1. Introduction

The Broward County Housing Authority (herein after, “BCHA”) is a Public Housing Agency established in June 1969 under the U.S. Housing Act of 1937 and Chapter 421 of the Florida Statutes and is an Independent Special District of the State of Florida.

The mission of Broward County Housing Authority, its affiliates and instrumentalities (hereinafter, jointly referred to as “BCHA”) is to create, provide and increase high quality housing opportunities for Broward County residents through effective and responsive management and responsible stewardship of public and private funds.

In addition to the provision of housing and housing assistance to low income families, BCHA acting through instrumentalities and single asset entities opted to expand, redevelop and sustain public housing assets via HUD’s Rental Assistance Demonstration program (RAD) conversion and public/private partnerships. The instrumentalities are established not-for profit enterprises and the single asset entities are considered affiliates. Both the BCHA and the not-for- profit enterprises have been used for acquisition and development of affordable housing units.

As of the issuance of this solicitation, BCHA manages 373 multi-family units; administers over 6,200 vouchers under the Housing Choice Voucher and similar programs, and operates 91 unsubsidized rental units. Through two not-for-profit enterprises (Building Better Communities and MCCAN Communities) in conjunction with private development companies, the BCHA jointly developed 731 low income housing tax credit units, which are privately managed by an independent third-party management company. An additional 80 low income housing tax credit units are currently in development under a public/ private model, and twelve (12) townhome units are in the initial stage of development.

BCHA is governed by a 5-member Board of Commissioners appointed to staggered 4-year terms by the Governor of Florida and is subject to the requirements of Title 24 of the Code of Federal Regulations (herein after, “CFR”) and BCHA’s procurement policy. Board members are responsible for setting policy, representing the community interest, and hiring the Chief Executive Officer who is responsible for agency operations. The affiliates and instrumentalities are governed by a 5-member Board of Directors.

The United States Department of Housing and Urban Development (“HUD”), a federal agency, partially funds and monitors operations of the BCHA. Nothing contained in this RFP or in the contract resulting from the selection process shall be construed to create any contractual relationship between the successful Proposer and HUD.

BCHA maintains a website at <http://www.bchafl.org> with information for clients, landlords, prospective business partners, and the public at large.

■ – Airflow above 450 cfm/ton.

NOTES:

1. Airflow based upon dry coil at 230v with factory-approved filter and electric heater (2 element heater sizes 018 through 036, 3 element heater sizes 042 through 060). For PF4MNP models, airflow at 208 volts is approximately the same as 230 volts because the multi-tap ECM motor is a constant torque motor. The torque doesn't drop off at the speeds the motor operates.
2. To avoid potential for condensate blowing out of drain pan prior to making drain trap:
Return static pressure must be less than 0.40 in. wc.
Horizontal applications of 042 – 060 sizes must have supply static greater than 0.20 in. wc.
3. Airflow above 400 cfm/ton on 048–060 size could result in condensate blowing off coil or splashing out of drain pan.

CFM – Cubic Ft per Minute EWB – Entering Wet Bulb °F (°C) LWB – Leaving Wet Bulb °F (°C) TC – Gross Cooling Capacity 1000 Btuh
 SHC – Gross Sensible Capacity 1000 Btuh BF – Bypass Factor MBH – 1000 Btuh

NOTES:

- Contact manufacturer for cooling capacities at conditions other than shown in table.
- Formulas:
 Leaving db = entering db - $\frac{\text{sensible heat cap.}}{1.09 \times \text{CFM}}$
 Leaving wb = wb corresponding to enthalpy of air leaving coil (h_{lwb})
 $h_{lwb} = h_{ewb} - \frac{\text{total capacity (Btuh)}}{4.5 \times \text{CFM}}$
 where h_{ewb} = enthalpy of air entering coil. Direct interpolation is permissible. Do not extrapolate.
- SHC is based on 80°F (27°C) db temperature of air entering coil. Below 80°F (27°C) db, subtract (Correction Factor x CFM) from SHC. Above 80°F (27°C) db, add (Correction Factor x CFM) to SHC.
- Bypass Factor = 0 indicates no psychometric solution. Use bypass factor of next lower EWB for approximation.

The airflow performance data was developed using fan coils with 10–kW electric heaters (2 elements) in the 018 through 036 size units and 15–kW heaters (3 elements) in the 042 through 060 size units. For fan coils with heaters of a different number of elements, the external available static at a given CFM from the curve may be corrected by adding or subtracting available external static pressure as indicated above.

When using units with 20-, 24-, and 30-kW electric heaters, maintain a 1-in. (25mm) clearance from combustible materials to discharge plenum and ductwork and maintain a distance of 36-in (914mm) from the unit. Use an accessory downflow base to maintain proper clearance on downflow installations. Use flexible connectors between ductwork and unit to prevent transmission of vibration. When electric heater is installed, use heat resistant material for flexible connector between ductwork and unit at discharge connection. Ductwork passing through unconditioned space must be insulated and covered with vapor barrier.

ACCESSORY KITS DESCRIPTION SUGGESTED AND REQUIRED USE

Disconnect Kit

The kit is used to disconnect electrical power to the fan coil so service or maintenance may be performed safely.

SUGGESTED USE: Units for 3- through 10-kW electric resistance heaters and cooling controls.

Downflow Base Kit

This kit is designed to provide a 1-in. (25mm) minimum clearance between unit discharge plenum, ductwork, and combustible materials. It also provides a gap-free seal with the floor.

REQUIRED USE: This kit must be used whenever fan coils are used in downflow applications.

Downflow Conversion Kit

Fan coils are shipped from the factory for upflow or horizontal-left applications. Downflow conversion kits provide proper condensate water drainage and support for the coil when used in downflow applications. Separate kits are available for slope coils and A-coils.

REQUIRED USE: This kit must be used whenever fan coils are used in downflow applications.

Downflow/Horizontal Conversion Gasket Kit

This kit provides the proper gasketing of units when applied in either a downflow or horizontal application.

REQUIRED USE: Fan coils in either downflow or horizontal applications.

Horizontal Applications - Water Management Kit

This kit provides proper installation of fan coils under conditions of high static pressure and high relative humidity.

SUGGESTED USE: All fan coils.

Single Point Wiring Kit

The single point wiring kit acts as a jumper between L1 and L3 lugs, and between the L2 and L4 lugs. This allows the installer to run two heavy-gauge, high-voltage wires into the fan coil rather than 4 light-gauge, high-voltage wires.

SUGGESTED USE: Fan coils with 15- and 20-kW fused heaters only.

Filter Kit (12 pack)

The kit consists of 12 fan coil framed filters. These filters collect large dust particles from the return air entering the fan coil and

prevents them from collecting on the coil. This process helps to keep the coil clean, which increases heat transfer and, in turn, the efficiency of the system.

SUGGESTED USE: To replace filters in fan coils.

REQUIRED USE: All units unless a filter grille is used.

Fan Coil Filter Cabinet

This cabinet is mounted to the fan coil on the return air end and designed to slip over the outer fan coil casing. The cabinets are insulated using the same insulation as production fan coils. They are designed for the removal of particulates from indoor air using FILXXFNC00(14, 17, 21, 24) media filter cartridges. These fan coil media filter cartridge kits are designed for the removal of particles from indoor air. The cartridge is installed in the return air duct next to the air handler or further upstream.

SUGGESTED USE: All fan coils.

Condensate Drain Trap Kit

This kit consists of 50 PVC condensate traps. Each trap is pre-formed and ready for field installation. This deep trap helps the system make and hold proper condensate flow even during blower initiation.

SUGGESTED USE: All fan coils.

Air Cleaner 240-volt Conversion Kit

The AIRA electronic air cleaner comes ready for 115-v operation.

REQUIRED USE: This kit is required when running 240-volt circuit to air cleaner.

Standard Filter Rack Kit

This kit mounts in fan coil filter rack area and modifies the existing filter rack to support standard 1-in. filter sizes.

SUGGESTED USE: Fan coils using standard filter sizes.

TXV Kit

These kits are designed to convert R-410A fancoils to R-22 TXVs.

Low Air Leakage Kit

This kit is available through MicroMetl and when installed as per the instructions provided in the kit, is designed to meet the stringent 1.4% air leakage at 0.5" water requirement as set by California Title 24 code. To order this kit, call MicroMetl Customer Service Department at 800.884.4662.

Attn: (Name)

Independent Contractor: This AGREEMENT does not create an employee/employer relationship between the parties. It is the intent of the parties that Contractor is an independent contractor under this AGREEMENT and not a BCHA employee for all purposes, including, but not limited to, the application of the Fair Labor Standards Act minimum wage and overtime payments, Federal Insurance Contribution Act, the Social Security Act, the Federal Unemployment Tax Act, the provisions of the Internal Revenue Code, the State Workers Compensation Act and the State unemployment insurance law. Contractor shall retain sole and absolute discretion in the judgment of the manner and means of carrying out Contractor's activities and responsibilities hereunder. Contractor agrees that it is a separate and independent enterprise from the BCHA, that it has full opportunity to find other business, that it has made its own investment in its business, and that it will utilize a high level of skill necessary to perform the work. This AGREEMENT shall not be construed as creating any joint employment relationship between Contractor and the BCHA. The BCHA will not be liable for any obligation incurred by Contractor, including but not limited to unpaid minimum wages and overtime premiums.

Binding Authority: Each person signing this AGREEMENT on behalf of either party individually warrants that he or she has full legal power to execute this AGREEMENT on behalf of the party for whom he or she is signing, and to bind and obligate such party with respect to all provisions contained in this AGREEMENT

Headings: Headings herein are for convenience of reference only and shall not be considered on any interpretation of this AGREEMENT.

Governing Law and Venue: This AGREEMENT shall be governed by the laws of the State of Florida with venue lying in Broward County, Florida.

Severability: If any provision of this AGREEMENT or application thereof to any person or situation shall to any extent, be held invalid or unenforceable, the remainder of this AGREEMENT, and the application of such provisions to persons or situations other than those as to which it shall have been held invalid or unenforceable shall not be affected thereby, and shall continue in full force and effect, and be enforced to the fullest extent permitted by law.

Extent of AGREEMENT: This AGREEMENT and, by incorporation, the RFP and Contractor's response to said RFP as contained in the Appendix represents the entire and integrated agreement between the BCHA and Contractor and supersedes all prior negotiations, representations or agreements, either written or oral.

Conflicting Terms or Language: Where any conflicting terms or language arise between this AGREEMENT and the documents contained in the Appendices, the order of precedence is as follows:

1. The terms and language in RFP 22-308-R; and
2. The terms and language in Contractor's response to RFP 22-308-R.

IN WITNESS WHEREOF, the parties hereto have caused this instrument to be executed in two original counterparts as of the day and year first above written.
