**I. Introduction/Survey Results/Recommendations**

**I. INTRODUCTION/SURVEY RESULTS**

Gaudet Associates, Inc., a licensed Florida Asbestos Business (ZA#0000011), was retained to perform an asbestos material identification survey for two (2) structures located at 4330 4<sup>th</sup> Street in Vero Beach, FL.

The facility consists of two (2) structures, radio house and shed.

The radio house is constructed of concrete block and wood on a concrete slab with an asphalt shingle roof. The interior consists of ceiling tiles, drywall and floor tile (2-layer). The structure is slated to be demolished.

The shed is constructed of wood walls with aluminum siding on a concrete slab with an asphalt shingle roof.

Gaudet Associates, Inc. scheduled an EPA Certified Building Inspector, Mr. Michael McGovern to perform the survey on September 12, 2022. The purpose of the survey was to identify, bulk sample and quantify suspect asbestos containing building materials in those areas accessible to the inspector. The inspector collected a total of twenty (20) samples. These samples were analyzed by a National Voluntary Laboratory Accreditation Program (NVLAP) accredited laboratory using Polarized Light Microscopy (PLM).

The Environmental Protection Agency's (EPA) definition of an asbestos-containing material is one that is greater than one (1%) percent asbestos. Five (5) of the samples proved positive for asbestos content.

The materials that are asbestos containing are as follows:

<u>Material</u>	<u>Location</u>	<u>Approximately Quantity</u>
12" x 12" Floor Tile (beige)	Throughout Radio House 2 layers	800 s.f.
Exterior Transite Siding	Radio House	600 s.f.

12" x 12" Floor Tile (beige)

The 12" x 12" Floor Tile (beige) contains three to five (3 - 5%) percent Chrysotile asbestos and is non-friable. The material is in fair to good condition and is located throughout the radio house.

Exterior Transite Siding

The exterior transite siding contains ten (10%) percent Chrysotile asbestos and is non-friable is in present conditions. This material is in fair to good condition and is located on the exterior of the radio house.

**RECOMMENDATIONS**

Gaudet Associates, Inc. recommends that the 12" x 12" Floor Tile (beige) two layers and exterior transite siding must be removed prior to demolition by a Florida Licensed Asbestos Abatement contractor. All work shall be performed in accordance with all Local, State and Federal regulations.

Once the 12" x 12" Floor Tile (beige) and exterior transite siding has been removed, the radio house and shed can be demolished, and all of its components can be recycled and/or placed in a Class III landfill. All works shall be performed in accordance with all Local, State and Federal regulations.

**II. Building Overview**

## II. BUILDING OVERVIEW

In conducting this building inspection in compliance with all local, state and federal regulations, all suspected asbestos-containing building materials (ACBM) which were accessible to the inspector, were either sampled to confirm the actual presence of asbestos or assumed to contain asbestos. Where suspected ACBM could be examined or by review of an existing plan, if available, could be determined to exist, such materials were also tested or assumed, as appropriate.

Building areas between walls, under floors, under concrete slabs and above permanent ceilings, all of which could not be accessed, were not visually inspected nor were materials therein sampled as a part of this building inspection.

Due in fact that over 3,600 different building products are recognized as asbestos-containing building materials, it cannot be said that all such products, which may be included in the subject building, have or could be identified. Due in fact that asbestos is an ingredient within a product and can be unevenly distributed, Gaudet Associates, Inc. cannot accept responsibility for the sample results and only reports said results as received by the accredited laboratory.

Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method") but augmented with procedures outlined in the 1993 ("final") version of the method. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. Non-friable organically bound materials present a problem matrix and therefore EMSL recommends gravimetric reduction prior to analysis. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample. Estimation of uncertainty is available on request.
