

City Hall Rebuild Project #2001  
Limited Phase II Environmental Site Assessment  
ADDENDUM I  
Answers to Questions

1. What was the basis of the sample locations? Why are some inside of the building if the building is unsafe?

A Limited Phase II ESA is required to test the existing soil conditions below grade.

A recent geotechnical report states that during drilling activities a “possible petroleum contamination was encountered”. The site served as an electric generating station and as a storage yard for the City’s electric department some 50 plus years ago.

The City Hall building has been completely removed.
