-in-Place Concrete:
1. Provide other hoistway and pit requirements, including location of sump pits.

C. Structural Steel: Including, but not limited to, elevator control rooms, hoistways and pits, sill supports, rail supports.

D. Miscellaneous Steel: Pit ladders, working platforms, inspection platforms, guard rails, divider beams.

E. Electric: Electrical service, mainline disconnects, 110 VAC disconnects, outlets, lights, switches in elevator control rooms and pits. Fire alarm devices and wiring, security devices and wiring.

F. Sprinklers: Including installation of sprinkler systems in the elevator pits or shaft as per NFPA 13.

G. HVAC: Provide necessary information to General Contractor and coordinate installation of equipment for elevator control rooms.

H. Finishes: Cab interiors, hoistway entrances, fixtures, smoke guard curtains.

I. Elevator Cab Flooring:
   1. Material and finish as specified.
   2. Flooring installation must be coordinated to ensure car sill is installed level with finished floor.

J. Security Equipment: Coordinate locations in elevator control rooms and cabs where cables, conduit, and other components for CCTV and/or security equipment must be installed.

1.9 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair, restore, or replace elevator equipment that fails due to defective materials or poor workmanship within specified warranty period.

B. Warranty Period: Twenty-Four (24) months from date of Substantial Completion:
   1. The Elevator Contractor guarantees that the materials and workmanship of the apparatus installed by them and any subcontractor, under this contract, is first class in every respect and that they will make good on any defects not due to ordinary wear and tear or improper use, which may develop within one year from the date of final acceptance of all equipment.
   2. Manufacturer's warranty to repair or replace defective products or their components in the event of defects within a specified period.
   3. Neither the final payment nor any provisions of the contract documents relieve the Elevator Contractor of any obligation provided by law. They shall remedy any defects and pay all expenses for any damage to other work.
   4. The warranty as outlined above, for all devices, starts from the date of Substantial Completion, by the Consultant and the Owner, of all work specified and intended under these contract documents.

1.10 MAINTENANCE

A. General:
   1. All maintenance is performed according to the guidelines stated in manufacturer's Maintenance and Operations manuals.
   2. Maintenance records for each device, including lubrication logs, check charts, are provided in each control room.

B. Construction Maintenance:
   1. Upon substantial completion of a device, after receiving sign-off from the governing authorities and acceptance from Consultant and/or Contractor, the device may be accepted for service before completion of the entire project.
   2. During the Construction Maintenance period, the necessary preventive maintenance is performed on a scheduled basis.
   3. Provide the necessary protection of the hoistway entrances and sills, hoistway fixtures, cab interiors and fixtures and car door sills.
   4. Replacement or repair of components, due to misuse by others, is the responsibility of the Contractor/Owner.
   5. Include emergency callback service six-days/week, 6 AM – 6 PM PST with response time of sixty minutes or less.

C. Warranty Maintenance:
   1. Upon final acceptance of each device, subsequent to receiving acceptance and sign-off from the governing authorities and final acceptance, each device is accepted for full operation.
   2. The warranty maintenance period begins for each device when all conditions in the above paragraph are met and will continue for a specified period.
   3. The warranty maintenance program includes the following:
      a. Monthly examinations, including adjustments, cleaning, and lubrication of equipment.
      b. 24-hour Emergency Call back service is provided at no additional cost to Owner.
      c. Replacement of components as required, using only components produced by the original manufacturer.
      d. Each control room is equipped with a lockable storage cabinet to contain the necessary spare parts.

D. Maintenance Specification:
   1. Upon completion of the Warranty Maintenance period, the Elevator Contractor will provide the personnel to service the vertical transportation equipment.
   2. Full-Service Maintenance Specification commences upon the completion of the warranty maintenance period for a term of two (2) years: If specifications for a comprehensive service agreement have not been provided, then the Contractor provides a proposal for a full-service agreement which covers the following:
      a. All required inspections and tests.
      b. 24-hour emergency call service at no additional cost to Owner.

PART 2 - PRODUCTS

2.1 REFERENCES

A. Definitions: Terms used are defined in the latest edition of the Safety Code for Elevators and Escalators, ASME A17.1.

B. American Society of Mechanical Engineers:
   1. ASME A17.1, Safety Code for Elevators and Escalators.
   2. ASME A17.2, Guide for Inspection of Elevators, Escalators, and Moving Walks.

3. ASME A17.5, Elevator and Escalator Electrical Equipment.
4. ASME A17.6, Standard for Elevator Suspension, Compensation, and Governor Systems.

C. International Building Code (IBC)

E. Accessibility:
1. American National Standard Institute (ANSI): A117.1, Accessible and Usable Buildings and Facilities.

2.2 MANUFACTURERS

A. Subject to compliance with project requirements, provide products by one of the following:
1. MRL Systems:
   a. KONE Incorporated: MonoSpace 700.
   b. Mitsubishi Electric Corporation: Diamond-Trac.
   c. Otis Elevator Company: G2S, Gen2 Underslung Series G2O, Gen2 Overslung Series.
   d. Schindler Elevator Corporation: 5500.
   e. TK Elevator Corporation: EVO 200, Synergy Self Supported, Building Supported.
   f. Manufacturer’s standard components, including machines, controllers, door equipment, fixtures, and cab enclosures, are approved.
2. Hoistway Entrance:
   a. Car 1: 5WL or Checker Plate, Stainless Steel, Removable.
3. Two-Way Communication Device:
   a. RingComm.
   b. EMS.
   c. TOA.

2.3 FIELD CONDITIONS

A. Seismic:
1. Elevator system withstands the effects of earthquake motions determined according to SEI/ASCE 7 and California Building Code and complies with elevator safety requirements for seismic risk Zone 2 or greater in ASME A17.1/CSA B44.
2. The term “withstand” means the system will remain in place without separation of any parts when subjected to the seismic forces specified.
3. Provide earthquake equipment required by ASME A17.1/CSA B44.
4. Provide Alpha-Numeric display if Earthquake Mode is needed.
5. Provide seismic switch required by SEI/ASCE 7.
6. Design earthquake spectral response acceleration short period (Sds):1.443.

7. Occupancy Category: III.
8. Project Seismic Design Category: E.
9. Elevator Component Importance Factor (Ip): 1.5.

2.4 PERFORMANCE REQUIREMENTS

A. Car Speed: ±3% of contract speed under any loading condition.

B. Car Capacity: Safely lower, stop, and hold 125% of rated load.

C. Car Stopping Zone: ±1/4" under any loading condition.

D. Door Times: Seconds from start to fully open or fully closed:
   1. Door Open: 2.7 seconds.
   2. Door Close: 3.7 seconds.

E. Car Floor-to-Floor Performance Time: 11.0 seconds from start of doors closing until doors are 3/4 open, and car is level and stopped at next successive floor under any loading condition or travel direction; floor height 14'-0", between floors 2 and 3.

F. Car Ride Quality:
   1. Acceleration and Deceleration: Smooth, constant, and not less than 2.5 feet/second² with an initial ramp between 0.5 and 0.75 second.
   2. Sustained Jerk: Not more than 6 feet/second³ or twice the rate of acceleration.
   3. Horizontal and vertical acceleration within car during all riding and door operating conditions: Not more than 15 mg peak-to-peak (adjacent peaks).
   4. Measurement Standards: Measure and evaluate ride quality consistent with ISO 18738, using low pass cutoff frequency of 10 Hz and A95 peak-to-peak average calculations.

G. Noise and Vibration Control:
   1. Airborne Noise:
      a. Measured noise level of elevator equipment and its operation does not exceed 55 dBA inside car under any condition including door operation and car ventilation exhaust blower on its highest speed.
      b. Limit noise level in the control room and control space relating to elevator equipment and its operation to no more than 55 dBA.
      c. All dBA readings to be taken 3'-0" off the floor and 3'-0" from the equipment using the “A” weighted scale.
   2. Vibration Control: All elevator equipment is mechanically isolated from the building structure and other components to minimize noise and vibrations being transmitted to occupied areas of the building.

2.5 ELEVATORS

A. Two Passenger Elevators, Cars 1 and 2:
   1. Capacity: 4,000 lbs.
   2. Class of Loading: Class C3.
   3. Contract Speed: 350 fpm.

4. Roping: Manufacturers Standard
5. Machine: Gearless.
6. Machine Location: Overhead in Hoistway.
7. Control System, Supervisory Control, Microprocessor-Based: Duplex selective collective.
8. Openings:
   a. Elevator 1: 6 front, 6 rear.
   b. Elevator 2: 6, all front.
9. Floors Served.
   a. Elevator 1: Front: 1-6; Rear: 1R – 6R.
   b. Elevator 2: 1-6, all front
10. Minimum Clear Height to Underside of Canopy: 9'-0" high.
11. Entrance Size: 4'-0" wide x 8'-0" high.
12. Entrance Type: Single-speed center-opening.

2.6 MATERIALS

A. Steel:
   1. Sheet Steel (Furniture Steel for Exposed Work): Stretcher-leveled, cold-rolled, commercial quality carbon steel, complying with ASTM A366, matte finish.
   2. Sheet Steel (for Unexposed Work): Hot-rolled, commercial quality carbon steel, pickled and oiled, complying with ASTM A568/A568M-03.
   3. Structural Steel Shapes and Plates: ASTM A36.

B. Stainless Steel:
   1. Type 302 or 304 400 series complying with ASTM A240, with standard tempers and hardness required for fabrication, strength, and durability.
   2. Apply mechanical finish on fabricated work in the locations shown or specified, Federal Standard and NAAMM nomenclature, with texture and reflectivity required to match Architect's sample. Protect with adhesive paper covering.
      a. No. 4 Satin:
         1) Directional polish finish.
         2) Graining directions as shown or, if not shown, in longest dimension.
      b. Textured:
         1) .050" mean pattern depth with bright directional polish (No. 4 satin finish).
         2) 5WL as manufactured by Rigidized Metals.
   3. Extruded Stainless Steel:
      a. 304 stainless steel per ASTM A276.
      b. Hot finished and stretched straightened.
      c. Polished finish.

C. Aluminum:
   1. Extrusions per ASTM B221; sheet and plate per ASTM B209.
   2. Die Cast Aluminum, ASTM B108, Alloy 356.0, T6.
   3. Extruded Aluminum, FS QQ-A 200/8, Alloy 6061, T6.

D. Nickel-Silver: Extruded nickel-silver:
   1. C77600 nickel-silver

2. Hot extruded, temper code M30

E. Plastic Laminate:
1. ASTM E84 Class A and NEMA LD3.1, Fire-Rated Grade (GP-50), Type 7, 0.050" ±.005" thick.
2. Exposed Surfaces: Color and texture selected by Architect.
3. Concealed Surfaces: Manufacturer's standard color and finish.

F. Paint Finishes:
1. General:
   a. Clean exposed metal parts and assemblies of oil, grease, scale, and other foreign matter and factory paint one shop coat of standard rust-resistant primer.
   b. Galvanized metal need not be painted.
2. Prime Finish:
   a. Apply one coat of rust-resistant primer followed by a filler coat over uneven surfaces.
   b. Sand smooth and apply final coat of primer.
3. All equipment and metal work installed under this contract, which does not have a baked enamel or special architectural finish, and which is exposed in the hoistway, is cleaned, and painted one field coat of enamel.
4. All control room equipment is painted upon completion of the installation with the manufacturer's standard machinery enamel.
5. Elevator designation (number and/or letter) is prominently indicated on all control room and machinery space equipment, top of car crosshead and pit equipment.

2.7 ALTERNATES

A. Five (5) year Full-Service Maintenance Agreement. Commencing upon completion of the warranty maintenance period.

B. Car 1: Provide Door Guard or equivalent jamb protection material at all entrances.

2.8 OPERATION

A. General:
1. Cars automatically slow down and stop level at floors in response to car and landing calls with stops made in sequence in the established direction of travel, regardless of order in which buttons are pressed.
2. Landing calls are canceled when the assigned car arrives at the landing.
3. Automatic Dispatch Failure: Provide auxiliary dispatch system to automatically dispatch elevators in the event of failure of the primary control system.
4. Hall Call Button Failure: Should failure of hall call button system occur, initiate operation providing predetermined service to all landings; elevators respond normally to car calls.
5. Automatic Leveling:
   a. When arriving at a floor cars level to within 1/8" above or below the landing sill prior to opening doors, without travelling past the landing during leveling

b. Maintain leveling accuracy regardless of carload, direction of travel, rope slippage or stretch.

6. Power Conservation:
   a. Shut off car interior illumination and ventilation after adjustable period, no less than 15 minutes, of no elevator demand.
      1) Lighting and ventilation shall remain on during entrapment.
   b. turn on prior to opening car doors when elevator demand returns.

B. Door Operation:
   1. Automatically open doors when car arrives at a floor.
   2. Stop and reopen doors or hold doors in open position upon activation of “door open” button.
   3. At expiration of normal dwell time, or upon activation of “door close” button, close doors:
      a. Prevent doors from closing and reverse doors at normal opening speed if door reopening device beams are obstructed while doors are closing, except during nudging operation.
      b. In event of door reopening device failure, provide for automatic shutdown of car at floor level with doors open.
      c. Close cycle does not begin upon activation of “door close” button until normal door dwell time for a car or hall call has expired, except firefighters’ operation.
   4. Nudging Operation:
      a. After beams of door reopening device are obstructed for a predetermined time interval (minimum 20.0-25.0 seconds), sound warning signal, and attempt to close doors with maximum of 2.5 foot-pounds kinetic energy.
      b. Activation of the door open button overrides nudging operation and reopens doors.
   5. Interrupted Beam Time:
      a. When beams are interrupted during initial door opening, hold door open a minimum of 3.0 seconds.
      b. When beams are interrupted after the initial 3.0 second hold open time, reduce time doors remain open to an adjustable time of approximately 1.0-1.5 seconds after beams are reestablished.
   6. Differential Door Time:
      a. Field adjustable time that doors remain open after stopping in response to calls.
      b. Car Call: Hold open time adjustable between 3.0 and 5.0 seconds.
      c. Hall Call:
         1) Hold open time adjustable between 5.0 and 8.0 seconds.
         2) Use hall call time when car responds to coincidental calls.
      d. Elevator 1: Provide front or rear selective door operation.

C. Independent Service:
   1. When feature is activated from within the car, allow control of car from buttons and controls inside the car.
   2. Close doors by constant pressure on desired destination floor button or door close button.
   3. Open doors automatically upon arrival at selected floor.

D. Load Weighing:
   1. Provide cars with adjustable load weighing device which monitors cable tension.
   2. Control system to provide dispatching at main floor in advance of normal intervals when car fills to a field adjustable, 10%-100%, percentage of rated capacity.
   3. Provide hall call by-pass when car is filled to a field adjustable, 10%-100%, percentage of rated capacity.
   4. Audible overload signaling device inside elevator cab shall be activated upon load weighing device sensing carload has reached or exceeded a pre-determined percentage of capacity.
   5. Doors will no close when overload signaling device is active.

E. Duplex Selective Collective Operation, Elevators 1 and 2:
   1. Elevators operate via momentary pressure buttons to:
      a. place hall call by selecting direction of travel at each hall landing (up and down buttons at each intermediate landing, single buttons at each terminal landing).
      b. place car call by selecting destination floor from inside the car (individual buttons for each floor served).
   2. Hall calls, other than calls placed at the landing at which car is standing, start car and cause the car to stop at first landing for which a call is registered in the direction of travel.
   3. Car calls cause the car to stop at the floors registered in the order the car arrives at each selected floor in its current direction of travel.
   4. Free Car:
      a. When there are no calls in the system, one car is automatically dispatched to the elevator discharge level (home car), park other car (free car) at its last stop above elevator discharge level.
      b. An idle free car answers call above or below it, except calls at main or Basement landings (where applicable).
      c. When free car travels to main landing in response to a car call, it becomes home car and former home car travels to a middle floor above main landing and becomes the free car.
      d. When free car is responding to calls, home car shall respond to the following:
         1) Up calls below UP traveling free car.
         2) All Up and Down calls behind DOWN traveling free car.
         3) Any hall calls registered when free car is delayed in its normal operation for a predetermined period.
      e. When both cars are responding to registered car and hall calls, the first car to complete its calls becomes the assigned home car and is dispatched automatically to the Main Landing.
      f. Only one car responds to each hall call.
   5. If either car is removed from service, the other car responds to all registered hall calls and its own car calls.
   6. Car and Hall Lanterns:
      a. Lanterns provide audio and visual signal upon each stop, regardless of responding to car or hall call.

b. Visual signal remains active from commencement of door opening until doors are completely closed.

F. Standby or Emergency Power Operation:
1. The terms Standby Power and Emergency Power are both referred to as Emergency Power in this Section. Elevator operation is the same when either is provided.
2. Where emergency power is provided to the elevator main disconnects and required by the Building Code the elevator installation shall comply with the Emergency Power Operation requirements of ASME A17.1 as modified by any superseding Building Code requirements.
3. Where emergency power is not provided, all elevator controller software and sequencing capabilities to allow future emergency power operation shall be included in the elevator control systems based on the applicable code requirements for new buildings in effect at the time of project permit application.
4. Operation is activated by a signal from an Automatic Transfer Switch (ATS) to elevator controls indicating the Emergency power source is operational.
   a. Start and run one car in each group at contract car speed and capacity.
   b. Illuminate “ELEVATOR EMERGENCY POWER” signals.
5. Automatic Selection and Return to Designated Landing: Provide automatic selection and return to designated landing for all elevator banks and single elevators in the building.
6. Intergroup and single car Emergency Power Operation:
   a. Elevator systems shall be designed to sequentially recall one elevator at a time in one bank and/or each single elevator at time. When all elevators in the first bank are recalled and parked, that control system shall communicate with the elevator control system for the next bank of elevators to commence automatic selection and return to designated landing operation until all elevators in the building are at their designated return landings with the doors open.
   b. Once all elevators have completed the return sequence one or more individual elevators shall be returned to service
7. Restoration of Normal Power:
   a. At least 20 seconds prior to transfer from emergency power to normal power at the ATS, a pre-transfer signal is supplied to the elevator control system from the ATS.
   b. Elevators operating on emergency power stop at the next available landing and remain there until normal power is restored.

G. Firefighters’ Emergency Operation: Provide equipment and operation in accordance with code requirements.

H. Motion Control:
1. Microprocessor-based AC variable-voltage, variable frequency with digitally encoded closed-loop velocity feedback suitable for operation specified and capable of providing smooth, comfortable car acceleration, retardation, and dynamic braking.
2. Limit the difference in car speed between full load and no load to not more than ±3% of the contract speed.

I. Emergency Lighting, Communication, and Alarm:
   1. Car mounted battery unit with solid-state charger to operate alarm bell, car emergency lighting, and communication system.
   2. Car lighting and communication shall be provided with a minimum of 4 hours of operation on back-up power during a loss of normal power, and a minimum of 1 hour of operation for car-mounted alarm and any remote alarm mounted at the designated level.
   3. Battery to be rechargeable with minimum five-year life expectancy.
   4. Provide constant pressure light test button in service compartment of car operating panel.
   5. Provide lighting integral with normal car lighting system.

J. Emergency Battery Operation:
   1. Upon loss of normal power automatically move the car to the nearest landing depending on the load in the car.
   2. Upon arrival at the landing, the elevator doors open automatically, and the elevator is removed from service.
   3. Upon restoration of normal power, the elevator shall automatically resume normal operation.
   4. The auxiliary power source is provided via 12-volt D.C. battery units installed in equipment space.
   5. Include solid-state charger and testing means mounted in a common metal container.
   6. Battery to be rechargeable lead acid or nickel cadmium with a five-year life expectancy.

K. Card/Proximity Reader Security System:
   1. Provide provisions inside all cars for reader unit.
   2. Mount reader unit as directed by Architect. Connect to card reader via traveling cable to terminal interface and relays in equipment space.
   3. Provide filler plate to match card slot size or proximity reader size and car return panel finish, including direction of graining. Provide filler plate to accommodate future security device installation.
   4. Provide output signal to facilitate system tracking of floor access.

2.9 EQUIPMENT SPACE EQUIPMENT

A. Arrange equipment in spaces shown on drawings.

B. Solid State Power Conversion and Regulation Unit:
   1. Provide solid-state, alternating current, variable voltage, variable frequency (ACV³F), IGBT converter/inverter regenerative drive.
   2. Design unit to limit current, suppress noise, and prevent transient voltage spikes into building power supply.
      a. Provide internal heat sink cooling fans for the power drive portion of the converter panels.
   3. Conform to IEEE standard 519-2014 for line harmonics and switching noise.
   4. Provide isolation transformers, filter networks, and choke inductors.

5. Suppress solid-state converter noises, radio frequency interference, and eliminate regenerative transients induced into the mainline feeders or the building standby power generator.
6. Supplemental direct-current power for the operation of hoist machine brake, door operator, dispatch processor, signal fixtures, from separate static power supply.
7. ACV³F Drives are regenerative and utilize IGBT converter/inverter and dynamic braking during overhauling condition.

C. Resistor Load Bank:
   1. Provide means of diverting regenerated power during emergency power operation and restoring regenerated power delivery back to the electrical distribution system following emergency power operation termination.
   2. Provide resistor load bank to discharge regenerative power during emergency power operation.
   3. Load bank is installed on the load side of the mainline disconnect.

D. Encoder: Direct drive, solid-state, digital type. Update car position at each floor and automatically restore after power loss.

E. Controller:
   1. UL/CSA labeled.
   2. Compartment:
      a. Securely mount all assemblies, power supplies, chassis switches, relays, on a substantial, self-supporting steel frame.
      b. Completely enclose equipment with covers.
      c. Provide means to prevent overheating.
   3. Relay Design:
      a. Magnet operated with contacts of design and material to insure maximum conductivity, long life, and reliable operation without overheating or excessive wear.
      b. Provide wiping action and means to prevent sticking due to fusion.
      c. Contacts carrying high inductive currents are provided with arc deflectors or suppressors.
   4. Microprocessor Hardware:
      a. Provide built-in noise suppression devices that provide a high level of noise immunity on all solid-state hardware and devices.
      b. Provide power supplies with noise suppression devices.
      c. Isolate inputs from external devices (such as pushbuttons) with opto-isolation modules.
      d. Design control circuits with one leg of power supply grounded.
      e. Safety circuits are not affected by accidental grounding of any part of the system.
      f. System automatically restarts when power is restored.
      g. System memory is retained in the event of power failure or disturbance.
      h. Equipment is provided with Electro Magnetic Interference (EMI) shielding within FCC guidelines.
   5. Wiring:
      a. CSA labeled copper for factory wiring.

b. Neatly route all wiring interconnections and securely attach wiring connections to studs or terminals.
c. Provide labels for all extra or spare wires, neatly organized at base of controller cabinet.

6. Data Monitoring:
   a. Provide an onboard monitor or screen, either inside the controller or in a stand-alone PC station, to display an easily understood format.
   b. Upon command, the current operating parameters, individual car status, floor positions or other selected operational features will be displayed.
   c. Display a minimum of 20 previous errors, which will be logged for statistical evaluation.
   d. Provide means for hard copy printouts.
   e. Diagnostic display will support monitoring of elevator motion, velocity, door operation parameters and timing functions.
   f. Non-volatile memory is required to store group operation data with provisions for data logging and hard copy reporting.
   g. Network connectivity provision is incorporated in the basic dispatching control system.
      1) This provision may be employed for traffic analysis, hard copy computation and/or remote monitoring of status conditions utilizing an isolated PC and compatible printer for reports or graphs.
      2) All reports are time and date stamped to confirm reporting period.
   h. Monitor employs color video displays for the following information:
      1) Display screen (group operations statistics).
      2) Monitoring screen (diagnostics, system status).
      3) Performance screen (traffic analysis).
   i. Features required regarding remote and additional location monitoring, as indicated in other applicable sections, apply.
7. Permanently mark components with symbols shown on wiring diagrams.
8. Provide control panel compliant with UL 508A SB.SCCR of 5000A required.

F. Electrical Wiring and Wiring Connections:
1. Conductors and Connections: Copper throughout with individual wires coded and connections on identified studs or terminal blocks.
2. The use of splices or similar connections in wiring except at terminal blocks, control compartments, or junction boxes is prohibited.
3. Conduit:
   a. Galvanized steel conduit, EMT, or duct.
   b. Flexible conduit length not to exceed 3'-0".
4. Traveling Cables:
   a. Tag spares in equipment space.
   b. Provide cables from controller to car top.
5. Auxiliary Disconnect: Provide controller or machine mounted auxiliary, lockable “open” disconnect.
6. Auxiliary Wiring:
   a. Provide dedicated equipment space junction boxes for the following:
      1) Fire alarm initiating devices.
      2) Emergency two-way communication system.
      3) Network connectivity.

4) Paging speaker.
5) CCTV.
6) Digital video display.
7) Security system and card reader interface terminals and relays.
8) Intercom, announcement speaker, and/or background music.

b. Provide conduit, wiring and connections from controller space junction box to each controller in the equipment space for the following:
1) Fire alarm initiating devices.
2) Emergency two-way communication system.
3) Network connectivity.
4) Paging speaker.
5) CCTV.
6) Digital video display.
7) Security system and card reader interface terminals and relays.
8) Intercom, announcement speaker, and/or background music.

2.10 HOISTWAY EQUIPMENT

A. Gearless Traction Hoist Machine:
1. AC induction or P.M.S.M. ACV³F gearless traction motor with brakes, drive sheave, and deflector sheave mounted in proper alignment.
2. Provide hoist machine mounted direct drive, digital, closed-loop velocity encoder.
3. Provide machine with an electromechanical brake.
a. The brake is spring applied and electrically released.
b. Brake shoes are applied to the braking surface simultaneously and with equal pressure.
4. Provide means to prevent ascending car over-speed and unintended car movement via dual modular redundant braking system.
5. Provide ladders and platforms with handrails and toe boards for overhead sheave and governor access within the bounds of the equipment space.

B. Machine and Equipment Support Beams:
1. Provide structural steel beams required for direct support of and attachment to building structure of hoist machine, deflector sheaves, overhead sheaves, governor, and hoist rope dead-end hitch assemblies.
2. Provide bearing plates, anchors, shelf angles, blocking, embedment, for support and fastening of machine beams or equipment to the building structure.
3. Isolate machine and overhead sheave beams to prevent noise and vibration transmission to building structure.

C. Governor:
1. Centrifugal-type, car-driven pit-mounted with pull-through jaws and bi-directional shutdown switches.
2. Provide required bracketing and supports for attachment to building structure.
3. Provide manual remote reset capability at controller.

D. Guide Rails:

1. Planed steel T-sections for car and counterweight of suitable size and weight for the application, including seismic reactions, including brackets for attachment to building structure.
2. No additional structural points of attachment other than those shown on the Contract Documents will be provided.
3. Provide rail backing and intermediate counterweight tie brackets.

E. Sheaves:
1. Machined grooves and sealed bearings.
2. Provide mounting to machine beams, car, and counterweight structural members, or building structure.

F. Counterweight: Steel frame with metal filler weights.

G. Counterweight Guides: Spring dampened roller guides.

H. Counterweight Runway Guard: Where counterweight is located between adjacent elevators, provide counterweight guard along entire runway next to the adjacent elevator.

I. Seismic Equipment:
1. Provide design, components, and operation per governing code.
2. Dual counterweight derailment sensing wires located vertically on each side of counterweight the entire height of travel.
3. Counterweight frame equipped with a minimum of four derailment rings.
4. Provide dual axis seismic switch that activates at no less than 0.15 times gravity in the vertical or horizontal directions. A minimum of one seismic switch shall be provided per car or group of elevators.
5. Counterweight retainer plates must be bolted.

J. Governor Rope and Encoder Tape Tensioning Sheaves:
1. Mount sheaves and support frame on pit floor or guide rail.
2. Provide frame with guides or pivot point to enable free vertical movement and proper tension of rope and tape.

K. Suspension Means:
1. 8 x 19 or 8 x 25 Seale construction, traction steel.
2. Fasten with staggered length, adjustable, spring isolated wedge shackles.
3. Noncircular elastomeric-coated steel belt comprising of several steel cords arranged in parallel and molded within a coating.
4. Approved governor rope.

L. Terminal Stopping: Provide normal and final devices.

M. Electrical Wiring and Wiring Connections:
1. Conductors and Connections:
    a. Copper throughout with individual wires coded and connections on identified studs or terminal blocks.

b. The use of splices or similar connections in wiring except at terminal blocks, control compartments, or junction boxes is prohibited.
c. Provide 20% spare conductors for each wire type.
d. Run spare wires from car connection points to individual elevator controllers in the equipment space.

2. Conduit:
   a. Galvanized steel conduit, EMT, or duct.
   b. Flexible conduit between isolated equipment, length not to exceed 3'-0".
   c. Flexible heavy-duty service cord may be used between fixed car wiring and car door switches for door protective devices.
   d. Coordinate conduit from the closest hoistway of each elevator or group or single elevator to the firefighters' control panel. Provide wiring.
3. Traveling Cables:
   a. Flame and moisture-resistant outer cover.
   b. Prevent traveling cable from rubbing or chafing against hoistway or equipment within hoistway.
   c. Provide the following minimum composition, which are not considered spares:
      1) Five pair of shielded 20-gauge wire for card reader.
      2) Two pair of shielded 18-gauge wire for CCTV, from car controller to car top junction box, plus 3'-0" excess loop at both ends.
      3) Two pair of 18-gauge wire for CCTV power.
      4) Two pair of 18-gauge wire for emergency communication system power.
   d. Provide eight pair of spare shielded communication wires in addition to those required to connect specified items.
   e. Tag spares in control room. Provide cables from controller to car top.
   f. Support traveling cable by suspending from supports by means that automatically tighten around the cable when tension is increased.
4. Auxiliary Wiring: Provide conduit, wiring and connections for systems specified.

N. Entrance Equipment:
1. Two-point hanger roller with non-metallic roller surface and suspension with eccentric upthrust roller adjustment.
2. Bar or formed, cold-drawn removable steel door tracks with smooth roller contact surface.
3. Door Interlocks: Operable door locks without retiring cam.
4. Door Closers:
   a. Spring, spirator, weighted, or jamb/strut mounted.
   b. Design and adjust to ensure a smooth and quiet mechanical close of doors.

O. Floor Numbers: Stencil paint 4" high floor designations in contrasting color on inside face of hoistway doors and hoistway fascia. Must be visible from within car.

2.11 HOISTWAY ENTRANCES

A. Entrance Assemblies:
1. Complete entrances bearing fire labels from a certified testing laboratory approved by authority having jurisdiction.

2. Provide entrance assemblies bearing 1½-hour label.
3. Paint all exposed ferrous metal black.

B. Frames:
1. Bolted and lapped head to jamb assembly at all floors.
2. Clad frames with finish material indicated in finish schedule, at all floors.
3. Provide Arabic floor designation/tactile marking plates:
   a. Centered at 60" above finished floor.
   b. Located on both side jambs of all entrances.
   c. Minimum 4" in height.
   d. Tactile indications below Arabic floor designation.
   e. Permanently fastened.
4. Provide car identification label:
   a. Mounted directly below floor designation/Tactile marking plates.
   b. Finish and design to match floor designation/Tactile marking plates.
   c. Permanently fastened.
5. Provide plates at main egress landing with “Star” designation.
6. For designated emergency car, provide “Star of Life” cast designation plates at height of 78"-84" above finished floor on both side jambs at all floors.

C. Door Panels:
1. Sandwich construction without binder angles.
2. Provide one leading edge of doors with rubber astragals.
3. Provide a minimum of two gibs per panel, one at leading and one at trailing edge with gibs in the sill groove entire length of door travel.
4. Provide one separate 4” steel reinforcement safety gib mounted between door gibs, where not integrated with door gibs.

D. Sight Guards:
1. Same material, finish, and height as hoistway entrance door panels.
2. Construct without sharp edges.

E. Sills: Extruded nickel silver.

F. Sill Supports:
1. Structural or formed steel designed to support sill load.
2. Design to eliminate need for grout under the sill.

G. Fascia, Platform Guards and Hanger Covers:
1. 16-gauge furniture steel with Contractor’s standard finish.
2. Provide full height fascia, platform guards, and hanger covers where rear entrances are not provided.

H. Struts and Headers:
1. Provide support of all entrances to building structure including connections to building structure.
2. Provide door open bumpers on entrances equipped with vertical struts.

I. Finish of Frames and Doors:

1. Reinforced textured finish stainless steel.
2. Provide final painting requirements to General Contractor where factory prime finish is specified.

J. Hoistway Access:
   1. Hoistway Access Switches:
      a. Mount in entrance frame side jamb at top floor.
      b. Provide switch without faceplate.

2.12 PIT EQUIPMENT

A. Buffers:
   1. Provide Oil type with blocking and support channels.
   2. Stencil car number on buffer.

B. Pit Access:
   1. Hoistway Access Key Switch:
      a. Provide key switch at lowest terminal landing.
      b. Mount in entrance frame side jamb.
      c. Provide switch without faceplate.
   2. Provide pit stop switches.
   3. Provide pit access door switch configured to disable elevators.

C. Counterweight Guard: Metal guard in pit in front of counterweight where no compensation is provided or where there is no space greater than 20" between the compensation means, suspension means, counterweight rails, or guards. Provide metal screen between elevators 6’-0” from pit floor.

2.13 CAR EQUIPMENT

A. Frame: Welded or bolted formed steel channel construction to meet load classification specified.

B. Safety Device: Type “B,” flexible guide clamp.

C. Platform:
   1. Design and construct to accommodate load classification requirements.
      a. Provide Class “C3” construction.
   2. The car platform consists of a steel frame with necessary steel stringers, all securely welded together.
   3. Isolate the passenger elevator platform.
      a. The support frame includes rubber pads on which the platform rests.
      b. No mechanical connections between platform and frame.
   4. Work Light Fixtures and AC Receptacles: Provide permanent mounted work light fixtures below platform, complete with proper lamp guards.

D. Platform Guard: Minimum 48" high, reinforced and braced to car platform front, and rear at Car 1, Floor 1, with Manufacturer’s standard finish

E. Cartop Guard Rail: Provide a railing system provided on the outside perimeter of the car top on all sides where the horizontal distance between the edges of the car top and the adjacent hoistway enclosure exceeds 12".

F. Car Guides: Roller type with three or more spring dampened, sound-deadening rollers per shoe. Minimum 3¼" outside diameter.

G. Cab Steadying Plates:
   1. Provide and install top of car steadying plates.
   2. Emphasis is placed on proper tension to car styles allowing minimal lateral movement of the cab.
   3. Steadying plates are isolated using non-metallic guides or rollers.

H. Sills:
   1. One-piece extrusion with extension between car entrance columns to face of car front return.
   2. Extruded extension to match finish of sill.
   3. Nickel silver.

I. Door Panels:
   1. Sandwich construction without binder angles.
   2. Provide one leading edges of doors with rubber astragals.
   3. Provide a minimum of two gibs per panel, one at leading and one at trailing edge with gibs in the sill groove entire length of door travel.
   4. Construct door panels with interlocking, stiffening ribs.

J. Door Hangers: Two-point suspension hanger roller with non-metallic surface and eccentric roller adjustment.

K. Door Track: Bar or formed, cold-drawn removable steel track with smooth roller contact surface.

L. Door Header: Construct of minimum 12-gauge steel, shape to provide stiffening flanges.

M. Door Electrical Contact: Prohibit car operation unless car door is closed. Provide car door interlock to prevent opening of car doors outside the unlocking zone, where clearance between the car platform and hoistway enclosure exceeds code maximum on the loading side.

N. Door Clutch:
   1. Heavy-duty clutch, linkage arms, vane assembly and pickup rollers or cams to provide positive, smooth, quiet door operation.
   2. Design clutch so car doors can be closed while hoistway doors remain open.

O. Restricted Opening Device:
   1. Provide mechanical car door restrictor to prevent opening of doors when outside unlocking zone.
   2. Plunger type restrictors are not applicable.
   3. Utilize mechanical angle to prevent door opening

P. Door Operator:
   1. High-speed heavy-duty door operator capable of opening doors at no less than 2.5 fps.
   2. Accomplish reversal within 2½" of door movement.
   3. Provide solid-state door control with closed loop circuitry to constantly monitor and automatically adjust door operation based upon velocity, position, and motor current.
   4. Provide a minimum of four controller-based motion profiles, per floor, per door, to maintain consistent, smooth, and quiet door operation at all floors, regardless of door weight or varying air pressure.

Q. Door Reversing Device:
   1. Infrared Reopening Device:
      a. Black fully enclosed device with full screen infrared matrix or multiple beams extending vertically along leading edge of each door panel to minimum height of 74" above finished floor.
      b. Provide additional beams full height of door panels.
      c. Reverse doors at normal opening speed if beams are obstructed while doors are closing, except during nudging operation.
      d. In event of device failure, provide for automatic shutdown of car at floor level with doors open.
   2. Nudging Operation:
      a. After door close is obstructed for a predetermined time interval (minimum 20.0-25.0 seconds), warning signal sounds, and doors close with a maximum of 2.5 foot-pounds kinetic energy.
      b. Door open button overrides nudging operation and reopen doors.
   3. Interrupted Beam Time:
      a. When beams are interrupted during initial door opening, hold door open a minimum of 3.0 seconds.
      b. When beams are interrupted after the initial 3.0 second hold open time, reduce remaining adjustable open time to 1.0-1.5 seconds after beams are reestablished.
   4. Differential Door Time:
      a. Provide separate adjustable timers to vary door dwell time after stopping in response to calls.
      b. Car Call: Hold open time adjustable between 3.0 and 5.0 seconds.
      c. Hall Call:
         1) Hold open time adjustable between 5.0 and 8.0 seconds.
         2) Use hall call time when car responds to coincidental calls.

R. Car Operating Panel:
   1. Passenger:
      a. Two car operating panels without faceplates:
         1) Consisting of a metal box containing the vandal resistant operating fixtures, mounted behind the car swing front and rear return panels.
      b. Suitably identify floor buttons, alarm button, door open button, door close button and emergency push-to-call button with cast tactile symbols recessed flush rear-mounted.
      c. Pushbuttons:

1) Provide minimum 3/4" diameter raised or flush floor pushbuttons which illuminate to indicate call registration.

d. Locate operating controls no higher than 48" above the car floor; no lower than 35" for emergency push-to-call button and alarm button.

e. Locked Firefighters Operation Panel:
   1) For fire officer use and independent service only.
   2) Openable by the same key which operates the Fire Operation switch.
   3) Panel is provided with solenoid operated key switch which automatically opens in the event of Firefighters' Phase I activation.
   4) Including the following features:
      a) Phase II fire access switch.
      b) Firefighters' visual indication.
      c) Call cancel button.
      d) Stop switch, manually operated.
      e) Door open button.
      f) Door close button.
      g) Floors served.

f. Provide "door open" button to stop and reopen doors or hold doors in open position.

g. Provide "door close" button to activate door close cycle. Cycle does not begin until normal door dwell time for a car or hall call has expired, except firefighters' operation.

2. Service Compartment:
   a. Provide lockable service compartment with recessed flush door.
   b. Door material and finish matches car return panel or car operating panel faceplate.
   c. Inside surface of door contains an integral flush window for displaying the elevator operating permit.
   d. Include the following controls in lockable service cabinet with function and operating positions identified by permanent signage or engraved legend:
      1) Access switch.
      2) Light switch.
      3) Four-position exhaust blower switch.
      4) Independent service switch.
      5) Constant pressure test button for battery pack emergency lighting.
      6) 120-volt, AC, GFCI protected electrical convenience duplex outlet.
      7) Card reader override switch.
      8) Keyed stop switch.

3. Provide black filled, engraved, or approved etched signage as follows with approved size and font:
   a. Phase II firefighters' operating instructions on inside face of firefighters' compartment door.
   b. Red filled engraved firefighters' operation on outside face of compartment door.
   c. Building identification car number over main and auxiliary car operating panel.
   d. Car capacity in pounds on main car operating panel service compartment door.
   e. Loading classification and description on car operating panel

f. “No Smoking” over main car operating panel.

S. Car Top Control Station:
1. Mount to provide safe access and utilization while standing on car top.
2. Operating device contains Up and Down direction buttons, a Run button, an Inspection/Automatic switch, and Emergency Stop switch.
3. Operating device contains an audible and visible indicator that fire recall has been initiated.
4. This station is fixed to the car crosshead or may be portable provided the extension cord and housing are permanently attached to the car crosshead.
5. The car will be operated by constant pressure on the appropriate direction button and the Run button simultaneously.
6. Normal operating devices will be inoperative while this device is in use.

T. Emergency Audible Signaling:
1. Provide on top of each elevator.
2. Activation of the Alarm Button or Emergency Stop switch will cause Emergency Audible Signal.
3. Provide auxiliary power supply to provide 1-hour power in the event of normal power loss.

U. Work Light and Duplex Plug Receptacles:
1. GFCI protected outlet at top and bottom of car.
2. Include on/off switch and lamp guard.
3. Provide additional GFCI protected circuit and dedicated junction box on car top for installation of car CCTV.
4. Provide additional GFCI protected circuit and dedicated junction box on car top for installation of car digital video display.

2.14 CAR ENCLOSURE

A. Passenger Elevators: Provide complete as specified herein and detailed on architectural drawings.
1. Shell:
a. Reinforced formed furniture steel panels with baked enamel interior finish.
b. Apply sound-deadening mastic to exterior.
c. Provide concealed ventilation cutouts.
2. Canopy:
a. Reinforced formed furniture steel panels with lockable, contacted, hinged emergency exit.
3. Front, and Rear for Elevator 1, Swing Return Panels and Integral Entrance Columns:
a. Reinforced furniture steel clad with satin finish stainless steel.
b. Swing entire unit on substantial pivot points for service access to car operating panels.
c. Locate pivot points to provide full swing of return panel without interference with side wall finish or handrail.
d. Secure in closed position with concealed three-point latch.

e. Provide firefighters' and service compartments with recessed flush cover and cutouts for operating switches.

4. Transom: Reinforced furniture steel clad with satin finish stainless steel full width of enclosure.
5. Base: Stainless Steel with concealed ventilation cutouts.
6. Finish Floor Covering:
   a. Furnished under other sections.
   b. Accommodate floor and subfloor thickness.
7. Interior Wall Finish:
   a. Removable panels faced and edged, with textured finish stainless steel, 5WL as manufactured by Rigidized Materials.
8. Forced Ventilation:
   a. Three-speed blower mounted to car canopy.
   b. Exhaust blower meets noise and vibration criteria.
9. Lighting: Provide LED fixtures with wiring and hookup. Coordinate with emergency lighting requirements.
10. Suspended Ceiling: Six-Section Stainless Steel panels with lighting cutouts in each panel.
11. Handrails/Guard Rail:
    a. Two lines.
    b. Top handrail line minimum 1½" diameter stainless-steel grab bar with backing plates and captive nuts.
    c. Lower guardrail line 4" x 3/8" solid stainless-steel flatstock bars mounted on both sides and rear of the car.
    d. Locate bottom guardrail line at 8" above car floor and handrail line at 32" above the car floor.
    e. Bolt rails through car walls from back and mount on 1½" deep solid round stainless-steel standoff spacers no more than 18" O.C.
    f. Return handrail/guardrail ends to car walls.
12. Pads and Buttons, All Cars:
    a. Three-piece removable pads.
    b. Two pads covering side walls and adjacent front returns and one covering rear wall.
    c. Provide cutouts to access main car operating panel.
    d. Isolate from car top to comply with noise and vibration requirements.

2.15 HALL CONTROL STATIONS

A. Pushbuttons:
1. Provide one pushbutton riser.
2. Provide flush mounted faceplates stations at all floors.
3. Include pushbuttons for each direction of travel that illuminate to indicate call registration.
4. Include variable message system at all evacuation and primary egress levels.
5. Include engraved message and pictorial representation prohibiting use of elevator during fire or other emergency as part of faceplate.
6. Pushbutton design matches car operating panel pushbuttons.
7. Provide vandal resistant pushbutton and light assemblies.
8. Provide LED illumination.

9. Provide Phase I Fire Service key switch, engraved operating instructions and illuminating jewel.
10. Provide communication check failure indication and silence key switch.
11. Provide illuminating jewels indicating standby power status.
12. Incorporate all items required by Code at the primary egress level into a single hall fixture.

B. Phase I Fire Service Fixture: Provide separate fixture including key switch, engraved operating instructions, and illuminating jewel. Provide illuminating jewels indicating standby power status.

2.16 SIGNALS

A. Car Direction Lantern:
1. Provide flush-mounted car lantern in all car entrance columns.
2. Illuminate up or down LED lights and sound tone once for up and twice for down direction.
3. Illuminate light until the car doors start to close.
4. Sound level is adjustable from 20-80 dBA measured at 5'-0" in front of hall control station and 3'-0" off floor.
5. Provide advanced hall lantern notification to comply with ADA hall call notification time.
6. Car direction lenses are arrow shaped without faceplates.
7. Lenses are minimum 2½" in their smallest dimension.
8. Provide vandal resistant lantern and light assemblies consisting of series of dots or lines for maximum visibility.

B. Car Position Indicator:
1. Alpha-numeric LCD screens containing floor designations and direction arrows a minimum of 2" high to indicate floor served and direction of car travel.
2. Locate fixture above each car operating panel.
3. When a car leaves or passes a floor, illuminate indication representing position of car in hoistway.
4. Illuminate proper direction arrow to indicate direction of travel.

C. Fixture Faceplate Material and Finish:
1. Satin finish stainless steel, all fixtures.
2. Tamper resistant fasteners for all public facing fastenings.

D. Floor Passing Tone: Provide an audible tone of no less than 20 decibels and frequency of no higher than 1500 Hz, to sound as the car passes or stops at a floor served.

E. Voice Synthesizer: Provide electronic device with easily reprogrammable message and female voice to announce car direction, floor, emergency exiting instructions.

2.17 COMMUNICATION

A. Car Communication System:
1. Hands-Free Phone System:

a. Two-way communication instrument in car with automatic dialing, tracking, and recall features, with shielded wiring to car controller in control room.
b. Provide dialer with automatic rollover capability with minimum two numbers:
    1) Actuate two-way communication via “Help” button.
    2) Adjacent light jewel illuminates and flash when call is acknowledged.
    3) Button matches car operating panel pushbutton design.
    4) Provide “Help” button tactile symbol, engraved signage, and Tactile marking adjacent to button mounted integral with car front return panel.

2. Emergency Personnel Communication:
    a. Communication system is provided allowing emergency personnel to establish communications with each elevator individually.
    b. Emergency Personnel Communication overrides any existing connection outside of building.
    c. Adjacent light jewel illuminates and flashes when call is acknowledged.
    d. Provide operating instructions.
    e. On the same car operating panel as the phone push button, provide capability to communicate with and obtain responses from passengers.
    f. Provide display video capability for entrapment assessment.
3. Communication for deaf, hearing and speech impaired:
    a. On the same car operating panel as the phone push button, provide capability to communicate visually with and obtain responses from passengers, including those passengers who cannot communicate verbally or hear.
    b. Provide shielded twisted pair wiring to communicate to control room network box.
    c. Device shall be open-sourced and capable of being monitored by any entity as selected by the owner. All software, hardware, and training cost associated with the device shall be included within this project. Associated monthly monitoring costs will not be accepted.

B. Remote Monitoring:
1. Provide system to capture faults or system shutdowns in real-time occurrence.
2. Communicate faults or shutdowns to reception system, enabling automatic dispatch of technicians.
3. System monitors faults 24-hours per day, 7-days per week.

C. Client Interface Tool:
1. Provide access to real-time data for elevators, including the following:
    a. Complete service history for all vertical transformation.
    b. Key performance indicators.
    c. Access to service request logs, disposition, and total downtime.
    d. Create service requests.
    e. View customer contracts.
    f. View and/or accept Work Orders.
    g. Provide document repository.
2. Data is accessible from any device, including mobile.

3. Proper safeguards are confirmed, protecting clients from malware and virus receipt.

D. Remote Maintenance (IOT):
1. Enable component performance data capture of information provided through elevator monitoring systems.
2. Perform data analysis to determine maintenance requirements and schedule those maintenance activities.
3. Analyzed data does not alleviate the need to provide maintenance and repairs in accordance with the Maintenance Control Program (MCP), specifically expand timeframes or scheduling for maintenance tasks, but may reduce the timeframe between maintenance tasks as deemed necessary based on, but not limited to:
   a. Cycles.
   b. Voltages.
   c. Resistance.
   d. Delay.
4. System does not allow remote maintenance or the ability to login remotely and affect changes to the operability of the elevator system.

E. Firefighters' Key Box:
1. Flush-mounted box with lockable hinged cover.
2. Engrave instructions for use on cover per Local Fire Authority requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Prior to beginning installation of equipment examine hoistway and control room areas.

B. Verify no irregularities exist that affect execution of work specified.

C. Verify electrical power location and characteristics in coordination with equipment requirements.

D. Do not proceed with installation until work in place conforms to project requirements.

3.2 INSTALLATION

A. Install all equipment in accordance with Contractor's instructions, referenced codes, specification, and approved submittals.

B. Install control room equipment with clearances in accordance with referenced codes and specification.

C. Install all equipment so it may be easily removed for maintenance and repair.

D. Provide any required hoisting/safety beams.

E. Install all equipment to afford maximum accessibility, safety, and continuity of operation.

F. Remove oil, grease, scale, and other foreign matter from the following equipment and apply one coat of field-applied machinery enamel.
   1. All exposed equipment and metal work installed as part of this work which does not have architectural finish.
   2. Control room equipment, hoistway equipment including guide rails, guide rail brackets, and pit equipment.
   3. Neatly touch up damaged factory-painted surfaces with original paint color. Protect machine finish surfaces against corrosion.

G. Fill hoistway door frames, back boxes for hallway stations and signal devices, and sills.

H. Clean all architectural finishes and replace or restore any surfaces damaged during construction to like new condition.

3.3 FIELD QUALITY CONTROL

A. Acceptance Testing: On completion of elevator installation and before permitting elevator use (either temporary or permanent), perform acceptance tests as required and recommended by ASME A17.1/CSA B44 and by governing regulations and agencies.

B. Operating Test:
   1. Load each elevator to rated capacity and operate continuously for 30 minutes over full travel distance, stopping at each level and proceeding immediately to the next.
   2. Record temperature rise of elevator machine during 30-minute test period.
   3. Record failure to perform as required.

C. Advise Contractor, Architect, and authorities having jurisdiction in advance of dates and times that tests are to be performed on elevators.

D. Independent Testing by Owner’s Consultant.

3.4 CONSTRUCTION TOLERANCES

A. Install rails plumb and align vertically with tolerance of 1/16" in 100'-0".

B. Secure joints without gaps and file any irregularities to a smooth surface.

3.5 ADJUSTING

A. Static balance car to equalize pressure of guide shoes on guide rails.

B. Dynamically balance car and counterweight.

C. Lubricate all equipment in accordance with Contractor’s instructions.

D. Adjust motors, power conversion units, brakes, controllers, leveling switches, limit switches, stopping switches, door operators, interlocks, and safety devices to achieve specified performance levels.

3.6 CLEANING

A. Keep work areas orderly and free from debris during progress of project.

B. Remove packaging materials on a daily basis.

C. Remove all loose materials and filings resulting from work.

D. Clean control room equipment and floor.

E. Clean hoistways, car, car enclosure, entrances, operating and signal fixtures.

F. Clean pit equipment and floor.

3.7 DEMONSTRATION:

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate all aspects of elevators while in normal operation.

B. Check operation of each elevator with Owner's personnel present before date of Substantial Completion and again not more than one month before end of warranty period.

C. Determine that operation systems and devices are functioning properly.

3.8 PROTECTION

A. Temporary Use: Comply with the following requirements for each elevator used for construction purposes:
   1. Provide car with temporary enclosure, either within finished car or in place of finished car, to protect finishes from damage.
   2. Provide strippable protective film on entrance and car doors and frames.
   3. Provide padded wood bumpers on entrance door frames covering jambs and frame faces.
   4. Provide other protective coverings, barriers, devices, signs, and procedures as needed to protect elevator and elevator equipment.
   5. Do not load elevators beyond their rated weight capacity.
   6. Engage elevator Installer to provide full maintenance service.
      a. Include preventive maintenance, repair, or replacement of worn or defective components, lubrication, cleanup, and adjustment as necessary for proper elevator operation at rated speed and capacity.
      b. Provide parts and supplies same as those used in the manufacture and installation of original equipment.
   7. Engage Elevator Installer to restore damaged work, if any, so no evidence remains of correction.
   8. Return items which cannot be refinished in the field to the shop, make required repairs, and refinish entire unit, or provide new units as required.

END OF SECTION

Division 21 - WATER BASED FIRE SUPPRESSION SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The requirements of the GENERAL CONDITIONS, SUPPLEMENTARY CONDITIONS, AND DIVISION 1, GENERAL REQUIREMENTS, apply to the work of this SECTION.

1.2 DESCRIPTION

A. Design and furnish all materials, labor, and equipment necessary for the installation of hydraulically designed Automatic Fire Sprinkler System throughout the buildings as generally outlined in this schematic performance Specification including but not limited to the following:

1. These systems will have to be reviewed and approved by the Division of The State Architect.
2. Overhead work shall begin 6” above finished floor. See Site Fire Protection piping supplying the Overhead Fire Sprinkler Systems as well as the supply and discharge overhead supply to the fire pump. Fire department connections are a part of the overhead. Refer to Site Fire Plan.
3. Occupancy and hazard classifications of each area shall be as per NFPA 13 and Division of The State Architect.
4. Furnish electric bells. Alarm and equipment location to be approved by the Architect. Coordinate installation (by others).
5. Sprinkler system shall be provided with floor control valves with tamper switches, electrical flow switches and test and drain valves on each floor.
6. Tamper switches at all valves as required.
7. Coordinate with Electrical Contractor for all necessary wiring and power supply.

8. Coordinate with structural engineer and architect for all penetration and sleeve locations. Post tension concrete slabs shall not be penetrated without the written approval by the structural engineer. Sleeves and layout of sleeves shall be included. GC shall provide control layout.
9. Sprinkler heads shall be provided in all mechanical equipment rooms, including telephone and electrical rooms, electrical switchgear rooms, and elevator machine rooms.
10. Flow and tamper switches shall be provided to accommodate monitoring by a central station.
11. One-year warranty.

1.3 PROPOSALS

A. Proposals include the cost of design and installation of the work described in this Section and any other systems and components required for a complete and functional Fire Protection system. The plans accompanying this specification are preliminary and are not to be presumed as complete and final. Changes to the project which may include Applications for Alternate Means and Methods, architectural design changes, structural design changes, may incur a change order by the subcontractor

1.4 DESIGN PROCEDURE

A. Complete working drawings per established schedules for construction and submittal to Division of The State Architect. Include coordination with Architect as to location of roof and floor openings and beam penetrations, location and weight of all equipment, and other pertinent features of the sprinkler design, including size, location and type of access panels, which might affect structural and/or architectural design.

B. Engineering calculations and construction drawings shall be prepared by a competent fire sprinkler designer under the review of a State of California C16 Licensed Fire Sprinkler Contractor. The calculations shall be based on NFPA 13.

C. At conclusion of base building construction, contractor shall provide hard copy and digital copies of as-built fire sprinkler drawings reflecting the actual installation.

1.5 SCOPE OF WORK COORDINATION

A. This section is provided in order to clarify additional work required by other trades.

B. Plumbing Subcontractor: The plumbing subcontractor shall furnish primed sanitary sewer drains at the base of fire sprinkler risers.

C. Electrical Subcontractor: The electrical subcontractor shall wire all tamper switches, water flow switches, fire pump, jockey pump, main controller, jockey controller, and appurtenances.

D. Wall and Ceiling Subcontractors

1. Access doors: Access doors in architectural walls and ceilings shall be provided by the wall or ceiling contractor where they are identified on fire protection drawings with a reference to same in architectural bid documents. The fire protection contractor shall locate and size all access doors relating to his work.

E. HVAC Subcontractor: Coordination of piping and ductwork: Ductwork takes priority over sprinkler piping unless transitions in piping create an offset below other piping that cannot be easily drained.

F. Miscellaneous Subcontractors or General Contractor:

1. Floor openings: The fire protection contractor shall locate and size all floor openings for piping and provide cans for same, except architectural shafts shown on architectural drawings. .

2. Equipment pads: The fire protection contractor shall locate and dimension all concrete bases and housekeeping pads relating to his work, to be provided by others.

3. Hoisting: Hoisting of all equipment, men and materials shall be coordinated. The Fire Sprinkler contractor shall provide all necessary rigging, supervisory labor and coordinate for hoisting only during normal working hours

1.6 SUBMITTALS

A. Submit Shop Drawings and Material Submittals to the Architect for approval.

B. Make all submittals sufficiently in advance of field requirements to allow ample time for checking.

C. Prepare and submit reproducible shop drawings and prints of all plans, sections, details and diagrams to minimum scale 1/8” = 1’ – 0”. Rooms and/or details shall be 1/4” = 1’0” minimum scale

1.8 UTILITY

A. For water supply, refer to the Underground Fire Protection and the Site Fire Protection plan. – Document TBD

1.9 REFERENCE STANDARDS AND CODES

A. Fire sprinkler system shall conform to the applicable requirements of the Building Codes, NFPA, Division of The State Architect Department requirements, State and Local Fire Marshal, and other applicable ordinances and codes.

1.10 GUARANTEE

A. The entire installation shall be guaranteed by the Contractor for a period of one year including repair and damage caused by leaks.

1.11 PRODUCT HANDLING AND STORAGE

A. Protect the Fire Sprinkler System materials from damage prior to installation. Protect the installed work of other trades.

1.12 EXTRA STOCK

A. Furnish extra sprinklers of each different type as required by NFPA 13 in a spare sprinkler cabinet with a special sprinkler wrench for each type.

1.13 TRENCHING AND BACKFILLING

A. Refer to the Underground Fire Protection.

PART 2 - PRODUCTS

2.1 PIPE AND FITTINGS

A. Piping 3” and larger Black Schedule 10 ASTM UL /FMG approved. Per district specs.
B. Piping 1”-2½” Schedule 40 ASTM UL /FMG approved Per district specs.
C. Fittings for Steel Piping: Threaded fittings shall be UL/FMG approved 150 lb. minimum ductile/cast iron, or UL/FMG approved. Grooved fittings shall be UL/FMG approved and minimum 175 psi minimum rated.

2.2 VALVES

A. Fire sprinkler control valves shall be UL/FMG grooved butterfly valves except where OS & Y gate valves are required before pumps per NFPA 20.

B. Check Valves shall be UL/FMG with grooved ends.

2.3 SPRINKLERS

A. Sprinkler heads shall be of the temperature rating and type as required. Provide quick response type as required. Provide sprinkler cage for exposed heads at 7 feet or lower elevations that are subject to damage.

B. Sprinkler head shall be located as indicated on the architectural drawings, or in cases where they are not indicated, as required by code and approved by the Architect. Additional sprinklers needed to meet aesthetic requirements are excluded.

C. Core ceiling sprinklers shall be white semi-recessed with white escutcheons.

D. Attic sprinklers shall be rough brass finish.

E. Exterior sprinklers shall have a white corrosion resistant coating.

F. Concealed ceiling sprinklers may be provided as an alternate for change where requested.

2.4 DRAIN AND TEST CONNECTIONS

A. Systems shall be installed to drain per where required per NFPA 13 with valves and piping of size as approved in accordance with NFPA 13. Drain risers capable of handling flow from hose valve test and equipped with connection for same shall be provided

2.5 KEY PLAN

A. Provide a key floor plan in frame showing locations of all standpipes and shut-off valves in a fire control room.

2.6 TAMPER SWITCHES, & FLOW SWITCHES

A. Tamper switches and flow switches shall be provided as per code.

2.7 STANDPIPE ACCESSORIES

A. Angle Hose: Potter Roemer, Croker, FPPI, or equal rough brass Gr. Or MNST X FNPT.
B. FDC: Potter Roemer, Croker, FPPI, or equal rough brass FNST X MNPT
C. Roof Connections: Two-Way rough brass by Potter Roemer, Croker, FPPI or equal.

PART 3 - EXECUTION

3.1 FABRICATION

A. All materials shall be new and as approved. All piping shall be reasonably free of rust. All fabrication shall be in compliance with the approved shop drawings.

3.2 INSPECTION

A. Prior to the commencement of each stage of the Fire Sprinkler System installation, carefully inspect the installed work of other trades and determine that all such work

is sufficiently complete to allow this installation to begin and that the work of other trades has been installed in such a manner as to permit this installation to be made in complete accordance with the approved design.

3.3 COORDINATION

A. Coordinate the installation schedule for this portion of the work with the overall construction schedule for the work to ensure orderly progress of the work with an absolute minimum of delay.

B. Coordinate interface of the Fire Sprinkler System with the work of all other trades to ensure proper and adequate provision for the installation and connection of this system.

3.4 INSTALLATION

A. Install the complete Fire Sprinkler System in strict accordance with the approved shop drawings.

B. Piping shall be concealed in all finished areas. Piping in exposed areas (areas without ceiling) and parking garage shall be exposed.

C. Where piping passes through rated walls, floors, or ceiling penetrations shall be fire-stopped.

D. Provide earthquake protection and bracing as required by NFPA 13.

E. Furnish all access doors for the work of the Section, Label per NFPA 13.

F. Piping shall be located under beams rather than through beams or columns whenever possible.

G. Install UL hangers, earthquake bracing, and branch-line restraints.

I. Set sprinkler heads at finished ceiling height where ceiling is in contract.

3.5 TESTS

A. Prior to connection to the overhead sprinkler piping, the site contractor should provide documentation showing the underground main was flushed and tested in the presence of the local fire inspector and met with his approval.

3.6 ACCEPTANCE AND INSTRUCTIONS

A. After completion of all installation, tests, etc., and prior to the opening date, instruct the Owner's representative in the operation of the sprinkler system and fire pump.

3.7 CLEANING UP

A. Upon completion of the work completely remove all debris and excess materials from the job site.

END OF DIVISION 21

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Sleeves.
   2. Sleeve-seal systems.

1.2 SUBMITTALS

B. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 SLEEVE-SEAL SYSTEMS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Link-Seal.
   2. Metraflex Company (The).
   3. Pipeline Seal and Insulator, Inc.
   4. Proco Products, Inc.

B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
   1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
   2. Pressure Plates: Carbon steel.
   3. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating, of length required to secure pressure plates to sealing elements.

PART 3 - EXECUTION

3.1 SLEEVE-SEAL-SYSTEM INSTALLATION

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade (when penetrations are below exterior finish grade elevation) at service piping entries into building.

B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

1.2 Section Includes:
1. Escutcheons.
2. Floor plates.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 ESCUTCHEONS

A. One-Piece, steel. With chrome finish.

B. Two-Piece, steel. With chrome finish.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install escutcheons for piping penetrations of walls, and ceilings in normally occupied rooms.

3.2 FIELD QUALITY CONTROL

A. Replace broken and damaged escutcheons and floor plates using new materials.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Bimetallic-actuated thermometers.
2. Thermowells.
3. Dial-type pressure gauges.
4. Gauge attachments.
5. Water meters

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Product certificates.

C. Operation and maintenance data.

PART 2 - PRODUCTS

2.1 BIMETALLIC-ACTUATED THERMOMETERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Palmer Wahl Instrumentation Group.
2. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
3. Weiss Instruments, Inc.

B. Standard: ASME B40.200.

C. Case: sealed type(s); stainless steel with 5-inch nominal diameter.

D. Dial: Nonreflective aluminum with permanently etched scale markings and scales in deg F.

E. Connector Type(s): Union joint, adjustable angle with unified-inch screw threads.

F. Connector Size: 1/2 inch, with ASME B1.1 screw threads.

G. Stem: 0.25 or 0.375 inch in diameter; stainless steel.

H. Window: Plain glass .

I. Ring: Stainless steel.

J. Element: Bimetal coil.

K. Pointer: Dark-colored metal.

L. Accuracy: Plus or minus 1 percent of scale range.

2.2 THERMOWELLS

A. Thermowells:
1. Standard: ASME B40.200.
2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
3. Material for Use with Copper Tubing: CNR or CUNI.
4. Material for Use with Steel Piping: CSA.
5. Type: Stepped shank unless straight or tapered shank is indicated.
6. External Threads: NPS 1/2, NPS 3/4, or NPS 1, ASME B1.20.1 pipe threads.
7. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
8. Bore: Diameter required to match thermometer bulb or stem.
9. Insertion Length: Length required to match thermometer bulb or stem.
10. Lagging Extension: Include on thermowells for insulated piping and tubing.
11. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

2.3 PRESSURE GAUGES

A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gauges:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
a. Palmer Wahl Instrumentation Group.
b. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
c. Weiss Instruments, Inc.
2. Standard: ASME B40.100.
3. Case: Sealed type(s); 4-1/2-inch nominal diameter.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
5. Pressure Connection: Brass, with NPS 1/4, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
6. Movement: Mechanical, with link to pressure element and connection to pointer.
7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi.
8. Pointer: Dark-colored metal.
9. Window: Glass.
10. Ring: Stainless steel.
11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

2.4 GAUGE ATTACHMENTS

A. Snubbers: ASME B40.100, brass; with NPS 1/4, ASME B1.20.1 pipe threads and porous-metal-type surge-dampening device. Include extension for use on insulated piping.

B. Valves: Brass or stainless-steel needle, with NPS 1/4, ASME B1.20.1 pipe threads.

2.5 WATER METERS

A. Positive displacement water meter.
   1. Min accuracy: Within 5% of minimum and maximum rated flow listing.
   2. Material: Low lead bronze or epoxy coated cast iron.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install thermowells with socket extending to center of pipe and in vertical position in piping tees.

B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.

C. Install thermowells with extension on insulated piping.

D. Fill thermowells with heat-transfer medium.

E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.

F. Install direct-mounted pressure gauges in piping tees with pressure gauge located on pipe at the most readable position.

G. Install snubber in piping for each pressure gauge for fluids.

H. Adjust faces of meters and gauges to proper angle for best visibility.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Bronze ball valves.
2. Iron, single-flange butterfly valves.
3. Bronze swing check valves.
4. Iron swing check valves.

B. Related Sections:
1. Division 22 plumbing piping Sections for specialty valves applicable to those Sections only.
2. Division 22 Section "Identification for Plumbing Piping and Equipment" for valve tags and schedules.

C. Applications:
1. Domestic cold water.
2. Domestic hot water/hot water return.

1.2 SUBMITTALS

A. Product Data: For each type of valve indicated.

1.3 QUALITY ASSURANCE

A. ASME Compliance: ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.

B. NSF Compliance: NSF 61 for valve materials for potable-water service.

C. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

A. Valve Sizes: Same as upstream piping unless otherwise indicated. In no case shall valves be smaller than equipment point of connection.

B. Valve-End Connections:
1. Flanged: With flanges according to ASME B16.1 for iron valves.
2. Solder Joint: With sockets according to ASME B16.18.
3. Threaded: With threads according to ASME B1.20.1.
4. Press-Fit: With female press end connections, according to ASME A112.4.14.

2.2 BRONZE BALL VALVES

A. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim, Lead Free:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
a. American Valve, Inc.
b. Crane Co.; Crane Valve Group; Crane Valves.
c. Hammond Valve.
d. Milwaukee Valve Company.
e. NIBCO INC.
2. Description:
a. Standard: MSS SP-110.
b. CWP Rating: 250 psig.
c. Body Design: Two piece.
d. Body Material: Bronze.
e. Ends: Threaded, soldered or press-fit.
f. Seats: PTFE or TFE.
g. Stem: Bronze.
h. Ball: Chrome-plated brass or stainless.
i. Port: Full.

2.3 IRON, SINGLE-FLANGE BUTTERFLY VALVES

A. Iron, Single-Flange Butterfly Valves with EPDM Seat and Aluminum-Bronze Disc, Lead Free:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
a. Crane Co.; Crane Valve Group; Jenkins Valves.
b. Hammond Valve.
c. Milwaukee Valve Company.
d. NIBCO INC.
2. Description:
a. Standard: MSS SP-67, Type I.
b. CWP Rating: 200 psig.
c. Body Design: Lug type; suitable for bidirectional dead-end service at rated pressure without use of downstream flange.
d. Body Material: ASTM A 536, ductile iron.
e. Seat: EPDM.
f. Stem: One- or two-piece stainless steel.
g. Disc: Aluminum bronze.
h. Body seal: EPDM.

2.4 BRONZE SWING CHECK VALVES

A. Bronze Swing Check Valves with Bronze Disc, Lead Free:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Crane Co.; Crane Valve Group; Crane Valves.
   b. Milwaukee Valve Company.
   c. NIBCO INC.
2. Description:
   a. Standard: MSS SP-80.
   b. CWP Rating: 200 psig.
   c. Body Design: Horizontal flow.
   d. Body Material: ASTM B 62, bronze.
   e. Ends: Threaded or soldered.
   f. Disc: Bronze.

2.5 IRON SWING CHECK VALVES

A. Iron Swing Check Valves with Metal Seats, Lead Free:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Crane Co.; Crane Valve Group; Crane Valves.
   b. Hammond Valve.
   c. Milwaukee Valve Company.
   d. NIBCO INC.
2. Description:
   a. Standard: MSS SP-71, Type I.
   b. NPS 2-1/2" to NPS 12", CWP Rating: 200 psig.
   c. Body Design: Clear or full waterway.
   d. Body Material: ASTM A 126, gray iron with bolted bonnet.
   e. Ends: Flanged.
   f. Trim: Bronze.
   g. Gasket: Asbestos free.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.

C. Examine threads on valve and mating pipe for form and cleanliness.

3.2 VALVE INSTALLATION

A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.

B. Locate valves for easy access and provide separate support where necessary.

C. Valves installed in horizontal piping shall have stem at or above center of pipe.

D. Install valves in position to allow full stem movement.

E. Install swing check valves for proper direction of flow and in horizontal position with hinge pin level.

3.3 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

A. Pipe NPS 2” and Smaller: Ball valves.

B. Pipe NPS 2-1/2 and Larger: Butterfly valves.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Metal pipe hangers and supports.
2. Trapeze pipe hangers.
3. Thermal-hanger shield inserts.
4. Pipe positioning systems.
5. Fastener systems.
6. Equipment supports.

1.2 PERFORMANCE REQUIREMENTS

A. Structural Performance: Hangers and supports, including bracing and other restraints, for plumbing piping and equipment shall withstand the effects of gravity, thermal, and seismic loads within limits and under conditions indicated according to 2019 CBC.
1. Design supports for multiple pipes capable of supporting combined weight of supported systems, system contents, and test water.
2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
3. Design seismic-restraint hangers and supports for piping and equipment.
4. Seismic design criteria per structural drawings.
5. Design piping systems to accommodate thermal changes without impact to serviceability.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Welding certificates.

C. Seismic bracing plans, details, and structural calculations

PART 2 - PRODUCTS

2.1 METAL PIPE HANGERS AND SUPPORTS

A. Carbon-Steel Pipe Hangers and Supports:
1. Description: MSS SP-58, and MSS SP-69.
2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
3. Padded Hangers: Hanger with felt to support bearing surface of piping for non-insulated copper piping.

4. Hanger Rods: Zinc-plated, continuous-thread rod, nuts, and washer made of carbon steel.

2.2 TRAPEZE PIPE HANGERS

A. Carbon-Steel Trapeze Pipe Hangers:
   1. Description: MSS SP-58, and MSS SP-69.
   2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.

2.3 THERMAL-HANGER SHIELD INSERTS

A. Insulation-Insert Material for Hot Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate with 100-psig minimum compressive strength and A-527 Galvanized sheet metal jacket.

B. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.

C. For Clevis, Band or J-Hangers: Insert and shield shall cover lower 180 degrees of pipe.

2.4 FASTENER SYSTEMS

A. Mechanical-Expansion Anchors: See mechanical details and structural details on plans.

2.5 PIPE POSITIONING SYSTEMS

A. Description: IAPMO PS 42, positioning system of metal brackets, clips, and straps for positioning piping in pipe spaces; for plumbing fixtures in commercial applications.

2.6 EQUIPMENT SUPPORTS

A. Description: See mechanical details and structural details.

PART 3 - EXECUTION

3.1 HANGER AND SUPPORT INSTALLATION

A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.

B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
   1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
   2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported.

C. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.

D. Fastener System Installation:
   1. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.

E. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.

F. Equipment Support Installation: Fabricate from welded-structural-steel shapes.

G. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

H. Install building attachments within concrete slabs or attach to structural steel.

I. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

J. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.

K. Insulated Piping:
   1. Attach clamps and spacers to piping.
      a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
      b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
      c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.

3.2 ADJUSTING

A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

3.3 HANGER AND SUPPORT SCHEDULE

A. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.

B. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.

C. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.

D. Use carbon-steel pipe hangers and supports and metal trapeze pipe hangers and attachments for general service applications.

E. Use padded felt lined hangers and clamps where applicable to prevent electrolysis between dissimilar metals.

F. Use thermal-hanger shield inserts for insulated piping and tubing.

G. Use pipe positioning systems in pipe spaces behind plumbing fixtures to support supply and waste piping for plumbing fixtures.

H. Horizontal-Piping Hangers and Supports: Support piping per 2019 CBC, and 2019 CMC requirements (including seismic requirements).

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Equipment labels.
2. Pipe labels.

1.2 SUBMITTAL

A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

A. Plastic Labels for Equipment:
1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16 inch thick, and having predrilled holes for attachment hardware.
2. Letter Color: White.
3. Background Color: Black .
4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
6. Minimum Letter Size: 1/2 inch.
7. Adhesive (when not attached by screws): Contact-type permanent adhesive, compatible with label and with substrate.

B. Label Content: Include equipment's Drawing designation or unique equipment number.

2.2 PIPE LABELS

A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.

B. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.

C. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.

2.3 CEILING TAGS:

1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16 inch thick.
2. Letter Color: White.
3. Background Color: Black.
4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
5. Minimum Label Size: Length and width vary for required label content, but not less than 1" by 1/2 inch.
6. Minimum Letter Size: 1/4 inch.
7. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 EQUIPMENT LABEL INSTALLATION

A. Install or permanently fasten labels on each major item of mechanical equipment.

B. Locate equipment labels where accessible and visible.

3.3 PIPE LABEL INSTALLATION

A. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
   1. At access doors, manholes, and similar access points that permit view of concealed piping.
   2. Near major equipment items and other points of origination and termination.
   3. Spaced at maximum intervals of 50 feet.
   4. Provide flow directional arrow minimum 1 at each label.

3.4 CEILING TAG INSTALLATION

A. Install labels on t-bar ceiling grid, or access door for each of the following:
   1. Main plumbing shutoff valves above ceiling.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Insulation Materials:
      a. Glass Fiber.
      b. Flexible elastomeric.
   2. Adhesives.
   3. Sealants.
   4. Factory-applied jackets.
   5. Field-applied jackets.
   6. Tapes.
   7. Securements.

B. Related Sections:
   1. Division 23 Section "Mechanical Insulation."

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

1.3 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: Insulation and related materials shall have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing and inspecting agency.
   1. Insulation Installed Indoors and outdoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

A. Comply with requirements in Part 3 schedule articles for where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Glass Fiber: Inorganic, incombustible, molded heavy density resin. Factory-applied all service jacket.
   1. Products: Provide the following or equal:
      a. “Owens Corning” ASJ/SSL II, complying with ASTM C547.

D. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
   1. Products: Provide one of the following or equal:
      a. Aeroflex USA Inc.; Aerocel.
      b. Armacell LLC; AP Armaflex.

2.2 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.

B. Flexible Elastomeric Adhesive: Comply with MIL-A-24179A, Type II, Class I.
   1. Products: Subject to compliance with requirements, provide the following] [provide one of the following:
      a. Aeroflex USA Inc.; Aeroseal.
      b. Armacell LCC; 520 Adhesive.
      c. Foster Products Corporation, H. B. Fuller Company; 85-75.
   2. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Glass-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the work include, but are not limited to, the following:
      a. Childers Products, Division of ITW; CP-82.
      b. Foster Products Corporation, H. B. Fuller Company; 85-20.
   2. For indoor applications, use adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

D. PVC Jacket Adhesive: Compatible with PVC jacket.
   1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
      a. Dow Chemical Company (The); 739, Dow Silicone.
      b. Johns-Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.
      c. P.I.C. Plastics, Inc.; Welding Adhesive.
      d. Speedline Corporation; Speedline Vinyl Adhesive.
   2. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.3 SEALANTS

A. FSK and Metal Jacket Flashing Sealants:
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Childers Products, Division of ITW; CP-76-8.
      b. Foster Products Corporation, H. B. Fuller Company; 95-44.
      c. Marathon Industries, Inc.; 405.
   2. Materials shall be compatible with insulation materials, jackets, and substrates.
   3. Fire- and water-resistant, flexible, elastomeric sealant.
   4. Service Temperature Range: Minus 40 to plus 250 deg F
   5. Color: Aluminum.
   6. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.4 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Johns Manville; Zeston.
      b. P.I.C. Plastics, Inc.; FG Series.
      c. Proto PVC Corporation; LoSmoke.
      d. Speedline Corporation; SmokeSafe.
   2. Adhesive: As recommended by jacket material manufacturer.
   3. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
      a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints.

C. Aluminum Jacket: Comply with ASTM B 209 Alloy 3003, 3005, 3105 or 5005, Temper H-14. Thickness is indicated in field-applied jacket schedules.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Childers Products, Division of ITW; Metal Jacketing Systems.
      b. PABCO Metals Corporation; Surefit.
      c. RPR Products, Inc; Insul-Mate.
   2. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
      a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints.

2.5 TAPES

A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the work include, but are not limited to, the following:
      a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0835.
      b. Compac Corp.; 104 and 105.
      c. Ideal Tape Co., Inc., an American Biltrite Company; 428 AWF ASJ.
      d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
   2. Width: 3 inches (75 mm).
   3. Thickness: 11.5 mils (0.29 mm).

2.6 SECUREMENTS

A. Aluminum Bands: ASTM B 209 Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 1/2 inch wide with wing or closed seal.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Childers Products; Bands.
      b. PABCO Metals Corporation; Bands.
      c. RPR Products, Inc.; Bands.

PART 3 - EXECUTION

3.1 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.2 GENERAL INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment and piping including fittings, valves, and specialties.

B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment and pipe system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Keep insulation materials dry during application and finishing.

F. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
   1. Install insulation continuously through hangers and around anchor attachments.
   2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
   3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
   4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

G. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

H. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

I. For above ambient services, do not install insulation to the following:
   1. Testing agency labels and stamps.
   2. Nameplates and data plates.
   3. Manholes.

J. Equipment requiring insulation:
   1. Water heating equipment (if not factory insulated).
   2. Exposed Lavatory P-traps and Hot Water Supply piping.

3.3 GENERAL PIPE INSULATION INSTALLATION

A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.

B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
   1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity, unless otherwise indicated.
   2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive.
   3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
   4. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
   5. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.

C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes, vessels, and equipment.

3.4 FLEXIBLE ELASTOMERIC INSULATION INSTALLATION

A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:
   1. Install pipe insulation to outer diameter of pipe flange.
   2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
   3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
   4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:
   1. Install mitered sections of pipe insulation.
   2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:
   1. Install preformed valve covers manufactured of same material as pipe insulation when available.
   2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   3. Install insulation to flanges as specified for flange insulation application.

4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.5 GLASS FIBER INSULATION INSTALLATION

1. Secure pipe insulation per manufacturer's recommendations.

3.6 FIELD-APPLIED JACKET INSTALLATION

A. Where PVC jackets are installed, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.

B. Where metal jackets are installed, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with aluminum bands 12 inches o.c. and at end joints.

3.7 FINISHES

A. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating where located outdoors.

3.8 INDOOR PIPING INSULATION SCHEDULE

A. Domestic Cold and non-potable within the building for condensation control: Insulation shall be the following:
   1. Glass-Fiber: 1" thick min, Preformed Pipe Insulation, Type I:
   2. Flexible Elastomeric: 1/2" thick insulation.

B. Condensate lines within the building for condensate control: Insulation shall be the following:
   1. Glass-Fiber, Preformed Pipe Insulation, Type I:
      a. All pipe sizes = 1" thick insulation.

C. Domestic Hot and Recirculated Hot Water: Insulation shall be the following:
   1. Glass-Fiber, Preformed Pipe Insulation, Type I:
      a. Pipe sizes 3/4" and less = 1" thick insulation.
      b. Pipe sizes 1" and larger = 1-1/2" thick insulation.

D. Roof Drain and Overflow Drain: Bodies of drains and downstream horizontal piping up to the point that piping turns vertical to drop to floor below, insulation shall be one of the following:
   1. Flexible Elastomeric: 1/2" thick insulation.
   2. Glass-Fiber: 1-1/2" thick duct wrap insulation.

3.9 OUTDOOR, ABOVEGROUND PIPING INSULATION SCHEDULE

A. Domestic Hot Water Piping: Insulation shall be the following:
   1. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1" thick insulation.

3.10 INDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install the field-applied jacket over the factory-applied jacket.

B. Piping, Exposed in Mechanical Rooms and other visible spaces without ceilings:
   1. PVC: 20 mils thick.

C. Piping accessible to students:
   1. Aluminum 0.016” thick. Stucco Embossed Finish

3.11 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. Piping, Exposed:
   1. Aluminum 0.016” thick. Stucco Embossed Finish

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Above and below ground domestic water pipes, tubes, fittings, and specialties inside the building.
2. Specialty valves.
3. Flexible connectors.

1.2 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Domestic water piping and support and installation shall withstand effects of earthquake motions determined according to 2019 CBC requirements. This is designed by Mason Industries, see seismic drawings.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Detail, at ¼" per foot, the piping layout, fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to the building structure. Detail location of anchors, alignment guides, and expansion joints and loops.

C. Field quality-control reports.

1.4 QUALITY ASSURANCE

A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

B. Comply with NSF 61 for potable domestic water piping and components.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.2 COPPER TUBE AND FITTINGS

A. Hard Copper Tube: ASTM B 88, Type L water tube, drawn temper.
1. Wrought-Copper Solder-Joint Fittings: ASME B16.22, wrought-copper pressure fittings.
2. Wrought-Copper Press Fit Fittings: ASME B16.22, wrought-copper mechanical press fittings.

3. Bronze Flanges: ASME B16.24, Class 150, with solder-joint or mechanical press ends.
4. Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces, and solder-joint, threaded or mechanical press ends.

B. Soft Copper Tube: ASTM B 88, Type K water tube, annealed temper.
1. Wrought-Copper Solder-Joint Fittings: ASME B16.22, wrought-copper pressure fittings.
2. Wrought-Copper Press-Fit Fittings: ASME B16.22, wrought-copper mechanical press fittings.

2.3 PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials: AWWA C110, Aramid fiber with nitrile binder, Garlock 2550 or equal.

B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

C. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

D. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.

E. Gasket Material: Thickness, material and type suitable for fluid to be handled and working temperatures and pressures.

2.4 DIELECTRIC FITTINGS

A. General Requirements: Assembly of copper alloy and ferrous materials or ferrous material body with separating nonconductive insulating material suitable for system fluid, pressure, and temperature.

B. Dielectric Flanges:
1. Description:
a. Manufacturer: CTS
b. Factory-fabricated, bolted, companion-flange assembly, UL Listed.
c. Pressure Rating: 150 psig minimum.
d. End Connections: Solder-joint or mechanical press copper alloy.
e. EPDM insulator.

C. Dielectric Nipples:
1. Description:
a. Manufacturer: Perfection Corp – Clearflow
b. Electroplated steel nipple complying with ASTM F 1545.
c. Pressure Rating: 300 psig at 225 deg F.

d. End Connections: Male threaded or grooved.
e. Lining: Inert and noncorrosive, propylene.

2.5 FLEXIBLE CONNECTORS

A. Stainless-Steel-Hose Flexible Connectors: Corrugated-stainless-steel tubing with stainless-steel wire-braid covering and ends welded to inner tubing.
1. Working-Pressure Rating: Minimum 150 psig.
2. End Connections NPS 2” and Smaller: Threaded steel-pipe nipple.
3. End Connections NPS 2-1/2” and Larger: Flanged steel nipple.

B. Manufacturers:
1. Metraflex, Inc.
2. Unaflex, Inc.
3. Unisource, Inc.
4. Or equal

PART 3 - EXECUTION

3.1 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of domestic water piping. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

B. Install copper tubing under building slab according to CDA's "Copper Tube Handbook."

C. Install water-pressure-reducing valves downstream from shutoff valves. Comply with requirements in Division 22 Section "Domestic Water Piping Specialties" for pressure-reducing valves.

D. Install domestic water piping level and plumb, unless indicated otherwise.

E. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.

F. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls.

G. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.

H. Install piping adjacent to equipment and specialties to allow service and maintenance.

I. Install piping to permit valve servicing.

J. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than system pressure rating used in applications below unless otherwise indicated.

K. Install piping free of sags and bends.

L. Install fittings for changes in direction and branch connections. “T-Drill” fittings are acceptable with brazed joints.

M. Install unions in copper tubing at final connection to each piece of equipment, machine, and specialty.

N. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 22 Section "Sleeves and Sleeve Seals for Plumbing Piping."

O. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22 Section "Escutcheons for Plumbing Piping."

3.2 JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

B. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
   1. Apply appropriate tape or thread compound to external pipe threads.
   2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

D. Brazed Joints: Join copper tube and fittings according to CDA's "Copper Tube Handbook," "Brazed Joints" Chapter.

E. Soldered Joints: Apply ASTM B 813, water-flushable flux to end of tube. Join copper tube and fittings according to ASTM B 828 or CDA's "Copper Tube Handbook."

F. Flanged Joints: Select appropriate asbestos-free, nonmetallic gasket material in size, type, and thickness suitable for domestic water service. Join flanges with gasket and bolts according to ASME B31.9.

G. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

3.3 VALVE INSTALLATION

A. General-Duty Valves: Comply with requirements in Division 22 Section "General-Duty Valves for Plumbing Piping" for valve installations.

3.4 DIELECTRIC FITTING INSTALLATION

A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.

B. Dielectric Fittings for NPS 2” and Smaller: Use dielectric nipples.

C. Dielectric Fittings for NPS 2-1/2” and larger: Use dielectric flanges.

3.5 FLEXIBLE CONNECTOR INSTALLATION

A. Install flexible connectors in suction and discharge piping connections to each domestic water pump.

B. Install stainless-steel-hose flexible connectors with dielectric flanges in domestic water piping.

C. Install flexible connections as shown on plans.

3.6 HANGER AND SUPPORT INSTALLATION

A. Comply with requirements in Division 22 Section "Vibration and Seismic Controls for Plumbing Piping and Equipment" for seismic-restraint devices.

B. Comply with requirements in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment" for pipe hanger and support products and installation.

3.7 IDENTIFICATION

A. Identify system components. Comply with requirements in Division 22 Section "Identification for Plumbing Piping and Equipment" for identification materials and installation.

3.8 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Piping Inspections:
   1. Do not enclose, cover, or put piping into operation until it has been inspected and approved by authorities having jurisdiction.
   2. During installation, notify authorities having jurisdiction at least one day before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction:
      a. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.

b. Final Inspection: Arrange final inspection for authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

3. Reinspection: If authorities having jurisdiction find that piping will not pass tests or inspections, make required corrections and arrange for reinspection.
4. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

C. Piping Tests:
1. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.
2. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.
3. Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.
4. Cap and subject piping to static water pressure of 125 psig. Isolate test source and allow to stand for two hours minimum. Leaks and loss in test pressure constitute defects that must be repaired.
5. Repair leaks and defects with new materials and retest piping or portion thereof until satisfactory results are obtained.
6. Prepare reports for tests and for corrective action required.
7. Demonstrate to owner representative and/or inspector of record for approval.

D. Domestic water piping will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.9 CLEANING

A. Clean and disinfect potable domestic water piping as follows:
1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
2. Use purging and disinfecting procedures prescribed by authorities having jurisdiction; if methods are not prescribed, use procedures described in either AWWA C651 or AWWA C652, as summarized below:
a. Inspect results from system purge to ensure material integrity and removal of system contaminants that may have entered the system.
b. Chlorinate system by methods as described in AWWA C651 standard (Liquid chlorine, sodium hypochlorite, calcium hypochlorite). Method must be approved by design team prior to acceptance of process.
c. Document that an adequate level of chlorine contacted each pipe to provide disinfection. Ensure that dosage and duration requirements for proper disinfection are met.
d. Flush and purge all hyper-chlorinated waters from the system to chlorine levels that are consistent with incoming city water.

e. Determine bacteriological quality (coliform and heterotrophic bacteria) by independent certified laboratory test after the disinfection process.

B. Prepare and submit reports of purging and disinfecting activities.

3.10 PIPING SCHEDULE

A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.

B. Flanges and unions may be used for aboveground piping joints unless otherwise indicated.

C. Under-building-slab, domestic water building service piping, NPS 8”and smaller, shall be one of the following:
1. ASTM B 88, Type K; wrought-copper brazed joint fittings.

D. Under-building-slab, domestic water piping, NPS 1” and smaller shall be one of the following:
1. Hard or soft copper tube, ASTM B 88, Type K; wrought-copper fittings with brazed joints.

E. Aboveground domestic water piping, NPS 2” and smaller, shall be:
1. Hard copper tube, ASTM B 88, Type L; wrought copper solder-joint fittings; and soldered or brazed joints or wrought copper mechanical press fittings.

F. Aboveground domestic water piping, NPS 2-1/2” and larger shall be:
1. Hard copper tube, ASTM B 88, Type L; wrought copper solder-joint fittings; brazed joints, or wrought copper mechanical press fittings (up to and including 4” NPS)

3.11 VALVE SCHEDULE

A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
1. Shutoff Duty: Use ball valves for piping NPS 2” and smaller. Use butterfly valves for piping NPS 2-1/2 and larger.
2. Hot-Water Circulation Piping, Balancing Duty: Memory-stop balancing valves.

B. Use check valves to maintain correct direction of domestic water flow to and from equipment.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following domestic water piping specialties:
   1. Backflow preventers.
   2. Water pressure-reducing valves.
   3. Balancing valves.
   4. Strainers.
   5. Hose bibbs.
   6. Water hammer arresters.
   7. Trap-seal primer valves.
   8. Outlet boxes (ice maker boxes).

1.2 PERFORMANCE REQUIREMENTS

A. Minimum Working Pressure for Domestic Water Piping Specialties: 150 psig, unless otherwise indicated.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Field quality-control test reports.

C. Operation and maintenance data.

1.4 QUALITY ASSURANCE

A. NSF Compliance:
   1. Comply with NSF 61, "Drinking Water System Components - Health Effects; Sections 1 through 9."

PART 2 - PRODUCTS

2.1 VACUUM BREAKERS

A. Pipe-Applied, Atmospheric-Type Vacuum Breakers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Ames Co.
      b. Conbraco Industries, Inc.
      c. FEBCO; SPX Valves & Controls.
      d. Watts Industries, Inc.; Water Products Div.
      e. Zurn Plumbing Products Group; Wilkins Div.
   2. Standard: ASSE 1001.
   3. Body: Bronze.
   4. Inlet and Outlet Connections: Threaded.
   5. Finish: Rough bronze.

B. Hose-Connection Vacuum Breakers:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Conbraco Industries, Inc.
b. MIFAB, Inc.
c. Watts Industries, Inc.; Water Products Div.
d. Woodford Manufacturing Company.
e. Zurn Plumbing Products Group; Light Commercial Operation.
f. Zurn Plumbing Products Group; Wilkins Div.
2. Standard: ASSE 1001.
3. Body: Bronze, nonremovable, with manual drain.
4. Outlet Connection: Garden-hose threaded complying with ASME B1.20.7.
5. Finish: Rough bronze.

2.2 BACKFLOW PREVENTERS

A. Reduced-Pressure-Principle Backflow Preventers :
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Conbraco Industries, Inc.
b. FEBCO; SPX Valves & Controls.
c. Watts Industries, Inc.; Water Products Div.
d. Zurn Plumbing Products Group; Wilkins Div.
2. Standards: ASSE 1013.
3. Listing: UPC.
4. Body: Bronze for NPS 2” and smaller; FDA epoxy coated cast iron for NPS 2-1/2 and larger.
5. End Connections: Threaded for NPS 2” and smaller; flanged for NPS 2-1/2 and larger.
6. Configuration: Designed for horizontal flow.
7. Accessories:
a. Valves: Ball type with threaded ends on inlet and outlet of NPS 2 and smaller; outside screw and yoke gate-type with flanged ends on inlet and outlet of NPS 2-1/2 (DN 65) and larger.
b. Air-Gap Fitting: ASME A112.1.2, matching backflow-preventer connection.
8. Location: install between 1’-0” and 5’-0” above finished floor. If mounted above 5’-0” a platform is required per 2016 CPC.

2.3 WATER PRESSURE-REDUCING VALVES

A. Water Regulators:
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Conbraco Industries, Inc.
b. Watts Industries, Inc.; Water Products Div.
c. Zurn Plumbing Products Group; Wilkins Div.

3. Standard: ASSE 1003.
4. Pressure Rating: Initial working pressure of 150 psig.
5. Body: Bronze for NPS 2 and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved for NPS 2-1/2 and larger.
6. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and NPS 3.

B. Manufacturers:
1. Bell & Gossett
2. Watts
3. Armstrong

2.4 BALANCING VALVES

A. Memory-Stop Balancing Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Conbraco Industries, Inc.
   b. Crane Co.; Crane Valve Group; Crane Valves.
   c. Hammond Valve.
   d. Milwaukee Valve Company.
   e. NIBCO INC.
   f. B&G.
2. Pressure Rating: 200-psig minimum at 250 deg F.
3. Size: NPS 2” and smaller.
4. Body: Bronze.
5. Port: Full port.
6. Ball: Brass or chrome-plated brass.
7. End Connections: Solder joint or threaded.

B. Automatic Balancing Valves:
1. Manufacturers:
   a. Victaulic
2. Pressure Rating: 400 psi at 180 deg F.
3. Size: ¾” and smaller
4. Body: Series 300 Stainless Steel
5. End Connections: Threaded

2.5 STRAINERS FOR DOMESTIC WATER PIPING

A. Y-Pattern Strainers:
1. Pressure Rating: 125 psig minimum, unless otherwise indicated.
2. Body: Bronze.
3. End Connections: Threaded for NPS 2” and smaller; flanged for NPS 2-1/2”and larger.
4. Screen: Stainless steel with round perforations.

5. Drain: Provide ball valve with hose end at each strainer.

B. Manufacturers:
1. Watts.
2. IFC.
3. Armstrong.

2.6 WATER HAMMER ARRESTERS

A. Water Hammer Arresters:
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Josam Company.
b. MIFAB, Inc.
c. PPP Inc.
d. Sioux Chief Manufacturing Company, Inc.
e. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
f. Watts Drainage Products Inc.
g. Zurn Plumbing Products Group; Specification Drainage Operation.
3. Standard: ASSE 1010 or PDI-WH 201.
4. Type: Copper tube with piston.

2.7 TRAP-SEAL PRIMER VALVES

A. Supply-Type, Trap-Seal Primer Valves :
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. MIFAB, Inc.
b. PPP Inc.
c. Sioux Chief Manufacturing Company, Inc.
d. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
e. Watts Industries, Inc.; Water Products Div.
2. Standard: ASSE 1018.
3. Pressure Rating: 125 psig minimum.
4. Body: Bronze.
5. Inlet and Outlet Connections: NPS ½" threaded, union, or solder joint.
6. Gravity Drain Outlet Connection: NPS ½" threaded or solder joint.
7. Finish: Chrome plated, or rough bronze for units used with pipe or tube that is not chrome finished.

2.8 OUTLET BOXES

A. Outlet Boxes
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Acorn Engineering Company.

b. Guy Gray Manufacturing Co., Inc.
c. Bradely
2. Mounting: Recessed.
3. Material and Finish: Stainless-steel box.
4. Faucet: Separate hot- and cold-water, valved fittings complying with ASME A112.18.1. Include garden-hose thread complying with ASME B1.20.7 on outlets.

2.9 HOSE BIBBS

A. Hose Bibbs:
1. Standard: ASME A112.18.1 for sediment faucets.
2. Body Material: Bronze.
3. Seat: Bronze, replaceable.
4. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
5. Pressure Rating: Min 125 psig.
6. Vacuum Breaker: Integral hose-connection vacuum breaker complying with ASSE 1011.
7. Finish: See plans.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install backflow preventers in each water supply to mechanical equipment and/or systems and to other equipment and water systems that may be sources of contamination. Comply with authorities having jurisdiction.
1. Locate backflow preventers in same room as connected equipment or in serviceable location.
2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe to floor drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are not acceptable for this application.
3. Do not install bypass piping around backflow preventers.

B. Install balancing valves in locations where they can easily be adjusted.

C. Install water hammer arresters in water piping according to PDI-WH 201.

D. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping and specialties.

3.2 FIELD QUALITY CONTROL

A. Perform the following tests and prepare test reports:
1. Contractor to test each reduced-pressure-principle backflow preventer and provide certification and submit test to owner representative.

B. Remove and replace malfunctioning domestic water piping specialties and retest as specified above.

C. Clean strainers after start-up.

3.3 ADJUSTING

A. Set field-adjustable pressure set points of water pressure-reducing valves.

B. Set field-adjustable flow of balancing valves.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following soil and waste, sanitary drainage and vent piping inside the building and outside the building up to connection to Civil plans.
   1. Pipe, tube and fittings.

1.2 SUBMITTALS

A. Field quality-control inspection and test reports.

B. Product data sheets.

C. Shop Drawings: Detail, at ¼" per foot, the piping layout, fabrication of pipe anchors, hangers, supports for multiple pipes, and attachments of the same to the building structure. Detail location of anchors.

1.3 QUALITY ASSURANCE

A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

A. Hubless Cast-Iron Pipe and Fittings: ASTM A 888 or CISPI 301.
   1. Shielded Couplings: ASTM C 1277 assembly of metal shield or housing, corrosion-resistant fasteners, and rubber sleeve with integral, center pipe stop.
      a. Standard Duty Couplings: CISPI 310, with stainless-steel corrugated shield; stainless-steel bands and tightening devices and ASTM C 564, rubber sleeve.
      b. Heavy-Duty Couplings: Husky HD 2000 or equal, ASTM C1540 and ASTM C564, with stainless-steel shield, stainless-steel bands and tightening devices, and rubber sleeve.

B. Copper DWV Tube: ASTM B 306, drainage tube, drawn temper.
   1. Copper Drainage Fittings: ASME B16.23, cast copper or ASME B16.29, wrought-copper, solder-joint fittings.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

A. Aboveground, sanitary waste piping shall be any of the following:
   1. Hubless cast-iron soil pipe and fittings; heavy duty couplings, and hubless-coupling joints.

2. Copper DWV tube, copper drainage fittings, and soldered joints (for trap arms, connection to fixtures, and in tight spaces).

B. Aboveground sanitary vent piping shall be any of the following:
   1. Hubless cast-iron soil pipe and fittings; shielded, standard duty stainless-steel couplings; and hubless-coupling joints.
   2. Copper DWV tube, copper drainage fittings, and soldered joints.

C. Underground, soil, waste, and vent piping shall be:
   1. Hubless cast-iron soil pipe and fittings; heavy duty stainless-steel couplings; and hubless-coupling joints.

3.2 PIPING INSTALLATION

A. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers.

B. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."

C. Install soil and waste drainage and vent piping at the following minimum slopes, unless otherwise indicated:
   1. Horizontal Sanitary Drainage Piping: 2 percent downward in direction of flow.
   2. Vent Piping: May be installed with no slope if above the floor rim of fixture served. Otherwise, vent piping shall be sloped 1 percent downward.

D. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

E. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22 Section "Escutcheons for Plumbing Piping."

3.3 JOINT CONSTRUCTION

A. Basic piping joint construction requirements are specified in Division 22 Section "Common Work Results for Plumbing."

B. Cast-Iron, Soil-Piping Joints: Make joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
   1. Hubless Joints: Make with rubber gasket and sleeve or clamp.

C. Soldered Joints: Use ASTM B 813, water-flushable, lead-free flux; ASTM B 32, lead-free-alloy solder; and ASTM B 828 procedure, unless otherwise indicated.

3.4 HANGER AND SUPPORT INSTALLATION

A. Pipe hangers and supports are specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."

3.5 FIELD QUALITY CONTROL

A. During installation, notify authorities having jurisdiction before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
   1. Roughing-in Inspection: Submit request for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
   2. Final Inspection: Final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.
   3. Refer to Division 1 Inspection Notification Requirements.

B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

D. Test sanitary drainage and vent piping according to the following procedures:
   1. Duration – 4 hours with water at minimum 10-foot head.
   2. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
   3. Prepare reports for tests and required corrective action.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following sanitary drainage piping specialties:
   1. Cleanouts.
   2. Floor drains.
   3. Miscellaneous sanitary drainage piping specialties.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and accessories for grease interceptors.

1.3 QUALITY ASSURANCE

A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

PART 2 - PRODUCTS

2.1 CLEANOUTS

A. Exposed Cast-Iron Cleanouts:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Josam Company.
      b. Zurn.
      c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
      d. Tyler Pipe; Wade Div.
   2. Standard: ASME A112.36.2M for cast iron for cleanout test tee.
   3. Size: Same as connected drainage piping
   4. Body Material: Hubless, cast-iron soil pipe test tee as required to match connected piping.
   5. Closure: Countersunk or raised-head brass or bronze plug.

B. Cast-Iron Floor Cleanouts:
   1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Josam Company; Josam Div.
      b. Sioux Chief Manufacturing Company, Inc.
      c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
      d. Watts Drainage Products Inc.
      e. Zurn Plumbing Products Group; Light Commercial Operation.
   2. Standard: ASME A112.36.2M for adjustable housing cleanout.
   3. Size: Same as connected branch.
   4. Type: Threaded, adjustable housing.
   5. Body or Ferrule: Cast iron

6. Closure: Countersunk or raised-head brass or bronze plug.
7. Adjustable Housing Material: Cast iron.
8. Frame and Cover Material and Finish: Rough bronze.
9. Frame and Cover Shape: Round or square to match floor.

C. Cast-Iron Wall Cleanouts:
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Josam Company; Josam Div.
   b. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   c. Watts Drainage Products Inc.
   d. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.36.2M. Include wall access.
3. Size: Same as connected drainage piping.
4. Body: Cast-iron soil pipe T-branch as required to match connected piping. Option for drilled-and-threaded plug in first subparagraph below is for a screw for a wall cover plate.
5. Closure: Countersunk or raised-head brass or bronze plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
7. Wall Access: Round, Flat, chrome-plated brass or stainless-steel cover plate with screw. Provide rated access door where necessary.

2.2 FLOOR DRAINS

A. Cast-Iron Floor Drains:
1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Josam Company; Josam Div.
   b. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   c. Watts Drainage Products Inc.
   d. Zurn Plumbing Products Group; Light Commercial Operation.
   e. Mason Industries.
2. Standard: ASME A112.6.3.
3. Body Material: Cast iron.
4. Seepage Flange: Required.
5. Anchor Flange: Not required.
6. Top or Strainer Material: Bronze.
7. Top of Body and Strainer Finish: Rough bronze.
8. Top Shape: Round or Square, to match flooring.
9. Trap Material: Cast iron.
10. Trap Features: Trap-seal primer connection as required.
11. For floor drains in floating floor: Drains provided by Mason Industries. See plans.

B. Floor-Drain, Trap-Seal Primer Fittings:
1. Description: Cast iron, with threaded inlet and threaded or spigot outlet, and trap-seal primer valve connection.
2. Size: Same as floor drain outlet with NPS ½" side inlet.

C. Note: CPC listed trap guards are an acceptable alternative to trap primers.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Refer to Division 22 Section "Common Work Results for Plumbing" for piping joining materials, joint construction, and basic installation requirements.

B. Install cleanouts in aboveground piping and building drain piping according to the following (and as required by the 2007 CPC):
   1. Size same as drainage piping up to NPS 4". Use 4" cleanouts for larger drainage piping unless larger cleanout is indicated.
   2. Locate at each change in direction of piping greater than 135 degrees.
   3. Locate at minimum intervals of 100 feet of piping.
   4. Locate at base of each vertical soil and waste stack.

C. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.

D. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall. For rated walls, provide rated access doors.

E. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.
   1. Position floor drains for easy access and maintenance.
      a. Set floor drains below elevation of surrounding finished floor to allow floor drainage.
      b. Install floor-drain flashing collar or flange so no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes where penetrated.
   2. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.

F. Install floor-drain, trap-seal primer fittings on inlet to floor drains that require trap-seal primer connection or a UPC listed trap guard alternative.
   1. Exception: Fitting may be omitted if trap has trap-seal primer connection.
   2. Size: Same as floor drain outlet.

3.2 CONNECTIONS

A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to equipment to allow service and maintenance.

3.3 PROTECTION

A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.

B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following storm drainage piping inside the building.
   1. Pipe and fittings.

1.2 PERFORMANCE REQUIREMENTS

A. Components and installation shall be capable of withstanding the following minimum working pressure, unless otherwise indicated:
   1. Storm Drainage Piping: 10-foot head of water or 5 PSI air.

1.3 SUBMITTALS

A. Field quality-control inspection and test reports.

B. Product data sheets.

1.4 QUALITY ASSURANCE

A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

A. Hubless Cast-Iron Pipe and Fittings: ASTM A 888 or CISPI 301.
   1. Shielded Couplings: ASTM C 1277 assembly of metal shield or housing, corrosion-resistant fasteners, and rubber sleeve with integral, center pipe stop.
      a. Heavy Duty Couplings: Husky SD 4000 or equal, with stainless-steel shield, stainless-steel bands and tightening devices, heavy duty FM-1680 compliant, and ASTM C 564, rubber sleeve.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

A. Special pipe fittings with pressure ratings at least equal to piping pressure ratings may be used in applications below, unless otherwise indicated.

B. Aboveground storm drainage piping NPS 12 and smaller shall be any of the following:
   1. Hubless cast-iron soil pipe and fittings; heavy-duty shielded, stainless-steel couplings; and coupled joints.

C. Underground storm drainage piping shall be the following:
   1. Hubless cast-iron soil pipe and fittings; heavy-duty shielded, stainless-steel couplings; and coupled joints.

3.2 PIPING INSTALLATION

A. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."

B. Make changes in direction for storm piping using appropriate branches, bends, and long-sweep bends. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.

C. Install storm drainage piping at the following minimum slopes, unless otherwise indicated:
   1. Building Storm Drain: 2 percent downward in direction of flow.
   2. Horizontal Storm-Drainage Piping: 2 percent downward in direction of flow.

D. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

E. Install escutcheons for exposed pipe penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22 Section "Escutcheons for Plumbing Piping."

3.3 JOINT CONSTRUCTION

A. Hubless Cast-Iron Soil Piping Coupled Joints: Join according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-coupling joints.

B. Soldered Joints: Use ASTM B 813, water-flushable, lead-free flux; ASTM B 32, lead-free-alloy solder; and ASTM B 828 procedure, unless otherwise indicated.

3.4 HANGER AND SUPPORT INSTALLATION

A. Install supports according to Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."

3.5 CONNECTIONS

A. Connect interior storm drainage piping to exterior storm drainage piping. Use approved transition fitting to join dissimilar piping materials.

B. Connect storm drainage piping to roof drains and storm drainage specialties.

3.6 FIELD QUALITY CONTROL

A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
   1. Arrange for inspection of piping before concealing or closing-in after roughing-in. Test piping with 10’ head for 15 minutes.

B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

3.7 CLEANING

A. Clean interior of piping. Remove debris as work progresses.

B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.

C. Place plugs in ends of uncompleted piping at end of day and when work stops.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:
   1. Faucets for lavatories and sinks.
   2. Flushometers.
   3. Toilet seats.
   4. Fixture supports.
   5. Water closets.
   6. Lavatories.
   7. Sinks.

1.2 DEFINITIONS

A. Accessible Medical Plumbing Fixture: Plumbing fixture that can be approached, entered, and used by people with disabilities.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Diagram power, signal, and control wiring.

C. Operation and maintenance data.

1.4 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in 2016 C.E.C., by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

B. Regulatory Requirements: Comply with requirements in ICC A117.1, "Accessible and Usable Buildings and Facilities"; Public Law 90-480, "Architectural Barriers Act"; and Public Law 101-336, "Americans with Disabilities Act"; for plumbing fixtures for people with disabilities.

C. Regulatory Requirements: Comply with requirements in Public Law 102-486, "Energy Policy Act," about water flow and consumption rates for plumbing fixtures.

D. NSF Standard: Comply with NSF 61, "Drinking Water System Components--Health Effects," for fixture materials that will be in contact with potable water.

E. Select combination fixtures and trim, faucets, fittings, and other components that are compatible.

F. Comply with the following applicable standards and other requirements specified for lavatory and sink faucets:

1. Backflow Protection Devices for Faucets with Hose-Thread Outlet: ASME A112.18.3M.
2. Diverter Valves for Faucets with Hose Spray: ASSE 1025.
3. Faucets: ASME A112.18.1.
4. Hose-Connection Vacuum Breakers: ASSE 1011.
5. Hose-Coupling Threads: ASME B1.20.7.
6. Integral, Atmospheric Vacuum Breakers: ASSE 1001.
7. NSF Materials: NSF 61.
8. Pipe Threads: ASME B1.20.1.
9. Sensor-Actuated Faucets and Electrical Devices: UL 1951.
10. Supply Fittings: ASME A112.18.1.
11. Brass Waste Fittings: ASME A112.18.2.

G. Comply with the following applicable standards and other requirements specified for shower faucets:
1. Backflow Protection Devices for Hand-Held Showers: ASME A112.18.3M.
2. Combination, Pressure-Equalizing and Thermostatic-Control Antiscald Faucets: ASSE 1016.
3. Faucets: ASME A112.18.1.
4. Hand-Held Showers: ASSE 1014.
5. High-Temperature-Limit Controls for Thermal-Shock-Preventing Devices: ASTM F 445.
6. Hose-Coupling Threads: ASME B1.20.7.
7. Manual-Control Antiscald Faucets: ASTM F 444.
8. Pipe Threads: ASME B1.20.1.
9. Pressure-Equalizing-Control Antiscald Faucets: ASTM F 444 and ASSE 1016.
10. Sensor-Actuated Faucets and Electrical Devices: UL 1951.
11. Thermostatic-Control Antiscald Faucets: ASTM F 444 and ASSE 1016.

H. Comply with the following applicable standards and other requirements specified for miscellaneous fittings:
1. Atmospheric Vacuum Breakers: ASSE 1001.
2. Brass and Copper Supplies: ASME A112.18.1.
3. Flexible Water Connectors: ASME A112.18.6.
4. Manual-Operation Flushometers: ASSE 1037.
5. Sensor-Operation Flushometers: ASSE 1037 and UL 1951.
6. Brass Waste Fittings: ASME A112.18.2.

I. Comply with the following applicable standards and other requirements specified for miscellaneous components:
1. Hose-Coupling Threads: ASME B1.20.7.
2. Off-Floor Fixture Supports: ASME A112.6.1M.
3. Pipe Threads: ASME B1.20.1.
4. Plastic Toilet Seats: ANSI Z124.5.
5. Supply and Drain Protective Shielding Guards: ICC A117.1.

PART 2 - PRODUCTS

2.1 2.10 See fixture schedule on Sheet P0.3 for fixtures. Provide listed fixture (or equal).

PART 3 - EXECUTION

3.1 INSTALLATION

A. Assemble medical plumbing fixtures, trim, fittings, and other components according to manufacturers' written instructions.

B. Install off-floor supports, affixed to building substrate, for wall-mounting fixtures.
   1. Use carrier supports with waste fitting and seal for back-outlet fixtures.
   2. Use carrier supports without waste fitting for fixtures with tubular waste piping.
   3. Use chair-type carrier supports with rectangular steel uprights for accessible fixtures.

C. Install back-outlet, wall-mounting fixtures onto waste fitting seals and attach to supports.

D. Install wall-mounting fixtures with tubular waste piping attached to supports.

E. Install fixtures level and plumb according to roughing-in drawings.

F. Install water-supply piping with stop on each supply to each fixture to be connected to domestic water piping. Attach supplies to supports or substrate within pipe spaces behind fixtures. Install stops in locations where they can be easily reached for operation.

G. Install trap and tubular waste piping on drain outlet of each fixture to be directly connected to sanitary drainage system.

H. Install flushometer valves for accessible water closets with handle mounted on wide side of compartment. Install other actuators in locations that are easy for people with disabilities to reach.

I. Install toilet seats on water closets.

J. Install faucet-spout fittings with specified flow rates and patterns in faucet spouts if faucets are not available with required rates and patterns. Include adapters if required.

K. Install shower flow-control fittings with specified maximum flow rates in shower arms.

L. Install traps on fixture outlets.
   1. Exception: Omit trap on fixtures with integral traps.

M. Install escutcheons at piping wall penetrations in exposed, finished locations and within cabinets and millwork. Use deep-pattern escutcheons if required to conceal protruding fittings. Escutcheons are specified in Division 22 Section "Escutcheons for Plumbing Piping."

N. Maintain fire rated wall construction when installing fixtures on rated walls.

3.2 CONNECTIONS

A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect water supplies from domestic water piping to medical plumbing fixtures.

C. Connect drain piping from medical plumbing fixtures to sanitary waste and vent piping.

3.3 FIELD QUALITY CONTROL

A. Check that medical plumbing fixtures are complete with trim, faucets, fittings, and other specified components.

B. Inspect installed medical plumbing fixtures for damage. Replace damaged fixtures and components.

C. Test installed fixtures after water systems are pressurized for proper operation. Replace malfunctioning fixtures and components, then retest. Repeat procedure until units operate properly.

3.4 PROTECTION

A. Provide protective covering for installed fixtures and fittings.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Sleeves.
   2. Sleeve-seal systems.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 SLEEVE-SEAL SYSTEMS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Link-Seal.
   2. Metraflex Company (The).
   3. Pipeline Seal and Insulator, Inc.
   4. Proco Products, Inc.

B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
   1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
   2. Pressure Plates: Carbon steel.
   3. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating, of length required to secure pressure plates to sealing elements.

PART 3 - EXECUTION

3.1 SLEEVE-SEAL-SYSTEM INSTALLATION

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.

B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Escutcheons.
   2. Floor plates.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 ESCUTCHEONS

A. One piece, steel. With chrome finish.

B. Two-piece, steel. With chrome finish.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install escutcheons for piping penetrations of walls, and ceilings in normally occupied rooms.

3.2 FIELD QUALITY CONTROL

A. Replace broken and damaged escutcheons and floor plates using new materials.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Metal pipe hangers and supports.
   2. Trapeze pipe hangers.
   3. Thermal-hanger shield inserts.
   4. Fastener systems.
   5. Equipment supports.

1.2 PERFORMANCE REQUIREMENTS

A. Structural Performance: Hangers and supports, including bracing and other restraints, for HVAC piping and equipment shall withstand the effects of gravity, thermal, and seismic loads within limits and under conditions indicated according to 2019 CBC.
   1. Design supports for multiple pipes capable of supporting combined weight of supported systems, system contents, and test water.
   2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
   3. Design seismic-restraint hangers and supports for piping and equipment.
   4. Seismic design criteria per structural drawings.
   5. Design piping systems to accommodate thermal changes without impact to serviceability.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Welding certificates.

C. Seismic bracing plans, details, and structural calculations

1.4 QUALITY ASSURANCE

A. Structural Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

PART 2 - PRODUCTS

2.1 METAL PIPE HANGERS AND SUPPORTS

A. Carbon-Steel Pipe Hangers and Supports:
   1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.

2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.
3. Padded Hangers: Hanger with felt to support bearing surface of piping.
4. Hanger Rods: Zinc-plated, continuous-thread rod, nuts, and washer made of carbon steel.

2.2 TRAPEZE PIPE HANGERS

A. Carbon-Steel Trapeze Pipe Hangers:
1. Description: MSS SP-58, and MSS SP-69.
2. Galvanized Metallic Coatings: Pregalvanized or hot dipped.

2.3 THERMAL-HANGER SHIELD INSERTS

A. Insulation-Insert Material for Hot Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate with 100-psig minimum compressive strength and A-527 Galvanized sheet metal jacket.

B. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.

C. For Clevis or Band Hangers: Insert and shield shall cover at least the lower 180 degrees of pipe.

2.4 FASTENER SYSTEMS

A. Mechanical-Expansion Anchors: See mechanical details and structural details.

2.5 EQUIPMENT SUPPORTS

A. Description: See mechanical details and structural details.

PART 3 - EXECUTION

3.1 HANGER AND SUPPORT INSTALLATION

A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.

B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.
1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.
2. Field fabricate from ASTM A 36/A 36M, carbon-steel shapes selected for loads being supported.

C. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified for individual pipe hangers.

D. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.

E. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

F. Equipment Support Installation: Fabricate from welded-structural-steel shapes.

G. Install building attachments within concrete slabs or attach to structural steel.

H. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

I. Install lateral bracing with pipe hangers and supports to prevent swaying where required per code.

J. Insulated Piping:
   1. Attach clamps and spacers to piping.
      a. Chilled water and heating hot water piping: Use thermal-hanger shield insert with clamp sized to match OD of insert.
      b. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.

3.2 ADJUSTING

A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

3.3 HANGER AND SUPPORT SCHEDULE

A. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system Sections.

B. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.

C. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.

D. Use carbon-steel pipe hangers and supports and metal trapeze pipe hangers and attachments for general service applications.

E. Use padded felt lined hangers and clamps to prevent electrolysis between dissimilar metals.

F. Use thermal-hanger shield inserts for insulated piping and tubing.

G. Horizontal-Piping Hangers and Supports: Support piping per 2019 CBC, 2019 CMC and 2019 CPC requirements (including seismic requirements).

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Equipment labels.
2. Pipe labels.
3. Ceiling tags.

1.2 SUBMITTAL

A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

A. Plastic Labels for Equipment:
1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16 inch thick, and having predrilled holes for attachment hardware.
2. Letter Color: White.
3. Background Color: Black.
4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
6. Minimum Letter Size: 1/2 inch.
7. Adhesive (when not attached by metal): Contact-type permanent adhesive, compatible with label and with substrate.

B. Label Content: Include equipment's Drawing designation or unique equipment number.

2.2 PIPE LABELS

A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service.

B. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.

C. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings.
1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.

2.3 CEILING TAGS:
1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16 inch thick.
2. Letter Color: White.

3. Background Color: Fire Smoke Dampers - Red. All others shall be black.
4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
5. Minimum Label Size: Length and width vary for required label content, but not less than 1" by 1/2 inch.
6. Minimum Letter Size: 1/4 inch.
7. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.2 EQUIPMENT LABEL INSTALLATION

A. Install or permanently fasten labels on each major item of mechanical equipment.

B. Locate equipment labels where accessible and visible.

3.3 PIPE LABEL INSTALLATION

A. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
   1. At access doors, manholes, and similar access points that permit view of concealed piping.
   2. Near major equipment items and other points of origination and termination.
   3. 50 feet intervals.
   4. Provide flow directional arrow minimum 1 at each label.

3.4 CEILING TAG INSTALLATION

A. Install labels on t-bar ceiling grid, or access door for each of the following:
   1. Fire/Smoke Dampers
   2. Constant Air Volume Boxes
   3. Fan Coils above ceiling
   4. Transfer Fans above ceiling
   5. Main hydronic shutoff valves at each floor

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Balancing Air Systems:
      a. Constant-volume air systems.
      b. Variable-airflow systems.
   2. Balancing Domestic Water systems.
   3. Duct detector flow confirmation.

1.2 DEFINITIONS

A. AABC: Associated Air Balance Council.

B. NEBB: National Environmental Balancing Bureau.

C. TAB: Testing, adjusting, and balancing.

D. TABB: Testing, Adjusting, and Balancing Bureau.

E. TAB Specialist: An entity engaged to perform TAB Work.

1.3 SUBMITTALS

A. TAB procedures and qualifications.

B. Certified TAB reports.

1.4 QUALITY ASSURANCE

A. TAB Contractor Qualifications: Engage a TAB entity certified by AABC, NEBB or TABB.

B. Certify TAB field data reports and perform the following:
   1. Review field data reports to validate accuracy of data and to prepare certified TAB reports.
   2. Certify that the TAB team complied with the approved TAB plan and the procedures specified and referenced in this Specification.

C. Instrumentation Type, Quantity, Accuracy, and Calibration: As described in ASHRAE 111, Section 5, "Instrumentation."

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems' designs that may preclude proper TAB of systems and equipment.

B. Examine systems for installed balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers. Verify that locations of these balancing devices are accessible.

C. Examine the approved submittals for HVAC systems and equipment.

D. Examine design data including HVAC system descriptions, statements of design assumptions for environmental conditions and systems' output, and statements of philosophies and assumptions about HVAC system and equipment controls.

E. Examine test reports specified in individual system and equipment Sections.

F. Examine three-way valves for proper installation for their intended function of diverting or mixing fluid flows.

G. Examine heat-transfer coils for correct piping connections and for clean and straight fins.

H. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

I. Ensure that filters are clean prior to starting TAB.

3.2 GENERAL PROCEDURES FOR TESTING AND BALANCING

A. Perform testing and balancing procedures on each system according to the procedures contained in AABC's "National Standards for Total System Balance" or NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems".

B. On fans systems that have belt drives with no variable frequency drives, TAB contractor shall include sheave changes for 20% of the equipment on the project to facilitate proper airflow balancing.

C. In addition to standards above, balance supply, return, and exhaust grilles to plus/minus 10% of design values. For rooms with a positive or negative pressure relationship per design, TAB contractor shall insure that pressure relationship is maintained.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Insulation Materials:
      a. Flexible elastomeric for equipment.
      b. Mineral fiber.
   2. Adhesives.
   3. Sealants.
   4. Factory-applied jackets.
   5. Field-applied jackets.
   6. Tapes.
   7. Securements.

B. Related Sections:
   1. Division 22 Section "Plumbing Insulation."
   2. Division 07 Section “Insulative Fireproofing”

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Field quality-control reports.

1.3 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: Insulation and related materials shall have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing and inspecting agency.
   1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
   2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

A. Comply with requirements in Part 3 schedule articles for where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.

D. Flexible Elastomeric for equipment: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. Aeroflex USA Inc.; Aerocel.
   b. Armacell LLC; AP Armaflex.

E. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type III with factory-applied FSK jacket.
1. Products: Subject to compliance with requirements, provide one of the following:
   a. CertainTeed Corp.; Duct Wrap.
   b. Johns Manville; Microlite.
   c. Knauf Insulation; Duct Wrap.
   d. Owens Corning; All-Service Duct Wrap.

F. Mineral-Fiber, Preformed Pipe Insulation:
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. Johns Manville; Micro-Lok.
   b. Knauf Insulation; 1000 Pipe Insulation.
   c. Manson Insulation Inc.; Alley-K.
   d. Owens Corning; Fiberglas Pipe Insulation.
2. Type I, 850 deg F Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory-applied ASJ-SSL.

2.2 ADHESIVES

G. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.

H. Flexible Elastomeric Adhesive: Comply with MIL-A-24179A, Type II, Class I.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. Armaflex; 520 BLV Adhesive.
   b. Armaflex; Low VOC spray contact Adhesive

I. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. Childers Products, Division of ITW; CP-82.
   b. Foster Products Corporation, H. B. Fuller Company; 85-20.

J. PVC Jacket Adhesive: Compatible with PVC jacket.
1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   a. Dow Chemical Company (The); 739, Dow Silicone.
   b. Johns-Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.
   c. Speedline Corporation; Speedline Vinyl Adhesive.

2.3 SEALANTS

A. FSK and Metal Jacket Flashing Sealants:
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Childers Products, Division of ITW; CP-76-8.
      b. Foster Products Corporation, H. B. Fuller Company; 95-44.
      c. Marathon Industries, Inc.; 405.
   2. Materials shall be compatible with insulation materials, jackets, and substrates.
   3. Fire- and water-resistant, flexible, elastomeric sealant.
   4. Service Temperature Range: Minus 40 to plus 250 deg F
   5. Color: Aluminum.
   6. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.4 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Johns Manville; Zeston.
      b. P.I.C. Plastics, Inc.; FG Series.
      c. Proto PVC Corporation; LoSmoke.
      d. Speedline Corporation; SmokeSafe.
   2. Adhesive: As recommended by jacket material manufacturer.
   3. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
      a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints.

C. Aluminum Jacket: Comply with ASTM B 209 Alloy 3003, 3005, 3105 or 5005, Temper H-14. Thickness is indicated in field-applied jacket schedules.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Childers Products, Division of ITW; Metal Jacketing Systems.
      b. PABCO Metals Corporation; Surefit.
      c. RPR Products, Inc; Insul-Mate.
   2. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
      a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints.

2.5 SECUREMENTS

A. Aluminum Bands: ASTM B 209 Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 1/2 inch wide with wing or closed seal.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Childers Products; Bands.

b. PABCO Metals Corporation; Bands.
c. RPR Products, Inc.; Bands.

B. Insulation Pins, Hangers, staples and wires:
1) Provide necessary pins with adhesive, hangers, staples and wires to meet all requirements of the insulation manufacturer.

PART 3 - EXECUTION

3.1 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.2 GENERAL INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment, ducts and fittings, and piping including fittings, valves, and specialties.

B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment, duct system, and pipe system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Keep insulation materials dry during application and finishing.

G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
1. Install insulation continuously through hangers and around anchor attachments.
2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

H. Apply adhesives and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

I. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

J. For above ambient services, do not install insulation to the following:

1. Vibration-control devices.
2. Testing agency labels and stamps.
3. Nameplates and data plates.

K. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

3.3 EQUIPMENT, TANK, AND VESSEL INSULATION INSTALLATION

A. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.
   1. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
   2. Seal longitudinal seams and end joints.

B. Insulation Installation on chilled water pumps; Provide one of the following methods:
   1. Fabricate metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Fabricate joints with outward bolted flanges. Bolt flanges on 8-inch centers, starting at corners. Install 3/8-inch diameter fasteners with wing nuts. Alternatively, secure the box sections together using a latching mechanism.

3.4 GENERAL PIPE INSULATION INSTALLATION

A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.

B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
   1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity, unless otherwise indicated.
   2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive.
   3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
   4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts.
   5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below ambient services, provide a design that maintains vapor barrier.
   6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.

3.5 FLEXIBLE ELASTOMERIC INSULATION INSTALLATION FOR PIPING

A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated. Painting of closed cell foam insulation shall not be accepted.

B. Insulation Installation on Pipe Flanges:
   1. Install pipe insulation to outer diameter of pipe flange.
   2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
   3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
   4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:
   1. Install mitered sections of pipe insulation.
   2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:
   1. Install preformed valve covers manufactured of same material as pipe insulation when available.
   2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
   3. Install insulation to flanges as specified for flange insulation application.
   4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.6 MINERAL-FIBER INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:
   1. For insulation with factory-applied jackets on above ambient surfaces, secure laps with outward clinched staples at 6 inches o.c.
   2. For insulation with factory-applied jackets on below ambient surfaces, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:
   1. Install preformed pipe insulation to outer diameter of pipe flange.
   2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
   3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.

C. Insulation Installation on Pipe Fittings and Elbows:
   1. Install preformed sections of same material as straight segments of pipe insulation when available.

2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:
1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

E. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins per manufacturer's recommendations.

3.7 FIELD-APPLIED JACKET INSTALLATION

A. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.

B. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with aluminum bands 12 inches on center and at end joints.

3.8 FINISHES

A. Flexible Elastomeric Thermal Insulation where used outdoors: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.

3.9 DUCT INSULATION SCHEDULE, GENERAL

A. Ducts Requiring Insulation:
1. Indoor, concealed.

B. Items Not Insulated:
1. Factory-insulated flexible ducts.
2. Factory-insulated plenums and casings.
3. Metal ductwork with duct liner of sufficient thickness to comply with Title-24.
4. Flexible connectors.
5. Vibration-control devices.
6. Access panels and doors.

3.10 DUCT INSULATION SCHEDULE

A. Insulate ductwork per Title-24 Requirements.

3.12 PIPING INSULATION SCHEDULE, GENERAL

A. Refrigerant piping = Thickness per Title-24 Requirements.
1. Flexible Elastomeric

B. Hot and Chilled water piping = Per Title-24 Requirements.
   1. Fiberglass molded pipe insulation with an all service jacket.

3.13 INDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. All exposed piping, (including areas without ceilings):
   1. PVC 20 mils thick.

3.14 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. All piping, Exposed:
   1. Aluminum 0.020” thick. Embossed finish.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes refrigerant piping used for split system and variable refrigerant split system air-conditioning applications.

1.2 SUBMITTALS

A. Product Data:
   1. For each type of valve and refrigerant piping specialty indicated. Include pressure drop based on manufacturer's test data.
   2. Piping and specialties.

B. Field quality-control test reports.

C. Operation and maintenance data.

1.3 QUALITY ASSURANCE

A. Comply with ASME B31.5, "Refrigeration Piping and Heat Transfer Components."

1.4 PRODUCT STORAGE AND HANDLING

A. Store piping in a clean and protected area with end caps in place to ensure that piping interior and exterior are clean when installed.

PART 2 - PRODUCTS

2.1 COPPER TUBE AND FITTINGS

A. Copper Tube: ACR, Type L

B. Line Sets: ACR, Type L or K. UL listed to 700 PSI. R410A engineered and tested. Pre-insulated with minimum 1/2" insulation, meeting ASTM E-84

C. Wrought-Copper Fittings: ASME B16.22. All 90 degree elbows shall be long radius.

D. Brazing Filler Metals (Copper to Copper): 15% silfoss

E. Brazing Filler Metals (Copper to Brass): 45% silfloss.

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

A. VRF Systems (between condensing unit and AHU): Hard piped copper tubing.

B. Stand-alone split Systems: Hard piped copper tubing.

3.2 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems; indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations.

B. Install refrigerant piping according to ASHRAE 15.

C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

F. Install piping adjacent to machines to allow service and maintenance.

G. Install piping free of sags and bends.

H. Select system components with pressure rating equal to or greater than system operating pressure.

I. Slope refrigerant piping per manufacturers guidelines.

J. Install piping with adequate clearance between pipe and adjacent walls and hangers or between pipes for insulation installation.

K. Insulate refrigerant piping per 230700.

3.3 PIPE JOINT CONSTRUCTION

A. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," Chapter "Pipe and Tube."
   1. Use Type BcuP, copper-phosphorus alloy (non-oxidizing) for joining copper socket fittings with copper pipe.

3.4 HANGERS AND SUPPORTS

A. Hanger, support, and anchor products are specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."

3.5 FIELD QUALITY CONTROL

A. Perform tests and inspections and prepare test reports.

B. Tests and Inspect using manufacturer’s guidelines.

3.6 SYSTEM CHARGING

A. Charge system using manufacturer's guidelines.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Rectangular ducts and fittings.
2. Round ducts and fittings.
3. Sheet metal materials.
4. Duct liner.
5. Sealants and gaskets.
6. Hangers and supports.
7. Seismic-restraint devices.
8. Duct Pressure Testing.

B. Related Sections:
1. Division 23 Section "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing requirements for metal ducts.
2. Division 23 Section "Air Duct Accessories" for dampers, sound-control devices, duct-mounting access doors and panels, turning vanes, and flexible ducts.

1.2 PERFORMANCE REQUIREMENTS

A. Structural Performance: Duct hangers, supports and seismic restraints shall withstand the effects of gravity and seismic loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and 2016 CBC.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings:
1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
2. Factory- and shop-fabricated ducts and fittings.
3. Duct layout indicating sizes, configuration, liner material, and static-pressure classes.
4. Elevation of top of ducts.
5. Dimensions of main duct runs from building grid lines.
6. Fittings.
7. Reinforcement and spacing.
8. Seam and joint construction.
9. Penetrations through fire-rated and other partitions.
10. Equipment installation based on equipment being used on Project.
11. Locations for duct accessories, including dampers, turning vanes, and access doors and panels.

C. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Duct installation in congested spaces, indicating coordination with general construction, building components, and other building services. Indicate proposed changes to duct layout.
   2. Size and location of initial access modules for acoustical tile.
   3. Penetrations of smoke barriers and fire-rated construction.
   4. Items penetrating finished ceiling including the following:
      a. Lighting fixtures.
      b. Air outlets and inlets.
      c. Sprinklers.
      d. Access panels.

D. Welding certificates.

PART 2 - PRODUCTS

2.1 RECTANGULAR DUCTS AND FITTINGS

A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.

B. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Transverse (Girth) Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

C. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Longitudinal Seams - Rectangular Ducts," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

D. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.2 ROUND DUCTS AND FITTINGS

A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 3, "Round, Oval, and Flexible Duct," based on indicated static-pressure class unless otherwise indicated.

B. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Transverse Joints - Round Duct," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

C. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Seams - Round Duct and Fittings," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

D. Tees and Laterals: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.3 SHEET METAL MATERIALS

A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.

C. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304 or 316, as indicated in the "Duct Schedule" Article; cold rolled, annealed, sheet. Exposed surface finish shall be No. 2B, No. 2D, No. 3, or No. 4 as indicated in the "Duct Schedule" Article.

D. Aluminum Sheets: Comply with ASTM B 209 Alloy 3003, H14 temper; with mill finish for concealed ducts, and standard, one-side bright finish for duct surfaces exposed to view.

E. Reinforcement Shapes and Plates: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

F. Tie Rods: Comply with SMACNA HVAC duct construction standards.

2.4 DUCT LINER

A. Fibrous-Glass Duct Liner: Comply with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Johns Manville.
   b. Knauf Insulation.

c. Owens Corning.

2. Maximum Thermal Conductivity:

a. Type I, Flexible: “R” value of 4.2 per inch minimum at 75 deg F mean temperature.

3. Antimicrobial Erosion-Resistant Coating: Apply to the surface of the liner that will form the interior surface of the duct to act as a moisture repellent and erosion-resistant coating. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
4. Water-Based Liner Adhesive: Comply with NFPA 90A or NFPA 90B and with ASTM C 916.

B. Shop Application of Duct Liner: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 7-11, "Flexible Duct Liner Installation."

2.5 SEALANT

A. General Sealant Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.

B. Water-Based Joint and Seam Sealant:
1. Application Method: Brush on.
2. Solids Content: Minimum 66 percent.
3. Water resistant.
4. Mold and mildew resistant.
5. VOC: Maximum 75 g/L (less water).
6. Minimum Static-Pressure Rating: 10-inch wg, positive.
7. Service: Indoor.

2.6 TAPES

A. Sealing of manufacturer specific rectangular joints (TDC, etc), shall utilize “Ductmate” #440 butyl gasket or equal.

2.7 HANGERS AND SUPPORTS

A. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct."

PART 3 - EXECUTION

3.1 DUCT INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to

size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and Coordination Drawings.

B. Install ducts according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.

C. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.

D. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.

E. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.

F. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.

G. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches.

H. Protect duct interiors from moisture, construction debris and dust, and other foreign materials. Comply with SMACNA's "Duct Cleanliness for New Construction Guidelines."

3.2 INSTALLATION OF EXPOSED DUCTWORK

A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.

B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.

C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.

D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.

E. Repair or replace damaged sections and finished work that does not comply with these requirements.

3.3 DUCT SEALING

A. Seal all ducts regardless of pressure classification.

3.4 HANGER AND SUPPORT INSTALLATION

A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."

B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
   1. Where practical, install concrete inserts before placing concrete.
   2. Install drilled in anchors after concrete has been poured.

C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing.

D. Hangers Exposed to View: Threaded rod and angle or channel supports. Pre-manufactured hanger systems by Gripple or equal are also acceptable.

E. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.5 SEISMIC-RESTRAINT-DEVICE INSTALLATION

A. Install ducts with hangers and braces designed to support the duct and to restrain against seismic forces required by 2019 CBC.

B. Attachment to Structure: If specific attachment is not indicated, anchor bracing and restraints to structure, to flanges of beams, to upper truss chords of bar joists, or to concrete members.

3.6 CONNECTIONS

A. Make connections to equipment with flexible connectors complying with Division 23 Section "Air Duct Accessories."

B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

3.7 START UP

A. Air Balance: Comply with requirements in Division 23 Section "Testing, Adjusting, and Balancing for HVAC."

3.8 DUCT SCHEDULE

A. Fabricate ducts with galvanized sheet steel except as otherwise indicated and as follows:

B. Supply Ducts:
   1. Up stream of VAV boxes = 4” positive.

2. Downstream of VAV boxes = 2” positive.

C. General Return and Exhaust Ducts:
   1. All return and exhaust = 2” negative.

D. Elbow Configuration:
   1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."
      a. Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
      b. Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."
   2. Round Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "Round Duct Elbows."
      a. Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 3-1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.
         1) Radius-to Diameter Ratio: 1.5.

E. Branch Configuration:
   1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-6, "Branch Connections."
      a. Rectangular Main to Rectangular Branch: 45-degree entry.
      b. Rectangular Main to Round Branch: Conical spin in fitting, 45 deg shoe tap, 45 deg lateral tap.
   2. Round: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees."
      a. All velocities: 45 deg lateral fitting, conical tap, 45 deg shoe tap.

F. Duct Pressure Testing:
   1. Test all ductwork as noted below per CMC 603.10.1 and SMACNA “HVAC Air Duct Leakage Test Manual”. The following Leakage Factors shall be utilized:
      a. 4” Duct Pressure – Round Ductwork = 0.07, Rectangular = 0.15.
   2. Test the following ductwork:
      a. All supply air ducts upstream of VAV boxes (unless exposed).
   3. The following ductwork does not require duct pressure testing:
      a. Exhaust ductwork.
      b. Supply ductwork downstream of CAV’s.
      c. Return ductwork.
      d. Exposed ductwork.

END OF SECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Backdraft dampers.
2. Manual volume dampers.
3. Control dampers.
4. Fire Smoke dampers.
5. Turning vanes.
6. Duct-mounted access doors.
7. Flexible connectors.
8. Flexible ducts.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: For duct accessories. Include plans, elevations, sections, details and attachments to other work.
1. Detail duct accessories fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:
a. Special fittings.
b. Manual volume damper installations.
c. Control damper installations.
d. Fire-damper and smoke-damper installations, including sleeves; and duct-mounted access doors.

C. Operation and maintenance data.

1.3 QUALITY ASSURANCE

A. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," and with NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."

PART 2 - PRODUCTS

2.1 MATERIALS

A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

2.2 BACKDRAFT DAMPERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Air Balance Inc.
   2. Cesco Products
   3. Pottorff; a division of PCI Industries, Inc.
   4. Ruskin Company.
   5. Greenheck
   6. SEMCO Incorporated.

B. Description: Gravity balanced.

C. Maximum Air Velocity: 1500 fpm.

D. Maximum System Pressure: 2-inch wg.

E. Frame: 0.052-inch thick, galvanized sheet steel, with welded corners.

F. Blades: Multiple single-piece blades, center-pivoted maximum 6-inch width, 0.025” inch thick, with sealed edges.

G. Blade Action: Parallel.

H. Blade Axles:
   1. Material: Galvanized steel.
   2. Diameter: 0.20 inch.

I. Accessories:
   1. Counterweights and spring-assist kits for vertical airflow installations.

2.3 MANUAL VOLUME DAMPERS

A. Standard, Steel, Manual Volume Dampers:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Ruskin Company
      b. McGill AirFlow LLC.
      c. METALAIRE, Inc.
      d. Young Regulator Company
   2. Suitable for horizontal or vertical applications.
   3. Rectangular volume damper 12” high and less:
      a. Single Blade: 18 gauge, with stiffeners as required per SMACNA.
      b. Rod: 3/8” square rod 18” wide and less. ½” rod 19” wide and above.
      c. Blade Clip: Ventock #618. Spot welded to damper blade up to 18” wide and “U-bolt” or welded for 19” and above.
      d. Bearings: Nylon, with stand off bracket at handle.

e. Quardrant: Ventlok #638 for damper width up to 18” and Ventlok #555 for 19” and above.

4. Rectangular volume damper over 12” high:
   a. 16 gage galvanized steel hat channel frame.
   b. Multiple Blades: 14 gage, 6” wide airfoil blades with edge seals.
   c. Rod: ½” diameter round rod.
   d. Bearings: Stainless steel sleeve.
   e. Quardrant: Ventlok #638 for damper width up to 18”and Ventlok #555 for 19” and above.
5. Round volume damper:
   a. Single Blade: 18 gage, with stiffeners as required per SMACNA.
   b. Rod: 3/8” square rod 18” diameter and less. ½” square rod 19” diameter and above.
   c. Blade Clip: Ventock #618. Spot welded to damper blade up to 18” wide and “U-bolt” or welded for 19” and above.
   d. Bearings: Nylon, with stand off bracket at handle.
   e. Quardrant: Ventlok #638 for damper width up to 18” and Ventlok #555 for 19” and above.
6. Concealed ceiling control:
   a. Rack and pinion controller: 14 gage galvanized steel capable of up to 35 inch pounds of push pull torque.
   b. Inner wire: 0.054” type 302 stainless steel control wire encapsulated in 1/16” flexible galvanized spiral wire sheath not to exceed 50 feet long. Tensile strength of 265,000 pounds.
   c. Ceiling cover plate: 3” diameter zinc plated steel cover plate.

2.4 CONTROL DAMPERS

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Cesco Products; a division of Mestek, Inc.
   2. Duro Dyne Inc.
   3. METALAIRE, Inc.
   4. Ruskin Company – CD60
   5. Vent Products Company, Inc.

B. Rectangular control dampers:
   a. 16 gage galvanized steel hat channel frame.
   b. Multiple Blades: 14 gage, 6” wide airfoil blades with edge seals.
   c. Rod: ½” or 1” diameter round rod (size depending).
   d. Bearings: Stainless steel sleeve.

2.5 TURNING VANES

A. Manufacturers: Subject to compliance requirements, [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Ductmate Industries, Inc.

2. Duro Dyne Inc.

B. Manufactured Turning Vanes for Metal Ducts: Curved blades of galvanized sheet steel; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.

C. General Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 2-3, "Vanes and Vane Runners," and 2-4, "Vane Support in Elbows."

D. Vane Construction: 2” Double wall for ducts up to 12” wide. 4” vanes for ducts 13” wide and larger.

2.6 DUCT-MOUNTED ACCESS DOORS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Cesco Products; a division of Mestek, Inc.
2. Ductmate Industries, Inc.
3. McGill AirFlow LLC.
4. Nailor Industries Inc.

B. Duct-Mounted Access Doors:
1. Door:
a. Two piece “sandwich” access door.
b. Galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class.
c. Fabricate doors airtight and suitable for duct pressure class.

2.7 FLEXIBLE CONNECTORS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Ductmate Industries, Inc.
2. Ventfabrics, Inc.

B. Materials: Flame-retardant or noncombustible fabrics, meeting the 25/50 flame/smoke requirement.

C. Indoor System, Flexible Connector Fabric: Glass fabric double coated with neoprene.
1. Minimum Weight: 26 oz./sq. yd..
2. Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
3. Service Temperature: Minus 20 to plus 200 deg F.

D. Outdoor System, Flexible Connector Fabric: Glass fabric double coated with weatherproof, synthetic rubber resistant to UV rays and ozone.
1. Minimum Weight: 24 oz./sq. yd.

2. Minimum Tensile Strength: 500 lbf/inch in the warp and 440 lbf/inch in the filling.
3. Service Temperature: Minus 10 to plus 250 deg F.

2.8 FLEXIBLE DUCTS

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Flexmaster U.S.A., Inc. – Type 8M
2. Thermaflex – M-KE
3. Flexmaster U.S.A., Inc. – Type 6
4. Flexmaster U.S.A., Inc. – Type M-KE

B. Insulated, Acoustical Rated Flexible Duct: UL 181, Class 1, CPE liner duct permanently bonded to a coated spring steel wire helix and supporting a fiberglass insulating blanket. Encapsulated with a low permeability outer vapor barrier of reinforced metalized aluminum fiberglass.
1. Pressure Rating: 8-inch wg positive and 1 inch wg negative (4-12 inch diameter).
2. Maximum Air Velocity: 5000 fpm.
3. Insulation R-value: R 4.2 (min).

C. Flexible Duct Connectors:
1. Clamps: Nylon straps complying with UL-181B in sizes 3 through 18 inches to suit duct size.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install duct accessories according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts.

B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.

C. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.
1. Install steel volume dampers in steel ducts.
2. Install aluminum volume dampers in aluminum ducts.

D. Set dampers to fully open position before testing, adjusting, and balancing.

E. Install test holes at fan inlets and outlets and elsewhere as indicated. Provide plugs as required.

F. Install fire and smoke dampers according to UL listing.

G. Install duct access doors on sides of ducts to allow for inspecting, cleaning, adjusting, and maintaining accessories and equipment at the following locations:
   1. At drain pans and seals.
   2. Adjacent to and close enough to fire or smoke dampers.
   3. Control devices requiring inspection.

H. Access Door Sizes:
   1. One-Hand or Inspection Access: Minimum 8 by 4 inches.
   2. Two-Hand Access: Minimum 12 by 8 inches.
   3. Head and Hand Access: Minimum 18 by 14 inches.

I. Label access doors according to Division 23 Section "Identification for HVAC Piping and Equipment" to indicate the purpose of access door.

J. Install flexible connectors to connect ducts to equipment.

K. Install duct test holes where required for testing and balancing purposes. Plug upon completion of TAB.

3.2 FIELD QUALITY CONTROL

A. Tests and Inspections:
   1. Operate dampers to verify full range of movement.
   2. Inspect locations of access doors and verify that purpose of access door can be performed.
   3. Operate fire and smoke dampers to verify full range of movement and verify that proper heat-response device is installed.
   4. Inspect turning vanes for proper and secure installation.

END OF SECTION

PART 1 GENERAL

1.1 SUMMARY

A. Furnish and install a digital Building Automation System (BAS) as specified herein.

B. Coordination with other Divisions: See coordination matrix in Section 230501 Basic Mechanical Materials and Methods.

1.2 CONTRACTOR PROPOSALS

A. The system requirements described in this specification are generally performance based. Where requirements are prescriptive, the intent is to provide minimum quality, not to give unfair advantage to any given manufacturer or product. If a contractor finds that a certain requirement is unduly difficult or expensive to meet, contact the Engineer prior to bid due date and an addendum modifying the requirement will be considered.

B. Where requirements are unclear, the contractor shall clarify the requirements with the Engineer before the bid due date. Where requirements continue to be unclear, the contractor's proposal must accurately describe what is included and excluded.

C. By submitting a proposal, contractor guarantees that their proposal is in full compliance with these specifications except as specifically excluded in their proposal.

1.3 REFERENCE STANDARDS

A. Nothing in Contract Documents shall be construed to permit Work not conforming to applicable laws, ordinances, rules, and regulations. When Contract Documents differ from requirements of applicable laws, ordinances, rules and regulations, comply with documents establishing the more stringent requirement.

B. The latest published or effective editions, including approved addenda or amendments, of the following codes and standard shall apply to the BAS design and installation as applicable.

C. State, Local, and City Codes

1. CBC − California Building Code

2. CMC − California Mechanical Code

3. CEC – California Electrical Code

4. Local City and County Codes

D. American Society of Heating, Refrigeration and Air Conditioning Engineers (ASHRAE)

1. ANSI/ASHRAE 135 – BACnet - A Data Communication Protocol for Building Automation and Control Networks

2. ANSI/ASHRAE Standard 135.1− Method of Test for Conformance to BACnet

3. ANSI/ASHRAE Standard 15 – Safety Standard for Refrigeration Systems

E. Electronics Industries Alliance

1. EIA-232 – Interface Between Data Terminal Equipment and Data Circuit-Terminating Equipment Employing Serial Binary Data Interchange.

2. EIA-458 – Standard Optical Fiber Material Classes and Preferred Sizes.

3. EIA-485 – Standard for Electrical Characteristics of Generator and Receivers for use in Balanced Digital Multipoint Systems.

4. EIA-472 – General and Sectional Specifications for Fiber Optic Cable.

5. EIA-475 – Generic and Sectional Specifications for Fiber Optic Connectors and all Sectional Specifications.

6. EIA-573 – Generic and Sectional Specifications for Field Portable Polishing Device for Preparation Optical Fiber and all Sectional Specifications.

7. EIA-590 – Standard for Physical Location and Protection of Below-Ground Fiber Optic Cable Plant and all Sectional Specifications.

F. Underwriters Laboratories

1. UL 916 – Energy Management Systems.

G. National Electrical Manufacturers Association

1. NEMA 250 – Enclosure for Electrical Equipment.

H. Institute of Electrical and Electronics Engineers (IEEE)

1. IEEE 142 – Recommended Practice for Grounding of Industrial and Commercial Power Systems.

2. IEEE 802.3 – CSMA/CD (Ethernet – Based) LAN.

1.4 DEFINITIONS

A. Acronyms

AAC	Advanced Application Controller
AH	Air Handler
AHU	Air Handling Unit
AI	Analog Input
ANSI	American National Standards Institute
AO	Analog Output
ASC	Application Specific Controllers
ASCII	American Standard Code for Information Interchange

XML	Extensible Markup Language

B. Terms

Term	Definition
Accessible	Locations that can be reached with no more than a ladder to assist access and without having to remove permanent partitions or materials. Examples include inside mechanical rooms, mechanical equipment enclosures, instrument panels, and above suspended ceilings with removable tiles.
BACnet Interoperability Building Blocks	A BIBB defines a small portion of BACnet functionality that is needed to perform a particular task. BIBBs are combined to build the BACnet functional requirements for a device in a specification.

Term	Definition
BACnet/BACnet Standard	BACnet communication requirements as defined by the latest version of ASHRAE/ANSI 135 and approved addenda.
Change of Value	An event that occurs when a digital point changes value or an analog value changes by a predefined amount.
Client	A device that is the requestor of services from a server. A client device makes requests of and receives responses from a server device.
Concealed	Embedded in masonry or other construction, installed in furred spaces, within double partitions, above hung ceilings, in trenches, in crawl spaces, or in enclosures.
Continuous Monitoring	A sampling and recording of a variable based on time or change of state (such as trending an analog value, monitoring a binary change of state).
Contract Documents	Specifications, drawings, and other materials provided with request for bids.
Control Systems Server	A computer(s) that maintain(s) the systems configuration and programming database.
Controller	Intelligent stand-alone control device. Controller is a generic reference to BCs, AACs, and ASCs.
Direct Digital Control	Microprocessor-based control including Analog/Digital conversion and program logic.
Building Automation System	The entire integrated building management and control system.
Equal	Approximately equal in material types, weight, size, design, quality, and efficiency of specified product.
Exposed	Not installed underground or concealed.
Furnish	To purchase, procure, acquire and deliver complete with related accessories.
Gateway	Bi-directional protocol translator connecting control systems that use different communication protocols.
Hand Held Device	Manufacturer’s microprocessor based portable device for direct connection to a field Controller.
Inaccessible	Locations that do not meet the definition of accessible. Examples include inside furred walls, pipe chases and shafts, or above ceilings without removable tiles.
Indicated, shown or noted	As indicated, shown or noted on drawings or specifications.
Install	To erect, mount and connect complete with related accessories.

Term	Definition
Instrumentation	Gauges, thermometers and other devices mounted in ductwork or piping that are not a part of the BAS.
College IT LAN	The Information Technology local area network furnished by the College or Division 27 Communications, used for normal business-related communication and may be used for interconnecting some BAS controllers and gateways where specified.
LAN Interface Device	Device or function used to facilitate communication and sharing of data throughout the BAS.
Local Area Network	Computer or control system communications network limited to local building or campus.
Master-Slave/Token Passing	Data link protocol as defined by the BACnet standard.
Motor Controllers	Starters, variable speed drives, and other devices controlling the operation of motors.
Native BACnet Device	A device that uses BACnet for communication. A device may also provide gateway functionality and still be described as a Native BACnet device.
Native BACnet System	A network composed only of Native BACnet Devices without gateways.
Open Database Connectivity	An open standard application-programming interface for accessing a database developed. ODBC compliant systems make it possible to access any data from any application, regardless of which database management system is handling the data.
Open Connectivity	OPC is an interoperability standard developed for industrial applications. OPC compliant systems make it possible to access or exchange data from any application, regardless of which database management system is handling the data.
Operator Interface	A device used by the operator to manage the BAS including OWSs, POTs, and HHDs.
Operator Workstation	The user's interface with the BAS system. As the BAS network devices are stand-alone, the OWS is not required for communications to occur.
College	The College or their designated representatives.
Piping	Pipe, tube, fittings, flanges, valves, controls, strainers, hangers, supports, unions, traps, drains, insulation and related items.
Points	All physical I/O points, virtual points, and all application program parameters.

Term	Definition
Point-to-Point	Serial communication as defined in the BACnet standard.
Portable Operators Terminal	Laptop PC used both for direct connection to a controller and for remote dial up connection.
Primary LAN	High speed, peer-to-peer controller LAN connecting BCs, AACs, and ASCs as well as some gateways. See System Architecture below.
Protocol Implementation Conformance Statement	A written document that identifies the particular options specified by BACnet that are implemented in a device.
Provide	Furnish, supply, install and connect up complete and ready safe and regular operation of particular work referred to unless specifically noted.
Protocol Translator	A device that converts BACnet from one network protocol to another.
Reviewed, approved, or directed	Reviewed, approved, or directed by or to College's Representative.
Router	A device that connects two or more networks at the network layer.
Secondary LAN	LAN connecting some gateways and networked sensors. See System Architecture below.
Server	A device that is a provider of services to a client. A client device makes requests of and receives responses from a server device.
Standardized Query Language	SQL - A standardized means for requesting information from a database.
Supervisory LAN	Ethernet-based LAN connecting Primary LANs with each other and OWSs, CSS, and THS. See System Architecture below.
Supply	Purchase, procure, acquire and deliver complete with related accessories.
Wiring	Raceway, fittings, wire, boxes and related items.
Work	Labor, materials, equipment, apparatus, controls, accessories and other items required for proper and complete installation.

1.5 QUALITY ASSURANCE

A. Materials and Equipment

1. Manufacturer's Qualifications: See 2.1 for approved manufacturers.

B. Installer

1. BAS Contractor's Project Manager Qualifications: Individual shall specialize in and be experienced with direct digital control system installation for not less than 3 years. Project Manager shall have experience with the installation of the proposed direct digital control equipment product line for not less than 2 projects of similar size and complexity. Project Manager must have proof of having successfully completed the most advanced training offered by the manufacturer of the proposed product line.

2. BAS Contractor's Programmer Qualifications: Individual(s) shall specialize in and be experienced with direct digital control system programming for not less than 3 years and with the proposed direct digital control equipment product line for not less than 1.5 years. Programmers must show proof of having successfully completed the most advanced programming training offered by the vendor of the programming application on the proposed product line.

3. BAS Contractor's Lead Installation Technician Qualifications: Individual(s) shall specialize in and be experienced with direct digital control system installation for not less than 3 years and with the proposed direct digital control equipment product line for not less than 1.5 years. Installers must show proof of having successfully completed the installation certification training offered by the vendor of the proposed product line.

4. BAS Contractor's Service Qualifications: The installer must be experienced in control system operation, maintenance and service. BAS Contractor must document a minimum 5-year history of servicing installations of similar size and complexity. Installer must also document at least a 1-year history of servicing the proposed product line.

5. Installer's Response Time and Proximity

   a. Installer must maintain a fully capable service facility within 50 miles of the subject Project. Service facility shall manage the emergency service dispatches and maintain the inventory of spare parts.

   b. Installer must demonstrate the ability to meet the emergency response times listed in Paragraph 1.11B.1.

6. Electrical installation shall be by manufacturer-trained electricians

   a. Exception: Roughing in wiring and conduit and mounting panels may be subcontracted to any licensed electrician.

1.6 SUBMITTALS

A. No work may begin on any segment of this Project until the related submittals have been reviewed for conformity with the design intent and the Contractor has responded to all comments to the satisfaction of the College's Representative.

B. Submit drawings and product data as hereinafter specified. Conditions in this Section take precedence over conditions in Division 1 or Section 230501 Basic Mechanical Materials and Methods.

C. Submittal Schedule: Submittal schedule shall be as follows unless otherwise directed by the College's Representative:

1. Allow 10 working days for approval, unless College's Representative agrees to accelerated schedule.

2. Submittal Package 0 (Qualifications) shall be submitted with bid.

3. Submittal Package 1 (Hardware and Shop Drawings) shall be submitted in accordance with schedule established by the College in bid documents.

4. Submittal Package 2 (Programming and Graphics) and shall be submitted no less than 30 days before software is to be installed in field devices.

5. Submittal Package 3 (Pre-Functional Test Forms) shall be submitted no less than 30 days prior to conducting tests.

6. Submittal Package 4 (Pre-Functional Test Report) shall be submitted no less than 14 after conducting tests.

7. Submittal Package 5 (Post-Construction Trend Points List) shall be submitted 14 days prior to the start of the trend collection period.

8. Submittal Package 6 (Functional Test Report) shall be submitted no more than 7 days after conducting tests.

9. Submittal Package 7 (Training Materials) shall be submitted no less than 14 days prior to conducting first training class.

10. Submittal Package 8 (Post-Construction Trend Logs) shall be submitted after demonstration tests are accepted and systems are in full automatic operation.

D. Submission and Resubmission Procedure

1. Optional Pre-Submittals. At Contractor's option, electronic submittals indicated below may be submitted unofficially via email directly to the Engineer for review and comment prior to formal submission. Comments provided by the Engineer are not official and may be changed or additional comments may be provided on the formal submittal. The intent of pre-submittals is to reduce paperwork and review time.

2. Each submittal shall have a unique serial number that includes the associated specification section followed by a number for each sub-part of the submittal for that specification section, such as SUBMITTAL 250000-01.

3. Each resubmittal shall have the original unique serial number plus unique revision number such as SUBMITTAL 250000-01 REVISION 1.

4. Submit one copy of submittal in electronic format specified under each submittal package below. Submissions made in the wrong format will be returned without action.

5. Submittals shall have bookmarks for each subsection (e.g. Materials, Drawings) and for each drawing including drawing number and name.

6. College's Representative will return a memo or mark-up of submittal with comments and corrections noted where required.

7. Make corrections

   a. Revise initial submittal to resolve review comments and corrections.

   b. Clearly identify resubmittal by original submittal number and revision number.

   c. The cover page of resubmittals shall include a summary of prior comments and how they were resolved in the resubmittal.

   d. Indicate any changes that have been made other than those requested.

8. Resubmit revised submittals until no exceptions are taken.

   a. The cost of Taylor Engineering's review of submittals after first resubmittal will be borne by Contractor at Taylor Engineering standard billing rates.

9. Once submittals are accepted with no exceptions taken, provide

   a. Complete submittal of all accepted drawings and products in a single electronic file.

   b. Photocopies or electronic copies for coordination with other trades, if and as required by the General Contractor or College's Representative.

E. Submittals Packages

1. Submittal Package 0 (Qualifications)

   a. Provide Installer and Key personnel qualifications as specified in Paragraph 1.5B.

   b. Format: Word-searchable format per Paragraph 1.7C.3.

2. Submittal Package 1 (Hardware and Shop Drawings)

    a. Hardware

        1) Organize by specification section and device tags as tagged in these specifications.

        2) Do not submit products that are not used even if included in specifications.

        3) Include a summary table of contents listing for every submitted device:

            a) Tab of submittal file/binder where submittal is located

            b) Device tag as tagged in these specifications (such as TS-1A, FM-1)

            c) Specification section number (down to the lowest applicable heading number)

            d) Whether device is per specifications and a listed product or a substitution

            e) Manufacturer

            f) Model number

            g) Device accuracy (where applicable)

            h) Accuracy as installed including wiring and A/D conversion effects (where applicable)

        4) Submittal shall include manufacturer's description and technical data, such as performance data and accuracy, product specification sheets, and installation instructions for all control devices and software.

        5) When manufacturer's cut-sheets apply to a product series rather than a specific product, the data specifically applicable to the Project shall be highlighted or clearly indicated by other means. Each submitted piece of literature and drawings shall clearly reference the specification or drawing that the submittal is to cover. General catalogs shall not be accepted as cut sheets to fulfill submittal requirements.

        6) A BACnet Protocol Implementation Conformance Statement (PICS) for each type of controller and operator interface.

        7) Format: Word-searchable format per Paragraph 1.7C.3.

    b. Shop Drawings

1) System architecture one-line diagram indicating schematic location of all control units, workstations, LAN interface devices, gateways, etc. Indicate address and type for each control unit. Indicate media, protocol, baud rate, and type of each LAN.

2) Schematic flow diagram of each air and water system showing fans, coils, dampers, valves, pumps, heat exchange equipment and control devices. The schematics provided on Drawings shall be the basis of the schematics with respect to layout and location of control points.

3) All physical points on the schematic flow diagram shall be indicated with names, descriptors, and point addresses identified as listed in the point summary table.

4) Label each input and output with the appropriate range.

5) Device table (Bill of Materials). With each schematic, provide a table of all materials and equipment including:

   a) Device tag as indicated in the schematic and actual field labeling (use tag as indicated in these specifications where applicable and practical)

   b) Device tag as indicated in these specifications where applicable and if it differs from schematic device tag

   c) Description

   d) Proposed manufacturer and model number

   e) Range

   f) Quantity

6) With each schematic or on separate valve sheet, provide valve and actuator information including pipe size, valve size, C_v, design flow, target pressure drop, actual design pressure drop, manufacturer, model number, close off rating, etc. Indicate normal positions of fail-safe valves and dampers.

7) Indicate all required electrical wiring. Electrical wiring diagrams shall include both ladder logic type diagram for motor starter, control, and safety circuits and detailed digital interface panel point termination diagrams with all wire numbers and terminal block numbers identified. Provide panel termination drawings on separate drawings. Ladder diagrams shall appear on system schematic. Clearly differentiate between portions of wiring that are factory-installed and portions to be field-installed.

8) Details of control panels, including controllers, instruments, and labeling shown in plan or elevation indicating the installed locations.

9) Floor plans: None required.

10) Format

a) Sheets shall be consecutively numbered.

b) Each sheet shall have a title indicating the type of information included and the mechanical/electrical system controlled.

c) Table of Contents listing sheet titles and sheet numbers.

d) Legend and list of abbreviations.

e) Schematics

1. Word searchable pdf format.

2. 21 inch x 15 inch or 17 inch x 11 inch.

f) Floor plans: None required

1. AutoCAD compatible format

2. 21 inch x 15 inch or 17 inch x 11 inch

c. Do not include sequence of controls on shop drawings or equipment submittals; they are included in Submittal Package 2.

3. Submittal Package 2 (Programming and Graphics)

a. A detailed description of point naming convention conforming to Paragraph 3.13B to be used for all software and hardware points, integrated with existing database convention.

b. A list of all hardware and software points identifying their full text names, device addresses and descriptions.

c. Control Logic Documentation

1) Submit control logic program listings (graphical programming) consistent with specified English-language Sequences of Operation for all control units.

2) Control logic shall be annotated to describe how it accomplishes the sequence of operation. Annotations shall be sufficient to allow an operator to relate each program component (block or line) to corresponding portions of the specified Sequence of Operation.

3) Include a MS Word file of the specified English-language Sequences of Operation of each control sequence updated to reflect any suggested changes made by the Contractor to clarify or improve the sequences. Changes shall be clearly marked. Also merge Guideline 36 sequences, where referenced, verbatim into the file; see Section 259000 Building Automation Sequences of Operation. SOOs shall be fully consistent with the graphical programming.

4) Include control settings, setpoints, throttling ranges, reset schedules, adjustable parameters and limits.

5) Submit one complete set of programming and operating manuals for all digital controllers concurrently with control logic documentation.

d. Graphic screens of all required graphics, provided in final colors.

e. Format

1) Points list: Word-searchable format per Paragraph 1.7C.3.

2) Programming: Native electronic file if interpreter is available (such as ALC Eikon or Alerton Visio); otherwise provide pdf files of screen shots.

3) Control sequences: MS Word

4) Programming and operating manual: Word-searchable format per Paragraph 1.7C.3.

5) Graphics: Graphical electronic format (pdf, png, etc.).

4. Submittal Package 3 (Pre-Functional Test Forms)

a. Provide pre-functional test forms as required by Paragraph 3.15D.23.15D.2.a.

b. Format: Word-searchable format per Paragraph 1.7C.3.

5. Submittal Package 4 (Pre-Functional Test Report)

a. Provide Pre-Functional Test Report as required by Paragraph 3.15D.2.

b. Format: Word-searchable format per Paragraph 1.7C.3.

6. Submittal Package 5 (Post-Construction Trend Points List)

a. Provide a list of points being trended along with trend interval or change-of-value per Paragraph 3.15H.2.d.

b. Format: Word-searchable format per Paragraph 1.7C.3.

7. Submittal Package 6 (Functional Test Report)

a. Provide completed functional test forms as required by Paragraph 3.15F.4.

b. Format: Word-searchable format per Paragraph 1.7C.3.

8. Submittal Package 7 (Training Materials)

a. Provide training materials as required by Paragraph 3.16.

b. Format: Word-searchable format per Paragraph 1.7C.3.

9. Submittal Package 8 (Post-Construction Trend Logs)

a. Provide trend logs as required by Paragraph 3.15H.

b. Format: Word-searchable format per Paragraph 1.7C.3.

1.7 COMPLETION REQUIREMENTS

A. Procedure

1. Until the documents required in this Section are submitted and approved, the system will not be considered accepted and final payment to Contractor will not be made.

2. Before requesting acceptance of Work, submit one set of completion documents for review and approval of College.

3. After review, furnish quantity of sets indicated below to College.

B. Completion Documents

1. Operation and Maintenance (O & M) Manuals. Provide in both paper and electronic format per Paragraph 1.7C.

a. Include the as-built version of all submittals (product data, shop drawings, control logic documentation, hardware manuals, software manuals, installation guides or manuals, maintenance instructions and spare parts lists) in maintenance manual. Submittal data shall be located in tabs along with associated maintenance information.

b. Engineering, Installation, and Maintenance Manual(s) that explain how to design and install new points, panels, and other hardware; preventive maintenance and calibration procedures; how to debug hardware problems; and how to repair or replace hardware.

c. Complete original issue documentation, installation, and maintenance information for all third-party hardware and software provided, including computer equipment and sensors.

d. A list of recommended spare parts with part numbers and suppliers.

e. Operators Manual with procedures for operating the control systems, including logging on/off, alarm handling, producing point reports, trending data, overriding computer control, and changing set points and other variables.

f. Programming Manuals with a description of the programming language, control block descriptions (including algorithms and calculations used), point database creation and modification, program creation and modification, and use of the programming editor.

g. Recommended preventive maintenance procedures for all system components, including a schedule of tasks (inspection, cleaning, calibration, etc.), time between tasks, and task descriptions.

h. A listing and documentation of all custom software for the Project created using the programming language, including the set points, tuning parameters, and point and object database.

i. English language control sequences updated to reflect final programming installed in the BAS at the time of system acceptance. See Section 259000 Building Automation Sequences of Operation.

2. Complete original issue electronic copy for all software provided, including operating systems, programming language, operator workstation software, and graphics software.

3. Complete electronic copy of BAS database, user screens, setpoints and all configuration settings necessary to allow re-installation of system after crash or replacement of server, and resume operations with the BAS in the same configuration as during College sign-off.

4. Project Record Drawings

   a. As-built versions of the submittal drawings in reproducible paper and electronic format per Paragraph 1.7C.

   b. As-built network architecture drawings showing all BACnet nodes including a description field with specific controller and device identification, description and location information.

5. Commissioning Reports. Completed versions of all Pre-functional, Functional, and Demonstration Commissioning Test reports, calibration logs, etc., per Paragraph 3.15A.9.

6. Copy of inspection certificates provided by the local code authorities.

7. Written guarantee and warranty documents for all equipment and systems, including the start and end date for each.

8. Training materials as required by Paragraph 3.16E.

9. Contact information. Names, addresses, and 24-hour telephone numbers of contractors installing equipment, and the control systems and service representatives of each.

C. Format of Completion Documents

1. Provide the type and quantity of media listed in table below.

2. Project database, programming source files, and all other files required to modify, maintain, or enhance the installed system shall be provided in their source format and compiled format (where applicable).

3. Where electronic copies are specified, comply with the following:

   a. Provide in word-searchable electronic format; acceptable formats are MS Word, Adobe Acrobat (pdf), and HTML; submit other formats for review and approval prior to submission; scanned paper documents not acceptable.

   b. For submittals, provide separate file for each type of equipment.

   c. Control sequences shall be in MS Word.

	Document	Paper (binder or bound)	Electronic	
			Loaded onto Flash Drive	Loaded onto CSS
1.	O&M Manual	2	1	1
2.	Original issue software	–	1 per workstation	1
3.	Project database including all source files	–	1 per workstation	1
4.	Project Record Drawings	2	1	1
5.	Control sequences	1	1	1
6.	Commissioning Reports	2	1	1
7.	Inspection Certificates	1	–	–
8.	Warranty documents	1	–	–
9.	Training materials	1 per trainee	1	1
10.	Contact information	1	–	1

D. Permanent On-site Documentation

1. In each panel, provide the following stored in clear plastic sleeve taped to the back of the panel door:

   a. 8.5x11 printout of as-built points list

b. 21 inch x 15 inch or 17 inch x 11 inch set of as-built shop drawings for devices in panel

1.8 BAS DESIGN

A. System Architecture

1. General

a. The system provided shall incorporate hardware resources sufficient to meet the functional requirements specified in this Section. Include all items not specifically itemized in this Section that are necessary to implement, maintain, and operate the system in compliance with the functional intent of this Section.

b. The system shall be configured as a distributed processing network(s) capable of expansion as specified herein.

c. The system will consist of BAS CSS located in the Building Engineer's Office. It will connect via a high-speed network to BCs and other control devices located throughout the building as well as the College IT LAN.

d. The BAS shall be standalone and not rely on any 3rd party networks, such as the College IT LAN, except as specifically allowed herein.

e. All control products provided for this Project shall comprise an interoperable Native BACnet System. All control products provided for this Project shall conform to ANSI/ASHRAE Standard 135.

f. Power-line carrier systems are not acceptable for BAS communications.

2. BAS Network Architecture

a. College IT LAN. Ethernet-based, 100 or 1000 Mbps BACnet/IP network specified under Division 27 Communications.

b. Supervisory LAN: The LAN shall be an Ethernet-based, 100 or 1000 Mbps network interconnecting the server and OWS(s) to BCs and certain gateways as specified herein. LAN shall be IEEE 802.3 Ethernet with switches and routers that support 100 Mbps minimum throughput. This network shall be BACnet/IP as defined in the BACnet standard, and shall share a common network number for the Ethernet backbone, as defined in BACnet.

c. Primary LAN: High-speed, peer-to-peer communicating LAN used to connect AACs, ASCs, and certain gateways and sensors where specified herein. Acceptable technologies include and are limited to:

1) Ethernet (IEEE802.3) per the Supervisory LAN

d. Secondary LAN: Network used only to connect certain gateways and sensors where specified herein. It shall not be used to interconnect BCs, AACs, and ASCs. Network speed versus the number of devices on the LAN shall be dictated by the response time and trending requirements. Acceptable technologies include but are not limited to:

   1) BACnet over Master Slave/ Token Passing (MS/TP)

   2) Modbus over RS-485 or IP

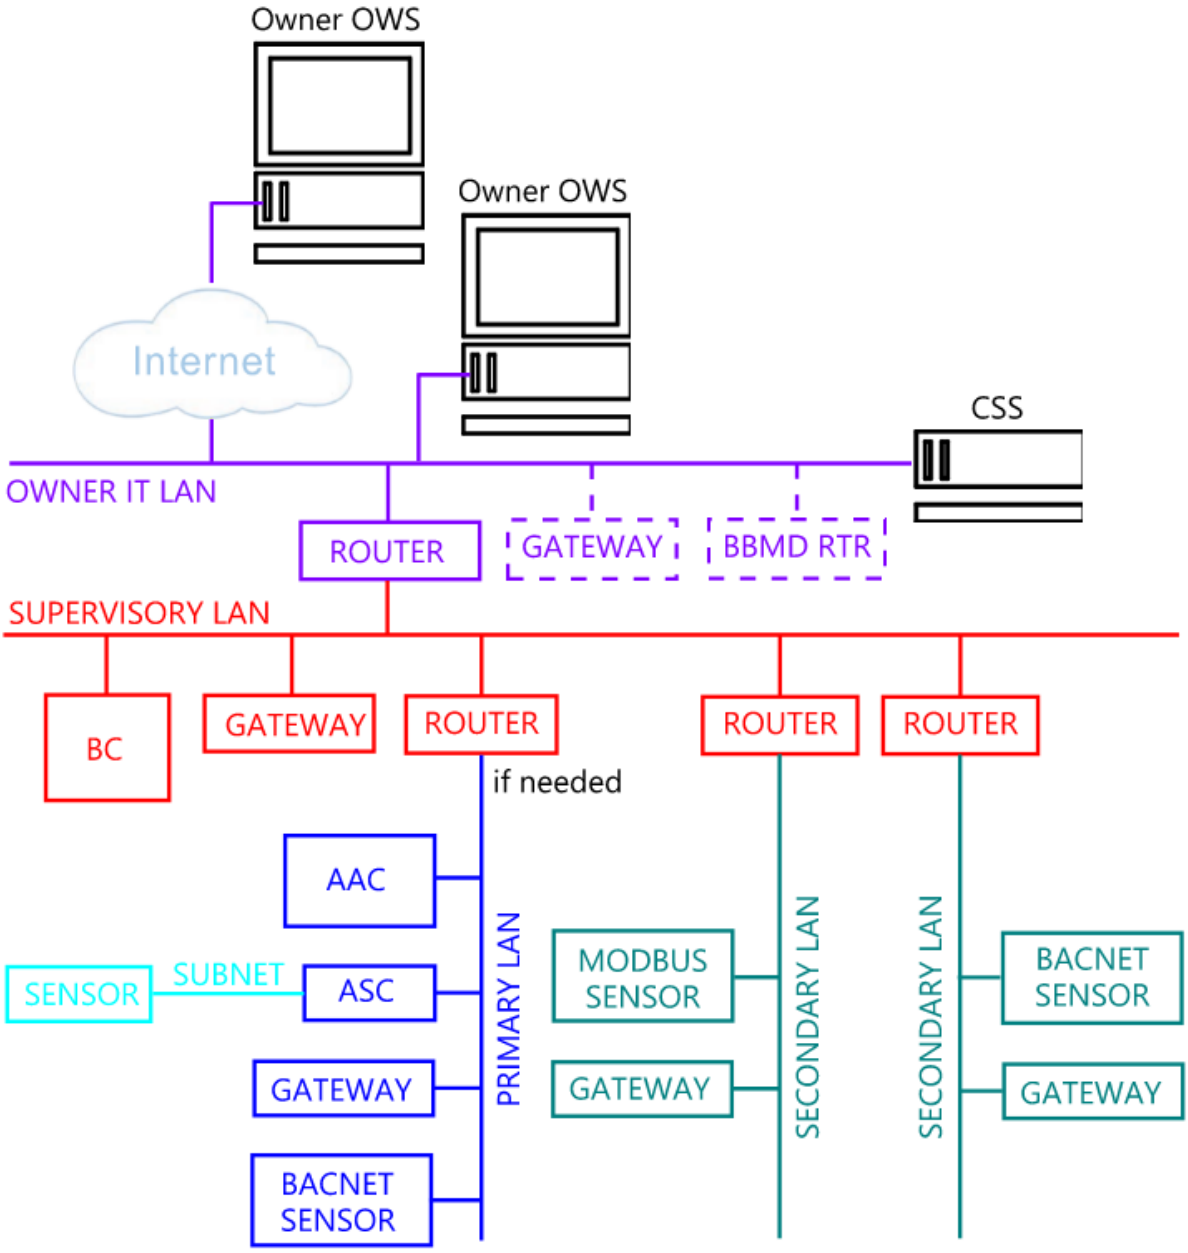
e. Subnets: Networks used to connect sensors and thermostats to AACs and ASCs. This network may as above for Secondary LANs or may be proprietary the manufacturer.

f. The figure below shows an example of the desired network architecture. Note:

   1) Not all devices shown will exist for this project.

   2) Ethernet network installer shall be responsible for assigning IP addresses to all devices on the network.

   3) If gateways are specified to be directly connected to the College IT LAN in Paragraph 2.4E, also provide and install a BBMD Router (both shown dashed in the schematic) including all configuration and programming.



1. Operator Interfaces and Servers

   a. Control Systems Server (CSS). This shall be a server upon which the systems configuration and programming databases are maintained and serves as web server for operator interface. It shall hold the backup files of the information downloaded into the individual controllers and as such support uploading and downloading that information directly to or from the controllers. It shall also act as a control information server to non-control system based programs. It shall allow secure multiple-access to the control information. It shall also store trend data uploaded from controllers.

b. The Operator Interface shall provide for overall system supervision, graphical user interface, management report generation, alarm annunciation, and remote monitoring. The system shall be capable of supporting an unlimited number of clients using a standard Web browser.

c. Remote monitoring and control shall be through use of a web browser through the College IT LAN and via the internet through the College IT LAN.

2. Controllers. The BCs, AACs, and ASCs shall monitor, control, and provide the field interface for all points specified.

3. Gateways

a. See Paragraph 2.4E for a list of gateways and routers.

b. Where gateways are used, critical points shall be hardwired from the BAS to the controlled device, rather than using the gateway, to avoid problems with gateway failures, currently a common problem. Critical points are those that are essential for proper operation and are listed in points list as separate points. Where listed, these points shall be hardwired even when available through gateway.

B. System Performance

1. The communication speed between the controllers, LAN interface devices, and operator interface devices shall be sufficient to ensure fast system response time under any loading condition. This includes when system is collecting trend data for commissioning and for long term monitoring. (See Paragraph 3.15H.) In no case shall delay times between an event, request, or command initiation and its completion be greater than those listed herein, assuming no other simultaneous operator activity. Reconfigure LAN as necessary to accomplish these performance requirements. This does not apply to gateways and their interaction with non-BAS-vendor equipment.

a. Object Command: The maximum time between an operator command via the operator interface to change an analog or binary point and the subsequent change in the controller shall be less than 5 seconds.

b. Object Scan: All changes of state and change of analog values will be transmitted over the network such that any data used or displayed at a controller or workstation will have been current within the previous 10 seconds.

c. Graphics Scan: The maximum time between an operator’s selection of a graphic and it completely painting the screen and updating at least 10 points shall be less than 10 seconds.

d. Alarm Response Time: The maximum time from when an object goes into alarm to when it is annunciated at the workstation or broadcast (where so

programmed) shall not exceed 10 seconds for a Level 1 alarm, 20 seconds for alarm levels 2 and 3, and 30 seconds for alarm levels 4 and 5. All workstations on the onsite network must receive alarms within 5 seconds of each other.

e. Program Execution Frequency: Custom and standard applications shall be capable of running as often as once every 5 seconds. Contractor shall be responsible for selecting execution times consistent with the mechanical process under control.

f. Control Loop Performance: Programmable controllers shall be able to execute DDC PID control loops at a selectable frequency of at least once per second. The controller shall scan and update the process value and output generated by this calculation at this same frequency.

2. Sensor selection, wiring method, use of transmitters, A-to-D conversion bits, etc. shall be selected and adjusted to provide end-to-end (fluid to display) accuracy at or better than those listed in the following table.

Measured Variable	**Reported Accuracy**
Space drybulb temperature	±1ºF
Ducted Air drybulb temperature	±0.5ºF
Mixed Air drybulb temperature	±1ºF
Outside Air drybulb temperature	±0.5ºF
Chilled and Condenser Water Temperature	±0.2ºF
Hot Water Temperature	±0.5ºF
Relative Humidity − general	±5% RH
Relative Humidity − outdoor air	±3% RH
Water and Gas Flow	±1% of reading
Airflow (terminal)	±10% of reading
Airflow (measuring stations)	±5% of reading
Air Pressure (ducts)	±0.05 inches
Air Pressure (space)	±0.01 inches
Water Pressure	±2% of reading
Electrical power	1% of reading
Carbon Dioxide (CO_2)	±75 ppm

1.9 COLLEGESHIP OF PROPRIETARY MATERIAL

A. All project-developed software and documentation shall become the property of the College. These include, but are not limited to:

1. Project graphic images

2. Record drawings

3. Project database

4. Project-specific application programming code

5. All documentation

1.10 WARRANTY

A. At the successful completion of the final testing, commissioning, and demonstration phase in accordance with the terms of this specification, if equipment and systems are operating satisfactorily to the College and if all completion requirements per Paragraph 1.7B have been fulfilled, the College shall certify in writing that the control system has been accepted. The date of acceptance shall be the start of the warranty period.

B. Guarantee all materials, equipment, apparatus and workmanship (including programming) to be free of defective materials and faulty workmanship for the following periods from date of acceptance:

1. BCs, AACs, and ASCs: two years

2. Valve and damper actuators: five years

3. All else: one year

C. Provide new materials, equipment, apparatus and labor to replace that determined by College to be defective or faulty.

D. Control system failures during the warranty period shall be adjusted, repaired, or replaced at no additional cost or reduction in service to the College. Contractor shall respond to the College's request for warranty service within 24 hours during normal business hours.

E. Operator workstation software, project-specific software, graphic software, database software, and firmware updates that resolve known software deficiencies shall be provided at no cost to the College during the warranty period.

F. Sequence of operation programming bugs (both due to programming misinterpretations and sequence errors) shall be corrected and any reasonable control sequence changes required to provide proper system operation shall be provided at no additional cost to the College during this period.

1.11 WARRANTY MAINTENANCE

A. The College reserves the right to make changes to the BAS during the warranty period. Such changes do not constitute a waiver of warranty. The Contractor shall warrant parts and installation work regardless of any such changes made by the College, unless the Contractor provides clear and convincing evidence that a specific problem is the result of such changes to the BAS.

B. At no cost to the College, provide maintenance services for software and hardware components during the warranty period as specified below:

1. Emergency Service: Any malfunction, failure, or defect in any hardware component or failure of any control programming that would result in property damage or loss of comfort control shall be corrected and repaired following notification by the College to the Contractor.

    a. Response by telephone or via internet connection to the BAS to any request for service shall be provided within two hours of the College's initial request for service.

    b. In the event that the malfunction, failure, or defect is not corrected, at least one technician, trained in the system to be serviced, shall be dispatched to the College's site within eight hours of the College's initial request for such services.

2. Normal Service: Any malfunction, failure, or defect in any hardware component or failure of any control programming that would not result in property damage or loss of comfort control shall be corrected and repaired following notification by the College to the Contractor.

    a. Response by telephone to any request for service shall be provided within eight working hours (contractor specified 40 hr. per week normal working period) of the College's initial request for service.

    b. In the event that the malfunction, failure, or defect is not, at least one technician, trained in the system to be serviced, shall be dispatched to the College's site within three working days of the College's initial request for such services, as specified.

3. College's Telephonic Request for Service: Contractor shall specify a maximum of three telephone numbers for College to call in the event of a need for service. At least one of the lines shall be attended continuously (24/7). Alternatively, pagers/SMS can be used for technicians trained in system to be serviced. One of the three paged/texted technicians shall respond to every call within 15 minutes.

4. Technical Support: Contractor shall provide technical support by telephone throughout the warranty period.

5. Documentation: Record drawings and software documentation shall be updated as required to reflect any and all changes made to the system or programming during the warranty period.

PART 2 PRODUCTS

2.1 PRIMARY BAS MANUFACTURER

A. Primary BAS manufacturers shall meet the following minimum qualifications:

1. The manufacturer agrees to fully program and test all ASHRAE Guideline 36 sequences that are referenced herein and in Section 259000 BAS Sequences of Operation for their dealers bidding this project at no direct cost to these dealers. The cost of Guideline 36 programming and testing shall not be a direct cost to this project.

2. The manufacturer has a minimum of three dealers who can bid on this project for this initial bid, all future improvements, and all future service work.

B. The following primary BAS manufacturers are known to meet the above criteria and are the basis of this specification:

1. Delta Controls (campus standard)

2.2 GENERAL

A. Materials shall be new, the best of their respective kinds without imperfections or blemishes and shall not be damaged in any way.

B. To the extent practical, all equipment of the same type serving the same function shall be identical and from the same manufacturer.

C. All controllers, associated hardware (repeaters, routers, etc.), sensors, and control devices shall be fully operational and maintain specified accuracy at the anticipated ambient conditions of the installed location as follows:

1. Outdoors or in harsh ambient conditions: -20°C to 55°C (-4°F to 130°F), 10% RH to 90% RH noncondensing.

2. Conditioned spaces or mechanical rooms: 0°C to 40°C (32°F to 104°F), 10% RH to 80% RH noncondensing.

2.3 CONTROLLERS

A. General

1. Point information from any controller (including BCs, AACs, and ASCs) and from any gateway shall be capable of being used in a control sequence in any other panel. The use of OWS or CSS to serve as a communications server between control panels and gateways is not acceptable.

2. For all controllers, operating configuration and software shall be retained in the event of a power outage without requiring a download from upper level controllers by one or a combination of the following:

a. Volatile RAM shall have a replaceable battery backup using a lithium battery with a rated service life of 10,000 hours continuous and a rated shelf life of at least 7 years.

b. Volatile RAM shall have a automatically rechargeable battery backup using a lithium battery with a rated service life of 50 hours continuous and a rated shelf life of at least 10 years.

c. EEPROM, EPROM, or NVROM non-volatile memory.

3. Controllers shall allow independent operation regardless of the status of the other controllers or OWS or CSS. BCs, AACs, and ASCs shall perform all specified control sequences independent of operator interface devices and servers, i.e. all programming shall reside in BCs, AACs, and ASCs.

4. Each controller shall continually check the status of its processor and memory circuits. If an abnormal operation is detected, the controller shall.

a. Assume a predetermined failure mode.

b. Generate an alarm notification to the master controller, Operator Workstation, or both.

5. All input points and output points shall be protected such that shorting of the point to itself — to another point, or to ground — will cause no damage to the controller. All input and output points shall be protected from voltage up to 24V of any duration, such that contact with this voltage will cause no damage to the controller.

6. Programmability: All controllers, including BCs, AACs, and ASCs, shall be fully user programmable. Configurable pre-programmed logic shall not be acceptable in any controller. (This is required due to non-standard control sequences at AHUs and VAV terminal units.)

B. Stand-Alone Functionality

1. General: These requirements clarify the requirement for stand-alone functionality relative to packaging I/O devices with a controller. Stand-alone functionality is specified with the controller and for each Application Category specified in Part 3. This item refers to acceptable paradigms for associating the points with the processor.

2. Functional Boundary: Provide controllers so that all points associated with and common to one unit or other complete system or equipment shall reside within a single control unit. The boundaries of a standalone system shall be as dictated in the contract documents. Generally systems specified for the Application Category will dictate the boundary of the standalone control functionality. See related restrictions below. When referring to the controller with respect to standalone functionality, reference is specifically made to the processor. One processor shall execute all the related I/O control logic via one operating system that uses a common programming and configuration tool.

3. The following configurations are considered acceptable with reference to a controller's standalone functionality:

    a. Points packaged as integral to the controller such that the point configuration is listed as an essential piece of information for ordering the controller (having a unique ordering number).

    b. Controllers with processors and modular back planes that allow plug in point modules as an integral part of the controller.

    c. I/O point expander boards, plugged directly into the main controller board to expand the point capacity of the controller.

4. The following configurations are considered unacceptable with reference to a controller's standalone functionality:

    a. Multiple controllers enclosed in the same control panel to accomplish the point requirement.

C. Building Controller (BC)

1. General Requirements

    a. BCs shall be peer-to-peer devices connected to the Primary Controller LAN.

    b. Each BC shall be capable of standalone direct digital operation utilizing its own microprocessor, internal RAM, non-volatile memory, input/output, wiring terminal strips, A/D converters, real-time clock/calendar and voltage transient and surge protection devices, battery backup, regulated power supply, power conditioning equipment, ports for connection of operating interface devices, and control enclosure. Refer to standalone functionality specified above.

    c. The BC(s) shall provide fully distributed control independent of the operational status of the OWSs and CSS. All necessary calculations required to achieve control shall be executed within the BC independent of any other device.

    d. BCs shall perform overall system coordination, accept control programs, perform automated HVAC functions, control peripheral devices and perform all necessary mathematical and logical functions. BCs shall share information with the entire network of BCs and AACs/ASCs for full global control. Each controller shall permit multi-user operation from multiple workstations and portable operator terminals connected either locally or over the Primary Controller LAN.

    e. BC shall contain sufficient memory for all specified global control strategies, user defined reports and trending, communication programs, and central alarming.

f. The BC may provide for point mix flexibility and expandability. This requirement may be met via either a family of expander boards, modular input/output configuration, or a combination thereof. Refer to standalone functionality specified above.

g. All BC point data, algorithms and application software shall be configurable, and all control strategies performed by the BC shall be both operator definable and modifiable, from Operator Interfaces. The point database and all application programs shall be stored in non-volatile or battery backed volatile memory within the BC and shall be able to upload to or download from the OWS or CSS.

h. BC shall provide buffer for holding alarms, messages, trends etc.

i. Each BC shall include self-test diagnostics, which allow the BC to automatically alarm any malfunctions or alarm conditions that exceed desired parameters as determined by programming input.

j. Each BC shall contain software to perform full DDC/PID control loops.

k. Memory

1) Memory for data trending shall reside in BCs; the Operator Workstation shall not need to be connected for data trending to occur. Memory shall be large enough to record 256 records of each hardware point on the panel and an equal number of software points, each record to include both data value and time of occurrence. See Paragraph 3.15H for trending software requirements.

2) Provide sufficient internal memory for the specified sequences of operation and trend logging. There shall be a minimum of approximately 25% of available memory free for future programming changes.

3) Provide an additional BC if needed to comply with this Paragraph.

l. Input-Output Processing

1) Digital Outputs (DO): Outputs shall be rated for a minimum 24 Vac or Vdc, 0.5 amp maximum current. Each shall be configurable as normally open or normally closed. Each DO shall be discrete outputs from the BC's board. Multiplexing to a separate manufacturer's board is unacceptable. Provide suppression to limit transients to acceptable levels.

2) Analog Inputs (AI): AI shall be 0-5 Vdc, 0-10 Vdc, and 0-20 mA; or direct thermistor connection. Provide signal conditioning and zero and span calibration for each input. Each input shall be a discrete input to the BC's board. Multiplexing to a separate manufacturers board is unacceptable. A/D converters shall have a minimum resolution of 12 bits.

3) Digital Inputs (DI): Monitor dry contact closures. Accept pulsed inputs of at least one per second. Source voltage for sensing shall be supplied by the BC and shall be isolated from the main board. Software multiplexing of an AI and resistors is unacceptable.

4) Universal Inputs (UI-AI or DI): To serve as either AI or DI as specified above.

5) Electronic Analog Outputs (AO): Voltage mode: 0-5 Vdc and 0-10 Vdc; Current mode: 4-20 mA. Provide zero and span calibration and circuit protection. Pulse Width Modulated (PWM) analog is not acceptable. D/A converters shall have a minimum resolution of 8 bits.

6) Pulsed Inputs: Capable of counting up to 8 pulses per second with buffer to accumulate pulse count. Pulses shall be counted at all times.

m. A communication port for operator interface through a terminal shall be provided in each BC. It shall be possible to perform all program and database back-up, system monitoring, control functions, and BC diagnostics through this port. Standalone BC panels shall allow temporary use of portable devices without interrupting the normal operation of permanently connected printers, or workstations.

n. Each BC shall be equipped with loop tuning algorithm for precise proportional, integral, derivative (PID) control. Loop tuning tools provided with the Operator Workstation software is acceptable. In any case, tools to support loop tuning must be provided such that P, I, and D gains are automatically calculated.

o. All output points shall have a selectable failure setpoint or mode. The BC shall be capable of maintaining this failure setpoint or mode in the event of a system malfunction, which causes loss of BC control or loss of output signal as long as power is available at the BC. The failure setpoint or mode shall be selectable on a per point basis.

p. Slope intercepts and gain adjustments shall be available on a per-point basis.

q. BC Power Loss

1) Upon a loss of power to any BC, the other units on the primary controlling network shall not in any way be affected.

2) Upon a loss of power, all software, database parameters, and data (except trend data) shall be protected from memory loss per Paragraph 2.3A.2.

3) Upon restoration of power within the specified battery backup period, the BC shall resume full operation without operator intervention. The BC shall automatically reset its clock such that proper operation of any time

dependent function is possible without manual reset of the clock. All monitored functions shall be updated.

4) Should the duration of a loss of power exceed the specified battery back-up period or BC panel memory be lost for any reason, the panel shall automatically report, or CSS shall automatically determine, the condition (upon resumption of power) and be capable of receiving a download via the network, and connected computer. In addition, the Owner shall be able to upload the most current versions of all energy management control programs, Direct Digital Control programs, database parameters, and all other data and programs in the memory of each BC to the OWS via the local area network, or via the local RS-232C port to the POT.

r. BC Failure

1) Controller LAN Data Transmission Failure: BC shall continue to operate in stand-alone mode. BC shall store loss of communication alarm along with the time of the event. All control functions shall continue with the global values programmable to either last value or a specified value.

2) BC Hardware Failure: BC shall cease operation and terminate communication with other devices. All outputs shall go to their specified fail position.

s. Each BC shall be equipped with firmware resident or software self-diagnostics for sensors and be capable of assessing an open or shorted sensor circuit and taking an appropriate control action (close valve, damper, etc.).

t. BCs may include LAN communications interface functions for controlling secondary LANs. Refer to Paragraph 2.3C for requirements if this function is packaged with the BC.

u. BCs shall be mounted on equipment, in packaged equipment enclosures, or locking wall mounted in a NEMA enclosure, as specified herein.

2. BACnet Building Controller Requirements

a. The BC(s) shall support all BIBBs defined in the BACnet Building Controller (B-BC) device profile as defined in the BACnet standard.

b. Each BC shall be connected to the BACnet Primary Controller LAN communicating to or from other BCs.

D. Advanced Application Controller (AAC) and Application Specific Controller (ASC)

1. General Requirements

a. AACs and ASCs shall be connected to the Primary or Secondary Controller LAN.

b. AACs and ASCs shall provide intelligent, standalone control of HVAC equipment. Each unit shall have its own internal RAM, non-volatile memory and will continue to operate all local control functions in the event of a loss of communications on the Secondary LAN. Refer to standalone requirements by application specified in Part 3 of this Section. In addition, it shall be able to share information with every other BC and AAC /ASC on the entire network.

c. Each AAC and ASC shall include self-test diagnostics that allow the AAC /ASC to automatically relay to the BC, LAN Interface Device or workstation, any malfunctions or abnormal conditions within the AAC /ASC or alarm conditions of inputs that exceed desired parameters as determined by programming input.

d. AACs and ASCs shall include sufficient memory to perform the specific control functions required for its application and to communicate with other devices.

e. Each AAC and ASC must be capable of stand-alone direct digital operation utilizing its own processor, non-volatile memory, input/output, voltage transient and surge protection devices to perform all specified application sequences.

f. All point data; algorithms and application software within an AAC /ASC shall be modifiable from Operator Interfaces.

g. Memory

    1) Memory for data trending is not required for AACs and ASCs. If not provided in controller, memory for trend data shall reside in BCs connected to the same Network.

    2) Provide sufficient internal memory for the specified sequences of operation. For AACs, there shall be a minimum of approximately 25% of available memory free for future programming changes. Provide additional AACs or a BC if needed to comply with this requirement.

h. AAC Input-Output Processing. Same as BCs (Paragraph 2.3C.1.l) except A/D converters may be 10 bit

i. ASC Input-Output Processing

    1) Digital Outputs (DO): Outputs shall be rated for a minimum 24 Vac or Vdc, 0.5 amp maximum current. Each shall be configurable as normally open or normally closed. Each output shall have an LED to indicate the operating mode of the output. Each DO shall be discrete outputs from the

ASC's board (multiplexing to a separate manufacturer's board is unacceptable). Provide suppression to limit transients to acceptable levels.

2) Analog Inputs (AI): AI shall be 0-5 Vdc, 0-10 Vdc, 0-20 mA, or direct thermistor connection. Provide signal conditioning, and zero and span calibration for each input. Each input shall be a discrete input to the ASC's board (multiplexing to a separate manufacturers board is unacceptable unless specifically indicated otherwise). A/D converters shall have a minimum resolution of 10 bits.

3) Digital Inputs (DI): Monitor dry contact closures. Accept pulsed inputs of at least one per second. Source voltage for sensing shall be supplied by the ASC and shall be isolated from the main board. Software multiplexing of an AI and resistors may only be done in non-critical applications and only with prior approval of the Owner.

4) Universal Inputs (UI-AI or DI): To serve as either AI or DI as specified above.

5) Electronic Analog Outputs (AO): Voltage mode: 0-5 Vdc and 0-10 Vdc; Current mode: 4-20 mA. Provide zero and span calibration and circuit protection. Pulse Width Modulated (PWM) analog is not acceptable. D/A converters shall have a minimum resolution of 8 bits.

2. BACnet AAC(s) and ASC(s) Requirements

a. The AAC(s) and ASC(s) shall support all BIBBs defined in the BACnet Building Controller (B-AAC and B-ASC) device profile as defined in the BACnet standard.

b. AAC(s) and ASC(s) shall communicate over the BACnet Primary Controller LAN or the Secondary LAN.

2.4 COMMUNICATION DEVICES

A. Controller Local Area Network Interface Devices (LANID)

1. The Controller LANID shall be a microprocessor-based communications device which acts as a gateway/router between the Primary LAN, Secondary LAN, an operator interface, or printer. These may be provided within a BC or as a separate device.

2. The LANID shall perform information translation between the Primary LAN and the Secondary LAN, supervise communications on a polling secondary LAN, and shall be applicable to systems in which the same functionality is not provided in the BC. In systems where the LANID is a separate device, it shall contain its own microprocessor, RAM, battery, real-time clock, communication ports, and power

supply as specified for a BC in Paragraph 2.3C. Each LANID shall be mounted in a lockable enclosure.

3. Upon loss of power to a LANID, the battery shall provide for minimum 100-hour backup of all programs and data in RAM. The battery shall be sealed and self-charging.

4. The LANID shall be transparent to control functions and shall not be required to control information routing on the Primary LAN.

B. Supervisory LAN Routers

1. The Supervisory Router shall be a microprocessor-based communications device that acts as a router between the Supervisory LAN CSSs or OWS and the Primary LAN.

2. The Supervisory Router shall not perform information translation. Both Primary LAN and the Supervisory LAN shall use BACnet.

3. The Supervisory Router shall contain its own microprocessor, RAM, communication ports, and power supply. Each Supervisory Router shall be mounted in a lockable enclosure.

4. The Supervisory Router shall allow centralized overall system supervision, operator interface, management report generation, alarm annunciation, acquisition of trend data, and communication with control units. It shall allow system operators to perform the following functions from the CSS, OWSs, and POTs.

   a. Configure systems.

   b. Monitor and supervise control of all points.

   c. Change control setpoints.

   d. Override input values.

   e. Override output values.

   f. Enter programmed start/stop time schedules.

   g. View and acknowledge alarms and messages.

   h. Receive, store and display trend logs and management reports.

   i. Upload/Download programs, databases, etc. as specified.

5. Upon loss of power to the Supervisory Router, the battery shall provide for minimum 100-hour backup of all programs and data in RAM. The battery shall be sealed and self-charging.

6. The Supervisory Router shall be transparent to control functions and shall not be required to control information routing on the Primary LAN.

C. BACnet broadcast message routing

1. To allow BACnet broadcast messages to be relayed from remote nodes communicating via the internet and connecting to the Supervisory Router through IP protocol, a BACnet/IP Broadcast Management Device (BBMD) shall be provided which conforms to the BACnet standard for two-hop distribution. Multicast messaging or one-hop distribution requiring configuration of IP routers which are not part of the BAS vendor's scope is not acceptable.

D. BACnet Gateways & Protocol Translators

1. Gateways shall be provided to link non-BACnet control products to the BACnet inter-network. All of the functionality described in this Paragraph is to be provided by using the BACnet capabilities. Each Gateway shall have the ability to expand the number of BACnet objects of each type supported by 20% to accommodate future system changes.

2. Each Gateway shall provide values for all points on the non-BACnet side of the Gateway to BACnet devices as if the values were originating from BACnet objects. The Gateway shall also provide a way for BACnet devices to modify (write) all points specified by the Points List using standard BACnet services.

3. Each Gateway shall provide a way to collect and archive or trend (time, value) data pairs.

4. Each Gateway and any devices that the Gateway represents which have time-of-day information shall respond to workstation requests to synchronize the date and time. Each Gateway and any devices that the Gateway represents shall support dynamic device binding and dynamic object binding.

5. All points in the system shall be made network visible through the use of standard BACnet objects or through proprietary BACnet extensions that the workstation also supports. All points shall be writable using standard BACnet services.

6. All devices have a Device Object instance number that is unique throughout the entire inter-network. All BACnet devices shall be configured with a Device Object instance number that is based on the format specified. This includes all physical devices as well as any logical BACnet devices that are physically represented by Gateways.

7. Upon loss of power to a Gateway, the battery shall provide for minimum 500-hour backup of all programs and data in RAM. The battery shall be sealed and self-charging.

8. UL 916 CE FCC part 15 Subpart B – Class A with surge and transient protection circuitry for power and communications.

E. Gateways and Protocol Translators

Equipment/System	Interface			
	Type	Specified Under Division:	Location	Connect to this Network:
Variable Speed Drives	BACnet/MSTP	23	Each VFD	Secondary
Air-to-Water Heat Pumps	BACnet/IP	23	Each Heat Pump	Supervisory
Lighting Controls	BACnet/IP	26	Electrical Room	Supervisory
Power Monitoring	BACnet/IP	26	Electrical Room	Supervisory
Switchgear Digital Power Meters	BACnet/IP	26	Electrical Room	Supervisory
Emergency Generator	Modbus RS-485	26	Each generator	Secondary
DCW Booster pump	BACnet/MSTP	22	DCW Booster pump	Secondary

2.5 BAS INTERFACE HARDWARE

A. Control System Server (CSS)

1. Hardware:

a. Intel Core i5 Quad core 3.4 GHz (minimum) Processor

b. 8 GB DDR4 RAM (minimum)

c. 1 TB SATA hard drive with 6 GB/s transfer rate (minimum)

d. One Ethernet 10/100 Mbps internal network card (for connection to Supervisory LAN)

e. One Ethernet 10/100/1000 Mbps (1 Gbps) internal network card (for connection to College IT LAN)

f. 24 inch color, 1920 x 1200 pixel flat panel display.

g. 256 MB VGA/DVI graphics adapter

h. 2-button with scroll optical USB mouse

i. Enhanced USB 101-key keyboard

j. Internal speakers

k. High efficiency power supply; EnergyStar configured

l. One spare serial port and one spare USB port in addition to those needed for specified peripherals

m. 24x7 dedicated technical support service that delivers reduced hold time, direct access to advanced level technicians, and reduced time to resolution, minimum 3 years

n. Tower cabinet

2. Software by PC Supplier (factory installed):

a. Operating system: Microsoft Windows 10 Pro

b. Database: MySQL or MS SQL

c. Browser: Microsoft Internet Explorer, Firefox, or Chrome

d. All software shall be at least the latest version available as of the date of purchase.

B. Operator Workstation (OWS)

1. CSS doubles as OWS

C. Portable Operators Terminal (POT)

1. None required.

D. Uninterruptible Power Supply (UPS)

1. None required.

2.6 AIR TUBING

A. Seamless copper tubing, Type L-ACR, ASTM B 88; with cast-bronze solder joint fittings, ANSI B1.18; or wrought-copper solder-joint fittings, ANSI B16.22; except brass compression-type fittings at connections to equipment. Solder shall be 95/5 tin antimony, or other suitable lead free composition solder.

B. Virgin polyethylene non-metallic tubing type FR, ASTM D 2737, and with flame-retardant harness for multiple tubing. Use compression or push-on brass fittings.

2.7 ELECTRIC WIRING AND DEVICES

A. All electrical work shall comply with Division 26.

B. Communication Wiring

1. Provide all communication wiring between Building Controllers, Protocol Translators, Gateways, AACs, ASCs and local and remote peripherals (such as operator workstations and printers).

2. Ethernet LAN: Use Fiber or Category 5e or 6 of standard TIA/EIA 68 (10baseT). Network shall be run with no splices and separate from any wiring over 30 volts.

3. RS-485 LAN: Communication wiring shall be individually 100% shielded pairs per manufacturers recommendations for distances installed, with overall PVC cover, Class 2, plenum-rated run with no splices and separate from any wiring over 30 volts. Shield shall be terminated and wiring shall be grounded as recommended by BC manufacturer.

C. Analog Signal Wiring

1. Input and output signal wiring to all field devices, including, but not limited to, all sensors, transducers, transmitters, switches, current or voltage analog outputs, etc. shall be twisted pair, 100% shielded if recommended or required by controller manufacturer, with PVC cover. Gauge shall be as recommended by controller manufacturer.

2.8 CONTROL CABINETS

A. All control cabinets shall be fully enclosed with hinged door.

1. For panels in mechanical rooms and other spaces that are secure and accessible only to BAS/MEP operators, provide quarter-turn slotted latch.

2. For panels located in electrical rooms, IDF rooms, and other spaces that may be accessible by persons other than BAS/MEP operators, provide key-lock latch. A single key shall be common to all panels within each building. Provide 3 keys.

B. Construction

1. Indoor:

a. Mechanical or electrical rooms etc.: NEMA 1

b. Air plenums: NEMA 12

2. Outdoor: NEMA 4

C. Interconnections between internal and face-mounted devices shall be pre-wired with color-coded stranded conductors neatly installed in plastic troughs or tie-wrapped. Terminals for field connections shall be UL Listed for service, individually identified per control-interlock drawings, with adequate clearance for field wiring. All control tubing and wiring shall be run neatly and orderly in open slot wiring duct with cover.

Control terminations for field connection shall be individually identified per control Shop Drawings.

D. Provide ON/OFF power switch with over-current protection for control power sources to each local panel.

E. Provide with

1. Framed, plastic-encased point list for all points in cabinet.

2. Nameplates for all devices on face.

2.9 SENSORS AND MISCELLANEOUS FIELD DEVICES

A. The listing of several sensors or devices in this section does not imply that any may be used. Refer to points list in Paragraph 2.12 Points List for device specification. Only where two or more devices are specifically listed in points list (such as “FM-1 or FM-4”) may the Contractor choose among listed products.

B. Control Valves

1. Manufacturers

a. Belimo

b. Siemens

c. Schneider

d. Delta

e. JCI

f. Bray

g. Or equal

2. Butterfly Valves

a. Body: Extended neck epoxy coated cast or ductile iron with full lug pattern, ANSI Class bolt pattern to match specified flanges.

b. Seat: EPDM replaceable, non-collapsible, phenolic backed.

c. Disc: Polished aluminum bronze or stainless steel, pinned or mechanically locked to shaft. Sanded castings are not acceptable.

d. Bearings: Bronze or stainless steel.

e. Shaft: 416 stainless steel supported at three locations with PTFE bushings for positive shaft alignment.

f. Close off rating: Bubble-tight shutoff greater or equal to 125% of pump shut-off head.

g. Manufacturers (In Addition to Paragraph 2.9B.1.)

1) Jamesbury

2) Keystone

3) Dezurik

4) Or equal

3. Two Position Ball Valves

a. Valves shall be specifically designed for two-position duty in control application with guaranteed average leak-free life span over 200,000 full stroke cycles.

b. Industrial quality with nickel plated forged brass body and female NPT threads.

c. Blowout proof stem design, glass-reinforced Teflon thrust seal washer and stuffing box ring with minimum 600 psi rating (1 inch and smaller) or 400 psi rating (larger than 1 inch). The stem packing shall consist of 2 lubricated O-rings designed for on-off service and requiring no maintenance.

d. Valves suitable for water or low-pressure steam shall incorporate an anti-condensation cap thermal break in stem design.

e. No characterization disks

f. Close off rating: Bubble-tight shutoff greater or equal to 125% of pump shut-off head.

g. Ball: Chrome plated brass

h. Stem: Chrome plated brass

4. Modulating Characterized Ball Valves

a. Valves shall be specifically designed for modulating duty in control application with guaranteed average leak-free life span over 200,000 full stroke cycles.

b. Industrial quality with nickel plated forged brass body and female NPT threads.

c. Blowout proof stem design, glass-reinforced Teflon thrust seal washer and stuffing box ring with minimum 600 psi rating (2-way valves) or 400 psi rating (3-way valves). The stem packing shall consist of 2 lubricated O-rings designed for modulating service and requiring no maintenance.

d. Valves suitable for water or low-pressure steam shall incorporate an anti-condensation cap thermal break in stem design.

e. Close off rating: Bubble-tight shutoff greater or equal to 125% of pump shut-off head.

f. Ball: stainless steel

g. Stem: stainless steel

h. Characterizing disk held securely by a keyed ring providing equal percentage characteristic

5. Minimum valve assembly pressure ratings

   a. Chilled water: 125 psi at 60ºF

   b. Hot water: 125 psi at 200ºF

   c. Condenser water: 125 psi at 100ºF

6. Valve Selection

   a. Valve type

      1) Modulating 2-way or 3-way valves

         a) 6 inch and less: characterized ball type

      2) Two-position isolation: butterfly or non-characterized ball type

   b. Valve Characteristic

      1) 2-way valves: equal percentage or modified equal percentage.

      2) 3-way valves controlling cooling coils and condenser water heat exchangers: linear.

      3) 3-way valves controlling heating coils: equal percentage or modified equal percentage.

      4) Two-position valves: not applicable. For ball valves used for two-position duty, do not include characterizing disk.

   c. Valve Sizing

1) Modulating Water: Size valve to achieve the following full-open pressure drop

a) Minimum pressure drop: equal to half the pressure drop of coil or exchanger.

b) Maximum pressure drop

1. Hot water at coils: 2 psi

2. Chilled water at coils: 5 psi

c) 3-way valves shall be selected for near minimum pressure drop. 2-way shall be selected near maximum pressure drop.

d) Flow coefficient (C_v) shall not be less than 1.0 (to avoid clogging)

e) Valve size shall match as close as possible the pipe size where C_v is available in that size.

2) Two-position valves: Line size unless otherwise indicated on Drawings.

C. Control Dampers

1. Section 237300 Air Handling Units & Coils

D. Actuators

1. Manufacturers

a. Belimo

b. No equal

2. Warranty: Valve and damper actuators shall carry a manufacturer's 5-year warranty.

3. Electric Actuators

a. Entire actuator shall be UL or CSA approved by a National Recognized Testing Laboratory.

b. Enclosure shall meet NEMA 4X weatherproof requirements for outdoor applications.

c. Dampers. The actuator shall be direct coupled over the shaft, enabling it to be mounted directly to the damper shaft without the need for connecting linkage. The clamp shall be steel of a V-bolt design with associated V-shaped, toothed cradle attaching to the shaft for maximum strength and

eliminating slippage via cold weld attachment. Single bolt or set screw type fasteners are not acceptable. Aluminum clamps are unacceptable.

d. Valves. Actuators shall be specifically designed for integral mounting to valves without external couplings.

e. Actuator shall have microprocessor based motor controller providing electronic cut off at full open so that no noise can be generated while holding open. Holding noise level shall be inaudible.

f. Noise from actuator while it is moving shall be inaudible through a tee-bar ceiling.

g. Actuators shall provide protection against actuator burnout using an internal current limiting circuit or digital motor rotation sensing circuit. Circuit shall insure that actuators cannot burn out due to stalled damper or mechanical and electrical paralleling. End switches to deactivate the actuator at the end of rotation or use of magnetic clutches are not acceptable.

h. Modulating Actuators. Actuators shall accept a 0 to 10 VDC or 0 to 20 mA control signal and provide a 2 to 10 VDC or 4 to 20 mA operating range. Actuators shall have positive positioning circuit so that controlled device is at same position for a given signal regardless of operating differential pressure. Actuators that internally use a floating actuator with an analog signal converter are not acceptable.

i. Where indicated on Drawings or Points List, actuators shall include

   1) 2 to 10 VDC position feedback signal

   2) Limit (end) position switches

j. All 24 VAC/DC actuators shall operate on Class 2 wiring and shall not require more than 10 VA for AC. Actuators operating on 120 VAC power shall not require more than 10 VA. Actuators operating on 230 VAC power shall not require more than 11 VA.

k. All modulating actuators shall have an external, built-in switch to allow the reversing of direction of rotation.

l. Actuators shall be provided with a conduit fitting an a minimum three-foot electrical cable and shall be pre-wired to eliminate the necessity of opening the actuator housing to make electrical connections.

m. Where fail-open or fail-closed (fail-safe) position is required by Paragraph 2.9D.5, an internal mechanical, spring return mechanism shall be built into the actuator housing. Electrical capacitor type fail-safe are also acceptable. All fail-safe actuators shall be capable of both clockwise or counterclockwise spring return operation by simply changing the mounting orientation. Spring

return 2-position fail-safe valves shall not be used in noise sensitive locations; use either electronic fail-safe where available, or use floating point type actuator with drive-open and drive-close wiring for normal open/close operation (spring shall only be used to cause valve to drive to fail-safe position upon a loss of power).

n. Actuators shall be capable of being mechanically and electrically paralleled to increase torque where required.

o. All non-spring return actuators shall have an external manual gear release to allow manual positioning of the damper when the actuator is not powered. Spring return actuators with more than 60 inch-pound torque capacity shall have a manual crank for this purpose.

p. Actuators shall be designed for a minimum of 60,000 full cycles at full torque and be UL 873 listed.

q. Actuators shall provide clear visual indication of damper/valve position.

4. Electric Actuators for Large Butterfly Valves

a. Entire actuator shall be UL or CSA approved by a National Recognized Testing Laboratory.

b. The valve actuator shall consist of a capacitor-type reversible electric motor, gear train, limit switches and terminal block, all contained in a die cast aluminum enclosure.

c. Enclosure shall meet NEMA 4X weatherproof requirements for outdoor applications.

d. Output shaft shall be electroless nickel plated to prevent corrosion.

e. Actuator shall have a motor rated for minimum 75% duty cycle. Duty cycle shall be defined as running time divided by installed time at maximum torque.

f. Actuator shall be suitable for operation in ambient temperature ranging from -22°F to +150°F.

g. A pre-wired cable shall bring wiring outside enclosure to avoid necessity of opening cover.

h. Gears shall be hardened alloy steel, permanently lubricated. A self-locking gear assembly or a brake shall be supplied.

i. Actuator shall be equipped with a hand wheel for manual override to permit operation of the valve in the event of electrical power failure or system malfunction. Hand wheel must be permanently attached to the actuator.

When in manual operation electrical power to the actuator will be permanently interrupted.

j. The hand wheel will not rotate while the actuator is electrically driven.

k. Actuator shall have heater and thermostat to minimize condensation within the actuator housing.

l. Provide limit (end) position switches where indicated on schematics.

m. Actuators shall provide clear visual indication of valve position.

5. Normal and Fail-Safe Position

a. Except as specified otherwise herein, the normal position (that with zero control signal) and the fail-safe position (that with no power to the actuator) of control devices and actuators shall be as indicated in table below. “Last” means last position. Actuators with a fail-safe position other than “Last” must have spring or electronic fail-safe capability.

Device	**Normal Position**	**Fail-Safe Position**
Outside air damper	CLOSED	CLOSED
Return air damper	OPEN	OPEN
Exhaust/relief air damper	CLOSED	CLOSED
AHU heating coil valves	OPEN	LAST
AHU cooling coil valves	CLOSED	LAST
Equipment isolation valves	OPEN	LAST
Minimum flow bypass valves	OPEN	LAST
VAV box dampers	OPEN	LAST

6. Valve Actuator Selection

a. Modulating actuators for valves shall have minimum rangeability of 50 to 1.

b. Water

1) 2-way, and two-position valves

a) Tight closing against 125% of system pump shut-off head.

b) Modulating duty against 90% of system pump shut-off head.

2) 3-way shall be tight closing against twice the full open differential pressure for which they are sized.

7. Damper Actuator Selection

a. Actuators shall be direct coupled. For multiple sections, provide one actuator for each section; linking or jack-shafting damper sections shall not be allowed.

b. Provide sufficient torque as velocity, static, or side seals require per damper manufacturer's recommendations and the following:

1) Torque shall be a minimum 5 inch-pound per square foot for opposed blade dampers and 7 inch-pound per square foot for parallel blade dampers.

2) The total damper area operated by an actuator shall not exceed 80% of the manufacturer's maximum area rating.

E. General Field Devices

1. Provide field devices for input and output of digital (binary) and analog signals into controllers (BCs, AACs, ASCs). Provide signal conditioning for all field devices as recommended by field device manufacturers and as required for proper operation in the system.

2. It shall be the Contractor's responsibility to assure that all field devices are compatible with controller hardware and software.

3. Field devices specified herein are generally two-wire type transmitters, with power for the device to be supplied from the respective controller. If the controller provided is not equipped to provide this power, or is not designed to work with two-wire type transmitters, or if field device is to serve as input to more than one controller, or where the length of wire to the controller will unacceptably affect the accuracy, provide a transmitter and necessary regulated DC power supply, as required.

4. For field devices specified hereinafter that require signal conditioners, signal boosters, signal repeaters, or other devices for proper interface to controllers, furnish and install proper device, including 120V power as required. Such devices shall have accuracy equal to, or better than, the accuracy listed for respective field devices.

5. Accuracy: As used in this Section, accuracy shall include combined effects of nonlinearity, non-repeatability and hysteresis. Sensor accuracy shall be at or better than both that specifically listed for a device and as required by Paragraph 1.8B.2.

F. Temperature Sensors (TS)

1. General

a. Unless otherwise noted, sensors may be platinum RTD, thermistor, or other device that is commonly used for temperature sensing and that meets accuracy, stability, and resolution requirements.

b. When matched with A/D converter of BC, AAC, or ASC, sensor range shall provide a resolution of no worse than 0.3ºF (0.16 °C) (unless noted otherwise herein).

c. Sensors shall drift no more than 0.3ºF and shall not require calibration over a five-year period.

d. Manufacturers

1) Mamac

2) Kele Associates

3) Building Automation Products Inc.

4) Automated Logic Corp.

5) Or equal

2. Duct temperature sensors: Shall consist of sensing element, junction box for wiring connections and gasket to prevent air leakage or vibration noise.

a. TS-1A: Single point (use where not specifically called out to be averaging in points list). Sensor probe shall be 304 stainless steel.

b. TS-1B: Averaging. Sensor length shall be at least 1 linear foot for each 2 square feet of face area up to 25 feet maximum. Sensor probe shall be bendable aluminum.

3. Water Temperature Sensors

a. TS-2A: Well mounted immersion sensor, ¼" stainless steel probe, double encapsulated sensor, with enclosure suitable for location.

b. TS-2B: Same as TS-2A except provide extra precision (XP) temperature sensors to meet accuracy specified Paragraph 1.8B.2.

c. All piping immersion sensors shall be in one-piece machined brass or stainless steel wells that allow removal from operating system, with lagging extension equal to insulation thickness where installed in insulated piping. Wells shall be rated for maximum system operating pressure, temperature and fluid velocity. The well shall penetrate the pipe by the lesser of approximately half the pipe diameter or eight inches. The use of direct immersion or strap-on type sensors is not acceptable.

4. Room Sensors

   a. Thermostat tags refer to the following:

Type:	Tag	
Display	Blank	LCD
Temperature only	TS-3A	TS-3C
With humidity	TS-3AH	TS-3CH
With CO_2	TS-3AC	TS-3CC
With CO_2 and humidity	TS-3AHC	TS-3CHC

      1) Display

         a) Blank: Blank cover (or LCD display with display configured to be shut off and touchpad or keypad disabled)

         b) LCD: LCD display of all sensors, temperature setpoint adjustment buttons, and schedule override button

      2) Humidity Sensor

         a) 10% to 90%/±2% accuracy

         b) Where humidity sensor is not specified but included as standard, it shall be configured to not be displayed on the LCD or any graphics and not included in points list, as if it did not exist. (The purpose is to avoid the expense of having to keep the sensor in calibration.)

      3) CO2 Sensor

         a) 400 to 1250 PPM/ ±30PPM or 3% of reading, whichever is greater.

         b) The sensor shall include automatic background calibration (ABC) logic to compensate for the aging of the infrared source and shall not require recalibration for a minimum of 5 years, guaranteed. If sensor is found to be out of calibration, supplier shall recalibrate at no additional cost to the College within 5 years of purchase date.

         c) Meet Title 24 requirements including calibration interval

      4) For room sensors connected to terminal box controllers (such as at VAV boxes) that require calibration: Include a USB port or some other means for connection of POT for terminal box calibration. Alternative means of terminal calibration are acceptable provided they result in no cost to Work performed under Section 230593 Testing, Adjusting, and Balancing.

   b. See equipment schedules for thermostat type.

5. TS-4: Outdoor Air Sensor

a. Enclose in fan-aspirated radiation shield that combines both active and passive aspiration to minimize the effects of radiation.

1) Motor-driven fan draws air through the sensor chamber and exhausts it through the top of the shield.

2) Triple-walled sensor chamber shielded by flow-through plates.

3) Aspiration rate: minimum is 220 feet per minute.

b. Sensor

1) Electronics mounted in watertight gasketed enclosure to prevent water seepage

2) TS-1A where only drybulb temperature is specified in points list

3) TS-1A and HT-2 where drybulb temperature and relative humidity is specified in points list

4) TS-5 where both drybulb and dewpoint temperature is specified in points list

c. Manufacturer

1) Davis Instruments 7747

2) Kele A21

3) Or equal

6. Temperature Transmitters: Where required by the Controller or to meet specified end-to-end accuracy requirements, sensors as specified above shall be matched with transmitters outputting 4-20 mA linearly across the specified temperature range. Transmitters shall have zero and span adjustments, an accuracy of 0.1°F when applied to the sensor range.

G. Pressure Transmitters (PT)

1. PT-1: Water, General Purpose

a. Fast-response stainless steel sensor

b. Two-wire transmitter, 4-20 mA output with zero and span adjustments

c. Accuracy

1) Overall Accuracy (at constant temp) ±0.5% full scale, includes non-linearity, repeatability, and hysteresis

d. Long Term Stability 0.5% FS per year

e. Pressure Limits

1) Rated pressure: see points list

2) Proof pressure = 3x rated pressure

3) Burst pressure = 5x rated pressure

f. Manufacturers

1) Setra 209

2) Kele & Associates P51 Series

3) Or equal

H. Differential Pressure Transmitters (DPT)

1. DPT-1: Water, General Purpose

a. Fast-response capacitance sensor

b. Two-wire transmitter, 4-20 mA output with zero and span adjustments

c. Accuracy

1) Overall Accuracy (at constant temp) ±0.25% full scale (FS).

2) Non-Linearity, BFSL ±0.22% FS.

3) Hysteresis 0.10% FS.

4) Non-Repeatability 0.05% FS.

d. Long Term Stability 0.5% FS per year

e. Only 316 stainless steel in contact with fluid

f. Pressure Limits

1) 0 to 100 psid range: 250 psig maximum static pressure rating, 250 psig maximum overpressure rating.

2) 100 to 300 psid range: 450 psig maximum static pressure rating, 450 psig maximum overpressure rating.

g. Include brass 5-valve assembly for single sensor devices. See Paragraph 3.12E.9.

h. Manufacturers

1) Setra 209 or 230

2) Modus W30

3) Or equal

2. DPT-2: Not used

3. DPT-3: Air, Duct Pressure:

a. General: Loop powered two-wire differential capacitance cell-type transmitter.

b. Output: two wire 4-20 mA output with zero adjustment.

c. Overall Accuracy: ±1% of range (not of maximum range/scale)

d. Switch selectable range:

1) ≥ 0.5 inches water column

2) ≤10 inches water column

3) Select range as specified in points list or, if not listed for specified setpoint to be between 25% and 75% full-scale.

e. Housing: Polymer housing suitable for surface mounting.

f. Static Sensing Element: Pitot-type static pressure sensing tips similar to Dwyer model A-301, Davis Instruments, or equal, with connecting tubing.

g. DPT-3A: Include LCD display of reading.

4. DPT-4: Air, Low Differential Pressure

a. General: Loop powered, two-wire differential capacitance cell type transmitter.

b. Output: Two-wire 4-20 mA output with zero adjustment.

c. Overall Accuracy

1) General: ±1% FS

2) Underfloor: ±0.5% FS

3) Minimum outdoor air damper DP used for minimum outdoor airflow: ±0.25% FS

d. Range

1) Fixed (non-switch selectable)

2) Minimum Range: 0, -0.1, -0.25, -0.5, or -1.0 inches water column

3) Maximum Range: +0.1, 0.25, 0.5, or 1.0 inches water column

4) Range shall be as specified in points list or, if not listed, selected such that specified setpoint is between 25% and 75% full-scale.

e. Housing: Polymer housing suitable for surface mounting

f. Static Sensing Element

1) Ambient sensor: Dwyer A-306 or 420, BAPI ZPS-ACC-10, or equal

2) Space sensor:

a) Wall plate: Kele RPS-W, BAPI ZPS-ACC-01, Dwyer A-417 or 465 or equal

b) Ceiling or wall probe: BAPI ZPS-ACC06, Dwyer A-419A, Veris AA05 or equal

3) Filter or duct pressure sensor: Dwyer A-301 or equal

4) Plenum pressure sensor: Dwyer A-421 or equal

g. DPT-4A: Include LCD display of reading

h. Manufacturers

1) Setra 267

2) Modus

3) Air Monitor

4) Paragon

5) Or equal

5. DPT-5: VAV Velocity Pressure

a. General: Loop powered two-wire differential capacitance cell type transmitter.

b. Output: Two-wire, 4-20 mA output with zero adjustment.

c. Flow transducer (including impact of A-to-D conversion) shall be capable of stably controlling to a setpoint of 0.004 inches differential pressure or lower, shall be capable of sensing 0.002 inches differential pressure or lower, and shall have a ±0.001 inches or lower resolution across the entire scale.

d. Calibration software shall use a minimum of two field measured points, minimum and maximum airflow, with curve fitting airflow interpolation in between.

e. Range: 0 to 1 in.w.c.

f. Housing: Polymer housing suitable for surface mounting.

g. Manufacturer

1) Automated Logic or Distech

2) No equal

I. Differential Pressure Switches (DPS)

1. DPS-1: Water: Diaphragm with adjustable setpoint, 2 psig or adjustable differential, and snap-acting Form C contacts rated for the application. 60 psid minimum pressure differential range. 0ºF to 160ºF operating temperature range.

2. DPS-2: Air: Diaphragm with adjustable setpoint and differential and snap acting form C contacts rated for the application. Automatic reset. Provide manufacturer's recommended static pressure sensing tips and connecting tubing.

J. Current Switches (CS-1)

1. Clamp-on or solid-core

2. Range: as required by application

3. Trip Point: Automatic or adjustable

a. Exception: Fixed setpoint (Veris H-600 or equal) may be used on direct drive constant speed fans that do not have backdraft or motorized shutoff dampers.

4. Switch: Solid state, normally open, 1 to 135 Vac or Vdc, 0.3 Amps. Zero off state leakage

5. Lower Frequency Limit: 6 Hz

6. Trip Indication: LED

7. Approvals: UL, CSA

8. May be combined with relay for start/stop

9. Where used for single-phase devices, provide the CS/CR in a self-contained unit in a housing with override switch. Kele RIBX, Veris H500, or equal

10. Manufacturers

    a. Veris Industries H-608/708/808/908

    b. Senva C-2320L

    c. RE Technologies SCS1150A-LED

    d. Or equal

K. Current Transformers (CT-1)

1. Clamp-On Design Current Transformer (for Motor Current Sensing)

2. Range: 1-10 amps minimum, 20-200 amps maximum

3. Trip Point: Adjustable

4. Output: 0-5 Vdc or 0-10 Vdc,

5. Accuracy: ±0.2% from 20 to 100 Hz.

6. Amperage range sizing and switch settings in accordance with the following and per manufacturer's instructions:

Motor HP	120V	277V	480V
≤1/2	0-10A	0-10A	–
3/4 – 1.5	–	0-10A	0-10A
2 – 5	–	–	0-10A
7.5 – 10	–	–	0-20A
15 – 20	–	–	0-30A
25 – 30	–	–	0-40A

7. Manufacturers

    a. Veris Hx22 series

    b. Kele SC100

    c. Or equal

L. Flow Meter (FM)

1. FM-1: Magnetic Flow Tube Flow Meters

    a. General Requirements

1) Sensor shall be a magnetic flow meter, which utilizes Faraday's Law to measure volumetric fluid flow through a pipe. The flow meter shall consist of 2 elements, the sensor and the electronics. The sensor shall generate a measuring signal proportional to the flow velocity in the pipe. The electronics shall convert this EMF into a standard current output.

2) Electronic replacement shall not affect meter accuracy (electronic units are not matched with specific sensors).

3) Provide a four-wire, externally powered, magnetic type flow transmitter with adjustable span and zero, integrally mounted to flow tube. Output signal shall be a digital pulse proportional to the flow rate (to provide maximum accuracy and to handle abrupt changes in flow). Standard 4-20 mA or 0-10 Vdc outputs may be used on HVAC applications provided accuracy is as specified.

    a) On applications where the output is wired to a BTU meter but flow is required also as a direct input to the DDC system, e.g. for minimum flow control loop, provide a secondary analog output for the DDC system.

4) Flow Tube

    a) ANSI class 150 psig steel

    b) ANSI flanges

    c) Lined with

        1. Heating hot water, glycol: PTFE, PFA, or ETFE liner rated for ≤-4°F to ≥212ºF fluid temperature

        2. Chilled, condenser, domestic hot and cold water: Polypropylene, Ebonite, PTFE, PFA, or ETFE liner rated for ≤32°F to ≥140ºF fluid temperature

5) Electrode and grounding material

    a) 316L Stainless steel or Hastelloy C

    b) Electrodes shall be fused to ceramic liner and not require O-rings.

6) Electrical Enclosure: NEMA 4

7) Approvals

    a) UL or CSA

    b) NSF Drinking Water approval for domestic water applications

8) Performance

a) Accuracy shall be:

1. ±0.4% of reading from 3.3 to 33 ft/s

2. ±0.75% of reading from 1.3 to 3.3 ft/s

3. ±0.0075 ft/s at flow rates less than 1 ft/s

b) Stability: 0.1% of rate over six months.

c) Meter repeatability shall be ± 0.1% of rate at velocities > 3 feet per second.

d) Calibration: The sensor must be factory calibrated on an internationally accredited (such as NAMAS) water flow rig with accuracy better than 0.1%. Calibration shall be NIST traceable.

b. Manufacturers

1) Onicon F-3100 series

2) Siemens/Danfoss Magflo 3100

3) Krohne Optiflux 4000

4) Sparling TigermagEP FM656

5) Or equal

M. Airflow Measuring Stations (AFMS)

1. General. AFMS provided under this Section shall be licensed to bear the AMCA Certified Rating Seal for Airflow Measuring Stations. Ratings shall be based on tests and procedures performed in accordance with AMCA Publication 611 and comply with requirements of the AMCA Certified Ratings Program.

2. AFMS-1

a. Differential pressure type with uniframe DP sensor

1) Provide quantity of DP sensors per manufacturer's recommendations

b. Station mounted with expanded metal screen

c. Analog outputs for "standard" airflow (0.075 lb_{da}/ft3 density) and temperature

d. Manufacturers

1) Air Monitor

a) Transmitter: OAM-II-2121-1BMMM

b) Airflow Measuring System: OAM-II-AFS-(XX)A-111-013 where “XX” varies with the associated opening dimensions.

2) No equal

N. Electric Control Components

1. Limit Switches (LS): Limit switches shall be UL listed, SPDT or DPDT type, with adjustable trim arm. Limit switches shall be as manufactured by Square D, Allen Bradley, or equal.

2. Line-Voltage Wall Thermostat: Wall-mounted thermostat shall consist of SPDT contacts rated for 120V and current as required for application, temperature setpoint range of 50 to 90ºF.

3. Control Relays: All control relays shall be UL listed, with contacts rated for the application, and mounted in minimum NEMA-1 enclosure for indoor locations, NEMA-4 for outdoor locations.

a. Control relays for use on electrical systems of 120 volts or less shall have, as a minimum, the following:

1) AC coil pull-in voltage range of +10%, -15% or nominal voltage.

2) Coil sealed volt-amperes (VA) not greater than 4 VA.

3) Silver cadmium Form C (SPDT) contacts in a dustproof enclosure, with 8 or 11 pin type plug.

4) Pilot light indication of power-to-coil and coil retainer clips.

b. Relays used for across-the-line control (start/stop) of 120V motors, 1/4 HP, and 1/3 HP, shall be rated to break minimum 10 Amps inductive load.

c. Relays used for stop/start control shall have low voltage coils (30 VAC or less), and shall be provided with transient and surge suppression devices at the controller interface.

4. General Purpose Power Contactors: NEMA ICS 2, AC general-purpose magnetic contactor. ANSI/NEMA ICS 6, NEMA type 1 enclosure. Manufacturer shall be Square D, Cutler-Hammer, or equal.

5. Control Transformers and Power Supplies

a. Control transformers shall be UL Listed. Furnish Class 2 current-limiting type, or furnish over-current protection in both primary and secondary circuits for Class 2 service per NEC requirements. Mount in minimum NEMA-1 enclosure.

b. Transformer shall be proper size for application. Limit connected loads to 80% of rated capacity.

c. DC power supply output shall match output current and voltage requirements. Unit shall be full-wave rectifier type with output ripple of 5.0 mV maximum peak-to-peak. Regulation shall be 1.0% line and load combined, with 100 microsecond response time for 50% load changes. Unit shall have built-in over-voltage and over-current protection, and shall be able to withstand a 150% current overload for at least 3 seconds without trip-out or failure.

d. Separate power transformer shall be used for controllers and for actuators and other end devices that use half wave rectification.

e. Unit shall operate between 0°C and 50°C [32°F and 120°F]. EM/RF shall meet FCC Class B and VDE 0871 for Class B, and MIL-STD 810C for shock and vibration.

f. Line voltage units shall be UL Recognized and CSA Approved.

6. Electric Push Button Switch: Switch shall be momentary contact, oil tight, push button, with number of N.O. or N.C. contacts as required. Contacts shall be snap-action type, and rated for minimum 120 Vac operation. Switch shall be 800T type, as manufactured by Allen Bradley, Kele, or equal.

7. Mechanical Timer Switch: Switch shall be mechanically spring wound with a N.O. contact or N.C. contacts as required. Timer shall be 0-60 minutes and shall not include a “hold” feature, which allows switch contacts to remain closed. Contacts shall be rated for minimum 120 VAC operation. Switch shall be C560M type, as manufactured by NSI Industries or equal.

8. Pilot Light: Panel-mounted pilot light shall be NEMA ICS 2 oil tight, transformer type, with screw terminals, push-to-test unit, LED type, rated for 120 VAC. Unit shall be 800T type, as manufactured by Allen-Bradley, Kele, or equal.

9. Alarm Horn: Panel-mounted audible alarm horn shall be continuous tone, Sonalert solid-state electronic signal, as manufactured by Mallory, Kele, or equal.

10. Potentiometer. Wall box mounted single turn with knob numbered 0 to 10 or 0 to 100. Wall plate cover to match electrical.

11. Electric Selector Switch (SS): Switch shall be maintained contact, NEMA ICS 2, oil-tight selector switch with contact arrangement, as required. Contacts shall be rated for minimum 120 Vac operation. Switch shall be 800T type, as manufactured by Allen-Bradley, Kele, or equal.

12. Window switch (WS)

    a. Surface mount magnetic burglar alarm switch.

    b. Screw mount, magnet on window, switch on frame.

    c. Sealed to prevent dirt or dust contact.

    d. Color to match electrical and lighting switch plates in the room. See Division 26 and Electrical Drawings.

2.10 CALIBRATION & TESTING INSTRUMENTATION

A. Provide instrumentation required to verify readings, calibrate sensors, and test the system and equipment performance.

B. All equipment used for testing and calibration shall be NIST/NBS traceable and calibrated within the preceding 6-month period. Certificates of calibration shall be submitted.

C. Test equipment used for testing and calibration of field devices shall be at least twice as accurate as respective field device (for example if field device is ±0.5% accurate, test equipment shall be ±0.25% accurate over same range).

2.11 SOFTWARE

A. General

1. System software shall be based on a server/thin-client architecture, designed around the open standards of web technology. Servers shall be accessed using a web browser over the control system Supervisory LAN, the Owner's IT LAN, and remotely over the Internet (through the Owner's IT LAN).

2. The intent of the thin-client architecture is to provide operators complete access to the BAS via a web browser GUI. No special software other than a web browser (including ActiveX components or fat java clients) shall be required to be installed on OIs used to access the BAS graphics, point displays, trends, and trend configuration. Additional software other than a browser may be used to configure or modify the BAS and programming.

3. The interface software shall be certified by the BACnet Testing Laboratory as an Advanced Operator Workstation Software (B-AWS) under ANSI/ASHRAE Standard 135.

4. Furnish and install all software and programming necessary to provide a complete and functioning system as specified. Include all software and programming not specifically itemized in these specifications that is necessary to implement, maintain, operate, and diagnose the system in compliance with these specifications.

5. Software Components: All software components of the BAS system software shall be installed and completed in accordance with the specification. BAS system components shall include:

    1) Server Software, Database and Web Browser Graphical User Interface

    2) System Configuration Utilities for future modifications to the system

    3) Programming language

    4) Direct digital control software

    5) Application Software

B. Licensing

1. Include licensing and hardware keys for all software packages at all workstations (OWSs and POTs) and servers.

2. Within the limitations of the server, provide licenses for any number of users to have web access to the CSS at any given time.

3. All operator interface, programming environment, networking, database management and any other software used by the Contractor to install the system or needed to operate the system to its full capabilities shall be licensed and provided to the College.

4. All operator software, including that for programming and configuration, shall be available on all workstations. Hardware and software keys to provide all rights shall be installed on all workstations.

C. Controller Software

1. BC Software Residency: Each BC shall be capable of control and monitoring of all points physically connected to it. All software including the following shall reside and execute at the BC:

    a. Real-Time Operating System software

    b. Real-Time Clock/Calendar and network time synchronization

    c. BC diagnostic software

    d. LAN Communication software/firmware

    e. Direct Digital Control software

    f. Alarm Processing and Buffering software

    g. Data Trending, Reporting, and Buffering software

h. I/O (physical and virtual) database

i. Remote Communication software

2. AAC/ASC Software Residency: Each AAC/ASC shall be capable of control and monitoring of all points physically connected to it. As a minimum, software including the following shall reside and execute at the AAC/ASC. Other software to support other required functions of the AAC/ASC may reside at the BC or LAN interface device (specified in Paragraph 2.4A) with the restrictions and exceptions per application provided in Paragraph 2.3D:

   a. Real-Time Operating System software

   b. AAC/ASC diagnostic software

   c. LAN Communication software

   d. Control software applicable to the unit it serves

   e. I/O (physical and virtual) database to support one mode of operation

3. Standalone Capability: BC shall continue to perform all functions independent of a failure in other BC/AAC/ASC or other communication links to other BCs/AACs/ASCs. Trends and runtime totalization shall be retained in memory. Runtime totalization shall be available on all digital input points that monitor electric motor status. Refer also to Paragraph 2.3 for other aspects of standalone functionality.

4. Operating System: Controllers shall include a real-time operating system resident in ROM or EEPROM. This software shall execute independently from any other device in the system. It shall support all specified functions. It shall provide a command prioritization scheme to allow functional override of control functions. Refer also to Paragraph 2.3 for other aspects of the controller's operating system.

5. Network Communications: Each controller shall include software or firmware that supports the networking of CUs on a common communications trunk that forms the respective LAN. Network support shall include the following:

   a. Building Controller/Primary LAN shall be a high-speed network designed and optimized for control system communication. If a Primary LAN communications trunk is severed, BCs shall reconfigure into two separate LANs and continue operations without interruption or Operator intervention.

   b. Controller communication software shall include error detection, correction, and re-transmission to ensure data integrity.

   c. Operator/System communication software shall facilitate communications between other BCs, all subordinate AACs/ASCs, Gateways and LAN

Interface Devices or Operator Workstations. Software shall allow point interrogation, adjustment, addition/deletion, and programming while the controller is on line and functioning without disruption to unaffected points. The software architecture shall allow networked controllers to share selected physical and virtual point information throughout the entire system.

6. Diagnostic Software: Controller software shall include diagnostic software that checks memory and communications and reports any malfunctions.

7. Alarm/Messaging Software: Controller software shall support alarm/message processing and buffering software as specified below.

8. Application Programs: CUs shall support and execute application programs specified herein.

9. Updating/Storing Application Data: Site-specific programming residing in volatile memory shall be uploadable/downloadable from an OWS or CSS using BACnet services connected locally, to the Primary LAN, to the Local Supervisory LAN but all must be available. Initiation of an upload or download shall include all of the following methods; Manually, Scheduled, and Automatically upon detection of a loss or change.

10. Power Loss and Restart: System software shall provide for orderly shutdown upon loss of power. Volatile memory shall be retained. Outputs shall go to programmed fail position, which as a default shall be set to their position in unoccupied mode. Equipment restart shall be automatic upon power restoration and shall include a user definable time delay on each piece of equipment to stagger the restart. Loss of power shall be alarmed at operator interface indicating date and time.

11. Time Synchronization: Operators shall be able to set the time and date in any device on the network that supports time-of-day functionality. The operator shall be able to select to set the time and date for an individual device, devices on a single network or all devices simultaneously. Automatic time synchronization shall be provided using BACnet services.

12. Anti-dithering: In order to improve the life expectancy of modulating electronic actuators, software shall limit the number of re-positions. This can be accomplished by providing anti-dithering software, a small deadband for fully proportioning actuators, and by ensuring that floating actuators do not receive control pulses of excessively short duration.

D. Graphical User Interface Software

1. A web browser installed on each OWS, POT, and server (see Paragraph 2.1A) shall serve as the graphical user interface to the BAS. Communication between the web server GUI and BAS server shall be encrypted using 128-bit encryption technology within Secure Socket Layers. Communication protocol shall be Hyper-Text Transfer Protocol.

2. The GUI shall provide a comprehensive user interface. Using a collection of web pages, it shall be constructed to have a look-and-feel like a single application and provide a complete and intuitive mouse/menu driven operator interface. It shall be possible to navigate through the system using a web browser to accomplish all features specified in this section.

3. The GUI shall (as a minimum) provide a Navigation Pane for navigation, and an Action Pane for display of animated graphics, schedules, alarms/events, live graphic programs, active graphic setpoint controls, configuration menus for operator access, reports, and reporting actions for events.

4. Login: Upon launching the web browser and selecting the appropriate domain name or IP address, the operator shall be presented with a login page that will require a login name and password. Navigation in the system shall be dependent on the operator's role privileges, and geographic area of responsibility. See Security Access below.

5. Navigation Pane

    a. The Navigation Pane shall comprise a Navigation Tree which defines a geographic hierarchy of the BAS system. Navigation through the GUI shall be accomplished by clicking on appropriate level of a navigation tree (consisting of expandable and collapsible tree control like Microsoft's Explorer program) or by selecting dynamic links to other system graphics. Both the navigation tree and action pane defined below shall be displayed simultaneously enabling the operator to select a specific system or equipment and view the corresponding graphic. The navigation tree shall as a minimum provide the following views:

        1) Geographic View shall display a logical geographic hierarchy of the system including: cities, sites, buildings, building systems, floors, equipment and BACnet objects.

        2) Network View shall display the hierarchy of the actual BACnet IP Intranet network. This can include: Systems, Site, Networks, Routers, Half-Routers, Devices, Equipment and all the BACnet Objects in a device.

        3) Groups View shall display Scheduled Groups and custom reports.

        4) Configuration View shall display all the configuration categories (Operators, Schedule, Event, Reporting and Roles).

    b. Alternative interface structures will also be accepted if they provide similar ease of navigation through the system hierarchy.

6. Action Pane: The Action Pane shall provide several functional views for each HVAC or mechanical/electrical subsystem specified. A functional view shall be accessed by clicking on the corresponding buttons:

a. Graphics: Using animated png or other graphical format suitable for display in a web browser, graphics shall include aerial building/campus views, color building floor-plans, equipment drawings, active graphic setpoint controls, web content, and other valid HTML elements. The data on each graphic page shall automatically refresh at least 6 times per minute.

b. Properties: Shall include graphic controls and text for the following: Locking or overriding BACnet objects, demand strategies, and any other valid data required for setup. Changes made to the properties pages shall require the operator to depress an accept/cancel button.

c. Schedules: Shall be used to create, modify, edit and view schedules based on the systems geographical hierarchy and in compliance with Paragraph 2.11D.8.

d. Events: Shall be used to view alarm event information geographically (using the navigation tree), acknowledge events, sort events by category, actions and verify reporting actions.

e. Trends: Shall be used to display associated trend and historical data, modify colors, date range, axis and scaling.

f. Logic - Live Graphic Programs: Shall be used to display a real-time graphic of the control algorithm for the mechanical/electrical system selected in the navigation tree.

7. Graphics

a. The GUI shall make extensive use of color in the graphic pane to communicate information related to setpoints and comfort. Animated graphics and active setpoint graphic controls shall be used to enhance usability.

b. Graphics tools used to create Web Browser graphics shall be non-proprietary and provided and installed on each OWS.

c. Graphical display shall be 1280 x 1024 pixels or denser, 256 color minimum.

d. Links

1) Graphics shall include hyperlinks which when selected (clicked on with mouse button) launch applications, initiate other graphics, etc.

2) Screen Penetration: Links shall be provided to allow user to navigate graphics logically without having to navigate back to the home graphic. See additional discussion in Paragraph 3.13E.

3) Information Links

a) On each MEP system and subsystem graphic, provide links to display in a new window the information listed below.

1. English-language as-built control sequence associated with the system. See Paragraph 1.7B.

2. O&M and submittal information for the devices on the graphic. See Paragraph 1.7B. This includes links to electronic O&M and submittal information for mechanical equipment supplied under Section 230501 Basic Mechanical Materials and Methods.

b) The display shall identify the target of the link by file name/address.

c) Information shall be displayed in electronic format that is text searchable.

d) Window shall include software tools so that text, model numbers, or point names may be found. Source documents shall be read-only (not be editable) with this software.

e. Point Override Feature

1) Every real output or virtual point displayed on a graphic shall be capable of being overridden by the user (subject to security level access) by mouse point-and-click from the graphic without having to open another program or view.

2) When the point is selected to be commanded

a) Dialog box opens to allow user to override the point (Operator Mode) or release the point (Automatic Mode). Operator Mode will override automatic control of the point from normal control programs.

b) Dialog box shall have buttons (for digital points) or a text box or slide bar (for analog points) to allow user to set the point's value when in operator mode. These are grayed out when in automatic mode.

c) When dialog box is closed, mode and value are sent to controller.

d) Graphic is updated upon next upload scan of the actual point value.

3) A list of points that are currently in an operator mode shall be available through menu selection.

f. Point override status (if a digital point is overridden by the supervised manual override per Paragraph 2.3C or if a point is in operator mode per Paragraph 2.11D.7.e) shall be clearly displayed on graphics for each point, such as by changing color or flag.

g. The color of symbols representing equipment shall be able to change color or become animated based on status of binary point to graphically represent on/off status.

h. On floor plan displays of spaces, temperature shall be graphically displayed by coloring the zone area in accordance with or similar to the following:

1) Red: space temperature above cooling setpoint by 2ºF (adjustable) or more. This condition can be programmed to generate an alarm.

2) Yellow: space temperature between cooling setpoint and 2ºF (adjustable) above setpoint.

3) Green: space temperature between cooling and heating setpoints and space is in occupied mode.

4) Gray: space temperature between cooling and heating setpoints and space is in unoccupied mode.

5) Light blue: space temperature between heating setpoint and 2ºF (adjustable) below setpoint.

6) Dark blue: space temperature below heating setpoint by 2ºF (adjustable) or more. This condition can be programmed to generate an alarm.

8. Graphics Development Package

a. Graphic development and generation software shall be provided to allow the user to add, modify, or delete system graphic displays.

b. Provide capability to store graphic symbols in a symbol directory and incorporate these symbols into graphics.

c. Provide libraries of pre-engineered screens and symbols depicting standard air handling unit components (such as fans, cooling coils, filters, dampers), mechanical system components (such as, pumps, chillers, cooling towers, boilers), complete mechanical subsystems (such as VAV reheat zone) and electrical symbols.

d. The Graphic Development Package shall use a mouse or similar pointing device to allow the user to perform the following:

1) Define symbols

2) Position items on graphic screens

3) Attach physical or virtual points to a graphic

4) Define background screens

5) Define connecting lines and curves

6) Locate, orient and size descriptive text

7) Define and display colors for all elements

8) Establish correlation between symbols or text and associated system points or other displays.

9) Create hot spots or link triggers to other graphic displays or other functions in the software.

e. A single graphic file shall be used for common control applications (such as VAV boxes) so that any updates to the graphic may be done once and automatically applied to all applications. Displayed points shall be automatically populated based on wild card entry of point name in graphic definition.

9. Time and Schedules

a. Provide a time master that is installed and configured to synchronize the clocks of all BACnet devices supporting time synchronization. Synchronization shall be done using Coordinated Universal Time. All trend sample times shall be able to be synchronized. The frequency of time synchronization message transmission shall be selectable by the operator.

b. System shall automatically change time/date for Daylight Savings Time and leap years.

c. An operator (with password access) shall be able to define a Normal, Holiday or Override schedule for an individual piece of equipment or room, or choose to apply a hierarchical schedule to the entire system, site or floor Zone Group. For example, Independence Day Holiday for every level in the system would be created by clicking at the top of the geographic hierarchy defined in the Navigation Tree. No further operator intervention would be required and every control module in the system with would be automatically downloaded with the Independence Day Holiday.

d. All schedules that affect the system/area/equipment highlighted in the Navigation Tree shall be shown in a summary schedule table and graph.

e. Schedules shall comply with the BACnet standard, (Schedule Object, Calendar Object, Weekly Schedule property and Exception Schedule property) and shall allow events to be scheduled based on

1) Types of schedule shall be Normal, Holiday or Override

2) A specific date

3) A range of dates

4) Any combination of Month of Year (1-12, any), Week of Month (1-5, last, any), Day of Week (M-Sun, Any)

5) Wildcard (example, allow combinations like second Tuesday of every month)

f. Schedule Categories: The system shall allow operators to define and edit scheduling categories (different types of systems or occupancy types). The categories shall include: name, description, icon (to display in the hierarchy tree when icon option is selected) and type of value to be scheduled.

g. Schedule Groups: In addition to hierarchical scheduling, operators shall be able to define functional Schedule Groups, comprised of an arbitrary group of areas/rooms/equipment scattered throughout the facility and site. For example, the operator shall be able to define an individual Tenant Group – who may occupy different areas within a building or buildings. Schedules applied to the Tenant Group shall automatically be downloaded to control modules affecting spaces occupied by the Tenant Group.

h. Partial Day Exceptions: Schedule events shall be able to accommodate a time range specified by the operator (example: board meeting from 6 pm to 9 pm overrides Normal schedule for conference room).

i. Schedule Summary Graph: The schedule summary graph shall clearly show Normal versus Holiday versus Override Schedules, and the net operating schedule that results from all contributing schedules. Note: In case of priority conflict between schedules at the different geographic hierarchy, the schedule for the more detailed geographic level shall apply.

j. Schedule Distribution: For reliability and performance, instead of maintaining a single schedule in a field device that writes over the network to notify other devices when a scheduled event occurs, field devices will only keep their part of the schedule locally. The BAS server software shall determine which nodes a hierarchical schedule applies to and will create/modify the necessary schedule objects in each field device as necessary.

10. Events and Alarms

a. Events and alarms associated with a specific system, area, or equipment selected in the Navigation Tree shall be displayed in the Action Pane by selecting an Events View.

b. Events View: Each event shall display an Event Category (using a different icon for each event category), date/time of occurrence, current status, and event report. An operator shall be able to sort events, edit event templates and categories, acknowledge or force a return to normal in the Events View as specified in this section.

c. Event Categories (Alarm Levels): The operator shall be able to create, edit or delete event categories (alarm level). An icon shall be associated with each Event category, enabling the operator to easily sort through multiple events displayed. Alarm levels (per Guideline 36) shall be initially configured by the Contractor as follows:

   1) Level 1: Life Safety Message

   2) Level 2: Critical Equipment Message

   3) Level 3: Urgent Message

   4) Level 4: Normal Message

d. BACnet Event Templates: BACnet Event template shall define different types of alarms and their associated properties. As a minimum, properties shall include a reference name, verbose description, severity of event, acknowledgement requirements, high/low limit and out of range information.

e. Event Areas (Actions): Each Event Categories (Alarm Level) shall be configured to specific Event Reporting Actions. For example, it shall be possible for an operator to assign all HVAC Maintenance events on the 1st floor of a building to email the technician responsible for maintenance. The Navigation Tree shall be used to setup Event Areas in the Graphic Pane.

f. Alarm Configuration. Alarms shall require configuration related to criticality (Critical/Not Critical), operator acknowledgement (Requires Acknowledgement/Does Not Require Acknowledgement), and conditions required for an alarm to clear automatically (Requires Acknowledgement of a Return to Normal/ Does Not Require Acknowledgement of a Return to Normal).

g. Event Reporting Actions: Event Reporting Actions specified shall be automatically launched (under certain conditions) after an event is received by the BAS server software. Operators shall be able to define these Reporting Actions using the Navigation Tree and Graphic Pane through the GUI. Reporting Actions shall be as follows:

   1) GUI dialog box: Provide visual and optional audible alarm indication. The alarm dialog box shall always become the top dialog box upon receipt of an alarm irrespective of the foreground application.

   2) Print: Alarm/Event information shall be printed to the any network accessible printer.

   3) Email: Alarm/Event information shall be via email to a POP3 address on the Owner's intranet or through this intranet to the internet.

   4) Text: Alarm/Event information shall be sent to phone via SMS services.

5) File Write: The ASCII File write reporting action shall enable the operator to append operator defined alarm information to any alarm through a text file. The alarm information that is written to the file shall be completely definable by the operator. The operator may enter text or attach other data point information (such as AHU discharge temperature and fan condition upon a high room temperature alarm).

6) Write Property: The write property reporting action updates a property value in a hardware module.

7) Run External Program: The Run External Program reporting action launches specified program in response to an event.

h. Event Time/Date Stamp: All events shall be generated at the BAS control module level and comprise the Time/Date Stamp using the standalone control module time and date.

i. Event Configuration: Operators shall be able to define the type of events generated per BACnet object. A network view of the Navigation Tree shall expose all BACnet objects and their respective Event Configuration. Configuration shall include assignment of event, alarm, type of acknowledgement and notification for return to normal or fault status.

j. Event Summary Counter: The view of events in the Graphic Pane shall provide a numeric counter, indicating how many events are active (in alarm), require acknowledgement, and total number of events in the BAS Server database.

k. Event Auto-Deletion: Events that are acknowledged and closed, shall be auto-deleted from the database and archived to a text file after an operator defined period. The file shall be stored in file on the CSS with no limit to quantity or age of alarms, other than limitations of hard disk. The file can be archived to tape and deleted by operator to clear disk space.

l. Data Format. The system shall allow for external systems to access the event instance data. Event data shall be stored and queried in the database in a relational manner. At a minimum, the fields to be stored in the database are

1) Event Source

2) Event Generation Time

3) Acknowledge Required Flag

4) Delivery Priority

5) BACnet Event Type

6) Event Message Text

7) BACnet Event Parameter

8) Classification of Event

9) Event Acknowledgement Time

10) Return to Normal Time

11) Operator Comments

12) Who Acknowledged the Event

m. Event Simulator: The GUI user shall provide an Event Simulator to test assigned Reporting Actions. The operator shall have the option of using current time or scheduling a specific time to generate the Event. Utilizing the Navigation Tree and drop-down menus in the Graphic Pane, the operator shall be able to select the Event Type, Status, Notification, Priority, Message, and whether acknowledgement is required.

11. Trends

a. Trending and trend analysis capabilities are considered critical to system performance. The system shall be designed to upload and record large amounts of point data without causing network bottlenecks or affecting proper system operation. Data shall be stored on the CSS. The system as a whole shall be designed to comply with the trending capability test defined in Paragraph 3.15H.

b. Every point, both real and virtual, shall be available for data trending.

c. Trending software shall be capable of recording point values and time on a user specified regular time step and on a change-of-value (COV) basis (data is recorded when point changes by a specified amount for analog points or by changes of state for binary points), at the user's option. Sampling intervals shall be as small as one second. Each trended point shall have the ability to be trended at a different sampling interval.

d. Trend data shall be sampled and stored in control panel memory (see Paragraph 2.3). If historical trending is enabled for the BACnet object, trend data shall be uploaded from control panels to the CSS on a user-defined interval, manual command, or automatically when the trend buffer becomes full. There shall be no limit to the amount of trend data stored at the CSS other than hard disk limitations.

e. Trends shall conform to the BACnet Trend Log Object specification. Trends shall both be displayed and user configurable through the GUI. Trend logs may comprise analog, digital or calculated points simultaneously. A trend log's properties shall be editable using the Navigation Tree and Graphic Pane.

f. Viewing Trends

1) Trend data shall be displayed graphically by the GUI. This shall be a capability internal to the workstation software and not a capability resulting from download of trend data on a third-party spreadsheet program unless such transfer is automatic and transparent to the operation and the third-party software is included with the workstation software package.

2) The software shall be capable of dynamically graphing the trend logged object data by creating two-axis (x, y) graphs that simultaneously display values relative to time for at least eight objects in different colors, even if objects have been trended at different time intervals. Where trended values are COV, software shall automatically fill the trend samples between COV entries. A graph legend shall identify each variable plotted.

3) Multiple scales shall be possible, one for each object, with range set automatically by the software but capable of being manually adjusted by the operator.

4) Trend format, displayed points, etc. shall be capable of being saved as a template for future trend displays.

5) Trends shall be able to dynamically update at operator-defined intervals, including on a 1 second interval for loop tuning.

6) It shall be possible to zoom-in on a particular section of a trend for more detailed examination and pan through historical data by simply scrolling the mouse.

7) It shall be possible to pick (or float mouse over) any sample on a trend and have the numerical value displayed.

8) The operator shall have the ability to pan through a historical trend and copy the data viewed to the clipboard using standard Windows keystrokes.

g. Trend Data Storage

1) The database shall allow applications to access the data while the database is running. The database shall not require shutting down in order to provide read-write access to the data. Data shall be able to be read from the database without interrupting the continuous storage of trend data being carried by the BAS using SQL queries.

2) Data shall be stored in an SQL compliant database format and shall be available through the Owner’s intranet or internet (with appropriate security clearance) without having to disable BAS access to the database.

3) The database shall not be inherently limited in size, e.g. due to software limitations or lack of a correct license. Database size shall be limited only by the size of the provided storage media (hard drive size).

h. Data export. Trends shall be exportable using one or more of the following methods:

1) SQL Query

a) Provide the exact syntax to allow extraction of data from the database in 4-column format as shown in Table 1 below.

b) Provide a windows-compatible ODBC driver for the database along with the installation of the database itself.

TrendName	DateTime	TimeZone	DataValue
B8.Plant.CH3.CHWS.Temp.F	2009-06-16 13:01:02	-0800	43.5
B8.Plant.CH3.CHWS.Temp.F	2009-06-16 13:06:06	-0800	45.2
B8.Plant.CH3.CHWS.Temp.F	2009-06-16 13:11:01	-0800	44.3

Table 1: Example of a database presentation

12. Security Access

a. Security access from the GUI to BAS servers shall require a Login Name and Password.

b. Access to different areas of the BAS shall be defined in terms of roles and geographic area of responsibility.

c. Roles shall reflect the actual roles of different types of operators. Roles shall be defined in terms of View, Edit and Function Privileges.

1) View Privileges: Navigation, Network, and Configuration Trees, Operators, Roles and Privileges, Alarm/Event Template and Reporting Action.

2) Edit Privileges: Setpoint, Tuning and Logic, Manual Override, and Point Assignment Parameters.

3) Function Privileges: Alarm/Event Acknowledgement, Control Module Configuration, Memory Download and Upload, Schedules, Schedule Groups, Manual Commands, Print, and Alarm/Event Maintenance.

d. Roles shall be geographically assigned using a similar expandable/collapsible navigation tree. For example, it shall be possible to assign two HVAC Technicians with similar competencies (and the same operator defined HVAC Role) to different areas of the system.

e. Each operator shall automatically be logged off of the system if no keyboard or mouse activity is detected for an adjustable period of time. This auto logoff time shall be set individually per operator.

f. Provide an audit trail of actions taken by any user, including the user name and time. Store in secure file in database format on the CSS. Provide software to view and print audit trail.

13. Report Software

a. Provide software to create standard and custom reports of point status, alarms, etc. Report format, displayed points, time period (daily, weekly, monthly, or annual), etc. shall be capable of being saved as a template for future reports. Reports shall be time and date stamped and shall contain a report title editable by the user.

b. Reports shall be capable of being sent to a printer or export to Word or ASCII format to a file, and shall be capable of being generated automatically based on date and time of day.

c. Standard reports. Prepare the following standard reports, accessible automatically without requiring definition by user.

1) Tenant or department after-hour usage. System must be capable of monitoring tenant override requests and generating a monthly report showing the daily total time in hours that each tenant has requested after-hours HVAC services.

2) Monthly and annual energy usage and cost. See Utility cost calculation in Paragraph 3.13.

3) Alarm events and status.

4) Points in Hand (Operator Override) via Workstation command (including name of operator who made the command) or via supervised HOA switch at output, including date and time.

E. Control Programming Software

1. Points

a. Provide templates customized for point type, to support input of individual point information using standard BACnet Objects, including long-name field.

b. All real and virtual points shall be accessible to any control panel for use in any control sequences regardless of physical location.

2. Programming Language

a. All controllers must be fully user-programmable using a single programming language for all control devices. Use of canned (preprogrammed, burned-in) software is not acceptable.

b. The control programming language must allow virtually any control sequences to be written. Software shall be capable of the sequences specified in Paragraph 3.13 without exception.

c. All custom programs shall be modifiable from Operator Workstations without having to burn chips or locally access the controller. Software shall allow the user to modify and input control sequence software and to download to panels via the control network.

d. The programming language shall support floating point arithmetic using the following operators and functions: +, -, /, x, square root, and x-to-the-y-power, natural log, log, trigonometric functions (sine, cosine, tangent), absolute value, minimum/maximum value from a list of values, and psychrometric parameters (wetbulb, dewpoint, and enthalpy) from temperature and relative humidity.

e. The programming language shall have predefined variables that represent time of day, day of the week, month of the year, and the date. Other predefined variables shall provide elapsed time in seconds, minutes, hours, and days. These elapsed time variables shall be able to be reset by the language so that interval timing functions can stopped and started within a program.

f. The system must be capable of supporting software (virtual) points to be used in control sequences and monitored just as if they were real digital or analog points.

g. Control programming shall employ the BACnet protocols for Standard Command Priorities.

h. A PID (proportional-integral-derivative) algorithm with adjustable gains and anti-windup shall be included as an integral part (subroutine) of the programming language, not requiring special programming or hardware.

i. The programming language shall be graphical. BASIC-like or other line- or block-type programming languages are not acceptable. With the graphical programming language, a sequence of operations shall be created by drag-and-drop assembling on screen of graphic blocks that represent each of the commands or functions necessary to complete a control sequence. Blocks represent common logical control devices such as relays, switches, high signal selectors, PID loops, optimum start, etc. Blocks are then interconnected on screen using graphic “wires,” each forming a logical connection. Once assembled, each logical grouping of graphic blocks and their interconnecting wires then forms a graphic function block which may be

used to control any piece of equipment with a similar point configuration and sequence of operation.

j. The graphic programming software shall support a live mode, where all input/output data, calculated data, and setpoints shall be displayed in a real-time mode. For each piece of HVAC equipment, the entire graphic program shall be displayed through the GUI. The operator must have the ability to scroll through the entire live graphic program as necessary.

3. Debugging Software

a. Provide a search capability that will search all control sequences for a given point name to determine all sequences that use or control the point.

b. The control programs shall be capable of being tested on-line or off-line (prior to installation in field panels). The program and results of programming tests shall be displayed graphically using graphical programming language with parameter values displayed in appropriate locations. Simulation capabilities shall include step-by-step, accelerated time, and operator defined simulation criteria like outside weather, demand, and communication status.

F. Miscellaneous Software

1. Provide a context-sensitive, on-line help system to assist the operator in operating and editing the system. On-line help shall be available for all applications and shall provide relevant data for the application or object that help is being called from.

2. Provide software for viewing (but not editing) electronic versions of as-built shop drawings of

a. Mechanical, electrical, and plumbing systems in Adobe pdf format

b. BAS drawings in Adobe pdf format

3. Automatic Demand Response (ADR) Control Software

a. The software shall allow OpenADR communication from PG&E's Demand Response Automation Server through the College's LAN to the CSS, communicating at least the minimum points shown in Paragraph 2.12C.5.

2.12 CONTROL POINTS

A. Table Column Definitions

1. Point description

2. Type (number in point schedule after each type refers to tag on schematics)

a. AO: analog output

b. AI: analog input

c. DO: digital or binary output

d. DI: digital or binary input

3. Device description

   a. See Paragraph 2.9 for device definition.

4. Trend Logging

   a. Commissioning: Where listed, point is to be trended at the basis listed for commissioning and performance verification purposes.

   b. Continuous: Where listed, point is to be trended at the basis listed continuously, initiated after system acceptance, for the purpose of future diagnostics.

   c. Trend Basis

      1) Where range of engineering units is listed, trend on a change of value (COV) basis (in other words record time stamp and value when point value changes by engineering unit listed).

      2) Where time interval is listed, trend on a time basis (in other words record time stamp and value at interval listed). All points relating to a specific piece of equipment shall be trended at the same initiation time of day so data can be compared in text format.

5. Calibration

   a. F = factory calibration only is required (no field calibration)

   b. HH = field calibrate with handheld device. See Paragraph 3.15D.6.a.2)

B. Note that points lists below are for each system of like kind. Refer to drawings for quantity of each.

C. Points mapped through gateways and network interfaces. Note that points listed herein are intended to indicate the level of effort required for point mapping for bid purposes; the points lists are not exclusive and exhaustive. The exact point names and types may vary since the points available vary by equipment manufacturer and model. A final list of available points must be obtained from the manufacturer during the shop drawing development phase. If the available points differ from the points lists herein, the desired points to be mapped shall be confirmed by the Engineer prior to issuing Submittal Package 2. Unless the quantity of points is significantly different

from those shown herein, the changes shall be made at no additional costs to the College.

Outdoor Air Temperature	AI	TS-4, located on roof	1 min	15 min	HH

PART 3 EXECUTION

3.1 INSTALLATION - GENERAL

A. Install systems and materials in accordance with manufacturer's instructions, roughing-in drawings and details indicated on Drawings.

B. Coordinate Work and Work schedule with other trades prior to construction.

C. Examine areas and conditions under which control systems are to be installed. Do not proceed with work until unsatisfactory conditions have been corrected in manner acceptable to Installer.

3.2 DELIVERY, STORAGE, AND HANDLING

A. Provide factory-shipping cartons for each piece of equipment and control device. Maintain cartons during shipping, storage and handling as required to prevent equipment damage, and to eliminate dirt and moisture from equipment.

B. Store equipment and materials inside and protect from weather.

3.3 IDENTIFICATION

A. General

1. Manufacturers' nameplates and UL or CSA labels to be visible and legible after equipment is installed.

2. Identifiers shall match record documents.

3. All plug-in components shall be labeled such that removal of the component does not remove the label.

B. Wiring and Tubing

1. All wiring and cabling, including that within factory-fabricated panels, shall be labeled at each end within 2 inches of termination with the BAS address or termination number.

2. Permanently label or code each point of field terminal strips to show the instrument or item served.

3. All pneumatic tubing shall be labeled at each end within 2 inches of termination with a descriptive identifier.

C. Equipment and Devices

1. Valve and damper actuators: None required.

2. Sensors: Provide 1 inch x 3 inches x 1/8 inches black micarta or lamacoid labels with engraved white lettering, ¼ inches high. Indicate sensor identifier and function (for example “CHWS Temp”).

3. Panels

   a. Provide 2 inches x 5 inches 1/8 inches black micarta or lamacoid labels with engraved white lettering, ½ inches high. Indicate panel identifier and service.

   b. Provide permanent tag indicating the electrical panel and circuit number from which panel is powered.

4. Identify room sensors relating to terminal box or valves with indelible marker on sensor hidden by cover.

3.4 CUTTING, CORING, PATCHING AND PAINTING

A. Provide canning for openings in concrete walls and floors and other structural elements prior to their construction.

B. Penetrations through rated walls or floors shall be filled with a listed material to provide a code compliant fire-stop.

C. All damage to and openings in ductwork, piping insulation, and other materials and equipment resulting from Work in this Section shall be properly sealed, repaired, or re-insulated by experienced mechanics of the trade involved. Repair insulation to maintain integrity of insulation and vapor barrier jacket. Use hydraulic insulating cement to fill voids and finish with material matching or compatible with adjacent jacket material.

D. At the completion of Work, all equipment furnished under this Section shall be checked for paint damage, and any factory-finished paint that has been damaged shall be repaired and repainted to original finish.

3.5 CLEANING

A. Clean up all debris resulting from its activities daily. Remove all cartons, containers, crates, and other debris generated by Work in this Section as soon as their contents have been removed. Waste shall be collected and legally disposed of.

B. Materials stored on-site shall be protected from weather and stored in an orderly manner, neatly stacked, or piled in the designated area assigned by the College’s Representative.

C. At the completion of work in any area, clean all work and equipment of dust, dirt, and debris.

D. Use only cleaning materials recommended by the manufacturer of the surfaces to be cleaned and on surfaces recommended by the cleaning material manufacturer.

3.6 CONTROLLERS

A. General

1. Install systems and materials in accordance with manufacturer's instructions, specifications roughing-in drawings and details indicated on Drawings.

2. Regardless of application category listed below, each Control Unit shall be capable of performing the specified sequence of operation for the associated equipment. Except as listed below, all physical point data and calculated values required to accomplish the sequence of operation shall reside within the associated CU. Listed below are point data and calculated values that shall be allowed to be obtained from other CUs via LAN.

   a. Global points such as outdoor air temperature

   b. Requests, such as heat/cool requests, used to request operation or for setpoint reset from zones to systems and systems to plants

   c. Modes, such as system modes, used to change operating logic from plants to systems and systems to zones

3. Where associated control functions involve functions from different categories identified below, the requirements for the most restrictive category shall be met.

B. Controller Application Categories

1. Controllers shall comply with the application table below (X under controller type indicates acceptable controller type).

Application Category	**Examples**	**Acceptable Controller**		
		ASC	**AAC**	**BC**
0	Monitoring of variables that are not used in a control loop, sequence logic, or safety, such as status of sump pumps or associated float switches, temperatures in monitored electrical rooms.	X	X	X
1	Miscellaneous heaters Constant speed exhaust fans and pumps	X	X	X
2	Terminal Units (such as VAV Boxes)	X		
4	Air Handling Units Heat Pump Water Plant		X (note 1)	X
Notes: Controller may be used only if all control functions and physical I/O associated with a given unit resides in one AAC/ASC				

2. ASC Installation

    a. ASCs that control equipment located above accessible ceilings shall be mounted on the equipment in an accessible enclosure and shall be rated for plenum use if ceiling attic is used as a return air plenum.

    b. ASCs that control equipment mounted in a mechanical room may either be mounted in or on the equipment, or on the wall of the mechanical room at an adjacent, accessible location.

    c. ASCs that control equipment mounted outside or in occupied spaces shall either be located in the unit or in a proximate mechanical/utility space.

3. AAC and BC Installation

    a. AACs/BCs shall be located in a temperature control cabinets constructed per Paragraph 2.8.

3.7 COMMUNICATION DEVICES

A. General

1. Install systems and materials in accordance with manufacturer's instructions, roughing-in drawings and details indicated on Drawings.

2. Provide all interface devices and software to provide an integrated system.

B. LANID and LAN Routers

1. Provide as required

2. Connect networks to both sides of device

3. Thoroughly test to ensure proper operation

4. Interruptions or fault at any point on any Primary LAN shall not interrupt communications between other nodes on the network. If a LAN is severed, two separate networks shall be formed and communications within each network shall continue uninterrupted. The system shall automatically monitor the operation of all network devices and annunciate any device that goes off-line because it is failing to communicate.

C. Gateways and Protocol Translators to Equipment Controllers

1. See Paragraph 2.4E for network connection of Gateways and Protocol Translators.

2. Wire to networks on both sides of device.

3. Map across all monitoring and control points listed in Paragraph 2.12C.

4. Thoroughly test each point to ensure that mapping is accurate.

5. Initiate trends of points as indication in Paragraph 2.12C.

D. External Communications

1. Provide an Ethernet second port on the CSS to which the College can connect their College IT LAN, by others. Contractor shall coordinate with the College's Representative to establish an IP address and communications parameters to assure proper operation. This connection shall also provide access to Internet through College's firewall to Internet Services Provider procured by College.

3.8 BAS INTERFACE HARDWARE

A. Provide the following BAS Interface Hardware:

Device	Quantity
Control System Server	1
Operator Workstation	0
Portable Operator's Terminal	0
Uninterruptible Power Supply	0
Color Inkjet Printer	0
Alarm Dot Matrix Printer	0

B. Install all hardware and software and configure all devices in accordance with manufacturer's instructions.

C. Provide all licenses, keys, etc. and all documentation and any information required to install, configure, operate, diagnose and maintain the system.

D. Connections

1. CSS

a. Connect to Supervisory LAN

b. Connect to College IT LAN.

E. Backup

1. After completion and acceptance of installation, create a backup of all OWSs and server database and configuration files for permanent record of initial installation on a flash drive. Make three copies, two for College and one for Contractor to retain for his records off-site.

2. All other backup configuration shall be by the College.

F. Anti-virus and firewall software and installation shall be by the College.

3.9 CONTROL AIR TUBING

A. Sensor air tubing shall be sized by the Contractor.

B. All control air piping shall be concealed except in equipment rooms or unfinished areas.

C. Installation methods and materials

1. Concealed and Inaccessible: Use copper tubing or FR plastic in metal raceway. Exception: Room thermostat drops in stud walls in areas with lay-in ceiling may be FR plastic tubing.

2. Concealed and Accessible tubing (including ceiling return air plenums) shall be copper tubing or FR plastic tubing, subject to the following limitations

a. FR tubing shall be enclosed in metal raceway when required by local code.

b. Quantity of FR tubing per cubic foot of plenum space shall not exceed manufacturer's published data for Class 1 installation.

3. Exposed to view or damage: Use hard-drawn copper or FR plastic in metal raceway.

a. Where copper tubing is used, a section 12 inches or less of FR plastic tubing is acceptable at final connection to control device.

D. Mechanically attach tubing to supporting surfaces. Sleeve through concrete surfaces in minimum 1 inch sleeves, extended 6 inches above floors and 1 inch below bottom surface of slabs.

E. Pneumatic tubing shall not be run in raceway containing electrical wiring.

F. Where FR tubing exits the end of raceway or junction box, provide a snap-in nylon bushing. Where pneumatic tubing exits control panels, provide bulkhead fittings. Where copper tubing exits junction boxes or panels, provide bulkhead fittings.

G. All tubing shall be number coded on each end and at each junction for easy identification.

H. All control air piping shall be installed in a neat and workmanlike manner parallel to building lines with adequate support.

I. Piping above suspended ceilings shall be supported from or anchored to structural members or other piping or duct supports. Tubing shall not be supported by or anchored to electrical raceways or ceiling support systems.

J. Brass-barbed fittings shall be used at copper-to-FR tubing junctions. Plastic slipped-over copper tubing is not acceptable.

K. Number-code or color-code tubing, except local individual room control tubing, for future identification and servicing of control system. Code shall be as indicated on approved installation drawings.

3.10 CONTROL POWER

A. Power wiring and wiring connections required for Work in this Section shall be provided under this Section unless specifically indicated on Division 26 Drawings or Specifications. See Paragraph 1.1B.

B. Extend power to all BAS devices, including 120V power to panels, from an acceptable power panel.

1. See Division 26 Electrical Drawings for power locations pre-allocated for BAS system.

2. Where no power source is indicated on drawings, for bid purposes only, assume a dedicated circuit is available within an average of 20 feet of panel location. If this is not the case, request additional cost prior to submission of shop drawings or no additional costs will be reimbursed.

3. Coordinate with Division 26 during shop drawing development for final connection location.

C. General requirements for obtaining power include the following:

1. Electrical service to controls panels and control devices shall be provided by isolated circuits, with no other loads attached to the circuit, clearly marked at its source. The location of the breaker shall be clearly identified in each panel served by it.

2. Obtain power from a source that feeds the equipment being controlled such that both the control component and the equipment are powered from the same panel. Where equipment is powered from a 460V source, obtain power from the electrically most proximate 120V source fed from a common origin.

3. Where control equipment is located inside a new equipment enclosure, coordinate with the equipment manufacturer and feed the control with the same source as the equipment. If the equipment's control transformer is large enough and of the correct voltage to supply the controls, it may be used. If the equipment's control transformer is not large enough or not of the correct voltage to supply the controls, provide separate transformer(s).

4. Where a controller controls multiple systems on varying levels of power reliability (normal, emergency, or interruptible), the controller, and any associated switches

and devices necessary its operation, shall be powered by the highest level of reliability served.

D. Unless transformers are provided with equipment as specified in related Division 23 and 26 equipment Sections, Contractor shall provide transformers for all low voltage control devices including non-powered terminal units such as cooling-only VAV boxes and VAV boxes with hot water reheat. Transformer(s) shall be located in control panels in readily accessible locations such as Electrical Rooms.

E. Power line filtering. Provide transient voltage and surge suppression for all workstations and BCs either internally or as an external component.

3.11 CONTROL AND COMMUNICATION WIRING

A. Control and Signal Wiring

1. Comply with Division 26.

2. Line Voltage Wiring

a. All line-voltage wiring shall meet NEC Class 1 requirements.

b. All Class 1 wiring shall be installed in UL Listed approved raceway per NEC requirements and shall be installed by a licensed electrician.

c. Class 1 wiring shall not be installed in raceway containing pneumatic tubing.

3. Low Voltage Wiring

a. All low-voltage wiring shall meet NEC Class 2 requirements. (Low-voltage power circuits shall be sub-fused when required to meet Class 2 current-limit.)

b. Class 2 wiring shall be installed in UL Listed approved raceway as follows:

1) Where located in unconcealed or inaccessible locations, such as:

a) Equipment rooms

b) Exposed to weather

c) Exposed to occupant view

d) Inaccessible locations such as concealed shafts and above inaccessible ceilings

2) Class 2 wiring shall not be installed in raceway containing Class 1 wiring.

c. Class 2 wiring need not be installed in raceway as follows:

1) Where located in concealed and easily accessible locations, such as:

   a) Inside mechanical equipment enclosures and control panels

   b) Above suspended accessible ceilings (e.g. lay-in and spline)

   c) Above suspended drywall ceilings within reach of access panels throughout

   d) In shafts within reach of access panels throughout

   e) Nonrated wall cavities

2) Wiring shall be UL Listed for the intended application. For example, cables used in floor or ceiling plenums used for air transport shall be UL Listed specifically for that purpose.

3) Wiring shall be supported from or anchored to structural members neatly tied at 10 foot intervals and at least 1 foot above ceiling tiles and light fixtures. Support or anchoring from straps or rods that support ductwork or piping is also acceptable. Cables shall not be supported by or anchored to ductwork, electrical raceways, piping, or ceilings.

4) Install wiring in sleeves where it passes through walls and floors. Maintain fire rating at all penetrations.

d. Boxes and panels containing high-voltage wiring and equipment shall not be used for low-voltage wiring except for the purpose of interfacing the two (for example relays and transformers).

4. All wire-to-device connections shall be made at a terminal block or terminal strip. All wire-to-wire connections shall be at a terminal block.

5. All field wiring shall be properly labeled at each end, with self-laminating typed labels indicating device address, for easy reference to the identification schematic. All power wiring shall be neatly labeled to indicate service, voltage, and breaker source.

6. Use coded conductors throughout with different colored conductors.

7. All wiring within enclosures shall be neatly bundled and anchored to permit access and prevent restriction to devices and terminals.

8. Maximum allowable voltage for control wiring shall be 120 V. If only higher voltages are available, the Contractor shall provide step-down transformers.

9. All wiring shall be installed as continuous lengths, with no splices permitted between termination points.

10. Size of raceway and size and type of wire shall be the responsibility of the Contractor, in keeping with the manufacturer's recommendation and NEC requirements.

11. Include one pull string in each raceway 1 inch or larger.

12. Control and status relays are to be located in designated enclosures only. These enclosures include packaged equipment control panel enclosures unless they also contain Class 1 starters.

13. Conceal all raceways, except within mechanical, electrical, or service rooms. Install raceway to maintain a minimum clearance of 6 inches from high-temperature equipment (for example steam pipes or flues).

14. Secure raceways with raceway clamps fastened to the structure and spaced according to code requirements. Raceways and pull boxes may not be hung on flexible duct strap or tie rods. Raceways may not be run on or attached to ductwork.

15. Install insulated bushings on all raceway ends and openings to enclosures. Seal top end of all vertical raceways.

16. Terminate all control or interlock wiring.

17. Maintain updated as-built wiring diagrams with terminations identified at the jobsite.

18. Flexible metal raceways and liquid-tight, flexible metal raceways shall not exceed 3 feet in length and shall be supported at each end. Flexible metal raceway less than ½ inches electrical trade size shall not be used. In areas exposed to moisture liquid-tight, flexible metal raceways shall be used.

19. Raceway must be rigidly installed, adequately supported, properly reamed at both ends, and left clean and free of obstructions. Raceway sections shall be joined with couplings per code. Terminations must be made with fittings at boxes and ends not terminating in boxes shall have bushings installed.

20. Wire digital outputs to either the normally-closed or normally-open contacts of binary output depending on desired action in case of system failure. Unless otherwise indicated herein, wire to the NO contact

21. Hardwire Interlocks

    a. The devices referenced in this Section are hardwire interlocked to ensure equipment shutdown occurs even if control systems are down. Do not use software (alone) for these interlocks.

    b. Hardwire device NC contact to air handler fan starter upstream of HOA switch, or to VFD enable contact.

c. Where multiple fans (or BAS DI) are controlled off of one device and the device does not have sufficient contacts, provide a relay at the device to provide the required number of contacts.

d. Provide for the following devices where indicated on Drawings or in Sequences of Operation:

1) Duct smoke detector

2) High discharge static pressure

3) Low mixing plenum pressure

22. Shielded cable shield shall be grounded only at one end. Signal wiring shield shall be grounded at controller end only unless otherwise recommended by the controller manufacturer.

B. Communication Wiring

1. Adhere to the requirements of Paragraph 3.11A in addition to this Paragraph.

2. Communication and signal wiring may be run without conduit in concealed, accessible locations as permitted by Paragraph 3.11A only if noise immunity is ensured. Contractor is fully responsible for noise immunity and rewire in conduit if electrical or RF noise affects performance.

3. All cabling shall be installed in a neat and workmanlike manner. Follow all manufacturers' installation recommendations for all communication cabling.

4. Do not install communication wiring in raceway and enclosures containing Class 1 or other Class 2 wiring.

5. Maximum pulling, tension, and bend radius for cable installation as specified by the cable manufacturer shall not be exceeded during installation.

6. Verify the integrity of the entire network following the cable installation. Use appropriate test measures for each particular cable.

7. All runs of communication wiring shall be unspliced length when that length is commercially available.

8. All communication wiring shall be labeled to indicate origination and destination data.

9. Grounding of coaxial cable shall be in accordance with NEC regulations Article on Communications Circuits, Cable and Protector Grounding.

10. Power-line carrier signal communication or transmission is not acceptable.

3.12 SENSORS AND MISCELLANEOUS FIELD DEVICES

A. Install sensors in accordance with the manufacturer's recommendations.

B. Mount sensors rigidly and adequately for the environment within which the sensor operates.

C. Sensors used as controlled points in control loops shall be hardwired to the controller to which the controlled device is wired and in which the control loop shall reside.

D. Temperature Sensors

1. Room temperature sensors and thermostats shall be installed with back plate firmly secured to the wall framing or drywall anchors.

   a. For sensors mounted in exterior walls or columns, use a back plate insulated with foam and seal all junction box openings with mastic sealant.

   b. For sensors on exposed columns, use Wiremold or equal enclosures that are the smallest required to enclose wiring (e.g. Wiremold 400 BAC or equal) and Wiremold or equal junction boxes that are the narrowest required to enclose the temperature sensor and wiring connections (e.g. Wiremold 2348S/51 or equal). Color or raceway and boxes shall be per the architect; submit for approval prior to installation.

2. All wires attached to sensors shall be air sealed in their raceways or in the wall to stop air transmitted from other areas affecting sensor readings.

3. Averaging sensors shall be installed in a serpentine manner vertically across duct. Each bend shall be supported with a capillary clip. Where located in front of filters (such as mixed air sensors), access for filter removal shall be maintained.

4. Temperature sensors downstream of coils shall be located as far from the coil fins as possible, 6 inches minimum. Temperature sensors upstream of coils shall be a minimum of 6 inches away from the coil fins. No part of the sensor or its support elements or conduit shall be in contact with the coil, coil framing or coil support elements. Discharge temperature sensors on VAV boxes shall be mounted as far from the coil as possible but upstream of the first diffuser with the probe located as near as possible to the center of the duct both vertically and horizontally.

5. All pipe-mounted temperature sensors shall be installed in wells. For small piping, well shall be installed in an elbow into pipe length. Install the sensor in the well with a thermal-conducting grease or mastic. Use a closed-cell insulation patch that is integrated into the pipe insulation system to isolate the top of the well from ambient conditions but allow easy access to the sensor. Install a test plug adjacent to all wells for testing and calibration.

6. Unless otherwise noted on Drawings or Points List, temperature sensors/thermostats, humidity sensors/humidistats, CO_2 sensors, and other room wall mounted sensors shall be installed at same centerline elevation as adjacent electrical switches, 4 feet above the finished floor where there are no adjacent electrical switches, and within ADA limitations.

7. Unless otherwise noted on Drawings or Points List, install outdoor air temperature sensors on north wall where they will not be influenced by building exhaust, exfiltration, or solar insolation. Do not install near intake or exhaust air louvers.

E. Differential Pressure Sensors

1. Supply Duct Static Pressure

a. Mount transmitter in temperature control panel near or in BAS panel to which it is wired.

b. Low pressure port of the pressure sensor

1) Pipe to either

a) Building pressure (high) signal of the building static pressure transmitter.

b) Open to a conditioned space inside the building

c) Open to the BAS panel in which the DPT is mounted provided the panel is inside the building envelope and not in an air plenum.

c. High-pressure port of the pressure sensor

1) Pipe to the duct using a static pressure tip located as indicated on Drawings; if no location is indicated, locate at end of duct riser or main as far out in the system as possible but upstream of all smoke and fire dampers.

2) Install pressure tips securely fastened with tip facing upstream in accordance with manufacturer's installation instructions.

2. Return Fan Discharge Plenum Pressure

a. Mount transmitter in temperature control panel near or in BAS panel to which it is wired.

b. Low pressure port of the pressure sensor

1) Pipe to either

a) Building pressure (low) signal of the building static pressure transmitter.

b) Separate ambient static pressure probe located on the outside of the relief damper through a high-volume accumulator or otherwise protected from wind fluctuations.

c. High-pressure port of the pressure sensor

1) Pipe to the duct using a static pressure tip located at the discharge of the return fan.

2) Install pressure tips securely fastened with tip facing upstream in accordance with manufacturer's installation instructions.

3. Building Static Pressure

a. Mount transmitter in temperature control panel near or in BAS panel to which it is wired.

b. Low pressure port of the pressure sensor

1) Pipe to the ambient static pressure probe located on the outside and at high point of the building through a high-volume accumulator or otherwise protected from wind fluctuations.

c. High-pressure port of the pressure sensor

1) Pipe to either

a) Behind a BAS temperature sensor cover in an interior zone (provided sensor has openings to allow ambient air to freely flow through it)

b) Wall plate sensor or wall/ceiling probe sensor as scheduled

2) Do not locate near elevators, exterior doors, atria, or (for ceiling sensor applications) near diffusers.

4. Filter Differential Pressure

a. Install static-pressure tips upstream and downstream of filters with tips oriented in direction of flow. If there is a Magnehelic gauge installed by the AHU manufacturer, it may be removed and discarded with its pressure tips used for the DPT provided the DPT has an LCD so it can double as a visual gauge.

b. Mount transmitter on outside of filter housing or filter plenum in an accessible position with LCD display clearly visible. This sensor is used in lieu of an analog gauge and thus must be readily viewable.

5. Minimum Outdoor Air Damper Differential Pressure

    a. Install plenum static-pressure sensors upstream and downstream of minimum outdoor air damper in a location where air velocity is minimal.

    b. Mount transmitter on inside or outside of economizer plenum (whichever is most accessible while out of weather) in an accessible position with LCD display clearly visible.

6. High/Low Static Pressure Safeties

    a. High static

        1) Install DPS-2 on side of supply air duct in accessible location.

        2) High port shall be open to supply air duct downstream of fan.

        3) Reference low port pressure shall be that at DP location.

    b. Low static

        1) Install DPS-2 inside or outside of mixed air plenum whichever is most accessible.

        2) Low port shall be open to mixed air plenum.

        3) Reference high port pressure shall be pressure on other side of mixed air plenum with the highest pressure, e.g. ambient pressure for systems with relief fans or non-powered relief, or relief air plenum for systems with return fans.

7. All pressure transducers, other than those controlling VAV boxes, shall be located where accessible for service without use of ladders or special equipment. If required, locate in field device panels and pipe to the equipment monitored or ductwork.

8. The piping to the pressure ports on all pressure transducers (both air and water) shall contain a capped test port located adjacent to the transducer.

9. Piping differential pressure transducers shall have one of the following:

    a. Five valve manifold, brass, two valves to allow removal of sensor without disrupting the hydronic system, an equalizing valve to allow the sensor to be zeroed and to prevent sensor from experiencing full static (as opposed to differential), and two valves used as air vents that also can be used as test plugs for calibration.

    b. For sensors using two separate sensors, install test plugs on each connection for calibration and also used as vents.

F. Current Switches and Current Transformers for Motor Status Monitoring

1. For CTs, create a software binary point for fan status triggered at a setpoint determined below and ~10% deadband.

2. Adjust the setpoint so that it is below minimum operating current and above motor no load current. For fans with motorized discharge dampers, adjust so that fan indicates off if damper is closed while fan is running. For pumps, adjust so that pump indicates off if valve is closed while pump is running.

G. Airflow Measuring Stations: Install per manufacturer's recommendations for unobstructed straight length of duct both upstream and downstream of sensor, except those installations specifically designed for installation in fan inlet. For installations in fan inlets, provide on both inlets of double inlet fans and provide inlet cone adapter as recommended by AFMS manufacturer.

H. Fluid Flow Meters: Install per manufacturer's recommendations for unobstructed straight length of pipe both upstream and downstream of sensor. Commission per the manufacturer's startup and commissioning recommendations. Complete all manufacturer's startup documentation and include this in prefunctional commissioning report.

I. Window Switches

1. Wiring

a. All wiring concealed in mullions and wall cavity to the extent possible. Review wiring routing details in mullions with window manufacturer.

b. Wiring that cannot be enclosed in mullions and walls shall be installed in Wiremold; location shall be reviewed and approved by College prior to installation.

2. Where there is more than one switch in a zone, wire in series so that windows are indicated as open when any window is open and indicated as closed when all are closed.

J. Actuators

1. Type: All actuators shall be electric.

2. Mount and link control damper actuators per manufacturer's instructions.

3. Dampers

a. To compress seals when spring-return actuators are used on normally closed dampers, power actuator to approximately 5° open position, manually close the damper, and then tighten the linkage, or follow manufacturer's instructions to achieve same effect.

b. Check operation of damper-actuator combination to confirm that actuator modulates damper smoothly throughout stroke to both open and closed positions.

c. Provide all mounting hardware and linkages for actuator installation.

4. Control Valves: Install so that actuators, wiring, and tubing connections are accessible for maintenance. Where possible, mount the valve so that the position indicator is visible from the floor or other readily accessible location. However, do not install valves with stem below horizontal or down. The preferred location for the valve and actuator is on lowest point in the valve train assembly for ease of access and inspection. If this is on the coil supply piping, the control valve may be located there even if schematics (and standard practice) show valves located on the coil return piping. This comment applies to both 2−way valves and 3-way valves (which would become diverting valves rather than mixing valves in this location).

3.13 SOFTWARE INSTALLATION

A. System Configuration

1. Thoroughly and completely configure BAS system software, supplemental software, network software etc. on OWS, POTs, and servers.

B. Point Structuring and Naming

1. The intent of this Paragraph is to require a consistent means of naming points across the BAS. The following requirement establishes a standard for naming points and addressing Buildings, Networks, Devices, Instances, etc.

2. Point Summary Table

a. The term “Point” includes all physical I/O points, virtual points, and all application program parameters.

b. With each schematic, provide a Point Summary Table listing

1) Building number and abbreviation

2) System type

3) Equipment type

4) Point suffix

5) Full point name (see Point Naming Convention Paragraph)

6) Point description

7) Ethernet backbone network number

8) Network number

9) Device ID

10) Device MAC address

11) Object ID (object type, instance number)

12) Engineering units

13) Device make and model number; include range of device if model number does not so identify.

14) Device physical location description; include floor and column line intersection to one decimal place (for example line 6.2 and line A.3).

c. Point Summary Table shall be provided in both hard copy and in a relational database electronic format (ODBC-compliant).

d. Coordinate with the College's representative and compile and submit a proposed Point Summary Table for review prior to any object programming or Project startup.

e. The Point Summary Table shall be kept current throughout the duration of the Project by the Contractor as the Master List of all points for the Project. Project closeout documents shall include an up-to-date accurate Point Summary Table. The Contractor shall deliver to the College the final Point Summary Table prior to final acceptance of the system. The Point Summary Table shall be used as a reference and guide during the commissioning process.

3. Point Naming Convention

a. All point names shall adhere to the format as established below, unless otherwise agreed to by the College. New categories and descriptors may be created with approval of the College.

b. Format:

1) Building.Category.System.EquipmentTag.Component.Property.

2) Example: 001.HVAC.Heatplant.B-1.HWS.Temperature

Building	Category	System	Equipment Tag	Component	Property	Typical units
Building number	ELCT	Lighting Plug Generator Misc	(from equipment schedules)	SWITCH PHOTO CB CWS CWR HWS HWR CHWS CHWR OA SA RA EA GAS FLUID	Command Status Light Power Voltage Current ValvePos DamperPos Temperature Humidity Pressure Flow Energy Speed Signal	On/off On/off Footcandles Watts Volts Amps %open %open °F %RH Psig, “H_2O Cfm, gpm Btu %, Hz %
	HVAC	Airhandling Exhaust Heatplant Coolplant Misc				
	PLMB	Domwater Air Natgas N2 O2 Irrigation Waste Misc				
	MISC	Weather				

4. Device Addressing Convention

   a. BACnet network numbers and Device Object IDs shall be unique throughout the network.

   b. All assignment of network numbers and Device Object IDs shall be coordinated with the College to ensure there are no duplicate BACnet device instance numbers.

   c. Each Network number shall be unique throughout all facilities and shall be assigned in the following manner: VVVNN, where: VVV = 0-999 for BACnet Vendor ID, NN = 00 - 99 for building network.

   d. Each Device Object Identifier property shall be unique throughout the system and shall be assigned in the following manner: VVVNNDD , where: VVV = number 0 to 999 for BACnet Vendor ID , NN = 00 - 99 for building network, DD = 01-99 for device address on a network.

   e. Coordinate with the College or a designated representative to ensure that no duplicate Device Object IDs occur.

   f. Alternative Device ID schemes or cross-project Device ID duplication if allowed shall be approved before Project commencement by the College.

5. I/O Point Physical Description

a. Each point associated with a hardware device shall have its BACnet long-name point description field filled out with:

1) The device manufacturer and model number. Include range of device if model number does not so identify.

2) For space sensors, include room number in which sensor is located.

C. Point Parameters

1. Provide the following minimum programming for each analog input

a. Name

b. Address

c. Scanning frequency or COV threshold

d. Engineering units

e. Offset calibration and scaling factor for engineering units

f. High and low value reporting limits (reasonableness values), which shall prevent control logic from using shorted or open circuit values.

g. Default value to be used when the actual measured value is not reporting. This is required only for points that are transferred across the Primary or Secondary networks and used in control programs residing in control units other than the one in which the point resides. Events causing the default value to be used shall include failure of the control unit in which the point resides or failure of any network over which the point value is transferred.

2. Provide the following minimum programming for each analog output

a. Name

b. Address

c. Engineering units

d. Offset calibration and scaling factor for engineering units

e. Output Range

f. Default value to be used when the normal controlling value is not reporting.

3. Provide the following minimum programming for each digital input

a. Name

b. Address

c. Engineering units (on/off, open/closed, freeze/normal, etc.)

d. Debounce time delay

e. Message and alarm reporting as specified

f. Reporting of each change of state, and memory storage of the time of the last change of state

g. Totalization of on-time (for all motorized equipment status points), and accumulated number of off-to-on transitions.

4. Provide the following minimum programming for each digital output

a. Name

b. Address

c. Output updating frequency

d. Engineering units (on/off, open/closed, freeze/normal, etc.)

e. Direct or Reverse action selection

f. Minimum on-time

g. Minimum off-time

h. Status association with a DI and failure alarming (as applicable)

i. Reporting of each change of state, and memory storage of the time of the last change of state.

j. Totalization of on-time (for all motorized equipment status points), and accumulated number of off-to-on transitions.

k. Default value to be used when the normal controlling value is not reporting.

D. Site-Specific Application Programming

1. All site specific application programming shall be written in a manner that will ensure programming quality and uniformity. Contractor shall ensure:

a. Programs are developed by one programmer, or a small group of programmers with rigid programming standards, to ensure a uniform style.

b. Programs for like functions are identical, to reduce debugging time and to ease maintainability.

c. Programs are thoroughly debugged before they are installed in the field.

2. Massage and tune application programming for a fully functioning system. It is the Contractor's responsibility to request clarification on sequences of operation that require such clarification.

3. All site-specific programming shall be fully documented and submitted for review and approval

   a. Prior to downloading into the panel (see Submittal Package 2, Paragraph 1.6.)

   b. At the completion of functional performance testing, and

   c. At the end of the warranty period (see Warranty Maintenance, Paragraph 1.11).

4. All programming, graphics and data files must be maintained in a logical system of directories with self-explanatory file names. All files developed for the Project will be the property of the College and shall remain on the workstations/servers at the completion of the Project.

E. Graphic Screens

1. All site specific graphics shall be developed in a manner that will ensure graphic display quality and uniformity among the various systems.

2. Schematics of MEP systems

   a. Schematics shall be 2-D or 3-D and shall be based substantially on the schematics provided on Drawings.

   b. All relevant I/O points and setpoints being controlled or monitored for each piece of equipment shall be displayed with the appropriate engineering units. Include appropriate engineering units for each displayed point value. Verbose names (English language descriptors) shall be included for each point on all graphics; this may be accomplished by the use of a pop-up window accessed by selecting the displayed point with the mouse.

   c. Animation or equipment graphic color changes shall be used to indicate on/off status of mechanical components.

   d. Indicate all adjustable setpoints and setpoint high and low limits (for automatically reset setpoints), on the applicable system schematic graphic or, if space does not allow, on a supplemental linked-setpoint screen.

3. Displays shall show all points relevant to the operation of the system, including setpoints.

4. The current value and point name of every I/O point and setpoint shall be shown on at least one graphic and in its appropriate physical location relative to building and mechanical systems.

5. Show weather conditions (local building outside air temperature and humidity) in the upper left hand corner of every graphic.

6. CAD Files: The contract document drawings will be made available to the Contractor in AutoCAD format upon request for use in developing backgrounds for specified graphic screens, such as floor plans and schematics. However the College does not guarantee the suitability of these drawings for the Contractor's purpose.

7. Provide graphics for the following as a minimum

    a. Building homepage: Background shall be a building footprint, approximately to scale, oriented as shown on the architectural Drawings. Include links to each floor and mechanical room/area, and to summary graphics described below. Include real-time site utility data such asbuilding electrical demand shown roughly on the map where the utilities connect to the site.

    b. Electricity demand limiting

        1) Demand limit. Include entries for sliding window interval and a table of Off-Peak, On-Peak or Partial-Peak demand time periods, both Summer and non-Summer, with three adjustable demand level limits for each and adjustable deadband.

        2) Electricity demand calculation. For each month, show actual peak kW and kWh for each time-of-day rate period. Show side-by-side as month-this-year and month-last-year, and month-to-date and year-to-date data.

    c. Each occupied floor plan, to scale

        1) HVAC: Floor plan graphics shall show heating and cooling zones throughout the buildings in a range of colors, which provide a visual display of temperature relative to their respective setpoints. The colors shall be updated dynamically as a zone's actual comfort condition changes. In each zone, provide links to associated terminal equipment.

        2) If multiple floor plans are necessary to show all areas, provide a graphic building key plan. Use elevation views or plan views as necessary to graphically indicate the location of all of the larger scale floor plans. Link graphic building key plan to larger scale partial floor plans. Provide links from each larger scale graphic floor plan screen to the building key plan and to each of the other graphic floor plan screens.

    d. Each equipment floor/area plan: To scale, with links to graphics of all BAS controlled/monitored equipment.

e. Each air handler and fan-coil: Provide link to associated HW and CHW plants where applicable.

f. Each trim & respond reset: Next to the display of the setpoint that is being reset, include a link to page showing all trim & respond points (see Guideline 36) plus the current number of requests, current setpoint, and status indicator point with values “trimming,” “responding,” or “holding.” Include a graph of the setpoint trend for the last 24 hours. Trim & respond points shall be adjustable from the graphic except for the associated device.

g. Each zone terminal

   1) See Sample Graphics – VAV Reheat Zone

   2) See Sample Graphics – VAV Cooling-Only Zone

   3) Include a non-editable graphic (picture) showing the design airflow setpoints from the design drawings adjacent to the editable airflows setpoints. The intent is that the original setpoints be retained over time despite “temporary” adjustments that may be made over the years.

h. Electrical power monitoring system: Show a schematic of the electrical system based on one-line diagrams with meter current kW reading and month-to-date kWh shown in actual locations. Show side-by-side kWh and peak demand as month-this-year and month-last-year, and month-to-date and year-to-date data. Power flow shall change on the diagram (by changing line color or width) to show which power line is active.

i. Water meters: Show side-by-side gallons and peak demand gpm as month-this-year and month-last-year, and month-to-date and year-to-date data.

j. Summary graphics: Provide a single text-based page (or as few as possible) for each of the following summary screens showing key variables listed in columns for all listed equipment. Include hyperlinks to each zone imbedded in the zone tag:

   1) Air handling units: operating mode; on/off status; supply air temperature; supply air temperature setpoint; fan speed; duct static pressure; duct static pressure setpoint; outdoor air and return air damper position; coil valve positions; etc. (all key operating variables); Cooling CHWST Reset current requests, cumulative %-request-hours, and request Importance Multiplier; Heating HWST Reset current requests, cumulative %-request-hours, and request Importance Multiplier (if HW coil)

   2) Zone Groups

      a) Separate zone terminal summary for each Zone Group.

      b) See Sample Graphics –Zone Group Summary

3) VAV Zone terminal units: operating mode; airflow rate; airflow rate setpoint; zone temperature; active heating setpoint; active cooling setpoint; damper position; supply air temperature (reheat boxes); supply air temperature setpoint (reheat boxes); CO2 concentration and CO2 loop output (where applicable); Fan start/stop command, speed, and status (fan-powered); Static Pressure Reset current requests, cumulative %-request-hours, and request Importance Multiplier; Cooling SAT Reset current requests, cumulative %-request-hours, and request Importance Multiplier; Heating HWST Reset current requests, cumulative %-request-hours, and request Importance Multiplier (HW reheat); Heating Static Pressure Reset current requests, cumulative %-request-hours, and request Importance Multiplier (dual duct); Heating SAT Reset current requests, cumulative %-request-hours, and request Importance Multiplier (dual duct).

4) Electrical meters and switches: Volts, current, kW, switch positions.

k. For all equipment with runtime alarms specified, show on graphic adjacent to equipment the current runtime, alarm setpoint (adjustable), alarm light, date of last runtime counter reset, and alarm reset/acknowledge button which resets the runtime counter.

l. For all equipment with lead/lag or lead/standby operation specified, show on graphic adjacent to equipment the current lead/lag order and manual buttons or switches to allow manual lead switching by the operator per Section 259000 Building Automation Sequences of Operation.

m. For all controlled points used in control loops, show the setpoint adjacent to the current value of the controlled point.

n. All other BAS controlled/monitored equipment.

o. On all system graphics, include a “note” block that allows users to enter comments relevant to system operation.

p. All equipment shall be identified on the graphic screen by the unit tag as scheduled on the drawings.

F. Alarm Configuration

1. Program alarms and alarm levels per Sequence of Operations.

2. Each programmed alarm shall appear on the alarm log screen and shall be resettable or acknowledged from those screens. Equipment failure alarms shall be displayed on the graphic system schematic screen for the system that the alarm is associated with (for example, fan alarm shall be shown on graphic air handling system schematic screen). For all graphic screens, display values that are in a Level 1 or 2 condition in a red color, Level 3 and higher alarm condition in a blue color, and normal (no alarm) condition in a neutral color (black or white).

3. For initial setup, Contractor shall configure alarms as follows:

	Level 1	**Level 2**	**Level 3**	**Level 4**
Criticality	Critical	Not Critical	Not Critical	Not Critical
Acknowledgement	Required	Required	Not Required	Not Required
Acknowledgement of Return to Normal	Not Required	Not Required	Not Required	Not Required
Email to building engineer(s)	Y	Y	Y	N
SMS text to building engineer(s)	Y	Y	N	N
Pop-up dialog box on OWS	Y	Y	N	N
Remove from alarm log	After Acknowledged	After Acknowledged	After 2 weeks	After 2 weeks

3.14 SEQUENCES OF OPERATION

A. See Section 259000 Building Automation Sequences of Operation.

3.15 SYSTEM COMMISSIONING

A. Sequencing. The following list outlines the general sequence of events for submittals and commissioning:

1. Submit Submittal Package 0 (Qualifications) and receive approval.
2. Submit Submittal Package 1 (Hardware and Shop Drawings) and receive approval.
3. Initiate installation of BAS hardware, devices and wiring.
4. Develop point database and application software.
5. Simulate sequencing and debug programming off-line to the extent practical.
6. Submit Submittal Package 2 (Programming and Graphics) and receive approval.
7. Complete installation of BAS hardware, devices and wiring.
8. Install point database and application software in field panels.
9. Submit Submittal Package 3 (Pre-Functional Test Forms) and receive approval.
10. Perform BAS Pre-functional Tests (start up, calibration and tuning) and submit completed forms as Submittal Package 4 (Pre-Functional Test Report) for approval.

11. Receive BAS Pre-functional Test Report approval and approval to schedule Functional Tests.

12. Field test application programs prior to functional testing.

13. Submit Package 5 (Post-Construction Trend Points List) in format specified for review and approval.

14. Receive approval of successful Trend Log configuration, or reconfigure as required.

15. Prepare and initiate commissioning Trend Logs.

16. Perform and record functional tests and submit Submittal Package 6 (Functional Test Report) for approval.

17. Assist in TAB tests and determining setpoints as specified in Section 230593 Testing, Adjusting and Balancing.

18. Assist in Title 24 Acceptance Testing as specified in Section 230800 Mechanical System Commissioning.

19. Submit Package 7 (Training Materials) and receive approval.

20. Receive BAS Functional Test Report approval and approval to schedule Demonstration Tests.

21. Perform Demonstration Tests to Commissioning Provider and College's Representatives and submit Demonstration Test Report.

22. Receive acceptance of Demonstration Tests.

23. Train College personnel on BAS operation and maintenance.

24. Substantial Completion

25. Submit Package 8 (Post-Construction Trend Logs) in format specified for review and approval.

26. Receive approval of successful Trend Log tests, or retest as required.

27. Complete all items in Completion Requirements per Paragraph 1.7B.

28. Provide administration level password access to the College.

29. Final Acceptance

30. Begin Warranty Period.

31. Prepare and initiate continuous Trend Logs per Paragraph 2.12A.4.

32. Update all software as specified.

33. End of Warranty Period

B. Assist Commissioning Provider/Coordinator as specified in Section 019100 Commissioning, including attending commissioning meetings.

C. Coordinate with Work specified in Section 230800 Mechanical Commissioning and Division 26 Electrical Commissioning.

D. Pre-functional tests

1. General

a. Inspect the installation of all devices. Review the manufacturer's installation instructions and validate that the device is installed in accordance with them.

b. Verify proper electrical voltages and amperages, and verify that all circuits are free from faults.

c. Verify integrity/safety of all electrical connections.

d. Verify that shielded cables are grounded only at one end.

e. Verify that all sensor locations are as indicated on drawings and are away from causes of erratic operation.

2. Test Documentation

a. Prepare forms to document the proper startup of the BAS components.

b. All equipment shall be included on test forms including but not limited to

1) Wiring: End-to-end checkout of all wiring at terminations. Power to all controllers and actuators. Confirmation of emergency power where specified.

2) Digital Outputs: Proper installation, normal position, response to command at CU

3) Digital Inputs: Proper installation, device test, response at CU

4) Analog Outputs: Proper installation of devices, verification of maximum and minimum stroke.

5) Analog Inputs: Proper installation of sensors, calibration

6) Panels: Confirmation of location, power source (electrical circuit used), confirmation of emergency power where specified.

7) Alarms and Safeties: Verification of alarm routing to all specified devices and correct hierarchy. Example: confirm alarm routing to cell phones, email, servers, remote workstations. Confirm that appropriate alarm levels are routed to appropriate devices.

8) Loop Tuning: Document setting of P/I parameters for all loops, chosen setpoints, time delays, loop execution speed.

9) Network Traffic: Document speed of screen generation, alarm and signal propagation in system with all required commissioning trends active.

c. Each form shall have a header or footer where the technician performing the test can indicate his/her name and the date of the test.

d. Submit blank forms for approval in Submittal Package 3.

e. Complete work, document results on forms, and submit for approval as Submittal Package 4 (Pre-Functional Test Report).

3. Digital Outputs

a. Verify that all digital output devices (relays, solenoid valves, two-position actuators and control valves, magnetic starters, etc.) operate properly and that the normal positions are correct.

4. Digital Inputs

a. Adjust setpoints, where applicable.

1) For current switches used as status on fans, adjust current setpoint so that fan status is OFF when fan discharge damper (if present) is fully closed and when belt is broken (temporarily remove belt).

2) For current switches used as status on pumps, adjust current setpoint so that pump status is OFF when pump is dead-headed (temporarily close discharge valve).

3) For differential pressure sensors on pumps and fans, set so that status is on when pump operating with all valves open (out on its curve).

5. Analog Outputs

a. Verify start and span are correct and control action is correct.

b. Check all control valves and automatic dampers to ensure proper action and closure. Make any necessary adjustments to valve stem and damper blade travel.

c. Check all normal positions of fail-safe actuators.

d. For outputs to reset other manufacturer's devices (for example, chiller setpoint) and for feedback from them, calibrate ranges to establish proper parameters.

6. Analog Input Calibration

   a. Sensors shall be calibrated as specified on the points list. Calibration methods shall be one of the following:

      1) Factory: Calibration by factory, to standard factory specifications. Field calibration is not required.

      2) Handheld: Field calibrate using a handheld device with accuracy meeting the requirements of Paragraph 2.10.

   b. The calibrating parameters in software (such as slope and intercept) shall be adjusted as required. A calibration log shall be kept and initialed by the technician indicating date and time, sensor and hand-held readings, and calibration constant adjustments and included in the Pre-functional Test Report.

   c. Inaccurate sensors must be replaced if calibration is not possible.

7. Alarms and Interlocks

   a. A log shall be kept and initialed by the technician indicating date and time, alarm/interlock description, action taken to initiate the alarm/interlock, and resulting action, and included in the Pre-functional Test Report.

   b. Check each alarm separately by including an appropriate signal at a value that will trip the alarm.

   c. Coordinate with Division 26 to test fire and life safety systems alarm contacts.

   d. Interlocks shall be tripped using field contacts to check the logic, as well as to ensure that the fail-safe condition for all actuators is in the proper direction.

   e. Interlock actions shall be tested by simulating alarm conditions to check the initiating value of the variable and interlock action.

8. Variable Frequency Drive Minimum Speed

   a. Minimum speed for VFD-driven fans and pumps shall be determined in accordance with this Paragraph. Tests shall be done for each piece of equipment, except that for multiple pieces of identical equipment used for identical applications, only one piece of equipment need be tested with results applied to all. Note that for fans and pumps, there is no minimum speed required for motor cooling. Power drops with cube of speed, causing motor losses to be minimal at low speeds.

b. This work shall be done only after fan/pump system is fully installed and operational.

c. Determine minimum speed setpoint as follows:

1) Start the fan or pump.

2) Manually set speed to 6 Hz (10%) unless otherwise indicated in control sequences. For cooling towers with gear boxes, use 20% or whatever minimum speed is recommended by tower manufacturer.

3) Observe fan/pump in field to ensure it is visibly rotating.

a) If not, gradually increase speed until it is.

4) The speed at this point shall be the minimum speed setpoint for this piece of equipment.

5) Record minimum speeds in log and store in software point as indicated in Guideline 36.

9. Tuning

a. Tune all control loops to obtain the fastest stable response without hunting, offset or overshoot. Record tuning parameters and response test results for each control loop in the Pre-functional Test Report. Except from a startup, maximum allowable variance from set point for controlled variables under normal load fluctuations shall be as follows. Within 3 minutes of any upset (for which the system has the capability to respond) in the control loop, tolerances shall be maintained (exceptions noted)

Controlled Variable	Control Accuracy
Duct Pressure	±0.1 inches w.g.
Building and relief plenum	±0.01 inches w.g.
Airflow and water flow	±10%
Space Temperature	±1.5ºF
Condenser Water Temperature	±2ºF
Chilled Water Temperature	±1ºF
Hot Water Temperature	±3ºF
Duct Temperature	±2ºF
Water Differential Pressure	±1.5 psi
Others	±2 times reported accuracy

10. Interface and Control Panels

a. Ensure devices are properly installed with adequate clearance for maintenance and with clear labels in accordance with the Record Drawings.

b. Ensure that terminations are safe, secure and labeled in accordance with the Record Drawings.

c. Check power supplies for proper voltage ranges and loading.

d. Ensure that wiring and tubing are run in a neat and workman-like manner, either bound or enclosed in trough.

e. Check for adequate signal strength on communication networks.

f. Check for standalone performance of controllers by disconnecting the controller from the LAN. Verify the event is annunciated at Operator Interfaces. Verify that the controlling LAN reconfigures as specified in the event of a LAN disconnection.

g. Ensure that buffered or volatile information is held through power outage.

h. With all system and communications operating normally, sample and record update and annunciation times for critical alarms fed from the panel to the Operator Interface.

i. Check for adequate grounding of all BAS panels and devices.

11. Operator Interfaces

a. Verify that all elements on the graphics are functional and are properly bound to physical devices or virtual points, and that hot links or page jumps are functional and logical.

b. Verify that the alarm logging, paging, emailing etc. are functional and per requirements.

E. Testing, Adjusting, and Balancing (TAB) Coordination

1. Coordinate with Work performed under Section 230593 Testing, Adjusting, and Balancing. Some balancing procedures require the BAS to be operational and require Contractor time and assistance.

2. Calibration Software

a. Software shall be provided free of charge on at least a temporary basis to allow calibration of terminal box airflow controls and other Work specified under Section 230593 Testing, Adjusting, and Balancing.

b. Software shall be provided for installation on POT(s) provided by Others or Contractor shall loan a POT or handheld device with software installed for the duration of Work specified under Section 230593 Testing, Adjusting, and Balancing.

c. Provide sufficient training to those performing Work specified under Section 230593 Testing, Adjusting, and Balancing to allow them to use the software for balancing and airflow calibration purposes. Contractor shall include a single training session for this purpose.

3. Setpoint Determination

a. Perform pre-functional tests described in Paragraph 3.15D before assisting in setpoint determination.

b. Coordinate with Work performed under Section 230593 Testing, Adjusting, and Balancing to determine fan and pump differential pressure setpoints, outdoor air damper minimum positions and DP setpoints, etc. as indicated in Section 230593 Testing, Adjusting and Balancing.

F. Functional Tests

1. Test schedule shall be coordinated with the Commissioning Provider, Commissioning Coordinator, and College's Representative.

2. Functional tests may be witnessed by College's Representative at the College's option.

3. All approved Functional Tests shall be conducted by the Contractor with results confirmed and signed by the Contractor's start-up technician.

4. Test documentation

a. College's Representatives will prepare functional testing forms after Submittal Package 2 has been reviewed and approved. Tests will be designed to test all sequences in a formal manner with simulations and expected outcomes.

b. Review tests and recommend changes that will improve ease of testing or avoid possible system damage, etc. and provide to College's Representative.

c. Complete work, document results on forms, and submit for approval as Submittal Package 6 Functional Test Report. Tutorials for using the functional test Excel workbook can be found at http://www.taylor-engineering.com/functional-performance-test-guidelines.

G. Demonstration Test

1. Demonstration tests consist of a small representative sample of functional tests and systems randomly selected by the Commissioning Provider. Tests will be designed to occur over no longer than 2 working days.

2. Schedule the demonstration with the Commissioning Provider and College's Representative at least 1 week in advance. Demonstration shall not be scheduled until the Functional Test Report has been approved.

3. The Contractor shall supply all personnel and equipment for the demonstration, including, but not limited to, instruments, ladders, etc. Contractor-supplied personnel shall be those who conducted the Functional tests or who are otherwise competent with and knowledgeable of all project-specific hardware, software, and the HVAC systems.

4. The system will be demonstrated following procedures that are the same or similar to those used in the Pre-Functional and Functional Tests. The Commissioning Provider will supply the test forms at the site at the start of the tests.

5. Demonstration tests may be witnessed by College's Representative at the College's option.

6. Contractor shall conduct tests as directed by and in the presence of the Commissioning Provider and complete test forms. Commissioning Provider will document the test results as the Demonstration Test Report after tests are complete.

7. Demonstration Tests shall be successfully completed and approved prior to Substantial Completion.

H. Trend Log Tests

1. Trends shall be fully configured to record and store data to the server for the points and at the interval listed in Paragraph 2.11 as follows:

   a. Commissioning: Configure trends prior to functional testing phase. Retain configuration until post-construction commissioning trend review has been completed successfully and accepted by the College's representative. Trends shall be deactivated after acceptance.

   b. Continuous: After system acceptance, configure trends for the purpose of long term future diagnostics. Configure trends to overwrite the oldest trends at the longest interval possible without filling the server hard disk beyond 80%.

2. Post-Construction Trend Test

   a. Trend logging shall not commence until Demonstration Tests are successfully completed.

   b. Hardware Points. Contractor shall configure points to trend as indicated in the Commissioning Trend column listed in Paragraph 2.11 points.

   c. Software Points. Include the following in trends of systems and zones whose hardware points are being trended as called for above. Time interval shall be the same as associated hardware point.

1) All setpoints and limits that are automatically reset, such as supply air temperature and fan static pressure setpoints, plus the points that are driving the reset, such as zone level cooling and static pressure requests

2) All setpoints that are adjustable by occupants

3) Outputs of all control loops, other than those driving a single AO point that is already being trended

4) System mode points (e.g. Warm-up, Occupied, etc.)

5) Global overrides such as demand shed signals

6) Calculated performance monitoring points, such as chiller efficiency

d. Submit for review and approval by the Commissioning Provider a table of points to be trended along with trend intervals or change-of-value a minimum of 14 days prior to trend collection period, as Submittal Package 5.

e. Trends shall be uploaded to the CSS in data format specified in Paragraph **Error! Reference source not found.**.

f. Trend logs of all points indicated above shall be collected for a 3 week Trend Period.

g. At the completion of the Trend Period, data shall be reviewed by the Contractor to ensure that the system is operating properly. If so, data shall be submitted to the College in an electronic format agreed to by the College and Contractor (such as flash drive or via direct access to the CSS via the internet) as Submittal Package 8.

h. Data will be analyzed by the Commissioning Provider.

i. The system shall be accepted only if the trend review indicates proper system operation without malfunction, without alarm caused by control action or device failure, and with smooth and stable control of systems and equipment in conformance with these specifications. If any but very minor glitches are indicated in the trends, steps f to h above shall be repeated for the same Trend Period until there is a complete Trend Period of error free operation.

j. After successfully completing the Post-Construction Trend Tests, the Contractor shall configure all points to trend as indicated in the Continuous Trend column listed in Paragraph 2.11 points list.

I. Remedial Work

1. Repair or replace defective Work, as directed by College's Representative in writing, at no additional cost to the College.

2. Restore or replace damaged Work due to tests as directed by College's Representative in writing, at no additional cost to the College.

3. Restore or replace damaged Work of others, due to tests, as directed by College's Representative in writing, at no additional cost to the College.

4. Remedial Work identified by site reviews, review of submittals, demonstration test, trend reviews, etc. shall be performed to the satisfaction of the College's Representative, at no additional cost to the College.

5. Contractor shall compensate College's Representatives and Commissioning Provider on a time and material basis at standard billing rates for any additional time required to witness additional demonstration tests or to review additional BAS trends beyond the initial tests, at no additional cost to the College.

3.16 TRAINING

A. Coordinate schedule and materials with Commissioning Provider.

B. Interim Training

1. Provide minimal training so the operating staff can respond to occupant needs and other operating requirements during start-up and commissioning phase.

C. Formal Training

1. Provide training sessions for personnel indicated in Paragraph 3.16G.

2. Submit training materials as Submittal Package 7.

3. Training shall be conducted after all commissioning is complete and systems are fully operational.

4. Off-site Primary System Training

a. Training on basic BAS functions as listed in Paragraph 3.16C.4 shall be given off-site by the primary manufacturer's training staff, either at the factory or at a permanent training facility. Training by Contractor staff is not acceptable.

b. The appropriate level of training shall be provided for each of the persons listed in Paragraph 3.16G.

c. The length of each training period will depend on the complexity of the system and the audience, described below. Minimum training shall be 24 hours per trainee, but period shall be longer if required to complete the training tasks described below.

d. Expenses for transportation to and from the training facility, hotel, and meals shall be provided by the College and excluded from the BAS bid. Cost for

books, manuals and any other type of training equipment or material shall be included in the BAS bid.

5. On-Site Training

    a. Include 40 hours total of on-site training to assist personnel in becoming familiar with site-specific issues, systems, control sequences, etc.

    b. College shall be permitted to videotape training sessions.

    c. Training may be in non-contiguous days at the request of the College.

6. During the warranty period, provide unlimited telephone support for all trained operators.

D. Operators are divided into three categories and shall receive training including but not limited to the tasks listed.

1. Day-to-day Operators shall be trained to

    a. Proficiently operate the system

    b. Understand control system architecture and configuration

    c. Understand BAS system components

    d. Understand system operation and control sequences

    e. Operate the workstation and peripherals

    f. Log on and off the system

    g. Access graphics, point reports, and logs

    h. Adjust and change system set points, time schedules, and holiday schedules

    i. Recognize malfunctions of the system by observation of the printed copy and graphical visual signals

    j. Understand and acknowledge alarms

    k. Understand system drawings, and Operation and Maintenance manual

    l. Understand the Project layout and location of control components

    m. Print point and predefined reports

2. Advanced Operators shall be trained to do all items for Day-to-Day operators plus

a. Make and change graphics on the workstation

b. Create, delete, and modify alarms, including annunciation and routing

c. Create, delete, and modify point trend logs, and graph or print these both on an ad-hoc basis and at user-definable time intervals

d. Create, delete, and modify reports

e. Add, remove, and modify system's physical points

f. Create, modify, and delete programming

g. Add control panels

h. Add Operator Workstations

i. Create, delete, and modify system displays — both graphical and otherwise

j. Perform BAS system field checkout procedures

k. Perform BAS controller unit operation and maintenance procedures

l. Perform workstation and peripheral operation and maintenance procedures

m. Perform BAS system diagnostic procedures

n. Configure hardware including PC boards, switches, communication, and I/O points

o. Maintain, calibrate, troubleshoot, diagnose, and repair hardware

p. Adjust, calibrate, and replace system components

q. Maintain software and prepare backups

3. System Managers/Administrators shall be trained to do all items for Day-to-Day operators plus

a. Maintain software and prepare backups

b. Create and print custom reports, including tenant billing summaries

c. Interface with project-specific, third-party operator software

d. Add new users and understand password security procedures

E. Training materials shall include step-by-step instructions (including illustrations, screen captures, etc.) for how to perform all task identified in Paragraph 3.16C.4 such that a new Operator, who has not attended the training in person and has

minimal familiarity with this BAS system, can easily follow the instructions and successfully perform all of the identified tasks. One copy of training material shall be provided per student. An electronic copy of the materials shall be stored on the OWS.

F. The instructor(s) shall be factory-trained instructors experienced in presenting this material.

G. The type and number of personnel and location for training shall include

1. Day-to-day Operator: 2

2. Advanced Operator: 1

3. System Managers/Administrators: 1

END OF SECTION 25 00 00

PART 1 GENERAL

1.1 SUMMARY

A. Program and commission the Building Automation System (BAS) to execute the Sequences of Operation specified herein.

B. See Section 250000 Building Automation Systems for general requirements.

C. These control sequences include references to ASHRAE Guideline 36 and approved addenda. Where sequences are verbatim from Guideline 36, they are shown in green text. Not all informative text has been included. Sequences have been customized to include only Title 24 options where they take precedence over ASHRAE 90.1 and 62.1 requirements.

D. Guideline 36 sequences shall be programmed to exactly match the specified sequences verbatim. The Contractor may use “equivalent” alternative sequences only with formal approval by the Engineer. Proposed changes in sequences shall be clearly identified and included as a part of Submittal Package 2.

E. This file shall be maintained by the Contractor to include all approved changes to sequences made during testing and commissioning and shall become the final as-built sequences of operation installed on the CSS per Section 250000 Building Automation Systems.

1.2 INFORMATION PROVIDED BY DESIGNER

A. See equipment schedules on drawings for all setpoints unless otherwise noted below.

B. General Zone Information

1. Zone Temperature Setpoints

a. Default setpoints shall be based on zone type as shown in Table 3.1.1.1.

Table 3.1.1.1 Default Setpoints

	Occupied		Unoccupied	
Zone Type	Heating	Cooling	Heating	Cooling
General (unless listed below)	70ºF	75ºF	60ºF	90ºF
IDF/MDF	–	78ºF	–	78ºF

2. Outdoor Air Ventilation Setpoints

    a. All zone minimum outdoor air setpoints are scheduled on Drawings.

        1) Vocc-min. Zone minimum outdoor airflow for occupants.

        2) Varea-min. Zone minimum outdoor airflow for building area.

        3) Indicate where occupied-standby mode is allowed based on the zone occupancy category.

3. CO2 Setpoints

    a. The CO2 setpoint for all occupancy types is 1000 ppm.

C. VAV Box Design Information

1. All VAV box setpoints are scheduled on Drawings except as indicated below.

2. VAV Cooling-Only Terminal Unit

    a. Zone maximum cooling airflow setpoint (Vcool-max)

    b. Zone maximum heating airflow setpoint (Vheat-max)

    c. Zone minimum airflow setpoint (Vmin). This is an optional entry. If no value is scheduled, or a value of “AUTO” is scheduled, Vmin will be calculated automatically and dynamically to meet ventilation requirements.

D. Zone Group Assignments

1. Unless otherwise specified by Owner, the following Zone Groups shall be created:

Zone Group Name	AH Tag	Terminal Unit Tags	Miscellaneous Equipment Tags	Default Schedule
First and second floors	AHU-1	All L1 and L2 VAVs		WD: 6 am to 8pm WE: off HOL: off
Third and fourth floors	AHU-1	All L3 and L4 VAVs		WD: 6 am to 8pm WE: off HOL: off
Fifth and sixth floors	AHU-1	All L5 and L6 VAVs		WD: 6 am to 8pm WE: 8 am to 8pm HOL: off

E. Multiple-Zone VAV Air-Handler Design Information

1. Temperature Setpoints

a. Min_ClgSAT, lowest cooling supply air temperature setpoint = scheduled cooling coil leaving air temperature plus 3°F

b. Max_ClgSAT, highest cooling supply air temperature setpoint = 65°F

c. OAT_Min, the lower value of the OAT reset range = 55°F

d. OAT_Max, the higher value of the OAT reset range = 70°F

2. Ventilation Setpoints

a. All AHU outdoor airflow setpoints are scheduled on Drawings.

1) AbsMinOA, the design outdoor air rate when all zones with CO2 sensors or occupancy sensors are unpopulated

2) DesMinOA, the design minimum outdoor airflow with areas served by the system are occupied at their design population, including diversity where applicable

3. Economizer High Limit

a. California Title 24 economizer high limit

1) California climate zone = 3

2) High limit option:

a) Fixed dry bulb + differential dry bulb

4. DP100, filter high limit differential pressure at design airflow = 1 in.w.c. or value from manufacturer's submittal whichever is lower

F. Dual-Fan Dual-Duct VAV Air-Handler Design Information

1. Temperature Setpoints

a. Max_HtgSAT, highest heating supply air temperature = scheduled heating coil leaving air temperature

2. DP100, filter high limit differential pressure at design airflow = 1 in.w.c. or value from manufacturer's submittal whichever is lower

1.3 INFORMATION PROVIDED BY (OR IN CONJUNCTION WITH) THE TESTING, ADJUSTING, AND BALANCING CONTRACTOR

A. Coordinate with Section 230593 Testing, Adjusting and Balancing for setpoint determination. Any work not specifically listed in Section 230593 shall be provided under this Section.

B. Multiple-Zone Air-Handler Information

1. Duct Design Maximum Static Pressure, Max_DSP

2. Minimum Fan Speed

a. Minimum speed setpoints for all VFD-driven equipment shall be determined in accordance with Section 250000 Building Automation System specifications for the following, as applicable:

1) Supply fan

2) Relief fan

3. Ventilation Plenum Pressures. (For minimum outdoor air control with separate outdoor air damper and differential pressure [DP] control, see Section 3.9D.)

a. For projects complying with California Title 24 Ventilation Standards:

1. AbsMinDP, the absolute minimum outdoor air damper DP that provides an outdoor airflow equal to the absolute minimum outdoor airflow AbsMinOA

2. DesMinDP, the design minimum outdoor air damper DP that provides the design minimum outdoor airflow DesMinOA.

1.4 INFORMATION DETERMINED BY CONTROL CONTRACTOR

A. VAV Box Controllable Minimum

1. This section is used to determine the lowest possible VAV box airflow setpoint (other than zero) allowed by the controls (Vm) used in VAV box control sequences. The minimums shall be stored as software points that may be adjusted by the user but need not be adjustable via the graphical user interface.

2. Option 1: If the VAV box controller can control to 0.004" per Section 250000 Building Automation Systems, the minimum setpoint *Vm* shall be determined from the table below if the VAV box manufacturer is listed:

Inlet	Titus	Krueger	Price	MetalAire High Gain	ETI
4	15	15	20	15	15
6	30	35	30	30	30
8	55	60	55	50	55
10	90	90	95	85	90
12	120	130	135	110	130
14	190	175	195	155	180
16	245	230	260	210	235
24x16	455	445	490	N/A	415

3. Option 2: The minimum setpoint *Vm* shall be determined per Guideline 36.

PART 2 PRODUCTS

2.1 NOT USED

PART 3 EXECUTION

3.1 GENERAL

A. Contractor shall review sequences prior to programming and suggest modifications where required to achieve the design intent. Contractor may also suggest modifications to improve performance and stability or to simplify or reorganize logic in a manner that provides equal or better performance. Proposed changes in sequences shall be clearly identified and included as a part of Submittal Package 2.

B. Include costs for minor program modifications if required to provide proper performance of the system.

C. Unless otherwise indicated, control loops shall be enabled and disabled based on the status of the system being controlled to prevent windup.

D. When a control loop is enabled or reenabled, it and all its constituents (such as the proportional and integral terms) shall be set initially to a neutral value.

E. A control loop in neutral shall correspond to a condition that applies the minimum control effect, i.e., valves/dampers closed, VFDs at minimum speed, etc.

F. When there are multiple outdoor air temperature sensors, the system shall use the valid sensor that most accurately represents the outdoor air conditions at the equipment being controlled.

   1. Outdoor air temperature sensors at air-handler outdoor air intakes shall be considered valid only when the supply fan is proven on and the unit is in Occupied Mode or in any other mode with the economizer enabled.

   2. The outdoor air temperature used for optimum start, plant lockout, and other global sequences shall be the average of all valid sensor readings. If there are four or more valid outdoor air temperature sensors, discard the highest and lowest temperature readings.

G. The term “proven” (i.e., “proven on”/“proven off”) shall mean that the equipment’s DI status point (where provided, e.g., current switch, DP switch, or VFD status) matches the state set by the equipment’s DO command point.

H. The term “software point” shall mean an analog variable, and “software switch” shall mean a digital (binary) variable, that are not associated with real I/O points. They shall be read/write capable (e.g., BACnet analog variable and binary variable).

I. The term “control loop” or “loop” is used generically for all control loops. These will typically be PID loops, but proportional plus integral plus derivative gains are not required on all loops. Unless specifically indicated otherwise, the guidelines in the following subsections shall be followed.

   1. Use proportional only (P-only) loops for limiting loops (such as zone CO2 control loops, etc.).

   2. Do not use the derivative term on any loops unless field tuning is not possible without it.

J. To avoid abrupt changes in equipment operation, the output of every control loop shall be capable of being limited by a user adjustable maximum rate of change, with a default of 25% per minute.

K. All setpoints, timers, deadbands, PID gains, etc. listed in sequences shall be adjustable by the user with appropriate access level whether indicated as adjustable in sequences or not. Software points shall be used for these variables. Fixed scalar numbers shall not be embedded in programs except for physical constants and conversion factors.

L. Values for all points, including real (hardware) points used in control sequences shall be capable of being overridden by the user with appropriate access level (e.g., for testing and commissioning). If hardware design prevents this for hardware points, they shall be equated to a software point, and the software point shall be used in all sequences. Exceptions shall be made for machine or life safety.

M. Alarms

1. There shall be 4 levels of alarm

    a. Level 1: Life-safety message

    b. Level 2: Critical equipment message

    c. Level 3: Urgent message

    d. Level 4: Normal message

2. Maintenance Mode. Operators shall have the ability to put any device (e.g., AHU) in/out of maintenance mode.

    a. All alarms associated with a device in maintenance mode will be suppressed. Exception: Life safety alarms shall not be suppressed.

    b. If a device is in maintenance mode, issue a daily Level 3 alarm at a scheduled time indicating that the device is still in maintenance mode.

3. Exit Hysteresis

    a. Each alarm shall have an adjustable time-based hysteresis (default: 5 seconds) to exit the alarm. Once set, the alarm does not return to normal until the alarm conditions have ceased for the duration of the hysteresis.
